Going, Going, Gone

A classic example of the need for rules for liabilities *expected* to be refinanced is the case of **Penn Central Railroad** (USA) before it went bankrupt. The railroad was deep into short-term debt but classified it as long-term debt. Why? Because the railroad believed it had commitments from lenders to keep refinancing the short-term debt. When those commitments suddenly disappeared, it was “good-bye Pennsy.” As the Greek philosopher Epictetus once said, “Some things in this world are not and yet appear to be.”

Dividends Payable

A **cash dividend payable** is an amount owed by a company to its shareholders as a result of the board of directors’ authorization (or in other cases, vote of shareholders). At the date of declaration, the company assumes a liability that places the shareholders in the position of creditors in the amount of dividends declared. Because companies always pay cash dividends within one year of declaration (generally within three months), they classify them as current liabilities.

On the other hand, companies do not recognize accumulated but undeclared dividends on cumulative preference shares as a liability. Why? Because **preference dividends in arrears** are not an obligation until the board of directors authorizes the payment. Nevertheless, companies should disclose the amount of cumulative dividends unpaid in a note, or show it parenthetically in the share capital section (see [Underlying Concepts](#)).

Underlying Concepts

Preference dividends in arrears do represent a probable future economic sacrifice, but the expected sacrifice does not result from a past transaction or past event. The sacrifice will result from a future event (declaration by the board of directors). Note disclosure improves the predictive value of the financial statements.

Dividends payable in the form of additional shares are not recognized as a liability. Such **share dividends** (as we discuss in [Chapter 15](#)) do not require future outlays of assets or services. Companies generally report such undistributed share dividends in the equity section because they represent retained earnings in the process of transfer to share capital.

Customer Advances and Deposits

Current liabilities may include **returnable cash deposits** received from customers and employees. Companies may receive deposits from customers to guarantee performance of a contract or service or as guarantees to cover payment of expected future obligations. For example, a company like **Vodafone** (GBR) often requires a deposit on equipment that customers use to connect to the Internet or to access Vodafone’s other services. Vodafone also may receive deposits from customers as guarantees for possible damage to property. Additionally, some companies require their employees to make deposits for the return of keys or other company property.

The classification of these items as current or non-current liabilities depends on the time between the date of the deposit and the termination of the relationship that required the deposit.

Unearned Revenues

A magazine publisher such as **Hachette** (FRA) receives payment when a customer subscribes to its magazines. An airline company such as **China Southern Airlines** (CHN) sells tickets for future flights. And software companies like **Microsoft** (USA) issue coupons that allow customers to upgrade

to the next version of their software. How do these companies account for **unearned revenues** that they receive before providing goods or performing services?

1. When a company receives an advance payment, it debits Cash and credits a current liability account identifying the source of the unearned revenue.
2. When a company recognizes revenue, it debits the unearned revenue account and credits a revenue account.

To illustrate, assume that Logo University sells 10,000 season soccer tickets at \$50 each for its five-game home schedule. Logo University records the sales of season tickets as follows.

August 6		
Cash	500,000	
Unearned Sales Revenue		500,000
(To record sale of 10,000 season tickets)		

After each game, Logo University makes the following entry.

September 7		
Unearned Sales Revenue	100,000	
Sales Revenue		100,000
(To record soccer ticket revenue)		

The account Unearned Sales Revenue represents unearned revenue. Logo University reports it as a current liability in the statement of financial position because the school has a performance obligation. As ticket holders attend games, Logo recognizes revenue and reclassifies the amount from Unearned Sales Revenue to Sales Revenue. Unearned revenue is material for some companies: In the airline industry, for example, tickets sold for future flights represent almost 50 percent of total current liabilities.

Illustration 13.2 shows specific unearned revenue and revenue accounts sometimes used in selected types of businesses.

Type of Business	Account Title	
	Unearned Revenue	Revenue
Airline	Unearned Passenger Ticket Revenue	Passenger Revenue
Magazine publisher	Unearned Subscription Revenue	Subscription Revenue
Hotel	Unearned Rental Revenue	Rental Revenue
Auto dealer	Unearned Warranty Revenue	Warranty Revenue
Retailers	Unearned Gift Card Revenue	Sales Revenue

ILLUSTRATION 13.2 Unearned Revenue and Revenue Accounts

The statement of financial position reports obligations for any commitments that are redeemable in goods and services. The income statement reports revenues related to performance obligations satisfied during the period.

What Do the Numbers Mean?

SAP's Liabilities—Good or Bad?

Users of financial statements generally examine current liabilities to assess a company's liquidity and overall financial flexibility. Companies must pay many current liabilities, such as accounts payable, wages payable, and taxes payable, sooner rather than later. A substantial increase in these liabilities should therefore raise a red flag about a company's financial position. However, this is not the case for all current liabilities.

For example, **SAP** (DEU) has a current liability account entitled "Contract liabilities/deferred income" with a balance in the most recent period of €3.028 billion, which is almost 24 percent of total current liabilities and over 13 percent of total liabilities. This account has been increasing year after year. Deferred income is a liability account that arises from SAP's sales of cloud subscription services and software support services where the payments are collected in advance.

Market analysts read such an increase in deferred income as a positive signal about SAP's sales and profitability. When SAP's sales are growing, its deferred income account increases. Thus, an increase in a liability is good news about SAP's sales. At the same time, a decline in deferred income is bad news. As one commentator noted, a slowdown or reversal of the growth in SAP's deferred income indicates both slowing sales and cash flows, which is bad news for investors. Thus, increases in current liabilities can sometimes be viewed as good signs instead of bad.

Sources: Adapted from Glenn Wisegarver, "The SaaS Addiction to Deferred Revenue,"

Sales and Value-Added Taxes Payable

Most countries have a consumption tax. Consumption taxes are generally either a sales tax or a value-added tax (VAT). The purpose of these taxes is to generate revenue for the government similar to the company or personal income tax. These two taxes accomplish the same objective—to tax the final consumer of the good or service. However, the two systems use different methods to accomplish this objective.

Sales Taxes Payable

To illustrate the accounting for sales taxes, assume that Halo Supermarket sells loaves of bread to consumers on a given day for €2,400. Assuming a sales tax rate of 10 percent, Halo Supermarket makes the following entry to record the sale.

Cash	2,640	
Sales Revenue		2,400
Sales Taxes Payable		240

In this situation, Halo Supermarket records a liability to provide for taxes collected from customers but not yet remitted to the appropriate tax authority. At the proper time, Halo Supermarket remits the €240 to the tax authority.

Sometimes, the sales tax collections credited to the liability account are not equal to the liability as computed by the governmental formula. In such a case, companies make an adjustment of the liability account by recognizing a gain or a loss on sales tax collections. Many companies do not segregate the sales tax and the amount of the sale at the time of sale. Instead, the company credits both amounts in total in the Sales Revenue account. Then, to reflect correctly the actual amount of sales and the liability for sales taxes, the company debits the Sales Revenue account for the amount of the sales taxes due the government on these sales and credits the Sales Taxes Payable account for the same amount.

To illustrate, assume that the Sales Revenue account balance of €150,000 includes sales taxes of 4 percent. Thus, the amount recorded in the Sales Revenue account is comprised of the sales amount plus sales tax of 4 percent of the sales amount. Sales therefore are €144,230.77 ($€150,000 \div 1.04$) and the sales tax liability is €5,769.23 ($€144,230.77 \times 0.04$, or $€150,000 - €144,230.77$). The following entry records the amount due to the tax authority.

Sales Revenue	5,769.23	
Sales Taxes Payable		5,769.23

Value-Added Taxes Payable

Value-added taxes (VAT) are used by tax authorities more than sales taxes (over 100 countries require that companies collect a value-added tax). As indicated earlier, a **value-added tax** is a consumption tax. This tax is placed on a product or service whenever value is added at a stage of production and at final sale. A VAT is a cost to the end user, normally a private individual, similar to a sales tax.

However, a VAT should not be confused with a sales tax. A sales tax is collected only once at the consumer's point of purchase. No one else in the production or supply chain is involved in the collection of the tax. In a VAT taxation system, the VAT is collected every time a business purchases products from another business in the product's supply chain. To illustrate, let's return to the Halo Supermarket example but now assume that a VAT is imposed rather than a sales tax. To understand how a VAT works, we need to understand how the loaves of bread were made ready for purchase. Here is what happened.

1. Hill Farms Wheat grows wheat and sells it to Sunshine Baking for €1,000. Hill Farms Wheat makes the following entry to record the sale, assuming the VAT is 10 percent.

Cash	1,100	
Sales Revenue		1,000
Value-Added Taxes Payable		100

Hill Farms Wheat then remits the €100 to the tax authority.

2. Sunshine Baking makes loaves of bread from this wheat and sells it to Halo Supermarket for €2,000. Sunshine Baking makes the following entry to record the sale, assuming the VAT is 10 percent.

Cash	2,200	
Sales Revenue		2,000
Value-Added Taxes Payable		200

Sunshine Baking then remits €100 to the government, not €200. The reason: Sunshine Baking has already paid €100 to Hill Farms Wheat. At this point, the tax authority is only entitled to €100. Sunshine Baking receives a credit for the VAT paid to Hill Farms Wheat, which reduces the VAT payable.

3. Halo Supermarket sells the loaves of bread to consumers for €2,400. Halo Supermarket makes the following entry to record the sale, assuming the VAT is 10 percent.

Cash	2,640	
Sales Revenue		2,400
Value-Added Taxes Payable		240

Halo Supermarket then sends only €40 to the tax authority, because it deducts the €200 VAT already paid to Sunshine Baking.

Who, then, in this supply chain ultimately pays the VAT of €240? The consumers. A summary of the process is provided in [Illustration 13.3](#).

1. Hill Farms Wheat collected €100 of VAT and remitted this amount to the tax authority; it did not have a net cash outlay for these taxes.
2. Sunshine Baking collected €200 of VAT but only remitted €100 to the tax authority because it received credit for the €100 VAT that it paid to Hill Farms Wheat; it did not have a net cash outlay for these taxes.
3. Halo Supermarket collected €240 of VAT but only remitted €40 to the tax authority because it received credit for the €200 of VAT it paid to Sunshine Baking; it did not have a net cash outlay for these taxes.

In summary, the total VAT collected and remitted by the companies in the supply chain is as follows.

	VAT Collected	VAT Remitted	VAT Credited	VAT Owed
Hill Farms Wheat	€100	€100	€ 0	€0
Sunshine Baking	200	100	100	0
Halo Supermarket	240	40	200	0
Totals	€540	€240	€300	€0

So who actually pays the VAT? It is the consumers who bear the €240 VAT cost as part of their purchase price, not the companies that produced and distributed the bread.

ILLUSTRATION 13.3 Who Pays the VAT?

An advantage of a VAT is that it is easier to collect than a sales tax because it has a self-correcting mechanism built into the tax system. For example, look again at Sunshine Baking in [Illustration 13.3](#). If Sunshine Baking is considering not paying the VAT, it knows that Halo Supermarket will report its purchase from Sunshine Baking in order to claim its credit. As a result, the tax authority has records that a purchase was made and therefore could charge Sunshine Baking with fraud if it fails to remit the VAT. A sales tax does not have this self-correcting mechanism and is thus easier to avoid. For example, if the sales tax is high, consumers can buy goods in different jurisdictions than their residence, or pretend to be a business in the supply chain rather than the ultimate consumer. On the other hand, a disadvantage of a VAT is the increased amount of record-keeping involved in implementing the system. For example, companies must keep track of credits for VAT payments and adjust Inventory (or Cost of Goods Sold) when remitting VAT taxes.

Income Taxes Payable

Most income tax varies in proportion to the amount of annual income. Using the best information and advice available, a business must prepare an income tax return and compute the income taxes payable resulting from the operations of the current period. Companies should classify as a current liability the taxes payable on net income, as computed per the tax return. However, in many countries proprietorships and partnerships are not taxable entities. Because the individual proprietor and the members of a partnership are subject to personal income taxes on their share of the business's taxable income, income tax liabilities do not appear on the financial statements of proprietorships and partnerships.

Most companies must make periodic tax payments throughout the year to the appropriate government agency. These payments are based upon estimates of the total annual tax liability. As the estimated total tax liability changes, the periodic payments also change. If, in a later year, the taxing authority assesses an additional tax on the income of an earlier year, the company should credit Income Taxes Payable and charge the related debit to current operations.

Differences between taxable income under the tax laws and accounting income under IFRS sometimes occur. Because of these differences, the amount of income taxes payable to the government in any

given year may differ substantially from income tax expense as reported on the financial statements. [Chapter 19](#) is devoted solely to income tax matters and presents an extensive discussion of this complex topic.

Employee-Related Liabilities

Companies also report as a current liability amounts owed to employees for salaries or wages at the end of an accounting period. In addition, they often also report as current liabilities the following items related to employee compensation.

- 1. Payroll deductions.
- 2. Compensated absences.
- 3. Bonuses.

Payroll Deductions

The most common types of payroll deductions are taxes, insurance premiums, employee savings, and union dues. **To the extent that a company has not remitted the amounts deducted to the proper authority at the end of the accounting period, it should recognize them as current liabilities.**

Social Security Taxes

Most governments provide a level of social benefits (for retirement, unemployment, income, disability, and medical benefits) to individuals and families. The benefits are generally funded from taxes assessed on both the employer and the employees. These taxes are often referred to as **Social Security taxes** or **Social Welfare taxes**. Employers collect the employee’s share of this tax by deducting it from the employee’s gross pay, and remit it to the government along with their share. The government often taxes both the employer and the employee at the same rate. **Companies should report the amount of unremitted employee and employer Social Security tax on gross wages paid as a current liability.**

Income Tax Withholding

Income tax laws generally require employers to withhold from each employee’s pay the applicable income tax due on those wages. The employer computes the amount of income tax to withhold according to a government-prescribed formula or withholding tax table. That amount depends on the length of the pay period and each employee’s taxable wages, marital status, and claimed dependents. [Illustration 13.4](#) summarizes payroll deductions and liabilities.

Item	Who Pays	
Income tax withholding		Employer reports these amounts as liabilities until remitted.
Social Security taxes—employee share	Employee	
Union dues		
Social Security taxes—employer share	Employer	

ILLUSTRATION 13.4 Summary of Payroll Liabilities

Payroll Deductions Example

Assume a weekly payroll of \$10,000 entirely subject to Social Security taxes (8 percent), with income tax withholding of \$1,320 and union dues of \$88 deducted. The company records the wages and salaries paid and the **employee payroll deductions** as follows.

Salaries and Wages Expense	10,000	
----------------------------	--------	--

Withholding Taxes Payable		1,320
Social Security Taxes Payable		800
Union Dues Payable		88
Cash		7,792

It records the **employer payroll taxes** as follows.

Payroll Tax Expense	800	
Social Security Taxes Payable		800

The employer must remit to the government its share of Social Security tax along with the amount of Social Security tax deducted from each employee's gross compensation. It should record all unremitted employer Social Security taxes as payroll tax expense and payroll tax payable.⁴

Compensated Absences

Compensated absences are paid absences from employment—such as vacation, illness, and maternity, paternity, and jury leaves.⁵ The following considerations are relevant to the accounting for compensated absences.

Vested rights exist when an employer has an obligation to make payment to an employee even after terminating his or her employment. Thus, vested rights are not contingent on an employee's future service. **Accumulated rights** are those that employees can carry forward to future periods if not used in the period in which earned. For example, assume that you earn four days of vacation pay as of December 31, the end of your employer's fiscal year. Company policy is that you will be paid for this vacation time even if you terminate employment. In this situation, your four days of vacation pay are vested, and your employer must accrue the amount.

Now assume that your vacation days are not vested but that you can carry the four days over into later periods. Although the rights are not vested, they are accumulated rights for which the employer must make an accrual. However, the amount of the accrual is adjusted to allow for estimated forfeitures due to turnover.

Non-accumulating rights do not carry forward; they lapse if not used. As a result, a company does not recognize a liability or expense until the time of absence (benefit). Thus, if an employee takes a vacation day during a month and it is non-accumulating, the vacation day is an expense in that month. Similarly, a benefit such as a maternity or paternity leave is contingent upon a future event and does not accumulate. Therefore, these costs are recognized only when the absence commences. [4]

A modification of the general rules relates to the issue of **sick pay**. If sick pay benefits vest, a company must accrue them. If sick pay benefits accumulate but do not vest, a company may choose whether to accrue them. Why this distinction? Companies may administer compensation designated as sick pay in one of two ways. In some companies, employees receive sick pay only if illness causes their absence. Therefore, these companies may or may not accrue a liability because its payment depends on future employee illness. Other companies allow employees to accumulate unused sick pay and take compensated time off from work even when not ill. For this type of sick pay, a company must accrue a liability because the company will pay it, regardless of whether employees become ill.

Companies should recognize the expense and related liability for compensated absences in the year earned by employees. For example, if new employees receive rights to two weeks' paid vacation at the beginning of their second year of employment, a company considers the vacation pay to be earned during the first year of employment.

What rate should a company use to accrue the compensated absence cost—the current rate or an expected rate? IFRS recommends the use of the expected rate. However, companies will likely use the current rather than expected rates because future rates are not known. To illustrate, assume that Amutron NV began operations on January 1, 2022. The company employs 10 individuals and pays each

€480 per week. Employees earned 20 unused vacation weeks in 2022. In 2023, the employees used the vacation weeks, but now they each earn €540 per week. Amutron accrues the accumulated vacation pay on December 31, 2022, as follows.

Salaries and Wages Expense	9,600	
Salaries and Wages Payable (€480 × 20)		9,600

At December 31, 2022, the company reports on its statement of financial position a liability of €9,600. In 2023, it records the payment of vacation pay as follows.

Salaries and Wages Payable	9,600	
Salaries and Wages Expense	1,200	
Cash (€540 × 20)		10,800

In 2023, the use of the vacation weeks extinguishes the liability. Note that Amutron records the difference between the amount of cash paid and the reduction in the liability account as an adjustment to Salaries and Wages Expense in the period when paid. This difference arises because it accrues the liability account at the rates of pay in effect during the period when employees *earned* the compensated time. The cash paid, however, depends on the rates in effect during the period when employees *used* the compensated time. If Amutron used the future rates of pay to compute the accrual in 2022, then the cash paid in 2023 would equal the liability.⁶

Profit-Sharing and Bonus Plans

Many companies give a **bonus** to certain or all employees in addition to their regular salaries or wages. Frequently, the bonus amount depends on the company's yearly profit. A company may consider **bonus payments to employees** as additional salaries and wages and should include them as a deduction in determining the net income for the year.

To illustrate the entries for an employee bonus, assume that Palmer Inc. shows income for the year 2022 of \$100,000. It will pay out bonuses of \$10,700 in January 2023. Palmer makes an adjusting entry dated December 31, 2022, to record the bonuses as follows.

Salaries and Wages Expense	10,700	
Salaries and Wages Payable		10,700

In January 2023, when Palmer pays the bonus, it makes this journal entry:

Salaries and Wages Payable	10,700	
Cash		10,700

Palmer should show the expense account in the income statement as an operating expense. **The liability, Salaries and Wages Payable, is usually payable within a short period of time. Companies should include it as a current liability in the statement of financial position.**

An obligation under a profit-sharing or bonus plan must be accounted for as an expense and not a distribution of profit, since it results from employee service and not a transaction with owners.

Similar to bonus agreements are contractual agreements for **conditional expenses**. Examples would be agreements covering rents or royalty payments conditional on the amount of revenues recognized or the quantity of product produced or extracted. Conditional expenses based on revenues or units produced are usually less difficult to compute than bonus arrangements.

For example, assume that a lease calls for a fixed rent payment of \$500 per month and 1 percent of all sales over \$300,000 per year. The company's annual rent obligation would amount to \$6,000 plus \$0.01 of each dollar of revenue over \$300,000. In other examples, a royalty agreement may give to a patent owner \$1 for every ton of product resulting from the patented process, or give to a mineral rights owner \$0.50 on every barrel of oil extracted. As the company produces or extracts each additional unit of product, it creates an additional obligation, usually a current liability.

Provisions

LEARNING OBJECTIVE 2

Explain the accounting for different types of provisions.

A **provision** is a liability of uncertain timing or amount (sometimes referred to as an *estimated liability*). Provisions are very common and may be reported as either current or non-current depending on the date of expected payment. [5] Common types of provisions are obligations related to litigation, warranties or product guarantees, business restructurings, and environmental damage.⁷

For example, **Petronas** (MYS) reported RM35,266 million related to a provision for decommissioning oil and gas properties. **Nokia** (FIN) reported €195 million for warranties, intellectual property infringement, and restructuring costs. And **Adecoagro SA** (BRA) reported R\$3,620,000 for labor, legal, and other claims.

The difference between a provision and other liabilities (such as accounts or notes payable, salaries payable, and dividends payable) is that **a provision has greater uncertainty about the timing or amount of the future expenditure required to settle the obligation**. For example, when **Siemens AG** (DEU) reports an accounts payable, there is an invoice or formal agreement as to the existence and the amount of the liability. Similarly, when Siemens accrues interest payable, the timing and the amount are known.⁸

Recognition of a Provision

Companies accrue an expense and related liability for a provision only if the following three conditions are met.

1. A company has a present obligation (legal or constructive) as a result of a past event;
2. It is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and
3. A reliable estimate can be made of the amount of the obligation.

If these three conditions are not met, no provision is recognized. [6]

In applying the first condition, the past event (often referred to as the *past obligatory event*) must have occurred. In applying the second condition, the term **probable** is defined as “more likely than not to occur.” This phrase is interpreted to mean the probability of occurrence is greater than 50 percent. If the probability is 50 percent or less, the provision is not recognized.

Recognition Examples

We provide three examples to illustrate when a provision should be recognized. It is assumed for each of these examples that a reliable estimate of the amount of the obligation can be determined.

Illustration 13.5 presents the first example in which a company has a legal obligation to honor its warranties. A legal obligation generally results from a contract or legislation.

Warranty

Facts: Santos SA gives warranties to its customers related to the sale of its electrical products. The warranties are for three years from the date of sale. Based on past experience, it is probable that there will be some claims under the warranties.

Question: Should Santos recognize at the statement of financial position date a provision for the warranty costs yet to be settled?

Solution: (1) The warranty is a present obligation as a result of a past obligating event—the past obligating event is the sale of the product with a warranty, which gives rise to a legal obligation. (2) The warranty results in the outflow of resources embodying benefits in settlement—it is probable that there will be some claims related to these warranties. Santos should recognize the provision based on past experience.

ILLUSTRATION 13.5 Recognition of a Provision—Warranty

A **constructive obligation** is an obligation that derives from a company's actions where:

1. By an established pattern of past practice, published policies, or a sufficiently specific current statement, the company has indicated to other parties that it will accept certain responsibilities; and
2. As a result, the company has created a valid expectation on the part of those other parties that it will discharge those responsibilities.

The second example, presented in **Illustration 13.6**, demonstrates how a constructive obligation is reported.

Refunds

Facts: **Christian Dior** (FRA) has a policy of refunding purchases to dissatisfied customers even though it is under no legal obligation to do so. Its policy of making refunds is generally known.

Question: Should Christian Dior record a provision for these refunds?

Solution: (1) The refunds are a present obligation as a result of a past obligating event—the sale of the product. This sale gives rise to a constructive obligation because the conduct of the company has created a valid expectation on the part of its customers that it will refund purchases. (2) The refunds result in the outflow of resources in settlement—it is probable that a proportion of goods will be returned for refund. A provision is recognized for the best estimate of the costs of refunds.

ILLUSTRATION 13.6 Recognition of a Provision—Refunds

The third example, the case of **Wm Morrison Supermarkets** (GBR) in **Illustration 13.7**, presents a situation in which the recognition of the provision depends on the probability of future payment.

Lawsuit

Facts: Assume that an employee filed a £1,000,000 lawsuit on November 30, 2022, against **Wm Morrison Supermarkets** for damages suffered when the employee slipped and suffered a serious injury at one of the company's facilities. Morrison's lawyers believe that Morrison will not lose the lawsuit, putting the probability of future payments at less than 50 percent.

Question: Should Morrison recognize a provision for legal claims at December 31, 2022?

Solution: Although a past obligating event has occurred (the injury leading to the filing of the lawsuit), **it is not probable (more likely than not)** that Morrison will have to pay any damages. Morrison therefore does not need to record a provision. If, on the other hand, Morrison's lawyer determined that it is probable that the company will lose the lawsuit, then Morrison should recognize a provision at December 31, 2022.

ILLUSTRATION 13.7 Recognition of a Provision—Lawsuit

Measurement of Provisions

How does a company like **Toyota** (JPN), for example, determine the amount to report for its warranty cost on its automobiles? How does a company like **Carrefour** (FRA) determine its liability for customer refunds? How does **Novartis** (CHE) determine the amount to report for a lawsuit that it probably will lose? And how does a company like **Total SA** (FRA) determine the amount to report as a provision for its remediation costs related to environmental clean-up?

IFRS provides an answer: The amount recognized should be the **best estimate of the expenditure required to settle the present obligation**. Best estimate represents the amount that a company would pay to settle the obligation at the statement of financial position date. [7]

In determining the best estimate, the management of a company must use judgment, based on past or similar transactions, discussions with experts, and any other pertinent information. Here is how this judgment might be used in three different types of situations to arrive at best estimate:

- **Toyota warranties.** Toyota sells many cars and must make an estimate of the number of warranty repairs and related costs it will incur. Because it is dealing with a large population of automobiles, it is often best to weight all possible outcomes by associated probabilities. For example, it might determine that 80 percent of its cars will not have any warranty cost, 12 percent will have substantial costs, and 8 percent will have a much smaller cost. In this case, by weighting all the possible outcomes by their associated probabilities, Toyota **arrives at an expected value** for its warranty liability.
- **Carrefour refunds.** Carrefour sells many items at varying selling prices. Refunds to customers for products sold may be viewed as a continuous range of refunds, with each point in the range having the same probability of occurrence. In this case, the **midpoint in the range** can be used as the basis for measuring the amount of the refunds.
- **Novartis lawsuit.** Large companies like Novartis are involved in numerous litigation issues related to their products. Where a single obligation such as a lawsuit is being measured, **the most likely outcome** of the lawsuit may be the best estimate of the liability.

In each of these situations, the measurement of the liability should consider the time value of money, if material. In addition, future events that may have an impact on the measurement of the costs should be considered. For example, a company like Total SA, which might have high remediation costs related to environmental clean-up, may consider future technological innovations that reduce future remediation costs.

Common Types of Provisions

Here are some common areas for which provisions may be recognized in the financial statements:

1. Lawsuits	4. Environmental
2. Warranties	5. Onerous contracts
3. Consideration payable	6. Restructuring

Although companies generally report only one current and one non-current amount for provisions in the statement of financial position, IFRS also requires extensive disclosure related to provisions in the notes to the financial statements. Companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession). [8]

Litigation Provisions

Companies must consider the following factors, among others, in determining whether to record a liability with respect to **pending or threatened litigation** and actual or possible **claims and assessments**.

1. The **time period** in which the underlying cause of action occurred.
2. The **probability** of an unfavorable outcome.
3. The ability to make a **reasonable estimate** of the amount of loss.

To report a loss and a liability in the financial statements, **the cause for litigation must have occurred on or before the date of the financial statements**. It does not matter that the company became aware of the existence or possibility of the lawsuit or claims after the date of the financial statements but before issuing them. To evaluate the probability of an unfavorable outcome, a company considers the following: the nature of the litigation, the progress of the case, the opinion of legal counsel, its own and others' experience in similar cases, and any management response to the lawsuit.

With respect to **unfiled suits** and **unasserted claims and assessments**, a company must determine (1) the degree of **probability** that a suit may be filed or a claim or assessment may be asserted, and (2) the **probability** of an unfavorable outcome. For example, assume that a regulatory body investigates the Nawtee Company for restraint of trade and institutes enforcement proceedings. Private claims of triple damages for redress often follow such proceedings. In this case, Nawtee must determine the probability of the claims being asserted **and** the probability of triple damages being awarded. If both are probable, if the loss is reasonably estimable, and if the cause for action is dated on or before the date of the financial statements, then Nawtee should accrue the liability.

Companies can seldom predict the outcome of pending litigation, however, with any assurance. And, even if evidence available at the statement of financial position date does not favor the company, it is hardly reasonable to expect the company to publish in its financial statements a dollar estimate of the probable negative outcome. Such specific disclosures might weaken the company's position in the dispute and encourage the plaintiff to intensify its efforts. As a result, many companies provide a general provision for the costs expected to be incurred without relating the disclosure to any specific lawsuit or set of lawsuits. [Illustration 13.8](#) provides the disclosure by **Nestlé Group** (CHE) related to its litigation claims.

Nestlé Group

Notes to the financial statements (partial)

Legal and tax

Legal provisions have been set up to cover legal and administrative proceedings that arise in the ordinary course of business. Tax provisions include disputes and uncertainties on non-income taxes (mainly VAT and sales taxes). It covers numerous separate cases whose detailed disclosure could be detrimental to the Group interests. The Group does not believe that any of these cases will have an adverse impact on its financial position. The timing of outflows is uncertain as it depends upon the outcome of these cases. Group Management does not believe it is possible to make assumptions on the evolution of the cases beyond the balance sheet date.

ILLUSTRATION 13.8 Litigation Disclosure

Warranty Provisions

A **warranty (product guarantee)** is a promise made by a seller to a buyer to make good on a deficiency of quantity, quality, or performance in a product. Manufacturers commonly use it as a sales promotion technique. Automakers, for instance, “hype” their sales by extending their new-car warranty to seven years or 100,000 miles. For a specified period of time following the date of sale to the consumer, the manufacturer may promise to bear all or part of the cost of replacing defective parts, to perform any necessary repairs or servicing without charge, to refund the purchase price, or even to “double your money back.”

Warranties and guarantees entail future costs. These additional costs, sometimes called “after costs” or “post-sale costs,” frequently are significant. Although the future cost is indefinite as to amount, due date, and even customer, a liability is probable in most cases. Companies should recognize this liability in the accounts if they can reasonably estimate it. The estimated amount of the liability includes all the costs that the company will incur after sale and delivery and that are incidental to the correction of defects or deficiencies required under the warranty provisions. Thus, warranty costs are a classic example of a provision.

Companies often provide one of two types of warranties to customers:

1. Warranty that the product meets agreed-upon specifications in the contract at the time the product is sold. This type of warranty is included in the sales price of a company’s product and is often referred to as an **assurance-type warranty**.
2. Warranty that provides an additional service beyond the assurance-type warranty. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a result, it is recorded as a separate performance obligation.

Assurance-Type Warranty

Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. These types of obligations should be expensed in the period the goods are provided or services performed. In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company will incur after sale due to the correction of defects or deficiencies required under the warranty provisions. Illustration 13.9 provides an example of an assurance-type warranty.

Assurance-Type Warranty

Facts: Denson Machinery Company begins production of a new machine in July 2022 and sells 100 of these machines for \$5,000 cash by year-end for a total sales revenue of \$500,000 ($100 \times \$5,000$). Each machine is under warranty for 1 year. Denson estimates, based on past experience with similar machines, that the warranty cost will average \$200 per unit for a total expected warranty expense of \$20,000 ($100 \times \200). Further, as a result of parts replacements and services performed in compliance with machinery warranties, it incurs \$4,000 in warranty costs in 2022 and \$16,000 in 2023.

Question: What are the journal entries for the sale and the related warranty costs for 2022 and 2023?

Solution: For the sale of the machines and related warranty costs in 2022, the entries are as follows.

1. To recognize sales of machines:

July–December 2022		
Cash	500,000	
Sales Revenue		500,000

2. To record payment for warranty expenditures incurred in 2022:

July–December 2022		
Warranty Expense	4,000	
Cash, Inventory, Accrued Payroll		4,000

3. The adjusting entry to record estimated warranty expense and warranty liability for expected warranty claims in 2023:

December 31, 2022		
Warranty Expense	16,000	
Warranty Liability		16,000

As a consequence of this adjusting entry at December 31, 2022, the statement of financial position reports a warranty liability (current) of \$16,000 ($\$20,000 - \$4,000$). The income statement for 2022 reports sales revenue of \$500,000 and warranty expense of \$20,000.

4. To record payment for warranty expenditures incurred in 2023 related to 2022 machinery sales:

January 1–December 31, 2023		
Warranty Liability	16,000	
Cash, Inventory, Accrued Payroll		16,000

At the end of 2023, no warranty liability is reported for the machinery sold in 2022.

ILLUSTRATION 13.9 Accounting for an Assurance-Type Warranty

Service-Type Warranty

A warranty is sometimes sold separately from the product. For example, when you purchase a television, you are entitled to an assurance-type warranty. You also will undoubtedly be offered an extended warranty on the product at an additional cost, referred to as a service-type warranty. In most

cases, service-type warranties provide the customer a service beyond fixing defects that existed at the time of sale.

Companies record a service-type warranty as a separate performance obligation. For example, in the case of the television, the seller recognizes the sale of the television with the assurance-type warranty separately from the sale of the service-type warranty. The sale of the service-type warranty is usually recorded in an Unearned Warranty Revenue account.

Companies then recognize revenue on a straight-line basis over the period the service-type warranty is in effect. Companies only defer and amortize costs that vary with and are directly related to the sale of the contracts (mainly commissions). Companies expense employees' salaries and wages, advertising, and general and administrative expenses because these costs occur even if the company did not sell the service-type warranty. [Illustration 13.10](#) presents an example of both an assurance-type and service-type warranty.

Warranties

Facts: You purchase an automobile from Hamlin Auto for €30,000 on January 2, 2022. Hamlin estimates the assurance-type warranty costs on the automobile to be €700 (Hamlin will pay for repairs for the first 36,000 kilometers or 3 years, whichever comes first). You also purchase for €900 a service-type warranty for an additional 3 years or 36,000 kilometers. Hamlin incurs warranty costs related to the assurance-type warranty of €500 in 2022 and €100 in 2023 and 2024. Hamlin records revenue on the service-type warranty on a straight-line basis.

Question: What entries should Hamlin make in 2022 and 2025?

Solution:

1. To record the sale of the automobile and related warranties:

January 2, 2022		
Cash (€30,000 + €900)	30,900	
Unearned Warranty Revenue		900
Sales Revenue		30,000

2. To record warranty expenditures incurred in 2022:

January 2–December 31, 2022		
Warranty Expense	500	
Cash, Inventory, Accrued Payroll		500

3. The adjusting entry to record estimated warranty expense and warranty liability for expected assurance warranty claims in 2023:

December 31, 2022		
Warranty Expense	200	
Warranty Liability		200

As a consequence of this adjusting entry at December 31, 2022, the statement of financial position reports a warranty liability of €200 (€700 – €500) for the assurance-type warranty. The income statement for 2022 reports sales revenue of €30,000 and warranty expense of €700.

4. To record revenue recognized in 2025 on the service-type warranty:

December 31, 2025		
Unearned Warranty Revenue (€900 ÷ 3)	300	
Warranty Revenue		300

Warranty expenditures under the service-type warranty will be expensed as incurred in 2025–2027.

ILLUSTRATION 13.10 Assurance-Type and Service-Type Warranties

Consideration Payable

Companies often make payments (provide consideration) to their customers as part of a revenue arrangement. Consideration paid or payable may include discounts, volume rebates, free products, or services. For example, numerous companies offer premiums (either on a limited or continuing basis) to customers in return for box tops, certificates, coupons, labels, or wrappers. The **premium** may be

silverware, dishes, a small appliance, a toy, or free transportation. Also, **printed coupons** that can be redeemed for a cash discount on items purchased are extremely popular (see [Underlying Concepts](#)). Another popular marketing innovation is the **cash rebate**, which the buyer can obtain by returning the store receipt and a rebate coupon to the manufacturer.

Underlying Concepts

Premiums and coupons are loss contingencies that satisfy the conditions necessary for a liability. Regarding the income statement, the *expense recognition principle* requires that companies report the related expense in the period in which the sale occurs.

Companies offer premiums, coupon offers, and rebates to stimulate sales. And to the extent that the premiums reflect a material right promised to the customer, a performance obligation exists and should be recorded as a liability. However, the period that benefits is not necessarily the period in which the company pays the premium. At the end of the accounting period, many premium offers may be outstanding and must be redeemed when presented in subsequent periods. In order to reflect the existing current liability, the company estimates the number of outstanding premium offers that customers will present for redemption. The company then charges the cost of premium offers to Premium Expense. It credits the outstanding obligations to an account titled Premium Liability.

[Illustration 13.11](#) provides an example of the accounting for consideration payable using provisions.⁹

Consideration Payable

Facts: Fluffy Cake Mix Ltd. sells boxes of cake mix for £3 per box. In addition, Fluffy Cake Mix offers its customers a large durable mixing bowl in exchange for £1 and 10 box tops. The mixing bowl costs Fluffy Cake Mix £2, and the company estimates that customers will redeem 60 percent of the box tops. The premium offer began in June 2022. During 2022, Fluffy Cake Mix purchased 20,000 mixing bowls at £2, sold 300,000 boxes of cake mix for £3 per box, and redeemed 60,000 box tops.

Question: What entries should Fluffy Cake Mix record in 2022?

Solution:

1. To record purchase of 20,000 mixing bowls at £2 per bowl in 2022:

Inventory of Premiums (20,000 mixing bowls × £2)	40,000	
Cash		40,000

2. The entry to record the sale of the cake mix boxes in 2022 is as follows:

Cash (300,000 boxes of cake mix × £3)	900,000	
Sales Revenue		900,000

3. To record the actual redemption of 60,000 box tops, the receipt of £1 per 10 box tops, and the delivery of the mixing bowls:

Cash [(60,000 ÷ 10) × £1]	6,000	
Premium Expense	6,000	
Inventory of Premiums [(60,000 ÷ 10) × £2]		12,000

4. The adjusting entry to record additional premium expense and the estimated premium liability at December 31, 2022, is as follows:

Premium Expense	12,000	
Premium Liability		12,000*

*Computation of Premium Liability at 12/31/22:

Total box tops sold in 2022	300,000
Estimated redemptions	×.60
Total estimated redemptions	180,000
Cost of estimated redemptions [(180,000 box tops ÷ 10) × (£2 – £1)]	£18,000
Redemptions to date	(6,000)
Liability at 12/31/22	£12,000

The December 31, 2022, statement of financial position of Fluffy Cake Mix reports Premium inventory of £28,000 (£40,000 – £12,000) as a current asset and Premium Liability of £12,000 as a current liability. The 2022 income statement reports £18,000 (£6,000 + £12,000) premium expense as a selling expense.

Note the solution is based on the assumption that the mixing bowls represent an immaterial item and are therefore not accounted for as a separate performance obligation. We will cover accounting for transactions with multiple performance obligations in [Chapter 18](#). You should make the same assumptions related to premiums as you do the homework problems for this chapter.

ILLUSTRATION 13.11 Accounting for Consideration Payable

What Do the Numbers Mean?

Frequent Flyers

Numerous companies offer premiums to customers in the form of a promise of future goods or services as an incentive for purchases today. Premium plans that have widespread adoption are the frequent-flyer programs used by all major airlines. On the basis of mileage accumulated, frequent-flyer members receive discounted or free airline tickets. Airline customers can earn miles toward free travel by making long-distance phone calls, staying in hotels, and charging gasoline and groceries on a credit card. Those free tickets represent an enormous potential liability because people using them may displace paying passengers.

When airlines first started offering frequent-flyer bonuses, everyone assumed that they could accommodate the free-ticket holders with otherwise empty seats. That made the additional cost of the program so minimal that airlines didn't accrue it or report the small liability. But, as more and more paying passengers have been crowded off flights by frequent-flyer awardees, the loss of revenues has grown enormously. For example, **Qantas Airways Limited** (AUS) recently reported a liability of \$5,781 million for advance ticket sales, including frequent-flyer obligations.

Environmental Provisions

Estimates to clean up existing toxic waste sites are substantial. In addition, cost estimates of cleaning up our air and preventing future deterioration of the environment run even higher.

In many industries, the construction and operation of long-lived assets involves obligations for the retirement of those assets. When a mining company opens up a strip mine, it may also commit to restore the land once it completes mining. Similarly, when an oil company erects an offshore drilling platform, it may be legally obligated to dismantle and remove the platform at the end of its useful life.

Accounting Recognition of Environmental Liabilities

As with other provisions, a company must recognize an **environmental liability** when it has an existing legal obligation associated with the retirement of a long-lived asset and when it can reasonably estimate the amount of the liability.

Obligating events.

Examples of existing legal obligations that require recognition of a liability include but are not limited to:

- Decommissioning nuclear facilities.
- Dismantling, restoring, and reclamation of oil and gas properties.
- Certain closure, reclamation, and removal costs of mining facilities.
- Closure and postclosure costs of landfills.

In order to capture the benefits of these long-lived assets, **the company is generally legally obligated for the costs associated with retirement of the asset, whether the company hires another party to perform the retirement activities or performs the activities with its own workforce and equipment.** Environmental liabilities give rise to various recognition patterns. For example, the obligation may arise at the outset of the asset's use (e.g., erection of an oil rig), or it may build over time (e.g., a landfill that expands over time).

Measurement.

A company initially measures an environmental liability at the best estimate of its future costs. The estimate should reflect the amount a company would pay in an active market to settle its obligation (essentially fair value). While active markets do not exist for many environmental liabilities, companies should estimate fair value based on the best information available. Such information could include market prices of similar liabilities, if available. Alternatively, companies may use present value techniques to estimate fair value.

Recognition and allocation.

To record an environmental liability in the financial statements, a company includes the cost associated with the environmental liability in the carrying amount of the related long-lived asset, and records a liability for the same amount. It records the environmental costs as part of the related asset because these costs are tied to operating the asset and are necessary to prepare the asset for its intended use. Therefore, the specific asset (e.g., mine, drilling platform, nuclear power plant) should be increased because the future economic benefit comes from the use of this productive asset.

Companies should not record the capitalized environmental costs in a separate account because there is no future economic benefit that can be associated with these costs alone.

In subsequent periods, companies allocate the cost of the asset to expense over the period of the related asset's useful life. Companies may use the straight-line method for this allocation, as well as other systematic and rational allocations.

Example of accounting provisions.

To illustrate the accounting for these types of environmental liabilities, assume that on January 1, 2022, Wildcat Oil Company erected an oil platform in the Gulf of Mexico. Wildcat is legally required to dismantle and remove the platform at the end of its useful life, estimated to be five years. Wildcat estimates that dismantling and removal will cost \$1,000,000. Based on a 10 percent discount rate, the fair value of the environmental liability is estimated to be \$620,920 ($\$1,000,000 \times .62092$). Wildcat records this liability as follows.

January 1, 2022		
Drilling Platform	620,920	
Environmental Liability		620,920

During the life of the asset, Wildcat allocates the asset cost to expense. Using the straight-line method, Wildcat makes the following entries to record this expense.

December 31, 2022, 2023, 2024, 2025, 2026		
Depreciation Expense ($\$620,920 \div 5$)	124,184	
Accumulated Depreciation—Plant Assets		124,184

In addition, Wildcat must accrue interest expense each period. Wildcat records interest expense and the related increase in the environmental liability on December 31, 2022, as follows.

December 31, 2022		
Interest Expense ($\$620,920 \times .10$)	62,092	
Environmental Liability		62,092

On January 10, 2027, Wildcat contracts with Rig Reclaimers, Inc. to dismantle the platform at a contract price of \$995,000. Wildcat makes the following journal entry to record settlement of the liability.

January 10, 2027		
Environmental Liability	1,000,000	
Gain on Settlement of Environmental Liability		5,000
Cash		995,000

As indicated, as a result of the discounting, Wildcat incurs two types of costs: (1) an operating cost related to depreciation expense, and (2) a finance cost related to interest expense. The recording of the interest expense is often referred to as “unwinding the discount,” which refers to the fact that the obligation was discounted as a result of present value computations. This discount can be substantial. For example, **BP** (GBR) in a recent year changed its policy related to the appropriate discount rate to use to estimate its provision for decommissioning and environmental costs. The 0.5 percent decrease in the discount rate resulted in a \$2.415 billion decrease in the liability.

A company like Wildcat can consider future events when evaluating the measurement of the liability. For example, a technological development that will make restoration less expensive and is virtually certain to happen should be considered. Generally, future events are limited to those that are virtually certain to happen, as well as technology advances or proposed legislation that will impact future costs.

Evolving Issue

Greenhouse Gases: Let's Be Standard-Setters

Here is your chance to determine what to do about a very fundamental issue—how to account for greenhouse gases (GHG), often referred to as carbon emissions. Many governments are trying a market-based system, in which companies pay for an excessive amount of carbon emissions put into the atmosphere. In this market-based system, companies are granted carbon allowance permits. Each permit allows them to discharge, as an example, one metric ton of carbon dioxide (CO₂). In some cases, companies may receive a number of these permits free—in other situations, they must pay for them. Other approaches require companies to pay only when they exceed a certain amount.

The question is how to account for these permits and related liabilities. For example, what happens when the permits issued by the government are free? Should an asset and revenue be reported? And if an asset is recorded, should the debit be to an intangible asset or inventory? Also, should the company recognize a liability related to its pollution? And how do we account for companies that have to purchase permits because they have exceeded their allowance? Two views seem to have emerged. The first is referred to as the **net liability approach**. In this approach, a company does not recognize an asset or liability. A company only recognizes a liability once GHG exceed the permits granted.

To illustrate, Holton Refinery receives permits on January 1, 2022, representing the right to emit 10,000 tons of GHG for the year 2022. Other data:

- The market price of each permit at date of issuance is €10 per ton.
- During the year, Holton emits 12,000 tons.
- The market price for a permit is €16 per ton at December 31, 2022.

Under the net liability approach, Holton records only a liability of €32,000 for the additional amount that it must pay for the 2,000 permits it must purchase at €16 per ton.

Another approach is referred to as the **government grant approach**. In this approach, permits granted by the government are recorded at their fair value based on the initial price of €10 per ton. The asset recorded is an intangible asset. At the same time, an unearned revenue account is credited, which is subsequently recognized in income over the 2022 year. During 2022, a liability and a related emission expense of €132,000 is recognized (10,000 tons × €10 + 2,000 tons × €16). The following chart compares the results of each approach on the financial statements.

Net Liability Approach		Government Grant Approach
Income Statement		
Revenues	€ 0	€100,000
Emission expenses	<u>32,000</u>	<u>132,000</u>
Net loss	<u>€32,000</u>	<u>€ 32,000</u>
Statement of Financial Position		
Assets	€ 0	€100,000
Liabilities	32,000	132,000

So what do you think—net liability or government grant approach? As indicated, companies presently can report this information either way, plus some other variants which were not mentioned here. Please feel free to contact the IASB regarding your views.

Onerous Contract Provisions

Sometimes, companies have what are referred to as **onerous contracts**. These contracts are ones in which “the unavoidable costs of meeting the obligations exceed the economic benefits expected to be received.” [9] An example of an onerous contract is a loss recognized on unfavorable non-cancelable purchase commitments related to inventory items (discussed in [Chapter 9](#)).

To illustrate another situation, assume that Sumart Sports operates profitably in a factory that it has leased and on which it pays monthly rentals. Sumart decides to relocate its operations to another facility. However, the lease on the old facility continues for the next three years. Unfortunately, Sumart cannot cancel the lease, nor will it be able to sublet the factory to another party. The expected costs to satisfy this onerous contract are €200,000. In this case, Sumart makes the following entry.

Loss on Lease Contract	200,000	
Lease Contract Liability		200,000

The expected costs should reflect the least net cost of exiting from the contract, which is the lower of (1) the cost of fulfilling the contract, or (2) the compensation or penalties arising from failure to fulfill the contract.

To illustrate, assume the same facts as above for the Sumart example. The expected costs to fulfill the contract are €200,000. However, Sumart can cancel the lease by paying a penalty of €175,000. In this case, Sumart should record the liability at €175,000.

[Illustration 13.12](#) indicates how **Nestlé Group** (CHE) discloses onerous contracts.

Nestlé Group

Notes to the financial statements (partial)

Other Provisions

Other provisions are mainly constituted by onerous contracts and various damage claims having occurred during the year but not covered by insurance companies. Onerous contracts result from termination of contracts or supply agreements above market prices in which the unavoidable costs of meeting the obligations under the contracts exceed the economic benefits expected to be received or for which no benefits are expected to be received.

[ILLUSTRATION 13.12](#) Onerous Contract Disclosure

Restructuring Provisions

The accounting for **restructuring** provisions is controversial. Once companies make a decision to restructure part of their operations, they have the temptation to charge as many costs as possible to this provision. The rationale: Many believe analysts often dismiss these costs as not part of continuing operations and therefore somewhat irrelevant in assessing the overall performance of the company. Burying as many costs as possible in a restructuring provision therefore permits companies to provide a more optimistic presentation of current operating results.

On the other hand, companies are continually in a state of flux, and what constitutes a restructuring is often difficult to assess. One thing is certain—companies should not be permitted to provide for future operating losses in the current period when accounting for restructuring costs. Nor should they be permitted to bury operating costs in the restructuring cost classification. [10]

As a consequence, IFRS is very restrictive regarding when a restructuring provision can be recorded and what types of costs may be included in a restructuring provision. Restructurings are defined as a “program that is planned and controlled by management and materially changes either (1) the scope of a business undertaken by the company; or (2) the manner in which that business is conducted.”

Examples of restructurings are the sale of a line of business, changes in management structures such as eliminating a layer of management, or closure of operations in a country.

For a company to record restructuring costs and a related liability, it must meet the general requirements for recording provisions discussed earlier. In addition, to assure that the restructuring is valid, companies are required to have a detailed formal plan for the restructuring and to have raised a valid expectation to those affected by implementation or announcement of the plan.

The case presented in [Illustration 13.13](#) provides an example of a restructuring.

Closure of Division

Facts: On December 12, 2022, Rodea Group decided to close down a division making solar panels. On December 20, 2022, a detailed plan for closing down the division was finalized; letters were sent to customers warning them to seek an alternative source of supply and termination notices were sent to the staff of the division. Rodea estimates that it is probable that it will have €500,000 in restructuring costs.

Question: Should Rodea report a restructuring liability if it has costs related to the restructuring?

Solution: (1) The past obligating event for Rodea is the communication of the decision to the customers and employees, which gives rise to a constructive obligation on December 31, 2022, because it creates a valid expectation that the division will be closed. (2) An outflow of resources in settlement is probable and reliably estimated. A provision is recognized at December 31, 2022, for the best estimate of closing the division, in this case, €500,000.

[ILLUSTRATION 13.13](#) Accounting for Restructuring

Only direct incremental costs associated with the restructuring may be included in the restructuring provision. At the same time, IFRS provides specific guidance related to certain costs and losses that should be excluded from the restructuring provision. [Illustration 13.14](#) provides a summary of costs that may and may not be included in a restructuring provision.

Costs Included (direct, incremental)	Costs Excluded
<ul style="list-style-type: none"> • Employee termination costs related directly to the restructuring. • Contract termination costs, such as lease termination penalties. • Onerous contract provisions. 	<ul style="list-style-type: none"> • Investment in new systems. • Lower utilization of facilities. • Costs of training or relocating staff. • Costs of moving assets or operations. • Administration or marketing costs. • Allocations of company overhead. • Expected future operating costs or expected operating losses unless they relate to an onerous contract.

[ILLUSTRATION 13.14](#) Costs Included/Excluded from Restructuring Provision

In general, the costs-excluded list is comprised of expenditures that relate to the future operations of the business and are not liabilities associated with the restructuring as of the end of the reporting period. Therefore, such expenditures are recognized on the same basis as if they arose independently of a restructuring. [11]

Self-Insurance

As discussed earlier, liabilities are not recorded for general risks (e.g., losses that might arise due to poor expected economic conditions). Similarly, companies do not record liabilities for more specific future risks such as allowances for repairs. These items do not meet the definition of a liability because they do not arise from a past transaction but instead relate to future events.

Some companies take out insurance policies against the potential losses from fire, flood, storm, and accident. Other companies do not. The reasons: Some risks are not insurable, the insurance rates are prohibitive (e.g., earthquakes and riots), or the companies make a business decision to self-insure. Self-insurance is another item that is not recognized as a provision.

Despite its name, **self-insurance** is **not insurance but risk assumption**. Any company that assumes its own risks puts itself in the position of incurring expenses or losses as they occur. There is little theoretical justification for the establishment of a liability based on a hypothetical charge to insurance expense (see **Underlying Concepts**). This is “as if” accounting. The conditions for accrual stated in IFRS are not satisfied prior to the occurrence of the event. Until that time, there is no diminution in the value of the property. And unlike an insurance company, which has contractual obligations to reimburse policyholders for losses, a company can have no such obligation to itself and, hence, no liability either before or after the occurrence of damage.¹⁰

Underlying Concepts

Even if companies can estimate the amount of losses with a high degree of certainty, the losses are not liabilities because they result from a future event and not from a past event.

Exposure to **risks of loss resulting from uninsured past injury to others**, however, is an existing condition involving uncertainty about the amount and timing of losses that may develop. A company with a fleet of vehicles for example, would have to accrue uninsured losses resulting from injury to others or damage to the property of others that took place prior to the date of the financial statements (if the experience of the company or other information enables it to make a reasonable estimate of the liability).¹¹ However, it should not establish a liability for **expected future injury** to others or damage to the property of others, even if it can reasonably estimate the amount of losses.

Disclosures Related to Provisions

The disclosures related to provisions are extensive. A company must provide a reconciliation of its beginning to ending balance for each major class of provisions, identifying what caused the change during the period. In addition, the provision must be described and the expected timing of any outflows disclosed. Also, disclosure about uncertainties related to expected outflows as well as expected reimbursements should be provided. [12] **Illustration 13.15** provides an example, based on the provisions note in **Nokia**’s (FIN) annual report.

Nokia

As of December 31, 2018, the restructuring provision amounted to EUR 493 million including personnel restructuring related costs, such as real estate exit costs. The provision consists of EUR 427 million global to the announcement on April 6, 2016 and EUR 66 million relating to the restructuring provisions recognized previously announced restructuring programs. The majority of the restructuring-related cash outflows is expected to occur over the next two years.

The warranty provision relates to sold products. Cash outflows related to the warranty provision are generally expected to occur within the next 18 months.

The litigation provision includes estimated potential future settlements for litigation. Cash outflows related to the litigation provision are inherently uncertain and generally occur over several periods.

The environmental provision includes estimated costs to sufficiently clean and refurbish contaminated sites, where necessary, and where necessary, continuing surveillance at sites where the environmental remediation costs are significant. Cash outflows related to the environmental liability are inherently uncertain and generally occur over several periods.

The project loss provision relates to onerous customer contracts. Cash outflows related to the project loss provision are generally expected to occur over the next 12 months.

The divestment-related provision relates to the sale of businesses, and includes certain liabilities where required to indemnify the buyer. Cash outflows related to the divestment-related provision are inherent

The material liability provision relates to non-cancelable purchase commitments with suppliers, in excess of requirements as of each reporting date. Cash outflows related to the material liability provision are expected over the next 12 months.

Other provisions include provisions for various contractual obligations, other obligations and uncertain outflows related to other provisions are generally expected to occur over the next two years.

ILLUSTRATION 13.15 Provisions Disclosure

Contingencies

LEARNING OBJECTIVE 3

Explain the accounting for loss and gain contingencies.

In a general sense, all provisions are contingent because they are uncertain in timing or amount. However, IFRS uses the term “contingent” for liabilities and assets that are **not** recognized in the financial statements. [13]

Contingent Liabilities

Contingent liabilities are not recognized in the financial statements because they are (1) a possible obligation (not yet confirmed as a present obligation), (2) a present obligation for which it is not probable that payment will be made, or (3) a present obligation for which a reliable estimate of the obligation cannot be made. Examples of contingent liabilities are:

- A lawsuit in which it is only possible that the company might lose.
- A guarantee related to collectibility of a receivable.

Illustration 13.16 presents the general guidelines for the accounting and reporting of contingent liabilities.

Outcome	Probability*	Accounting Treatment
Virtually certain	At least 90%	Report as liability (provision).
Probable (more likely than not)	51–89% probable	Report as liability (provision).
Possible but not probable	5–50%	Disclosure required.
Remote	Less than 5%	No disclosure required.
	*In practice, the percentages for virtually certain and remote may deviate from those presented here.	

ILLUSTRATION 13.16 Contingent Liability Guidelines

Unless the possibility of any outflow in settlement is remote, companies should disclose the contingent liability at the end of the reporting period, providing a brief description of the nature of the contingent liability and, where practicable:

1. An estimate of its financial effect;
2. An indication of the uncertainties relating to the amount or timing of any outflow; and
3. The possibility of any reimbursement.

[Illustration 13.17](#) provides a disclosure by **Barloworld Limited** (ZAF) related to its contingent liabilities.

Barloworld Limited

(R in millions)	2018	2017
Contingent liabilities (in part)		
Performance guarantees given to customers, other guarantees and claims	872	785
Buy-back and repurchase commitments not reflected on the statement of financial position	94	126

During 2018 the Barloworld Equipment division has entered into a 25% risk share agreement with Caterpillar Financial in South Africa and Portugal. The risk share agreement only relates to certain agreed upon customer risk profiles and relates to exposure at default less any recoveries. As of 30 September 2018 the maximum exposure of this guarantee was estimated to be R278 million.

In October 2017, the Barloworld Equipment South Africa (BWE SA) business received notification from the Competition Commission that it is investigating a complaint against the Contractors Plant Hire Association of which Barloworld Equipment was a member. The matter is ongoing but no action has been taken by the Competition Authorities.

The company and its subsidiaries are continuously subject to various tax and customs audits in the territories in which it operates. While in most cases the companies are able to successfully defend the tax positions taken, the outcomes of some of the audits are being disputed. Where, based on our own judgement and the advice of external legal counsel, we believe there is a probable likelihood of the group being found liable, adequate provisions have been recognised in the financial statements.

ILLUSTRATION 13.17 Contingent Liability Disclosure

Contingent Assets

A **contingent asset** is a possible asset that arises from past events and whose existence will be confirmed by the occurrence or non-occurrence of uncertain future events not wholly within the control of the company. [\[14\]](#) Typical contingent assets are:

1. Possible receipts of monies from gifts, donations, and bonuses.
2. Possible refunds from the government in tax disputes.
3. Pending court cases with a probable favorable outcome.

Contingent assets are not recognized on the statement of financial position. If realization of the contingent asset is virtually certain, it is no longer considered a contingent asset and is recognized as an asset. **Virtually certain** is generally interpreted to be at least a probability of 90 percent or more.

The general rules related to contingent assets are presented in [Illustration 13.18](#).

Outcome	Probability*	Accounting Treatment
Virtually certain	At least 90% probable	Report as asset (no longer contingent).
Probable (more likely than not)	51–90% probable	Disclose.
Possible but not probable	5–50%	No disclosure required.
Remote	Less than 5%	No disclosure required.
*In practice, the percentages for virtually certain and remote may deviate from those presented here.		

ILLUSTRATION 13.18 Contingent Asset Guidelines

Contingent assets are disclosed when an inflow of economic benefits is considered more likely than not to occur (greater than 50 percent). However, it is important that disclosures for contingent assets avoid giving misleading indications of the likelihood of income arising. As a result, it is not surprising that the thresholds for allowing recognition of contingent assets are more stringent than those for liabilities.

What might be an example of a contingent asset that becomes an asset to be recorded? To illustrate, assume that Marcus Realty leases a property to **Marks and Spencer plc (M&S)** (GBR). The contract is non-cancelable for five years. On December 1, 2022, before the end of the contract, M&S withdraws from the contract and is required to pay £245,000 as a penalty. At the time M&S cancels the contract, a receivable and related income should be reported by Marcus. The disclosure includes the nature and, where practicable, the estimated financial effects of the asset.

Presentation and Analysis

LEARNING OBJECTIVE 4

Indicate how to present and analyze liability-related information.

Presentation of Current Liabilities

In practice, current liabilities are usually recorded and reported in financial statements at their full maturity value. Because of the short time periods involved, frequently less than one year, the difference between the present value of a current liability and the maturity value is usually not large. The profession accepts as immaterial any slight overstatement of liabilities that results from carrying current liabilities at maturity value.

The current liabilities accounts are commonly presented after non-current liabilities in the statement of financial position. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. **Illustration 13.19** presents an adapted excerpt of **Wilmar International Limited's** (SGP) financial statements that is representative of the reports of large companies.

Wilmar International Limited

December 31

(in thousands)

Current assets	2018	2017
Inventories	\$ 7,911,302	\$ 8,223,606
Trade receivables	4,349,147	4,101,058
Other financial receivables	7,517,691	5,354,750
Other non-financial assets	1,467,301	1,153,055
Derivative financial instruments	524,989	368,166
Investment securities	326,164	421,328
Other bank deposits	1,719,077	1,502,726
Cash and bank balances	1,650,478	1,454,708
	<u>\$25,466,149</u>	<u>\$22,579,397</u>
Current liabilities		
Trade payables	\$ 1,441,729	\$ 1,094,846
Other financial payables	1,492,732	1,397,906
Other non-financial liabilities	411,577	400,616
Derivative financial instruments	321,857	503,797
Loans and borrowings	17,821,225	16,130,316
Tax payables	139,746	159,648
	<u>\$12,628,866</u>	<u>\$19,687,129</u>

ILLUSTRATION 13.19 Current Assets and Current Liabilities

Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. Companies should clearly identify secured liabilities, as well as indicate the related assets pledged as collateral. If the due date of any liability can be extended, a company should disclose the details. Companies should not offset current liabilities against assets that they will apply to their liquidation. As discussed earlier, current maturities of long-term debt are classified as current liabilities.

Analysis of Current Liabilities

The distinction between current and non-current liabilities is important. It provides information about the liquidity of the company. Liquidity regarding a liability is the expected time to elapse before its payment. In other words, a liability soon to be paid is a current liability. A liquid company is better able to withstand a financial downturn. Also, it has a better chance of taking advantage of investment opportunities that develop.

Analysts use certain basic ratios such as net cash flow provided by operating activities to current liabilities, and the turnover ratios for receivables and inventory, to assess liquidity. Two other ratios used to examine liquidity are the current ratio and the acid-test ratio.

Current Ratio

The **current ratio** is the ratio of total current assets to total current liabilities. [Illustration 13.20](#) shows its formula.

Current Ratio	=	$\frac{\text{Current Assets}}{\text{Current Liabilities}}$
----------------------	---	------------------------------------------------------------

ILLUSTRATION 13.20 Formula for Current Ratio

The ratio is frequently expressed as a coverage of so many times. Sometimes it is called the **working capital ratio** because working capital is the excess of current assets over current liabilities.

A satisfactory current ratio does not provide information on the portion of the current assets that may be tied up in slow-moving inventories. With inventories, especially raw materials and work in process, there is a question of how long it will take to transform them into the finished product and what ultimately will be realized in the sale of the merchandise. Eliminating the inventories, along with any prepaid expenses, from the amount of current assets might provide better information for short-term creditors. Therefore, some analysts use the acid-test ratio in place of the current ratio.

Acid-Test Ratio

Many analysts favor an **acid-test** or **quick ratio** that relates total current liabilities to cash, short-term investments, and receivables. [Illustration 13.21](#) shows the formula for this ratio. As you can see, the acid-test ratio does not include inventories and prepaid expenses.

Acid-Test Ratio	=	$\frac{\text{Cash} + \text{Short-Term Investments} + \text{Net Receivables}}{\text{Current Liabilities}}$
------------------------	---	-----------------------------------------------------------------------------------------------------------

ILLUSTRATION 13.21 Formula for Acid-Test Ratio

To illustrate the computation of these two ratios, we use the information for **Wilmar International Limited** (SGP) in [Illustration 13.19](#). [Illustration 13.22](#) shows the computation of the current and acid-test ratios for Wilmar.

Current Ratio	=	$\frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$25,466,149}{\$12,628,866} = 2.02 \text{ times}$
Acid-Test Ratio	=	$\frac{\text{Cash} + \text{Short-Term Investments} + \text{Net Receivables}}{\text{Current Liabilities}} = \frac{\$16,087,546}{\$12,628,866} = 1.27$

Learning Objectives Review

1 Describe the nature, valuation, and reporting of current liabilities.

Current liabilities. A current liability is generally reported if one of two conditions exists: (1) the liability is expected to be settled within its normal operating cycle, or (2) the liability is expected to be settled within 12 months after the reporting date. This definition has gained wide acceptance because it recognizes operating cycles of varying lengths in different industries. Theoretically, liabilities should be measured by the present value of the future outlay of cash required to liquidate them. In practice, companies usually record and report current liabilities at their full maturity value.

There are several types of current liabilities, such as (1) accounts payable, (2) notes payable, (3) current maturities of long-term debt, (4) dividends payable, (5) customer advances and deposits, (6) unearned revenues, (7) taxes payable, and (8) employee-related liabilities.

Short-term debt expected to be refinanced. A short-term obligation is excluded from current liabilities if, at the reporting date, the company has a right to defer settlement of the liability (e.g., a refinancing) for at least 12 months after the reporting date.

Employee-related liabilities. The employee-related liabilities are (1) payroll deductions, (2) compensated absences, and (3) bonus agreements.

2 Explain the accounting for different types of provisions.

A provision is a liability of uncertain timing or amount (sometimes referred to as an estimated liability). Provisions are very common and may be reported as either current or non-current depending on the date of expected payment. Common types of provisions are (1) litigation obligations, (2) warranty obligations, (3) consideration payable, (4) environmental obligations, (5) onerous obligations, and (6) restructuring obligations. Companies accrue an expense and related liability for a provision only if the following three conditions are met: (1) a company has a present obligation (legal or constructive) as a result of a past event, (2) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and (3) a reliable estimate can be made of the amount of the obligation. If any of these three conditions is not met, no provision is recognized.

3 Explain the accounting for loss and gain contingencies.

Contingent liabilities are not recognized in the financial statements because they are possible obligations (not yet confirmed as present obligations) or they are present obligations but it is not probable that payment will be necessary or a reliable estimate of the obligations cannot be made.

Contingent assets are not recognized on the statement of financial position. If realization of the contingent asset is virtually certain, it is no longer considered a contingent asset and is recognized as an asset. Virtually certain is generally interpreted to be at least a probability of 90 percent or more.

4 Indicate how to present and analyze liability-related information.

Current liabilities are usually recorded and reported in financial statements at full maturity value. Current liabilities are commonly presented after non-current liabilities in the statement of financial position. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Two ratios used to analyze liquidity are the current and acid-test ratio.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Listed below are selected transactions of Baileys' Department Store for the current year ending December 31.

1. On December 5, the store received \$500 from the Jackson Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.

2. During December, cash sales totaled \$798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
3. On December 10, the store purchased for cash three delivery trucks for \$120,000. The trucks were purchased in a state that applies a 5% sales tax.
4. Baileys' determined it will cost \$100,000 to restore the area (considered a land improvement) surrounding one of its parking lots, when the store closes in 2 years. Baileys' estimates the fair value of the obligation at December 31 is \$84,000.
5. As a result of uninsured accidents during the year, personal injury suits for \$350,000 and \$60,000 have been filed against the company. It is the judgment of Baileys' legal counsel that an unfavorable outcome is unlikely in the \$60,000 case but that an unfavorable verdict approximating \$250,000 (reliably estimated) will probably result in the \$350,000 case.
6. Baileys' Midwest store division, consisting of 12 stores in "Tornado Alley," is uninsurable because of the special risk of injury to customers and employees, losses due to severe weather, and subpar construction standards in older malls. The year 2022 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year in the last decade (ranging from \$60,000 to \$700,000), management is certain that next year the company will probably not be so fortunate.

Instructions

- a. Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.
- b. For items 5 and 6, indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

Solution

a.

1. Dec. 5	Cash	500	
	Due to Customer		500
2. Dec. 1–31	Cash	798,000	
	Sales Revenue ($\$798,000 \div 1.05$)		760,000
	Sales Taxes Payable ($\$760,000 \times .05$)		38,000
3. Dec. 10	Trucks ($\$120,000 \times 1.05$)	126,000	
	Cash		126,000
4. Dec. 31	Land Improvements	84,000	
	Environmental Liability		84,000
5.	Lawsuit Loss	250,000	
	Lawsuit Liability		250,000
6. No entry required.			

b.

5. A loss and a liability have been recorded in the first case assuming (i) information is available that indicates it is probable that a liability had been incurred at the date of the financial statements and (ii) the amount is reasonably estimable. That is, the occurrence of the

uninsured accidents during the year plus the outstanding injury suits and the attorney's estimate of probable loss requires recognition of a loss contingency.

6. Even though Baileys' Midwest store division is uninsurable due to high risk and has sustained repeated losses in the past, as of the statement of financial position date no assets have been impaired or liabilities incurred, nor is an amount reasonably estimable. Therefore, this situation does not satisfy the criteria for recognition of a loss contingency. Also, unless a casualty has occurred or there is some other evidence to indicate impairment of an asset prior to the issuance of the financial statements, there is no disclosure required relative to a loss contingency. Disclosure is required when one or more of the criteria for a loss contingency are not satisfied, and there is a reasonable possibility that a liability may have been incurred or an asset impaired, or it is probable that a claim will be asserted and there is a reasonable possibility of an unfavorable outcome.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

1. Distinguish between a current liability and a non-current liability.
2. Assume that your friend Hans Jensen, who is a music major, asks you to define and discuss the nature of a liability. Assist him by preparing a definition of a liability and by explaining to him what you believe are the elements or factors inherent in the concept of a liability.
3. Why is the liabilities section of the statement of financial position of primary significance to bankers?
4. How are current liabilities related to a company's operating cycle?
5. Leong Hock, a newly hired loan analyst, is examining the current liabilities of a company loan applicant. He observes that unearned revenues have declined in the current year compared to the prior year. Is this a positive indicator about the client's liquidity? Explain.
6. How is present value related to the concept of a liability?
7. Explain how to account for a zero-interest-bearing note payable.
8. How should a debt callable by the creditor be reported in the debtor's financial statements?
9. Under what conditions should a short-term obligation be excluded from current liabilities?
10. What evidence is necessary to demonstrate the ability to defer settlement of short-term debt?
11. Discuss the accounting treatment or disclosure that should be accorded a declared but unpaid cash dividend; an accumulated but undeclared dividend on cumulative preference shares; and a share dividend distributable.
12. How does unearned revenue arise? Why can it be classified properly as a current liability? Give several examples of business activities that result in unearned revenues.
13. What are compensated absences?
14. Under what conditions must an employer accrue a liability for the cost of compensated absences?
15. What do the terms vested rights, accumulated rights, and non-accumulated rights mean in relation to compensated absences? Explain their accounting significance.
16. Faith Battle operates a health-food store, and she has been the only employee. Her business is growing, and she is considering hiring some additional staff to help her in the store. Explain to her the various payroll deductions that she will have to account for, including their potential impact on her financial statements, if she hires additional staff.

17. Explain the difference between a value-added tax and a sales tax.
18. Define a provision, and give three examples of a provision.
19. Under what conditions should a provision be recorded?
20. Distinguish between a current liability, such as accounts payable, and a provision.
21. How are the terms “probable” and “virtually certain” related to provisions and contingencies?
22. Explain the difference between a legal obligation and a constructive obligation.
23. Explain the accounting for an assurance-type warranty.
24. Grant plc has had a record-breaking year in terms of growth in sales and profitability. However, market research indicates that it will experience operating losses in two of its major businesses next year. The controller has proposed that the company record a provision for these future losses this year since it can afford to take the charge and still show good results. Advise the controller on the appropriateness of this charge.
25. How does an assurance-type warranty differ from a service-type warranty?
26. What is an onerous contract? Give two examples of an onerous contract.
27. Define a restructuring. What costs should not be accrued in a restructuring?
28. When must a company recognize an environmental provision?
29. Should a liability be recorded for risk of loss due to lack of insurance coverage? Discuss.
30. What factors must be considered in determining whether to record a liability for pending litigation? For threatened litigation?
31. Within the current liabilities section, how do you believe the accounts should be listed? Defend your position.
32. How does the acid-test ratio differ from the current ratio? How are they similar?
33. When should liabilities for each of the following items be recorded on the books of an ordinary business?
 - a. Acquisition of goods by purchase on credit.
 - b. Onerous contract.
 - c. Special bonus to employees.
 - d. Warranty.
 - e. Profit-sharing payment.

Brief Exercises

BE13.1 (LO 1) Roley SA uses a periodic inventory system and the gross method of accounting for purchase discounts. On July 1, Roley purchased €60,000 of inventory, terms 2/10, n/30, FOB shipping point. Roley paid freight costs of €1,200. On July 3, Roley returned damaged goods and received credit of €6,000. On July 10, Roley paid for the goods. Prepare all necessary journal entries for Roley.

BE13.2 (LO 1) Upland Company borrowed \$40,000 on November 1, 2021, by signing a \$40,000, 9%, 3-month note. Prepare Upland’s November 1, 2021, entry; the December 31, 2021, annual adjusting entry; and the February 1, 2022, entry.

BE13.3 (LO 1) Takemoto Ltd. borrowed ¥60,000,000 on November 1, 2021, by signing a ¥61,350,000 3-month, zero-interest-bearing note. Prepare Takemoto’s November 1, 2021, entry; the December 31, 2021, annual adjusting entry; and the February 1, 2022, entry.

BE13.4 (LO 1) At December 31, 2021, Burr AG owes €500,000 on a note payable due February 15, 2022. (a) If Burr expects to refinance the obligation by issuing a long-term note on February 14 and

using the proceeds to pay off the note due February 15, how much (if any) of the €500,000 should be reported as a current liability at December 31, 2021? (b) If Burr pays off the note on February 15, 2022, and then borrows €1,000,000 on a long-term basis on March 1, how much (if any) of the €500,000 should be reported as a current liability at December 31, 2021, the end of the fiscal year?

BE13.5 (LO 1) Herzog SE has a long-term debt with a maturity date of November 2, 2023. On October 10, 2021, it breaches a covenant related to this debt and the loan becomes due on demand. Herzog reaches an agreement with the lender on January 5, 2022, to provide a waiver of the breach. The financial statement reporting date is December 31, 2021, and the financial statements are authorized for issue on March 16, 2022. Explain whether the debt obligation should be classified as current or non-current.

BE13.6 (LO 1) Sport Pro Magazine sold 12,000 annual subscriptions on August 1, 2022, for €18 each. Prepare Sport Pro's August 1, 2022, journal entry and the December 31, 2022, annual adjusting entry.

BE13.7 (LO 1) Dillons AS made credit sales of €30,000 which are subject to 6% VAT. The company also made cash sales which totaled €20,670 including the 6% VAT. (a) Prepare the entry to record Dillons' credit sales. (b) Prepare the entry to record Dillons' cash sales.

BE13.8 (LO 1) Henning plc sells its products to Len Taylor, a private individual, for €5,000. The sale is subject to a VAT of 15%. Prepare the journal entry to record the sale by Henning.

BE13.9 (LO 1) Lexington AG's weekly payroll of €24,000 included Social Security taxes withheld of €1,920, income taxes withheld of €2,990, and insurance premiums withheld of €250. Prepare the journal entry to record Lexington's payroll.

BE13.10 (LO 1) Kasten SA provides paid vacations to its employees. At December 31, 2022, 30 employees have each earned 2 weeks of vacation time. The employees' average salary is €700 per week. Prepare Kasten's December 31, 2022, adjusting entry.

BE13.11 (LO 1) Mayaguez Ltd. provides its officers with bonuses based on net income. For 2021, the bonuses total £350,000 and are paid on February 15, 2022. Prepare Mayaguez's December 31, 2021, adjusting entry and the February 15, 2022, entry.

BE13.12 (LO 2, 3) Scorsese A.S. is involved in a lawsuit at December 31, 2022. (a) Prepare the December 31 entry assuming it is probable that Scorsese will be liable for 900,000 as a result of this suit. (b) Prepare the December 31 entry, if any, assuming it is *not* probable that Scorsese will be liable for any payment as a result of this suit.

BE13.13 (LO 2, 3) Buchanan Company recently was sued by a competitor for patent infringement. Attorneys have determined that it is probable that Buchanan will lose the case and that a reasonable estimate of damages to be paid by Buchanan is \$300,000. In light of this case, Buchanan is considering establishing a \$100,000 self-insurance allowance. What entry or entries, if any, should Buchanan record to recognize this provision?

BE13.14 (LO 2) Calaf's Drillers erects and places into service an off-shore oil platform on January 1, 2022, at a cost of £10,000,000. Calaf estimates it will cost £1,000,000 to dismantle and remove the platform at the end of its useful life in 10 years, which it is legally obligated to do. (The fair value at January 1, 2022, of the dismantle and removal costs is £450,000.) Prepare the entry to record the environmental liability.

BE13.15 (LO 2) Streep Factory provides a 2-year warranty with one of its products which was first sold in 2022. Streep sold \$1,000,000 of products subject to the warranty. Streep expects \$125,000 of warranty costs over the next 2 years. In that year, Streep spent \$70,000 servicing warranty claims. Prepare Streep's journal entry to record the sales (ignore cost of goods sold) and the December 31 adjusting entry, assuming the expenditures are inventory costs.

BE13.16 (LO 2) Leppard AG sells DVD players. The company also offers its customers a 4-year warranty contract. Early in 2022, Leppard sold 20,000 warranty contracts at €99 each. The company spent €180,000 servicing warranties during 2022. Prepare Leppard's journal entries for (a) the sale of

contracts, (b) the cost of servicing the warranties, and (c) the recognition of warranty revenue. Assume the service costs are inventory costs.

BE13.17 (LO 2) Wynn Company offers a set of building blocks to customers who send in 3 box tops from Wynn cereal, along with 50¢. The block sets cost Wynn \$1.10 each to purchase and 60¢ each to mail to customers. During 2022, Wynn sold 1,200,000 boxes of cereal. The company expects 30% of the box tops to be sent in. During 2022, 120,000 box tops were redeemed. Prepare Wynn's December 31, 2022, adjusting entry.

BE13.18 (LO 2, 3) Cargo Company purchased land from Hazard Company for €20,000,000 on September 13, 2022. On October 31, 2022, it learned that the site was contaminated. As a result, Cargo sued Hazard for €4,000,000. Cargo's attorneys believe that their odds of winning the case are 75%. Indicate how Cargo should account for this lawsuit at December 31, 2022.

BE13.19 (LO 2) Management at Eli plc has decided to close one of its plants. It will continue to operate the plant for approximately one year. It anticipates the following costs will be incurred as a result of this closing: (1) termination compensation costs, (2) marketing costs to rebrand the company image, (3) future losses for keeping the plant open for another year, and (4) lease termination costs related to the closing. Indicate which, if any, of these costs should not be considered restructuring costs for purposes of establishing a provision.

BE13.20 (LO 2) Luckert NV decided to cancel an existing property lease in one of its divisions, as its operations in this area were no longer profitable. Unfortunately, Luckert has a non-cancelable lease and cannot sublease the property. The present value of future lease payments under the lease is €2,000,000. The penalty to break the lease is €1,450,000. Prepare the journal entry to record this cancellation.

Exercises

E13.1 (LO 1) (Statement of Financial Position Classification) Consider the following items.

- a. Accrued vacation pay.
- b. Income taxes payable.
- c. Service-type warranties on appliance sales.
- d. Social Security taxes payable.
- e. Personal injury claim pending.
- f. Unpaid bonus to officers.
- g. Deposit received from customer to guarantee performance of a contract.
- h. Value-added tax payable.
- i. Gift certificates sold to customers but not yet redeemed.
- j. Premium offers outstanding.
- k. Accounts payable.
- l. Employee payroll deductions unremitted.
- m. Current maturities of long-term debts to be paid from current assets.
- n. Cash dividends declared but unpaid.
- o. Dividends in arrears on preference shares.
- p. Loans to officers.

Instructions

How would each of the preceding items be reported on the statement of financial position?

E13.2 (LO 1) (Accounts and Notes Payable) The following are selected 2022 transactions of Darby Corporation.

Sept. 1	Purchased inventory from Orion Company on account for \$50,000. Darby records purchases gross and uses a periodic inventory system.
Oct. 1	Issued a \$50,000, 12-month, 8% note to Orion in payment of account.
Oct. 1	Borrowed \$75,000 from the Shore Bank by signing a 12-month, zero-interest-bearing \$81,000 note.

Instructions

- Prepare journal entries for the selected transactions above.
- Prepare adjusting entries at December 31.
- Compute the total net liability to be reported on the December 31 statement of financial position for:
 - The interest-bearing note.
 - The zero-interest-bearing note.

E13.3 (LO 1) (Refinancing of Short-Term Debt) On December 31, 2021, Alexander AG had €1,200,000 of short-term debt in the form of notes payable due February 2, 2022. On January 21, 2022, the company issued 25,000 ordinary shares for €36 per share, receiving €900,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2022, the proceeds from the share sale, supplemented by an additional €300,000 cash, are used to liquidate the €1,200,000 debt. The December 31, 2021, statement of financial position is authorized for issue on February 23, 2022.

Instructions

Show how the €1,200,000 of short-term debt should be presented on the December 31, 2021, statement of financial position.

E13.4 (LO 1) (Refinancing of Short-Term Debt) The CFO for Yong Corporation is discussing with the company's CEO issues related to the company's short-term obligations. Presently, both the current ratio and the acid-test ratio for the company are quite low, and the CEO is wondering if any of these short-term obligations could be reclassified as long-term. The financial reporting date is December 31, 2021. Two short-term obligations were discussed, and the following action was taken by the CFO.

Short-Term Obligation A: Yong has a \$50,000 short-term obligation due on March 1, 2022. The CFO discussed with its lender whether the payment could be extended to March 1, 2024, provided Yong agrees to provide additional collateral. An agreement is reached on February 1, 2022, to change the loan terms to extend the obligation's maturity to March 1, 2024. The financial statements are authorized for issuance on April 1, 2022.

Short-Term Obligation B: Yong also has another short-term obligation of \$120,000 due on February 15, 2022. In its discussion with the lender, the lender agrees to extend the maturity date to February 1, 2023. The agreement is signed on December 18, 2021. The financial statements are authorized for issuance on March 31, 2022.

Instructions

Indicate how these transactions should be reported at December 31, 2021, on Yong's statement of financial position.

E13.5 (LO 1) (Debt Classifications) Presented below are four different situations related to McKee plc debt obligations. McKee's next financial reporting date is December 31, 2021. The financial statements are authorized for issuance on March 1, 2022.

1. McKee has a debt obligation maturing on December 31, 2024. The debt is callable on demand by the lender at any time.
2. McKee also has a long-term obligation due on December 1, 2023. On November 10, 2021, it breaches a covenant on its debt obligation and the loan becomes due on demand. An agreement is reached to provide a waiver of the breach on December 8, 2021.
3. McKee has a long-term obligation of £400,000, which is maturing over 4 years in the amount of £100,000 per year. The obligation is dated November 1, 2021, and the first maturity date is November 1, 2022.
4. McKee has a short-term obligation due February 15, 2022. Its lender agrees to extend the maturity date of this loan to February 15, 2024. The agreement for extension is signed on January 15, 2022.

Instructions

Indicate how each of these debt obligations is reported on McKee's statement of financial position on December 31, 2021.

E13.6 (LO 1) (Compensated Absences) Matthewson SA began operations on January 2, 2021. It employs 9 individuals who work 8-hour days and are paid hourly. Each employee earns 10 paid vacation days and 6 paid sick days annually. Vacation days may be taken after January 15 of the year following the year in which they are earned. Sick days may be taken as soon as they are earned; unused sick days accumulate. Additional information is as follows.

Actual Hourly Wage Rate		Vacation Days Used by Each Employee		Sick Days Used by Each Employee	
2021	2022	2021	2022	2021	2022
€12	€13	0	9	4	5

Matthewson has chosen to accrue the cost of compensated absences at rates of pay in effect during the period when earned and to accrue sick pay when earned.

Instructions

- a. Prepare journal entries to record transactions related to compensated absences during 2021 and 2022.
- b. Compute the amounts of any liability for compensated absences that should be reported on the statement of financial position at December 31, 2021 and 2022.

E13.7 (LO 1) (Compensated Absences) Use the same information as in E13.6, except that Matthewson SA has chosen (1) not to accrue paid sick leave until used and (2) to accrue vacation time at expected future rates of pay without discounting. The company used the following projected rates to accrue vacation time.

Year in Which Vacation Time Was Earned	Projected Future Pay Rates Used to Accrue Vacation Pay
2021	€12.90
2022	13.70

Instructions

- a. Prepare journal entries to record transactions related to compensated absences during 2021 and 2022.
- b. Compute the amounts of any liability for compensated absences that should be reported on the statement of financial position at December 31, 2021, and 2022.

E13.8 (LO 1) (Adjusting Entry for Sales Tax and VAT) During the month of June, Danielle's Boutique had cash sales of R\$265,000 and credit sales of R\$153,700, both of which include the 6% sales tax that must be remitted to the government by July 15.

Instructions

- Prepare the adjusting entry that should be recorded to fairly present the June 30 financial statements.
- How would the adjusting entry change if the 6% tax was a VAT rather than a sales tax?

E13.9 (LO 1) (Adjusting Entry for Sales Tax and VAT) Eastwood Ranchers sells a herd of cattle to Rozo Meat Packers for €30,000 and the related VAT. Rozo Meat Packers sells the beef to Wrangler Supermarkets for €40,000 and the related VAT. Wrangler Supermarkets sells this beef to customers for €50,000 plus the related VAT.

Instructions

- Assuming the VAT is 15% on all sales, prepare the journal entry to record the sale by Rozo Meat Packers to Wrangler Supermarkets.
- What is the net cash outlay that Eastwood Ranchers incurs related to the VAT?

E13.10 (LO 1) (Payroll Tax Entries) The payroll of Kee Ltd. for September 2022 is as follows (amounts in thousands): total payroll was ¥340,000; income taxes in the amount of ¥80,000 were withheld, as was ¥9,000 in union dues; and the current Social Security tax is 8% of an employee's wages. The employer must also remit 8% for employees' wages.

Instructions

Prepare the necessary journal entries if the salaries and wages paid and the employer payroll taxes are recorded separately.

E13.11 (LO 1) (Payroll Tax Entries) Allison Hardware Company's payroll for November 2022 is as follows: factory, €140,000; sales, €32,000; and administrative, €36,000. The Social Security rate is 8% on an employee's wages. Income tax withheld amounts to €16,000 for factory, €7,000 for sales, and €6,000 for administrative.

Instructions

- Prepare a schedule showing the employer's total cost of salaries and wages for November by function.
- Prepare the journal entries to record the factory, sales, and administrative payrolls including the employer's payroll taxes.

E13.12 (LO 2) (Warranties) Soundgarden Ltd. sold 200 color laser copiers on July 10, 2022, for £4,000 apiece, together with a 1-year warranty. Maintenance on each copier during the warranty period is estimated to be £330.

Instructions

Prepare entries to record the sale of the copiers, the related warranty costs, and any accrual on December 31, 2022. Actual warranty expenditures (inventory) in 2022 were £17,000.

E13.13 (LO 2) (Warranties) Early in 2022, Sheryl Crow Equipment sold 500 Rollomatics at €6,000 each. During 2022, Crow spent €20,000 servicing the 2-year assurance warranties that accompany the Rollomatic. All applicable transactions are on a cash basis.

Instructions

- a. Prepare 2022 entries for Crow. Assume that Crow estimates the total cost of servicing the warranties will be €55,000 for 2 years.
- b. Prepare 2022 entries for Crow assuming that the warranties are not an integral part of the sale (a service-type warranty). Assume that of the sales total, €56,000 relates to sales of warranty contracts. Crow estimates the total cost of servicing the warranties will be €55,000 for 2 years. Estimate revenues to be recognized on a straight-line basis.

E13.14 (LO 2) (Premium Entries) No Doubt Company includes 1 coupon in each box of soap powder that it packs, and 10 coupons are redeemable for a premium (a kitchen utensil). In 2022, No Doubt Company purchased 8,800 premiums at 80 cents each and sold 110,000 boxes of soap powder at \$3.30 per box; 44,000 coupons were presented for redemption in 2022. It is estimated that 60% of the coupons will eventually be presented for redemption.

Instructions

Prepare all the entries that would be made relative to sales of soap powder and to the premium plan in 2022.

E13.15 (LO 2) (Restructuring Issues) EADS Ltd. is involved in a restructuring related to its energy division. The company controller and CFO are considering the following costs to accrue as part of the restructuring. The costs are as follows (amounts in thousands).

1. The company has a long-term lease on one of the facilities related to the division. It is estimated that it will have to pay a penalty cost of ¥400,000 to break the lease. The company estimates that the present value related to payments on the lease contract is ¥650,000.
2. The company's allocation of overhead costs to other divisions will increase by ¥1,500,000 as a result of restructuring these facilities.
3. Due to the restructuring, some employees will be shifted to some of the other divisions. The cost of retraining these individuals is estimated to be ¥2,000,000.
4. The company has hired an outplacement firm to help it in dealing with the number of terminations related to the restructuring. It is estimated the cost for this outplacement firm will be ¥600,000.
5. It is estimated that employee termination costs will be ¥3,000,000.
6. The company believes that it will cost ¥320,000 to move useable assets from the energy division to other divisions in the company.

Instructions

Indicate whether each of these costs should be included in the restructuring provision in the financial statements.

E13.16 (LO 2) (Restructuring) On December 31, 2022, the board of Dolman Group decided to close one of its divisions. The same day a detailed plan for closing the division was agreed to by the board, and letters were sent to customers and employees affected by this closure.

Instructions

- a. What is a restructuring? Provide two examples.
- b. To ensure that the restructuring is valid, what two conditions must take place?
- c. Possible costs that may be incurred during the restructuring are as follows: (1) investment in new software as a result of closing the division, (2) cost of moving some assets of the closed division to other parts of the company, (3) employee termination costs related to closing the division, (4) expected future operating losses in closing the division, and (5) onerous contract provisions

related to the closing. Indicate which (if any) of these costs may be part of a restructuring provision.

E13.17 (LO 2, 3) (Provisions and Contingencies) Presented below are three independent situations.

1. During 2022, Maverick ASA became involved in a tax dispute with the government. Maverick's attorneys have indicated that they believe it is probable that Maverick will lose this dispute. They also believe that Maverick will have to pay the government between €800,000 and €1,400,000. After the 2022 financial statements were issued, the case was settled with the government for €1,200,000. What amount, if any, should be reported as a liability for this tax dispute as of December 31, 2022?
2. On October 1, 2022, Holmgren Chemical was identified as a potentially responsible party by its Environmental Regulatory Agency. Holmgren's management, along with its counsel, have concluded that it is probable that Holmgren will be responsible for damages, and a reasonable estimate of these damages is €6,000,000. Holmgren's insurance policy of €9,000,000 has a deductible clause of €500,000. How should Holmgren Chemical report this information in its financial statements at December 31, 2022?
3. Shinobi Ltd. had a manufacturing plant in Darfur, Sudan, which was destroyed in the civil war. It is not certain who will compensate Shinobi for this destruction, but Shinobi has been assured by governmental officials that it will receive a definite amount for this plant. The amount of the compensation will be less than the fair value of the plant but more than its book value. How should the compensation be reported in the financial statements of Shinobi?

Instructions

Answer the question at the end of each situation.

E13.18 (LO 2) (Environmental Liability) Bassinger Company purchases an oil tanker depot on January 1, 2022, at a cost of \$600,000. Bassinger expects to operate the depot for 10 years, at which time it is legally required to dismantle the depot and remove the underground storage tanks. It is estimated that it will cost \$70,000 to dismantle the depot and remove the tanks at the end of the depot's useful life.

Instructions

- a. Prepare the journal entries to record the depot and the environmental liability for the depot on January 1, 2022. Based on an effective-interest rate of 6%, the fair value of the environmental liability on January 1, 2022, is \$39,087.
- b. Prepare any journal entries required for the depot and the environmental liability at December 31, 2022. Bassinger uses straight-line depreciation; the estimated residual value for the depot is zero.
- c. On December 31, 2031, Bassinger pays a demolition firm to dismantle the depot and remove the tanks at a price of \$80,000. Prepare the journal entry for the settlement of the environmental liability.

E13.19 (LO 2) Groupwork (Premiums) The following are three independent situations.

1. Hairston Stamp Company records stamp service revenue and provides for the cost of redemptions in the year stamps are sold to licensees. Hairston's past experience indicates that only 80% of the stamps sold to licensees will be redeemed. Hairston's liability for stamp redemptions was \$13,000,000 at December 31, 2021. Additional information for 2022 is as follows.

Stamp service revenue from stamps sold to licensees	\$9,500,000
Cost of redemptions (stamps sold prior to 1/1/22)	6,000,000

If all the stamps sold in 2022 were presented for redemption in 2023, the redemption cost would be \$5,200,000. What amount should Hairston report as a liability for stamp redemptions at December 31, 2022?

- In packages of its products, Burnitz SA includes coupons that may be presented at retail stores to obtain discounts on other Burnitz products. Retailers are reimbursed for the face amount of coupons redeemed plus 10% of that amount for handling costs. Burnitz honors requests for coupon redemption by retailers up to 3 months after the consumer expiration date. Burnitz estimates that 60% of all coupons issued will ultimately be redeemed. Information relating to coupons issued by Burnitz during 2022 is as follows.

Consumer expiration date	12/31/22
Total face amount of coupons issued	€800,000
Total payments to retailers as of 12/31/22	330,000

What amount should Burnitz report as a liability for unredeemed coupons at December 31, 2022?

- Roland AG sold 700,000 boxes of pie mix under a new sales promotional program. Each box contains one coupon, which submitted with €4.00, entitles the customer to a baking pan. Roland pays €6.00 per pan and €0.50 for handling and shipping. Roland estimates that 70% of the coupons will be redeemed, even though only 250,000 coupons were processed during 2022. What amount should Roland report as a liability for unredeemed coupons at December 31, 2022?

E13.20 (LO 2) (Provisions) Presented below are three independent situations.

- Bruegger Transportation purchased a ship on January 1, 2022, for £20,000,000. The useful life of the ship is 40 years, but it is subject to a government-mandated major overhaul every 4 years with a total projected cost over the 40 years of £4,000,000. The present value related to these payments is £3,200,000. Explain how this transaction should be accounted for at January 1, 2022, and at December 31, 2022. Prepare the journal entries to record all appropriate entries related to the ship in 2022. Bruegger uses the straight-line method of depreciation and assumes no residual value for the ship.
- Marquardt Company signs a 5-year lease related to office space at an annual rental of £30,000. At the end of the second year, the company decides to close its operation in this part of country. Its lease is non-cancelable, and the penalty for non-payment is £62,000. The present value of future payments on the lease is estimated to be £81,000. The company does not believe that it can sublet these facilities. Explain how this transaction should be accounted for at December 31, 2022. Prepare the journal entry to record this entry on December 31, 2022.
- Powersurge Group operates a nuclear power plant. The plant cost £40,000,000 on January 2, 2023. It is estimated that the present value of dismantling the plant and the ensuing clean-up will be £1,000,000. Explain how this transaction should be accounted for on January 2, 2023. Prepare the journal entry or entries to record this transaction on January 2, 2023.

Instructions

Prepare the explanation and journal entry required for each situation.

E13.21 (LO 2) (Provisions) The following situations relate to Bolivia Company.

- Bolivia Company provides a warranty with all products sold. It estimates that it will sell 1,000,000 units of its product for the year ended December 31, 2022, and that its total revenue for the product will be \$100,000,000. It also estimates that 60% of the product will have no defects, 30% will have major defects, and 10% will have minor defects. The cost of a minor defect is estimated to be \$5 for each product, and the cost for a major defect is \$15. The company also estimates that the minimum amount of warranty expense will be \$2,000,000 and the maximum will be \$10,000,000.

2. Bolivia is involved in a tax dispute with the tax authorities. The most likely outcome of this dispute is that the company will lose and have to pay \$400,000. The minimum it will lose is \$20,000 and the maximum is \$2,500,000.

Instructions

Determine the amount to record as provisions, if any, for Bolivia Company at December 31, 2022.

E13.22 (LO 4) (Financial Statement Impact of Liability Transactions) Presented below is a list of possible transactions.

1. Purchased inventory for €80,000 on account (assume perpetual system is used).
2. Issued an €80,000 note payable in payment on account (see [item 1](#) above).
3. Recorded accrued interest on the note from [item 2](#) above.
4. Borrowed €100,000 from the bank by signing a 6-month, €112,000, zero-interest-bearing note.
5. Recognized 4 months' interest expense on the note from [item 4](#) above.
6. Recorded cash sales of €75,260, which includes 10% VAT.
7. Recorded wage expense of €35,000. The cash paid was €25,000; the difference was due to various amounts withheld.
8. Recorded employer's payroll taxes.
9. Accrued accumulated vacation pay.
10. Recorded an environmental liability and related asset.
11. Recorded bonuses due to employees.
12. Recorded sales of product and related warranties (assume both assurance-type warranty and service-type warranty).
13. Paid warranty costs that were accrued in [item 12](#) above related to assurance-type warranty.
14. Recorded a liability on a lawsuit that the company will probably lose.
15. Paid service-type warranty costs under contracts from [item 12](#).
16. Recognized warranty revenue (see [item 12](#)).

Instructions

Set up a table using the format shown below and analyze the effect of the 16 transactions on the financial statement categories indicated.

#	Assets	Liabilities	Equity	Net Income
1				

Use the following code:

I: Increase	D: Decrease	NE: No net effect
-------------	-------------	-------------------

E13.23 LO 4) (Ratio Computations and Discussion) Chen Group has been operating for several years, and on December 31, 2022, presented the following statement of financial position (amounts in thousands).

Chen Group Statement of Financial Position December 31, 2022			
Plant assets (net)	¥220,000	Share capital—ordinary	¥160,000

Chen Group Statement of Financial Position December 31, 2022			
Inventory	95,000	Retained earnings	60,000
Receivables	75,000	Mortgage payable	140,000
Cash	40,000	Accounts payable	70,000
	<u>¥430,000</u>		<u>¥430,000</u>

The net income for 2022 was ¥25,000. Assume that total assets are the same in 2021 and 2022.

Instructions

Compute each of the following ratios. For each of the four, indicate the manner in which it is computed and its significance as a tool in the analysis of the financial soundness of the company.

- Current ratio.
- Acid-test ratio.
- Debt to assets.
- Return on assets.

E13.24 (LO 4) (Ratio Computations and Analysis) EAN Ltd.'s condensed financial statements provide the following information (amounts in thousands).

EAN Ltd. Statement of Financial Position				
	December 31, 2022		December 31, 2021	
Property, plant, and equipment		¥ 897,000		¥ 853,000
Current assets				
Inventory	¥440,000		¥360,000	
Prepaid expenses	3,000		7,000	
Accounts receivable	158,000		80,000	
Short-term investments	80,000		40,000	
Cash	52,000	733,000	60,000	547,000
Total assets		<u>¥1,630,000</u>		<u>¥1,400,000</u>
Equity		¥ 990,000		¥ 840,000
Bonds payable		400,000		400,000
Current liabilities		240,000		160,000
		<u>¥1,630,000</u>		<u>¥1,400,000</u>

Income Statement For the Year Ended 2022	
Sales revenue	¥1,640,000
Cost of goods sold	(800,000)
Gross profit	840,000
Selling and administrative expenses	(480,000)
Interest expense	(40,000)
Net income	<u>¥ 320,000</u>

Instructions

- a. Determine the following for 2022.
 1. Current ratio at December 31.
 2. Acid-test ratio at December 31.
 3. Accounts receivable turnover.
 4. Inventory turnover.
 5. Return on assets.
 6. Profit margin on sales.
- b. Prepare a brief evaluation of the financial condition of EAN Ltd. and of the adequacy of its profits.

E13.25 (LO 4) (Ratio Computations and Effect of Transactions) The following information is related to Leland AG.

Leland AG Statement of Financial Position December 31, 2022				
Equipment (net)		€150,000	Share capital—ordinary (par €5)	€260,000
Land		20,000	Retained earnings	141,000

Cash		45,000		
		€488,000		

Leland AG Income Statement For the Year Ended December 31, 2022		
Sales revenue		€1,400,000
Cost of goods sold		
Inventory, Jan. 1, 2022	€200,000	
Purchases	790,000	
Cost of goods available for sale	990,000	
Inventory, Dec. 31, 2022	(170,000)	
Cost of goods sold		820,000
Gross profit on sales		580,000
Operating expenses		370,000
Net income		€ 210,000

Instructions

- a. Compute the following ratios or relationships of Leland. Assume that the ending account balances are representative of the entire year unless the information provided indicates differently.
 1. Current ratio.
 2. Inventory turnover.

3. Accounts receivable turnover.
 4. Earnings per share.
 5. Profit margin on sales.
 6. Return on assets for 2022.
- b. Indicate for each of the following transactions whether the transaction would improve, weaken, or have no effect on the current ratio of Leland at December 31, 2022.
1. Write off an uncollectible account receivable, €2,200.
 2. Repurchase ordinary shares for cash.
 3. Pay €40,000 on notes payable (short-term).
 4. Collect €23,000 on accounts receivable.
 5. Buy equipment on account.
 6. Give an existing creditor a short-term note in settlement of account.

Problems

P13.1 (LO 1) Groupwork (Current Liability Entries and Adjustments) Described below are certain transactions of Edwardson AG. The company uses the periodic inventory system.

1. On February 2, the company purchased goods from Martin Company for €70,000 subject to cash discount terms of 2/10, n/30. Purchases and accounts payable are recorded by Edwardson at net amounts after cash discounts. The invoice was paid on February 26.
2. On April 1, the company bought a truck for €50,000, paying €4,000 in cash and signing a 1-year, 12% note for the balance of the purchase price.
3. On August 1, the board of directors declared a €300,000 cash dividend that was payable on September 10 to shareholders of record on August 31.

Instructions

- a. Make all the journal entries necessary to record the transactions above using appropriate dates.
- b. Edwardson's year-end is December 31. Assuming that no adjusting entries relative to the transactions above have been recorded, prepare any adjusting journal entries concerning interest that are necessary to present fair financial statements at December 31.

P13.2 (LO 1, 2) (Liability Entries) Listed below are selected transactions of Schultz Department Store for the current year ending December 31.

1. On December 5, the store received €500 from the Jackson Players as a deposit to be returned after certain furniture to be used in stage production is returned on January 15.
2. During December, cash sales totaled €798,000, which includes the 5% VAT that must be remitted to the tax authority by the fifteenth day of the following month.
3. On December 10, the store purchased for cash three delivery trucks for €120,000. The trucks were purchased in a jurisdiction that applies a 5% VAT.
4. The store determined it will cost €100,000 to restore the area surrounding one of its store parking lots, when the store is closed in 2 years. Schultz estimates the fair value of the obligation at December 31 is €84,000.

Instructions

Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.

P13.3 (LO 1) (Payroll Tax Entries) Cedarville Company pays its office employee payroll weekly. Below is a partial list of employees and their payroll data for August. Because August is their vacation period, vacation pay is also listed.

Employee	Earnings to July 31	Weekly Pay	Vacation Pay to Be Received in August
Mark Hamill	\$4,200	\$200	–
Karen Robbins	3,500	150	\$300
Brent Kirk	2,700	110	220
Alec Guinness	7,400	250	–
Ken Sprouse	8,000	330	660

Assume that the income tax withheld is 10% of wages. Union dues withheld are 2% of wages. Vacations are taken the second and third weeks of August by Robbins, Kirk, and Sprouse. The Social Security rate is 8% on employee and employer.

Instructions

Make the journal entries necessary for each of the four August payrolls. The entries for the payroll and for the company's liability are made separately. Also make the entry to record the monthly payment of payroll liabilities.

P13.4 (LO 1) (Payroll Tax Entries) Below is a payroll sheet for Otis Import plc for the month of September 2022. Assume a 10% income tax rate for all employees and an 8% Social Security tax on employee and employer.

Name	Earnings to Aug. 31	September Earnings	Income Tax Withholding	Social Security
B.D. Williams	£ 6,800	£ 800		
D. Raye	6,500	700		
K. Baker	7,600	1,100		
F. Lopez	13,600	1,900		
A. Daniels	105,000	13,000		
B. Kingston	112,000	16,000		

Instructions

- Complete the payroll sheet and make the necessary entry to record the payment of the payroll.
- Make the entry to record the payroll tax expenses of Otis Import.
- Make the entry to record the payment of the payroll liabilities created. Assume that the company pays all payroll liabilities at the end of each month.

P13.5 (LO 2) Groupwork (Warranties) Brooks Ltd. sells computers under a 2-year warranty contract that requires the company to replace defective parts and to provide the necessary repair labor. During 2022, Brooks sells for cash 400 computers at a unit price of £2,500. On the basis of past experience, the 2-year warranty costs are estimated to be £155 for parts and £185 for labor per unit. (For simplicity, assume that all sales occurred on December 31, 2022.) The warranty is not sold separately from the computer.

Instructions

- Record any necessary journal entries in 2022.
- What liability relative to these transactions would appear on the December 31, 2022, statement of financial position and how would it be classified?
- In 2023, the actual warranty costs to Brooks were £21,400 for parts and £39,900 for labor. Record any necessary journal entries in 2023.

P13.6 (LO 2) (Extended Warranties) Dos Passos SA sells televisions at an average price of R\$900 and also offers to each customer a separate 3-year warranty contract for R\$90 that requires the company to perform periodic services and to replace defective parts. During 2022, the company sold 300 televisions and 270 warranty contracts for cash. It estimates the 3-year warranty costs as R\$20 for parts and R\$40 for labor, and accounts for warranties separately. Assume sales occurred on December 31, 2022, and straight-line recognition of warranty revenues occurs.

Instructions

- Record any necessary journal entries in 2022.
- What liability relative to these transactions would appear on the December 31, 2022, statement of financial position, and how would it be classified?

In 2023, Dos Passos incurred actual costs relative to 2022 television warranty sales of R\$2,000 for parts and R\$4,000 for labor.

- Record any necessary journal entries in 2023 relative to 2022 television warranties.
- What amounts relative to the 2022 television warranties would appear on the December 31, 2023, statement of financial position, and how would they be classified?

P13.7 (LO 2) (Warranties) Alvarado Company sells a machine for \$7,400 with a 12-month warranty agreement that requires the company to replace all defective parts and to provide the repair labor at no cost to the customers. With sales being made evenly throughout the year, the company sells 600 machines in 2022 (warranty expenditures are expected half in 2022 and half in 2023). As a result of product testing, the company estimates that the total warranty cost is \$390 per machine (\$170 parts and \$220 labor).

Instructions

Assuming that actual warranty expenditures occur exactly as estimated, what journal entries would be made relative to the following facts?

- Sale of machinery and warranty expenditures occur in 2022.
- Warranty accrual on December 31, 2022.
- Warranty expenditures occur in 2023.
- What amount, if any, is disclosed in the statement of financial position as a liability for future warranty expenditures as of December 31, 2022?

P13.8 (LO 2) (Premium Entries) To stimulate the sales of its Alladin breakfast cereal, Loptien NV places 1 coupon in each box. Five coupons are redeemable for a premium consisting of a children's hand puppet. In 2023, the company purchases 40,000 puppets at €1.50 each and sells 480,000 boxes of Alladin at €3.75 a box. From its experience with other similar premium offers, the company estimates that 40% of the coupons issued will be mailed back for redemption. During 2023, 115,000 coupons are presented for redemption.

Instructions

Prepare the journal entries that should be recorded in 2023 relative to the premium plan.

P13.9 (LO 2, 4) (Premium Entries and Financial Statement Presentation) Sycamore Candy offers an MP3 download (seven-single medley) as a premium for every five candy bar wrappers presented by customers together with £2.50. The candy bars are sold by the company to distributors for £0.30 each. The purchase price of each download code to the company is £2.25. In addition, it costs £0.50 to distribute each code. The results of the premium plan for the years 2022 and 2023 are as follows. (All purchases and sales are for cash.)

	2022	2023
MP3 codes purchased	250,000	330,000
Candy bars sold	2,895,400	2,743,600
Wrappers redeemed	1,200,000	1,500,000
2022 wrappers expected to be redeemed in 2023	290,000	
2023 wrappers expected to be redeemed in 2024		350,000

Instructions

- Prepare the journal entries that should be made in 2022 and 2023 to record the transactions related to the premium plan of Sycamore Candy.
- Indicate the account names, amounts, and classifications of the items related to the premium plan that would appear on the statement of financial position and the income statement at the end of 2022 and 2023.

P13.10 (LO 2, 3) Writing (Litigation Claim: Entries and Essay) On November 24, 2021, 26 passengers on Wong Airlines Flight No. 901 were injured upon landing when the plane skidded off the runway. Personal injury suits for damages totaling NT\$9,000,000 were filed on January 11, 2022, against the airline by 18 injured passengers. The airline carries no insurance. Legal counsel has studied each suit and advised Wong that it can reasonably expect to pay 60% of the damages claimed. The financial statements for the year ended December 31, 2021, were authorized for issuance on February 27, 2022.

Instructions

- Prepare any disclosures and journal entries required by the airline in preparation of the December 31, 2021, financial statements.
- Ignoring the November 24, 2021, accident, what liability due to the risk of loss from lack of insurance coverage should Wong Airlines record or disclose? During the past decade, the company has experienced at least one accident per year and incurred average damages of NT\$3,200,000. Discuss fully.

P13.11 (LO 2, 3) Writing (Contingencies: Entries and Essays) Polska SA, in preparation of its December 31, 2022, financial statements, is attempting to determine the proper accounting treatment for each of the following situations.

- As a result of uninsured accidents during the year, personal injury suits for €350,000 and €60,000 have been filed against the company. It is the judgment of Polska's legal counsel that an unfavorable outcome is unlikely in the €60,000 case but that an unfavorable verdict approximating €250,000 will probably result in the €350,000 case.
- Polska owns a subsidiary in a foreign country that has a book value of €5,725,000 and an estimated fair value of €9,500,000. The foreign government has communicated to Polska its intention to expropriate the assets and business of all foreign investors. On the basis of

settlements other firms have received from this same country, it is virtually certain that Polska will receive 40% of the fair value of its properties as final settlement.

3. Polska's chemical product division, consisting of five plants, is uninsurable because of the special risk of injury to employees and losses due to fire and explosion. The year 2022 is considered one of the safest (luckiest) in the division's history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from €60,000 to €700,000), management is certain that next year the company will probably not be so fortunate.
4. Polska operates profitably from a factory it has leased. During 2022, Polska decides to relocate these operations to a new factory. The lease of the old factory continues for the next 5 years. The lease cannot be cancelled and the factory cannot be subleased. Polska determines that the cost to settle the old lease is €950,000.
5. Litigation is being pursued for the recovery of €1,300,000 consulting fees on a failed project. The directors believe it is more likely than not that their claim will be successful.

Instructions

- a. Prepare the journal entries that should be recorded as of December 31, 2022, to recognize each of the situations above.
- b. Indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

P13.12 (LO 2) (Warranties and Premiums) Garison Music Emporium carries a wide variety of musical instruments, sound reproduction equipment, recorded music, and sheet music. Garison uses two sales promotion techniques—warranties and premiums—to attract customers.

Musical instruments and sound equipment are sold with a 1-year warranty for replacement of parts and labor. The estimated warranty cost, based on past experience, is 2% of sales.

The premium is offered on the recorded and sheet music. Customers receive a coupon for each dollar spent on recorded music or sheet music. Customers may exchange 200 coupons and \$20 for an MP3 player. Garison pays \$32 for each player and estimates that 60% of the coupons given to customers will be redeemed.

Garison's total sales for 2022 were \$7,200,000—\$5,700,000 from musical instruments and sound reproduction equipment and \$1,500,000 from recorded music and sheet music. Replacement parts and labor for warranty work totaled \$94,000 during 2022. A total of 6,500 players used in the premium program were purchased during the year, and there were 1,200,000 coupons redeemed in 2022.

The balances in the accounts related to warranties and premiums on January 1, 2022, were as shown below.

Inventory of Premiums	\$ 37,600
Premium Liability	44,800
Warranty Liability	136,000

Instructions

Garison Music Emporium is preparing its financial statements for the year ended December 31, 2022. Determine the amounts that will be shown on the 2022 financial statements for the following.

- a. Warranty Expense.
- b. Warranty Liability.
- c. Premium Expense.

- d. Inventory of Premiums.
- e. Premium Liability.

P13.13 (LO 2, 3, 4) Groupwork Writing (Liability Errors) You are the independent auditor engaged to audit Millay Ltd.'s December 31, 2022, financial statements. Millay manufactures household appliances. During the course of your audit, you discover the following situations.

1. Millay began production of a new dishwasher in June 2022 and, by December 31, 2022, sold 120,000 to various retailers for £500 each. Each dishwasher is under a one-year warranty. The company estimates that its warranty expense per dishwasher will amount to £25. At year-end, the company had already paid out £1,000,000 in warranty expenses. Millay's income statement shows warranty expenses of £1,000,000 for 2022.
2. Millay's attorney, Morgan Chye, Esq., has informed you that Millay has been cited for dumping toxic waste into the Loden River. Clean-up costs and fines amount to £2,750,000. Although the case is still being contested, Chye is certain that Millay will most probably have to pay the fine and clean-up costs. No disclosure of this situation was found in the financial statements.
3. Millay is also the defendant in a patent infringement lawsuit by Megan Drabek over Millay's use of a hydraulic compressor in several of its products. Chye claims that if the suit goes against Millay the loss may be as much as £5,000,000. However, Chye believes the loss of this suit is only a possibility. Again, no mention of this suit is made in the financial statements.

As presented, these situations are not reported in accordance with IFRS, which may create problems in issuing a favorable audit report. You feel the need to note these problems in the work papers.

Instructions

Heading each page with the name of the company, the statement of financial position date, and a brief description of the problem, write a brief narrative for each of the above issues in the form of a **memorandum** to be incorporated in the audit work papers. Explain what led to the discovery of each problem, what the problem really is, and what you advised your client to do (along with any appropriate journal entries) in order to bring these situations in accordance with IFRS.

P13.14 (LO 2) (Warranty and Coupon Computation) Schmitt Company must make computations and adjusting entries for the following independent situations at December 31, 2022.

1. Its line of amplifiers carries a 3-year assurance-type warranty against defects. On the basis of past experience, the estimated warranty costs related to dollar sales are: first year after sale—2% of sales; second year after sale—3% of sales; and third year after sale—5% of sales. Sales and actual warranty expenditures for the first 3 years of business were:

	Sales	Warranty Expenditures
2021	\$ 800,000	\$ 6,500
2022	1,100,000	17,200
2023	1,200,000	62,000

Instructions

Compute the amount that Schmitt Company should report as a liability in its December 31, 2023, statement of financial position. Assume that all sales are made evenly throughout each year with warranty expenses also evenly spaced relative to the rates above.

2. With some of its products, Schmitt Company includes coupons that are redeemable in merchandise. The coupons have no expiration date and, in the company's experience, 40% of them

are redeemed. The liability for unredeemed coupons at December 31, 2021, was \$9,000. During 2022, coupons worth \$30,000 were issued, and merchandise worth \$8,000 was distributed in exchange for coupons redeemed.

Instructions

Compute the amount of the liability that should appear on the December 31, 2022, statement of financial position.

Concepts for Analysis

(Unless instructed otherwise, round answers to nearest currency unit. Interest rates are per annum unless otherwise indicated.)

CA13.1 (LO 1) (Nature of Liabilities) Presented below is the current liabilities section of Micro SE (amounts in thousands).

	2022	2021
Current liabilities		
Notes payable	€ 68,713	€ 7,700
Accounts payable	179,496	101,379
Compensation to employees	60,312	31,649
Accrued liabilities	158,198	77,621
Income taxes payable	10,486	26,491
Current maturities of long-term debt	16,592	6,649
Total current liabilities	€493,797	€251,489

Instructions

Answer the following questions.

- What are the essential characteristics that make an item a liability?
- What distinguishes a current liability from a non-current liability?
- What are accrued liabilities? Give three examples of accrued liabilities that Micro might have.
- What is the theoretically correct way to value liabilities? How are current liabilities usually valued?
- Why are notes payable often reported first in the current liabilities section?
- What might be the items that comprise Micro's liability for "Compensation to employees"?

CA13.2 (LO 1) (Current versus Non-Current Classification) Rodriguez Corporation includes the following items in its liabilities at December 31, 2021.

- Notes payable, \$25,000,000, due June 30, 2022.
- Deposits from customers on equipment ordered by them from Rodriguez, \$6,250,000.
- Salaries payable, \$3,750,000, due January 14, 2022.

Instructions

Indicate in what circumstances, if any, each of the three liabilities above would be excluded from current liabilities.

CA13.3 (LO 1) Writing (Refinancing of Short-Term Debt) Kobayashi Ltd. reports in the current liability section of its statement of financial position at December 31, 2021 (its year-end), short-term obligations of ¥15,000,000, which includes the current portion of 12% long-term debt in the amount of ¥10,000,000 (matures in March 2022). Management has stated its intention to refinance the 12% debt so that no portion of it will mature during 2022. The date of issuance of the financial statements is March 25, 2022.

Instructions

- a. Is management's intention enough to support long-term classification of the obligation in this situation?
- b. Assume that Kobayashi Ltd. issues ¥13,000,000 of 10-year debentures to the public in January 2022 and that management expects to use the proceeds to liquidate the ¥10,000,000 debt maturing in March 2022. Furthermore, assume that the debt maturing in March 2022 is paid from these proceeds prior to the authorization to issue the financial statements. Will this have any impact on the statement of financial position classification at December 31, 2021? Explain your answer.
- c. Assume that Kobayashi Ltd. issues ordinary shares to the public in January and that management expects to entirely liquidate the ¥10,000,000 debt maturing in March 2022 with the proceeds of this equity securities issue. In light of these events, should the ¥10,000,000 debt maturing in March 2022 be included in current liabilities at December 31, 2021?
- d. Assume that Kobayashi Ltd., on February 15, 2022, entered into a financing agreement with a commercial bank that permits Kobayashi to borrow at any time through 2023 up to ¥15,000,000 at the bank's prime rate of interest. Borrowings under the financing agreement mature 3 years after the date of the loan. The agreement is not cancelable except for violation of a provision with which compliance is objectively determinable. No violation of any provision exists at the date of issuance of the financial statements. Assume further that the current portion of long-term debt does not mature until August 2022. In addition, management may refinance the ¥10,000,000 obligation under the terms of the financial agreement with the bank, which is expected to be financially capable of honoring the agreement. Given these facts, should the ¥10,000,000 be classified as current on the statement of financial position at December 31, 2021?

CA13.4 (LO 3) Writing (Contingencies) On February 1, 2022, a huge storage tank owned by Viking Manufacturing exploded. Windows in houses and other buildings within a 1-mile radius of the explosion were severely damaged, and a number of people were injured. As of February 15, 2022 (when the December 31, 2021, financial statements were completed and sent to the publisher for printing and public distribution), no suits had been filed or claims asserted against the company as a consequence of the explosion. The company fully anticipates that suits will be filed and claims asserted for injuries and damages. Because the casualty was uninsured and the company considered at fault, Viking Manufacturing will have to cover the damages from its own resources.

Instructions

Discuss fully the accounting treatment and disclosures that should be accorded the casualty and related contingent losses in the financial statements dated December 31, 2021.

CA13.5 (LO 2) (Possible Environmental Liability) Presented below is a note disclosure for Matsui Group.

Litigation and Environmental: Matsui has been notified or is a named or a potentially responsible party in a number of governmental and private actions associated with environmental matters. These actions seek clean-up costs, penalties and/or damages for personal injury or to property or natural resources.

In 2022, the Company recorded a pretax charge of ¥56,229,000, included in the “Other expense (income)—net” caption of the Company’s consolidated income statements, as an additional provision for environmental matters. These expenditures are expected to take place over the next several years and are indicative of the Company’s commitment to improve and maintain the environment in which it operates. At December 31, 2022, environmental accruals amounted to ¥69,931,000, of which ¥61,535,000 are considered non-current and are included in the “Non-current liability” caption of the Company’s consolidated statements of financial position.

While it is impossible at this time to determine with certainty the ultimate outcome of environmental matters, it is management’s opinion, based in part on the advice of independent counsel (after taking into account accruals and insurance coverage applicable to such actions) that when the costs are finally determined they will not have a material adverse effect on the financial position of the Company.

Instructions

Answer the following questions.

- a. What conditions must exist before a provision can be recorded in the accounts?
- b. Suppose that Matsui could not reasonably estimate the amount of the loss, although it could establish with a high degree of probability the minimum and maximum loss possible. How should this information be reported in the financial statements?
- c. If the amount of the loss is uncertain, how would the potential liability be reported in the financial statements?

CA13.6 (LO 2) (Warranties and Litigation Provisions) The following two independent situations involve litigation provisions.

Part 1: Benson plc sells two products, Grey and Yellow. Each carries a 1-year warranty.

1. Product Grey—Product warranty costs, based on past experience, will normally be 1% of sales.
2. Product Yellow—Product warranty costs cannot be reasonably estimated because this is a new product line. However, the chief engineer believes that product warranty costs are likely to be incurred.

Instructions

How should Benson report the estimated product warranty costs for each of the two types of merchandise above? Discuss the rationale for your answer. Do not discuss disclosures that should be made in Benson’s financial statements or notes.

Part 2: Constantine Ltd. is being sued for £4,000,000 for an injury caused to a child as a result of alleged negligence while the child was visiting the Constantine plant in March 2022. The suit was filed in July 2022. Constantine’s lawyer states that it is probable that Constantine will lose the suit and be found liable for a judgment costing anywhere from £400,000 to £2,000,000. However, the lawyer states that the most probable judgment is £1,000,000.

Instructions

How should Constantine report the suit in its 2022 financial statements? Discuss the rationale for your answer. Include in your answer disclosures, if any, that should be made in Constantine’s financial statements or notes.

CA13.7 (LO 2) Ethics (Ethics of Warranties) The Dotson Company, owner of Bleacher Mall, charges Rich Clothing Store a rental fee of \$600 per month plus 5% of yearly profits over \$500,000. Matt Rich, the owner of the store, directs his accountant, Ron Hamilton, to increase the estimate of bad debt expense and warranty costs in order to keep profits at \$475,000.

Instructions

Answer the following questions.

- Should Hamilton follow his boss's directive?
- Who is harmed if the estimates are increased?
- Is Matt Rich's directive ethical?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What was the composition of M&S's borrowings and other financial liabilities shown in its current liability section at March 30, 2019?
- What was M&S's March 30, 2019, working capital and current ratio? Comment on M&S's liquidity.
- What types of commitments and contingencies has M&S reported in its financial statements? What is management's reaction to these contingencies?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- How much working capital do each of these companies have at the end of 2018?
- Compute both companies' (a) current cash debt coverage, (b) cash debt coverage, (c) current ratio, (d) acid-test ratio, (e) accounts receivable turnover, and (f) inventory turnover for 2018. Comment on each company's overall liquidity.
- What types of loss or gain contingencies do these two companies have at the end of 2018?

Financial Statement Analysis Cases

Case 1 Northland Cranberries

Despite being a publicly traded company only since 1987, **Northland Cranberries** (USA) of Wisconsin Rapids, Wisconsin, is one of the world's largest cranberry growers. Despite its short life as a publicly traded company, it has engaged in an aggressive growth strategy. As a consequence, the

company has taken on significant amounts of both short-term and long-term debt. The following information is taken from recent annual reports of the company.

	Current Year	Prior Year
Current assets	\$ 6,745,759	\$ 5,598,054
Total assets	107,744,751	83,074,339
Current liabilities	10,168,685	4,484,687
Total liabilities	73,118,204	49,948,787
Shareholders' equity	34,626,547	33,125,552
Net sales	21,783,966	18,051,355
Cost of goods sold	13,057,275	8,751,220
Interest expense	3,654,006	2,393,792
Income tax expense	1,051,000	1,917,000
Net income	1,581,707	2,942,954

Instructions

- Evaluate the company's liquidity by calculating and analyzing working capital and the current ratio.
- The following discussion of the company's liquidity was provided by the company in the Management Discussion and Analysis section of the company's annual report. Comment on whether you agree with management's statements, and what might be done to remedy the situation.

The lower comparative current ratio in the current year was due to \$3 million of short-term borrowing then outstanding which was incurred to fund the Yellow River Marsh acquisitions last year. As a result of the extreme seasonality of its business, the company does not believe that its current ratio or its underlying stated working capital at the current, fiscal year-end is a meaningful indication of the Company's liquidity. As of March 31 of each fiscal year, the Company has historically carried no significant amounts of inventories and by such date all of the Company's accounts receivable from its crop sold for processing under the supply agreements have been paid in cash, with the resulting cash received from such payments used to reduce indebtedness. The Company utilizes its revolving bank credit facility, together with cash generated from operations, to fund its working capital requirements throughout its growing season.

Case 2 Suzuki Group

Presented below is the current liabilities section and related note of Suzuki Group.

	(yen in millions)	
	Current Year	Prior Year
Current liabilities		
Current portion of long-term debt	¥ 15,000	¥ 10,000
Short-term debt	2,668	405
Accounts payable	29,495	42,427
Accrued warranty	16,843	16,741
Accrued marketing programs	17,512	16,585
Other accrued liabilities	35,653	33,290

Accrued and deferred income taxes	16,206	17,348
Total current liabilities	¥133,377	¥136,796

Notes to Consolidated Financial Statements

Note 1 (in part): Summary of Significant Accounting Policies and Related Data

Accrued Warranty The company provides an accrual for future warranty costs based upon the relationship of prior years' sales to actual warranty costs.

Instructions

Answer the following questions.

- What type of warranty is Suzuki providing to customers?
- Under what circumstance, if any, would it be appropriate for Suzuki to recognize unearned revenue on warranty contracts?
- If Suzuki recognized unearned revenue on warranty contracts, how would it recognize this revenue in subsequent periods?

Case 3 BOP Clothing Co.

As discussed in the chapter, an important consideration in evaluating current liabilities is a company's operating cycle. The operating cycle is the average time required to go from cash to cash in generating revenue. To determine the length of the operating cycle, analysts use two measures: the average days to sell inventory (*inventory-days*) and the average days to collect receivables (*receivable-days*). The inventory-days computation measures the average number of days it takes to move an item from raw materials or purchase to final sale (from the day it comes in the company's door to the point it is converted to cash or an account receivable). The receivable-days computation measures the average number of days it takes to collect an account.

Most businesses must then determine how to finance the period of time when the liquid assets are tied up in inventory and accounts receivable. To determine how much to finance, companies first determine accounts-payable-days—how long it takes to pay creditors. Accounts-payable-days measure the number of days it takes to pay a supplier invoice. Consider the following operating cycle worksheet for BOP Clothing Co.

	2021	2022
Cash	\$ 45,000	\$ 30,000
Accounts receivable	250,000	325,000
Inventory	830,000	800,000
Accounts payable	720,000	775,000
Purchases	1,100,000	1,425,000
Cost of goods sold	1,145,000	1,455,000
Sales	1,750,000	1,950,000
Operating Cycle		
Inventory days ¹	264.6	200.7
Receivable days ²	52.1	60.8
Operating cycle	316.7	261.5
Less: Accounts payable days ³	238.9	198.5
Days to be financed	77.8	63.0
Working capital	\$ 405,000	\$ 380,000

Current ratio	1.56	1.49
Acid-test ratio	0.41	0.46

¹Inventory-days = (Inventory × 365) ÷ Cost of goods sold

²Receivable-days = (Accounts receivable × 365) ÷ Sales

³Accounts-payable-days = (Accounts payable × 365) ÷ Purchases

Purchases = Cost of goods sold + Ending inventory – Beginning inventory. The ratios above assume that other current assets and liabilities are negligible.

These data indicate that BOP has reduced its overall operating cycle (to 261.5 days) as well as the number of days to be financed with sources of funds other than accounts payable (from 78 to 63 days). Most businesses cannot finance the operating cycle with accounts payable financing alone, so working capital financing, usually short-term interest-bearing loans, is needed to cover the shortfall. In this case, BOP would need to borrow less money to finance its operating cycle in 2022 than in 2021.

Instructions

- Use the BOP analysis to briefly discuss how the operating cycle data relate to the amount of working capital and the current and acid-test ratios.
- Select two other real companies that are in the same industry and complete the operating cycle worksheet (similar to that prepared for BOP), along with the working capital and ratio analysis. Briefly summarize and interpret the results. To simplify the analysis, you may use ending balances to compute turnover ratios.

(Adapted from Operating Cycle Worksheet at www.entrepreneur.com)

Accounting, Analysis, and Principles

YellowCard ASA manufactures accessories for iPods, iPhones, and iPads. It had the following selected transactions during calendar 2022. (For any part of this problem requiring an interest or discount rate, use 10%.)

- YellowCard provides a 2-year warranty on its docking stations, which it began selling in 2022. YellowCard estimates that €45,000 will be spent in the future to service warranties related to 2022 sales. During 2022, YellowCard spent €6,000 servicing warranty claims.
- YellowCard has a 1-year €200,000 loan outstanding from UBS. The loan is set to mature on February 28, 2023. For several years, UBS has agreed to extend the loan, as long as YellowCard makes all of its quarterly interest payments (interest is due on the last days of each February, May, August, and November) and maintains an acid-test ratio (also called quick ratio) of at least 1.25. On December 10, 2022, UBS provided YellowCard a commitment letter indicating that UBS will extend the loan another 12 months, provided that YellowCard makes the interest payment due on February 28.
- During 2021, YellowCard constructed a small facility specifically to manufacture one particular accessory. YellowCard paid the construction contractor €5,000,000 cash (which was the total contract price) and placed the facility into service on January 1, 2022. Because of technological changes, YellowCard anticipates that the manufacturing facility will be useful for no more than 10 years. The local government where the facility is located required that, at the end of the 10-year period, YellowCard remediate the facility so that it can be used as a community center. YellowCard estimates the cost of remediation in the future to be €500,000.

Accounting

Prepare all 2022 journal entries relating to (a) YellowCard's warranties, (b) YellowCard's loan from UBS, and (c) the new manufacturing facility that YellowCard opened on January 1, 2022.

Analysis

Describe how the transactions above affect ratios that might be used to assess YellowCard's liquidity. How important is the commitment letter that YellowCard has from UBS to these ratios?

Principles

YellowCard is contemplating offering an extended warranty. If customers pay an additional €50 at the time of product purchase, YellowCard would extend the warranty an additional 2 years. Would the extended warranty meet the definition of a liability under IFRS? Briefly explain.

Research Case

Hincapie AG manufactures specialty bike accessories. The company is best known for its product quality, and it has offered one of the best warranties in the industry on its higher-priced items—a lifetime guarantee. The warranty on these products is included in the sales price. Hincapie has a

contract with a service company, which performs all warranty work on Hincapie products. Under the contract, Hincapie guarantees the service company at least €200,000 of warranty work for each year of the 3-year contract.

A recent economic recession has been hard on Hincapie's business. Sales for its higher-end products have been especially adversely impacted. As a result, Hincapie is planning to restructure its high-quality lines by moving manufacturing for those products into one of its other factories, shutting down assembly lines, and terminating workers. In order to keep some workers on board, Hincapie plans to bring all warranty work in-house. It can terminate the current warranty contract by making a one-time termination payment of €75,000.

Management discussed the restructuring plans in November 2021; they plan to get approval from the board of directors at the December board meeting and execute the restructuring in early 2022. Given the company's past success, the accounting for restructuring activities has never come up. Hincapie would like you to research how it should account for this restructuring according to IFRS.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the accounting literature that addresses the accounting for the various restructuring costs that will be incurred in the restructuring.
- b. Advise Hincapie on the restructuring costs. When should Hincapie recognize liabilities arising from the restructuring? What costs can be included? What costs are excluded?
- c. Does Hincapie have a liability related to the service contract? Explain. If Hincapie has a liability, at what amount should it be recorded?

Notes

- 1 This illustration is not just a theoretical exercise. In practice, a number of preference share issues have all the characteristics of a debt instrument, except that they are called and legally classified as preference shares. In some cases, taxing authorities have even permitted companies to treat the dividend payments as interest expense for tax purposes.
- 2 The IASB also indicates two other conditions that occur infrequently. The first is that if the liability is held primarily for trading purposes, it should be reported as a current liability. Trading means that the liability is subject to selling or repurchasing in the short term. These liabilities are recorded at fair value, and gains or losses are reported in income. In addition, if a liability in a company does not have an unconditional right to defer settlement of the liability for at least 12 months after the reporting date, it is classified as current.
- 3 *Refinancing a short-term obligation on a long-term basis* means either replacing it with a long-term obligation or equity securities, or renewing, extending, or replacing it with short-term obligations for an uninterrupted period extending beyond one year (or the normal operating cycle) from the date of the company's statement of financial position.
- 4 A manufacturing company allocates all of the payroll costs (wages, payroll taxes, and fringe benefits) to appropriate cost accounts such as Direct Labor, Indirect Labor, Sales Salaries, Administrative Salaries, and the like. This abbreviated and somewhat simplified discussion of payroll costs and deductions is not indicative of the volume of records and clerical work that may be involved in maintaining a sound and accurate payroll system.
- 5 Companies provide **postemployment benefits** to past or inactive employees **after employment but prior to retirement**. Examples include salary continuation, supplemental unemployment benefits, severance pay, job training, and continuation of health and life insurance coverage.

- 6 Some companies have obligations for benefits paid to employees after they retire. The accounting and reporting standards for postretirement benefit payments are complex. These standards relate to two different types of **postretirement benefits**: (1) pensions, and (2) postretirement healthcare and life insurance benefits. We discuss these issues extensively in [Chapter 20](#).
- 7 The term provision can be confusing because it can describe a liability, a valuation account, or an expense. It is most commonly used to describe a liability and therefore is used as such in this chapter.
- 8 The distinction is important because provisions are subject to disclosure requirements that do not apply to other types of payables.
- 9 We provide expanded discussion of performance obligations, such as those reflected in warranties and premiums, in [Chapter 18](#).
- 10 A commentary in the financial magazine *Forbes* (June 15, 1974), p. 42, stated its position on this matter quite succinctly: “The simple and unquestionable fact of life is this: Business is cyclical and full of unexpected surprises. Is it the role of accounting to disguise this unpleasant fact and create a fairyland of smoothly rising earnings? Or, should accounting reflect reality, warts and all—floods, expropriations and all manner of rude shocks?”
- 11 This type of situation is often referred to as “an incurred but not recorded” (IBNR) provision. A company may not be able to identify the claims giving rise to the obligation, but it knows a past obligating event has occurred.

CHAPTER 14

Non-Current Liabilities

LEARNING OBJECTIVES

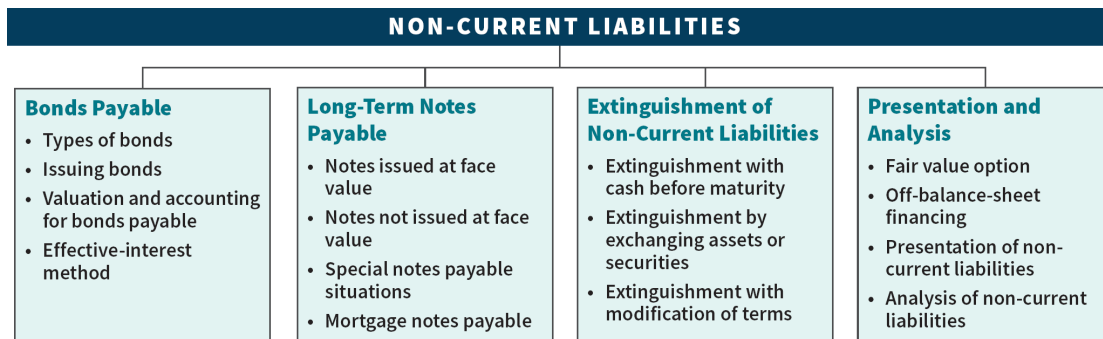

After studying this chapter, you should be able to:

1. Describe the nature of bonds and indicate the accounting for bond issuances.
2. Explain the accounting for long-term notes payable.
3. Explain the accounting for the extinguishment of non-current liabilities.
4. Indicate how to present and analyze non-current liabilities.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 14

As the following opening story indicates, governments and companies are increasingly relying on long-term borrowing to get the resources needed for operations. In this chapter, we explain the accounting issues related to non-current liabilities. The content and organization of the chapter are as follows.

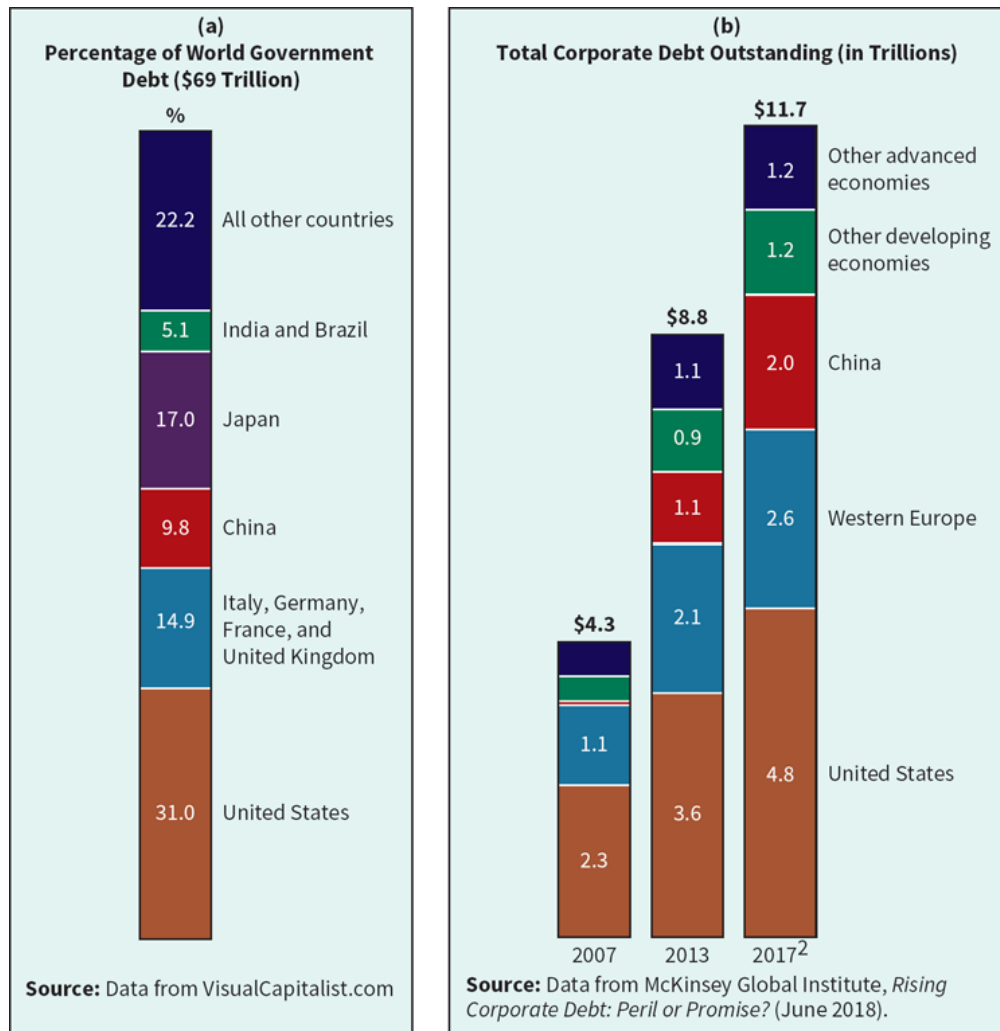

Going Long

Governments issue debt when their expenditures exceed their tax receipts. This is often the case when governments want to stimulate their economies either directly via spending or indirectly through a reduction in taxes. While this is a reasonable policy, many governments have in practice operated at substantial deficits for a number of years, relying on borrowing to support their spending.

Consider chart (a), which shows the \$69 trillion total government debt as of 2019. The size of each country's area in the chart reflects its portion of total government debt. Note that the United States and Japan have the largest amount of outstanding debt; however, Japan's debt to GDP ratio is over two times that of the United States.

In addition to government debt, low interest rates and rising inflows into bond funds have triggered record bond issuances. As can be seen in chart (b), total debt outstanding has recently increased in every region of the world. For example, total debt outstanding has increased from \$4.3 trillion in 2007 to \$11.7 trillion in 2017—an over 270 percent increase in 10 years.

Companies such as **PayPal** (USA), **Air Liquide** (FRA), and **Toyota Motor** (JPN) have all sold long-term bonds recently. Increases in the issuance of these bonds suggest companies have a strong appetite for issuing the bonds because they provide substantial cash infusion at a relatively low interest rate. The hope is that the trend will prove beneficial for both the investor and the company in the long run.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Bonds Payable

LEARNING OBJECTIVE 1

Describe the nature of bonds and indicate the accounting for bond issuances.

Non-current liabilities (sometimes referred to as **long-term debt**) consist of an expected outflow of resources arising from present obligations that are not payable within a year or the operating cycle of

the company, whichever is longer. Bonds payable, long-term notes payable, mortgages payable, pension liabilities, and lease liabilities are examples of non-current liabilities.

A company usually requires approval by the board of directors and the shareholders before bonds or notes can be issued. The same holds true for other types of long-term debt arrangements.

Generally, long-term debt has various **covenants** or **restrictions** that protect both lenders and borrowers. The indenture or agreement often includes the amounts authorized to be issued, interest rate, due date(s), call provisions, property pledged as security, sinking fund requirements, working capital and dividend restrictions, and limitations concerning the assumption of additional debt. Companies should describe these features in the body of the financial statements or the notes, if important for a complete understanding of the financial position and the results of operations.

Although it would seem that these covenants provide adequate protection to the long-term debtholder, many bondholders suffer considerable losses when companies add more debt to the capital structure. Consider what can happen to bondholders in leveraged buyouts (LBOs), which are usually led by management. In an LBO of **RJR Nabisco** (USA), for example, solidly rated 9 $\frac{3}{8}$ percent bonds plunged 20 percent in value when management announced the leveraged buyout. Such a loss in value occurs because the additional debt added to the capital structure increases the likelihood of default. Although covenants protect bondholders, they can still suffer losses when debt levels get too high.

Types of Bonds

We define some of the more common types of bonds found in practice as follows.

Types of Bonds

Secured and Unsecured Bonds. **Secured bonds** are backed by a pledge of some sort of collateral. Mortgage bonds are secured by a claim on real estate. Collateral trust bonds are secured by shares and bonds of other companies. Bonds not backed by collateral are **unsecured**. A **debenture bond** is unsecured. A “junk bond” is unsecured and also very risky, and therefore pays a high interest rate. Companies often use these bonds to finance leveraged buyouts.

Term, Serial Bonds, and Callable Bonds. Bond issues that mature on a single date are called **term bonds**; issues that mature in installments are called **serial bonds**. Serially maturing bonds are frequently used by school or sanitation districts, municipalities, or other local taxing bodies that receive money through a special levy. **Callable bonds** give the issuer the right to call and retire the bonds prior to maturity.

Convertible Bonds. If bonds are convertible into other securities of the company for a specified time after issuance, they are **convertible bonds**.

Two types of bonds have been developed in an attempt to attract capital in a tight money market—commodity-backed bonds and deep-discount bonds. **Commodity-backed bonds** (also called **asset-linked bonds**) are redeemable in measures of a commodity, such as barrels of oil, tons of coal, or ounces of rare metal. To illustrate, **Sunshine Mining** (USA), a silver-mining company, sold bonds that were redeemable with either \$1,000 in cash or 50 ounces of silver, whichever was greater at maturity, and that had a stated interest rate of 8½ percent. The accounting problem was one of projecting the maturity value, especially since silver has fluctuated between \$4 and \$40 an ounce since issuance.

Deep-discount bonds, also referred to as **zero-interest debenture bonds**, are sold at a discount that provides the buyer’s total interest payoff at maturity, with no periodic interest payments.

Registered and Bearer (Coupon) Bonds. Bonds issued in the name of the owner are **registered bonds** and require surrender of the certificate and issuance of a new certificate to complete a sale. A **bearer** or **coupon bond**, however, is not recorded in the name of the owner and may be transferred from one owner to another by mere delivery.

Income and Revenue Bonds. **Income bonds** pay no interest unless the issuing company is profitable. **Revenue bonds**, so called because the interest on them is paid from specified revenue sources, are most frequently issued by airports, school districts, counties, toll-road authorities, and governmental bodies.

Issuing Bonds

A bond arises from a contract known as a **bond indenture**. A bond represents a promise to pay (1) a sum of money at a designated maturity date, plus (2) periodic interest at a specified rate on the maturity amount (face value). Individual bonds are evidenced by a paper certificate and typically have a €1,000 face value. Companies usually make bond interest payments semiannually, although the interest rate is generally expressed as an annual rate. The main purpose of bonds is to borrow for the long term when the amount of capital needed is too large for one lender to supply. By issuing bonds in €100, €1,000, or €10,000 denominations, a company can divide a large amount of long-term indebtedness into many small investing units, thus enabling more than one lender to participate in the loan.

A company may sell an entire bond issue to an investment bank, which acts as a selling agent in the process of marketing the bonds. In such arrangements, investment banks could underwrite the entire issue by guaranteeing a certain sum to the company, thus taking the risk of selling the bonds for whatever price they can get (firm underwriting). Or, the underwriters could sell the bond issue for a

commission on the proceeds of the sale (best-efforts underwriting). Alternatively, the issuing company could sell the bonds directly to a large institution, financial or otherwise, without the aid of an underwriter (private placement).

What Do the Numbers Mean?

All About Bonds

How do investors monitor their bond investments? One way is to review the bond listings found in the newspaper or online. Company bond listings show the coupon (interest) rate, maturity date, and last price. However, because company bonds are more actively traded by large institutional investors, the listings also indicate the current yield. Company bond listings would look as follows.

Issuer	Coupon	Maturity	Price	Yield	Rating
Vodafone Group	6.15%	2/17/2037	128.81	3.89%	BBB
Telecom Italia S.p.A	7.20%	7/18/2036	116.24	5.65%	BB+

The companies issuing the bonds are listed in the first column, in this case, two telecommunications companies, **Vodafone Group** (GBR) and **Telecom Italia S.p.A** (ITA). In the second column is the interest rate paid by the bond as a percentage of its par value, followed by its maturity date. The Vodafone bonds, for example, pay 6.15 percent and mature on February 17, 2037. The Telecom Italia bonds pay 7.20 percent. The Vodafone bonds have a current yield of 3.89 percent, based on the price of 128.81 per £1,000. In contrast, the Telecom Italia bonds selling at 116.24 yield 5.65 percent. The final column gives the bond rating. Vodafone, with a rating of BBB, is viewed as more creditworthy than Telecom Italia, which explains why Vodafone's bonds sell at a higher price and lower yield.

Also, as indicated in the chapter, interest rates and the bond's term to maturity have a real effect on bond prices. For example, an increase in interest rates will lead to a decline in bond values. Similarly, a decrease in interest rates will lead to a rise in bond values. The following data, based on three different bond funds, demonstrate these relationships between interest rate changes and bond values.

Bond Price Changes in Response to Interest Rate Changes	1% Interest Rate Increase	1% Interest Rate Decrease
Short-term fund (2–5 years)	–2.5%	+2.5%
Intermediate-term fund (5 years)	–5%	+5%
Long-term fund (10 years)	–10%	+10%
Source: The Vanguard Group.		

Another factor that affects bond prices is the call feature, which decreases the value of the bond. Investors must be rewarded for the risk that the issuer will call the bond if interest rates decline, which would force the investor to reinvest at lower rates.

Valuation and Accounting for Bonds Payable

The issuance and marketing of bonds to the public does not happen overnight. It usually takes weeks or even months. First, the issuing company must arrange for underwriters which will help market and sell the bonds. Then, it must obtain regulatory approval of the bond issue, undergo audits, and issue a prospectus (a document that describes the features of the bond and related financial information). Finally, the company must generally have the bond certificates printed. Frequently, the issuing

company establishes the terms of a bond indenture well in advance of the sale of the bonds. Between the time the company sets these terms and the time it issues the bonds, the market conditions and the financial position of the issuing company may change significantly. Such changes affect the marketability of the bonds and thus their selling price.

The selling price of a bond issue is set by the supply and demand of buyers and sellers, relative risk, market conditions, and the state of the economy. The investment community values a bond at the **present value of its expected future cash flows**, which consist of (1) interest and (2) principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics.

The interest rate written in the terms of the bond indenture (and often printed on the bond certificate) is known as the **stated, coupon, or nominal rate**. The issuer of the bonds sets this rate. The stated rate is expressed as a percentage of the **face value** of the bonds (also called the **par value, principal amount, or maturity value**).

Bonds Issued at Par

If the rate employed by the investment community (buyers) is the same as the stated rate, the bond sells at par. That is, the par value equals the present value of the bonds computed by the buyers (and the current purchase price). To illustrate the computation of the **present value of a bond issue**, assume that Santos SA issues R\$100,000 in bonds dated January 1, 2022, due in five years with 9 percent interest payable annually on January 1. At the time of issue, the market rate for such bonds is 9 percent. The time diagram in [Illustration 14.1](#) depicts both the interest and the principal cash flows.

ILLUSTRATION 14.1 Time Diagram for Bonds Issued at Par

The actual principal and interest cash flows are discounted at a 9 percent rate for five periods, as shown in [Illustration 14.2](#).

Present value of the principal:	
R\$100,000 × .64993 (Table 6.2)	R\$ 64,993
Present value of the interest payments:	
R\$9,000 × 3.88965 (Table 6.4)	35,007
Present value (selling price) of the bonds	<u>R\$100,000</u>

ILLUSTRATION 14.2 Present Value Computation of Bond Selling at Par

By paying R\$100,000 (the par value) at the date of issue, investors realize an effective rate or yield of 9 percent over the five-year term of the bonds. Santos makes the following entries in the first year of the bonds.

January 1, 2022 (issue bonds)		
Cash	100,000	
Bonds Payable		100,000
December 31, 2022 (accrued interest expense)		
Interest Expense (R\$100,000 × .09)	9,000	
Interest Payable		9,000
January 1, 2023 (record the first interest payment)		
Interest Payable	9,000	
Cash		9,000

Bonds Issued at Discount or Premium

If the rate employed by the investment community (buyers) differs from the stated rate, the present value of the bonds computed by the buyers (and the current purchase price) will differ from the face value of the bonds. The difference between the face value and the present value of the bonds determines the actual price that buyers pay for the bonds. This difference is either a discount or premium.¹

- If the bonds sell for less than face value, they sell at a **discount**.
- If the bonds sell for more than face value, they sell at a **premium**.

The rate of interest actually earned by the bondholders is called the **effective yield** or **market rate**. If bonds sell at a discount, the effective yield exceeds the stated rate. Conversely, if bonds sell at a premium, the effective yield is lower than the stated rate. Several variables affect the bond's price while it is outstanding, most notably the market rate of interest. There is an inverse relationship between the market interest rate and the price of the bond.

To illustrate, assume now that Santos issues R\$100,000 in bonds, due in five years with 9 percent interest payable annually at year-end. At the time of issue, the market rate for such bonds is 11 percent. The time diagram in [Illustration 14.3](#) depicts both the interest and the principal cash flows.

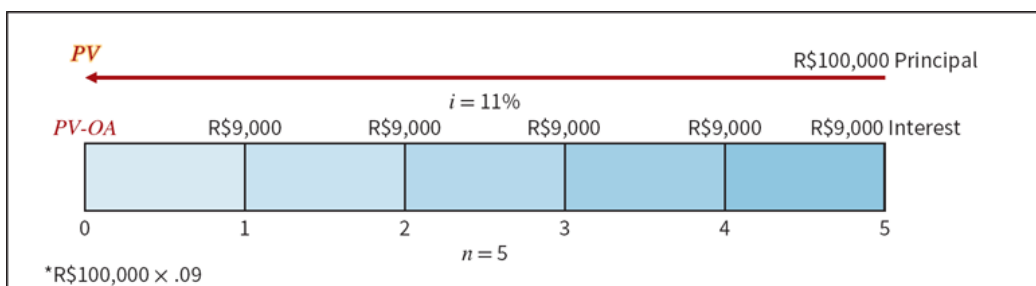

ILLUSTRATION 14.3 Time Diagram for Bonds Issued at a Discount

The actual principal and interest cash flows are discounted at an 11 percent rate for five periods, as shown in [Illustration 14.4](#).

Present value of the principal:	
$R\$100,000 \times .59345$ (Table 6.2)	R\$59,345
Present value of the interest payments:	
$R\$9,000 \times 3.69590$ (Table 6.4)	33,263
Present value (selling price) of the bonds	<u>R\$92,608</u>

ILLUSTRATION 14.4 Present Value Computation of Bond Selling at a Discount

By paying R\$92,608 at the date of issue, investors realize an effective rate or yield of 11 percent over the five-year term of the bonds. These bonds would sell at a discount of R\$7,392 ($R\$100,000 - R\$92,608$). The price at which the bonds sell is typically stated as a percentage of the face or par value of the bonds. For example, the Santos bonds sold for 92.6 (92.6% of par). If Santos had received R\$102,000, then the bonds sold for 102 (102% of par).

When bonds sell at less than face value, it means that investors demand a rate of interest **higher** than the stated rate. Usually, this occurs because the investors can earn a higher rate on alternative investments of equal risk. The investors cannot change the stated rate, so they refuse to pay face value for the bonds. Thus, by changing the amount invested, they alter the effective rate of return. The investors receive interest at the stated rate computed on the face value, but they actually earn at **an effective rate that exceeds the stated rate because they paid less than face value for the bonds**. (Later in the chapter, [Illustrations 14.8](#) and [14.9](#) present a bond that sells at a premium.)

What Do the Numbers Mean?

How About a 100-Year Bond?

Yes, some companies issue bonds with maturities that exceed a person's lifetime. For example, **Électricité de France S.A.** (FRA) in early 2014 sold 100-year bonds in Europe. In addition, countries such as Ireland and Mexico have recently sold 100-year government bonds.

Why do these companies and countries issue 100-year bonds? A number of investors, such as pension funds and insurance companies, have non-current liabilities. They need long-duration assets to reduce an asset-liability mismatch. While investing in a 100-year bond carries interest-rate risk, long-term debt has an offsetting effect against long-duration assets. Thus, this group of investors has a strong demand for these bonds.

Other multibillion-dollar companies, such as **Walt Disney Company** (USA) and **The Coca-Cola Company** (USA), have issued 100-year bonds in the past. Many of these bonds and debentures contain an option that lets the debt issuer partially or fully repay the debt long before the scheduled maturity. For example, the 100-year bond that Disney issued in 1993 is supposed to mature in 2093, but the company can start repaying the bonds any time after 30 years (2023).

You may be surprised to learn that *1,000-year* bonds also exist. A few issuers, such as the **Canadian Pacific Corporation** (CAN), have issued such bonds in the past. And, there have also been instances of bonds issued with no maturity date at all, meaning that the debt issuers continue fulfilling the coupon payments forever. These types of financial instruments are commonly referred to as perpetuities.

Sources: Albert Phung, "Why Do Companies Issue 100-Year Bonds?" *Investopedia* (February 2009); K. Linsell, "EDF's Borrowing Exceeds \$12 Billion This Week with 100-Year Bond," *Bloomberg* (January 17, 2014); and Dara Doyle, "Ireland Sells First 100-Year Bond, Staying On Comeback Trail," *Bloomberg* (March 16, 2016).

Effective-Interest Method

As discussed earlier, by paying more or less at issuance, investors earn a rate different than the coupon rate on the bond. Recall that the issuing company pays the contractual interest rate over the

term of the bonds but also must pay the face value at maturity. If the bond is issued at a discount, the amount paid at maturity is more than the issue amount. If issued at a premium, the company pays less at maturity relative to the issue price.

The company records this adjustment to the cost as **bond interest expense** over the life of the bonds through a process called **amortization**. **Amortization of a discount increases bond interest expense. Amortization of a premium decreases bond interest expense.**

The required procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**). Under the effective-interest method, companies: [\[1\]](#) (See the [Authoritative Literature References](#) section near the end of the chapter.)

1. Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective-interest rate.²
2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration 14.5 depicts graphically the computation of the amortization.

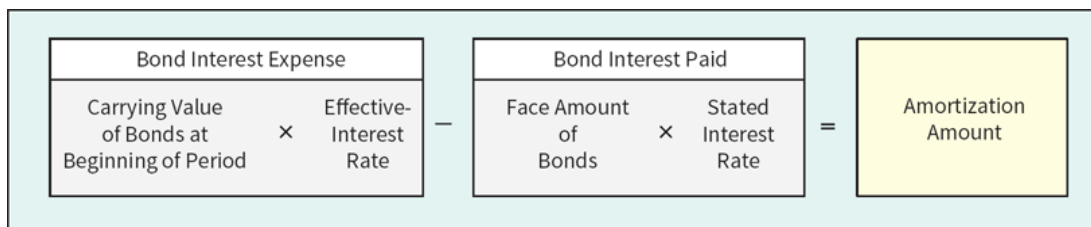

ILLUSTRATION 14.5 Bond Discount and Premium Amortization Computation

The effective-interest method produces a periodic interest expense equal to **a constant percentage of the carrying value of the bonds**.³

Bonds Issued at a Discount

To illustrate amortization of a discount under the effective-interest method, assume Evermaster AG issued €100,000 of 8 percent term bonds on January 1, 2022, due on January 1, 2027, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid €92,278 for the €100,000 of bonds, creating a €7,722 discount. Evermaster computes the €7,722 discount as shown in [Illustration 14.6](#).⁴

Maturity value of bonds payable		€100,000
Present value of €100,000 due in 5 years at 10%, interest payable semiannually (Table 6.2); $FV(PVF_{10,5\%})$; $(€100,000 \times .61391)$	€61,391	
Present value of €4,000 interest payable semiannually for 5 years at 10% annually (Table 6.4); $R(PVF-OA_{10,5\%})$; $(€4,000 \times 7.72173)$	30,887	
Proceeds from sale of bonds		(92,278)
Discount on bonds payable		€ 7,722

ILLUSTRATION 14.6 Computation of Discount on Bonds Payable

The five-year amortization schedule appears in [Illustration 14.7](#).

Schedule of Bond Discount Amortization Effective-Interest Method—Semiannual Interest Payments 5-Year, 8% Bonds Sold to Yield 10%				
Date	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Bonds
1/1/22				€ 92,278
7/1/22	€ 4,000 ^a	€ 4,614 ^b	€ 614 ^c	92,892 ^d

	€40,000	€47,722	€7,722	
^a €4,000 = €100,000 × .08 × ⁶ / ₁₂ ^c €614 = €4,614 – €4,000				
^b €4,614 = €92,278 × .10 × ⁶ / ₁₂ ^d €92,892 = €92,278 + €614				

ILLUSTRATION 14.7 Bond Discount Amortization Schedule

 Calculator Solution for Present Value of Bonds:		
	Inputs	Answer
N	10	
I/YR	5	
PV	?	92,278
PMT	–4,000	
FV	–100,000	

Evermaster records the issuance of its bonds at a discount on January 1, 2022, as follows.

Cash	92,278	
Bonds Payable		92,278

It records the first interest payment on July 1, 2022, and amortization of the discount as follows.

Interest Expense	4,614	
Bonds Payable		614

Cash		4,000
------	--	-------

Evermaster records the interest expense accrued at December 31, 2022 (year-end), and amortization of the discount as follows.

Interest Expense	4,645	
Interest Payable		4,000
Bonds Payable		645

Bonds Issued at a Premium

Now assume that for the bond issue described above, investors are willing to accept an effective-interest rate of 6 percent. In that case, they would pay €108,530 or a premium of €8,530, computed as shown in [Illustration 14.8](#).

Maturity value of bonds payable		€100,000
Present value of €100,000 due in 5 years at 6%, interest payable semiannually (Table 6.2); $FV(PVF_{10,3\%})$; $(€100,000 \times .74409)$	€74,409	
Present value of €4,000 interest payable semiannually for 5 years at 6% annually (Table 6.4); $R(PVF-OA_{10,3\%})$; $(€4,000 \times 8.53020)$	34,121	
Proceeds from sale of bonds		(108,530)
Premium on bonds payable		<u>€ 8,530</u>

ILLUSTRATION 14.8 Computation of Premium on Bonds Payable

The five-year amortization schedule appears in [Illustration 14.9](#).

Date	Cash Paid	Interest Expense	Premium Amortized	Carrying Amount of Bonds
1/1/22				€108,530
7/1/22	€ 4,000 ^a	€ 3,256 ^b	€ 744 ^c	107,786 ^d
1/1/23	4,000	3,234	766	107,020
7/1/23	4,000	3,211	789	106,231

7/1/24	4,000	3,163	837	104,581
1/1/25	4,000	3,137	863	103,718
7/1/25	4,000	3,112	888	102,830
1/1/26	4,000	3,085	915	101,915
7/1/26	4,000	3,057	943	100,972
1/1/27	4,000	3,029	972	100,000
	<u>€40,000</u>	<u>€31,471</u>	<u>€8,529[*]</u>	
^a €4,000 = €100,000 × .08 × ⁶ / ₁₂ ^c €744 = €4,000 – €3,256				
^b €3,256 = €108,530 × .06 × ⁶ / ₁₂ ^d €107,786 = €108,530 – €744				
[*] Rounded				

	Inputs	Answer
N	10	
I/YR	3	
PV	?	108,530
PMT	-4,000	
FV	-100,000	

Cash	108,530	
Bonds Payable		108,530

Evermaster records the first interest payment on July 1, 2022, and amortization of the premium as follows.

Interest Expense	3,256	
Bonds Payable	744	
Cash		4,000

Evermaster should amortize the discount or premium as an adjustment to interest expense over the life of the bond in such a way as to result in a **constant rate of interest** when applied to the carrying amount of debt outstanding at the beginning of any given period.⁵

Accruing Interest

In our previous examples, the interest payment dates and the date the financial statements were issued were essentially the same. For example, when Evermaster sold bonds at a premium, the two interest payment dates coincided with the financial reporting dates. However, what happens if Evermaster prepares financial statements at the end of February, 2022? In this case, as [Illustration 14.10](#) shows, the company **prorates** the premium by the appropriate number of months to arrive at the proper interest expense.

Interest accrual ($\text{€}4,000 \times 2/6$)	€1,333.33
Premium amortized ($\text{€}744 \times 2/6$)	(248.00)
Interest expense (Jan.–Feb.)	€1,085.33

[ILLUSTRATION 14.10](#) Computation of Interest Expense

Evermaster records this accrual as follows.

Interest Expense	1,085.33	
Bonds Payable	248.00	
Interest Payable		1,333.33

If the company prepares financial statements six months later, it follows the same procedure. That is, the premium amortized would be as shown in [Illustration 14.11](#).

Premium amortized (March–June) ($\text{€}744 \times 4/6$)	€496.00
Premium amortized (July–August) ($\text{€}766 \times 2/6$)	255.33
Premium amortized (March–August 2022)	€751.33

[ILLUSTRATION 14.11](#) Computation of Premium Amortization

Bonds Issued Between Interest Dates

Companies usually make bond interest payments semiannually, on dates specified in the bond indenture. When companies issue bonds on other than the interest payment dates, **bond investors will pay the issuer the interest accrued from the last interest payment date to the date of issue**. The bond investors, in effect, pay the bond issuer in advance for that portion of the full six-months' interest payment to which they are not entitled because they have not held the bonds for that period. **Then, on the next semiannual interest payment date, the bond investors will receive the full six-months' interest payment.**

Bonds Issued at Par

To illustrate, assume that instead of issuing its bonds on January 1, 2022, Evermaster issued its five-year bonds, dated January 1, 2022, on May 1, 2022, at par (€100,000). Evermaster records the issuance of the bonds between interest dates as follows.

May 1, 2022

May 1, 2022		
Cash	100,000	
Bonds Payable		100,000
(To record issuance of bonds at par)		
Cash	2,667	
Interest Expense ($€100,000 \times .08 \times \frac{4}{12}$)		2,667
(To record accrued interest; Interest Payable might be credited instead)		

Because Evermaster issues the bonds between interest dates, it records the bond issuance at **par (€100,000) plus accrued interest (€2,667)**. That is, the total amount paid by the bond investor includes four months of accrued interest.

On July 1, 2022, two months after the date of purchase, Evermaster pays the investors six months' interest, by making the following entry.

Interest Expense			
		5/1/22	2,667 ^a
7/1/22	4,000 ^b		
Balance	1,333		
^a Accrued interest received.			
^b Cash paid.			

July 1, 2022		
Interest Expense ($€100,000 \times .08 \times \frac{6}{12}$)	4,000	
Cash		4,000
(To record first interest payment)		

The Interest Expense account now contains a debit balance of €1,333 ($€4,000 - €2,667$), which represents the proper amount of interest expense—two months at 8 percent on €100,000.

Bonds Issued at Discount or Premium

The illustration above was simplified by having the January 1, 2022, bonds issued on May 1, 2022, at **par**. However, if the bonds are issued at a discount or premium between interest dates, Evermaster **must not only account for the partial cash interest payment but also the amount of effective amortization for the partial period**.

To illustrate, assume that the Evermaster 8-percent bonds were issued on May 1, 2022, to yield 6 percent. Thus, the bonds are issued at a premium; in this case, the price is €108,039.⁶ Evermaster records the issuance of the bonds between interest dates as follows.

May 1, 2022		
Cash	108,039	
Bonds Payable		108,039
(To record the present value of the cash flows)		
Cash	2,667	
Interest Expense ($€100,000 \times .08 \times \frac{4}{12}$)		2,667

May 1, 2022		
(To record accrued interest; Interest Payable might be credited instead)		

In this case, Evermaster receives a total of €110,706 at issuance, comprised of the bond price of €108,039 plus the accrued interest of €2,667. Following the effective-interest procedures, Evermaster then determines interest expense from the date of sale (May 1, 2022), not from the date of the bonds (January 1, 2022). [Illustration 14.12](#) provides the computation, using the effective-interest rate of 6 percent. The bond interest expense therefore for the two months (May and June) is €1,080.

Interest Expense	
Carrying value of bonds	€108,039
Effective-interest rate ($.06 \times \frac{2}{12}$)	1%
Interest expense for two months	€ 1,080

ILLUSTRATION 14.12 Partial Period Interest Amortization

The premium amortization of the bonds is also for only two months. It is computed by taking the difference between the net cash paid related to bond interest and the effective-interest expense of €1,080. [Illustration 14.13](#) shows the computation of the partial amortization, using the effective-interest rate of 6 percent.

Cash interest paid on July 1, 2022 ($€100,000 \times .08 \times \frac{6}{12}$)	€4,000
Less: Cash interest received on May 1, 2022	2,667
Net cash paid	€1,333
Bond interest expense (at the effective rate) for two months	(1,080)
Premium amortization	€ 253

ILLUSTRATION 14.13 Partial Period Interest Amortization

As indicated, both the bond interest expense and amortization reflect the shorter two-month period between the issue date and the first interest payment. Evermaster therefore makes the following entries on July 1, 2022, to record the interest payment and the premium amortization.

Interest Expense			
		5/1/22	2,667 ^a
7/1/22	4,000 ^b	7/1/22	253 ^c
Balance	1,080		
^a Accrued interest received.			
^b Cash paid.			
^c 2 months' amortization.			

July 1, 2022		
Interest Expense	4,000	
Cash		4,000
(To record first interest payment)		
Bonds Payable	253	
Interest Expense		253
(To record two months' premium amortization)		

The Interest Expense account now contains a debit balance of €1,080 ($€4,000 - €2,667 - €253$), which represents the proper amount of interest expense—two months at an effective annual interest rate of 6 percent on €108,039.

Long-Term Notes Payable

LEARNING OBJECTIVE 2

Explain the accounting for long-term notes payable.

The difference between current notes payable and **long-term notes payable** is the maturity date. As discussed in [Chapter 13](#), short-term notes payable are those that companies expect to pay within a year or the operating cycle—whichever is longer. Long-term notes are similar in substance to bonds in that both have fixed maturity dates and carry either a stated or implicit interest rate. However, notes do not trade as readily as bonds in the organized public securities markets. Small companies commonly issue notes as their long-term instruments. Larger companies issue both long-term notes and bonds.

Accounting for notes and bonds is quite similar. **Like a bond, a note is valued at the present value of its future interest and principal cash flows. The company amortizes any discount or premium over the life of the note,** just as it would the discount or premium on a bond. Companies compute the present value of an **interest-bearing note**, record its issuance, and amortize any discount or premium and accrual of interest in the same way that they do for bonds.

As you might expect, accounting for long-term notes payable parallels accounting for long-term notes receivable, as [Chapter 7](#) demonstrated.

Notes Issued at Face Value

In [Chapter 7](#), we discussed the recognition of a €10,000, three-year note Scandinavian Imports issued at face value to Bigelow ASA. In this transaction, the stated rate and the effective rate were both 10 percent. The time diagram and present value computation in [Chapter 7](#) (see [Illustration 7.12](#)) for Bigelow would be the same for the issuer of the note, Scandinavian Imports, in recognizing a note payable. Because the present value of the note and its face value are the same, €10,000, Scandinavian would recognize no premium or discount. It records the issuance of the note as follows.

Calculator Solution for Effective Interest on Note:		
	Inputs	Answer
N	8	
I/YR	?	15
PV	-327	
PMT	0	
FV	1,000	

Cash	10,000	
Notes Payable		10,000

Scandinavian Imports would recognize the interest incurred each year as follows.

Interest Expense ($\text{€}10,000 \times .10$)	1,000	
Cash		1,000

Notes Not Issued at Face Value

Zero-Interest-Bearing Notes

If a company issues a zero-interest-bearing (non-interest-bearing) note⁷ solely for cash, it measures the note's present value by the cash received. The implicit interest rate is the **rate that equates the cash received with the amounts to be paid in the future**. The issuing company records the difference between the face amount and the present value (cash received) as a **discount and amortizes that amount to interest expense over the life of the note**.

An example of such a transaction is **Beneficial Corporation's** (USA) offering of \$150 million of zero-coupon notes (deep-discount bonds) having an eight-year life. With a face value of \$1,000 each, these notes sold for \$327—a deep discount of \$673 each. The present value of each note is the cash proceeds of \$327. We can calculate the interest rate by determining the rate that equates the amount the investor currently pays with the amount to be received in the future. Thus, Beneficial amortizes the discount over the eight-year life of the notes using an effective-interest rate of 15 percent.⁸

To illustrate the entries and the amortization schedule, assume that Turtle Cove Company issued the three-year, \$10,000, zero-interest-bearing note to Jeremiah Company illustrated in [Chapter 7](#) (notes receivable). The implicit rate that equated the total cash to be paid (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80 cash proceeds at date of issuance) was 9 percent. (The present value of \$1 for three periods at 9 percent is \$0.77218.) [Illustration 14.14](#) shows the time diagram for the single cash flow.

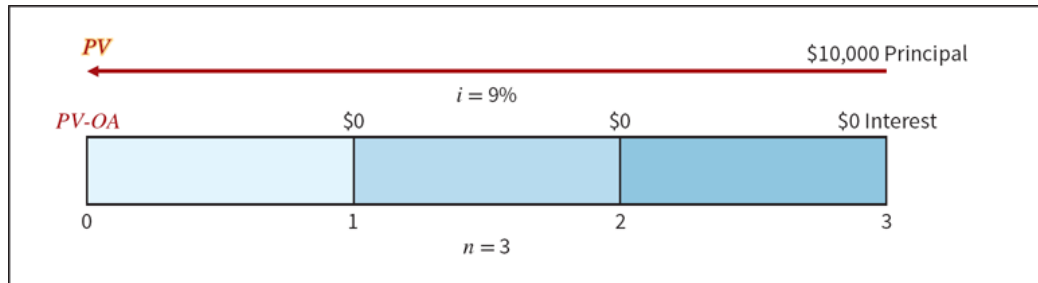

ILLUSTRATION 14.14 Time Diagram for Zero-Interest Note

Turtle Cove records issuance of the note as follows.

Cash	7,721.80	
Notes Payable		7,721.80

Turtle Cove amortizes the discount and recognizes interest expense annually using the **effective-interest method**. [Illustration 14.15](#) shows the three-year discount amortization and interest expense schedule. (This schedule is similar to the note receivable schedule of Jeremiah Company in [Illustration 7.14](#).)

Schedule of Note Discount Amortization Effective-Interest Method 0% Note Discounted at 9%				
	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue				\$ 7,721.80
End of year 1	\$-0-	\$ 694.96 ^a	\$ 694.96 ^b	8,416.76 ^c
End of year 2	-0-	757.51	757.51	9,174.27
End of year 3	-0-	825.73 ^d	825.73	10,000.00
	<u>\$-0-</u>	<u>\$2,278.20</u>	<u>\$2,278.20</u>	
^a	\$7,721.80 × .09 = \$694.96		^c	\$7,721.80 + \$694.96 = \$8,416.76
^b	\$694.96 - \$0 = \$694.96		^d	5¢ adjustment to compensate for rounding.

ILLUSTRATION 14.15 Schedule of Note Discount Amortization

Turtle Cove records interest expense at the end of the first year using the effective-interest method as follows.

Interest Expense (\$7,721.80 × .09)	694.96	
Notes Payable		694.96

The total amount of the discount, \$2,278.20 in this case, represents the expense that Turtle Cove Company will incur on the note over the three years.

Interest-Bearing Notes

The zero-interest-bearing note above is an example of the extreme difference between the stated rate and the effective rate. In many cases, the difference between these rates is not so great.

Consider the example from [Chapter 7](#) where Marie Co. issued for cash a €10,000, three-year note bearing interest at 10 percent to Morgan Group. The market rate of interest for a note of similar risk is 12 percent. [Illustration 7.15](#) shows the time diagram depicting the cash flows and the computation of the present value of this note. In this case, because the effective rate of interest (12%) is greater than the stated rate (10%), the present value of the note is less than the face value. That is, the note is exchanged at a **discount**. Marie Co. records the issuance of the note as follows.

Cash	9,520	
Notes Payable		9,520

Marie Co. then amortizes the discount and recognizes interest expense annually using the **effective-interest method**. [Illustration 14.16](#) shows the three-year discount amortization and interest expense schedule.

Schedule of Note Discount Amortization Effective-Interest Method 10% Note Discounted at 12%				
	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue				€ 9,520
End of year 1	€1,000 ^a	€1,142 ^b	€142 ^c	9,662 ^d
End of year 2	1,000	1,159	159	9,821
End of year 3	1,000	1,179	179	10,000
	<u>€3,000</u>	<u>€3,480</u>	<u>€480</u>	
^a €10,000 × .10 = €1,000			^c €1,142 – €1,000 = €142	
^b €9,520 × .12 = €1,142			^d €9,520 + €142 = €9,662	

ILLUSTRATION 14.16 Schedule of Note Discount Amortization

Marie Co. records payment of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Interest Expense	1,142	
Notes Payable		142
Cash		1,000

When the present value exceeds the face value, Marie Co. issues the note at a premium. It does so by recording the premium as a credit to Notes Payable and amortizing it using the effective-interest method over the life of the note as annual reductions in the amount of interest expense recognized.

What Do the Numbers Mean?

Negative Interest Rates—Is That Even Possible?

Starting around 2014, a number of debt securities were issued that paid a *negative* interest rate. Most of us understand that interest rates rise and fall, but negative interest rates are something altogether different. The presence of debt securities paying negative interest rates raises a number of questions.

1. **What is a negative interest rate?** In a negative interest rate debt offering, the investor provides money to the borrower, and over the lifetime of the investment receives back a *smaller* amount than the original investment. This is the opposite of a traditional (positive interest rate) debt offering, where the amount received over the lifetime of the investment is greater than the amount invested.
2. **Who would issue this kind of debt?** The most common issuers have been central banks. Central banks are components or affiliates of the central governments of various countries and regions. For example, **Deutsche Bundesbank** (DEU) is the central bank of the Federal Republic of Germany. Similarly, the **European Central Bank (ECB)** is the central bank of the European Union. Central banks have a variety of functions related to monetary policy, with the principle aim to assist governments to achieve various economic objectives related to employment and economic growth. (However, while the majority of negative interest rate borrowings are issued by central banks, a small number of businesses, including **LVMH** (FRA), **Sanofi** (FRA), and **Henkel** (DEU), have issued debt that has traded a zero and/or negative rate.)

For example, in the years following the economic crisis of 2008–2009, the economies of countries in the European Union began to recover and for several years showed healthy growth. However, during 2014, the growth began to slow and overall growth in the EU lagged behind many of the other economies around the world. Typically, during this kind of period, central banks will reduce interest rates with an expectation that making funds “cheaper” will stimulate the economy. However, the ECB, like many other central banks, had already reduced its rates. For example, by the end of 2011, the ECB rate was at .25 percent, which was then cut in 2012 to zero. In 2014, still hoping to stimulate the lagging European economy, the ECB lowered rates again. Since rates were already at zero, this meant that the rates were reduced to a negative rate: first to $-.10$ percent and then to $-.20$ percent. The ECB has continued to cut rates to this day, with the current rate set at $-.50$ percent. This strategy was not limited to Europe alone. For example, the yield on Japanese 10-year government bonds was negative in 2016 and again in 2019.

3. **Who would invest in negative interest rate debt?** While a variety of investors purchase debt, a subset of debt investors tend to be the primary investors in negative interest rate debt. The most prominent investors tend to be in the financial services industry, such as banks, mutual funds, and insurance companies. The reason they are willing to accept this negative return has to do with regulatory requirements and business practices, such as banks that have a regulatory requirement to hold a portion of their assets in very low risk and highly liquid securities. To fulfil this requirement, banks have almost always invested in debts from central banks since they are backed by these banks’ national governments and are viewed as essentially risk-free.

What does the future hold? Will we continue to see debt issued with negative yield? Will it continue to be common practice for a central bank to reduce interest rates to stimulate the economy, even when cutting rates means lowering them to below zero? Numerous questions accompany this recent phenomenon and remain to be answered in full.

Special Notes Payable Situations

Notes Issued for Property, Goods, or Services

Sometimes, companies may receive property, goods, or services in exchange for a note payable. When exchanging the debt instrument for property, goods, or services in a bargained transaction entered into at arm’s length, the stated interest rate is presumed to be fair unless:

1. No interest rate is stated, or
2. The stated interest rate is unreasonable, or
3. The stated face amount of the debt instrument is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances, the company measures the present value of the debt instrument by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note. **[3] If there is no stated rate of interest, the amount of interest is the difference between the face amount of the note and the fair value of the property.**

For example, assume that Scenic Development AS sells land having a cash sale price of €200,000 to Health Spa Services. In exchange for the land, Health Spa gives a five-year, €293,866, zero-interest-bearing note. The €200,000 cash sale price represents the present value of the €293,866 note discounted at 8 percent for five years. Should both parties record the transaction on the sale date at the face amount of the note, which is €293,866? No—if they did, Health Spa’s Land account and Scenic’s sales would be overstated by €93,866 (the interest for five years at an effective rate of 8 percent). Similarly, interest revenue to Scenic and interest expense to Health Spa for the five-year period would be understated by €93,866.

Because the difference between the cash sale price of €200,000 and the €293,866 face amount of the note represents interest at an effective rate of 8 percent, the companies’ transaction is recorded at the exchange date as shown in [Illustration 14.17](#).

Health Spa Services (Buyer)			Scenic Development AS (Seller)		
Land	200,000		Notes Receivable	200,000	
Notes Payable		200,000	Sales Revenue		200,000

ILLUSTRATION 14.17 Entries for Non-Cash Note Transaction

During the five-year life of the note, Health Spa amortizes annually a portion of the discount of €93,866 as a charge to interest expense. Scenic Development records interest revenue totaling €93,866 over the five-year period by also amortizing the discount, using the effective-interest method.

Choice of Interest Rate

In note transactions, the effective or market interest rate is either evident or determinable by other factors involved in the exchange, such as the fair value of what is given or received. But, if a company cannot determine the fair value of the property, goods, services, or other rights, and if the note has no ready market, determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, a company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**, and the resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments of issuers with similar credit ratings affect the choice of a rate. Other factors, such as restrictive covenants, collateral, payment schedule, and the existing prime interest rate, also play a part. Companies determine the imputed interest rate when they issue a note; any subsequent changes in prevailing interest rates are ignored.

To illustrate, assume that on December 31, 2022, Wunderlich plc issued a promissory note and to Brown Interiors Company for architectural services. The note has a face value of £550,000, a due date of December 31, 2027, and also bears a stated interest rate of 2 percent, payable at the end of each year. Wunderlich cannot readily determine the fair value of the architectural services, nor is the note readily marketable. On the basis of Wunderlich's credit rating, the absence of collateral, the prime interest rate at that date, and the prevailing interest on Wunderlich's other outstanding debt, the company imputes an 8 percent interest rate as appropriate in this circumstance. [Illustration 14.18](#) shows the time diagram depicting both cash flows.

Mortgage Notes Payable

A common form of long-term notes payable is a mortgage note payable. A **mortgage note payable** is a promissory note secured by a document called a mortgage that pledges title to property as security for the loan. Individuals, proprietorships, and partnerships use mortgage notes payable more

frequently than do larger companies (which usually find that bond issues offer advantages in obtaining large loans).

The borrower usually receives cash for the face amount of the mortgage note. In that case, the face amount of the note is the true liability, and no discount or premium is involved. When the lender assesses “points,” however, the total amount received by the borrower is less than the face amount of the note.⁹ Points raise the effective-interest rate above the rate specified in the note. A **point** is 1 percent of the face of the note.

For example, assume that Harrick Co. borrows \$1,000,000, signing a 20-year mortgage note with a stated interest rate of 10.75 percent as part of the financing for a new plant. If Associated Savings demands 4 points to close the financing, Harrick will receive 4 percent less than \$1,000,000—or \$960,000—but it will be obligated to repay the entire \$1,000,000 at the rate of \$10,150 per month. Because Harrick received only \$960,000 and must repay \$1,000,000, its effective-interest rate is increased to approximately 11.3 percent on the money actually borrowed.

On the statement of financial position, Harrick should report the mortgage note payable as a liability using a title such as “Mortgage Notes Payable” or “Notes Payable—Secured,” with a brief disclosure of the property pledged in notes to the financial statements.

Mortgages may be payable in full at maturity or in installments over the life of the loan. If payable at maturity, Harrick classifies its mortgage payable as a non-current liability on the statement of financial position until such time as the approaching maturity date warrants showing it as a current liability. If it is payable in installments, Harrick shows the current installments due as current liabilities, with the remainder as a non-current liability.

Lenders have partially replaced the traditional **fixed-rate mortgage** with alternative mortgage arrangements. Most lenders offer **variable-rate mortgages** (also called floating-rate or adjustable-rate mortgages) featuring interest rates tied to changes in the fluctuating market rate. Generally, the variable-rate lenders adjust the interest rate at either one- or three-year intervals, pegging the adjustments to changes in the prime rate or the London Interbank Offering rate (LIBOR).¹⁰

Extinguishment of Non-Current Liabilities

LEARNING OBJECTIVE 3

Explain the accounting for extinguishment of non-current liabilities.

How do companies record the payment of non-current liabilities—often referred to as **extinguishment of debt**? If a company holds the bonds (or any other form of debt security) to maturity, the answer is straightforward: The company does not compute any gains or losses. It will have fully amortized any premium or discount at the date the bonds mature. As a result, the carrying amount, the maturity (face) value, and the fair value of the bond are the same. Therefore, no gain or loss exists.

In this section, we discuss extinguishment of debt under three common additional situations:

1. Extinguishment with cash before maturity.
2. Extinguishment by transferring assets or securities.
3. Extinguishment with modification of terms.

Extinguishment with Cash Before Maturity

In some cases, a company extinguishes debt before its maturity date.¹¹ The amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition, is called the **reacquisition price**. On any specified date, the **carrying amount** of the

bonds is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the net carrying amount over the reacquisition price is a **gain from extinguishment**. The excess of the reacquisition price over the carrying amount is a **loss from extinguishment**. At the time of reacquisition, **the unamortized premium or discount must be amortized up to the reacquisition date**.

To illustrate, we use the Evermaster bonds issued at a discount on January 1, 2022. These bonds are due in five years. The bonds have a par value of €100,000, a coupon rate of 8 percent paid semiannually, and were sold to yield 10 percent. The amortization schedule for the Evermaster bonds is presented in [Illustration 14.21](#).

Schedule of Bond Discount Amortization Effective-Interest Method—Semiannual Interest Payments 5-Year, 8% Bonds Sold to Yield 10%				
Date	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Bonds
1/1/22				€ 92,278
7/1/22	€ 4,000 ^a	€ 4,614 ^b	€ 614 ^c	92,892 ^d
1/1/23	4,000	4,645	645	93,537
7/1/23	4,000	4,677	677	94,214
1/1/24	4,000	4,711	711	94,925
7/1/24	4,000	4,746	746	95,671
1/1/25	4,000	4,783	783	96,454
7/1/25	4,000	4,823	823	97,277
1/1/26	4,000	4,864	864	98,141
7/1/26	4,000	4,907	907	99,048
1/1/27	4,000	4,952	952	100,000
	€40,000	€47,722	€7,722	
^a €4,000 = €100,000 × .08 × ⁶ / ₁₂ ^c €614 = €4,614 – €4,000				
^b €4,614 = €92,278 × .10 × ⁶ / ₁₂ ^d €92,892 = €92,278 + €614				

ILLUSTRATION 14.21 Bond Premium Amortization Schedule, Bond Extinguishment

On January 1, 2024, two years after the issue date, Evermaster calls the entire issue at 101 and cancels it.¹² As indicated in the amortization schedule, the carrying value of the bonds on January 1, 2024, is €94,925. [Illustration 14.22](#) indicates how Evermaster computes the loss on redemption (extinguishment).

Reacquisition price (€100,000 × 1.01)	€101,000
Carrying amount of bonds redeemed	(94,925)
Loss on extinguishment	€ 6,075

ILLUSTRATION 14.22 Computation of Loss on Redemption of Bonds

Evermaster records the reacquisition and cancellation of the bonds as follows.

Bonds Payable	94,925	
Loss on Extinguishment of Debt	6,075	
Cash		101,000

Note that it is often advantageous for the issuer to acquire the **entire** outstanding bond issue and replace it with a new bond issue bearing a lower rate of interest. The replacement of an existing issuance with a new one is called **refunding**. Whether the early redemption or other extinguishment of outstanding bonds is a non-refunding or a refunding situation, a company should recognize the difference (gain or loss) between the reacquisition price and the carrying amount of the redeemed bonds in income (in other income and expenses) of the period of redemption.

Extinguishment by Exchanging Assets or Securities

In addition to using cash, settling a debt obligation can involve either a transfer of non-cash assets (real estate, receivables, or other assets) or the issuance of the debtor's shares. In these situations, **the creditor should account for the non-cash assets or equity interest received at their fair value.**

The debtor must determine the excess of the carrying amount of the payable over the fair value of the assets or equity transferred (gain).¹³ The debtor recognizes a gain equal to the amount of the excess. In addition, the debtor recognizes a gain or loss on disposition of assets to the extent that the fair value of those assets differs from their carrying amount (book value).

Transfer of Assets

Assume that Hamburg Bank loaned €20,000,000 to Bonn Mortgage Company. Bonn, in turn, invested these monies in residential apartment buildings. However, because of low occupancy rates, it cannot meet its loan obligations. Hamburg Bank agrees to accept real estate with a fair value of €16,000,000 from Bonn Mortgage in full settlement of the €20,000,000 loan obligation. The real estate has a carrying value of €21,000,000 on the books of Bonn Mortgage. Bonn (debtor) records this transaction as follows.

Notes Payable (to Hamburg Bank)	20,000,000	
Loss on Disposal of Real Estate (€21,000,000 – €16,000,000)	5,000,000	
Real Estate		21,000,000
Gain on Extinguishment of Debt (€20,000,000 – €16,000,000)		4,000,000

Bonn Mortgage has a loss on the disposition of real estate in the amount of €5,000,000 (the difference between the €21,000,000 book value and the €16,000,000 fair value). In addition, it has a gain on settlement of debt of €4,000,000 (the difference between the €20,000,000 carrying amount of the note payable and the €16,000,000 fair value of the real estate).

Granting of Equity Interest

Now assume that Hamburg Bank agrees to accept from Bonn Mortgage 320,000 ordinary shares (€10 par) that have a fair value of €16,000,000, in full settlement of the €20,000,000 loan obligation. Bonn Mortgage (debtor) records this transaction as follows.

Notes Payable (to Hamburg Bank)	20,000,000	
Share Capital—Ordinary (320,000 × €10)		3,200,000
Share Premium—Ordinary (€16,000,000 – €3,200,000)		12,800,000
Gain on Extinguishment of Debt		4,000,000

It records the ordinary shares issued in the normal manner. It records the difference between the par value and the fair value of the shares as share premium.

Extinguishment with Modification of Terms

Practically every day, the *Wall Street Journal* or the *Financial Times* runs a story about some company in financial difficulty, such as **Japan Display** (JPN) or **Bayer AG** (DEU). In many of these

situations, a creditor may grant a borrower concessions with respect to settlement. The creditor offers these concessions to ensure the highest possible collection on the loan. For example, a creditor may offer one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

As with other extinguishments, when a creditor grants favorable concessions on the terms of a loan, the debtor has an economic gain. Thus, the accounting for modifications is similar to that for other extinguishments. That is, the original obligation is extinguished, the new payable is recorded at fair value, and a gain is recognized for the difference in the fair value of the new obligation and the carrying value of the old obligation.¹⁴

To illustrate, assume that on December 31, 2022, Morgan National Bank enters into a debt modification agreement with Resorts Development Group, which is experiencing financial difficulties. The bank restructures a ¥10,500,000 loan receivable issued at par (interest paid to date) by:

- Reducing the principal obligation from ¥10,500,000 to ¥9,000,000;
- Extending the maturity date from December 31, 2022, to December 31, 2026; and
- Reducing the interest rate from the historical effective rate of 12 percent to 8 percent. Given Resorts Development's financial distress, its market-based borrowing rate is 15 percent.

IFRS requires the modification to be accounted for as an extinguishment of the old note and issuance of the new note, measured at fair value. [6] **Illustration 14.23** shows the calculation of the fair value of the modified note, using Resorts Development's market discount rate of 15 percent.

Present value of restructured cash flows:	
Present value of ¥9,000,000 due in 4 years at 15%, interest payable annually (Table 6.2); $FV(PVF_{4,15\%})$; $(¥9,000,000 \times .57175)$	¥5,145,750
Present value of ¥720,000* interest payable annually for 4 years at 15% (Table 6.4); $R(PVF-OA_{4,15\%})$; $(¥720,000 \times 2.85498)$	2,055,586
Fair value of note	¥7,201,336
* ¥ 9,000,000 × .08	

ILLUSTRATION 14.23 Fair Value of Restructured Note

The gain on the modification is ¥3,298,664, which is the difference between the prior carrying value (¥10,500,000) and the fair value of the restructured note, as computed in [Illustration 14.23](#) (¥7,201,336). Given this information, Resorts Development makes the following entry to record the modification.

Notes Payable (old)	10,500,000	
Gain on Extinguishment of Debt		3,298,664
Notes Payable (new)		7,201,336

[Illustration 14.24](#) shows the amortization schedule for the new note, following the modification.

Date	Cash Paid	Interest Expense	Amortization	Carrying Value
12/31/2022				¥7,201,336
12/31/2023	¥720,000 ^a	¥1,080,200 ^b	¥360,200 ^c	7,561,536 ^d
12/31/2024	720,000	1,134,230	414,230	7,975,766
12/31/2025	720,000	1,196,365	476,365	8,452,131
12/31/2026	720,000	1,267,820	547,869 ^e	9,000,000
^a ¥9,000,000 × .08		^c ¥1,080,200 – ¥720,000		^e ¥49 adjustment for rounding
^b ¥7,201,336 × .15		^d ¥7,201,336 + ¥360,200		

ILLUSTRATION 14.24 Schedule of Interest and Amortization after Debt Modification

Resorts Development recognizes interest expense on this note using the effective rate of 15 percent. Thus, on December 31, 2023 (date of first interest payment after restructure), Resorts Development makes the following entry.

December 31, 2023		
Interest Expense	1,080,200	
Notes Payable		360,200
Cash		720,000

Resorts Development makes a similar entry (except for different amounts for credits to Notes Payable and debits to Interest Expense) each year until maturity. At maturity, Resorts Development makes the following entry.

December 31, 2026		
Notes Payable	9,000,000	
Cash		9,000,000

In summary, following the modification, Resorts Development has extinguished the old note with an effective rate of 12 percent and now has a new loan with a much higher effective rate of 15 percent.

Presentation and Analysis

LEARNING OBJECTIVE 4

Indicate how to present and analyze non-current liabilities.

Fair Value Option

As indicated earlier, non-current liabilities such as bonds and notes payable are generally measured at amortized cost (face value of the payable, adjusted for any payments and amortization of any premium or discount). However, companies have the option to record fair value in their accounts for most financial assets and liabilities, including bonds and notes payable. [7] As discussed in Chapter 7, the IASB believes that fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. It considers fair value to be more relevant because it reflects the current cash equivalent value of financial instruments.

Fair Value Measurement

If companies choose the **fair value option**, non-current liabilities such as bonds and notes payable are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An **unrealized holding gain or loss** is the net change in the fair value of the liability from one period

to another, exclusive of interest expense recognized but not recorded. As a result, the company reports the liability at fair value each reporting date. In addition, it reports the change in value as part of net income.

To illustrate, Edmonds SE issued €500,000 of 6 percent bonds at face value on May 1, 2022. Edmonds chose the fair value option for these bonds. At December 31, 2022, the fair value of the bonds is €480,000 because interest rates in the market increased to 8 percent. The value of the debt securities fell because the bond paid less than market rate for similar securities. Under the fair value option, Edmonds made the following entry.

Bonds Payable (€500,000 – €480,000)	20,000	
Unrealized Holding Gain or Loss—Income		20,000

As the journal entry indicates, the value of the bonds declined. This decline leads to a reduction in the bond liability and a resulting unrealized holding gain, which is reported as part of net income. The value of Edmonds' debt declined because interest rates increased. It should be emphasized that Edmonds must continue to value the bonds payable at fair value in all subsequent periods.

Fair Value Controversy

With the Edmonds bonds, we assumed that the decline in value of the bonds was due to an interest rate increase. In other situations, the decline may occur because the bonds become more likely to default. That is, **if the creditworthiness of Edmonds declines, the value of its debt also declines**. If its creditworthiness declines, its bond investors are receiving a lower rate relative to investors with similar-risk investments. If Edmonds is using the fair value option, changes in the fair value of the bonds payable for a decline in creditworthiness are included as part of income. Some question how Edmonds can record a gain when its creditworthiness is becoming worse. As one writer observed, "It seems counterintuitive." However, the IASB notes that the debtholders' loss is the shareholders' gain. That is, the shareholders' claims on the assets of the company increase when the value of the debtholders' claims declines. In addition, the worsening credit position may indicate that the assets of the company are declining in value as well. Thus, the company may be reporting losses on the asset side, which will be offsetting gains on the liability side.

The IASB apparently agrees with this statement and requires that the effects of changes in a company's credit risk should not affect profit and loss unless the liability is held for trading. [8] Therefore, any change in the value of the liability due to credit risk changes should be reported in other comprehensive income. To illustrate, assume the change in the interest rate related to the Edmonds bonds described in the previous section changed from 6 percent to 8 percent due to a decrease in the credit quality of these bonds. Under the fair value option, Edmonds makes the following entry.

Bonds Payable	20,000	
Unrealized Holding Gain or Loss—Equity		20,000

This entry recognizes the decline in the fair value of the liability and a resulting unrealized holding gain, which is reported as part of other comprehensive income. The value of the Edmonds bonds declined because of the change in its credit risk, not because of general market conditions. Edmonds then continues to value the bonds payable at fair value in all subsequent periods (see [Underlying Concepts](#)).

Underlying Concepts

The fair value controversy represents a classic trade-off between relevance and faithful representation.

Off-Balance-Sheet Financing

What do **Air Berlin** (DEU), **HSBC** (GBR), **China Construction Bank Corp.** (CHN), and **Enron** (USA) have in common? They all have been accused of using off-balance-sheet financing to minimize the reporting of debt on their statements of financial position.⁴⁵ **Off-balance-sheet financing** is an attempt to borrow monies in such a way as to prevent recording the obligations. It has become an issue of extreme importance. Many allege that Enron, in one of the largest corporate failures on record, hid a considerable amount of its debt off the statement of financial position. As a result, any company that uses off-balance-sheet financing today risks investors dumping their shares. Consequently, their share price will suffer. Nevertheless, a considerable amount of off-balance-sheet financing continues to exist. As one writer noted, “The basic drives of humans are few: to get enough food, to find shelter, and to keep debt off the balance sheet.”

Different Forms

Off-balance-sheet financing can take different forms:

1. **Non-consolidated subsidiary.** Under IFRS, a parent company does not have to consolidate a subsidiary company that is less than 50 percent owned. In such cases, the parent therefore does not report the assets and liabilities of the subsidiary. All the parent reports on its statement of financial position is the investment in the subsidiary. As a result, users of the financial statements may not understand that the subsidiary has considerable debt for which the parent may ultimately be liable if the subsidiary runs into financial difficulty.
2. **Special purpose entity (SPE).** A company creates a **special purpose entity (SPE)** to perform a special project. To illustrate, assume that Clarke Company decides to build a new factory. However, management does not want to report the plant or the borrowing used to fund the construction on its statement of financial position. It therefore creates an SPE, the purpose of which is to build the plant. (This arrangement is called a **project financing arrangement**.) The SPE finances and builds the plant. In return, Clarke guarantees that it or some outside party will purchase all the products produced by the plant (sometimes referred to as a **take-or-pay contract**). As a result, Clarke might not report the asset or liability on its books.

Rationale

Why do companies engage in off-balance-sheet financing? A major reason is that many believe that **removing debt enhances the quality of the statement of financial position** and permits credit to be obtained more readily and at less cost.

Second, loan covenants often limit the amount of debt a company may have. As a result, the company uses off-balance-sheet financing because **these types of commitments might not be considered in computing debt limits**.

Third, some argue that the asset side of the statement of financial position is severely understated. For example, companies that depreciate assets on an accelerated basis will often have carrying amounts for property, plant, and equipment that are much lower than their fair values. As an offset to these lower values, some believe that part of the debt does not have to be reported. In other words, **if companies reported assets at fair values**, less pressure would undoubtedly exist for off-balance-sheet financing arrangements.

Whether the arguments above have merit is debatable. The general idea of “out of sight, out of mind” may not be true in accounting. Many users of financial statements indicate that they attempt to factor these off-balance-sheet financing arrangements into their computations when assessing debt to equity relationships. Similarly, many loan covenants also attempt to account for these complex arrangements. Nevertheless, many companies still believe that benefits will accrue if they omit certain obligations from the statement of financial position.

As a response to off-balance-sheet financing arrangements, the IASB has increased disclosure (note) requirements. This response is consistent with an “efficient markets” philosophy: The important question is not whether the presentation is off-balance-sheet but whether the items are disclosed at all. In addition, the U.S. SEC now requires companies that it regulates to disclose (1) all contractual obligations in a tabular format and (2) contingent liabilities and commitments in either a textual or tabular format. An example of this disclosure appears in the following “Evolving Issue” box.¹⁶

We believe that recording more obligations on the statement of financial position will enhance financial reporting. Given the problems with companies such as Enron, **Tiger Air** (AUS), **Petra Perdana** (MYS), and **Washington Mutual** (USA), and on-going efforts by the IASB and market regulators, we expect that less off-balance-sheet financing will occur in the future.¹⁷

Evolving Issue

Off-and-On Reporting

The off-balance-sheet world is slowly but surely becoming more on-balance-sheet. New rules on guarantees and consolidation of SPEs are doing their part to increase the amount of debt reported on company statements of financial position. See [footnote 16](#) for a discussion of the IASB's consolidation guidance.

In addition, companies must disclose off-balance-sheet arrangements and contractual obligations that currently have, or are reasonably likely to have, a material future effect on the companies' financial condition. Presented below is **Novartis Group's** (CHE) tabular disclosure of its contractual obligations. Because Novartis lists its securities in the United States, it is subject to U.S. SEC rules.

Novartis Group Contractual Obligations					
The following table summarizes the Group's contractual obligations and other commercial commitments as well as the effect these obligations and commitments are expected to have on the Group's liquidity and cash flow in future periods:					
	Payments due by period				
(in USD millions)	Total	Less than 1 year	2–3 years	4–5 years	After 5 years
Non-current financial debt, including current portion	25,660	3,190	4,117	4,863	13,490
Interest on non-current financial debt, including current portion	5,994	572	892	775	3,755
Operating leases	3,612	372	500	377	2,363
Unfunded pensions and other post-employment benefit plans	2,094	122	254	266	1,452
Research and development potential milestone commitments	4,417	228	1,632	1,663	894
Property, plant and equipment purchase commitments	289	280	9		
Total contractual cash obligations	42,066	4,764	7,404	7,944	21,954
The Group intends to fund the R&D and purchase commitments with internally generated resources.					

Enron's (USA) abuse of off-balance-sheet financing to hide debt was shocking and inappropriate. One silver lining in the Enron debacle, however, is that the standard-setting bodies are now providing increased guidance on companies' reporting of contractual obligations. We believe the U.S. SEC rule, which requires companies to report their obligations over a period of time, will be extremely useful to the investment community.

Presentation of Non-Current Liabilities

Companies that have large amounts and numerous issues of non-current liabilities frequently report only one amount in the statement of financial position, supported with comments and schedules in the accompanying notes. Long-term debt that **matures within one year** should be reported as a current liability. If the company plans to refinance debt, convert it into shares, or retire it from a bond

retirement fund, it should continue to report the debt as non-current if the refinancing agreement is completed by the end of the period. [\[10\]](#)

Note disclosures generally indicate the nature of the liabilities, maturity dates, interest rates, call provisions, conversion privileges, restrictions imposed by the creditors, and assets designated or pledged as security. Companies should show any assets pledged as security for the debt in the assets section of the statement of financial position. The fair value of the long-term debt should also be disclosed. Finally, companies must disclose future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. These disclosures aid financial statement users in evaluating the amounts and timing of future cash flows. [Illustration 14.25](#) shows an example of the type of information provided for Novartis Group.

ILLUSTRATION 14.25 Long-Term Debt Disclosure

Analysis of Non-Current Liabilities

Long-term creditors and shareholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt at maturity. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

Debt to Assets Ratio

The **debt to assets ratio** measures the percentage of the total assets provided by creditors. To compute it, divide total debt (both current and non-current liabilities) by total assets, as [Illustration 14.26](#) shows.

$$\text{Debt to Assets} = \frac{\text{Total Liabilities}}{\text{Total Assets}}$$

ILLUSTRATION 14.26 Computation of Debt to Assets Ratio

The higher the percentage of total liabilities to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

Times Interest Earned

The **times interest earned** ratio indicates the company's ability to meet interest payments as they come due. As shown in [Illustration 14.27](#), it is computed by dividing the sum of net income, interest expense, and income tax expense by interest expense.

$$\text{Times Interest Earned} = \frac{\text{Net Income} + \text{Interest Expense} + \text{Income Tax Expense}}{\text{Interest Expense}}$$

ILLUSTRATION 14.27 Computation of Times Interest Earned

To illustrate these ratios, we use data from **Novartis's** 2018 annual report. Novartis has total liabilities of \$66,871 million, total assets of \$145,563 million, interest expense of \$957 million, income taxes of \$1,221 million, and net income of \$12,614 million. We compute Novartis's debt to assets and times interest earned ratios as shown in [Illustration 14.28](#).

$$\begin{aligned} \text{Debt to assets} &= \frac{\$66,871}{\$145,563} = 46\% \\ \text{Times interest earned} &= \frac{\$12,614 + \$957 + \$1,221}{\$957} = 15.5 \text{ times} \end{aligned}$$

ILLUSTRATION 14.28 Computation of Long-Term Debt Ratios for Novartis

Even though Novartis has a relatively high debt to assets ratio of 46 percent, its high interest coverage of 15.5 times indicates it can meet its interest payments as they come due.

Learning Objectives Review

1 Describe the nature of bonds and indicate the accounting for bond issuances.

Incurring long-term debt is often a formal procedure. Companies usually require approval by the board of directors and the shareholders before they can issue bonds or can make other long-term debt arrangements. Generally, long-term debt has various covenants or restrictions. The covenants and other terms of the agreement between the borrower and the lender are stated in the bond indenture or note agreement.

Various types of bond issues are (1) secured and unsecured bonds; (2) term, serial, and callable bonds; (3) convertible, commodity-backed, and deep-discount bonds; (4) registered and bearer (coupon) bonds; and (5) income and revenue bonds. The variety in the types of bonds results from attempts to attract capital from different investors and risk-takers and to satisfy the cash flow needs of the issuers.

The investment community values a bond at the present value of its future cash flows, which consist of interest and principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the

issuer's risk characteristics. The interest rate written in the terms of the bond indenture and ordinarily appearing on the bond certificate is the stated, coupon, or nominal rate. The issuer of the bonds sets the rate and expresses it as a percentage of the face value (also called the par value, principal amount, or maturity value) of the bonds. If the rate employed by the buyers differs from the stated rate, the present value of the bonds computed by the buyers will differ from the face value of the bonds. The difference between the face value and the present value of the bonds is either a discount or a premium.

The discount (premium) is amortized and charged (credited) to interest expense over the life of the bonds. Amortization of a discount increases bond interest expense, and amortization of a premium decreases bond interest expense. The profession's preferred procedure for amortization of a discount or premium is the effective-interest method. **Under the effective-interest method,** (1) bond interest expense is computed by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate; then, (2) the bond discount or premium amortization is determined by comparing the bond interest expense with the interest to be paid.

2 Explain the accounting for long-term notes payable.

Accounting procedures for notes and bonds are similar. Like a bond, a note is valued at the present value of its expected future interest and principal cash flows, with any discount or premium being similarly amortized over the life of the note. Whenever the face amount of the note does not reasonably represent the present value of the consideration in the exchange, a company must evaluate the entire arrangement in order to properly record the exchange and the subsequent interest.

3 Explain the accounting for the extinguishment of non-current liabilities.

Non-current liabilities, such as bonds and notes payable, may be extinguished by (1) paying cash, (2) transferring non-cash assets and/or granting of an equity interest, and (3) modification of terms. At the time of extinguishment, any unamortized premium or discount must be amortized up to the reacquisition date. The reacquisition price is the amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition. On any specified date, the carrying amount of the debt is the amount payable at maturity, adjusted for unamortized premium or discount. Any excess of the carrying amount over the reacquisition price is a gain from extinguishment. The excess of the reacquisition price over the carrying amount is a loss from extinguishment. Gains and losses on extinguishments are recognized currently in income. When debt is extinguished by transfer of non-cash assets or granting of equity interest, debtors record losses and gains on settlements based on fair values. The accounting for debt extinguished with modification is similar to that for other extinguishments. That is, the original obligation is extinguished, the new payable is recorded at fair value, and a gain or loss is recognized for the difference in the fair value of the new obligation and the carrying value of the old obligation.

4 Indicate how to present and analyze non-current liabilities.

Fair value option. Companies have the option to record fair value in their accounts for most financial assets and liabilities, including non-current liabilities. Fair value measurement for financial instruments, including financial liabilities, provides more relevant and understandable information than amortized cost. If companies choose the fair value option, non-current liabilities such as bonds and notes payable are recorded at fair value, with unrealized holding gains or losses reported as part of net income. An unrealized holding gain or loss is the net change in the fair value of the liability from one period to another, exclusive of interest expense recognized but not recorded.

Off-balance-sheet financing arrangements. Off-balance-sheet financing is an attempt to borrow funds in such a way as to prevent recording obligations. Examples of off-balance-sheet arrangements are (1) non-consolidated subsidiaries and (2) special purpose entities.

Presentation. Companies that have large amounts and numerous issues of non-current liabilities frequently report only one amount in the statement of financial position and support this with comments and schedules in the accompanying notes. Any assets pledged as security for the debt should be shown in the assets section of the statement of financial position. Long-term debt that matures within one year should be reported as a current liability, unless retirement is to be accomplished with other than current assets. If a company plans to refinance the debt, convert it into shares, or retire it from a bond retirement fund, it should continue to report it as non-current, as long as the refinancing is completed by the end of the period. Disclosure is required of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years.

Analysis. Debt to assets and times interest earned are two ratios that provide information about a company's debt-paying ability and long-run solvency.

Enhanced Review and Practice

Practice Problem

Consider the following independent situations:

- On March 1, 2022, Heide AG issued at 103 plus accrued interest €3,000,000, 9% bonds. The bonds are dated January 1, 2022, and pay interest semiannually on July 1 and January 1. In addition, Heide incurred €27,000 of bond issuance costs. Compute the net amount of cash received by Heide as a result of the issuance of these bonds.
- On January 1, 2022, Reymont SA issued 9% bonds with a face value of €500,000 for €469,280 to yield 10%. The bonds are dated January 1, 2022, and pay interest annually. What is the amount of discount on the issue date? Prepare the journal entry to record interest expense on December 31, 2022.
- Czeslaw Building Co. has a number of long-term bonds outstanding at December 31, 2022. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	Sinking Fund	Maturities
2023	€300,000	€100,000
2024	100,000	250,000
2025	100,000	100,000
2026	200,000	—
2027	200,000	150,000
2028	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2022.

Instructions

Prepare responses for each item above.

Solution

a. Heide AG

--	--

Selling price of the bonds ($€3,000,000 \times 1.03$)	€3,090,000
Accrued interest from January 1 to February 28, 2022 ($€3,000,000 \times .09 \times \frac{2}{12}$)	45,000
Total cash received from issuance of the bonds	3,135,000
Less: Bond issuance costs	27,000
Net amount of cash received	<u>€3,108,000</u>

b. Reymont SA

Face value of bonds	€ 500,000
Issue price	(469,280)
Bond discount on issue date	<u>€ 30,720</u>

December 31, 2022		
Interest Expense ($€469,280 \times .10$)	46,928	
Bonds Payable ($€46,928 - €45,000$)		1,928
Interest Payable ($€500,000 \times .09$)		45,000

c. Czeslaw Building Co.

Maturities and sinking fund requirements on long-term debt for each of the next five years are as follows.

2023	€400,000	2026	€200,000
2024	350,000	2027	350,000
2025	200,000

(Unless instructed otherwise, round all answers to the nearest whole currency unit.)

Questions

- (a) From what sources might a company obtain funds through long-term debt? (b) What is a bond indenture? What does it contain? (c) What is a mortgage?
- Novartis Group** (CHE) has issued various types of bonds, such as term bonds, income bonds, and debentures. Differentiate between term bonds, mortgage bonds, collateral trust bonds, debenture bonds, income bonds, callable bonds, registered bonds, bearer or coupon bonds, convertible bonds, commodity-backed bonds, and deep-discount bonds.
- Distinguish between the following interest rates for bonds payable:
 - Yield rate.
 - Nominal rate.
 - Stated rate.
 - Market rate.
 - Effective rate.
- Distinguish between the following values relative to bonds payable:
 - Maturity value.

- b. Face value.
- c. Market (fair) value.
- d. Par value.

5. Under what conditions of bond issuance does a discount on bonds payable arise? Under what conditions of bond issuance does a premium on bonds payable arise?
6. Briefly explain how bond premium or discount affects interest expense over the life of a bond.
7. What is the required method of amortizing discount and premium on bonds payable? Explain the procedures.
8. Zopf NV sells its bonds at a premium and applies the effective-interest method in amortizing the premium. Will the annual interest expense increase or decrease over the life of the bonds? Explain.
9. **Vodafone** (GBR) recently issued debt. How should the costs of issuing these bonds be accounted for?
10. Will the amortization of a bond discount increase or decrease bond interest expense? Explain.
11. What is done to record properly a transaction involving the issuance of a non-interest-bearing long-term note in exchange for property?
12. How is the present value of a non-interest-bearing note computed?
13. When is the stated interest rate of a debt instrument presumed to be fair?
14. What are the considerations in imputing an appropriate interest rate?
15. Differentiate between a fixed-rate mortgage and a variable-rate mortgage.
16. Identify the situations under which debt is extinguished.
17. What is the “call” feature of a bond issue? How does the call feature affect the amortization of bond premium or discount?
18. Why would a company wish to reduce its bond indebtedness before its bonds reach maturity? Indicate how this can be done and the correct accounting treatment for such a transaction.
19. What are the general rules for measuring a gain or a loss by a debtor in a debt extinguishment?
20.
 - a. In a debt modification situation, why might the creditor grant concessions to the debtor?
 - b. What type of concessions might a creditor grant the debtor in a debt modification situation?
21. What are the general rules for measuring and recognizing gain or loss by a debt extinguishment with modification?
22. What is the fair value option? Briefly describe the controversy of applying the fair value option to financial liabilities.
23. Pierre SA has a 12% note payable with a carrying value of €20,000. Pierre applies the fair value option to this note; given a decrease in market interest rates, the fair value of the note is €22,600. Prepare the entry to record the fair value option for this note.
24. What disclosures are required relative to long-term debt and sinking fund requirements?
25. What is off-balance-sheet financing? Why might a company be interested in using off-balance-sheet financing?
26. What are some forms of off-balance-sheet financing?
27. Explain how a non-consolidated subsidiary can be a form of off-balance-sheet financing.

Brief Exercises

BE14.1 (LO 1) Whiteside Ltd. issues ¥500,000 of 9% bonds, due in 10 years, with interest payable semiannually. At the time of issue, the market rate for such bonds is 10%. Compute the issue price of the bonds.

BE14.2 (LO 1) The Colson Company issued €300,000 of 10% bonds on January 1, 2022. The bonds are due January 1, 2027, with interest payable each July 1 and January 1. The bonds are issued at face value. Prepare Colson's journal entries for (a) the January issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE14.3 (LO 1) Assume the bonds in BE14.2 were issued at 108.11 to yield 8%. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31.

BE14.4 (LO 1) Assume the bonds in BE14.2 were issued at 92.6393 to yield 12%. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31.

BE14.5 (LO 1) Devers plc issued £400,000 of 6% bonds on May 1, 2022. The bonds were dated January 1, 2022, and mature January 1, 2024, with interest payable July 1 and January 1. The bonds were issued at face value plus accrued interest. Prepare Devers' journal entries for (a) the May 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE14.6 (LO 1) On January 1, 2022, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective-interest rate of 8%.

BE14.7 (LO 1) Assume the bonds in BE14.6 were issued for \$644,636 with an effective-interest rate of 6%. Prepare the company's journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.

BE14.8 (LO 1) Tan Ltd. issued HK\$600,000,000 of 7% bonds on November 1, 2022, for HK\$644,636,000. The bonds were dated November 1, 2022, and mature in 10 years, with interest payable each May 1 and November 1. The effective-interest rate is 6%. Prepare Tan's December 31, 2022, adjusting entry.

BE14.9 (LO 2) Coldwell AG issued a €100,000, 4-year, 10% note at face value to Flint Hills Bank on January 1, 2022, and received €100,000 cash. The note requires annual interest payments each December 31. Prepare Coldwell's journal entries to record (a) the issuance of the note and (b) the December 31 interest payment.

BE14.10 (LO 2) Samson plc issued a 4-year, £75,000, zero-interest-bearing note to Brown Ltd. on January 1, 2022, and received cash of £47,664. The implicit interest rate is 12%. Prepare Samson's journal entries for (a) the January 1 issuance and (b) the December 31 recognition of interest.

BE14.11 (LO 2) McCormick Corporation issued a 4-year, \$40,000, 5% note to Greenbush Company on January 1, 2022, and received a computer that normally sells for \$31,495. The note requires annual interest payments each December 31. The market rate of interest for a note of similar risk is 12%. Prepare McCormick's journal entries for (a) the January 1 issuance and (b) the December 31 interest.

BE14.12 (LO 2) Shlee SA issued a 4-year, €60,000, zero-interest-bearing note to Garcia Company on January 1, 2022, and received cash of €60,000. In addition, Shlee agreed to sell merchandise to Garcia at an amount less than regular selling price over the 4-year period. The market rate of interest for similar notes is 12%. Prepare Shlee's January 1 journal entry.

BE14.13 (LO 3) On January 1, 2022, Henderson Corporation retired \$500,000 of bonds at 99. At the time of retirement, the unamortized premium was \$15,000. Prepare Henderson's journal entry to record the reacquisition of the bonds.

BE14.14 (LO 3) Refer to the note issued by Coldwell AG in BE14.9. During 2022, Coldwell experiences financial difficulties. On January 1, 2023, Coldwell negotiates a settlement of the note by

issuing to Flint Hills Bank 20,000 €1 par Coldwell ordinary shares. The ordinary shares have a market price of €4.75 per share on the date of the settlement. Prepare Coldwell's entries to settle this note.

BE14.15 (LO 3) Refer to the note issued by Coldwell AG in BE14.9. During 2022, Coldwell experiences financial difficulties. On January 1, 2023, Coldwell negotiates a modification of the terms of the note. Under the modification, Flint Hills Bank agrees to reduce the face value of the note to €90,000 and to extend the maturity date to January 1, 2027. Annual interest payments on December 31 will be made at a rate of 8%. Coldwell's market interest rate at the time of the modification is 12%. Prepare Coldwell's entries for (a) the modification on January 1, 2023, and (b) the first interest payment date on December 31, 2023.

BE14.16 (LO 4) Shonen Knife Ltd. has elected to use the fair value option for one of its notes payable. The note was issued at an effective rate of 11% and has a carrying value of HK\$16,000. At year-end, Shonen Knife's borrowing rate has declined; the fair value of the note payable is now HK\$17,500. (a) Determine the unrealized gain or loss on the note and (b) prepare the entry to record any unrealized gain or loss, assuming that the change in value was due to general market conditions.

BE14.17 (LO 4) At December 31, 2022, Hyasaki Corporation has the following account balances:

Bonds payable, due January 1, 2030	\$1,912,000
Interest payable	80,000

Show how the above accounts should be presented on the December 31, 2022, statement of financial position, including the proper classifications.

Exercises

E14.1 (LO 1) (Classification of Liabilities) Presented below are various account balances.

- Bank loans payable of a winery, due March 10, 2025. (The product requires aging for 5 years before sale.)
- Serial bonds payable, €1,000,000, of which €250,000 are due each July 31.
- Amounts withheld from employees' wages for income taxes.
- Notes payable due January 15, 2024.
- Credit balances in customers' accounts arising from returns and allowances after collection in full of account.
- Bonds payable of €2,000,000 maturing June 30, 2023.
- Overdraft of €1,000 in a bank account. (No other balances are carried at this bank.)
- Deposits made by customers who have ordered goods.

Instructions

Indicate whether each of the items above should be classified on December 31, 2022, as a current liability, a non-current liability, or under some other classification. Consider each one independently from all others; that is, do not assume that all of them relate to one particular business. If the classification of some of the items is doubtful, explain why in each case.

E14.2 (LO 1, 2) (Classification) The following items are found in the financial statements.

- Interest expense (credit balance).
- Bond issue costs.
- Gain on repurchase of debt.
- Mortgage payable (payable in equal amounts over next 3 years).

- e. Debenture bonds payable (maturing in 5 years).
- f. Notes payable (due in 4 years).
- g. Income bonds payable (due in 3 years).

Instructions

Indicate how each of these items should be classified in the financial statements.

E14.3 (LO 1) (Entries for Bond Transactions) Presented below are two independent situations.

1. On January 1, 2022, Divac SA issued €300,000 of 9%, 10-year bonds at par. Interest is payable quarterly on April 1, July 1, October 1, and January 1.
2. On June 1, 2022, Verbitsky AG issued €200,000 of 12%, 10-year bonds dated January 1 at par plus accrued interest. Interest is payable semiannually on July 1 and January 1.

Instructions

For each of these two independent situations, prepare journal entries to record the following.

- a. The issuance of the bonds.
- b. The payment of interest on July 1.
- c. The accrual of interest on December 31.

E14.4 (LO 1) (Entries for Bond Transactions) Foreman Cleaners issued €800,000 of 10%, 20-year bonds on January 1, 2022, at 119.792 to yield 8%. Interest is payable semiannually on July 1 and January 1.

Instructions

Prepare the journal entries to record the following.

- a. The issuance of the bonds.
- b. The payment of interest and the related amortization on July 1, 2022.
- c. The accrual of interest and the related amortization on December 31, 2022.

E14.5 (LO 1) (Entries for Bond Transactions) Assume the same information as in E14.4, except that the bonds were issued at 84.95 to yield 12%.

Instructions

Prepare the journal entries to record the following. (Round to the nearest euro.)

- a. The issuance of the bonds.
- b. The payment of interest and related amortization on July 1, 2022.
- c. The accrual of interest and the related amortization on December 31, 2022.

E14.6 (LO 1) (Amortization Schedule) Spencer plc sells 10% bonds having a maturity value of £3,000,000 for £2,783,724. The bonds are dated January 1, 2022, and mature January 1, 2027. Interest is payable annually on January 1.

Instructions

Set up a schedule of interest expense and discount amortization. (*Hint:* The effective-interest rate must be computed.)

E14.7 (LO 1) Groupwork (Determine Proper Amounts in Account Balances) Presented below are three independent situations.

Instructions

- a. McEntire Co. sold \$2,500,000 of 11%, 10-year bonds at 106.231 to yield 10% on January 1, 2022. The bonds were dated January 1, 2022, and pay interest on July 1 and January 1. Determine the amount of interest expense to be reported on July 1, 2022, and December 31, 2022.
- b. Cheriel Inc. issued \$600,000 of 9%, 10-year bonds on June 30, 2022, for \$562,500. This price provided a yield of 10% on the bonds. Interest is payable semiannually on December 31 and June 30. Determine the amount of interest expense to record if financial statements are issued on October 31, 2022.
- c. On October 1, 2022, Chinook Company sold 12% bonds having a maturity value of \$800,000 for \$853,382 plus accrued interest, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2022, and mature January 1, 2027, with interest payable December 31 of each year. Prepare the journal entries at the date of the bond issuance and for the first interest payment.

E14.8 (LO 1) Groupwork (Entries and Questions for Bond Transactions) On June 30, 2021, Macias SA issued R\$5,000,000 face value of 13%, 20-year bonds at R\$5,376,150 to yield 12%. The bonds pay semiannual interest on June 30 and December 31.

Instructions

- a. Prepare the journal entries to record the following transactions.
 1. The issuance of the bonds on June 30, 2021.
 2. The payment of interest and the amortization of the premium on December 31, 2021.
 3. The payment of interest and the amortization of the premium on June 30, 2022.
 4. The payment of interest and the amortization of the premium on December 31, 2022.
- b. Show the proper statement of financial position presentation for the liability for bonds payable on the December 31, 2022, statement of financial position.
- c. Provide the answers to the following questions.
 1. What amount of interest expense is reported for 2022?
 2. Determine the total cost of borrowing over the life of the bond.

E14.9 (LO 1) (Entries for Bond Transactions) On January 1, 2022, Osborn plc sold 12% bonds having a maturity value of £800,000 for £860,651.79, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2022, and mature January 1, 2027, with interest payable December 31 of each year.

Instructions

- a. Prepare the journal entry at the date of the bond issuance.
- b. Prepare a schedule of interest expense and bond amortization for 2022–2024.
- c. Prepare the journal entry to record the interest payment and the amortization for 2022.
- d. Prepare the journal entry to record the interest payment and the amortization for 2024.

E14.10 (LO 1) (Information Related to Various Bond Issues) Pawnee Inc. has issued three types of debt on January 1, 2022, the start of the company's fiscal year.

- a. \$10 million, 10-year, 13% unsecured bonds, interest payable quarterly. Bonds were priced to yield 12%.
- b. \$25 million par of 10-year, zero-coupon bonds at a price to yield 12% per year.
- c. \$15 million, 10-year, 10% mortgage bonds, interest payable annually to yield 12%.

Instructions

Prepare a schedule that identifies the following items for each bond: (1) maturity value, (2) number of interest periods over life of bond, (3) stated rate per each interest period, (4) effective-interest rate per each interest period, (5) payment amount per period, and (6) present value of bonds at date of issue.

E14.11 (LO 2) (Entries for Zero-Interest-Bearing Notes) On January 1, 2022, McLean AG makes the two following acquisitions.

1. Purchases land having a fair value of €300,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of €505,518.
2. Purchases equipment by issuing a 6%, 8-year promissory note having a maturity value of €400,000 (interest payable annually).

The company has to pay 11% interest for funds from its bank.

Instructions

- a. Record the two journal entries that should be recorded by McLean AG for the two purchases on January 1, 2022.
- b. Record the interest at the end of the first year on both notes.

E14.12 (LO 2) (Imputation of Interest) The following are two independent situations.

Instructions

- a. On January 1, 2022, Spartan Inc. purchased land that had an assessed value of \$390,000 at the time of purchase. A \$600,000, zero-interest-bearing note due January 1, 2025, was given in exchange. There was no established exchange price for the land, nor a ready market price for the note. The interest rate charged on a note of this type is 12%. Determine at what amount the land should be recorded at January 1, 2022, and the interest expense to be reported in 2022 related to this transaction.
- b. On January 1, 2022, Geimer Furniture Co. borrowed \$4,000,000 (face value) from Aurora Co., a major customer, through a zero-interest-bearing note due in 4 years. Because the note was zero-interest-bearing, Geimer Furniture agreed to sell furniture to this customer at lower than market price. A 10% rate of interest is normally charged on this type of loan. Prepare the journal entry to record this transaction and determine the amount of interest expense to report for 2022.

E14.13 (LO 2) (Imputation of Interest with Right) On January 1, 2022, Durdil A.S. borrowed and received ₺500,000 from a major customer evidenced by a zero-interest-bearing note due in 3 years. As consideration for the zero-interest-bearing feature, Durdil agrees to supply the customer's inventory needs for the loan period at lower than the market price. The appropriate rate at which to impute interest is 8%.

Instructions

- a. Prepare the journal entry to record the initial transaction on January 1, 2022.
- b. Prepare the journal entry to record any adjusting entries needed at December 31, 2022. Assume that the sales of Durdil's product to this customer occur evenly over the 3-year period.

E14.14 (LO 1, 3) (Entry for Retirement of Bond; Bond Issue Costs) On January 2, 2019, Prebish Corporation issued \$1,500,000 of 10% bonds to yield 11% due December 31, 2028. Interest on the bonds is payable annually each December 31. The bonds are callable at 101 (i.e., at 101% of face amount), and on January 2, 2022, Prebish called \$1,000,000 face amount of the bonds and retired them.

Instructions

- Determine the price of the Prebish bonds when issued on January 2, 2019.
- Prepare an amortization schedule for 2019–2023 for the bonds.
- Ignoring income taxes, compute the amount of loss, if any, to be recognized by Prebish as a result of retiring the \$1,000,000 of bonds on January 2, 2022, and prepare the journal entry to record the retirement.

E14.15 (LO 1, 3) (Entries for Retirement and Issuance of Bonds) On June 30, 2014, Mendenhal plc issued 8% bonds with a par value of £600,000 due in 20 years. They were issued at 82.8414 to yield 10% and were callable at 104 at any date after June 30, 2022. Because of lower interest rates and a significant change in the company's credit rating, it was decided to call the entire issue on June 30, 2023, and to issue new bonds. New 6% bonds were sold in the amount of £800,000 at 112.5513 to yield 5%; they mature in 20 years. Interest payment dates are December 31 and June 30 for both old and new bonds.

Instructions

- Prepare journal entries to record the retirement of the old issue and the sale of the new issue on June 30, 2023. Unamortized discount is £78,979.
- Prepare the entry required on December 31, 2023, to record the payment of the first 6 months' interest and the amortization of premium on the bonds.

E14.16 (LO 1, 3) (Entries for Retirement and Issuance of Bonds) Kobiachi Group had bonds outstanding with a maturity value of ¥5,000,000. On April 30, 2023, when these bonds had an unamortized discount of ¥100,000, they were called in at 104. To pay for these bonds, Kobiachi had issued other bonds a month earlier bearing a lower interest rate. The newly issued bonds had a life of 10 years. The new bonds were issued at 103 (face value ¥5,000,000).

Instructions

Ignoring interest, compute the gain or loss and record this refunding transaction.

E14.17 (LO 3) (Settlement of Debt) Strickland Company owes \$200,000 plus \$18,000 of accrued interest to Moran State Bank. The debt is a 10-year, 10% note. During 2022, Strickland's business deteriorated due to a faltering regional economy. On December 31, 2022, Moran State Bank agrees to accept an old machine and cancel the entire debt. The machine has a cost of \$390,000, accumulated depreciation of \$221,000, and a fair value of \$180,000.

Instructions

- Prepare journal entries for Strickland Company to record this debt settlement.
- How should Strickland report the gain or loss on the disposition of machine and on restructuring of debt in its 2022 income statement?
- Assume that, instead of transferring the machine, Strickland decides to grant 15,000 of its ordinary shares (\$10 par), which have a fair value of \$180,000, in full settlement of the loan obligation. Prepare the entries to record the transaction.

E14.18 (LO 3) (Loan Modification) On December 31, 2022, Sterling Bank enters into a debt restructuring agreement with Barkley plc, which is now experiencing financial trouble. The bank agrees to restructure a 12%, issued at par, £3,000,000 note receivable by the following modifications:

1. Reducing the principal obligation from £3,000,000 to £2,400,000.
2. Extending the maturity date from December 31, 2022, to January 1, 2026.
3. Reducing the interest rate from 12% to 10%. Barkley's market rate of interest is 15%.

Barkley pays interest at the end of each year. On January 1, 2026, Barkley pays £2,400,000 in cash to Sterling Bank.

Instructions

- a. Can Barkley record a gain under the term modification mentioned above? Explain.
- b. Prepare the amortization schedule of the note for Barkley after the debt modification.
- c. Prepare the interest payment entry for Barkley on December 31, 2024.
- d. What entry should Barkley make on January 1, 2026?

E14.19 (LO 3) (Loan Modification) Use the same information as in E14.18 except that Sterling Bank reduced the principal to £1,900,000 rather than £2,400,000. On January 1, 2026, Barkley pays £1,900,000 in cash to Sterling Bank for the principal.

Instructions

- a. Prepare the journal entries to record the loan modification for Barkley.
- b. Prepare the amortization schedule of the note for Barkley after the debt modification.
- c. Prepare the interest payment entries for Barkley on December 31 of 2023, 2024, and 2025.
- d. What entry should Barkley make on January 1, 2026?

E14.20 (LO 3) (Entries for Settlement of Debt) Consider the following independent situations.

Instructions

- a. Gottlieb Stores owes €199,800 to Ceballos SpA. The debt is a 10-year, 11% note. Because Gottlieb is in financial trouble, Ceballos agrees to accept some land and cancel the entire debt. The land has a book value of €90,000 and a fair value of €140,000. Prepare the journal entry on Gottlieb's books for debt settlement.
- b. Vargo Corp. owes \$270,000 to First Trust. The debt is a 10-year, 12% note due December 31, 2022. Because Vargo Corp. is in financial trouble, First Trust agrees to extend the maturity date to December 31, 2024, reduce the principal to \$220,000, and reduce the interest rate to 5%, payable annually on December 31. Vargo's market rate of interest is 8%. Prepare the journal entries on Vargo's books on December 31, 2022, 2023, and 2024.

E14.21 (LO 4) (Fair Value Option) Fallen AG commonly issues long-term notes payable to its various lenders. Fallen has had a pretty good credit rating, such that its effective borrowing rate is quite low (less than 8% on an annual basis). Fallen has elected to use the fair value option for the long-term notes issued to Barclay's Bank and has the following data related to the carrying and fair value for these notes. (Assume that changes in fair value are due to general market interest rate changes).

	Carrying Value	Fair Value
December 31, 2022	€54,000	€54,000

December 31, 2023	44,000	42,500
December 31, 2024	36,000	38,000

Instructions

- Prepare the journal entry at December 31 (Fallen's year-end) for 2022, 2023, and 2024, to record the fair value option for these notes.
- At what amount will the note be reported on Fallen's 2023 statement of financial position?
- What is the effect of recording the fair value option on these notes on Fallen's 2024 income?
- Assuming that general market interest rates have been stable over the period, do the fair value data for the notes indicate that Fallen's creditworthiness has improved or declined in 2024? Explain.
- Assuming the conditions that exist in (d), what is the effect of recording the fair value option on these notes in Fallen's income statement in 2022, 2023, and 2024?

E14.22 (LO 4) (Long-Term Debt Disclosure) At December 31, 2022, Redmond Company has outstanding three long-term debt issues. The first is a \$2,000,000 note payable which matures June 30, 2025. The second is a \$6,000,000 bond issue which matures September 30, 2026. The third is a \$12,500,000 sinking fund debenture with annual sinking fund payments of \$2,500,000 in each of the years 2024 through 2027.

Instructions

Prepare the required note disclosure for the long-term debt at December 31, 2022.

Problems

P14.1 (LO 1) Groupwork (Analysis of Amortization Schedule and Interest Entries) The following amortization and interest schedule reflects the issuance of 10-year bonds by Capulet SpA on January 1, 2016, and the subsequent interest payments and charges. The company's year-end is December 31, and financial statements are prepared once yearly.

Amortization Schedule				
Year	Cash	Interest	Amount Unamortized	Book Value
1/1/2016			€5,651	€ 94,349
2016	€11,000	€11,322	5,329	94,671
2017	11,000	11,361	4,968	95,032
2018	11,000	11,404	4,564	95,436
2019	11,000	11,452	4,112	95,888
2020	11,000	11,507	3,605	96,395
2021	11,000	11,567	3,038	96,962
2022	11,000	11,635	2,403	97,597
2023	11,000	11,712	1,691	98,309
2024	11,000	11,797	894	99,106
2025	11,000	11,894		100,000

Instructions

- Indicate whether the bonds were issued at a premium or at a discount and how you can determine this fact from the schedule.

- b. Determine the stated interest rate and the effective-interest rate.
- c. On the basis of the schedule, prepare the journal entry to record the issuance of the bonds on January 1, 2016.
- d. On the basis of the schedule, prepare the journal entry or entries to reflect the bond transactions and accruals for 2016. (Interest is paid January 1.)
- e. On the basis of the schedule, prepare the journal entry or entries to reflect the bond transactions and accruals for 2023. Capulet does not use reversing entries.

P14.2 (LO 1, 3) (Issuance and Retirement of Bonds) Venezuela Co. is building a new hockey arena at a cost of \$2,500,000. It received a down payment of \$500,000 from local businesses to support the project and now needs to borrow \$2,000,000 to complete the project. It decides to issue \$2,000,000 of 10.5%, 10-year bonds. These bonds were issued on January 1, 2021, and pay interest annually on each January 1. The bonds yield 10%.

Instructions

- a. Prepare the journal entry to record the issuance of the bonds on January 1, 2021.
- b. Prepare a bond amortization schedule up to and including January 1, 2025.
- c. Assume that on July 1, 2024, Venezuela Co. retires half of the bonds at a cost of \$1,065,000 plus accrued interest. Prepare the journal entry to record this retirement.

P14.3 (LO 1) (Negative Amortization) Good-Deal Auto developed a new sales gimmick to help sell its inventory of new automobiles. Because many new car buyers need financing, Good-Deal offered a low down payment and low car payments for the first year after purchase. It believes that this promotion will bring in some new buyers.

On January 1, 2022, a customer purchased a new €33,000 automobile, making a down payment of €1,000. The customer signed a note indicating that the annual rate of interest would be 8% and that quarterly payments would be made over 3 years. For the first year, Good-Deal required a €400 quarterly payment to be made on April 1, July 1, October 1, and January 1, 2023. After this one-year period, the customer was required to make regular quarterly payments that would pay off the loan as of January 1, 2025.

Instructions

- a. Prepare a note amortization schedule for the first year.
- b. Indicate the amount the customer owes on the contract at the end of the first year.
- c. Compute the amount of the new quarterly payments.
- d. Prepare a note amortization schedule for these new payments for the next 2 years.
- e. What do you think of the new sales promotion used by Good-Deal?

P14.4 (LO 1) Writing (Effective-Interest Method) Samantha Cordelia, an intermediate accounting student, is having difficulty amortizing bond premiums and discounts using the effective-interest method. Furthermore, she cannot understand why IFRS requires that this method be used. She has come to you with the following problem, looking for help.

On June 30, 2022, Hobart SA issued R\$2,000,000 face value of 11%, 20-year bonds at R\$2,171,600, a yield of 10%. Hobart uses the effective-interest method to amortize bond premiums or discounts. The bonds pay semiannual interest on June 30 and December 31.

Instructions

Prepare the amortization schedule for four periods. Using the data for illustrative purposes, write a short memo (1–1.5 pages double-spaced) to Samantha, explaining what the effective-interest method

is, why it is preferable, and how it is computed. (Do not forget to include an amortization schedule, referring to it whenever necessary.)

P14.5 (LO 2) (Entries for Zero-Interest-Bearing Note) On December 31, 2022, Faital plc acquired a computer system from Plato Group by issuing a £600,000 zero-interest-bearing note, payable in full on December 31, 2026. Faital's credit rating permits it to borrow funds from its several lines of credit at 10%. The computer is expected to have a 5-year life and a £70,000 residual value.

Instructions

- a. Prepare the journal entry for the purchase on December 31, 2022.
- b. Prepare any necessary adjusting entries relative to depreciation (use straight-line) and amortization on December 31, 2023.
- c. Prepare any necessary adjusting entries relative to depreciation and amortization on December 31, 2024.

P14.6 (LO 2) (Entries for Zero-Interest-Bearing Note; Payable in Installments) Sabonis Cosmetics Co. purchased machinery on December 31, 2021, paying \$50,000 down and agreeing to pay the balance in four equal installments of \$40,000 payable each December 31. An assumed interest rate of 8% is implicit in the purchase price.

Instructions

Prepare the journal entries that would be recorded for the purchase and for the payments and interest on the following dates.

- a. December 31, 2021.
- b. December 31, 2022.
- c. December 31, 2023.
- d. December 31, 2024.
- e. December 31, 2025.

P14.7 (LO 1, 3, 4) (Issuance and Retirement of Bonds; Income Statement Presentation) Chen Ltd. issued its 9%, 25-year mortgage bonds in the principal amount of ¥30,000,000 on January 2, 2008, at a discount of ¥2,722,992 (effective rate of 10%). The indenture securing the issue provided that the bonds could be called for redemption in total, but not in part, at any time before maturity at 104% of the principal amount. However, the indenture did not provide for any sinking fund.

On December 18, 2022, the company issued its 11%, 20-year debenture bonds in the principal amount of ¥40,000,000 at 102, and the proceeds were used to redeem the 9%, 25-year mortgage bonds on January 2, 2023. The indenture securing the new issue did not provide for any sinking fund or for retirement before maturity. The unamortized discount at retirement was ¥1,842,888.

Instructions

- a. Prepare journal entries to record the issuance of the 11% bonds and the retirement of the 9% bonds.
- b. Indicate the income statement treatment of the gain or loss from retirement and the note disclosure required.

P14.8 (LO 1, 3) (Comprehensive Bond Problem) In each of the following independent cases, the company closes its books on December 31.

1. Sanford Co. sells \$500,000 of 10% bonds on March 1, 2022. The bonds pay interest on September 1 and March 1. The due date of the bonds is September 1, 2025. The bonds yield 12%. Give entries through December 31, 2023.
2. Titania Co. sells \$400,000 of 12% bonds on June 1, 2022. The bonds pay interest on December 1 and June 1. The due date of the bonds is June 1, 2026. The bonds yield 10%. On October 1, 2023, Titania buys back \$120,000 worth of bonds for \$126,000 (includes accrued interest). Give entries through December 1, 2024.

Instructions

For the two cases, prepare all of the relevant journal entries from the time of sale until the date indicated. (Construct amortization tables where applicable.) Amortize premium or discount on interest dates and at year-end. (Assume that no reversing entries were made; round to the nearest dollar.)

P14.9 (LO 1, 3) **Groupwork** (Issuance of Bonds Between Interest Dates, Retirement)

Presented below are selected transactions on the books of Simonson Foundry.

July 1, 2022	Bonds payable with a par value of €900,000, which are dated January 1, 2022, are sold at 112.290 plus accrued interest to yield 10%. They are coupon bonds, bear interest at 12% (payable annually at January 1), and mature January 1, 2032. (Use interest expense account for accrued interest.)
Dec. 31	Adjusting entries are made to record the accrued interest on the bonds, and the amortization of the proper amount of premium.
Jan. 1, 2023	Interest on the bonds is paid.
Jan. 2	Bonds of par value of €360,000 are called at 102 and extinguished.
Dec. 31	Adjusting entries are made to record the accrued interest on the bonds, and the proper amount of premium amortized.

Instructions

Prepare journal entries for the transactions above.

P14.10 (LO 1, 3) (Entries for Life Cycle of Bonds) On April 1, 2022, Sarkar Sailboats sold 15,000 of its 11%, 15-year, R\$1,000 face value bonds to yield 12%. Interest payment dates are April 1 and October 1. On April 2, 2023, Sarkar took advantage of favorable prices of its shares to extinguish 6,000 of the bonds by issuing 200,000 of its R\$10 par value ordinary shares. At this time, the accrued interest was paid in cash. The company's shares were selling for R\$31 per share on April 2, 2023.

Instructions

Prepare the journal entries needed on the books of Sarkar to record the following.

- a. April 1, 2022: issuance of the bonds.
- b. October 1, 2022: payment of semiannual interest.
- c. December 31, 2022: accrual of interest expense.
- d. April 1, 2023: payment of semiannual interest.
- e. April 2, 2023: extinguishment of 6,000 bonds. (No reversing entries made.)

P14.11 (LO 3) (Modification of Debt) Daniel Perkins is the sole shareholder of Perkins Inc., which is currently under protection of the U.S. bankruptcy court. As a "debtor in possession," he has

negotiated the following revised loan agreement with United Bank. Perkins Inc.'s \$600,000, 12%, 10-year note was refinanced with a \$600,000, 5%, 10-year note. Perkins has a market rate of interest of 15%.

Instructions

- What is the accounting nature of this transaction?
- Prepare the journal entry to record this refinancing on the books of Perkins Inc.

P14.12 (LO 3) (Modification of Note under Different Circumstances) Halvor Corporation is having financial difficulty and therefore has asked Frontenac National Bank to restructure its \$5 million note outstanding. The present note has 3 years remaining and pays a current rate of interest of 10%. The present market rate for a loan of this nature is 12%. The note was issued at its face value.

Instructions

Presented below are three independent situations. Prepare the journal entry that Halvor would make for each of these restructurings.

- Frontenac National Bank agrees to take an equity interest in Halvor by accepting ordinary shares valued at \$3,700,000 in exchange for relinquishing its claim on this note. The ordinary shares have a par value of \$1,700,000.
- Frontenac National Bank agrees to accept land in exchange for relinquishing its claim on this note. The land has a book value of \$3,250,000 and a fair value of \$4,000,000.
- Frontenac National Bank agrees to modify the terms of the note, indicating that Halvor does not have to pay any interest on the note over the 3-year period.

P14.13 (LO 3) (Debtor Entries for Continuation of Debt with New Effective Interest)

Crocker plc owes Yaeger Ltd. a 10-year, 10% note in the amount of £330,000 plus £33,000 of accrued interest. The note is due today, December 31, 2022. Because Crocker is in financial trouble, Yaeger agrees to forgive the accrued interest, and £30,000 of the principal, and to extend the maturity date to December 31, 2025. Interest at 10% of revised principal will continue to be due on 12/31 each year. Given Crocker's financial difficulties, the market rate for its loans is 12%.

Instructions

- Prepare the amortization schedule for the years 2022 through 2025.
- Prepare all the necessary journal entries on the books of Crocker for the years 2022, 2023, and 2024.

P14.14 (LO 1, 3, 4) **Groupwork** (Comprehensive Problem: Issuance, Classification, Reporting)

Presented below are three independent situations.

Instructions

- On January 1, 2022, Langley Co. issued 9% bonds with a face value of \$700,000 for \$656,992 to yield 10%. The bonds are dated January 1, 2022, and pay interest annually. What amount is reported for interest expense in 2022 related to these bonds?
- Tweedie Building Co. has a number of long-term bonds outstanding at December 31, 2022. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	Sinking Fund	Maturities
2023	\$300,000	\$100,000
2024	100,000	250,000

2025	100,000	100,000
2026	200,000	—
2027	200,000	150,000
2028	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2022.

- c. In the long-term debt structure of Beckford Inc., the following three bonds were reported: mortgage bonds payable \$10,000,000; collateral trust bonds \$5,000,000; bonds maturing in installments, secured by plant equipment \$4,000,000. Determine the total amount, if any, of debenture bonds outstanding.

Concepts for Analysis

CA14.1 (LO 1, 4) (Bond Theory: Statement of Financial Position Presentations, Interest Rate, Premium) On January 1, 2023, Nichols Company issued for \$1,085,800 its 20-year, 11% bonds that have a maturity value of \$1,000,000 and pay interest semiannually on January 1 and July 1. Bond issue costs were not material in amount. Below are three presentations of the non-current liability section of the statement of financial position that might be used for these bonds at the issue date.

1. Bonds payable (maturing January 1, 2043)	<u>\$1,085,800</u>
2. Bonds payable—principal (face value \$1,000,000 maturing January 1, 2043)	\$ 142,050 ^a
Bonds payable—interest (semiannual payment \$55,000)	943,750 ^b
Total bond liability	<u>\$1,085,800</u>
3. Bonds payable—principal (maturing January 1, 2043)	\$1,000,000
Bonds payable—interest (\$55,000 per period for 40 periods)	2,200,000
Total bond liability	<u>\$3,200,000</u>

^aThe present value of \$1,000,000 due at the end of 40 (6-month) periods at the yield rate of 5% per period.

^bThe present value of \$55,000 per period for 40 (6-month) periods at the yield rate of 5% per period.

Instructions

- Discuss the conceptual merit(s) of each of the date-of-issue statement of financial position presentations shown above for these bonds.
- Explain why investors would pay \$1,085,800 for bonds that have a maturity value of only \$1,000,000.
- Assuming that a discount rate is needed to compute the carrying value of the obligations arising from a bond issue at any date during the life of the bonds, discuss the conceptual merit(s) of using for this purpose:
 - The coupon or nominal rate.
 - The effective or yield rate at date of issue.
- If the obligations arising from these bonds are to be carried at their present value computed by means of the current market rate of interest, how would the bond valuation at dates subsequent to the date of issue be affected by an increase or a decrease in the market rate of interest?

CA14.2 (LO 1, 4) Writing (Various Non-Current Liability Conceptual Issues) Schrempf AG has completed a number of transactions during 2022. In January, the company purchased under

contract a machine at a total price of €1,200,000, payable over 5 years with installments of €240,000 per year. The seller has considered the transaction as an installment sale with the title transferring to Schrempf at the time of the final payment.

On March 1, 2022, Schrempf issued €10 million of general revenue bonds priced at 99 with a coupon of 10% payable July 1 and January 1 of each of the next 10 years. The July 1 interest was paid and on December 30, the company transferred €1,000,000 to the trustee, Flagstad SE, for payment of the January 1, 2023, interest.

As the accountant for Schrempf, you have prepared the statement of financial position as of December 31, 2022, and have presented it to the president of the company, who asks you the following questions.

1. Why has depreciation been charged on equipment being purchased under contract? Title has not passed to the company as yet and, therefore, it is not our asset. Why should the company not show on the left side of the statement of financial position only the amount paid to date instead of showing the full contract price on the left side and the unpaid portion on the right side? After all, the seller considers the transaction an installment sale.
2. Bond interest is shown as a current liability. Did we not pay our trustee, Flagstad SE, the full amount of interest due this period?

Instructions

Outline your answers to these questions by writing a brief paragraph that will justify your treatment.

CA14.3 (LO 1, 3, 4) (Bond Theory: Price, Presentation, and Retirement) On March 1, 2023, Sealy Sundries sold its 5-year, £1,000 face value, 9% bonds dated March 1, 2023, at an effective annual interest rate (yield) of 11%. Interest is payable semiannually, and the first interest payment date is September 1, 2023. Sealy uses the effective-interest method of amortization. The bonds can be called by Sealy at 101 at any time on or after March 1, 2024.

Instructions

- a.
 1. How would the selling price of the bond be determined?
 2. Specify how all items related to the bonds would be presented in a statement of financial position prepared immediately after the bond issue was sold.
- b. What items related to the bond issue would be included in Sealy's 2023 income statement, and how would each be determined?
- c. Would the amount of bond discount amortization using the effective-interest method of amortization be lower in the second or third year of the life of the bond issue? Why?
- d. Assuming that the bonds were called in and extinguished on March 1, 2024, how should Sealy report the retirement of the bonds on the 2024 income statement?

CA14.4 (LO 1, 3, 4) **Writing** (Bond Theory: Amortization and Gain or Loss Recognition)

Part I: The required method of amortizing a premium or discount on issuance of bonds is the effective-interest method.

Instructions

How is amortization computed using the effective-interest method, and why and how do amounts obtained using the effective-interest method provide financial statement readers useful information about the cost of borrowing?

Part II: Gains or losses from the early extinguishment of debt that is refunded can theoretically be accounted for in three ways:

1. Amortized over remaining life of old debt.

2. Amortized over the life of the new debt issue.
3. Recognized in the period of extinguishment.

Instructions

- a. Develop supporting arguments for each of the three theoretical methods of accounting for gains and losses from the early extinguishment of debt.
- b. Which of the methods above is generally accepted under IFRS and how should the appropriate amount of gain or loss be shown in a company's financial statements?

CA14.5 (LO 4) Writing (Off-Balance-Sheet Financing) Matt Ryan Corporation is interested in building its own soda can manufacturing plant adjacent to its existing plant in Partyville, Kansas. The objective is to ensure a steady supply of cans at a stable price and to minimize transportation costs. However, the company has been experiencing some financial problems and has been reluctant to borrow any additional cash to fund the project. The company is not concerned with the cash flow problems of making payments but rather with the impact of adding additional long-term debt to its statement of financial position.

The president of Ryan, Andy Newlin, approached the president of the Aluminum Can Company (ACC), its major supplier, to see if some agreement could be reached. ACC was anxious to work out an arrangement since it seemed inevitable that Ryan would begin its own can production, and ACC could not afford to lose the account.

After some discussion, a two-part plan was worked out. First, ACC was to construct the plant on Ryan's land adjacent to the existing plant. Second, Ryan would sign a 20-year purchase agreement. Under the purchase agreement, Ryan would express its intention to buy all of its cans from ACC, paying a unit price which, at normal capacity, would cover labor and material, an operating management fee, and the debt service requirements on the plant. The expected unit price, if transportation costs are taken into consideration, is lower than current market. If Ryan did not take enough production in any one year and if the excess cans could not be sold at a high enough price on the open market, Ryan agrees to make up any cash shortfall so that ACC could make the payments on its debt. The bank will be willing to make a 20-year loan for the plant, taking the plant and the purchase agreement as collateral. At the end of 20 years, the plant is to become the property of Ryan.

Instructions

- a. What are project financing arrangements using special purpose entities?
- b. What are take-or-pay contracts?
- c. Should Ryan record the plant as an asset together with the related obligation? If not, should Ryan record an asset relating to the future commitment?
- d. What is meant by off-balance-sheet financing?

CA14.6 (LO 1, 4) Ethics (Bond Issue) Donald Lennon is the president, founder, and majority owner of Edina Medical Group, an emerging medical technology products company. Edina is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Donald, as owner of 51% of the outstanding shares, manages the company's operations. He places heavy emphasis on research and development and long-term growth. The other principal shareholder is Nina Friendly who, as a non-employee investor, owns 40% of the shares. Nina would like to deemphasize the R&D functions and emphasize the marketing function to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Edina's shares.

All of Donald's personal capital and borrowing power are tied up in his 51% share ownership. He knows that any offering of additional shares will dilute his controlling interest because he won't be

able to participate in such an issuance. But Nina has money and would likely buy enough shares to gain control of Edina. She then would dictate the company's future direction, even if it meant replacing Donald as president.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Edina's credit rating, and will increase the company's reported losses due to the growth in interest expense. Nina and the other minority shareholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain control and to preserve the direction of "his" company, Donald is doing everything to avoid a share issuance and is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues in this case?
- c. What would you do if you were Donald?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What cash outflow obligations related to the repayment of long-term debt does M&S have over the next 5 years?
- b. M&S indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. Compute the debt to assets ratio and the times interest earned for these two companies. Comment on the quality of these two ratios for both adidas and Puma.
- b. What is the difference between the fair value and the historical cost (carrying amount) of each company's borrowings at year-end 2018? Why might a difference exist in these two amounts?
- c. Do these companies have debt issued in foreign countries? Speculate as to why these companies may use foreign debt to finance their operations. What risks are involved in this strategy, and how might they adjust for this risk?

Financial Statement Analysis Cases

Case 1 Commonwealth Edison Co.

The following article about **Commonwealth Edison Co.** (USA) appeared in the *Wall Street Journal*.

Bond Markets

Giant Commonwealth Edison Issue Hits Resale Market With \$70 Million Left Over

NEW YORK—Commonwealth Edison Co.'s slow-selling new 9¼% bonds were tossed onto the resale market at a reduced price with about \$70 million still available from the \$200 million offered Thursday, dealers said.

The Chicago utility's bonds, rated double-A by Moody's and double-A-minus by Standard & Poor's, originally had been priced at 99.803, to yield 9.3% in 5 years. They were marked down yesterday the equivalent of about \$5.50 for each \$1,000 face amount, to about 99.25, where their yield jumped to 9.45%.

Instructions

- a. How will the development above affect the accounting for Commonwealth Edison's bond issue?
- b. Provide several possible explanations for the markdown and the slow sale of Commonwealth Edison's bonds.

Case 2 Eurotec

Consider the following events relating to Eurotec's long-term debt in a recent year.

1. The company decided on February 1 to refinance €500 million in short-term 7.4% debt to make it long-term 6%.
2. €780 million of long-term zero-coupon bonds with an effective-interest rate of 10.1% matured July 1 and were paid.
3. On October 1, the company issued €250 million in 6.3% bonds at 102 and €95 million 11.4% bonds at 99.
4. The company holds €100 million in perpetual foreign interest payment bonds that were issued in 1989 and presently have a rate of interest of 5.3%. These bonds are called perpetual because they have no stated due date. Instead, at the end of every 10-year period after the bond's issuance, the bondholders and Eurotec have the option of redeeming the bonds. If either party desires to redeem the bonds, the bonds must be redeemed. If the bonds are not redeemed, a new interest rate is set, based on the then-prevailing interest rate for 10-year bonds. The company does not intend to cause redemption of the bonds but will reclassify this debt to current next year since the bondholders could decide to redeem the bonds.

Instructions

- a. Consider event 1. What are some of the reasons the company may have decided to refinance this short-term debt, besides lowering the interest rate?
- b. What do you think are the benefits to the investor in purchasing zero-coupon bonds, such as those described in event 2? What journal entry would be required to record the payment of these bonds? If financial statements are prepared each December 31, in which year would the bonds have been included in current liabilities?
- c. Make the journal entry to record the bond issues described in event 3. Note that the bonds were issued on the same day, yet one was issued at a premium and the other at a discount. What are some of the reasons that this may have happened?

- d. What are the benefits to Eurotec in having perpetual bonds as described in event 4? Suppose that in the current year, the bonds are not redeemed and the interest rate is adjusted to 6% from 7.5%. Make all necessary journal entries to record the renewal of the bonds and the change in rate.

Accounting, Analysis, and Principles

The following information is taken from the 2022 annual report of Bugant SA. Bugant's fiscal year ends December 31 of each year.

Bugant SA Statement of Financial Position December 31, 2022		
Assets		
Plant and equipment (net of accumulated depreciation of €160)		€1,840
Inventory	€1,800	
Cash	450	
Total current assets		2,250
Total assets		€4,090
Equity		
Share capital		€1,500
Retained earnings		1,164
Liabilities		
Bonds payable (net of discount)		1,426
Total equity and liabilities		€4,090
Note X: Long-Term Debt		
On January 1, 2020, Bugant issued bonds with face value of €1,500 and coupon rate equal to 10%. The bonds were issued to yield 12% and mature on January 1, 2025.		

Additional information concerning 2023 follows.

1. Sales were €2,922, all for cash.
2. Purchases were €2,000, all paid in cash.
3. Salaries were €700, all paid in cash.
4. Plant and equipment was originally purchased for €2,000 and is depreciated on a straight-line basis over a 25-year life with no residual value.
5. Ending inventory was €1,900.
6. Cash dividends of €100 were declared and paid by Bugant.
7. Ignore taxes.
8. The market rate of interest on bonds of similar risk was 16% during all of 2023.
9. Interest on the bonds is paid semiannually each June 30 and December 31.

Accounting

Prepare an income statement for Bugant for the year ending December 31, 2023, and a statement of financial position at December 31, 2023. Assume semiannual compounding.

Analysis

Use common ratios for analysis of long-term debt to assess Bugant's long-run solvency. Has Bugant's solvency changed much from 2022 to 2023? Bugant's net income in 2022 was €550 and interest expense was €169.

Principles

The FASB and the IASB allowed companies the option of recognizing in their financial statements the fair values of their long-term debt. That is, companies have the option to change the statement of financial position value of their long-term debt to the debt's fair value and report the change in statement of financial position value as a gain or loss in income. In terms of the qualitative characteristics of accounting information ([Chapter 2](#)), briefly describe the potential trade-off(s) involved in reporting long-term debt at its fair value.

Research Case

Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and with cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie is contemplating a borrowing on a note payable or issuance of bonds. In the past, the company has had little need for external borrowing so the management team has a number of questions concerning the accounting for these new non-current liabilities. They have asked you to conduct some research on this topic.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. With respect to a decision of issuing notes or bonds, management is aware of certain costs (e.g., printing, marketing, and selling) associated with a bond issue. How will these costs affect Wie's reported earnings in the year of issue and while the bonds are outstanding?
- b. If all goes well with the plant expansion, the financial performance of Wie Company could dramatically improve. As a result, Wie's market rate of interest (which is currently around 12%) could decline. This raises the possibility of retiring or exchanging the debt, in order to get a lower borrowing rate. How would such a debt extinguishment be accounted for?

Global Accounting Insights

LEARNING OBJECTIVE 5

Compare the accounting for liabilities under IFRS and U.S. GAAP.

U.S. GAAP and IFRS have similar definitions for liabilities. In addition, the accounting for current liabilities is essentially the same under both IFRS and U.S. GAAP. However, there are substantial differences in terminology related to non-current liabilities, as well as some differences in the accounting for various types of long-term debt transactions.

Relevant Facts

Similarities

- As indicated above, U.S. GAAP and IFRS have similar liability definitions. Both also classify liabilities as current and non-current.
- Much of the accounting for bonds and long-term notes is the same under U.S. GAAP and IFRS.
- Under U.S. GAAP and IFRS, bond issue costs are netted against the carrying amount of the bonds.
- Both U.S. GAAP and IFRS require the best estimate of a probable loss. In U.S. GAAP, the minimum amount in a range is used. Under IFRS, if a range of estimates is predicted and no amount in the range is more likely than any other amount in the range, the midpoint of the range is used to measure the liability.
- Both U.S. GAAP and IFRS prohibit the recognition of liabilities for future losses.

Differences

- Under U.S. GAAP, companies must classify a refinancing as current only if it is completed before the financial statements are issued. IFRS requires that the current portion of long-term debt be classified as current unless an agreement to refinance on a long-term basis is completed before the reporting date.
- U.S. GAAP uses the term contingency in a different way than IFRS. A contingency under U.S. GAAP may be reported as a liability under certain situations. IFRS does not permit a contingency to be recorded as a liability.
- U.S. GAAP uses the term estimated liabilities to discuss various liability items that have some uncertainty related to timing or amount. IFRS generally uses the term provisions.
- U.S. GAAP and IFRS are similar in the treatment of environmental liabilities. However, the recognition criteria for environmental liabilities are more stringent under U.S. GAAP:

Environmental liabilities are not recognized unless there is a present legal obligation and the fair value of the obligation can be reasonably estimated.

- U.S. GAAP uses the term troubled debt restructurings and develops recognition rules related to this category. IFRS generally assumes that all restructurings should be considered extinguishments of debt.
- Under U.S. GAAP, companies are permitted to use the straight-line method of amortization for bond discount or premium, provided that the amount recorded is not materially different than that resulting from effective-interest amortization. However, the effective-interest method is preferred and is generally used. Under IFRS, companies must use the effective-interest method.
- Under U.S. GAAP, companies record discounts and premiums in separate accounts (see the [About the Numbers](#) section). Under IFRS, companies do not use premium or discount accounts but instead show the bond at its net amount.
- Under U.S. GAAP, losses on onerous contracts are generally not recognized unless addressed by industry- or transaction-specific requirements. IFRS requires a liability and related expense or cost be recognized when a contract is onerous.

About the Numbers

Under IFRS, premiums and discounts are netted against the face value of the bonds for recording purposes. Under U.S. GAAP, discounts and premiums are recorded in separate accounts. To illustrate, consider the €100,000 of bonds dated January 1, 2022 (8 percent coupon, paid semiannually), issued by Evermaster to yield 6 percent on January 1, 2022. Recall from the discussion earlier in this chapter that the price of these bonds was €108,530. Using U.S. GAAP procedures, Evermaster makes the following entry to record issuance of the bonds.

January 1, 2022		
Cash	108,530	
Bonds payable		100,000
Premium on Bonds Payable		8,530
(€108,530 – €100,000)		

As indicated, the bond premium is recorded in a separate account (the account, “Discount on Bonds Payable,” has a debit balance and is used for bonds issued at a discount). Evermaster makes the following entry on the first interest payment date.

January 1, 2022		
Interest Expense ($€108,530 \times .06 \times \frac{6}{12}$)	3,256	
Premium on Bonds Payable (€4,000 – €3,256)	744	
Cash ($€100,000 \times .08 \times \frac{6}{12}$)		4,000

Following this entry, the net carrying value of the bonds is as follows.

Bonds payable	€100,000
Premium on bonds payable (€8,530 – €744)	7,786
Carrying value of bonds payable	<u>€107,786</u>

Thus, with a separate account for the premium, entries to record amortization are made to the premium account, which reduces the carrying value of the bonds to face value over the life of the bonds.

GAAP Self-Test Questions

1. Under U.S. GAAP, bond issuance costs, including the printing costs and legal fees associated with the issuance, should be:
 - a. expensed in the period when the debt is issued.
 - b. recorded as a reduction in the carrying value of bonds payable.
 - c. accumulated in a deferred charge account and amortized over the life of the bonds.
 - d. reported as an expense in the period the bonds mature or are redeemed.
2. Which of the following is stated correctly?
 - a. Current liabilities follow non-current liabilities on the statement of financial position under U.S. GAAP but non-current liabilities follow current liabilities under IFRS.
 - b. IFRS does not treat debt modifications as extinguishments of debt.
 - c. Bond issuance costs are recorded as a reduction of the carrying value of the debt under U.S. GAAP but are recorded as an asset and amortized to expense over the term of the debt under IFRS.
 - d. Under U.S. GAAP, bonds payable is recorded at the face amount and any premium or discount is recorded in a separate account. Under IFRS, bonds payable is recorded at the carrying value so no separate premium or discount accounts are used.
3. All of the following are differences between IFRS and U.S. GAAP in accounting for liabilities **except**:
 - a. When a bond is issued at a discount, U.S. GAAP records the discount in a separate contra liability account. IFRS records the bond net of the discount.
 - b. Under IFRS and U.S. GAAP, bond issuance costs reduce the carrying value of the debt.
 - c. U.S. GAAP, but not IFRS, uses the term “troubled-debt restructurings.”
 - d. U.S. GAAP, but not IFRS, uses the term “provisions” for contingent liabilities that are accrued.
4. All of the following are similarities in the accounting for liabilities under IFRS and U.S. GAAP **except**:
 - a. Bond issue costs are netted against the carrying amount of the bonds.
 - b. Both U.S. GAAP and IFRS have similar liability definitions.
 - c. Recognition of liabilities for future losses is allowed under U.S. GAAP and IFRS.
 - d. Both U.S. GAAP and IFRS require the best estimate for a probable loss, with U.S. GAAP selecting the minimum amount in the range.
5. On January 1, Martinez Inc. issued \$3,000,000, 11% bonds for \$3,195,000. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Martinez uses the effective-interest method of amortizing bond premium. At the end of the first year, Martinez should report bonds payable of:
 - a. \$3,185,130.
 - b. \$3,184,500.
 - c. \$3,173,550.
 - d. \$3,165,000.

GAAP Concepts and Application

GAAP14.1 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for liabilities.

GAAP14.2 Diaz Company issued \$100,000 face value, 9% coupon bonds on January 1, 2021, for \$92,608 to yield 11%. The bonds mature in 5 years and pay interest annually on December 31. Prepare the entries under U.S. GAAP for Diaz for (a) date of issue, (b) first interest payment date, and (c) January 1, 2023, when Diaz calls and extinguishes the bonds at 101.

Answers to GAAP Self-Test Questions

1. b 2. d 3. d 4. c 5. b

Notes

- 1 It is generally the case that the stated rate of interest on bonds is set in rather precise decimals (such as 10.875 percent). Companies usually attempt to align the stated rate as closely as possible with the market or effective rate at the time of issue.
- 2 The **carrying value** is the face amount minus any unamortized discount or plus any unamortized premium. The term *carrying value* is synonymous with *book value*.
- 3 The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. These costs should be recorded as a reduction of the issue amount of the bond payable and then amortized into expense over the life of the bond, through an adjustment to the effective-interest rate (see **Underlying Concepts**). [2] For example, if the face value of the bond is €100,000 and issue costs are €1,000, then the bond payable (net of the bond issue costs) is recorded at €99,000. Thus, the effective-interest rate will be higher, based on the reduced carrying value.

Underlying Concepts

Because bond issue costs do not meet the definition of an asset, some argue they should be expensed at issuance.

- 4 Because companies pay interest semiannually, the interest rate used is 5% ($.10 \times \frac{6}{12}$). The number of periods is 10 (5 years \times 2).
- 5 The issuer may call some bonds at a stated price after a certain date. This call feature gives the issuing company the opportunity to reduce its bonded indebtedness or take advantage of lower interest rates. Whether bonds are callable or not, a company must amortize any premium or discount over the bond's life to maturity because early redemption (call of the bond) is not a certainty.
- 6 Determination of the price of a bond between interest payment dates generally requires use of a financial calculator because the time value of money tables shown in this text do not have factors for all compounding periods. *For homework purposes, the price of a bond sold between interest dates will be provided.*
- 7 Although we use the term "note" throughout this discussion, the basic principles and methodology apply equally to other long-term debt instruments.

$$\begin{aligned}
 \$327 &= \$1,000 (PVF_{8,i}) \\
 PVF_{8,i} &= \frac{\$327}{\$1,000} = .327 \\
 .327 &= 15\% \text{ (in Table 6 .2, locate .32690).}
 \end{aligned}$$

9. Points, in mortgage financing, are analogous to the original issue discount of bonds.
10. One of the many changes that occurred in the aftermath of the financial crisis of 2008–2009 was recognizing that LIBOR was not a reliable measure of interest rates between banks. As a result, the G20 requested that the Financial Stability Board (FSB) examine alternative methods to determine one or more reliable benchmark rates. This process is ongoing but will either result in an alternative approach to measure LIBOR, or the replacement of LIBOR with a more market-based interest rate.
11. Some companies have attempted to extinguish debt through an in-substance defeasance. **In-substance defeasance** is an arrangement whereby a company provides for the future repayment of a long-term debt issue by placing purchased securities in an irrevocable trust. The company pledges the principal and interest of the securities in the trust to pay off the principal and interest of its own debt securities as they mature. However, it is not legally released from its primary obligation for the debt that is still outstanding. In some cases, debtholders are not even aware of the transaction and continue to look to the company for repayment. This practice is not considered an extinguishment of debt, and therefore the company does not record a gain or loss. [4]
12. The issuer of callable bonds must generally exercise the call on an interest date. Therefore, the amortization of any discount or premium will be up to date, and there will be no accrued interest. However, early extinguishments through purchases of bonds in the open market are more likely to be on other than an interest date. If the purchase is not made on an interest date, the discount or premium must be amortized, and the interest payable must be accrued from the last interest date to the date of purchase.
13. Likewise, the creditor must determine the excess of the receivable over the fair value of those same assets or equity interests transferred. The creditor normally charges the excess (loss) against Allowance for Doubtful Accounts. Creditor accounting for these transactions is addressed in [Chapter 7](#).
14. An exception to the general rule occurs when the modification of terms is not substantial. A **substantial modification** exists when (1) the discounted cash flows under the terms of the new debt (using the historical effective-interest rate) differ by at least 10 percent of the carrying value of the original debt, or (2) there is a substantial and fundamental change in the terms and conditions of the new borrowing compared to the original borrowing. If a modification is not substantial, the difference (gain) is deferred and amortized over the remaining life of the debt at the (historical) effective-interest rate. [5] In the case of a non-substantial modification, in essence, the new loan is a continuation of the old loan. Therefore, the debtor should record interest at the historical effective-interest rate.
15. Throughout the text, we use the label “statement of financial position” rather than “balance sheet” in referring to the financial statement that reports assets, liabilities, and equity. We use *off-balance-sheet* in the present context because of its common usage in financial markets.
16. The IASB has issued consolidation guidance that looks beyond equity ownership as the primary criterion for determining whether an off-balance-sheet entity (and its assets and liabilities) should be on-balance-sheet (i.e., consolidated). Specifically, an investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. Thus, the principle of control sets out the following three elements of control: (1) power over the investee; (2) exposure, or rights, to

variable returns from involvement with the investee; and (3) the ability to use power over the investee to affect the amount of the investor's returns. In general, the control principle is applied in circumstances when voting rights are not the dominant factor in deciding who controls the investee, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. [9] The details of consolidation accounting procedures are beyond the scope of this text and are usually addressed in an advanced accounting course.

- 17 It is unlikely that the IASB will be able to stop all types of off-balance-sheet transactions. Financial engineering is the Holy Grail of securities markets. Developing new financial instruments and arrangements to sell and market to customers is not only profitable but also adds to the prestige of the investment firms that create them. Thus, new financial products will continue to appear that will test the ability of the IASB to develop appropriate accounting standards for them.

CHAPTER 15

Equity

LEARNING OBJECTIVES

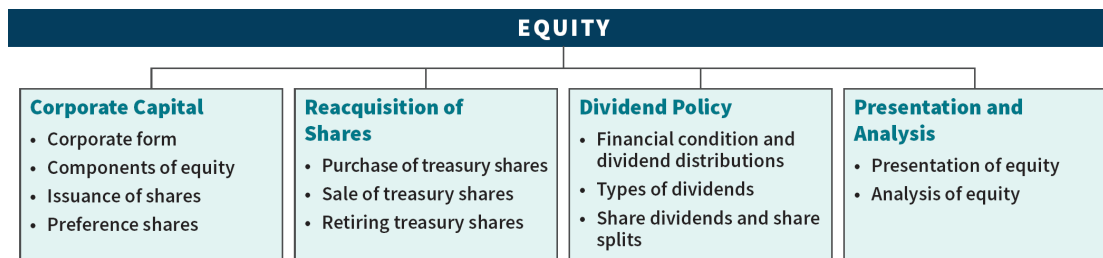

After studying this chapter, you should be able to:

1. Describe the corporate form and the issuance of shares.
2. Explain the accounting and reporting for treasury shares.
3. Explain the accounting and reporting issues related to dividends.
4. Indicate how to present and analyze equity.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 15

As the following opening story indicates, the growth of global equity capital markets indicates that investors around the world need useful information. In this chapter, we explain the accounting issues related to the equity of a corporation. The content and organization of the chapter are as follows.

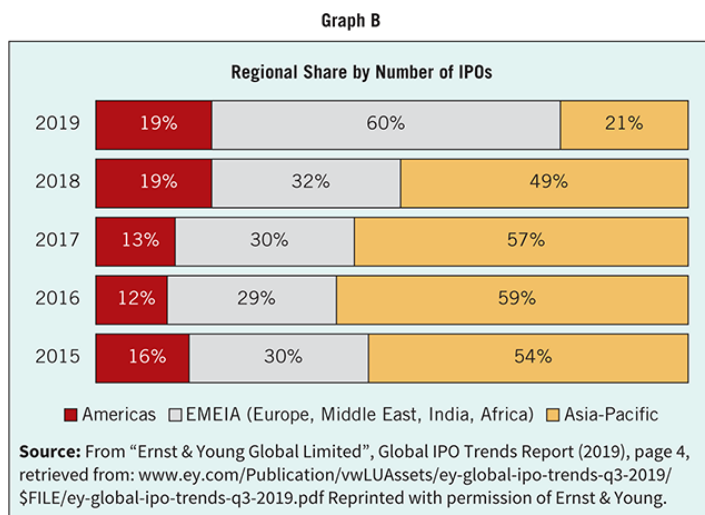

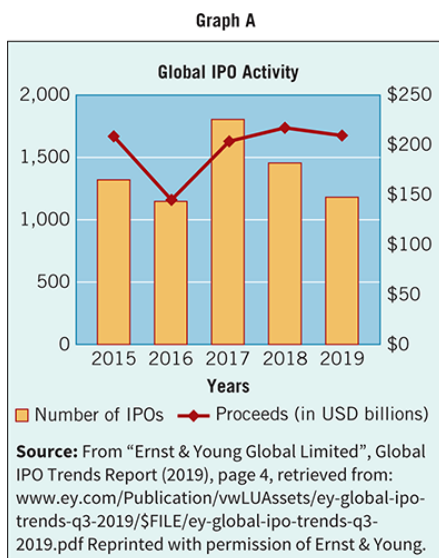

It's a Global Market

As mentioned in prior chapters, we are moving toward one set of global financial reporting standards and one “common language” for financial information. This change will probably lead to greater consolidation of our capital markets. To understand how quickly the global financial world is changing, let's examine a few trends occurring on securities exchanges around the world.

In 2007, the New York Stock Exchange (NYSE) merged with Paris-based Euronext, creating the world's first transatlantic securities exchange. **NYSE Euronext** is the world's largest exchange group, with more than 8,000 listed issuers representing over one-third of global equity trading. Similarly, NASDAQ, the world's largest electronic securities market, merged with **OMX**, the Nordic securities market operator. This electronic exchange operates in 29 countries, on six continents, and has over 3,000 listed issuers, with a market value of approximately \$8.5 trillion. Further exchange consolidation occurred in 2013, when Intercontinental Exchange merged with NYSE.

Another reason for the movement toward international financial reporting standards can be found in recent initial public offerings (IPOs). For example, total global IPO listings, as well as regional percentages, were as follows.

As indicated, global stock listings have been on the rise, and listings in Asia-Pacific continue to be the biggest share of IPOs.

- Proceeds in Asia were bolstered by the debut of China's STAR Market in 2019.
- Europe-Middle East was the second highest grossing sector, steadily increasing from 2016 to 2018, recovering from the United Kingdom's decision to leave the European Union.

Another indicator of globalization is provided by a review of the world's largest companies, in terms of revenues and profits as shown in the following table.

Top 10 of the Fortune Global 500			
Rank	Company	Revenues (in USD millions)	Profits (in USD millions)
1	Walmart (USA)	\$514,405	\$ 6,670
2	Sinopec Group (CHN)	414,649	5,845
3	Royal Dutch Shell (NDL/GBR)	396,556	23,352
4	China National Petroleum (CHN)	392,976	2,271
5	State Grid (CHN)	387,056	8,175
6	Saudi Aramco (SAU)	355,905	110,975
7	BP (GBR)	303,738	9,383
8	ExxonMobil (USA)	290,212	20,840
9	Volkswagen (DEU)	278,342	14,323
10	Toyota (JPN)	272,162	16,982

Sources: Adapted from L. Ventura, "World's Largest Companies 2019," Global Finance (August 29, 2019).

The richest companies in the world by revenue are **Walmart** (USA), petroleum and chemical corporation **Sinopec** (CHN), and **Royal Dutch Shell** (NDL/GBR). If these companies generate more sales, why do stock investors prefer to pour money into tech companies and startups? Because—unlike established companies—tech upstarts have a much greater potential for growth. That said, with seven different countries represented in the top 10 of the Fortune Global 500, it really is a global market, and investors should take care not to avoid these global investment opportunities.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Corporate Capital

LEARNING OBJECTIVE 1

Describe the corporate form and the issuance of shares.

Of the three **primary forms of business organization**—the proprietorship, the partnership, and the corporation—the corporate form dominates. The corporation is by far the leader in terms of the aggregate amount of resources controlled, goods and services produced, and people employed. Although the corporate form has a number of advantages (as well as disadvantages) over the other two forms, its principal benefit is its facility for attracting and accumulating large amounts of capital.

Corporate Form

The special characteristics of the corporate form that affect accounting include:

1. Influence of corporate law.
2. Use of the share system.
3. Development of a variety of ownership interests.

Corporate Law

Anyone who wishes to establish a corporation must generally submit **articles of incorporation** to the appropriate governmental agency for the country in which incorporation is desired. After fulfilling requirements, the governmental agency issues a corporation charter, thereby recognizing the company as a legal entity. Regardless of the number of countries in which a corporation has operating divisions, it is incorporated in only one country. It is to the company's advantage to incorporate where laws favor the corporate form of business organization.

Many governments have their own business incorporation acts. The accounting for equity follows the provisions of these acts. In many cases, the laws are complex and vary both in their provisions and in their definitions of certain terms. Some laws fail to define technical terms. As a result, terms often have one meaning in one country and another meaning in a different country. These problems may be further compounded because legal authorities often interpret the effects and restrictions of the laws differently.

Share System

Equity in a corporation generally consists of a large number of units or shares. Within a given class of shares, each share exactly equals every other share. The number of shares possessed determines each owner's interest. If a company has ordinary shares divided into 1,000 shares, a person who owns 500 shares controls one-half of the ownership interest. One holding 10 shares has a one-hundredth interest.

Each share has certain rights and privileges. Only by special contract can a company restrict these rights and privileges at the time it issues the shares. Owners must examine the articles of incorporation, the share certificates, and the provisions of applicable laws to ascertain such restrictions on or variations from the standard rights and privileges. In the absence of restrictive provisions, each share carries the following rights:

1. To share proportionately in profits and losses.
2. To share proportionately in management (the right to vote for directors).
3. To share proportionately in corporate assets upon liquidation.
4. To share proportionately in any new issues of shares of the same class—called the **preemptive right**.¹

The first three rights are self-explanatory. The last right is used to protect each shareholder's proportional interest in the company. **The preemptive right protects an existing shareholder from involuntary dilution of ownership interest.** Without this right, shareholders might find their interest reduced by the issuance of additional shares without their knowledge and at prices unfavorable to them. However, many corporations have eliminated the preemptive right. Why? Because this right makes it inconvenient for corporations to issue large amounts of additional shares, as they frequently do in acquiring other companies.

The share system easily allows one individual to transfer an interest in a company to another investor. For example, individuals owning shares in **Pão de Açúcar** (BRA) **may sell them to others at any time and at any price without obtaining the consent of the company or other shareholders.** Each share is personal property of the owner, who may dispose of it at will. Pão de Açúcar simply maintains a list or subsidiary ledger of shareholders as a guide to dividend payments, issuance of share rights, voting proxies, and the like. Because owners freely and frequently transfer shares, Pão de Açúcar must revise the subsidiary ledger of shareholders periodically, generally in advance of every dividend payment or shareholders' meeting.

In addition, the major securities exchanges require ownership controls that the typical corporation finds uneconomic to provide. Thus, corporations often use **registrars and transfer agents** who specialize in performing services for recording and transferring shares.

Variety of Ownership Interests

In every corporation, one class of shares must represent the basic ownership interest. That class of shares is called ordinary. **Ordinary shares** represent the residual corporate interest that bears the ultimate risks of loss and receives the benefits of success. They are guaranteed neither dividends nor assets upon dissolution. But ordinary shareholders generally control the management of the corporation and tend to profit most if the company is successful. In the event that a corporation has only one authorized issue of shares, that issue is by definition ordinary shares, whether so designated in the charter or not.

In an effort to broaden investor appeal, corporations may offer two or more classes of shares, each with different rights or privileges. In the preceding section, we pointed out that each share of a given issue has the same four inherent rights as other shares of the same issue. By special contracts between the corporation and its shareholders, however, the shareholder may sacrifice certain of these rights in return for other special rights or privileges. Thus special classes of shares, usually called **preference shares**, are created. In return for any special preference, the preference shareholder always sacrifices some of the inherent rights of ordinary shareholders.

A common type of preference is to give preference shareholders a prior claim on earnings. The corporation thus assures them a dividend, usually at a stated rate, before it distributes any amount to the ordinary shareholders. In return for this preference, the preference shareholders may sacrifice their right to a voice in management and/or their right to share in profits beyond the stated rate.

What Do the Numbers Mean?

A Class (B) Act

Some companies grant preferences to different shareholders by issuing different classes of ordinary shares. For a family-controlled company, issuing newer classes of lower or non-voting shares (referred to as B shares) effectively creates currency for acquisitions, increases liquidity, or puts a public value on the company without diluting the family's powers. For example, the B shareholders at **Vodafone** (GBR) only get a vote if the company is to be dissolved. The following are some notable companies with two-tiered shares.

Company	Votes Controlled by Class B Shareholders
Vodafone (GBR)	0%
Alphabet (USA)	63%
Under Armour (USA)	65.3%
Air Canada (CAN)	(Only Canadian citizens can vote)
Facebook (USA)	43%
Bombardier (CAN)	0%

Some trading exchanges impose rules to protect non-controlling investors. For example, the Financial Times Stock Exchange (FTSE) requires family owners to hold no more than 50 percent of voting shares. For many retail investors, voting rights are not that important. But, investors must carefully compare the apparent bargain prices for some classes of shares—they may end up as second-class citizens with no voting rights.

Gottfried, "A Double-Digit Return Is Hiding in Plain Sight at Under Armour: The Yawning Gap Between Under Armour's Voting and Nonvoting Shares Offers an Opportunity," *Wall Street Journal* (November 28, 2016); and D. Shultz, "What Are Non-Voting Shares?" danashultz.com/2019/03/15/non-voting-shares (March 15, 2019).

Components of Equity

Equity is the residual interest in the assets of the company after deducting all liabilities. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) Equity is often referred to as shareholders' equity, stockholders' equity, or corporate capital. Equity is often subclassified on the statement of financial position into the following categories (as discussed in [Chapter 5](#)).

1. Share capital.
2. Share premium.
3. Retained earnings.
4. Accumulated other comprehensive income.
5. Treasury shares.
6. Non-controlling interest.

Such classifications help financial statement users to better understand the legal or other restrictions related to the ability of the company to pay dividends or otherwise use its equity for certain defined purposes.

Companies often make a distinction between contributed capital (paid-in capital) and earned capital. **Contributed (paid-in) capital** is the total amount paid in on capital shares—the amount provided by shareholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding shares and premiums less discounts on issuance. **Earned capital** is

the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company. **Retained earnings** represents the earned capital of the company.

As indicated above, equity is a **residual interest** and therefore its value is derived from the amount of the corporations' assets and liabilities (see **Underlying Concepts**). Only in unusual cases will a company's equity equal the total fair value of its shares. For example, **BMW** (DEU) recently had total equity of €58,088 million and a market capitalization of €53,560 million. BMW's equity represents the net contributions from shareholders (from both controlling and non-controlling shareholders) plus retained earnings and accumulated other comprehensive income. As a residual interest, its equity has no existence apart from the assets and liabilities of BMW—equity equals net assets. Equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on BMW's profitability. Equity grows if the company is profitable. It shrinks, or may disappear entirely, if BMW loses money.

Underlying Concepts

According to the Conceptual Framework, equity is defined as a residual, based on the net of assets minus liabilities.

Issuance of Shares

In issuing shares, companies follow these procedures. First, the applicable governmental agency must authorize the shares, generally in a certificate of incorporation or charter. Next, the corporation offers shares for sale, entering into contracts to sell these shares. Then, after receiving amounts for the shares, the corporation issues the shares. The corporation generally makes no entry in the general ledger accounts when it receives its share authorization from the jurisdiction of incorporation.

We discuss the accounting problems involved in the issuance of shares under the following topics.

1. Accounting for par value shares.
2. Accounting for no-par shares.
3. Accounting for shares issued in combination with other securities (lump-sum sales).
4. Accounting for shares issued in non-cash transactions.
5. Accounting for costs of issuing shares.

Par Value Shares

The par value of a share has no relationship to its fair value. At present, the par value associated with most ordinary share issuances is very low. For example, par value for **China Railway Construction Corporation** (CHN) is ¥1.00, and for **Nestlé S.A.** (CHE), it is CHF1. Low par values help companies avoid the contingent liability associated with shares sold below par.²

To show the required information for issuance of par value shares, corporations maintain accounts for each class of shares as follows.

1. **Preference Shares or Ordinary Shares.** Together, these two share accounts reflect the par value of the corporation's issued shares. The company credits these accounts when it originally issues the shares. It makes no additional entries in these accounts unless it issues additional shares or retires them.
2. **Share Premium.** The **Share Premium** account indicates any excess over par value paid in by shareholders in return for the shares issued to them. Once paid in, the excess over par becomes a part of the corporation's share premium. The individual shareholder has no greater claim on the excess paid in than all other holders of the same class of shares.

No-Par Shares

Many countries permit the issuance of shares without par value, called **no-par shares**. The reasons for issuance of no-par shares are twofold. First, issuance of no-par shares **avoids the contingent liability** (see [footnote 2](#)) that might occur if the corporation issued par value shares at a discount. Second, some confusion exists over the relationship (or rather the absence of a relationship) between the par value and fair value. If shares have no par value, **the questionable treatment of using par value as a basis for fair value never arises**. This is particularly advantageous whenever issuing shares for items such as tangible or intangible fixed assets.

A major disadvantage of no-par shares is that some countries levy a high tax on these issues. In addition, in some countries the total issue price for no-par shares may be considered legal capital, which could reduce the flexibility in paying dividends.

Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to ordinary or preference shares. For example, Video Electronics AG is organized with 10,000 ordinary shares authorized without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at €10 per share, it makes the following entry:

Cash	5,000	
Share Capital—Ordinary		5,000

If it issues another 500 shares for €11 per share, Video Electronics makes this entry:

Cash	5,500	
Share Capital—Ordinary		5,500

True no-par shares should be carried in the accounts at issue price without any share premium reported. But some countries require that no-par shares have a **stated value**. The stated value is a minimum value below which a company cannot issue the shares; instead of being no-par shares, such stated-value shares become, in effect, shares with a very low par value. Therefore, such shares are open to all the criticism and abuses that first encouraged the development of no-par shares.

If no-par shares have a stated value of €5 per share but sell for €11, all amounts in excess of €5 are recorded as share premium, which in many jurisdictions is fully or partially available for dividends. Thus, no-par shares with a low stated value permit a new corporation to commence its operations with share premium that may exceed its stated capital. For example, if a company issues 1,000 of the shares with a €5 stated value at €15 per share for cash, it makes the following entry.

Cash	15,000	
Share Capital—Ordinary		5,000
Share Premium—Ordinary		10,000

Most corporations account for no-par shares with a stated value as if they were par value shares with par equal to the stated value.

Shares Issued with Other Securities (Lump-Sum Sales)

Generally, corporations sell classes of shares separately from one another. The reason to do so is to track the proceeds relative to each class as well as relative to each lot. Occasionally, a corporation issues two or more classes of securities for a single payment or lump sum, in the acquisition of another company. The accounting problem in such **lump-sum sales** is how to allocate the proceeds among the several classes of securities. Companies use one of two methods of allocation: (1) the proportional method and (2) the incremental method.

Proportional Method

If the fair value or other sound basis for determining relative value is available for each class of security, **the company allocates the lump sum received among the classes of securities on a proportional basis.** [Illustration 15.1](#) presents an example of the proportional method.

Proportional Method for Allocation in Lump-Sum Securities Issuance

Facts: Miller Company issues 1,000 shares of \$10 stated value ordinary shares having a fair value of \$20 per share, and 1,000 shares of \$10 par value preference shares having a fair value of \$12 per share, for a lump sum of \$30,000.

Question: How should Miller Company allocate the proceeds between ordinary and preference shares under the proportional method?

Solution: Miller allocates the \$30,000 to the two classes of shares as follows.

Fair value of ordinary (1,000 × \$20)	= \$20,000
Fair value of preference (1,000 × \$12)	= 12,000
Aggregate fair value	<u>\$32,000</u>
Allocated to ordinary:	$\frac{\$20,000}{\$32,000} \times \$30,000 = \$18,750$
Allocated to preference:	$\frac{\$12,000}{\$32,000} \times \$30,000 = \$11,250$
Total allocation	<u>\$30,000</u>

ILLUSTRATION 15.1 Allocation in Lump-Sum Securities Issuance—Proportional Method

Incremental Method

In instances where a company cannot determine the fair value of all classes of securities, it may use the incremental method. It uses the fair value of the securities as a basis for those classes that it knows, and allocates the remainder of the lump sum to the class for which it does not know the fair value. [Illustration 15.2](#) presents an example of the incremental method.

Incremental Method for Allocation in Lump-Sum Securities Issuance

Facts: Hogan Company issues 1,000 shares of \$10 stated value ordinary shares having a fair value of \$20 per share, and 1,000 shares of \$10 par value preference shares having no established fair value, for a lump sum of \$30,000.

Question: How should Hogan Company allocate the proceeds between ordinary and preference shares under the incremental method?

Solution: Hogan allocates the \$30,000 to the two classes of shares as follows.

Lump-sum receipt	\$30,000
Allocated to ordinary (1,000 × \$20)	(20,000)
Balance allocated to preference	<u>\$10,000</u>

ILLUSTRATION 15.2 Allocation in Lump-Sum Securities Issuance—Incremental Method

If a company cannot determine the fair value for any of the classes of shares involved in a lump-sum exchange, it may need to use other approaches. In this situation, the company may rely on an expert's appraisal. Or, if the company knows that one or more of the classes of securities issued will have a determinable fair value in the near future, it may use a best-estimate basis with the intent to adjust later upon establishment of the future fair value.

Shares Issued in Non-Cash Transactions

Accounting for the issuance of shares for property or services involves an issue of valuation. **The general rule is that companies should record shares issued for services or property other than cash at the fair value of the goods or services received, unless that fair value cannot be measured reliably. If the fair value of the goods or services cannot be measured reliably, use the fair value of the shares issued. [2]**

If a company can readily determine both and the transaction results from an arm's-length exchange, there will probably be little difference in their fair values. In such cases, the basis for valuing the exchange should not matter.

If a company cannot readily determine either the fair value of the shares it issues or the property or services it receives, it should employ an appropriate valuation technique. Depending on available data, the valuation may be based on market transactions involving comparable assets or the use of discounted expected future cash flows. Companies should avoid the use of book, par, or stated values as a basis of valuation for these transactions.

A company may exchange unissued shares or treasury shares (issued shares that it has reacquired but not retired) for property or services. If it uses treasury shares and the fair value of the property or services cannot be reliably estimated, the cost of the treasury shares should not be considered the decisive factor in establishing the fair value of the property or services. Instead, it should use the fair value of the treasury shares to value the property or services.

The series of transactions shown in **Illustration 15.3** indicate the procedure for recording the issuance of 10,000 shares of €10 par value ordinary shares for a patent for Marlowe SA, in various circumstances.

Generally, the board of directors has the power to set the value of non-cash transactions. However, boards sometimes abuse this power. The issuance of shares for property or services has resulted in cases of overstated corporate capital through intentional overvaluation of the property or services

received. The overvaluation of equity resulting from inflated asset values creates **watered shares**. The corporation should eliminate the “water” by simply writing down the overvalued assets.

If, as a result of the issuance of shares for property or services, a corporation undervalues the recorded assets, it creates **secret reserves**. An understated corporate structure (secret reserve) may also result from other methods: excessive depreciation or amortization charges, expensing capital expenditures, excessive write-downs of inventories or receivables, or any other understatement of assets or overstatement of liabilities. An example of a liability overstatement is an excessive provision for estimated product warranties that ultimately results in an understatement of equity, thereby creating a secret reserve.

Marlowe cannot readily determine the fair value of the patent, but it knows the fair value of the shares is €140,000.		
Patents	140,000	
Share Capital—Ordinary (10,000 shares × €10 per share)		100,000
Share Premium—Ordinary		40,000
Marlowe cannot readily determine the fair value of the shares, but it determines the fair value of the patent is €150,000.		
Patents	150,000	
Share Capital—Ordinary (10,000 shares × €10 per share)		100,000
Share Premium—Ordinary		50,000
Marlowe cannot readily determine the fair value of the shares nor the fair value of the patent. An independent consultant values the patent at €125,000, based on discounted expected cash flows.		
Patents	125,000	
Share Capital—Ordinary (10,000 shares × €10 per share)		100,000
Share Premium—Ordinary		25,000

ILLUSTRATION 15.3 Issuance of Shares for Patent

Costs of Issuing Shares

When a company like **Wesfarmers** (AUS) issues shares, it should report direct costs incurred to sell shares, such as underwriting costs, accounting and legal fees, printing costs, and taxes, as a reduction of the amounts paid in. Wesfarmers therefore debits issue costs to Share Premium because they are unrelated to corporate operations. In effect, **issue costs are a cost of financing**. As such, issue costs should reduce the proceeds received from the sale of the shares.

Wesfarmers should expense management salaries and other indirect costs related to the share issue because it is difficult to establish a relationship between these costs and the sale proceeds. In addition, Wesfarmers expenses recurring costs, primarily registrar and transfer agents’ fees, as incurred.

Preference Shares

As noted earlier, **preference shares** are a special class of shares that possess certain preferences or features not possessed by ordinary shares. The following features are those most often associated with preference share issues.

1. Preference as to dividends.
2. Preference as to assets in the event of liquidation.

3. Convertible into ordinary shares.
4. Callable at the option of the corporation.
5. Non-voting.

The features that distinguish preference shares from ordinary shares may be of a more restrictive and negative nature. For example, the preference shares may be non-voting, non-cumulative, and non-participating.

Companies usually issue preference shares with a par value, expressing the dividend preference as a **percentage of the par value**. Thus, holders of 8 percent preference shares with a \$100 par value are entitled to an annual dividend of \$8 per share ($\$100 \times .08$). This share is commonly referred to as an 8 percent preference share. In the case of no-par preference shares, a corporation expresses a dividend preference as a **specific dollar amount** per share, for example, \$7 per share. This share is commonly referred to as a \$7 preference share.

A preference as to dividends does not assure the payment of dividends. It merely assures that the corporation must pay the stated dividend rate or amount applicable to the preference shares before paying any dividends on the ordinary shares.

A company often issues preference shares (instead of debt) because of a high debt to equity ratio. In other instances, it issues preference shares through private placements with other corporations at a lower-than-market dividend rate because the acquiring corporation often receives largely tax-free dividends in certain countries.

Features of Preference Shares

A company may attach whatever preferences or restrictions, in whatever combination it desires, to a preference share issue, as long as it does not specifically violate its country's incorporation law. Also, it may issue more than one class of preference shares. We discuss the most common features attributed to preference shares below.

Cumulative Preference Shares

Cumulative preference shares require that if a company fails to pay a dividend in any year, it must make it up in a later year before paying any dividends to ordinary shareholders. If the directors fail to declare a dividend at the normal date for dividend action, the dividend is said to have been "passed." Any passed dividend on cumulative preference shares constitutes a **dividend in arrears**. Because no liability exists until the board of directors declares a dividend, a corporation does not record a dividend in arrears as a liability but discloses it in a note to the financial statements. A corporation seldom issues non-cumulative preference shares because a passed dividend is lost forever to the preference shareholder. As a result, this type of share issue would be less marketable.

Participating Preference Shares

Holders of **participating preference shares** share ratably with the ordinary shareholders in any profit distributions beyond the prescribed rate. That is, 5 percent preference shares, if fully participating, will receive not only a 5 percent return, but also dividends at the same rates as those paid to ordinary shareholders if paying amounts in excess of 5 percent of par or stated value to ordinary shareholders. Note that some participating preference shares are only partially participating.

Convertible Preference Shares

Convertible preference shares give the preference shareholders the option to exchange preference shares for ordinary shares at a predetermined ratio. The convertible preference shareholder not only

enjoys a preference claim on dividends but also has the option to convert to an ordinary shareholder with unlimited participation in earnings.

Callable Preference Shares

Callable preference shares permit the company at its option to call or redeem the outstanding preference shares at specified future dates and at stipulated prices. Many preference issues are callable. The company usually sets the call or redemption price slightly above the original issuance price and commonly states it in terms related to the par value. The callable feature permits the company to use the capital obtained through the issuance of such shares until the need has passed or it is no longer advantageous.

The existence of a call price or prices tends to set a ceiling on the market price of the preference shares unless they are convertible into ordinary shares. When a company redeems preference shares, it must pay any dividends in arrears.

Redeemable Preference Shares

Recently, more and more issuances of preference shares have features that make the securities more like debt (legal obligation to pay) than an equity instrument. For example, **redeemable preference shares** have a mandatory redemption period or a redemption feature that the issuer cannot control.

Previously, public companies were not permitted to report these debt-like preference share issues in equity, but they were not required to report them as a liability either. There were concerns about classification of these debt-like securities, which may have been reported as equity or in the “mezzanine” section of statements of financial position between equity and debt. There also was diversity in practice as to how dividends on these securities were reported. IFRS requires debt-like securities, like redeemable preference shares, to be classified as liabilities and to be measured and accounted similarly to liabilities. [3]

Accounting for and Reporting of Preference Shares

The accounting for preference shares at issuance is similar to that for ordinary shares. A company allocates proceeds between the par value of the preference shares and share premium. To illustrate, assume that Bishop plc issues 10,000 shares of £10 par value preference shares for £12 cash per share. Bishop records the issuance as follows.

Cash	120,000	
Share Capital—Preference		100,000
Share Premium—Preference		20,000

Thus, Bishop maintains separate accounts for these different classes of shares.

Companies consider convertible preference shares as a part of equity. In addition, when exercising convertible preference shares, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with shareholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Share Capital—Preference, along with any related Share Premium—Preference; credit Share Capital—Ordinary and Share Premium—Ordinary (if an excess exists).

Preference shares generally have no maturity date. Therefore, no legal obligation exists to pay the preference shareholder. As a result, companies classify preference shares as part of equity. Companies generally report preference shares at par value as the first item in the equity section. They report any excess over par value as part of share premium. They also consider dividends on preference shares as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preference shares outstanding. [4]

Reacquisition of Shares

LEARNING OBJECTIVE 2

Explain the accounting and reporting for treasury shares.

Companies often buy back their own shares. In fact, as indicated in [Illustration 15.4](#), share buybacks for companies in the FTSE 100 almost exceed share issuances in recent years and exceed dividends as a form of distribution to shareholders. For example, oil company **BP** (GBR) purchased \$90 million worth of shares in 2018, and rival **Royal Dutch Shell** (NLD/GBR) announced a \$25 billion share buyback scheme that would run until 2020.

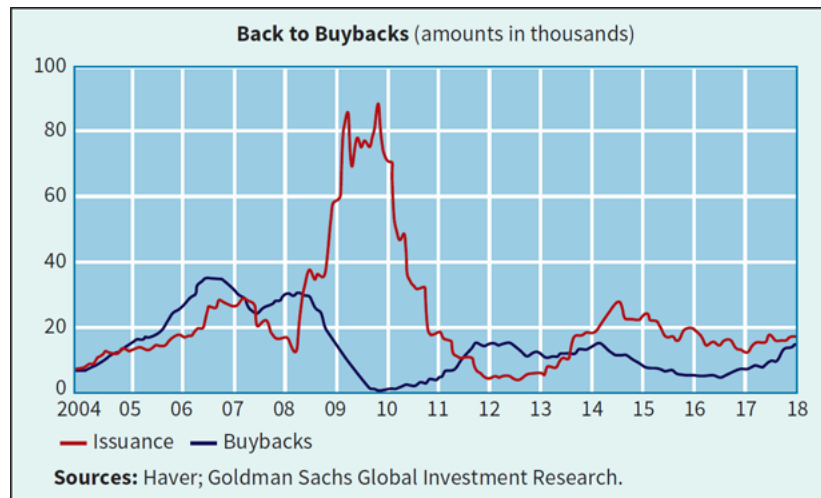

ILLUSTRATION 15.4 Share Issuances/Buybacks 2004–2018

Companies purchase their outstanding shares for several reasons:

1. **To provide tax-efficient distributions of excess cash to shareholders.** Tax rates on sales of shares to the company by the shareholders are often much lower than the ordinary tax rate for many investors.
2. **To increase earnings per share and return on equity.** Reducing both shares outstanding and equity often enhances certain performance ratios. For example, **Siemens** (DEU) announced its €4 billion buyback as part of its efforts to improve profitability. However, strategies to hype performance measures might increase performance in the short run, but these tactics add no real long-term value.
3. **To provide shares for employee compensation contracts or to meet potential merger needs.** **Honeywell Inc.** (USA) reported that it would use part of its purchase of one million ordinary shares for employee share option contracts. Other companies acquire shares to have them available for business acquisitions.
4. **To thwart takeover attempts or to reduce the number of shareholders.** By reducing the number of shares held by the public, existing owners and managements bar “outsiders” from gaining control or significant influence.
5. **To make a market in the shares.** As one company executive noted, “Our company is trying to establish a floor for its shares.” Purchasing shares in the marketplace creates a demand. This may stabilize the share price or, in fact, increase it. For example, **HTC** (TWN) indicated its recent treasury share transaction was one of the options for boosting its sagging share price.

Some publicly held corporations have chosen to “go private,” that is, to eliminate public (outside) ownership entirely by purchasing all of their outstanding shares. Companies often accomplish such a procedure through a **leveraged buyout (LBO)**, in which the company borrows money to finance the share repurchases.

After reacquiring shares, a company may either retire them or hold them in the treasury for reissue. If not retired, such shares are referred to as **treasury shares**. Technically, treasury shares are a corporation’s own shares, reacquired after having been issued and fully paid.

Treasury shares are not an asset. When a company purchases treasury shares, a reduction occurs in both assets and equity. It is inappropriate to imply that a corporation can own a part of itself. A corporation may sell treasury shares to obtain funds, but that does not make treasury shares a statement of financial position asset (see **Underlying Concepts**). When a corporation buys back some of its own outstanding shares, it has not acquired an asset; the buyback reduces net assets.

Underlying Concepts

As we indicated in [Chapter 2](#), an asset should have probable future economic benefits. Treasury shares simply reduce ordinary shares outstanding.

The possession of treasury shares does not give the corporation the right to vote, to exercise preemptive rights as a shareholder, to receive cash dividends, or to receive assets upon corporate liquidation. **Treasury shares are essentially the same as unissued ordinary shares.** No one advocates classifying unissued ordinary shares as an asset in the statement of financial position.³

Purchase of Treasury Shares

Companies use two general methods of handling treasury shares in the accounts: the cost method and the par value method. Both methods are generally acceptable.

- The **cost method** results in debiting the Treasury Shares account for the reacquisition cost and in reporting this account as a deduction from equity on the statement of financial position.
- The **par (stated) value method** records all transactions in treasury shares at their par value and reports the treasury shares as a deduction from share capital only.

No matter which method a company uses, most jurisdictions consider the cost of the treasury shares acquired as a restriction on retained earnings.

Because just about all companies use the cost method to account for treasury shares, we illustrate its use here. This method derives its name from the fact that a company maintains the Treasury Shares account at the cost of the shares purchased.⁴ Under the cost method, the company debits the Treasury Shares account for the cost of the shares acquired. Upon reissuance of the shares, it credits the account for this same cost. The price received for the shares when issued originally does not affect the entries to record the acquisition and reissuance of the treasury shares.

To illustrate, assume that Pacific Company issued 100,000 shares of \$1 par value ordinary shares at a price of \$10 per share. In addition, it has retained earnings of \$300,000. [Illustration 15.5](#) shows the equity section on December 31, 2021, before purchase of treasury shares.

Equity	
Share capital—ordinary, \$1 par, 100,000 shares issued and outstanding	\$ 100,000
Share premium—ordinary	900,000
Retained earnings	300,000
Total equity	<u>\$1,300,000</u>

ILLUSTRATION 15.5 Equity with No Treasury Shares

On January 20, 2022, Pacific acquires 10,000 of its shares at \$11 per share. Pacific records the reacquisition as follows.

January 20, 2022		
Treasury Shares	110,000	
Cash		110,000

Note that Pacific debits Treasury Shares for the cost of the shares purchased. The original account, Share Capital—Ordinary, is not affected because the number of issued shares does not change. The same is true for the Share Premium—Ordinary account. Pacific then deducts treasury shares to determine total equity.

Illustration 15.6 shows the equity section for Pacific after purchase of the treasury shares.

Equity	
Share capital—ordinary, \$1 par value, 100,000 shares issued and 90,000 outstanding	\$ 100,000
Share premium—ordinary	900,000
Retained earnings	300,000
Less: Cost of treasury shares (10,000 shares)	<u>110,000</u>
Total equity	<u>\$1,190,000</u>

ILLUSTRATION 15.6 Equity with Treasury Shares

Pacific subtracts the cost of the treasury shares from the total of share capital—ordinary, share premium—ordinary, and retained earnings. It therefore reduces equity. Many jurisdictions require a corporation to restrict retained earnings for the cost of treasury shares purchased. The restriction keeps intact the corporation's capital. When the corporation sells the treasury shares, it lifts the restriction.

Pacific discloses both the number of shares issued (100,000) and the number of shares in the treasury (10,000). The difference is the number of shares outstanding (90,000). The term **outstanding shares** means the number of issued shares that shareholders own.

Sale of Treasury Shares

Companies usually reissue or retire treasury shares. When selling treasury shares, the accounting for the sale depends on the price. If the selling price of the treasury shares equals its cost, the company records the sale of the shares by debiting Cash and crediting Treasury Shares. In cases where the selling price of the treasury shares is not equal to cost, then accounting for treasury shares sold **above cost** differs from the accounting for treasury shares sold **below cost**. However, the sale of treasury shares either above or below cost increases both total assets and equity.

Sale of Treasury Shares Above Cost

When the selling price of the treasury shares exceeds its cost, a company credits the difference to Share Premium—Treasury. To illustrate, assume that Pacific acquired 10,000 treasury shares at \$11 per share. It now sells 1,000 shares at \$15 per share on March 10. Pacific records the entry as follows.

March 10, 2022		
Cash (1,000 × \$15)	15,000	
Treasury Shares (1,000 × \$11)		11,000
Share Premium—Treasury		4,000

There are two reasons why Pacific does not credit \$4,000 to Gain on Sale of Treasury Shares: (1) gains on sales occur when selling **assets**; treasury shares are not an asset, and (2) a gain or loss should not be recognized from share transactions with its own shareholders. Thus, Pacific should not include share premium arising from the sale of treasury shares in the measurement of net income. Instead, it lists share premium from treasury shares separately on the statement of financial position.

Sale of Treasury Shares Below Cost

When a corporation sells treasury shares below its cost, it usually debits the excess of the cost over selling price to Share Premium—Treasury. Thus, if Pacific sells an additional 1,000 treasury shares on March 21 at \$8 per share, it records the sale as follows.

March 21, 2022		
Cash (1,000 × \$8)	8,000	
Share Premium—Treasury	3,000	
Treasury Shares (1,000 × \$11)		11,000

We can make several observations based on the two sale entries (sale above cost and sale below cost): (1) Pacific credits Treasury Shares at cost in each entry; (2) Pacific uses Share Premium—Treasury for the difference between the cost and the resale price of the shares, and (3) neither entry affects Share Capital—Ordinary.

After eliminating the credit balance in Share Premium—Treasury, the corporation debits any additional excess of cost over selling price to Retained Earnings. To illustrate, assume that Pacific sells an additional 1,000 shares at \$8 per share on April 10. [Illustration 15.7](#) shows the balance in the Share Premium—Treasury account (before the April 10 purchase).

Share Premium—Treasury			
Mar. 21	3,000	Mar. 10	4,000
		Balance	1,000

[ILLUSTRATION 15.7](#) Treasury Share Transactions in Share Premium—Treasury Account

In this case, Pacific debits \$1,000 of the excess to Share Premium—Treasury. It debits the remainder to Retained Earnings. The entry is as follows.

April 10, 2022		
Cash (1,000 × \$8)	8,000	
Share Premium—Treasury	1,000	
Retained Earnings	2,000	
Treasury Shares (1,000 × \$11)		11,000

Retiring Treasury Shares

The board of directors may approve the retirement of treasury shares. This decision results in cancellation of the treasury shares and a reduction in the number of issued shares. Retired treasury shares have the status of authorized and unissued shares. The accounting effects are similar to the sale of treasury shares except that corporations debit **applicable equity accounts related to the**

retired shares instead of cash. For example, if a corporation originally sells the shares at par, it debits Share Capital—Ordinary for the par value per share. If it originally sells the shares at \$3 above par value, it also debits Share Premium—Ordinary for \$3 per share at retirement.

What Do the Numbers Mean?

Signals to Buy?

As indicated in [Illustration 15.4](#), companies have steadily increased repurchases of their own shares in recent years. And why not? Few company announcements are more beloved by investors than those that indicate a share buyback is on the horizon. Following a lull in buybacks during the financial crisis of 2008, companies have increased their buyback programs. For example, buybacks by the companies in the FTSE 100 increased steadily before and after the financial crisis, with major companies such as **BP** (GBR), **Royal Dutch Shell** (NLD/GBR), and **Burberry** (GBR), as well as insurers **Allianz** (CHE) and **Zurich** (CHE), making some of the bigger repurchases.

Increases in buybacks are music to investors' ears because it indicates that executives at some of the companies have confidence that better times are ahead. The buybacks also show that cash reserves are healthy enough for companies to believe they not only have enough cash to cover their day-to-day functions but also enough to spare to allow for generous buybacks. In fact, market experts often look to share buybacks as a buy signal. That strategy is not surprising if you look at the performance of the companies that did buybacks. For example, in one study, buyback companies outperformed similar companies without buybacks by an average of 23 percent. In a recent three-year period, companies followed by [BuybackLetter.com](#) (USA) were up 16.4 percent, while the broader market index was up just 7.1 percent. Why the premium? The conventional wisdom is that companies that buy back shares believe their shares are undervalued. Thus, analysts view the buyback announcement as an important piece of inside information about future company prospects.

Sohn, "More Buybacks," *Naples Daily News* (June 28, 2015); and C. Cornish, "UK Share Buybacks Accelerate as Market Lags Behind," *Financial Times* (March 16, 2018).

Dividend Policy

LEARNING OBJECTIVE 3

Explain the accounting and reporting issues related to dividends.

Determining the proper amount of dividends to pay is a difficult financial management decision. Companies that are paying dividends are extremely reluctant to reduce or eliminate their dividend. They fear that the securities market might view this action negatively. As a consequence, companies that have been paying cash dividends will make every effort to continue to do so. In addition, the type of shareholder the company has (taxable or non-taxable, retail investor or institutional investor) plays a large role in determining dividend policy.⁵

Very few companies pay dividends in amounts equal to their legally available retained earnings. The major reasons are as follows.

1. To maintain agreements (bond covenants) with specific creditors to retain all or a portion of the earnings in the form of assets, or to build up additional protection against possible loss.
2. To meet corporation requirements that earnings equivalent to the cost of treasury shares purchased be restricted against dividend declarations.

3. To retain assets that would otherwise be paid out as dividends, in order to finance growth or expansion. This is sometimes called internal financing, reinvesting earnings, or “plowing” the profits back into the business.
4. To smooth out dividend payments from year to year by accumulating earnings in good years, and using such accumulated earnings as a basis for dividends in bad years.
5. To build up a cushion or buffer against possible losses or errors in the calculation of profits.

The reasons above are self-explanatory except for the second. The laws of some jurisdictions require that the corporation restrict its contributed capital from distribution to shareholders, to protect against loss for creditors.⁶ The applicable law determines the legality of a dividend.

Financial Condition and Dividend Distributions

Effective management of a company requires attention to more than the legality of dividend distributions. Management must also consider economic conditions, and most importantly, liquidity. Assume an extreme situation as shown in [Illustration 15.8](#).

Statement of Financial Position			
Plant assets	€500,000	Share capital	€400,000
	€500,000	Retained earnings	100,000
			€500,000

[ILLUSTRATION 15.8](#) Statement of Financial Position, Showing a Lack of Liquidity

The depicted company has a retained earnings credit balance. Unless restricted, it can declare a dividend of €100,000. But because all its assets are plant assets used in operations, payment of a cash dividend of €100,000 would require the sale of plant assets or borrowing.

Even if a statement of financial position shows current assets, as in [Illustration 15.9](#), the question remains as to whether the company needs those cash assets for other purposes.

Statement of Financial Position				
Plant assets	€460,000	Share capital	€400,000	
Cash	100,000	Retained earnings	100,000	€500,000
	€560,000	Current liabilities		60,000
				€560,000

[ILLUSTRATION 15.9](#) Statement of Financial Position, Showing Cash but Minimal Working Capital

The existence of current liabilities strongly implies that the company needs some of the cash to meet current debts as they mature. In addition, day-to-day cash requirements for payrolls and other expenditures not included in current liabilities also require cash.

Thus, before declaring a dividend, management must consider **availability of funds to pay the dividend**. A company should not pay a dividend unless both the present and future financial position warrant the distribution.

Types of Dividends

Companies generally base dividend distributions either on accumulated profits (that is, retained earnings) or on some other equity item such as share premium. Dividends are of the following types.

1. Cash dividends.
2. Property dividends.

3. Liquidating dividends.
4. Share dividends.

Although commonly paid in cash, companies occasionally pay dividends in shares or some other asset. **All dividends, except for share dividends, reduce the total equity in the corporation.** When declaring a share dividend, the corporation does not pay out assets or incur a liability. It issues additional shares to each shareholder and nothing more.

The natural expectation of any shareholder who receives a dividend is that the corporation has operated successfully. As a result, he or she is receiving a share of its profits. A company should disclose a **liquidating dividend**—that is, a dividend not based on retained earnings—to the shareholders so that they will not misunderstand its source.

Cash Dividends

The board of directors votes on the declaration of **cash dividends**. Upon approval of the resolution, the board declares a dividend. Before paying it, however, the company must prepare a current list of shareholders. For this reason, there is usually a time lag between declaration and payment. For example, the board of directors might approve a resolution at the January 10 (**date of declaration**) meeting and declare it payable February 5 (**date of payment**) to all shareholders of record January 25 (**date of record**).⁷ In this example, the period from January 10 to January 25 gives time for the company to complete and register any transfers in process. The time from January 25 to February 5 provides an opportunity for the transfer agent or accounting department, depending on who does this work, to prepare a list of shareholders as of January 25 and to prepare and mail dividend checks.

A declared cash dividend is a liability. Because payment is generally required very soon, it is usually a current liability. Companies use the following entries to record the declaration and payment of an ordinary dividend payable in cash. For example, Roadway Freight Corp. on June 10 declared a cash dividend of 50 cents a share on 1.8 million shares payable July 16 to all shareholders of record June 24. The entries for this dividend are shown in [Illustration 15.10](#).

At date of declaration (June 10)		
Retained Earnings (Cash Dividends Declared)	900,000	
Dividends Payable		900,000
At date of record (June 24)		
No entry		
At date of payment (July 16)		
Dividends Payable	900,000	
Cash		900,000

[ILLUSTRATION 15.10](#) Cash Dividend Entries

To set up a ledger account that shows the amount of dividends declared during the year, Roadway Freight might debit Cash Dividends Declared instead of Retained Earnings at the time of declaration. It then closes this account to Retained Earnings at year-end.

A company may declare dividends either as a certain percentage of par, such as a 6 percent dividend on preference shares, or as an amount per share, such as 60 cents per share on no-par ordinary shares. In the first case, the rate multiplied by the par value of outstanding shares equals the total dividend. In the second, the dividend equals the amount per share multiplied by the number of shares outstanding. **Companies do not declare or pay cash dividends on treasury shares because they are not outstanding.**

Dividend policies vary among corporations. Some companies take pride in a long, unbroken string of quarterly dividend payments. They would lower or pass the dividend only if forced to do so by a sustained decline in earnings or a critical shortage of cash.

“Growth” companies, on the other hand, pay little or no cash dividends because their policy is to expand as rapidly as internal and external financing permit. For example, **Ophir Energy plc** (GBR) does not pay cash dividends to its ordinary shareholders so that the cash can be used in exploration and production. Investors in these growth companies hope that the price of their shares will appreciate in value. The investors will then realize a profit when they sell their shares. Many companies focus more on increasing share price, share repurchase programs, and corporate earnings than on dividend payout.

What Do the Numbers Mean?

Dividends Up, Dividends Down

An investment strategy focusing on shares with the potential of *increasing* dividends has been a mainstay for many investors. Said one market watcher, “Investors too often overlook the importance of dividends, particularly the contribution to total return from reinvested dividends.... Dividends also can provide a good hedge against inflation in the form of a growing stream of income.” One study, the results of which are summarized in the following table, indicates the importance of dividends for investment returns.

Average Annual Returns and Volatility by Dividend Policy	
	Returns
Dividend growers and initiators	9.52%
Dividend payers	8.74
No change in dividend policy	7.15
Dividend non-payers	1.61
Dividend cutters and eliminators	−0.31
Equal-weighted S&P 500 Index	7.03
Sources: Ned Davis Research (December 2012); stocks within the S&P 500 Index.	

Companies that raised their dividends are classified as dividend growers and initiators, as opposed to other companies that are classified as dividend cutters and eliminators. The study also identified companies with no change in dividend policy. The table supports the advice to keep an eye on dividend growth. What the table tells us is that companies that grew or initiated a dividend have experienced the highest returns relative to other shares. That is, over a multiyear investment horizon, an investment of \$100 would have grown to \$4,169, while dividend non-payers only increased to \$193. In addition, the higher performers offered lower volatility of returns in all market environments.

More recent data on the dividends and investments returns continue to tell the same story. From 1958 through 2018, a portfolio with the top 20 percent of S&P 500 companies ranked by dividend yield and weighted by market capitalization outperformed the overall S&P 500 by 2.13 percentage points annually, according to **Greenrock Research** (USA).

Indeed, central banks’ low interest rate monetary policies are adding to the current continuing appeal of dividend securities. That’s because lower interest rates push bond yields lower, making shares more attractive to investors. While most investors buy dividend shares for the steady income stream, that is not the only benefit these investments offer, financial experts say. Indeed, research shows that dividend shares often outperform their non-dividend-paying counterparts over longer periods. That is partly because dividend payments account for a substantial portion of the securities market’s total return. Researcher **Morningstar Inc.** (USA) calculates that dividends were responsible for 19 percent of the S&P 500 index’s return over the past five years. Other research indicates much higher portions for longer periods, thanks to the compounding of reinvested dividends.

Thus, companies that grow dividends are signaling confidence about future earnings and are most likely to perform well throughout market cycles—this makes them good candidates for long-term growth.

Sources: Data from R. Evans, “Here Are the American and European Companies with Incredible Track Records of Raising Their Dividends,” *The Telegraph* (November 4, 2013); Hartford Funds, “The Power of Dividends: Past, Present, and Future,” *Second Quarter 2014 White Paper* (2014); and D. Weil, “Why Dividend Stocks Are Popular Again,” *Wall Street Journal* (March 3, 2019).

Property Dividends

Dividends payable in assets of the corporation other than cash are called **property dividends** or **dividends in kind**. Property dividends may be merchandise, real estate, or investments, or whatever form the board of directors designates. **Gold Bullion Development Corporation** (CAN) has a long-standing practice of paying dividends in gold instead of cash. Because of the obvious difficulties of divisibility of units and delivery to shareholders, the usual property dividend is in the form of securities of other companies that the distributing corporation holds as an investment.

When declaring a property dividend, the corporation should **remeasure at fair value the property it will distribute, recognizing any gain or loss** as the difference between the property's fair value and carrying value at date of declaration. The corporation may then record the declared dividend as a debit to Retained Earnings (or Property Dividends Declared) and a credit to Property Dividends Payable, at an amount equal to the fair value of the distributed property. Upon distribution of the dividend, the corporation debits Property Dividends Payable and credits the account containing the distributed asset (restated at fair value). [Illustration 15.11](#) presents a property dividend situation.

Entries for Property Dividends

Facts: Tsen Ltd. transferred to shareholders some of its investments in securities with a carrying value of HK\$1,250,000 by declaring a property dividend on December 28, 2021, to be distributed on January 30, 2022, to shareholders of record on January 15, 2022.

Question: If, at the date of declaration, the securities have a fair value of HK\$2,000,000, what entries does Tsen make at the dates of declaration and distribution?

Solution: Tsen makes the following entries.

At date of declaration (December 28, 2021)		
Equity Investments	750,000	
Unrealized Holding Gain or Loss—Income		750,000
Retained Earnings (Property Dividends Declared)	2,000,000	
Property Dividends Payable		2,000,000
At date of distribution (January 30, 2022)		
Property Dividends Payable	2,000,000	
Equity Investments		2,000,000

[ILLUSTRATION 15.11](#) Property Dividend Entries

Liquidating Dividends

Some corporations use amounts paid in by shareholders as a basis for dividends. Without proper disclosure of this fact, shareholders may erroneously believe the corporation has been operating at a profit. To avoid this type of deception, intentional or unintentional, a clear statement of the source of every dividend should accompany the dividend check.

Dividends based on other than retained earnings are sometimes described as liquidating dividends. This term implies that such dividends are a return of the shareholder's investment rather than of profits. In other words, **any dividend not based on earnings reduces amounts paid in by**

shareholders, and to that extent, it is a liquidating dividend. Companies in the extractive industries may pay dividends equal to the total of accumulated income and depletion. The portion of these dividends in excess of accumulated income represents a return of part of the shareholder's investment. [Illustration 15.12](#) presents a liquidating dividend example.

Entries for Liquidating Dividends

Facts: McChesney Mines issued a “dividend” to its ordinary shareholders of £1,200,000. The cash dividend announcement noted that shareholders should consider £900,000 as income and the remainder a return of capital.

Question: What are the entries for McChesney at declaration date and at the date of distribution?

Solution: McChesney Mines records the dividend as follows.

At date of declaration		
Retained Earnings	900,000	
Share Premium—Ordinary	300,000	
Dividends Payable		1,200,000
At date of payment		
Dividends Payable	1,200,000	
Cash		1,200,000

[ILLUSTRATION 15.12](#) Liquidating Dividend Entries

In some cases, management simply decides to cease business and declares a liquidating dividend. In these cases, liquidation may take place over a number of years to ensure an orderly and fair sale of assets. For example, when **Overseas National Airways** (USA) dissolved, it agreed to pay a liquidating dividend to its shareholders over a period of years equivalent to \$8.60 per share. Each liquidating dividend payment in such cases reduces the amount paid in by shareholders.

Share Dividends and Share Splits

Share Dividends

Companies sometimes issue a share dividend. In this case, **the company distributes no assets.** Each shareholder maintains exactly the same proportionate interest in the corporation and the same total book value after the company issues the share dividend. Of course, the book value per share is lower because each shareholder holds more shares.

A **share dividend** therefore is the issuance by a corporation of its own shares to its shareholders on a pro rata basis, without receiving any consideration. In recording a share dividend, some believe that the company should transfer the **par value of the shares issued** as a dividend from retained earnings to share capital.⁸

To illustrate a share dividend, assume that Vine plc has outstanding 100,000 shares of £1 par value ordinary shares and retained earnings of £50,000. If Vine declares a 10 percent share dividend, it issues 10,000 additional shares to current shareholders. The fair value of the shares at the time of the share dividend is £8. Given this information, the entry is:

At date of declaration

At date of declaration		
Retained Earnings (Share Dividend Declared)	10,000	
Ordinary Share Dividend Distributable		10,000

Two important points should be noted about this entry. First, the par value, not the fair value, is used to record the share dividend. Second, the share dividend does not affect any asset or liability. The entry merely reflects a reclassification of equity. If Vine prepares a statement of financial position between the dates of declaration and distribution, it should show the ordinary share dividend distributable in the equity section as an addition to share capital—ordinary (whereas it shows cash or property dividends payable as current liabilities).

When issuing the shares, the entry is:

At date of distribution		
Ordinary Share Dividend Distributable	10,000	
Share Capital—Ordinary		10,000

No matter what the fair value is at the time of the share dividend, each shareholder retains the same proportionate interest in the corporation.

Some applicable laws and exchange rules specifically prohibit the issuance of share dividends on treasury shares. In those jurisdictions that permit treasury shares to participate in the distribution accompanying a share dividend or share split, the planned use of the treasury shares influences corporate practice. For example, if a corporation issues treasury shares in connection with employee share options, the treasury shares may participate in the distribution because the corporation usually adjusts the number of shares under option for any share dividends or splits. But no useful purpose is served by issuing additional shares to the treasury shares without a specific purpose, since they are essentially equivalent to authorized but unissued shares.

To continue with our example of the effect of the share dividend, note in [Illustration 15.13](#) that the share dividend does not change the total equity. Also note that it does not change the proportion of the total shares outstanding held by each shareholder.

Before dividend	
Share capital—ordinary, 100,000 shares of £1 par	£100,000
Retained earnings	50,000
Total equity	£150,000
Shareholders' interests:	
A. 40,000 shares, 40% interest, book value	£60,000
B. 50,000 shares, 50% interest, book value	75,000
C. 10,000 shares, 10% interest, book value	15,000
	£150,000
After declaration but before distribution of 10% share dividend	
Share capital—ordinary, 100,000 shares at £1 par	£100,000
Ordinary share dividend distributable, 10,000 shares at £1 par	10,000
Retained earnings (£50,000 – £10,000)	40,000
Total equity	£150,000
After declaration and distribution of 10% share dividend	
Share capital—ordinary, 110,000 shares at £1 par	£110,000
Retained earnings (£50,000 – £10,000)	40,000
Total equity	£150,000
Shareholders' interest:	
A. 44,000 shares, 40% interest, book value	£60,000
B. 55,000 shares, 50% interest, book value	75,000
C. 11,000 shares, 10% interest, book value	15,000
	£150,000

ILLUSTRATION 15.13 Effects of Share Dividends

Share Splits

If a company has undistributed earnings over several years and accumulates a sizable balance in retained earnings, the market value of its outstanding shares likely increases. Shares issued at prices less than £50 a share can easily attain a market price in excess of £200 a share. The higher the market price of a share, however, the less readily some investors can purchase it.

The managements of many corporations believe that better public relations depend on wider ownership of the company shares. They therefore target a market price sufficiently low to be within range of the majority of potential investors. To reduce the market price of each share, they use the common device of a **share split**. For example, after its share price increased significantly, **Arcam AB** (SWE) announced a split of its shares 4-for-1. The split should reduce the share price, leading to wider distribution of shares at lower trading prices.

From an accounting standpoint, **Arcam records no entry for a share split**. However, it enters a memorandum note to indicate the changed par value of the shares and the increased number of shares. **Illustration 15.14** shows the lack of change in equity for a 2-for-1 share split on 100,000 shares of €1 par value, with the par being halved upon issuance of the additional shares.

Equity Before 2-for-1 Split		Equity After 2-for-1 Split	
Share capital—ordinary,		Share capital—ordinary,	
100,000 shares at €1 par	€100,000	200,000 shares at €0.50 par	€100,000
Retained earnings	50,000	Retained earnings	50,000
	<u>€150,000</u>		<u>€150,000</u>

ILLUSTRATION 15.14 Effects of a Share Split

Share Split and Share Dividend Differentiated

From a legal standpoint, a share split differs from a share dividend. How? A share split increases the number of shares outstanding and decreases the par or stated value per share. **A share dividend, although it increases the number of shares outstanding, does not decrease the par value; thus, it increases the total par value of outstanding shares.**

The reasons for issuing a share dividend are numerous and varied. Share dividends can be primarily a publicity gesture **because some consider share dividends as dividends**. Another reason is that the company may simply wish to retain profits in the business by capitalizing a part of retained earnings. In such a situation, it makes a transfer on declaration of a share dividend from earned capital to contributed capital.

A company may also use a share dividend, like a share split, to increase the marketability of the shares, although marketability is often a secondary consideration. That is, a share dividend has the same effect on market price as a share split. However, as discussed earlier, a share dividend does not alter the par value per share.

Illustration 15.15 summarizes and compares the effects in the statement of financial position and related items of various types of dividends and share splits.

Effect on:			Declaration and Distribution of

Presentation and Analysis of Equity

LEARNING OBJECTIVE 4

Indicate how to present and analyze equity.

Presentation of Equity

Statement of Financial Position

[Illustration 15.16](#) shows a comprehensive equity section from the statement of financial position of Frost SpA that includes the equity items we discussed in this chapter.⁹

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the statement of financial position, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows.

Frost SpA Equity December 31, 2022		
Share capital—preference, €100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding	€3,000,000	
Share capital—ordinary, no par, stated value €10 per share, 500,000 shares authorized, 400,000 shares issued	4,000,000	
Ordinary share dividend distributable	200,000	€ 7,200,000
Share premium—preference	150,000	
Share premium—ordinary	840,000	990,000
Retained earnings		4,360,000
Treasury shares (2,000 ordinary shares)		(190,000)
Accumulated other comprehensive loss		(360,000)
Total equity		<u>€12,000,000</u>

[ILLUSTRATION 15.16](#) Comprehensive Equity Presentation

Disclosure of Restrictions on Retained Earnings

Many companies restrict retained earnings or dividends, without any formal journal entries. Such restrictions are **best disclosed by note**. Parenthetical notations are sometimes used, but restrictions imposed by bond indentures and loan agreements commonly require an extended explanation. Notes provide a medium for more complete explanations and free the financial statements from abbreviated notations. The note disclosure should reveal the source of the restriction, pertinent provisions, and the amount of retained earnings subject to restriction or the amount not restricted.

Restrictions may be based on the retention of a certain retained earnings balance, the ability to maintain certain working capital requirements, additional borrowing, and other considerations. The example from the annual report of **Samsung** (KOR) in [Illustration 15.17](#) shows a note disclosing potential restrictions on retained earnings and dividends.

Samsung

21. RETAINED EARNINGS

Retained earnings as of December 31 consist of the following:

(in millions of Korean won)	Current Year	Prior Year
Appropriated		
Legal reserve:		
Earned surplus reserve ¹	₩ 450,789	₩ 450,789
Discretionary reserve:		
Reserve for improvement of financial structure	204,815	204,815
Reserve for business rationalization	9,512,101	8,512,101
Reserve for overseas market development	510,750	510,750
Reserve for overseas investment losses	164,962	164,982
Reserve for research and human resource development	26,936,458	22,936,458
Reserve for export losses	167,749	167,749
Reserve for loss on disposal of treasury stock	3,100,000	2,550,000
Reserve for capital expenditure	8,816,905	8,216,439
	49,864,529	43,714,083
Unappropriated	5,555,022	7,351,091
Total	₩55,419,551	₩51,065,174

¹The Commercial Code of the Republic of Korea requires the Company to appropriate as a legal reserve, an amount equal to a minimum of 10% of annual cash dividends declared, until the reserve equals 50% of its issued capital stock. The reserve is not available for the payment of cash dividends, but may be transferred to capital stock through a resolution of the Board of Directors or used to reduce accumulated deficit, if any, with the ratification of the shareholders.

ILLUSTRATION 15.17 Disclosure of Restrictions on Retained Earnings and Dividends

Presentation of Statement of Changes in Equity

Companies are also required to present a **statement of changes in equity**. The statement of changes in equity includes the following.

1. Total comprehensive income for the period, showing separately the total amounts attributable to owners of the parent and to non-controlling interests.
2. For each component of equity, the effects of retrospective application or retrospective restatement.
3. For each component of equity, a reconciliation between the carrying amount at the beginning and the end of the period, separately disclosing changes resulting from:
 - a. Profit or loss.
 - b. Each item of other comprehensive income.
 - c. Transactions with owners in their capacity as owners, showing separately contributions by and distributions to owners and changes in ownership interests in subsidiaries that do not result in a loss of control.

A statement of changes in equity for **BASF Group** (DEU) is presented in **Illustration 15.18**.

In addition, BASF is required to present, either in the statement of changes in equity or in the notes, the amount of dividends recognized as distributions to owners during the period and the related amount per share. [5]

ILLUSTRATION 15.18 Statement of Changes in Equity

Analysis

Analysts use equity ratios to evaluate a company's profitability and long-term solvency. We discuss and illustrate the following three ratios below.

1. Return on ordinary share equity.
2. Payout ratio.
3. Book value per share.

Return on Ordinary Share Equity

The **return on ordinary share equity** (or return on equity) measures profitability from the ordinary shareholders' viewpoint. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. Return on equity (ROE) also helps investors judge the worthiness of a share when the overall market is not doing well.

Return on equity equals net income less preference dividends, divided by average ordinary shareholders' equity. For example, assume that Gerber's Inc. had net income of \$360,000, that it declared and paid preference dividends of \$54,000, and average ordinary shareholders' equity of \$2,550,000. [Illustration 15.19](#) shows how to compute Gerber's ratio.

Return on Ordinary Share Equity	$= \frac{\text{Net Income} - \text{Preference Dividends}}{\text{Average Ordinary Shareholders' Equity}}$
	$= \frac{\$360,000 - \$54,000}{\$2,550,000}$
	$= 12\%$

ILLUSTRATION 15.19 Computation of Return on Ordinary Share Equity

As shown in [Illustration 15.19](#), when preference shares are present, income available to ordinary shareholders equals net income less preference dividends.

A company can improve its return on ordinary share equity through the prudent use of debt or preference share financing. **Trading on the equity** describes the practice of using borrowed money or issuing preference shares in hopes of obtaining a higher rate of return on the money used. Ordinary shareholders win if return on the assets is higher than the cost of financing these assets. When this happens, the return on ordinary share equity will exceed the return on total assets. In short, the company is "trading on the equity at a gain." In this situation, the money obtained from bondholders or preference shareholders earns enough to pay the interest or preference dividends and leaves a profit for the ordinary shareholders. On the other hand, if the cost of the financing is higher than the rate earned on the assets, the company is trading on equity at a loss and shareholders lose.

Payout Ratio

Another ratio of interest to investors, the **payout ratio**, is the ratio of cash dividends to net income. If preference shares are outstanding, this ratio equals cash dividends paid to ordinary shareholders, divided by net income available to ordinary shareholders. For example, assume that Troy SA has cash dividends of €100,000 and net income of €500,000, and no preference shares outstanding.

[Illustration 15.20](#) shows the payout ratio computation.

Payout Ratio	=	$\frac{\text{Cash Dividends}}{\text{Net Income} - \text{Preference Dividends}}$
	=	$\frac{€100,000}{€500,000}$
	=	20 %

ILLUSTRATION 15.20 Computation of Payout Ratio

Recently, the payout ratio has plummeted. In 2000, more than half of earnings were converted to dividends. In 2018, just 43 percent of the earnings of global public companies was distributed via dividends.¹⁰

Book Value per Share

Another basis for evaluating net worth is found in the book value or equity value per share. **Book value per share** is the amount each share would receive if the company were liquidated **on the basis of amounts reported on the statement of financial position**. However, the figure loses much of its relevance if the valuations on the statement of financial position fail to approximate fair value of the assets. Book value per share equals ordinary shareholders' equity divided by outstanding ordinary shares. Assume that Chen Ltd.'s ordinary shareholders' equity is HK\$1,000,000 and that it has 100,000 shares of ordinary shares outstanding. **Illustration 15.21** shows its book value per share computation.

Book Value per Share	=	$\frac{\text{Ordinary Shareholders' Equity}}{\text{Outstanding Shares}}$
	=	$\frac{\text{HK\$1,000,000}}{100,000}$
	=	HK\$10 per share

ILLUSTRATION 15.21 Computation of Book Value per Share

APPENDIX 15A

Dividend Preferences and Book Value per Share

Dividend Preferences

LEARNING OBJECTIVE *5

Discuss the different types of preference share dividends and their effect on book value per share.

Illustrations 15A.1 to 15A.4 indicate the **effects of various dividend preferences** on dividend distributions to ordinary and preference shareholders. Assume that in 2022, Mason Company is to distribute €50,000 as cash dividends, its outstanding ordinary shares have a par value of €400,000, and its 6 percent preference shares have a par value of €100,000. Mason would distribute dividends to each class, employing the assumptions given, as follows.

1. If the preference shares are non-cumulative and non-participating:

	Preference	Ordinary	Total
6% of €100,000	€6,000		€ 6,000
The remainder to ordinary		€44,000	44,000
Totals	€6,000	€44,000	€50,000

ILLUSTRATION 15A.1 Dividend Distribution, Non-Cumulative and Non-Participating Preference

2. If the preference shares are cumulative and non-participating, and Mason Company did not pay dividends on the preference shares in the preceding two years:

	Preference	Ordinary	Total
Dividends in arrears, 6% of €100,000 for 2 years	€12,000		€12,000
Current year's dividend, 6% of €100,000	6,000		6,000
The remainder to ordinary		€32,000	32,000
Totals	€18,000	€32,000	€50,000

ILLUSTRATION 15A.2 Dividend Distribution, Cumulative and Non-Participating Preference Shares, with Dividends in Arrears

3. If the preference shares are non-cumulative and are fully participating:¹¹

	Preference	Ordinary	Total
Current year's dividend, 6%	€ 6,000	€24,000	€30,000
Participating dividend of 4%	<u>4,000</u>	<u>16,000</u>	<u>20,000</u>
Totals	<u>€10,000</u>	<u>€40,000</u>	<u>€50,000</u>
The participating dividend was determined as follows:			
Current year's dividend:			
Preference, 6% of €100,000 = € 6,000			
Ordinary, 6% of €400,000 = <u>24,000</u>	€30,000		
Amount available for participation (€50,000 – €30,000)	€20,000		
Par value of shares that are to participate (€100,000 + €400,000)	€500,000		
Rate of participation (€20,000 ÷ €500,000)	4%		
Participating dividend:			
Preference, 4% of €100,000	€ 4,000		
Ordinary, 4% of €400,000	<u>16,000</u>		
	<u>€20,000</u>		

ILLUSTRATION 15A.3 Dividend Distribution, Non-Cumulative and Fully Participating Preference Shares

4. If the preference shares are cumulative and are fully participating, and Mason Company did not pay dividends on the preference shares in the preceding two years:

	Preference	Ordinary	Total
Dividends in arrears, 6% of €100,000 for 2 years	€12,000		€12,000
Current year's dividend, 6%	6,000	€24,000	30,000
Participating dividend, 1.6% (€8,000 ÷ €500,000)	<u>1,600</u>	<u>6,400</u>	<u>8,000</u>
Totals	<u>€19,600</u>	<u>€30,400</u>	<u>€50,000</u>

ILLUSTRATION 15A.4 Dividend Distribution, Cumulative and Fully Participating Preference Shares, with Dividends in Arrears

Book Value per Share

Book value per share in its simplest form is computed as net assets divided by outstanding shares at the end of the year. The computation of book value per share becomes more complicated if a company has preference shares in its capital structure. For example, if preference dividends are in arrears, if the preference shares are participating, or if preference shares have a redemption or liquidating value higher than its carrying amount, the company must allocate retained earnings between the preference and ordinary shareholders in computing book value.

For example, the situation in [Illustration 15A.5](#) assumes that no preference dividends are in arrears and that the preference shares are not participating. Now assume that the same facts exist, except that the 5 percent preference shares are cumulative, participating shares up to 8 percent, and that dividends for three years before the current year are in arrears. [Illustration 15A.6](#) shows how to compute the book value of the ordinary shares, assuming that no action has yet been taken concerning dividends for the current year.

Equity	Preference	Ordinary
Preference shares, 5%	€300,000	
Ordinary shares		€400,000
Share premium—ordinary		37,500
Retained earnings		162,582
Totals	€300,000	€600,082
Shares outstanding		4,000
Book value per share		€150.02

[ILLUSTRATION 15A.5](#) Computation of Book Value per Share—No Dividends in Arrears

Equity	Preference	Ordinary
Preference shares, 5%	€300,000	
Ordinary shares		€400,000
Share premium—ordinary		37,500
Retained earnings:		
Dividends in arrears (3 years at 5% a year)	45,000	
Current year requirement at 5%	15,000	20,000
Participating—additional 3%	9,000	12,000
Remainder to ordinary		61,582
Totals	€369,000	€531,082
Shares outstanding		4,000
Book value per share		€132.77

[ILLUSTRATION 15A.6](#) Computation of Book Value per Share—with Dividends in Arrears, Participating

As indicated, retained earnings is allocated between preference and ordinary shareholders in computing book value per share.

In connection with the book value computation, the analyst must know how to handle the following items: the number of authorized and unissued shares, the number of treasury shares on hand, any commitments with respect to the issuance of unissued shares or the reissuance of treasury shares, and the relative rights and privileges of the various types of shares authorized. As an example, if the

liquidating value of the preference shares is higher than its carrying amount, the liquidating amount should be used in the book value computation.

Learning Objectives Review

1 Describe the corporate form and the issuance of shares.

Among the specific characteristics of the corporate form that affect accounting are the (1) influence of corporate law, (2) use of the share system, and (3) development of a variety of ownership interests. In the absence of restrictive provisions, each ordinary share carries the right to share proportionately in (1) profits and losses, (2) management (the right to vote for directors), (3) corporate assets upon liquidation, and (4) any new issues of shares of the same class (called the preemptive right).

Equity is classified into two categories: contributed capital and earned capital. Contributed capital (paid-in capital) describes the total amount paid in as share capital. Put another way, it is the amount that shareholders advance to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding shares and premiums less any discounts on issuance. Earned capital is the capital that develops if the business operates profitably; it consists of all undistributed income that remains invested in the company.

Accounts are kept for the following different types of shares. *Par value shares*: (a) Share Capital—Preference or Share Capital—Ordinary, (b) Share Premium—Preference and Share Premium—Ordinary. *No-par shares*: Share Capital—Ordinary or Share Capital—Ordinary and Share Premium—Ordinary if stated value used. For shares issued in combination with other securities (lump-sum sales), the two methods of allocation available are (a) the proportional method and (b) the incremental method. When issuing shares for services or property other than cash, the company should record the exchange at the fair value of the property or services received unless that fair value cannot be reliably measured. Otherwise, use the fair value of the shares issued.

Preference shares are a special class of shares that possess certain preferences or features not possessed by the ordinary shares. The features that are most often associated with preference share issues are (1) preference as to dividends, (2) preference as to assets in the event of liquidation, (3) convertible into ordinary shares, (4) callable at the option of the corporation, and (5) non-voting. At issuance, the accounting for preference shares is similar to that for ordinary shares. When convertible preference shares are converted, a company uses the book value method. It debits Share Capital—Preference, along with any related Share Premium—Preference, and credits Share Capital—Ordinary and Share Premium—Ordinary (if an excess exists).

2 Explain the accounting and reporting for treasury shares.

The cost method is generally used in accounting for treasury shares. This method derives its name from the fact that a company maintains the Treasury Shares account at the cost of the shares purchased. Under the cost method, a company debits the Treasury Shares account for the cost of the shares acquired and credits it for this same cost upon reissuance. The price received for the shares when originally issued does not affect the entries to record the acquisition and reissuance of the treasury shares.

3 Explain the accounting and reporting issues related to dividends.

The incorporation laws normally provide information concerning the legal restrictions related to the payment of dividends. Corporations rarely pay dividends in an amount equal to the legal limit. This is due, in part, to the fact that companies use assets represented by undistributed earnings to finance future operations of the business. If a company is considering declaring a dividend, it must ask two preliminary questions. (1) Is the condition of the corporation such that the dividend is **legally permissible**? (2) Is the condition of the corporation such that a dividend is **economically sound**?

Dividends are of the following types: (1) cash dividends, (2) property dividends, (3) liquidating dividends (dividends based on other than retained earnings), and (4) share dividends (the issuance by a corporation of its own shares to its shareholders on a pro rata basis but without receiving consideration).

When declaring a share dividend, a company debits Retained Earnings at the par value of the shares it distributes. The entry includes a credit to Ordinary Share Dividend Distributable at par value times the number of shares. A share dividend is a capitalization of retained earnings that reduces retained earnings. The par value per share and total equity remain unchanged with a share dividend, and all shareholders retain their same proportionate share of ownership. A share split (or reverse share split) results in an increase or decrease in the number of shares outstanding, with a corresponding decrease or increase in the par or stated value per share. No accounting entry is required for a share split.

4 Indicate how to present and analyze equity.

The equity section of a statement of financial position includes share capital, share premium, and retained earnings. A company may also have additional items such as treasury shares, accumulated other comprehensive income (loss), and non-controlling interest. Companies are required to present a statement of changes in equity. Ratios that use equity amounts are return on ordinary share equity, payout ratio, and book value per share.

*5 Discuss the different types of preference share dividends and their effect on book value per share.

The dividend preferences of preference shares affect the dividends paid to shareholders. Preference shares can be (1) cumulative or non-cumulative, and (2) fully participating, partially participating, or non-participating. If preference dividends are in arrears, if the preference shares are participating, or if preference shares have a redemption or liquidation value higher than its carrying amount, allocate retained earnings between preference and ordinary shareholders in computing book value per share.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

D'Ouille Company was formed on July 1, 2021. It was authorized to issue 500,000 shares of €10 par value ordinary shares and 100,000 shares of 4%, €25 par value, cumulative and non-participating preference shares. D'Ouille Company has a July 1–June 30 fiscal year. The following information relates to the equity accounts of D'Ouille Company.

Ordinary Shares

Prior to the 2023–2024 fiscal year, D'Ouille Company had 110,000 shares of outstanding ordinary shares issued as follows.

- 95,000 shares were issued for cash on July 1, 2021, at €31 per share.
- On July 24, 2021, 5,000 shares were exchanged for a plot of land which cost the seller €70,000 in 2015 and had an estimated fair value of €220,000 on July 24, 2021.
- 10,000 shares were issued on March 1, 2023, for €42 per share.

During the 2023–2024 fiscal year, the following transactions regarding ordinary shares took place.

Nov. 30, 2023	D'Ouille purchased 2,000 of its own shares on the open market at €39 per share. D'Ouille uses the cost method for treasury shares.
Dec.	D'Ouille declared a 5% share dividend for shareholders of record on January 15, 2024, to be

15, 2023	issued on January 31, 2024. D'Ouille was having a liquidity problem and could not afford a cash dividend at the time. D'Ouille's ordinary shares were selling at €52 per share on December 15, 2023.
June 20, 2024	D'Ouille sold 500 of its own ordinary shares that it had purchased on November 30, 2023, for €21,000.

Preference Shares

D'Ouille issued 100,000 preference shares at €44 per share on July 1, 2022.

Cash Dividends

D'Ouille generally declares cash dividends in December and June, with payment being made to shareholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2024, are shown below.

Declaration Date	Ordinary Shares	Preference Shares
12/15/22	€0.30 per share	€0.50 per share
6/15/23	€0.30 per share	€0.50 per share
12/15/23	—	€0.50 per share

No cash dividends were declared during June 2024 due to the company's liquidity problems.

Retained Earnings

As of June 30, 2023, D'Ouille's retained earnings account had a balance of €550,000. For the fiscal year ending June 30, 2024, D'Ouille reported net income of €120,000.

Instructions

Prepare the equity section of the statement of financial position, including appropriate notes, for D'Ouille Company as of June 30, 2024, as it should appear in its annual report to the shareholders.

Solution

D'Ouille Company Partial Statement of Financial Position June 30, 2024	
Equity	
4% Share capital—preference, €25 par value, cumulative and non-participating, 100,000 shares authorized, 100,000 shares issued and outstanding (Note A)	€2,500,000
Share capital—ordinary, €10 par value, 500,000 shares authorized, 115,400 shares issued, with 1,500 shares held in the treasury	1,154,000
Share premium—preference	1,900,000
Share premium—ordinary	2,485,000*
Share premium—treasury	1,500
Retained earnings	
Less: Treasury shares, 1,500 shares at cost	
Total equity	
Note A: D'Ouille Company is in arrears on the preference shares in the amount of €100,000.	
*Share premium—ordinary:	
Issue of 95,000 shares × (€31 – €10)	

D'Ouville Company Partial Statement of Financial Position June 30, 2024	
Issue of 5,000 shares for plot of land (€220,000 – €50,000)	
10,000 shares issued (3/1/20) [10,000 × (€42 – €10)]	
***Retained Earnings:	
Beginning balance + Income – Share dividend – Preference dividend = Ret. earnings, end	
€550,000 + €120,000 – €54,000 – €50,000 =	€566,000

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. In the absence of restrictive provisions, what are the basic rights of shareholders of a corporation?
2. Why is a preemptive right important?
3. Distinguish between ordinary and preference shares.
4. Why is the distinction between contributed capital (paid-in capital) and retained earnings important?
5. Explain each of the following terms: authorized ordinary shares, unissued ordinary shares, issued ordinary shares, outstanding ordinary shares, and treasury shares.
6. What is meant by par value, and what is its significance to shareholders?
7. Describe the accounting for the issuance for cash of no-par value ordinary shares at a price in excess of the stated value of the ordinary shares.
8. Explain the difference between the proportional method and the incremental method of allocating the proceeds of lump-sum sales of share capital.
9. What are the different bases for share valuation when assets other than cash are received for issued shares?
10. Explain how underwriting costs and accounting and legal fees associated with the issuance of shares should be recorded.
11. For what reasons might a company purchase its own shares?
12. Discuss the propriety of showing:
 - a. Treasury shares as an asset.
 - b. "Gain" or "loss" on sale of treasury shares as additions to or deductions from income.
 - c. Dividends received on treasury shares as income.
13. What features or rights may alter the character of preference shares?
14. Kim Inc. recently noted that its 4% preference shares and 4% participating preference shares are both cumulative and have priority as to dividends up to 4% of their par value. Its participating preference shares participate equally with the ordinary shares in any dividends in excess of 4%. What is meant by the term participating? Cumulative?

- 15.** Where in the financial statements are preference shares normally reported?
- 16.** List five elements included in equity.
- 17.** BMG purchases 10,000 shares of its own previously issued €10 par ordinary shares for €290,000. Assuming the shares are held in the treasury with intent to reissue, what effect does this transaction have on (a) net income, (b) total assets, (c) retained earnings, and (d) total equity?
- 18.** Indicate how each of the following accounts should be classified in the equity section.
- a. Share Capital—Ordinary
 - b. Retained Earnings
 - c. Share Premium—Ordinary
 - d. Treasury Shares
 - e. Share Premium—Treasury
 - f. Accumulated Other Comprehensive Income
 - g. Share Capital—Preference
- 19.** What factors influence the dividend policy of a company?
- 20.** What are the principal considerations of a board of directors in making decisions involving dividend declarations? Discuss briefly.
- 21.** Dividends are sometimes said to have been paid “out of retained earnings.” What is the error, if any, in that statement?
- 22.** Distinguish among cash dividends, property dividends, liquidating dividends, and share dividends.
- 23.** Describe the accounting entry for a share dividend, if any. Describe the accounting entry for a share split, if any.
- 24.** Share splits and share dividends may be used by a corporation to change the number of its shares outstanding.
- a. From an accounting viewpoint, explain how the share split differs from an ordinary share dividend.
 - b. How should a share dividend that has been declared but not yet issued be classified in a statement of financial position? Why?
- 25.** The following comment appeared in the notes of Mona Corporation’s annual report: “Such distributions, representing proceeds from the sale of Sarazan, Inc., were paid in the form of partial liquidating dividends and were in lieu of a portion of the Company’s ordinary cash dividends.” How would a partially liquidating dividend be accounted for in the financial records?
- 26.** This comment appeared in the annual report of Christensen Inc.: “The Company could pay cash or property dividends on the Class A ordinary shares without paying cash or property dividends on the Class B ordinary shares. But if the Company pays any cash or property dividends on the Class B ordinary shares, it would be required to pay at least the same dividend on the Class A ordinary shares.” How is a property dividend accounted for in the financial records?
- 27.** For what reasons might a company restrict a portion of its retained earnings?
- 28.** How are restrictions of retained earnings reported?
- *29.** Wang Corp. had \$100,000 of 7%, \$20 par value preference shares and 12,000 shares of \$25 par value ordinary shares outstanding throughout 2022.

- a. Assuming that total dividends declared in 2022 were \$64,000 and that the preference shares are not cumulative but are fully participating, ordinary shareholders should receive 2022 dividends totaling what amount?
- b. Assuming that total dividends declared in 2022 were \$64,000 and that the preference shares are fully participating and cumulative with preference dividends in arrears for 2021, preference shareholders should receive 2022 dividends totaling what amount?
- c. Assuming that total dividends declared in 2022 were \$30,000; that the preference shares are cumulative, non-participating, and were issued on January 1, 2021; and that \$5,000 of preference dividends were declared and paid in 2021, the ordinary shareholders should receive 2022 dividends totaling what amount?

Brief Exercises

BE15.1 (LO 1) Kaymer SA issued 300 shares of €10 par value ordinary shares for €4,500. Prepare Kaymer's journal entry.

BE15.2 (LO 1) Swarten AG issued 600 shares of no-par ordinary shares for €8,200. Prepare Swarten's journal entry if (a) the shares have no stated value, and (b) the shares have a stated value of €2 per share.

BE15.3 (LO 1, 2, 4) Wilco SE has the following equity balances at December 31, 2022.

Share capital—ordinary, €5 par value	€ 510,000
Treasury shares	90,000
Retained earnings	2,340,000
Share premium—ordinary	1,320,000

Prepare Wilco's December 31, 2022, equity section in the statement of financial position.

BE15.4 (LO 1) Ravonette Corporation issued 300 shares of \$10 par value ordinary shares and 100 shares of \$50 par value preference shares for a lump sum of \$13,500. The ordinary shares have a market price of \$20 per share, and the preference shares have a market price of \$90 per share. Prepare the journal entry to record the issuance.

BE15.5 (LO 1) On February 1, 2022, Gruber plc issued 3,000 shares of its £5 par value ordinary shares for land worth £31,000. Prepare the February 1, 2022, journal entry.

BE15.6 (LO 1) Moonwalker Corporation issued 2,000 shares of its \$10 par value ordinary shares for \$60,000. Moonwalker also incurred \$1,500 of costs associated with issuing the shares. Prepare Moonwalker's journal entry to record the issuance of the company's shares.

BE15.7 (LO 2) Sprinkle SE has outstanding 10,000 shares of €10 par value ordinary shares. On July 1, 2022, Sprinkle reacquired 100 shares at €87 per share. On September 1, Sprinkle reissued 60 shares at €90 per share. On November 1, Sprinkle reissued 40 shares at €83 per share. Prepare Sprinkle's journal entries to record these transactions using the cost method.

BE15.8 (LO 2) Arantxa S.A. has outstanding 20,000 shares of R\$5 par value ordinary shares. On August 1, 2022, Arantxa reacquired 200 shares at R\$80 per share. On November 1, Arantxa reissued the 200 shares at R\$70 per share. Arantxa had no previous treasury share transactions. Prepare Arantxa's journal entries to record these transactions using the cost method.

BE15.9 (LO 1) Hinges SpA issued 500 shares of €100 par value preference shares for €61,500. Prepare Hinges's journal entry.

BE15.10 (LO 3) Woolford Inc. declared a cash dividend of \$1 per share on its 2 million outstanding shares. The dividend was declared on August 1, payable on September 9 to all shareholders of record on August 15. Prepare all journal entries necessary on those three dates.

BE15.11 (LO 3) Silva SpA owns shares of Costa S.A. classified as a trading equity investment. At December 31, 2022, the trading equity investment was carried in Silva's accounting records at its cost of R\$875,000, which equals its fair value. On September 21, 2023, when the fair value of the investment was R\$1,200,000, Silva declared a property dividend whereby the Costa securities are to be distributed on October 23, 2023, to shareholders of record on October 8, 2023. Prepare all journal entries necessary on those three dates.

BE15.12 (LO 3) Zhang Mining Company declared on April 20 a dividend of ¥500,000,000, payable on June 1. Of this amount, ¥125,000,000 is a return of capital. Prepare the April 20 and June 1 entries for Zhang.

BE15.13 (LO 3) Green Day Corporation has outstanding 400,000 shares of \$10 par value ordinary shares. The corporation declares a 5% share dividend when the fair value is \$65 per share. Prepare the journal entries for Green Day Corporation for both the date of declaration and the date of distribution.

BE15.14 (LO 3) Use the information from BE15.13 but assume Green Day Corporation declared a 100% share dividend rather than a 5% share dividend. Prepare the journal entries for both the date of declaration and the date of distribution.

***BE15.15 (LO 5)** Nottebart AG has outstanding 10,000 shares of €100 par value, 6% preference shares and 60,000 shares of €10 par value ordinary shares. The preference shares were issued in January 2022, and no dividends were declared in 2022 or 2023. In 2024, Nottebart declares a cash dividend of €300,000. How will the dividend be shared by ordinary and preference shareholders if the preference is (a) non-cumulative and (b) cumulative?

Exercises

E15.1 (LO 1) (Recording the Issuances of Ordinary Shares) During its first year of operations, Sitwell SE had the following transactions pertaining to its ordinary shares.

Jan. 10	Issued 80,000 shares for cash at €6 per share.
Mar. 1	Issued 5,000 shares to attorneys in payment of a bill for €35,000 for services rendered in helping the company to incorporate.
July 1	Issued 30,000 shares for cash at €8 per share.
Sept. 1	Issued 60,000 shares for cash at €10 per share.

Instructions

- Prepare the journal entries for these transactions, assuming that the ordinary shares have a par value of €3 per share.
- Briefly discuss how the entries in part (a) will change if the shares are no-par with a stated value of €2 per share.

E15.2 (LO 1) (Recording the Issuance of Ordinary and Preference Shares) Abernathy Corporation was organized on January 1, 2022. It is authorized to issue 10,000 shares of 8%, \$50 par value preference shares, and 500,000 shares of no-par ordinary shares with a stated value of \$2 per share. The following share transactions were completed during the first year.

Jan. 10	Issued 80,000 ordinary shares for cash at \$5 per share.
Mar. 1	Issued 5,000 preference shares for cash at \$108 per share.
Apr.	Issued 24,000 ordinary shares for land. The asking price of the land was \$90,000; the fair value

1	of the land was \$80,000.
May 1	Issued 80,000 ordinary shares for cash at \$7 per share.
Aug. 1	Issued 10,000 ordinary shares to attorneys in payment of their bill of \$50,000 for services rendered in helping the company organize.
Sept. 1	Issued 10,000 ordinary shares for cash at \$9 per share.
Nov. 1	Issued 1,000 preference shares for cash at \$112 per share.

Instructions

Prepare the journal entries to record the above transactions.

E15.3 (LO 1) (Shares Issued for Land) Twenty-five thousand shares reacquired by Pierce plc for £48 per share were exchanged for undeveloped land that has an appraised value of £1,700,000. At the time of the exchange, the ordinary shares were trading at £60 per share on an organized exchange.

Instructions

- Prepare the journal entry to record the acquisition of land, assuming that the purchase of the shares was originally recorded using the cost method.
- Briefly identify the possible alternatives (including those that are totally unacceptable) for quantifying the cost of the land and briefly support the choice you feel is best.

E15.4 (LO 1) (Lump-Sum Sale of Shares with Bonds) Fogelberg Industries is a regional company, whose securities are thinly traded. Fogelberg has issued 10,000 units. Each unit consists of a CHF500 par, 12% subordinated debenture and 10 shares of CHF5 par ordinary shares. The investment banker has retained 400 units as the underwriting fee. The other 9,600 units were sold to outside investors for cash at CHF850 per unit. Prior to this sale, the 2-week ask price of ordinary shares was CHF40 per share. Twelve percent is a reasonable market yield for the debentures, and therefore the par value of the bonds is equal to the fair value.

Instructions

- Prepare the journal entry to record Fogelberg's transaction, under the following conditions. (Round to the nearest CHF.)
 - Employing the incremental method.
 - Employing the proportional method, assuming the recent price quote on the ordinary shares reflects fair value.
- Briefly explain which method is, in your opinion, the better method.

E15.5 (LO 1) (Lump-Sum Sales of Ordinary and Preference Shares) Hartman SE issues 500 shares of €10 par value ordinary shares and 100 shares of €100 par value preference shares for a lump sum of €100,000.

Instructions

- Prepare the journal entry for the issuance when the fair value of the ordinary shares is €168 each and fair value of the preference shares is €210 each. (Round to the nearest euro.)
- Prepare the journal entry for the issuance when only the fair value of the ordinary shares (€170 per share) is known.

E15.6 (LO 1, 2) (Share Issuances and Repurchase) Loxley Corporation is authorized to issue 50,000 shares of \$10 par value ordinary shares. During 2022, Loxley took part in the following selected transactions.

1. Issued 5,000 shares at \$45 per share, less costs related to the issuance of the shares totaling \$7,000.
2. Issued 1,000 shares for land appraised at \$50,000. The shares were actively traded on a national securities exchange at approximately \$46 per share on the date of issuance.
3. Purchased 500 treasury shares at \$44 per share. The treasury shares purchased were issued in 2021 at \$40 per share.

Instructions

- a. Prepare the journal entry to record item 1.
- b. Prepare the journal entry to record item 2.
- c. Prepare the journal entry to record item 3 using the cost method.

E15.7 (LO 2) (Effect of Treasury Share Transactions on Financials) Goosen SA has outstanding 40,000 shares of €5 par ordinary shares which had been issued at €30 per share. Goosen then entered into the following transactions.

1. Purchased 5,000 treasury shares at €45 per share.
2. Resold 500 of the treasury shares at €40 per share.
3. Resold 2,000 of the treasury shares at €49 per share.

Instructions

Use the following code to indicate the effect each of the three transactions has on the financial statement categories listed in the table below, assuming Goosen SA uses the cost method: I = Increase; D = Decrease; and NE = No effect.

#	Assets	Liabilities	Equity	Share Premium	Retained Earnings	Net Income
1						
2						
3						

E15.8 (LO 1, 5) (Preference Share Entries and Dividends) Weisberg Corporation has 10,000 shares of \$100 par value, 6%, preference shares and 50,000 ordinary shares of \$10 par value outstanding at December 31, 2022.

Instructions

Answer the questions in each of the following independent situations.

- a. If the preference shares are cumulative and dividends were last paid on the preference shares on December 31, 2019, what are the dividends in arrears that should be reported on the December 31, 2022, statement of financial position? How should these dividends be reported?
- b. If the preference shares are convertible into seven shares of \$10 par value ordinary shares and 3,000 shares are converted, what entry is required for the conversion, assuming the preference shares were issued at par value?
- c. If the preference shares were issued at \$107 per share, how should the preference shares be reported in the equity section?

E15.9 (LO 1, 2) (Correcting Entries for Equity Transactions) Davison plc recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review what he had learned earlier about corporation accounting. During the first month, he made the following entries for the corporation's ordinary shares.

May	2	Cash	192,000	
		Share Capital—Ordinary		192,000
		(Issued 12,000 shares of £10 par value ordinary shares at £16 per share)		
	10	Cash	600,000	
		Share Capital—Ordinary		600,000
		(Issued 10,000 shares of £30 par value preference shares at £60 per share)		
	15	Share Capital—Ordinary	14,000	
		Cash		14,000
		(Purchased 1,000 ordinary shares for the treasury at £14 per share)		
	31	Cash	8,500	
		Share Capital—Ordinary		5,000
		Gain on Sale of Shares		3,500
		(Sold 500 treasury shares at £17 per share)		

Instructions

On the basis of the explanation for each entry, prepare the entries that should have been made for the ordinary share transactions.

E15.10 (LO 1, 2, 4) (Analysis of Equity Data and Equity Section Preparation) For a recent 2-year period, the statement of financial position of Jiang Group showed the following equity data at December 31 (amounts in millions).

	2023	2022
Share premium—ordinary	HK\$ 891	HK\$ 817
Share capital—ordinary	545	540
Retained earnings	7,167	5,226
Treasury shares	(1,428)	(918)
Total equity	HK\$7,175	HK\$5,665
Ordinary shares issued	218	216
Ordinary shares authorized	500	500
Treasury shares	34	27

Instructions

- Answer the following questions.
 - What is the par value of the ordinary shares?
 - What is the cost per treasury share at December 31, 2023, and at December 31, 2022?
- Prepare the equity section of the statement of financial position at December 31, 2023.

E15.11 (LO 3) (Effect of Equity Items on the Statement of Financial Position) The following are selected transactions that may affect equity.

1. Recorded accrued interest earned on a note receivable.
2. Declared and distributed a share split.
3. Declared a cash dividend.
4. Recorded a retained earnings restriction.
5. Recorded the expiration of insurance coverage that was previously recorded as prepaid insurance.
6. Paid the cash dividend declared in item 3 above.
7. Recorded accrued interest expense on a note payable.
8. Declared a share dividend.
9. Distributed the share dividend declared in item 8.

Instructions

In the following table, indicate the effect each of the nine transactions has on the financial statement elements listed. Use the following code:

I = Increase D = Decrease NE = No effect

Item	Assets	Liabilities	Equity	Share Premium	Retained Earnings	Net Income

E15.12 (LO 3) (Cash Dividend and Liquidating Dividend) Addison Corporation has 10 million shares of ordinary shares issued and outstanding. On June 1, the board of directors voted a 60 cents per share cash dividend to shareholders of record as of June 14, payable June 30.

Instructions

- a. Prepare the journal entry for each of the dates above, assuming the dividend represents a distribution of earnings.
- b. How would the entry differ if the dividend were a liquidating dividend?

E15.13 (LO 3) (Share Split and Share Dividend) The ordinary shares of Otuk Holding are currently selling at ₪110 per share. The directors wish to reduce the share price and increase share volume prior to a new issue. The per share par value is ₪10; book value is ₪70 per share. Five million shares are issued and outstanding.

Instructions

- a. Prepare the necessary journal entries assuming that the board votes a 2-for-1 share split.
- b. Prepare the necessary journal entries assuming that the board votes a 100% share dividend.

- c. Briefly discuss the accounting and securities market differences between these two methods of increasing the number of shares outstanding.

E15.14 (LO 3) (Entries for Share Dividends and Share Splits) The equity accounts of Lawrence Group have the following balances on December 31, 2022.

Share Capital—Ordinary, €10 par, 200,000 shares issued and outstanding	€2,000,000
Share Premium—Ordinary	1,200,000
Retained Earnings	5,600,000

Shares of Lawrence Group are currently selling at €37.

Instructions

Prepare the appropriate journal entries for each of the following cases.

- A share dividend of 5% is declared and issued.
- A share dividend of 100% is declared and issued.
- A 2-for-1 share split is declared and issued.

E15.15 (LO 3) (Dividend Entries) The following data were taken from the statement of financial position accounts of Murless SA on December 31, 2022.

Current Assets	R\$540,000
Investments	624,000
Share Capital—Ordinary (par value R\$10)	600,000
Share Premium—Ordinary	150,000
Retained Earnings	840,000

Instructions

Prepare the required journal entries for the following unrelated items.

- A 5% share dividend is declared and distributed at a time when the market price of the shares is R\$39 per share.
- The par value of the ordinary shares is reduced to R\$2 with a 5-for-1 share split.
- A dividend is declared January 5, 2023, and paid January 25, 2023, in bonds held as held for collection investment. The bonds have a cost of R\$90,000 and a fair value of R\$125,000.

E15.16 (LO 1, 2, 3) (Computation of Retained Earnings) The following information has been taken from the ledger accounts of Choi Corporation (all amounts in thousands).

Total Income Since Incorporation	₩287,000
Total Cash Dividends Paid	60,000
Total Value of Share Dividends Distributed	40,000
Gains on Treasury Share Transactions	18,000
Accumulated Other Comprehensive Income	32,000

Instructions

Determine the current balance of retained earnings.

E15.17 (LO 1, 4) (Equity Section) Teller SE's post-closing trial balance at December 31, 2022, was as follows.

Teller SE Post-Closing Trial Balance December 31, 2022		
	Dr.	Cr.
Accounts payable		€ 310,000
Accounts receivable	€ 480,000	
Accumulated depreciation—buildings		185,000
Allowance for doubtful accounts		30,000
Bonds payable		700,000
Buildings	1,450,000	
Cash	190,000	
Dividends payable (preference shares—cash)		4,000
Inventory	560,000	
Land	400,000	
Prepaid expenses	40,000	
Retained earnings		201,000
Share capital—ordinary (€1 par value)		200,000
Share capital—preference (€50 par value)		500,000
Share premium—ordinary		1,000,000
Share premium—treasury		160,000
Treasury shares (ordinary at cost)	170,000	
Total	<u>€3,290,000</u>	<u>€3,290,000</u>

At December 31, 2022, Teller had the following number of ordinary and preference shares.

	Ordinary	Preference
Authorized	600,000	60,000
Issued	200,000	10,000
Outstanding	190,000	10,000

The dividends on preference shares are €4 cumulative. In addition, the preference shares have a preference in liquidation of €50 per share.

Instructions

Prepare the equity section of Teller's statement of financial position at December 31, 2022.

E15.18 (LO 2, 3, 4) Groupwork (Dividends and Equity Section) Elizabeth Company reported the following amounts in the equity section of its December 31, 2022, statement of financial position.

Share capital—preference, 8%, \$100 par (10,000 shares authorized, 2,000 shares issued)	\$200,000
Share capital—ordinary, \$5 par (100,000 shares authorized, 20,000 shares issued)	100,000
Share premium—preference	125,000
Retained earnings	<u>450,000</u>
Total	<u>\$875,000</u>

During 2023, Elizabeth Company took part in the following transactions concerning equity.

1. Paid the annual 2022 \$8 per share dividend on preference shares and a \$2 per share dividend on ordinary shares. These dividends had been declared on December 31, 2022.
2. Purchased 2,700 shares of its own outstanding ordinary shares for \$40 per share. Elizabeth uses the cost method.
3. Reissued 700 treasury shares for land with a fair value of \$30,000.
4. Issued 500 preference shares at \$105 per share.
5. Declared a 10% share dividend on the outstanding ordinary shares when the shares are selling for \$45 per share.
6. Issued the share dividend.
7. Declared the annual 2023 \$8 per share dividend on preference shares and the \$2 per share dividend on ordinary shares. These dividends are payable in 2024.

Instructions

- a. Prepare journal entries to record the transactions described above.
- b. Prepare the December 31, 2023, equity section of the statement of financial position. Assume 2023 net income was \$330,000.

E15.19 (LO 4) (Comparison of Alternative Forms of Financing) Shown below is the equity and liabilities section of the statement of financial position for Ingalls plc and Wilder Ltd. Each has assets totaling £4,200,000.

Ingalls plc		Wilder Ltd.	
Share capital—ordinary (£20 par)	£2,000,000	Share capital—ordinary (£20 par)	£2,900,000
Retained earnings (Cash dividends, £220,000)	700,000	Retained earnings (Cash dividends, £328,000)	700,000
Non-current liabilities, 10%	1,200,000	Current liabilities	600,000
Current liabilities	300,000		
	<u>£4,200,000</u>		<u>£4,200,000</u>

For the year, each company has earned the same income before interest and taxes.

	Ingalls plc	Wilder Ltd.
Income from operations	£1,200,000	£1,200,000
Interest expense	120,000	—0—
Income before income tax	1,080,000	1,200,000
Income tax (40%)	<u>432,000</u>	<u>480,000</u>
Net income	<u>£ 648,000</u>	<u>£ 720,000</u>

At year-end, the market price of an Ingalls' share was £101, and Wilder's was £63.50. Assume statement of financial position amounts are representative for the entire year.

Instructions

- a. Which company is more profitable in terms of return on total assets?
- b. Which company is more profitable in terms of return on ordinary share equity?
- c. Which company has the greater net income per share? Neither company issued or reacquired shares during the year.

- d. From the point of view of net income, is it advantageous to the shareholders of Ingalls plc to have the non-current liabilities outstanding? Why?
- e. What is the book value per share for each company?

E15.20 (LO 4) (Trading on the Equity Analysis) Presented below is information from the annual report of DeVries Plastics.

Operating income	€ 532,150
Bond interest expense	135,000
Income before income tax	397,150
Income tax	183,432
Net income	€ 213,718
Bonds payable	€1,500,000
Share capital—ordinary	875,000
Retained earnings	575,000

Instructions

- a. Compute the return on ordinary share equity and the rate of interest paid on bonds. (Assume balances for debt and equity accounts approximate averages for the year.)
- b. Is DeVries Plastics trading on the equity successfully? Explain.

***E15.21 (LO 5) (Preference Dividends)** The outstanding share capital of Pennington Corporation consists of 2,000 shares of \$100 par value, 6% preference, and 5,000 shares of \$50 par value ordinary.

Instructions

Assuming that the company has retained earnings of \$70,000, all of which is to be paid out in dividends, and that preference dividends were not paid during the 2 years preceding the current year, determine how much each class of shares should receive under each of the following conditions.

- a. The preference shares are non-cumulative and non-participating.
- b. The preference shares are cumulative and non-participating.
- c. The preference shares are cumulative and participating. (Round dividend rate percentages to four decimal places.)

***E15.22 (LO 5) (Preference Dividends)** Martinez SA's ledger shows the following balances on December 31, 2022.

Share Capital—Preference, 5%—€10 par value, outstanding 20,000 shares	€ 200,000
Share Capital—Ordinary—€100 par value, outstanding 30,000 shares	3,000,000
Retained Earnings	630,000

Instructions

Assuming that the directors decide to declare total dividends in the amount of €266,000, determine how much each class of shares should receive under each of the conditions stated below. One year's dividends are in arrears on the preference shares.

- a. The preference shares are cumulative and fully participating.
- b. The preference shares are non-cumulative and non-participating.
- c. The preference shares are non-cumulative and are participating in distributions in excess of a 7% dividend rate on the ordinary shares.

***E15.23 (LO 5) (Preference Share Dividends)** Hagar Ltd. has outstanding 2,500 shares of £100 par, 6% preference shares and 15,000 shares of £10 par value ordinary. The schedule below shows the amount of dividends paid out over the last 4 years.

Instructions

Allocate the dividends to each type of shares under assumptions (a) and (b). Express your answers in per share amounts using the format shown below.

		Assumptions			
		(a) Preference, non-cumulative, and non-participating		(b) Preference, cumulative, and fully participating	
Year	Paid-out	Preference	Ordinary	Preference	Ordinary
2021	£12,000				
2022	£26,000				
2023	£52,000				
2024	£76,000				

***E15.24 (LO 5) (Computation of Book Value per Share)** Johnstone Inc. began operations in January 2021 and reported the following results for each of its 3 years of operations.

2021	\$260,000 net loss	2022	\$40,000 net loss	2023	\$700,000 net income
------	--------------------	------	-------------------	------	----------------------

At December 31, 2023, Johnstone Inc. share capital accounts were as follows.

Share Capital—Preference, 6% cumulative, par value \$100; authorized, issued, and outstanding 5,000 shares	\$500,000
Share Capital—Ordinary, par value \$1.00; authorized 1,000,000 shares; issued and outstanding 750,000 shares	\$750,000

Johnstone Inc. has never paid a cash or share dividend. There has been no change in the share capital accounts since Johnstone began operations. The country law permits dividends only from retained earnings.

Instructions

- Compute the book value of the ordinary shares at December 31, 2023.
- Compute the book value of the ordinary shares at December 31, 2023, assuming that the preference shares have a liquidating value of \$106 per share.

Problems

P15.1 (LO 1, 2, 3, 4) Groupwork (Equity Transactions and Statement Preparation) On January 5, 2022, Phelps Corporation received a charter granting the right to issue 5,000 shares of \$100 par value, 8% cumulative and non-participating preference shares, and 50,000 shares of \$10 par value ordinary shares. It then completed these transactions.

Jan. 11	Issued 20,000 ordinary shares at \$16 per share.
Feb. 1	Issued to Sanchez Corp. 4,000 preference shares for the following assets: machinery with a fair value of \$50,000; a factory building with a fair value of \$160,000; and land with an appraised value of \$270,000.
July	Purchased 1,800 of its own ordinary shares at \$17 per share. (Use cost method.)

29	
Aug. 10	Sold the 1,800 treasury shares at \$14 per share.
Dec. 31	Declared a \$0.25 per share cash dividend on the ordinary shares and declared the preference dividend.
Dec. 31	Closed the Income Summary account. There was \$175,700 net income.

Instructions

- Record the journal entries for the transactions listed above.
- Prepare the equity section of Phelps Corporation's statement of financial position as of December 31, 2022.

P15.2 (LO 2, 4) (Treasury Share Transactions and Presentation) Clemson SE had the following equity as of January 1, 2022.

Share capital—ordinary, €5 par value, 20,000 shares issued	€100,000
Share premium—ordinary	300,000
Retained earnings	320,000
Total equity	<u>€720,000</u>

During 2022, the following transactions occurred.

Feb. 1	Clemson repurchased 2,000 treasury shares at a price of €19 per share.
Mar. 1	800 shares of treasury shares repurchased above were reissued at €17 per share.
Mar. 18	500 shares of treasury shares repurchased above were reissued at €14 per share.
Apr. 22	600 shares of treasury shares repurchased above were reissued at €20 per share.

Instructions

- Prepare the journal entries to record the treasury share transactions in 2022, assuming Clemson uses the cost method.
- Prepare the equity section of the statement of financial position as of April 30, 2022. Net income for the first 4 months of 2022 was €130,000.

P15.3 (LO 1, 2, 3, 4) (Equity Transactions and Statement Preparation) Hatch plc has two classes of share capital outstanding: 8%, £20 par preference and £5 par ordinary. At December 31, 2021, the following accounts were included in equity.

Share Capital—Preference, 150,000 shares	£ 3,000,000
Share Capital—Ordinary, 2,000,000 shares	10,000,000
Share Premium—Preference	200,000
Share Premium—Ordinary	27,000,000
Retained Earnings	4,500,000

The following transactions affected equity during 2022.

Jan. 1	30,000 preference shares issued at £22 per share.
Feb. 1	50,000 ordinary shares issued at £20 per share.
June 1	2-for-1 share split on ordinary shares (par value reduced to £2.50).
July 1	30,000 ordinary treasury shares purchased at £10 per share. Hatch uses the cost method.

Sept. 15	10,000 treasury shares reissued at £11 per share.
Dec. 31	The preference dividend is declared, and an ordinary dividend of 50 pence per share is declared.
Dec. 31	Net income is £2,100,000.

Instructions

Prepare the equity section of the statement of financial position for Hatch plc at December 31, 2022. Show all supporting computations.

P15.4 (LO 1) (Share Transactions—Lump Sum) Seles SA's charter authorized issuance of 100,000 ordinary shares of €10 par value and 50,000 shares of €50 preference shares. The following transactions involving the issuance of shares were completed. Each transaction is independent of the others.

1. Issued a €10,000, 9% bond payable at par and gave as a bonus one preference share, which at that time was selling for €106 a share.
2. Issued 500 ordinary shares for machinery. The machinery had been appraised at €7,100; the seller's book value was €6,200. The most recent market price of the ordinary shares is €16 a share.
3. Issued 375 ordinary shares and 100 preference shares for a lump sum amounting to €10,800. The ordinary shares had been selling at €14 and the preference shares at €65.
4. Issued 200 shares of ordinary and 50 shares of preference for furniture and fixtures. The ordinary shares had a fair value of €16 per share; the furniture and fixtures have a fair value of €6,500.

Instructions

Record the transactions listed above in journal entry form.

P15.5 (LO 2) (Treasury Shares) Before Smith Ltd. engages in the treasury share transactions listed below, its general ledger reflects, among others, the following account balances (par value is £30 per share).

Share Premium—Ordinary	Share Capital—Ordinary	Retained Earnings
£99,000	£270,000	£80,000

Instructions

Record the treasury share transactions (given below) under the cost method of handling treasury shares: use the FIFO method for purchase-sale purposes.

- a. Bought 380 treasury shares at £40 per share.
- b. Bought 300 treasury shares at £45 per share.
- c. Sold 350 treasury shares at £42 per share.
- d. Sold 110 treasury shares at £38 per share.

P15.6 (LO 2, 3, 4) Groupwork (Treasury Shares—Equity Section Preparation) Washington Company has the following equity accounts at December 31, 2022.

Share Capital—Ordinary—\$100 par value, authorized 8,000 shares	\$480,000
Retained Earnings	294,000

Instructions

- a. Prepare entries in journal form to record the following transactions, which took place during 2023.

1. 280 ordinary shares were purchased at \$97 per share. (These are to be accounted for using the cost method.)
 2. A \$20 per share cash dividend was declared.
 3. The dividend declared in No. 2 above was paid.
 4. The treasury shares purchased in No. 1 above were resold at \$102 per share.
 5. 500 shares were purchased at \$105 per share.
 6. 350 of the shares purchased in No. 5 above were resold at \$96 per share.
- b. Prepare the equity section of Washington Company's statement of financial position after giving effect to these transactions, assuming that the net income for 2023 was \$94,000. Country law requires restriction of retained earnings for the amount of treasury shares.

P15.7 (LO 2, 3) (Cash Dividend Entries) The books of Conchita SA carried the following account balances as of December 31, 2022.

Cash	R\$ 195,000
Share Capital—Preference (6% cumulative, non-participating, R\$50 par)	300,000
Share Capital—Ordinary (no-par value, 300,000 shares issued)	1,500,000
Share Premium—Preference	150,000
Treasury Shares (ordinary 2,800 shares at cost)	33,600
Retained Earnings	105,000

The company decided not to pay any dividends in 2022.

The board of directors, at their annual meeting on December 21, 2023, declared the following: "The current year dividends shall be 6% on the preference and R\$0.30 per share on the ordinary. The dividends in arrears shall be paid by issuing 1,500 treasury shares." At the date of declaration, the preference is selling at R\$80 per share, and the ordinary at R\$12 per share. Net income for 2023 is estimated at R\$77,000.

Instructions

- a. Prepare the journal entries required for the dividend declaration and payment, assuming that they occur simultaneously.
- b. Could Conchita SA give the preference shareholders 2 years' dividends and ordinary shareholders a 30 cents per share dividend, all in cash?

P15.8 (LO 3) Groupwork (Dividends and Splits) Myers SpA provides you with the following condensed statement of financial position information.

Assets		Equity and Liabilities		
Equipment (net)	€250,000	Equity		
Intangibles	60,000	Share capital—ordinary (€5 par)	€ 20,000	
Investments in ABC shares (Trading) (10,000 shares)	70,000	Share premium—ordinary	110,000	
		Retained earnings	180,000	€310,000
Current assets	40,000	Non-current and current liabilities		110,000
Total assets	<u>€420,000</u>	Total equity and liabilities		<u>€420,000</u>

Instructions

For each transaction below, indicate the euro impact (if any) on the following five items: (1) total assets, (2) share capital—ordinary, (3) share premium—ordinary, (4) retained earnings, and (5) equity. (Each situation is independent.)

- a. Myers declares and pays a €1 per share cash dividend.
- b. Myers declares and issues a 10% share dividend when the market price is €14 per share.
- c. Myers declares and issues a 100% share dividend when the market price is €15 per share.
- d. Myers declares and distributes a property dividend. Myers gives one ABC share for every two shares held of Myers SpA. ABC is selling for €10 per share on the date the property dividend is declared.
- e. Myers declares a 2-for-1 share split and issues new shares.

P15.9 (LO 1, 2, 3, 4) (Equity Section of Statement of Financial Position) The following is a summary of all relevant transactions of Vicario Corporation since it was organized in 2022.

In 2022, 15,000 shares were authorized and 7,000 ordinary shares (\$50 par value) were issued at a price of \$57. In 2023, 1,000 shares were issued as a share dividend when a share was selling for \$60. Three hundred ordinary shares were bought in 2024 at a cost of \$64 per share. These 300 shares are still in the company treasury.

In 2023, 10,000 preference shares were authorized and the company issued 5,000 of them (\$100 par value) at \$113. Some of the preference shares were reacquired by the company and later reissued for \$4,700 more than it cost the company.

The corporation has earned a total of \$610,000 in net income and paid out a total of \$312,600 in cash dividends since incorporation.

Instructions

Prepare the equity section of the statement of financial position in proper form for Vicario Corporation as of December 31, 2024. Account for treasury shares using the cost method.

P15.10 (LO 3) Writing (Share Dividends and Share Split) Ortogo S.A.'s €10 par ordinary shares are selling for €110 per share. Four million shares are currently issued and outstanding. The board of directors wants to stimulate interest in Ortogo S.A. ordinary shares before a forthcoming share issue but does not wish to distribute cash at this time. The board also believes that too many adjustments to the equity section, especially retained earnings, might discourage potential investors.

The board has considered three options for stimulating interest in the shares:

1. A 20% share dividend.
2. A 100% share dividend.
3. A 2-for-1 share split.

Instructions

Acting as financial advisor to the board, you have been asked to report briefly on each option and, considering the board's wishes, make a recommendation. Discuss the effects of each of the foregoing options.

P15.11 (LO 3, 4) (Share and Cash Dividends) Earnhart Corporation has outstanding 3,000,000 ordinary shares with a par value of \$10 each. The balance in its retained earnings account at January 1, 2022, was \$24,000,000, and it then had Share Premium of \$5,000,000. During 2022, the company's net income was \$4,700,000. A cash dividend of \$0.60 per share was declared on May 5, 2022, and was paid June 30, 2022, and a 6% share dividend was declared on November 30, 2022, and distributed to

shareholders of record at the close of business on December 31, 2022. You have been asked to advise on the proper accounting treatment of the share dividend.

The existing shares of the company are quoted on a national securities exchange. The market price of the shares has been as follows.

October 31, 2022	\$31
November 30, 2022	\$34
December 31, 2022	\$38

Instructions

- Prepare the journal entry to record the declaration and payment of the cash dividend.
- Prepare the journal entry to record the declaration and distribution of the share dividend.
- Prepare the equity section (including schedules of retained earnings and share premium) of the statement of financial position of Earnhart Corporation for the year 2022 on the basis of the foregoing information. Draft a note to the financial statements setting forth the basis of the accounting for the share dividend, and add separately appropriate comments or explanations regarding the basis chosen.

P15.12 (LO1, 2, 3, 4) (Analysis and Classification of Equity Transactions) Penzi plc was formed on July 1, 2020. It was authorized to issue 300,000 shares of £10 par value ordinary shares and 100,000 shares of 8% £25 par value, cumulative and non-participating preference shares. Penzi plc has a July 1–June 30 fiscal year.

The following information relates to the equity accounts of Penzi plc.

Ordinary Shares

Prior to the 2022–2023 fiscal year, Penzi plc had 110,000 ordinary shares outstanding issued as follows.

- 85,000 shares were issued for cash on July 1, 2020, at £31 per share.
- On July 24, 2020, 5,000 shares were exchanged for a plot of land which cost the seller £70,000 in 2014 and had an estimated fair value of £220,000 on July 24, 2020.
- 20,000 shares were issued on March 1, 2021, for £42 per share.

During the 2022–2023 fiscal year, the following transactions regarding ordinary shares took place.

November 30, 2022	Penzi purchased 2,000 of its own shares on the open market at £39 per share. Penzi uses the cost method for treasury shares.
December 15, 2022	Penzi declared a 5% share dividend for ordinary shareholders of record on January 15, 2023, to be issued on January 31, 2023. Penzi was having a liquidity problem and could not afford a cash dividend at the time. Penzi's ordinary shares were selling at £52 per share on December 15, 2022.
June 20, 2023	Penzi sold 500 of its own ordinary shares that it had purchased for £21,000 on November 30, 2022.

Preference Shares

Penzi issued 40,000 preference shares at £44 per share on July 1, 2021.

Cash Dividends

Penzi has followed a schedule of declaring cash dividends in December and June, with payment being made to shareholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2023, are shown below.

Declaration Date	Ordinary Shares	Preference Shares
12/15/21	£0.30 per share	£1.00 per share
6/15/22	£0.30 per share	£1.00 per share
12/15/22	—	£1.00 per share

No cash dividends were declared during June 2023 due to the company's liquidity problems.

Retained Earnings

As of June 30, 2022, Penzi's retained earnings account had a balance of £690,000. For the fiscal year ending June 30, 2023, Penzi reported net income of £40,000.

Instructions

Prepare the equity section of the statement of financial position, including appropriate notes, for Penzi plc as of June 30, 2023, as it should appear in its annual report to the shareholders.

Concepts for Analysis

CA15.1 (LO 1) (Preemptive Rights and Dilution of Ownership) Wallace Computer is a small, closely held company. Derek Wallace, the president, holds 80% of the shares. Of the remainder, 10% are held by members of his family and 10% by Kathy Baker, a former officer who is now retired. The statement of financial position of the company at June 30, 2022, was substantially as shown here.

Assets		Equity and Liabilities	
Cash	£ 22,000	Share capital—ordinary	£250,000
Other	450,000	Retained earnings	172,000
	<u>£472,000</u>	Current liabilities	50,000
			<u>£472,000</u>

Additional authorized ordinary shares of £300,000 par value have never been issued. To strengthen the cash position of the company, Wallace issued ordinary shares with a par value of £100,000 to himself at par for cash. At the next shareholders' meeting, Baker objected and claimed that her interests had been injured.

Instructions

- Which shareholder's right was ignored in the issue of shares to Derek Wallace?
- How might the damage to Baker's interests be repaired most simply?
- If Derek Wallace offered Baker a personal cash settlement and they agreed to employ you as an impartial arbitrator to determine the amount, what settlement would you propose? Present your calculations with sufficient explanation to satisfy both parties.

CA15.2 (LO 1) (Issuance of Shares for Land) Martin Corporation is planning to issue 3,000 shares of its own \$10 par value ordinary shares for two acres of land to be used as a building site.

Instructions

- What general rule should be applied to determine the amount at which the land should be recorded?
- Under what circumstances should this transaction be recorded at the fair value of the land?
- Under what circumstances should this transaction be recorded at the fair value of the shares issued?
- Assume Martin intentionally records this transaction at an amount greater than the fair value of the land and the shares. Discuss this situation.

CA15.3 (LO 1, 2, 3) Writing (Conceptual Issues—Equity) The IASB has set forth the Conceptual Framework that it will use in developing standards. As part of this Conceptual Framework, the IASB defines various elements of financial statements.

Instructions

Answer the following questions based on the Conceptual Framework.

- Define and discuss the term “equity.”
- What transactions or events change equity?
- What financial statement element other than equity is typically affected by owner investments?
- What financial statement element other than equity is typically affected by distributions to owners?
- What are examples of changes within equity that do not change the total amount of equity?

CA15.4 (LO 3) (Share Dividends and Splits) The directors of Merchant ASA are considering the issuance of a share dividend. They have asked you to discuss the proposed action by answering the following questions.

Instructions

- What is a share dividend? How is a share dividend distinguished from a share split (1) from a legal standpoint, and (2) from an accounting standpoint?
- For what reasons does a company usually declare a share dividend? A share split?
- Discuss the amount, if any, of retained earnings to be capitalized in connection with a share dividend.

CA15.5 (LO 3) (Share Dividends) Yamada Inc., a client, is considering the authorization of a 10% ordinary share dividend. The financial vice president of Yamada wishes to discuss the accounting implications of such an authorization with you before the next meeting of the board of directors.

Instructions

- The first topic the vice president wishes to discuss is the nature of the share dividend to the recipient. Discuss the case against considering the share dividend as income to the recipient.
- The other topic for discussion is the propriety of issuing the share dividend to all “shareholders of record” or to “shareholders of record exclusive of shares held in the name of the corporation as treasury shares.” Discuss the case against issuing share dividends on treasury shares.

CA15.6 (LO 2, 3) (Share Dividend, Cash Dividend, and Treasury Shares) Mask SE has 30,000 shares of €10 par value ordinary shares authorized and 20,000 shares issued and outstanding. On August 15, 2022, Mask purchased 1,000 shares of treasury shares for €18 per share. Mask uses the cost method to account for treasury shares. On September 14, 2022, Mask sold 500 shares of the treasury shares for €20 per share.

In October 2022, Mask declared and distributed 1,950 shares as a share dividend from unissued shares when the market price of the ordinary shares was €21 per share.

On December 20, 2022, Mask declared a €1 per share cash dividend, payable on January 10, 2023, to shareholders of record on December 31, 2022.

Instructions

- How should Mask account for the purchase and sale of the treasury shares, and how should the treasury shares be presented in the statement of financial position at December 31, 2022?

- b. How should Mask account for the share dividend, and how would it affect equity at December 31, 2022? Why?
- c. How should Mask account for the cash dividend, and how would it affect the statement of financial position at December 31, 2022? Why?

CA15.7 (LO 2) Ethics (Treasury Shares) Lois Kenseth, president of Sycamore Corporation, is concerned about several large shareholders who have been very vocal lately in their criticisms of her leadership. She thinks they might mount a campaign to have her removed as the corporation's CEO. She decides that buying them out by purchasing their shares could eliminate them as opponents, and she is confident they would accept a "good" offer. Kenseth knows the corporation's cash position is decent, so it has the cash to complete the transaction. She also knows the purchase of these shares will increase earnings per share, which should make other investors quite happy. (Earnings per share is calculated by dividing net income available for the ordinary shareholders by the weighted-average number of shares outstanding. Therefore, if the number of shares outstanding is decreased by purchasing treasury shares, earnings per share increases.)

Instructions

Answer the following questions.

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues involved?
- c. Should Kenseth authorize the transaction?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What is the par or stated value of M&S's preference shares?
- b. What is the par or stated value of M&S's ordinary shares?
- c. What percentage of M&S's authorized ordinary shares was issued at year-end 2019?
- d. How many ordinary shares were outstanding at year-end 2018 and 2019?
- e. What was the pound amount effect of the cash dividends on M&S's equity?
- f. What is M&S's return on ordinary share equity for 2019 and 2018?
- g. What is M&S's payout ratio for 2019 and 2018?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial statements to answer the following questions.

- What is the par or stated value of adidas's and Puma's ordinary shares?
- How many shares were issued by adidas and Puma at December 31, 2018?
- How many shares are held as treasury shares by adidas by Puma at December 31, 2018?
- How many adidas ordinary shares and how many Puma ordinary shares are outstanding at December 31, 2018?
- What amounts of cash dividends per share were declared by adidas and Puma in 2018? What were the monetary amount effects of the cash dividends on each company's equity?
- What are adidas's and Puma's return on equity for 2018 and 2017? Which company gets the higher return on the equity of its shareholders?
- What are adidas's and Puma's payout ratios for 2018?

Financial Statement Analysis Cases

Case 1: BHP (formerly BHP Billiton)

BHP (formerly BHP Billiton) (AUS) is the world's largest diversified natural resources company. The company extracts and processes minerals, oil, and gas from its production operations located primarily in Australia, the Americas, and southern Africa. BHP Billiton sells its products globally, with sales and marketing taking place through its principal hubs of The Hague and Singapore. Presented below are some basic facts for BHP.

BHP (in thousands)		
	Current Year	Prior Year
Sales	\$ 65,986	\$ 72,226
Net earnings	11,075	15,532
Total assets	138,109	129,273
Total liabilities	66,074	62,188
Share capital	2,255	2,255
Reserves	1,970	1,912
Retained earnings	66,979	62,236
Treasury shares	(540)	(533)
Number of shares outstanding (millions)	5,322	5,323

Instructions

- What are some of the reasons that management purchases its own shares?
- Explain how earnings per share might be affected by treasury share transactions.
- Calculate the ratio of debt to assets for the current and prior years, and discuss the implications of the change.

Case 2: Jinpain International Ltd.

The following note related to equity was reported in **Jinpain International's** (CHN) annual report.

On February 1, the Board of Directors declared a 2-for-1 share split, distributed on February 25 to shareholders of record on February 10. Accordingly, all numbers of common (ordinary) shares, except unissued shares and treasury shares, and all per share data have been restated to reflect this share split.

Instructions

- What is the significance of the date of record and the date of distribution?
- Why might Jinpain have declared a 2-for-1 for share split?
- What impact does Jinpain's share split have on (1) total equity, (2) total par value, (3) outstanding shares, and (4) book value per share?

Accounting, Analysis, and Principles

On January 1, 2022, Nadal SE had the following equity accounts.

Share Capital—Ordinary (€10 par value, 60,000 shares issued and outstanding)	€600,000
Share Premium—Ordinary	500,000
Retained Earnings	620,000

During 2022, the following transactions occurred.

Jan. 15	Declared and paid a €1.05 cash dividend per share to shareholders.
Apr. 15	Declared and issued a 10% share dividend. The market price of the shares was €14 per share.
May 15	Reacquired 2,000 ordinary shares at a market price of €15 per share.
Nov. 15	Reissued 1,000 shares held in treasury at a price of €18 per share.
Dec. 31	Determined that net income for the year was €370,000.

Accounting

Journalize the above transactions. (Include entries to close net income to Retained Earnings.) Determine the ending balances to be reported for Share Capital—Ordinary, Retained Earnings, and Equity.

Analysis

Calculate the payout ratio and the return on equity ratio.

Principles

The Federer Group is examining Nadal's financial statements and wonders whether the "gains" or "losses" on Nadal's treasury share transactions should be included in income for the year. Briefly explain whether, and the conceptual reasons why, gains or losses on treasury share transactions should be recorded in income.

Research Case

Recall from [Chapter 13](#) that Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preference share issue to help finance this expansion in operations. The company is leaning toward preference shares because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the authoritative literature that addresses disclosure of information about capital structure.
- b. What information about share capital must companies disclose? Discuss how Hincapie should report the proposed preference share issue.

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the accounting procedures for equity under IFRS and U.S. GAAP.

The accounting for transactions related to equity, such as issuance of shares, purchase of treasury shares, and declaration and payment of dividends, is similar under both IFRS and U.S. GAAP. Major differences relate to terminology used and presentation of equity information.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to equity.

Similarities

- The accounting for the issuance of shares and purchase of treasury shares is similar under both U.S. GAAP and IFRS.
- The accounting for declaration and payment of dividends and the accounting for share splits is similar under both U.S. GAAP and IFRS.

Differences

- U.S. GAAP requires that small share dividends (referred to as stock dividends) be recorded by transferring an amount equal to the fair value of the shares issued from retained earnings to share capital accounts. IFRS is silent on the accounting for share dividends.

- Major differences relate to terminology used, introduction of concepts such as revaluation surplus, and presentation of equity information.
- In the United States and the United Kingdom, many companies rely on substantial investments from private investors. Other countries have different investor groups. For example, in Germany, financial institutions such as banks are not only the major creditors but often are also the largest shareholders as well.
- The accounting for treasury share retirements differs between U.S. GAAP and IFRS. Under U.S. GAAP, a company has three options: (1) charge the excess of the cost of treasury shares over par value to retained earnings, (2) allocate the difference between paid-in capital and retained earnings, or (3) charge the entire amount to paid-in capital. Under IFRS, the excess may have to be charged to paid-in capital, depending on the original transaction related to the issuance of the shares.
- The statement of changes in equity is usually referred to as the statement of stockholders' equity (or shareholders' equity) under U.S. GAAP.
- Both U.S. GAAP and IFRS use the term retained earnings. However, U.S. GAAP uses the account Accumulated Other Comprehensive Income (Loss). Use of this account is gaining prominence within the IFRS literature, which traditionally has relied on the term "reserve" as a dumping ground for other types of equity transactions, such as other comprehensive income items, as well as various types of unusual transactions related to convertible debt and share option contracts.
- The term surplus is generally not used in U.S. GAAP, as the standards do not allow revaluation accounting. Under IFRS, it is common to report "revaluation surplus" related to increases or decreases in items such as property, plant, and equipment; mineral resources; and some intangible assets.

About the Numbers

As indicated, numerous differences in terminology exist in comparing equity under U.S. GAAP and IFRS. The following excerpt from a U.S. statement of financial position (balance sheet) illustrates these distinctions (you might compare the presentation here to that in [Illustration 15.16](#) under IFRS).

Frost Company Stockholders' Equity December 31, 2022		
Capital stock		
Preferred stock, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding		\$ 3,000,000
Common stock, no par, stated value \$10 per share, 500,000 shares authorized, 400,000 shares issued		4,000,000
Common stock dividend distributable, 20,000 shares		200,000
Total capital stock		7,200,000
Additional paid-in capital		
Excess over par—preferred	\$150,000	
Excess over stated value—common	840,000	990,000
Total paid-in capital		8,190,000
Retained earnings		4,360,000
Total paid-in capital and retained earnings		12,550,000
Less: cost of treasury stock (2,000 shares, common)		190,000
Accumulated other comprehensive loss		360,000

Frost Company Stockholders' Equity December 31, 2022		
Total stockholders' equity		<u>\$12,000,000</u>

On the Horizon

As indicated earlier in the text, the IASB and the FASB have completed some work on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined, and whether they should be included in the financial statements. For example, it is likely that the statement of changes in equity and its presentation will be examined closely. In addition, the options of how to present other comprehensive income under U.S. GAAP will change in any converged standard.

GAAP Self-Test Questions

- Which of the following does **not** represent a pair of U.S. GAAP/IFRS-comparable terms?
 - Treasury stock/Repurchase reserve.
 - Additional paid-in capital/Share premium.
 - Common stock/Share capital—ordinary.
 - Preferred stock/Preference share.
- Under U.S. GAAP, the amount of capital received in excess of par value would be credited to:
 - Retained Earnings.
 - Contributed Capital.
 - Share Premium.
 - Par value is not used under U.S. GAAP.
- The term “reserves” is used under U.S. GAAP with reference to all of the following **except**.
 - gains and losses on revaluation of property, plant, and equipment.
 - capital received in excess of the par value of issued shares.
 - retained earnings.
 - U.S. GAAP does not use the term reserves.
- Which of the following is **false**?
 - Under U.S. GAAP, companies cannot record gains on transactions involving their own shares.
 - Under U.S. GAAP, companies do not make an entry for a share split.
 - Under U.S. GAAP, the statement of stockholders' equity is a required statement.
 - Under U.S. GAAP, a company records a revaluation surplus when it experiences an increase in the price of its common stock.
- Under U.S. GAAP, a purchase by a company of its own shares results in.
 - an increase in treasury shares.
 - a decrease in assets.

- c. a decrease in equity.
- d. All of the answer choices are correct.

GAAP Concepts and Application

GAAP15.1 Mary Tokar is comparing a U.S. GAAP-based company to a company that uses IFRS. Both companies report investments, with unrealized gains and losses not reported in income. The IFRS company reports unrealized losses on these investments under the heading “Reserves” in its equity section. However, Mary cannot find a similar heading in the U.S. GAAP company financial statements. Can Mary conclude that the U.S. GAAP company has no unrealized gains or losses on its investments? Explain.

GAAP15.2 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for equity.

GAAP15.3 Briefly discuss the implications of the financial statement presentation project for the reporting of equity.

Answers to GAAP Self-Test Questions

1. a 2. b 3. d 4. d 5. d

Notes

- 1 This privilege is referred to as a **share right** or **warrant**. The warrants issued in these situations are of short duration, unlike the warrants issued with other securities.
- 2 Companies rarely, if ever, issue shares at a value below par value. The reason: The corporation may call on the original purchaser or the current holder of the shares issued below par to pay in the amount of the discount to prevent creditors from sustaining a loss upon liquidation of the corporation.
- 3 The possible justification for classifying these shares as assets is that the company will use them to liquidate a specific liability that appears on the statement of financial position.
- 4 If making numerous acquisitions of blocks of treasury shares at different prices, a company may use inventory cost flow assumptions—such as specific identification, average-cost, or FIFO—to identify the cost at date of reissuance.
- 5 One recent study of large international companies showed that in the decade ending in March 2013, companies with the highest dividend payouts showed the highest share price increases. See “Rising Corporate Cash: What It Means for Investors,” *T. Rowe Price Report* (Summer 2013) and G. Zuckerman and A. Kuriloff, “High-Dividend Stocks Gain Appeal,” *Wall Street Journal* (February 28, 2016).
- 6 If the corporation buys its own outstanding shares, it reduces its contributed capital and distributes assets to shareholders. If permitted, the corporation could, by purchasing treasury shares at any price desired, return to the shareholders their investments and leave creditors with little or no protection against loss.
- 7 Theoretically, the ex-dividend date is the day after the date of record. However, to allow time for transfer of the shares, the securities exchanges generally advance the ex-dividend date two to four days. Therefore, the party who owns the shares on the day prior to the expressed ex-dividend date receives the dividends. The party who buys the shares on and after the ex-dividend date does not receive the dividend. Between the declaration date and the ex-dividend date, the market price of the shares includes the dividend.
- 8 An alternative approach (required in the United States) is the fair value approach. Under this approach, for small share dividends (defined as those less than 20–25%) companies transfer the fair

value of the shares issued from retained earnings. This approach was adopted, at least in part, to influence the share dividend policies of corporations—some of which were possibly misleading investors as to the real impact of the share dividend. That is, some argued that “many recipients of share dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received.” (See Stephen A. Zeff, “The Rise of ‘Economic Consequences,’” *The Journal of Accountancy* (December 1978), pp. 53–66 for a complete discussion of the evolution of this issue.) IFRS is silent on the accounting for share dividends under either the par value or fair value method. We show the par value method because it is more conceptually sound, as it is generally accepted that share dividends are not income for investors.

- 9 Looking at [Illustration 15.16](#), note that companies may include a number of items in “Accumulated other comprehensive loss” or “Accumulated other comprehensive income.” Among these items are “Foreign currency translation adjustments” (covered in advanced accounting), “Unrealized holding gains and losses for non-trading equity investments” (covered in [Chapter 17](#)), and “Unrealized holding gains or losses on property, plant, and equipment” (covered in [Chapter 11](#)), often referred to as revaluation surplus.
- 10 Andrew Blackman, “How Well Do You Know ... Dividends?” *Wall Street Journal* (September 10, 2007), p. R5. Also, see payout data at pages.stern.nyu.edu/~%20adamodar/New_Home_Page/data.html and M. Bird, “Dividend Frenzy Starts to Cool Down,” *Wall Street Journal* (November 2, 2016).
- 11 When preference shares are participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement the following procedure is recommended:
 - a. After the preference shares are assigned the current year’s dividend, the ordinary shares will receive a “like” percentage of par value outstanding. In example (3), this amounts to 6 percent of €400,000.
 - b. In example (3), shown in [Illustration 15A.3](#), the remainder of the declared dividend is €20,000. We divide this amount by total par value (€500,000) to find the rate of participation to be applied to each class of shares. In this case, the rate of participation is 4% ($€20,000 \div €500,000$), which we then multiply by the par value of each class of shares to determine the amount of participation.

CHAPTER 16

Dilutive Securities and Earnings per Share

LEARNING OBJECTIVES

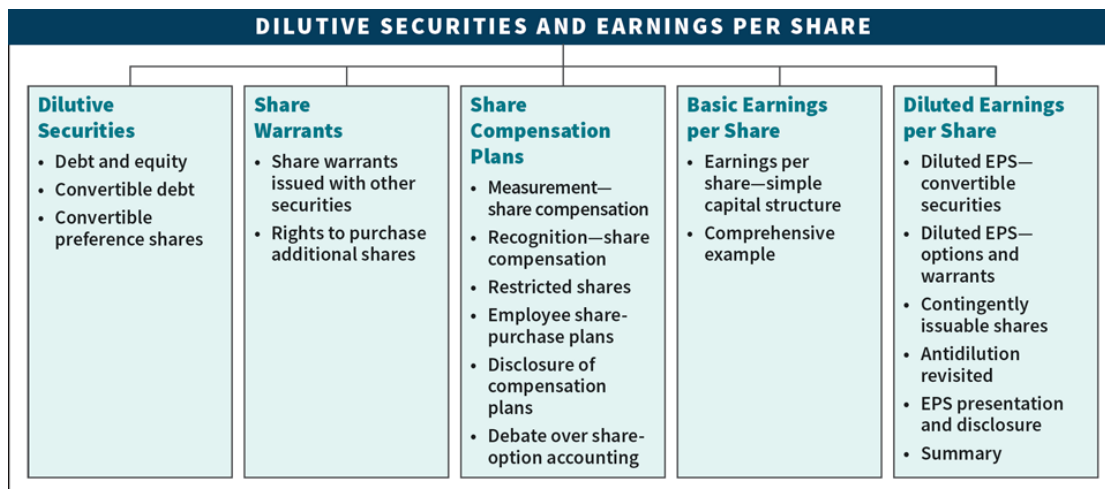

After studying this chapter, you should be able to:

1. Describe the accounting for the issuance, conversion, and retirement of convertible securities.
2. Describe the accounting for share warrants and for share warrants issued with other securities.
3. Describe the accounting and reporting for share compensation plans.
4. Compute basic earnings per share.
5. Compute diluted earnings per share.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 16

As the following opening story indicates, companies are rethinking the use of various forms of share-based compensation, which are based on dilutive securities. The purpose of this chapter is to discuss the proper accounting for dilutive securities. The chapter examines issues related to other types of financial instruments, such as convertible securities, warrants, and contingent shares, including their effects on reporting earnings per share. The content and organization of the chapter are as follows.

Breaking the Options Habit

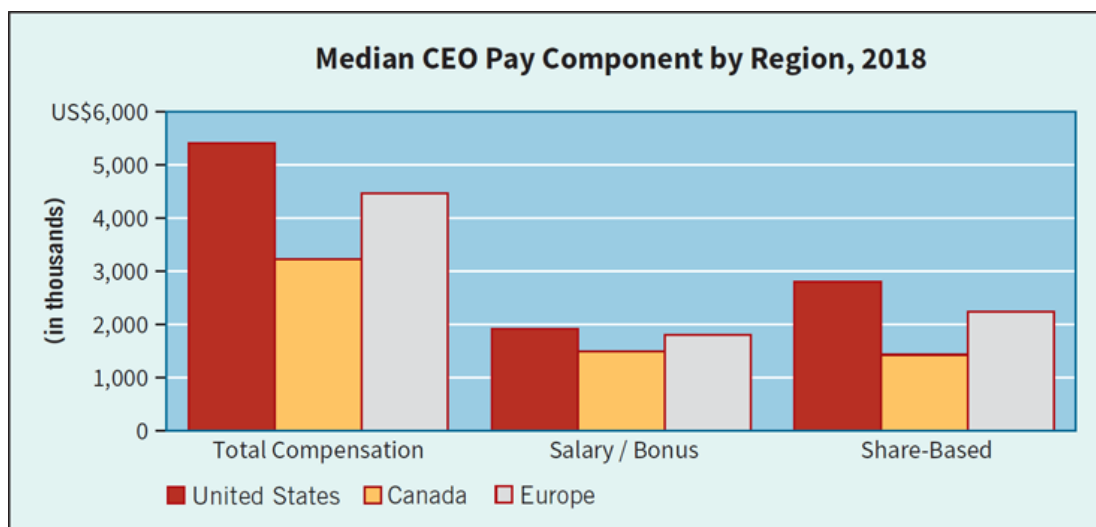

Determining the components of executive pay has been the subject of debate in company board compensation committees. Share options have been a significant component in many pay packages. The share option habit has been hard to break. As you will learn in this chapter, share options—called by some “the crack cocaine of incentives”—are a form of compensation that gives key employees the choice to purchase shares at a given (usually lower-than-market) price. For many years, companies were hooked on these products. Why? The combination of a hot equity market and favorable accounting treatment made share options the incentive of choice. They were a form of compensation with no expense to the companies that granted them, and the share options were popular with key employees, so companies granted them with abandon.

However, the accounting rules changed, resulting in required expensing of the fair value of share options when granted. This treatment made it easier for companies to kick the share option habit. As shown in the following table, a shift has occurred in the use of share options versus restricted shares for both large companies and high-tech companies.

	Large Companies		High-Tech Companies	
	2016	2013	2016	2013
Types of equity awards granted—by number of units (median)				
Share options	56%	74%	67%	76%
Restricted shares	46	26	33	24
Types of equity awards granted—by value of awards (median)				
Share options	22	48	44	55
Restricted shares	78	52	56	45

In fact, starting in 2006 (at the time companies began implementing the standard on share compensation), both large and high-tech companies started switching to restricted-share plans. As a spokesperson at one company said, “Once you begin expensing options, the attractiveness significantly drops.”

Option awards in most cases are reserved for the key officers of a company. And while there has been a decline in the use of options in executive pay packages, equity-based compensation continues to be significant for companies around the world. One recent study (Equilar, *CEO Pay Trends*) indicates that the median value of the cash component was \$1.9 million, and the median equity component was \$2.8 million. As shown in the following chart, the significance of the equity-based component persists across the United States, Canada, and Europe.

Approximately 50 percent of the overall compensation of U.S. CEOs took the form of shares. Similarly, European and Canadian CEOs of companies received a median cash component of \$1.8 million and \$1.5 million, respectively. However, equity components were significantly less than the median U.S. figure, at \$2.2 million and \$1.4 million, respectively. Given the persistence and significance of share-based compensation, good accounting for these costs—which you will learn about in this chapter—is a necessity.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Dilutive Securities

LEARNING OBJECTIVE 1

Describe the accounting for the issuance, conversion, and retirement of convertible securities.

Debt and Equity

Many of the controversies related to the accounting for financial instruments such as share options, convertible securities, and preference shares relate to whether companies should report these instruments as a liability or as equity. For example, companies should classify non-redeemable ordinary shares as equity because the issuer has no **obligation** to pay dividends or repurchase the shares. Declaration of dividends is at the issuer's discretion, as is the decision to repurchase the shares. Similarly, preference shares that are not redeemable do not require the issuer to pay dividends or repurchase the shares. Thus, non-redeemable ordinary or preference shares lack an important characteristic of a liability—an

obligation to pay the holder of the ordinary or preference shares at some point in the future.¹

In this chapter, we discuss securities that have characteristics of *both* debt and equity. For example, a convertible bond has both debt and equity characteristics. Should a company classify this security as debt, as equity, or as part debt and part equity? In addition, how should a company compute earnings per share if it has convertible bonds and other convertible securities in its capital structure? Convertible securities, as well as options, warrants, and other securities, are often called **dilutive securities** because upon exercise they may reduce (dilute) earnings per share.

Convertible Debt

Convertible bonds can be changed into other company securities during some specified period of time after issuance. A convertible bond combines the benefits of a bond with the privilege of exchanging it for shares at the holder's option. Investors who purchase it want the security of a bond investment (guaranteed interest and principal) plus the added option of conversion if the value of the shares appreciates significantly.

Companies issue convertible securities for two main reasons. One is to raise equity capital without giving up more ownership control than necessary. To illustrate, assume a company wants to raise \$1 million; its ordinary shares are selling at \$45 a share. To raise the \$1 million, the company would have to sell 22,222 shares (ignoring issue costs). By selling 1,000 bonds at \$1,000 par, each convertible into 20 ordinary shares, the company could raise \$1 million by committing only 20,000 ordinary shares.

A second reason to issue convertibles is to obtain debt financing at cheaper rates. Many companies could issue debt only at high interest rates unless they attached a conversion option. The conversion privilege entices the investor to accept a lower interest rate than would normally be the case on a straight debt issue. For example, **China Minsheng Bank** (CHN) recently issued convertible bonds that pay interest at an effective yield of 1.5 percent. This rate was much lower than China Minsheng would have had to pay by issuing straight debt. For this lower interest rate, the investor receives the right to buy China Minsheng's ordinary shares at a fixed price until the bond's maturity.²

Accounting for Convertible Debt

Convertible debt is accounted for as a **compound instrument** because it contains both a liability and an equity component. IFRS requires that compound instruments be separated into their liability and equity components for purposes of accounting. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) Companies use the “**with-and-without**” **method** to value compound instruments.

Illustration 16.1 identifies the components used in the with-and-without method.

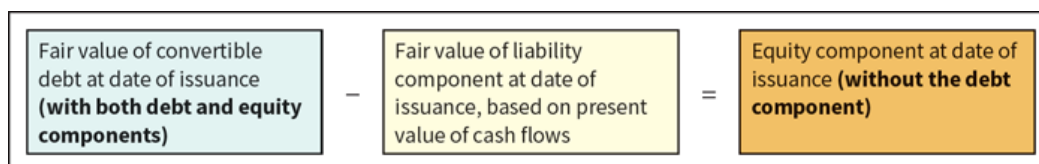

ILLUSTRATION 16.1 Convertible Debt Components

As indicated, the equity component is the residual amount after subtracting the liability component. IFRS does not permit companies to assign a value to the equity amount first and then determine the liability component. To do so would be inconsistent with the definition of equity, which is considered a residual amount. [2]

To implement the with-and-without approach, a company does the following:

1. First, determine the total fair value of the convertible debt *with both* the liability and equity component. **This is straightforward, as this amount is the proceeds received upon issuance.**
2. Second, determine the liability component by computing the net present value of all contractual future cash flows discounted at the market rate of interest. This market rate is the rate the company would pay on similar non-convertible debt.
3. Finally, subtract the liability component estimated in the second step from the fair value of the convertible debt (issue proceeds) to arrive at the equity component. That is, the equity component is the fair value of the convertible debt *without* the liability component.

Accounting at Time of Issuance

To illustrate the accounting for convertible debt, assume that **Roche Group** (CHE) issues 2,000 convertible bonds at the beginning of 2022. The bonds have a four-year term with a stated rate of interest of 6 percent and are issued at par with a face value of €1,000 per bond (the total proceeds received from issuance of the bonds are €2,000,000). Interest is payable annually at December 31. Each bond is convertible into 250 ordinary shares with a par value of €1. The market rate of interest on similar non-convertible debt is 9 percent.

The time diagram in [Illustration 16.2](#) depicts both the interest and principal cash flows.

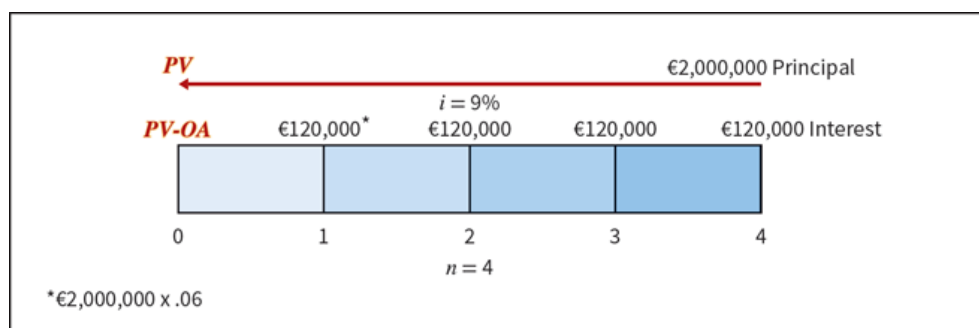

ILLUSTRATION 16.2 Time Diagram for Convertible Bond

The liability component of the convertible debt is computed as shown in [Illustration 16.3](#).

Present value of principal: €2,000,000 × .70843 (Table 6.2 ; $n = 4$, $i = 9\%$)	€1,416,860
Present value of the interest payments: €120,000 × 3.23972 (Table 6.4 ; $n = 4$, $i = 9\%$)	388,766
Present value of the liability component	€1,805,626

ILLUSTRATION 16.3 Fair Value of Liability Component of Convertible Bond

The equity component of Roche's convertible debt is then computed as shown in [Illustration 16.4](#).

Fair value of convertible debt at date of issuance	€2,000,000
Less: Fair value of liability component at date of issuance	1,805,626
Fair value of equity component at date of issuance	€ 194,374

ILLUSTRATION 16.4 Equity Component of Convertible Bond

The journal entry to record this transaction is as follows.

Cash	2,000,000	
Bonds Payable		1,805,626
Share Premium—Conversion Equity		194,374

The liability component of Roche's convertible debt issue is recorded as Bonds Payable. As shown in [Chapter 14](#), the amount of the discount relative to the face value of the bond is amortized at each reporting period. So at maturity, the Bonds Payable account is reported at €2,000,000 (face value). The equity component of the convertible bond is recorded in the Share Premium—Conversion Equity account and is reported in the equity section of the statement of financial position. Because this amount is considered part of contributed capital, it does not change over the life of the convertible.³

Settlement of Convertible Bonds

We illustrate four settlement situations: (1) repurchase at maturity, (2) conversion at maturity, (3) conversion before maturity, and (4) repurchase before maturity.

Repurchase at maturity

If the bonds are not converted at maturity, Roche makes the following entry to pay off the convertible debtholders.

Bonds Payable	2,000,000	
Cash		2,000,000
(To record the redemption of bonds at maturity)		

Because the carrying value of the bonds equals the face value, there is no gain or loss on repurchase at maturity. The amount originally allocated to equity of €194,374 either remains in the Share Premium—Conversion Equity account or is transferred to Share Premium—Ordinary.

Conversion of bonds at maturity

If the bonds are converted at maturity, Roche makes the following entry.

Share Premium—Conversion Equity	194,374	
Bonds Payable	2,000,000	

Share Capital—Ordinary		500,000
Share Premium—Ordinary		1,694,374
(To record the conversion of bonds at maturity)		

As indicated, Roche records a credit to Share Capital—Ordinary for €500,000 (2,000 bonds × 250 shares × €1 par) and the remainder to Share Premium—Ordinary for €1,694,374. There is no gain or loss on conversion at maturity. The original amount allocated to equity (€194,374) is transferred to the Share Premium—Ordinary account. As a result, Roche's equity has increased by a total of €2,194,374 through issuance and conversion of the convertible bonds. This accounting approach is often referred to as the **book value method** in that the carrying amount (book value) of the bond and related conversion equity determines the amount in the ordinary equity accounts.

Conversion of bonds before maturity

What happens if bonds are converted before maturity? To understand the accounting, we again use the Roche Group example. A schedule of bond amortization related to Roche's convertible bonds is shown in [Illustration 16.5](#).

Schedule of Bond Amortization Effective-Interest Method 6% Bond Discounted at 9%				
Date	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Bonds
1/1/22				€1,805,626
12/31/22	€120,000	€162,506	€42,506	1,848,132
12/31/23	120,000	166,332	46,332	1,894,464
12/31/24	120,000	170,502	50,502	1,944,966
12/31/25	120,000	175,034*	55,034	2,000,000

*€13 difference due to rounding.

ILLUSTRATION 16.5 Convertible Bond Amortization Schedule

Assuming that Roche converts its bonds into ordinary shares on December 31, 2023, Roche debits the Bonds Payable account for its carrying value of €1,894,464 (see [Illustration 16.5](#)). In addition, Roche credits Share Capital—Ordinary for €500,000 (2,000 × 250 × €1) and credits Share Premium—Ordinary for €1,588,838. The entry to record this conversion is as follows.

Share Premium—Conversion Equity	194,374	
Bonds Payable	1,894,464	
Share Capital—Ordinary		500,000
Share Premium—Ordinary		1,588,838
(To record the conversion of bonds before maturity)		

There is no gain or loss on conversion before maturity: The original amount allocated to equity (€194,374) is transferred to the Share Premium—Ordinary account.

Repurchase before maturity

In some cases, companies decide to repurchase the convertible debt before maturity. The approach used for allocating the amount paid upon repurchase follows the approach used when the convertible bond was originally issued. That is, Roche determines the fair value of the liability component of the convertible bonds at December 31, 2023, and then subtracts this amount from the fair value of the convertible bond issue (including the equity component) to arrive at the value for the equity. After this allocation is completed:

1. The difference between the consideration allocated to the liability component and the carrying amount of the liability is recognized as a gain or loss, and
2. The amount of consideration relating to the equity component is recognized (as a reduction) in equity. [3]

To illustrate, instead of converting the bonds on December 31, 2023, assume that Roche repurchases the convertible bonds from the bondholders. Pertinent information related to this conversion is as follows.

- Fair value of the convertible debt (including both liability and equity components), based on market prices at December 31, 2023, is €1,965,000.
- The fair value of the liability component is €1,904,900. This amount is based on computing the present value of a non-convertible bond with a two-year term (which corresponds to the shortened time to maturity of the repurchased bonds).

Roche first determines the gain or loss on the liability component, as computed in [Illustration 16.6](#).

Present value of liability component at December 31, 2023 (given above)	€ 1,904,900
Carrying value of liability component at December 31, 2023 (per Illustration 16.5)	(1,894,464)
Loss on repurchase	<u>€ 10,436</u>

[ILLUSTRATION 16.6](#) Gain or Loss on Debt Repurchase

Roche has a loss on this repurchase because the fair value of the debt extinguished is greater than its carrying amount. To determine any adjustment to the equity, Roche computes the value of the equity as shown in [Illustration 16.7](#).

Fair value of convertible debt at December 31, 2023 (with equity component)	€1,965,000
Less: Fair value of liability component at December 31, 2023 (similar 2-year non-convertible debt)	1,904,900
Fair value of equity component at December 31, 2023 (without debt component)	<u>€ 60,100</u>

[ILLUSTRATION 16.7](#) Equity Adjustment on Repurchase of Convertible Bonds

Roche makes the following compound journal entry to record the entire repurchase transaction.

Bonds Payable	1,894,464	
Share Premium—Conversion Equity	60,100	
Loss on Repurchase	10,436	
Cash		1,965,000
(To record the repurchase of convertible bonds)		

In summary, the repurchase results in a loss related to the liability component and a reduction in Share Premium—Conversion Equity. The remaining balance in Share Premium—Conversion Equity of €134,274 (€194,374 – €60,100) is often transferred to Share Premium—Ordinary upon the repurchase.

Induced Conversions

Sometimes, the issuer wants to encourage prompt conversion of its convertible debt to equity securities in order to reduce interest costs or to improve its debt to equity ratio. In this situation, the issuer may offer some form of additional consideration (such as cash or ordinary shares), called a “sweetener,” to **induce conversion**. The issuing company reports the sweetener as an expense of the current period. Its amount is the fair value of the additional securities or other consideration given.

Assume that Helloid, Inc. has outstanding \$1,000,000 par value convertible debentures convertible into 100,000 ordinary shares (\$1 par value). When issued, Helloid recorded Share Premium—Conversion Equity of \$15,000. Helloid wishes to reduce its annual interest cost. To do so, Helloid agrees to pay the holders of its convertible debentures an additional \$80,000 if they will convert. Assuming conversion occurs, Helloid makes the following entry.

Conversion Expense	80,000	
Share Premium—Conversion Equity	15,000	
Bonds Payable	1,000,000	
Share Capital—Ordinary		100,000
Share Premium—Ordinary		915,000
Cash		80,000

Helloid records the additional \$80,000 as **an expense of the current period** and not as a direct reduction of equity. [4]

Some argue that the cost of a conversion inducement is a cost of obtaining equity capital. As a result, they contend that companies should recognize the cost of conversion as a cost of (a reduction of) the equity capital acquired and not as an expense. However, the IASB indicated that when an issuer makes an additional payment to encourage conversion, the payment is for a service (bondholders converting at a given time) and should be reported as an expense.

Convertible Preference Shares

Convertible preference shares include an option for the holder to convert preference shares into a fixed number of ordinary shares. The major difference between accounting for a convertible bond and a convertible preference share is their classification. Convertible bonds are compound instruments because they have both a liability and an equity component. Convertible preference shares (unless mandatory redemption exists) are not compound instruments because they have only an equity component. As a result, convertible preference shares are reported as part of equity. When preference shares are converted or repurchased, there is no gain or loss recognized. The rationale is that a company does not recognize a gain or loss involving transactions with its existing shareholders.

To illustrate, assume that Morse AG issues 1,000 convertible preference shares that have a par value of €1 per share. The shares were issued at a price of €200 per share. The journal entry to record this transaction is as follows.

Cash (1,000 × €200)	200,000	
Share Capital—Preference (1,000 × €1)		1,000
Share Premium—Conversion Equity		199,000
(To record the issuance of convertible preference shares)		

If each share is subsequently converted into 25 ordinary shares (€2 par value) that have a fair value of €410,000, the journal entry to record the conversion is as follows.

Share Capital—Preference	1,000	
Share Premium—Conversion Equity	199,000	
Share Capital—Ordinary (1,000 × 25 × €2)		50,000
Share Premium—Ordinary		150,000
(To record the conversion of convertible preference shares)		

As indicated (and similar to the treatment for convertible bonds), Morse uses the book value method and does not recognize a gain or loss on the conversion. The fair value of the ordinary shares is therefore ignored in this computation. If the convertible preference shares are repurchased at their fair value instead of converted, Morse makes the following entry.

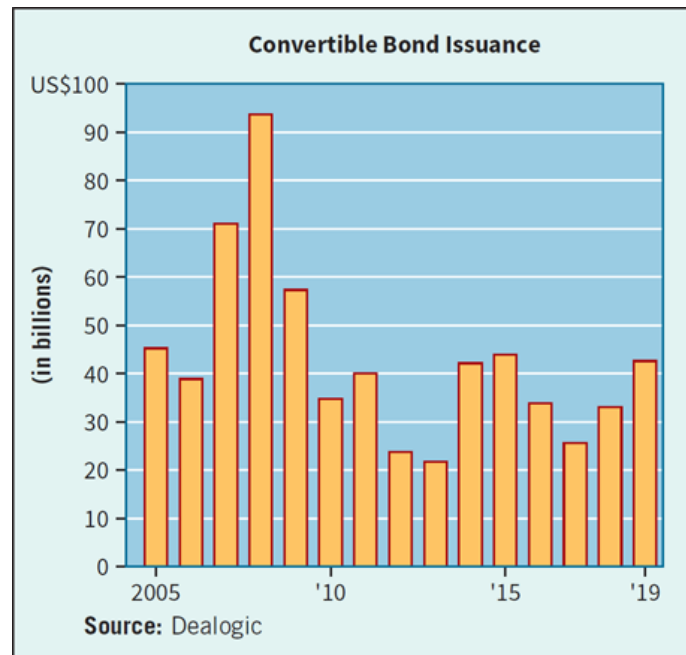

Share Capital—Preference	1,000	
Share Premium—Conversion Equity	199,000	
Retained Earnings	210,000	
Cash		410,000
(To record the repurchase of convertible preference shares)		

Morse does not report a gain or loss on the repurchase. Any excess paid above the book value of the convertible preference shares is often debited to Retained Earnings on the theory that an excess dividend is being paid to the preference shareholders to facilitate the repurchase.

What Do the Numbers Mean?

How Low Can You Go?

What do **SONY** (JPN), **Tesla Motors Inc.** (USA), **Twitter Inc.** (USA), **Qihoo 360 Technology** (CHN), and semiconductor maker **ASE** (TWN) have in common? They are part of the wave of companies that have raised capital in the convertible bond market. And quite a wave it is. As indicated in the following chart, in the past two decades companies have issued over \$40 billion of convertible bonds.

These bonds are popular with issuing companies and investors. Companies use them to raise money at rates lower than those on ordinary bonds. Investors like them because, at a time of low interest rates, they can book extra profit if the issuer's share price rises. However, depending on the features of the bond and the share value, some unusual results may be observed.

Consider the convertible bonds issued by **STMicroelectronics (STM)** (CHE). STM's 10-year bonds have a zero coupon and are convertible into STM ordinary shares at an exercise price of \$33.43. When issued, the bonds sold at an effective yield of *minus* 0.05 percent. That's right—a negative yield. How could this happen? When STM issued the bonds, investors thought the options to convert were so valuable that they were willing to take zero interest payments and invest an amount in excess of the maturity value of the bonds.

In essence, the investors are paying interest to STM, and STM records interest revenue. Why would investors do this? If the share price rises, as many thought it would for STM and many tech companies at this time, these bond investors could convert and get a big gain in the shares.

Investors did get some additional protection in the deal: They can redeem the \$1,000 bonds after three years and receive \$975 (and after five and seven years, for lower

amounts) if it looks like the bonds will never convert. In the end, STM has issued bonds with a significant unrecorded equity component. And because the entire bond issue is classified as debt under U.S. GAAP, STM records negative interest expense.

C1; Mariko Yasu, “Sony Shares Plunge after Convertible Bond Offering: Tokyo Mover,” *Bloomberg* (November 14, 2012); P.Davies, “Asia Turns Bullish on Convertible Bonds,” *Financial Times* (September 1, 2013); and Daniel Kruger, “Rising Rates Revitalize Convertible-Bond Sales,” *Wall Street Journal* (December 10, 2018).

Share Warrants

LEARNING OBJECTIVE 2

Describe the accounting for share warrants and for share warrants issued with other securities.

Warrants are certificates entitling the holder to acquire shares at a certain price within a stated period. This option is similar to the conversion privilege: Warrants, if exercised, become ordinary shares and usually have a dilutive effect (reduce earnings per share) similar to that of the conversion of convertible securities. However, a substantial difference between convertible securities and share warrants is that upon exercise of the warrants, the holder has to pay a certain amount of money to obtain the shares.

The issuance of warrants or options to buy additional shares normally arises under three situations:

1. When issuing different types of securities, such as bonds or preference shares, companies often include warrants **to make the security more attractive**—by providing an “equity kicker.”
2. Upon the issuance of additional ordinary shares, existing shareholders have a **preemptive right to purchase ordinary shares** first. Companies may issue warrants to evidence that right.
3. Companies give warrants, often referred to as *share options*, **to executives and employees** as a form of **compensation**.

The problems in accounting for share warrants are complex and present many difficulties—some of which remain unresolved. The following sections address the accounting for share warrants in three situations.

Share Warrants Issued with Other Securities

Warrants issued with other securities are basically long-term options to buy ordinary shares at a fixed price. Generally, the life of warrants is five years, occasionally 10 years; very occasionally, a company may offer perpetual warrants.

A **share warrant** works like this. Assume that **Bohai Pharmaceutical Group** (CHN) offers a unit comprising one ordinary share and one share warrant. In this case, Bohai’s

warrants are detachable; that is, they can be detached (separated) from the ordinary shares and traded as a separate security.

Companies may also issue non-detachable warrants with debt, which means the warrant cannot be separated from the debt. In either case, debt issued with warrants is considered a compound instrument for accounting purposes. The Bohai warrant in this example is exercisable at ¥24.25 per share and good for five years. The unit (share plus detachable warrant) sells for ¥22.75. Since the price of the ordinary share the day before the sale was ¥19.88, the difference suggests a price of ¥2.87 for the warrant.

The investor pays for the warrant in order to receive the right to buy ordinary shares, at a fixed price of ¥24.25, sometime in the future. It would not be profitable at present for the purchaser to exercise the warrant and buy the share because the price of the share is much below the exercise price. But if, for example, the price of the share rises to ¥30, the investor gains ¥2.88 ($¥30 - ¥24.25 - ¥2.87$) on an investment of ¥2.87, a 100 percent increase! If the price never rises, the investor loses the full ¥2.87 per warrant.⁴

Thus, debt issued with share warrants is a compound instrument that has a debt and an equity component. As a result, the company should use the with-and-without method to allocate the proceeds between the two components.

Illustration

At one time, **Siemens AG** (DEU) issued bonds with detachable five-year warrants. Assume that the five-year warrants provide the option to buy one ordinary share (par value €5) at €25. At the time, an ordinary share of Siemens was selling for approximately €30. These warrants enabled Siemens to price its bond offering (with a €10,000,000 face value) at par with an 8¾ percent yield (quite a bit lower than prevailing rates at that time). In this example, Siemens was able to sell the bonds plus the warrants for €10,200,000.

To account for the proceeds from this sale, Siemens uses the with-and-without method. Using this approach, Siemens determines the present value of the future cash flows related to the bonds, which is €9,707,852. It then subtracts this amount from €10,200,000 to determine the equity component. Determination of the equity component, using the with-and-without method, is shown in [Illustration 16.8](#).

Fair value of bonds with warrants	€10,200,000
Less: Fair value of liability component at date of issuance	9,707,852
Equity component at date of issuance	€ 492,148

ILLUSTRATION 16.8 Equity Component of Security Issue

In this situation, the bonds sell at a discount. Siemens records the sale as follows.

Cash	9,707,852	
Bonds Payable		9,707,852

In addition, Siemens sells warrants that it credits to Share Premium—Share Warrants. It makes the following entry.

Cash	492,148	
Share Premium—Share Warrants		492,148

Siemens may combine the entries if desired. Here, we show them separately, to indicate that the purchaser of the bond is buying not only a bond but also a possible future claim on ordinary shares.

Assuming investors exercise all 10,000 warrants (one warrant per one ordinary share), Siemens makes the following entry.

Cash (10,000 × €25)	250,000	
Share Premium—Share Warrants	492,148	
Share Capital—Ordinary (10,000 × €5)		50,000
Share Premium—Ordinary		692,148

What if investors fail to exercise the warrants? In that case, Siemens debits Share Premium—Share Warrants for €492,148 and credits Share Premium—Expired Share Warrants for a like amount. The Share Premium—Expired Share Warrants reverts to the former shareholders.

Summary Analysis

The IASB indicates that companies should separate the debt and equity components of securities, such as convertible debt or bonds issued with warrants. We agree with this position. In both situations (convertible debt and debt issued with warrants), the investor has made a payment to the company for an equity feature—the right to acquire an equity instrument in the future. The only real distinction between them is that the additional payment made when the equity instrument is formally acquired takes different forms. The warrant holder pays additional cash to the issuing company; the convertible debtholder pays for shares by forgoing the receipt of interest from the conversion date until maturity and by forgoing the receipt of the maturity value itself. Thus, the difference is one of method or form of payment only, rather than one of substance.

Rights to Purchase Additional Shares

If the directors of a company decide to issue new ordinary shares, the old shareholders generally have the right (**preemptive privilege**) to purchase newly issued shares in proportion to their holdings. This privilege, referred to as a **share right**, saves existing shareholders from suffering a dilution of voting rights without their consent. Also, it may allow them to purchase shares somewhat below their market price. Unlike the warrants issued with other securities, the warrants issued for share rights are of short duration.

The certificate representing the share right states the number of shares the holder of the right may purchase. Each share owned ordinarily gives the owner one share right. The certificate also states the price at which the new shares may be purchased. The price is normally less than the current market price of such shares, which gives the rights a value in themselves. From the time they are issued until they expire, holders of share rights may purchase and sell them like any other security.

Companies make only a memorandum entry when they issue rights to existing shareholders. This entry indicates the number of rights issued to existing shareholders in order to ensure that the company has additional unissued shares registered for issuance in case the rights are exercised. Companies make no formal entry at this time because they have not yet issued shares nor received cash.

If holders exercise the share rights, a cash payment of some type usually is involved. If the company receives cash equal to the par value, it makes an entry crediting Share Capital—Ordinary at par value. If the company receives cash in excess of par value, it credits Share Premium—Ordinary for the amount received above par value. If it receives cash less than par value, a debit to Share Premium—Ordinary is appropriate.

Share Compensation Plans

LEARNING OBJECTIVE 3

Describe the accounting and reporting for share compensation plans.

The third form of warrant arises in share compensation plans to pay and motivate employees. This warrant is a **share option**, which gives key employees the option to purchase ordinary shares at a given price over an extended period of time.

A consensus of opinion is that effective compensation programs are ones that do the following:

1. Base compensation on employee and company performance.
2. Motivate employees to high levels of performance.
3. Help retain executives and allow for recruitment of new talent.
4. Maximize the employee's after-tax benefit and minimize the employer's after-tax cost.
5. Use performance criteria over which the employee has control.

Straight cash-compensation plans (salary and perhaps a bonus), though important, are oriented to the short run. Many companies recognize that they need a longer-term compensation plan in addition to the cash component.

Long-term compensation plans attempt to develop company loyalty among key employees by giving them “a piece of the action”—that is, an equity or ownership interest. These plans, generally referred to as **share-based compensation plans**, come in many forms. Essentially, they provide the employee with the opportunity to receive shares if the performance of the company (by whatever measure) is satisfactory. Typical performance measures focus on long-term improvements that are readily measurable and that benefit the company as a whole, such as increases in earnings per share, revenues, share price, or market share.

Illustration 16.9 indicates that the cost of options is a much smaller element of compensation relative to restricted shares at global companies such as **Ford** (USA) and **Disney** (USA).

(\$ in millions) U.S. Company	Option Grants	Restricted-Share Grants
Disney	\$102	\$312
Ford	27	95
Urban Outfitters	3	10
Walmart	23	365

ILLUSTRATION 16.9 Company Equity Grants

As discussed in the opening story, the major reasons for this change are twofold. Critics often cite the indiscriminate use of share options as a reason why company executives manipulated accounting numbers in an attempt to achieve higher share price. As a result, many responsible companies decided to cut back on the issuance of options, both to avoid such accounting manipulations and to head off investor doubts. In addition, IFRS now results in companies recording a higher expense when share options are granted.

The data reported in [Illustration 16.10](#) part (a) reinforce the point made in the opening story that the fair value of share grants is a significant component of compensation. For the 100 largest non-tech companies in the S&P 500, 81 percent are providing some mix of share-based compensation elements. Part (b) of [Illustration 16.10](#) indicates the recent compensation breakdown for the CEO of **Marks and Spencer plc (M&S)** (GBR). Note that the share-based component nearly equals the pay received in cash—a relationship that is typical for many public companies.

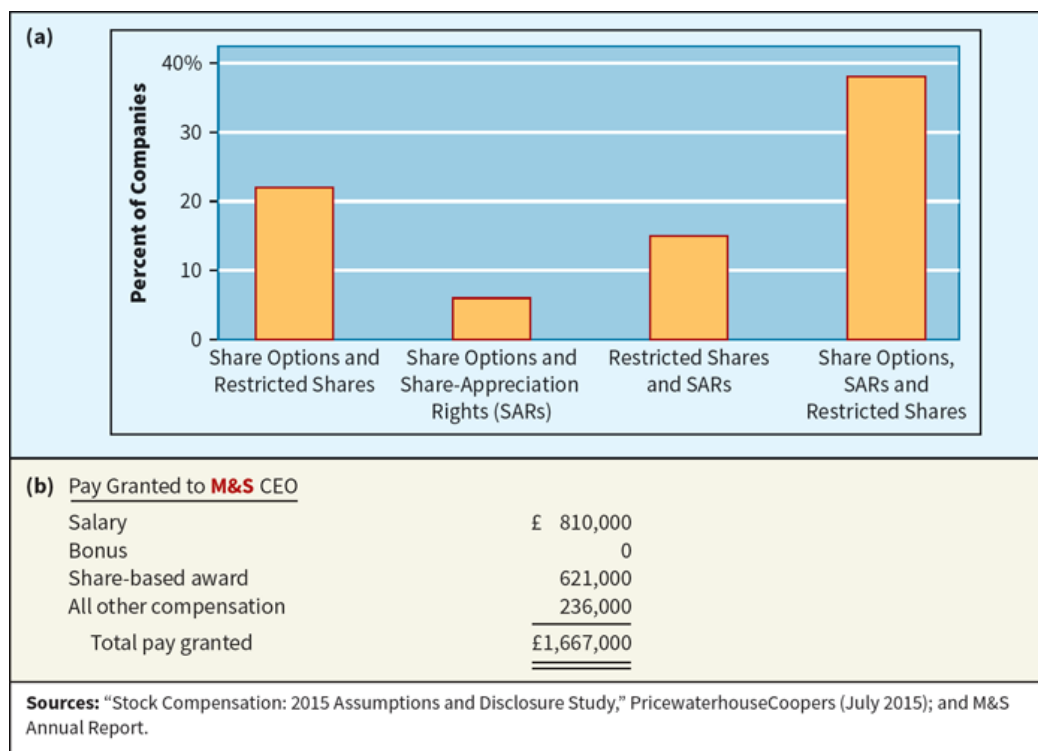

ILLUSTRATION 16.10 Compensation Elements

Measurement—Share Compensation

Suppose that, as an employee for Hurdle Inc., you receive options to purchase 10,000 shares of the firm's ordinary shares as part of your compensation. The date you receive the options is referred to as the **grant date**. The options are good for 10 years. The market price and the exercise price for the shares are both \$20 at the grant date. **What is the value of the compensation you just received?**

Some believe that what you have received has no value. They reason that because the difference between the market price and the exercise price is zero, no compensation results. Others argue these options do have value. If the share price goes above \$20 any time in the next 10 years and you exercise the options, you may earn substantial compensation. For example, if at the end of the fourth year the share market price is \$30 and you exercise your options, you could earn \$100,000 $[10,000 \text{ options} \times (\$30 - \$20)]$, ignoring income taxes.

The question for Hurdle is how to report the granting of these options. One approach measures compensation cost by the excess of the market price of the shares over their exercise price at the grant date. This approach is referred to as the **intrinsic-value method**. It measures what the holder would receive today if the option was immediately exercised. The intrinsic value is **the difference between the market price of the shares and the exercise price of the options at the grant date**. Using the intrinsic-value method, Hurdle would not recognize any compensation expense related to your options because at the grant date the market price equaled the exercise price. (In the preceding paragraph, those who answered that the options had no value were looking at the question from the intrinsic-value approach.)

The second way to look at the question of how to report the granting of these options bases the cost of employee share options on the **fair value** of the share options granted. Under the **fair value method**, companies use acceptable option-pricing models to value the options at the date of grant. These models take into account the many factors that determine an option's underlying value.⁵

The IASB guidelines require that companies recognize compensation cost using the fair value method. [5] The IASB position is that companies should base the accounting for the cost of employee services on the fair value of compensation paid. This amount is presumed to be a measure of the value of the services received. We will discuss more about the politics of IFRS in this area later (see "[Debate over Share-Option Accounting](#)" section). Let's first describe the procedures involved.

Recognition—Share Compensation

Share-Option Plans

Share-option plans involve two main accounting issues:

1. How to determine compensation expense.
2. Over what periods to allocate compensation expense.

Determining Expense

Under the fair value method, companies compute total compensation expense based on the fair value of the options expected to vest on the date they grant the options to the

employee(s) (i.e., the **grant date**).⁶ Public companies estimate fair value by using an option-pricing model, with some adjustments for the unique factors of employee share options. No adjustments occur after the grant date in response to subsequent changes in the share price—either up or down.

Allocating Compensation Expense

In general, a company recognizes compensation expense in the periods in which its employees perform the service—the **service period**. Unless otherwise specified, the service period is the vesting period—the time between the grant date and the vesting date. Thus, the company determines total compensation cost at the grant date and allocates it to the periods benefited by its employees' services.

Share Compensation Example

An example will help show the accounting for a share-option plan. Assume that on November 1, 2021, the shareholders of Chen Ltd. approve a plan that grants the company's five executives options to purchase 2,000 shares each of the company's ¥100 par value ordinary shares. The company grants the options on January 1, 2022. The executives may exercise the options at any time within the next 10 years. The option price per share is ¥6,000, and the market price of the shares at the date of grant is ¥7,000 per share.

Under the fair value method, the company computes total compensation expense by applying an acceptable fair value option-pricing model (such as the Black-Scholes option-pricing model). To keep this illustration simple, we assume that the fair value option-pricing model determines Chen's total compensation expense to be ¥22,000,000.

Basic Entries

Under the fair value method, a company recognizes the value of the options as an expense in the periods in which the employee performs services. In the case of Chen Ltd., assume that the expected period of benefit is two years, starting with the grant date. Chen would record the transactions related to this option contract as follows.

At date of grant (January 1, 2022)		
No entry.		
To record compensation expense for 2022 (December 31, 2022)		
Compensation Expense	11,000,000	
Share Premium—Share Options (¥22,000,000 ÷ 2)		11,000,000
To record compensation expense for 2023 (December 31, 2023)		
Compensation Expense	11,000,000	
Share Premium—Share Options		11,000,000

As indicated, Chen allocates compensation expense evenly over the two-year service period.

Exercise

If Chen's executives exercise 2,000 of the 10,000 options (20 percent of the options) on June 1, 2025 (three years and five months after date of grant), the company records the following journal entry.

June 1, 2025		
Cash (2,000 × ¥6,000)	12,000,000	
Share Premium—Share Options (.20 × ¥22,000,000)	4,400,000	
Share Capital—Ordinary (2,000 × ¥100)		200,000
Share Premium—Ordinary		16,200,000

Expiration

If Chen's executives fail to exercise the remaining share options before their expiration date, the company transfers the balance in the Share Premium—Share Options account to a more properly titled share premium account, such as Share Premium—Expired Share Options. Chen records this transaction at the date of expiration as follows.

January 1, 2032 (expiration date)		
Share Premium—Share Options	17,600,000	
Share Premium—Expired Share Options (.80 × ¥22,000,000)		17,600,000

Adjustment

An unexercised share option does not nullify the need to record the costs of services received from executives and attributable to the share-option plan. Under IFRS, a company therefore does not adjust compensation expense upon expiration of the options.

Once the total compensation is measured at the date of grant, can it be changed in future periods? The answer is that it depends on whether the adjustment is caused by a service or market condition. A **service condition** requires employees to complete a specified period of service to receive the award. If a service condition exists, the company is permitted to adjust the number of share options expected to the actual number of instruments vested. **Thus, compensation can be adjusted.** The company should adjust the estimate of compensation expense recorded in the current period (as a change in estimate). A company records this change in estimate by debiting Share Premium—Share Options and crediting Compensation Expense for the amount of cumulative compensation expense recorded to date (thus decreasing compensation expense in the period of forfeiture).

A **market condition** results when vesting or exercisability of the share option depends on a performance condition, such as a rise in the market price of the company's ordinary shares. Because market conditions are reflected in the determination of fair value at the grant date, **no adjustment to compensation expense is permitted.**

Many question this accounting treatment. The practice of not reversing share-option awards due to market conditions (share price stays below exercise price) means that a company may recognize an expense for an option that is never exercised. However, if the

reason the option is not exercised relates to a service condition (**failure to stay as an employee and perform services**), the compensation expense related to the option is adjusted. In summary, estimates of the number of share options that are expected to vest are adjusted to the actual number that do vest. Cancellations due to market conditions are not adjusted.⁷

Restricted Shares

As indicated earlier, many companies are also using restricted shares (or replacing options altogether) to compensate employees. **Restricted-share plans** transfer shares to employees, subject to an agreement that the shares cannot be sold, transferred, or pledged until vesting occurs. Similar to share options, these shares are subject to forfeiture if the conditions for vesting are not met.⁸

Major advantages of restricted-share plans are:

1. **Restricted shares never become completely worthless.** In contrast, if the share price does not exceed the exercise price for a share option, the options are worthless. The restricted shares, however, still have value.
2. **Restricted shares generally result in less dilution to existing shareholders.** Restricted-share awards are usually one-half to one-third the size of share options. For example, if a company issues share options on 1,000 shares, an equivalent restricted-share offering might be 333 to 500 shares. The reason for the difference is that at the end of the vesting period, the restricted shares will have value, whereas the share options may not. As a result, fewer shares are involved in restricted-share plans, and therefore less dilution results if the share price rises.
3. **Restricted shares better align the employee incentives with the companies' incentives.** The holder of restricted shares is essentially a shareholder and should be more interested in the long-term objectives of the company. In contrast, the recipients of share options often have a short-run focus, which leads to taking risks to hype the share price for short-term gain to the detriment of the long term.

The accounting for restricted shares follows the same general principles as accounting for share options at the date of grant. That is, the company determines the fair value of the restricted shares at the date of grant (usually the fair value of a share) and then expenses that amount over the service period. Subsequent changes in the fair value of the shares are ignored for purposes of computing compensation expense.

Restricted Shares Example

Assume that on January 1, 2022, Ogden Company issues 1,000 restricted shares to its CEO, Christie DeGeorge. Ogden's shares have a fair value of \$20 per share on January 1, 2022. Additional information is as follows.

- The service period related to the restricted shares is five years.
- Vesting occurs if DeGeorge stays with the company for a five-year period.
- The par value is \$1 per share.

Ogden makes the following entry on the grant date (January 1, 2022).

Unearned Compensation	20,000	
Share Capital—Ordinary (1,000 × \$1)		1,000
Share Premium—Ordinary (1,000 × \$19)		19,000

The credits to Share Capital—Ordinary and Share Premium—Ordinary indicate that Ogden has issued shares. The debit to Unearned Compensation (often referred to as Deferred Compensation Expense) identifies the total compensation expense the company will recognize over the five-year period. **Unearned Compensation represents the cost of services yet to be performed, which is not an asset.** Consequently, the company reports Unearned Compensation in equity in the statement of financial position, as a contra equity account (similar to the reporting of treasury shares at cost).

At December 31, 2022, Ogden records compensation expense of \$4,000 (1,000 shares × \$20 × .20) as follows.

Compensation Expense	4,000	
Unearned Compensation		4,000

Ogden records compensation expense of \$4,000 for each of the next four years (2023, 2024, 2025, and 2026).

What happens if DeGeorge leaves the company before the five years has elapsed (that is, she does not fulfill a service condition)? In this situation, DeGeorge forfeits her rights to the shares, and Ogden reverses the compensation expense already recorded.

For example, assume that DeGeorge leaves on February 3, 2024 (before any expense has been recorded during 2024). The entry to record this forfeiture is as follows.

Share Capital—Ordinary	1,000	
Share Premium—Ordinary	19,000	
Compensation Expense (\$4,000 × 2)		8,000
Unearned Compensation		12,000

In this situation, Ogden reverses the compensation expense of \$8,000 recorded through 2023. In addition, the company debits Share Capital—Ordinary and Share Premium—Ordinary, reflecting DeGeorge's forfeiture. It credits the balance of Unearned Compensation since none remains when DeGeorge leaves Ogden.

This accounting is similar to accounting for share options when employees do not fulfill vesting requirements. Recall that once compensation expense is recorded for share options, it is not reversed. The only exception is when an employee leaves a company early, and so does not fulfill a service condition.

In Ogden's restricted-share plan, vesting never occurred because DeGeorge left the company before she met the service requirement. Because DeGeorge was never vested, she had to forfeit her shares. Therefore, the company must reverse compensation expense recorded to date.⁹

Employee Share-Purchase Plans

Employee share-purchase plans (ESPPs) generally permit all employees to purchase shares at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its ordinary shares among employees. **These plans are considered compensatory and should be recorded as expense over the service period.**

To illustrate, assume that Masthead plc offers all its 1,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value £1 per share) at a 20 percent discount. The purchase price must be paid immediately upon acceptance of the offer. In total, 800 employees accept the offer, and each employee purchases on average 80 shares. That is, the employees purchase a total of 64,000 shares. The weighted-average market price of the shares at the purchase date is £30 per share, and the weighted-average purchase price is £24 per share. The entry to record this transaction is as follows.

Cash ($64,000 \times £24$)	1,536,000	
Compensation Expense [$64,000 \times (£30 - £24)$]	384,000	
Share Capital—Ordinary ($64,000 \times £1$)		64,000
Share Premium—Ordinary		1,856,000
(Issue shares in an employee share-purchase plan)		

The IASB indicates that there is no reason to treat broad-based employee share plans differently from other employee share plans. Some have argued that because these plans are used to raise capital, they should not be compensatory. However, IFRS requires recording expense for these arrangements. The Board notes that because these arrangements are available only to employees, it is sufficient to conclude that the benefits provided represent employee compensation.¹⁰ [6]

Disclosure of Compensation Plans

Companies must fully disclose the status of their compensation plans at the end of the periods presented. To meet these objectives, companies must make extensive disclosures. Specifically, a company with one or more share-based payment arrangements must disclose information that enables users of the financial statements to understand:

1. The nature and extent of share-based payment arrangements that existed during the period.
2. How the fair value of the goods and services received, or the fair value of the equity instruments granted during the period, was determined.
3. The effect of share-based payment transactions on the company's net income (loss) during the period and on its financial position. [7]

Illustration 16.11 presents the type of information disclosed for compensation plans.

Debate over Share-Option Accounting

The IASB faced considerable opposition when it proposed the fair value method for accounting for share options. This is not surprising, given that the fair value method results

in greater compensation costs relative to the intrinsic-value model.

Many small high-technology companies have been especially vocal in their opposition, arguing that only through offering share options can they attract top professional management. They contend that recognizing large amounts of compensation expense under these plans places them at a competitive disadvantage against larger companies that can withstand higher compensation charges. As one high-tech executive stated, “If your goal is to attack fat-cat executive compensation in multi-billion dollar firms, then please do so! But not at the expense of the people who are ‘running lean and mean,’ trying to build businesses and creating jobs in the process.”

The share-option saga is a classic example of the difficulty the IASB faces in issuing new accounting guidance. Many powerful interests aligned against the Board. Even some who initially appeared to support the Board’s actions later reversed themselves. These efforts undermine the authority of the IASB at a time when it is essential that we restore faith in our financial reporting system (see [Underlying Concepts](#)).

Underlying Concepts

The share-option controversy involves economic-consequence issues. The IASB believes companies should follow the neutrality concept. Others disagree, noting that factors other than accounting theory should be considered.

Transparent financial reporting—including recognition of share-based expense—should not be criticized because companies will report lower income. We may not like what the financial statements say, but we are always better off when the statements are representationally faithful to the underlying economic substance of transactions.

By leaving share-based compensation expense out of income, reported income is biased. Biased reporting not only raises concerns about the credibility of companies’ reports but also of financial reporting in general. Even good companies get tainted by the biased reporting of a few “bad apples.” If we write standards to achieve some social, economic, or public policy goal, financial reporting loses its credibility.

Share-Option Plan					Total expense for share-based plans
The Company has a share-based compensation plan. The compensation cost that has been charged against income for the plan was \$29.4 million and \$28.7 million for 2022 and 2021, respectively.					
The Company's 2022 Employee Share-Option Plan (the Plan), which is shareholder-approved, permits the grant of share options and shares to its employees for up to 8 million shares of ordinary shares. The Company believes that such awards better align the interests of its employees with those of its shareholders. Option awards are generally granted with an exercise price equal to the market price of the Company's shares at the date of grant; those option awards generally vest based on 5 years of continuous service and have 10-year contractual terms. Share awards generally vest over five years. Certain option and share awards provide for accelerated vesting if there is a change in control (as defined by the Plan).					Description of share-option plan
The fair value of each option award is estimated on the date of grant using an option valuation model based on the assumptions noted in the following table.					
		2022	2021	Explanation of valuation model	
Expected volatility		25%–40%	24%–38%		
Weighted-average volatility		33%	30%		
Expected dividends		1.5%	1.5%		
Expected term (in years)		5.3–7.8	5.5–8.0		
Risk-free rate		6.3%–11.2%	6.0%–10.0%		
A summary of option activity under the Plan as of December 31, 2022, and changes during the year then ended, is presented below.					Number and weighted-average exercise prices for share options
Options	Shares (000)	Weighted-Average Exercise Price	Weighted-Average Remaining Contractual Term	Aggregate Intrinsic Value (\$000)	
Outstanding at January 1, 2022	4,660	42			
Granted	950	60			
Exercised	(800)	36			
Forfeited or expired	(80)	59			
Outstanding at December 31, 2022	4,730	47	6.5	85,140	
Exercisable at December 31, 2022	3,159	41	4.0	75,816	
The weighted-average grant-date fair value of options granted during the years 2022 and 2021 was \$19.57 and \$17.46, respectively. The total intrinsic value of options exercised during the years ended December 31, 2022 and 2021, was \$25.2 million and \$20.9 million, respectively.					
As of December 31, 2022, there was \$25.9 million of total unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the Plan. That cost is expected to be recognized over a weighted-average period of 4.9 years. The total fair value of shares vested during the years ended December 31, 2022 and 2021, was \$22.8 million and \$21 million, respectively.					
Restricted-Share Awards					Description of restricted-share plan
The Company also has a restricted-share plan. The Plan is intended to retain and motivate the Company's Chief Executive Officer over the term of the award and to bring the total compensation package closer to median levels for Chief Executive Officers of comparable companies. The fair value of grants during the year was \$1,889,000, or \$35.68 per share, equivalent to 92% of the market price of a share of the Company's Ordinary Shares on the date the award was granted.					
Restricted-share activity for the year ended 2022 is as follows.					
	Shares	Price			
Outstanding at December 31, 2021	57,990	—			
Granted	149,000	\$12.68			
Vested	(19,330)	—			
Forfeited	—	—			
Outstanding at December 31, 2022	187,660

Basic Earnings per Share

LEARNING OBJECTIVE 4

Compute basic earnings per share.

The financial press frequently reports earnings per share data. Further, shareholders and potential investors widely use this data in evaluating the profitability of a company. **Earnings per share** indicates the income earned by each ordinary share. Thus,

companies report earnings per share only for ordinary shares. For example, if Oscar SA has net income of €300,000 and a weighted average of 100,000 ordinary shares outstanding for the year, earnings per share is €3 ($€300,000 \div 100,000$). Because of the importance of earnings per share information, companies must report this information on the face of the income statement. [8] The exception, due to the cost constraint, is non-public companies.¹¹ Generally, companies report earnings per share information below net income in the income statement. [Illustration 16.12](#) shows Oscar SA's income statement presentation of earnings per share.

Net income	<u>€300,000</u>
Earnings per share	<u>€3.00</u>

[ILLUSTRATION 16.12](#) Income Statement Presentation of EPS

When the income statement contains discontinued operations, companies are required to report earnings per share from continuing and discontinued operations and net income on the face of the income statement. The presentation in [Illustration 16.13](#) is representative.

Earnings per share:	
Income from continuing operations	€4.00
Loss from discontinued operations, net of tax	0.60
Net income	<u>€3.40</u>

[ILLUSTRATION 16.13](#) Income Statement Presentation of EPS Components

These disclosures enable the user of the financial statements to compare performance between different companies in the same reporting period and between different reporting periods for the same company. Even though earnings per share data have limitations because of the different accounting policies that may be used for determining “earnings,” a consistently determined denominator enhances financial reporting. [9]

Earnings per Share—Simple Capital Structure

A company's capital structure is **simple** if it consists only of ordinary shares or includes no potential ordinary shares that upon conversion or exercise could dilute earnings per ordinary share. In this case, a company reports **basic earnings per share (EPS)**. A capital structure is **complex** if it includes securities (potential ordinary shares) that could have a dilutive effect on earnings per ordinary share.¹² In this situation, a company reports both basic and **diluted earnings per share (EPS)**.

The computation of basic earnings per share for a simple capital structure involves two items (other than net income): (1) preference share dividends and (2) weighted-average ordinary shares outstanding.

Preference Share Dividends

As we indicated earlier, earnings per share relates to earnings per ordinary share. When a company has both ordinary and preference shares outstanding, **it subtracts the current-year preference share dividend from net income to arrive at income available to**

ordinary shareholders. [Illustration 16.14](#) shows the formula for computing earnings per share.

$$\text{Earnings per Share} = \frac{\text{Net Income} - \text{Preference Dividends}}{\text{Weighted-Average Ordinary Shares Outstanding}}$$

ILLUSTRATION 16.14 Formula for Computing Earnings per Share

In reporting earnings per share information, a company must calculate income available to ordinary shareholders. To do so, the company subtracts dividends on preference shares from income from continuing operations and net income. If a company declares dividends on preference shares and a net loss occurs, **the company adds the preference dividend to the loss** (thereby increasing the amount of the loss) for purposes of computing the loss per share.

If the preference shares are cumulative and the company declares no dividend in the current year, it subtracts (or adds) **an amount equal to the dividend that it should have declared for the current year only** from net income (or to the loss). The company should have included dividends in arrears for previous years in the previous years' computations.¹³

Weighted-Average Ordinary Shares Outstanding

In all computations of earnings per share, the **weighted-average ordinary shares outstanding** during the period constitutes the basis for the per share amounts reported. Shares issued or purchased during the period affect the amount outstanding. Companies must **weight the shares by the fraction of the period they are outstanding**. The rationale for this approach is to find the equivalent number of whole shares outstanding for the year.

To illustrate, assume that Franks Inc. has changes in its ordinary shares outstanding for the period, as shown in [Illustration 16.15](#).

Date	Share Changes	Shares Outstanding
Jan. 1	Beginning balance	90,000
Apr. 1	Issued 30,000 shares for cash	30,000
		120,000
July 1	Purchased 39,000 shares	(39,000)
		81,000
Nov. 1	Issued 60,000 shares for cash	60,000
Dec. 31	Ending balance	141,000

ILLUSTRATION 16.15 Shares Outstanding, Ending Balance—Franks Inc.

Franks computes the weighted-average ordinary shares outstanding as shown in [Illustration 16.16](#).

	(A)	(B)	(C)
Dates Outstanding	Shares Outstanding	Fraction of Year	Weighted Shares (A × B)
Jan. 1–Apr. 1	90,000	3/12	22,500
Apr. 1–July 1	120,000	3/12	30,000
July 1–Nov. 1	81,000	4/12	27,000
Nov. 1–Dec. 31	141,000	2/12	23,500
Weighted-average ordinary shares outstanding			<u>103,000</u>

ILLUSTRATION 16.16 Weighted-Average Ordinary Shares Outstanding

As [Illustration 16.16](#) shows, 90,000 shares were outstanding for three months, which translates to 22,500 whole shares for the entire year. Because Franks issued additional shares on April 1, it must weight these shares for the time outstanding. When the company purchased 39,000 shares on July 1, it reduced the shares outstanding. Therefore, from July 1 to November 1, only 81,000 shares were outstanding, which is equivalent to 27,000 shares. The issuance of 60,000 shares increases shares outstanding for the last two months of the year. Franks then makes a new computation to determine the proper weighted shares outstanding.

Share Dividends and Share Splits

When **share dividends** or **share splits** occur, companies need to restate the shares outstanding before the share dividend or split, in order to compute the weighted-average ordinary shares. For example, assume that Vijay Ltd. had 100,000 shares outstanding on January 1 and issued a 25 percent share dividend on June 30. For purposes of computing a weighted average for the current year, it assumes the additional 25,000 shares outstanding as a result of the share dividend to be **outstanding since the beginning of the year**. Thus, the weighted average for the year for Vijay is 125,000 shares.

Companies restate the issuance of a share dividend or share split, but not the issuance or repurchase of shares for cash. Why? Because share splits and share dividends do not increase or decrease the net assets of the company. The company merely issues additional shares. Because of the added shares, it must restate the weighted-average shares. Restating allows valid comparisons of earnings per share between periods before and after the share split or share dividend. Conversely, the issuance or purchase of shares for cash **changes the amount of net assets**. As a result, the company earns more, or less, in the future because of this change in net assets. Stated another way, **a share dividend or split does not change the shareholders' total investment**—it only increases (unless it is a reverse share split) the number of ordinary shares representing this investment.

To illustrate how a share dividend affects the computation of the weighted-average ordinary shares outstanding, assume that Sabrina Company has the following changes in its ordinary shares during the year, as shown in [Illustration 16.17](#).

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	100,000
March 1	Issued 20,000 shares for cash	20,000
		120,000
June 1	60,000 additional shares (50% share dividend)	60,000
		180,000
November 1	Issued 30,000 shares for cash	30,000
December 31	Ending balance	210,000

ILLUSTRATION 16.17 Shares Outstanding, Ending Balance—Sabrina Company

Sabrina computes the weighted-average ordinary shares outstanding as shown in **Illustration 16.18**.

	(A)	(B)	(C)	(D)
Dates Outstanding	Shares Outstanding	Restatement	Fraction of Year	Weighted Shares (A × B × C)
Jan. 1–Mar. 1	100,000	1.50	2/12	25,000
Mar. 1–June 1	120,000	1.50	3/12	45,000
June 1–Nov. 1	180,000		5/12	75,000
Nov. 1–Dec. 31	210,000		2/12	35,000
Weighted-average ordinary shares outstanding				180,000

ILLUSTRATION 16.18 Weighted-Average Ordinary Shares Outstanding—Share Issue and Share Dividend

Sabrina must restate the shares outstanding prior to the share dividend. The company adjusts the shares outstanding from January 1 to June 1 for the share dividend, so that it now states these shares on the same basis as shares issued subsequent to the share dividend. Sabrina does not restate shares issued after the share dividend because they are on the new basis. The share dividend simply restates existing shares. **The same type of treatment applies to a share split.**

If a share dividend or share split occurs after the end of the year but before the financial statements are authorized for issuance, the company must restate the weighted-average ordinary shares outstanding for the year (and any other years presented in comparative form). For example, assume that Hendricks Company computes its weighted-average ordinary shares as 100,000 for the year ended December 31, 2022. On January 15, 2023, before authorizing the issuance of the financial statements, the company splits its shares 3 for 1. In this case, the weighted-average ordinary shares used in computing earnings per share for 2022 is now 300,000 shares. If Hendricks provides earnings per share information for 2021 as comparative information, Hendricks must also adjust it for the share split.

Comprehensive Example

Let's study a comprehensive illustration for a simple capital structure. Diaz SA has income from continuing operations of R\$580,000 and a gain on discontinued operations, net of tax, of R\$240,000. In addition, it has declared preference dividends of R\$1 per share on 100,000 shares of preference shares outstanding. Diaz also has the following changes in its ordinary shares outstanding during 2022, as shown in [Illustration 16.19](#).

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	180,000
May 1	Purchased 30,000 treasury shares	<u>30,000</u>
		150,000
July 1	300,000 additional shares (3-for-1 share split)	<u>540,000</u>
		690,000
December 31	Issued 50,000 shares for cash	<u>50,000</u>
December 31	Ending balance	<u>740,000</u>

ILLUSTRATION 16.19 Shares Outstanding, Ending Balance—Diaz SA

To compute the earnings per share information, Diaz determines the weighted-average ordinary shares outstanding as shown in [Illustration 16.20](#).

	(A)	(B)	(C)	(D)
Dates Outstanding	Shares Outstanding	Restatement	Fraction of Year	Weighted Shares (A × B × C)
Jan. 1–May 1	180,000	3	4/12	180,000
May 1–July 1	150,000	3	2/12	75,000
July 1–Dec. 31	690,000		6/12	<u>225,000</u>
Weighted-average ordinary shares outstanding				<u>480,000</u>

ILLUSTRATION 16.20 Weighted-Average Ordinary Shares Outstanding

In computing the weighted-average ordinary shares, the company ignores the shares sold on December 31, 2022, because they have not been outstanding during the year. Diaz then divides the weighted-average ordinary shares into income from continuing operations and net income to determine earnings per share. It subtracts its preference dividends of R\$100,000 from income from continuing operations (R\$580,000) to arrive at income from continuing operations available to ordinary shareholders of R\$480,000 (R\$580,000 – R\$100,000).

Deducting the preference dividends from the income from continuing operations also reduces net income without affecting the gain on discontinued operations. The final amount is referred to as **income available to ordinary shareholders**, as shown in [Illustration 16.21](#).

	(A)	(B)	(C)
	Income Information	Weighted Shares	Earnings per Share (A ÷ B)
Income from continuing operations available to ordinary shareholders	R\$480,000*	480,000	R\$1.00
Gain on discontinued operations (net of tax)	240,000	480,000	0.50
Income available to ordinary shareholders	<u>R\$720,000</u>	480,000	<u>R\$1.50</u>

*R\$580,000 – R\$100,000

ILLUSTRATION 16.21 Computation of Income Available to Ordinary Shareholders

Diaz must disclose the per share amount for gain on discontinued operations (net of tax) either on the face of the income statement or in the notes to the financial statements.

Illustration 16.22 shows the income and per share information reported on the face of Diaz's income statement.

Income from continuing operations	R\$580,000
Gain on discontinued operations, net of tax	240,000
Net income	<u>R\$820,000</u>
Earnings per share:	
Income from continuing operations (R\$580,000 – R\$100,000)	R\$1.00
Gain on discontinued operations, net of tax	<u>0.50</u>
Net income	<u>R\$1.50</u>

ILLUSTRATION 16.22 Earnings per Share, with Gain on Discontinued Operations

Diluted Earnings per Share

LEARNING OBJECTIVE 5

Compute diluted earnings per share.

The EPS discussion to this point applies to **basic EPS** for a simple capital structure. One problem with a **basic EPS** computation is that it fails to recognize the potential impact of a company's dilutive securities. As discussed at the beginning of the chapter, **dilutive securities** are securities that can be converted to ordinary shares.¹⁴ Upon conversion or exercise by the holder, the dilutive securities reduce (dilute) earnings per share. This adverse effect on EPS can be significant and, more importantly, *unexpected* unless financial statements call attention to their potential dilutive effect.

As indicated earlier, a **complex capital structure** exists when a company has convertible securities, options, warrants, or other rights that upon conversion or exercise could dilute earnings per share. When a company has a complex capital structure, **it reports both basic and diluted earnings per share.**

Computing **diluted EPS** is similar to computing basic EPS. The difference is that diluted EPS includes the effect of all potential dilutive ordinary shares that were outstanding during the period. The formula in **Illustration 16.23** shows the relationship between basic EPS and diluted EPS.

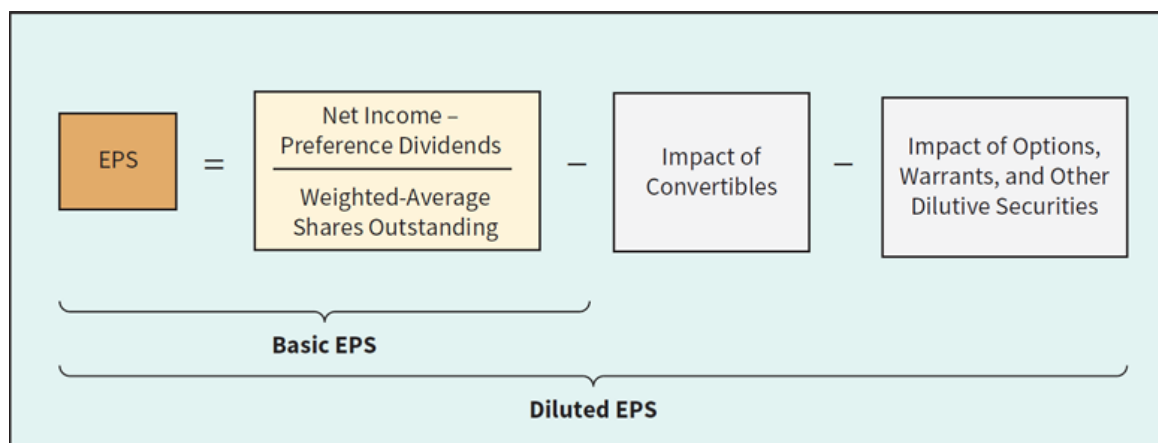

ILLUSTRATION 16.23 Relation between Basic and Diluted EPS

Some securities are antidilutive. **Antidilutive securities** are securities that upon conversion or exercise **increase** earnings per share (or reduce the loss per share). Companies with complex capital structures will not report diluted EPS if the securities in their capital structure are antidilutive. The purpose of presenting both basic and diluted EPS is to inform financial statement users of situations that will likely occur (basic EPS) and also to provide “worst case” dilutive situations (dilutive EPS). If the securities are antidilutive, the likelihood of conversion or exercise is considered remote. Thus, companies that have only antidilutive securities must report only the basic EPS number. We illustrated the computation of basic EPS in the prior section. In the following sections, we address the effects of convertible and other dilutive securities on EPS calculations.

Diluted EPS—Convertible Securities

At conversion, companies exchange convertible securities for ordinary shares. Companies measure the dilutive effects of potential conversion on EPS using the **if-converted method**. This method for a convertible bond assumes (1) the conversion of the convertible securities at the beginning of the period (or at the time of issuance of the security, if issued during the period), and (2) the elimination of related interest, net of tax. Thus, the additional shares assumed issued increase the **denominator**—the weighted-average ordinary shares outstanding. The amount of interest expense, net of tax, increases the **numerator**—net income.

Comprehensive Example—If-Converted Method

As an example, Mayfield Ltd. has net income of £210,000 for the year and 100,000 weighted-average ordinary shares outstanding during the same period. The basic earnings per share is therefore £2.10 (£210,000 ÷ 100,000). The company has two convertible debenture bond issues outstanding. One is a 6 percent issue sold at 100 (total £1,000,000) in a prior year and convertible into 20,000 ordinary shares. Interest expense for the current year related to the liability component of this convertible bond is £62,000.¹⁵ The other is a 7

percent issue sold at 100 (total £1,000,000) on April 1 of the current year and convertible into 32,000 ordinary shares. Interest expense for the first full year related to the liability component of this convertible bond is £80,000. The tax rate is 40 percent.

As [Illustration 16.24](#) shows, to determine the numerator for diluted earnings per share, Mayfield adds back the interest on the if-converted securities, less the related tax effect. Because the if-converted method assumes conversion as of the beginning of the year, Mayfield assumes that it pays no interest on the convertibles during the year. The effective interest on the 6 percent convertibles is £62,000 for the year. The increased tax expense is £24,800 ($£62,000 \times 0.40$). The interest added back net of taxes is £37,200 ($£62,000 - £24,800$) or simply $£62,000 \times (1 - 0.40)$.

Net income for the year	£210,000
Add: Adjustment for interest (net of tax)	
6% debentures ($£62,000 \times [1 - .40]$)	37,200
7% debentures ($£80,000 \times 9/12 \times [1 - .40]$)	36,000
Adjusted net income	£283,200

ILLUSTRATION 16.24 Computation of Adjusted Net Income

Continuing with the information in [Illustration 16.24](#), because Mayfield issues 7 percent convertibles subsequent to the beginning of the year, it weights the shares. In other words, it considers these shares to have been outstanding from April 1 to the end of the year. As a result, the interest adjustment to the numerator for these bonds reflects the interest for only nine months. Thus, the interest added back on the 7 percent convertible is £36,000 [$£80,000 \times 9/12 \text{ year} \times (1 - 0.4)$]. The final item in [Illustration 16.24](#) shows the adjusted net income. This amount becomes the numerator for Mayfield's computation of diluted earnings per share.

Mayfield then calculates the weighted-average ordinary shares outstanding, as shown in [Illustration 16.25](#). This number of shares becomes the denominator for Mayfield's computation of diluted earnings per share.

Weighted-average ordinary shares outstanding	100,000
Add: Shares assumed to be issued:	
6% debentures (as of beginning of year)	20,000
7% debentures (as of date of issue, April 1; $9/12 \times 32,000$)	24,000
Weighted-average ordinary shares adjusted for dilutive securities	144,000

ILLUSTRATION 16.25 Computation of Weighted-Average Ordinary Shares

In its income statement, Mayfield reports basic and diluted earnings per share.¹⁶ [Illustration 16.26](#) shows this dual presentation.

Net income for the year	<u>£210,000</u>
Earnings per Share (Note X)	
Basic earnings per share ($£210,000 \div 100,000$)	<u>£2.10</u>
Diluted earnings per share ($£283,200 \div 144,000$)	<u>£1.97</u>

ILLUSTRATION 16.26 Earnings per Share Disclosure

Other Factors

The conversion rate on a dilutive security may change during the period in which the security is outstanding. For the diluted EPS computation in such a situation, the **company uses the most dilutive conversion rate available**. [10] For example, assume that a company issued a convertible bond on January 1, 2020, with a conversion rate of 10 ordinary shares for each bond starting January 1, 2022. Beginning January 1, 2023, the conversion rate is 12 ordinary shares for each bond. Beginning January 1, 2029, it is 15 ordinary shares for each bond. In computing diluted EPS in 2020, the company uses the conversion rate of 15 shares to one bond.

Another issue relates to preference shares. For example, assume that Mayfield's 6 percent convertible debentures were instead 6 percent convertible **preference shares**. In that case, Mayfield considers the convertible preference shares as potential ordinary shares. Thus, it includes them in its diluted EPS calculations as shares outstanding. The company does not subtract preference dividends from net income in computing the numerator. Why not? Because for computing EPS, the company assumes conversion of the convertible preference shares to outstanding ordinary shares, and no preference dividends would have been paid. The company uses net income as the numerator—it computes **no tax effect** because preference dividends generally are not tax-deductible.

Diluted EPS—Options and Warrants

A company includes in diluted earnings per share all share options and warrants outstanding (whether or not presently exercisable), unless they are antidilutive. Companies use the **treasury-share method** to include options and warrants and their equivalents in EPS computations.

The treasury-share method assumes that the options or warrants are exercised at the beginning of the year (or date of issue if later) and that the company uses those proceeds to purchase ordinary shares for the treasury. If the exercise price is lower than the market price of the shares, then the proceeds from exercise are insufficient to buy back all the shares. The company then adds the incremental shares remaining to the weighted-average ordinary shares outstanding for purposes of computing diluted earnings per share.

For example, if the exercise price of a warrant is €5 and the fair value of the shares is €15, the treasury-share method increases the shares outstanding. Exercise of the warrant results in one additional share outstanding, but the €5 received for the one share issued is insufficient to purchase one share in the market at €15. The company needs to exercise three warrants (and issue three additional shares) to produce enough money (€15) to acquire one share in the market. Thus, a net increase of two shares outstanding results.

To see this computation using larger numbers, assume 1,500 options outstanding at an exercise price of €30 for an ordinary share and a market price per ordinary share of €50. Through application of the treasury-share method, the company would have 600 incremental shares outstanding, computed as shown in [Illustration 16.27](#).¹⁷

Proceeds from exercise of 1,500 options ($1,500 \times €30$)	<u>€45,000</u>
Shares issued upon exercise of options	1,500
Treasury shares purchasable with proceeds ($€45,000 \div €50$)	(900)
Incremental shares outstanding (potential ordinary shares)	<u>600</u>

ILLUSTRATION 16.27 Computation of Incremental Shares

Thus, if the exercise price of the option or warrant is **lower** than the market price of the shares, dilution occurs. An exercise price of the option or warrant **higher** than the market price of the shares reduces ordinary shares. In this case, the options or warrants are **antidilutive** because their assumed exercise leads to an increase in earnings per share.

For both options and warrants, exercise is assumed only if the average market price of the share exceeds the exercise price during the reported period.¹⁸ As a practical matter, a simple average of the weekly or monthly prices is adequate, so long as the prices do not fluctuate significantly.

Comprehensive Example—Treasury-Share Method

To illustrate application of the treasury-share method, assume that Kubitz Industries has net income for the period of ₪220,000. The average number of shares outstanding for the period was 100,000 shares. Hence, basic EPS—ignoring all dilutive securities—is ₪2.20. The average number of shares related to options outstanding (although not exercisable at this time), at an option price of ₪20 per share, is 5,000 shares. The average market price of the ordinary shares during the year was ₪28. [Illustration 16.28](#) shows the computation of EPS using the treasury-share method.

	Basic Earnings per Share	Diluted Earnings per Share
Average number of shares related to options outstanding:		5,000
Option price per share		× ₹20
Proceeds upon exercise of options		<u>₹100,000</u>
Average market price of ordinary shares		₹28
Treasury shares that could be repurchased with proceeds (₹100,000 ÷ ₹28)		<u>3,571</u>
Excess of shares under option over the treasury shares that could be repurchased (5,000 – 3,571)—potential ordinary incremental shares		1,429
Average number of ordinary shares outstanding	<u>100,000</u>	<u>100,000</u>
Total average number of ordinary shares outstanding and potential ordinary shares	<u>100,000 (A)</u>	<u>101,429 (C)</u>
Net income for the year	<u>₹220,000</u> (B)	<u>₹220,000</u> (D)
Earnings per share	<u>₹2.20 (B ÷ A)</u>	<u>₹2.17 (D ÷ C)</u>

ILLUSTRATION 16.28 Computation of Earnings per Share—Treasury-Share Method

Contingently Issuable Shares

Contingently issuable ordinary shares are defined as ordinary shares issuable for little or no cash consideration upon satisfaction of specified conditions in a contingent share agreement. For example, in business combinations, the acquirer may agree to issue additional shares—contingently issuable shares—under certain circumstances. Companies generally issue these contingent shares based on a measure such as attainment of a certain earnings or market price level. The basic rule is that the number of contingent shares to be included in diluted earnings per share is based on the number of shares that would be issuable if the end of the period were the end of the contingency period.¹⁹ [11]

For example, assume that Watts Corporation purchases Cardoza SA in 2021 and agrees to give Cardoza's shareholders 20,000 additional shares in 2024 if Cardoza's net income in 2023 is R\$90,000. Here is what happens in the next two years:

1. In 2022, Cardoza's net income is R\$100,000. Cardoza therefore has met the net income test in 2022 and **should include** the 20,000 shares in diluted earnings per share for 2022.
2. In 2023, Cardoza's net income is R\$80,000. Cardoza therefore does not meet the earnings test in 2023 and **should not** include the shares in diluted earnings per share in 2023.

Because Cardoza's earnings in 2022 may change in 2023, the calculation of basic EPS does not include contingent shares until the end of the contingency period because not all conditions have been satisfied.

Antidilution Revisited

In computing diluted EPS, a company must consider the aggregate of all dilutive securities. But first it must determine which potentially dilutive securities are in fact individually dilutive and which are antidilutive. **A company should exclude any security that is antidilutive**, nor can the company use such a security to offset dilutive securities.

Recall that including antidilutive securities in earnings per share computations increases earnings per share (or reduces net loss per share). With options or warrants, whenever the exercise price exceeds the market price, the security is antidilutive. Convertible debt is antidilutive if the addition to income of the interest (net of tax) causes a greater percentage increase in income (numerator) than the conversion of the bonds causes a percentage increase in ordinary and potentially dilutive shares (denominator). In other words, convertible debt is antidilutive if conversion of the security causes ordinary share earnings to increase by an amount per additional ordinary share that is greater than the amount of earnings per share before the conversion.

To illustrate, assume that Martin Corporation has a \$1,000,000 debt issue that is convertible into 10,000 ordinary shares. Interest expense on the liability component of this convertible bond is \$60,000. Net income for the year is \$210,000, the weighted-average number of ordinary shares outstanding is 100,000 shares, and the tax rate is 40 percent. In this case, assumed conversion of the debt into ordinary shares at the beginning of the year requires the following adjustments of net income and the weighted-average number of shares outstanding, as shown in [Illustration 16.29](#).

Net income for the year	\$210,000	Average number of shares outstanding	100,000
Add: Adjustment for interest (net of tax) on bonds $\$60,000 \times (1 - .40)$	36,000	Add: Shares issued upon assumed conversion of debt	10,000
Adjusted net income	<u>\$246,000</u>	Average number of ordinary and potential ordinary shares	<u>110,000</u>
Basic EPS = $\$210,000 \div 100,000 = \2.10			
Diluted EPS = $\$246,000 \div 110,000 = \$2.24 = \text{Antidilutive}$			

[ILLUSTRATION 16.29](#) Test for Antidilution

As a shortcut, Martin can also identify the convertible debt as antidilutive by comparing the EPS resulting from conversion, \$3.60 ($\$36,000$ additional earnings \div 10,000 additional shares), with EPS before inclusion of the convertible debt, \$2.10.

Companies should ignore antidilutive securities in all calculations and in computing diluted earnings per share. This approach is reasonable. The accounting profession's intent was to inform the investor of the possible dilution that might occur in reported earnings per share and not to be concerned with securities that, if converted or exercised, would result in an increase in earnings per share. [Appendix 16B](#) to this chapter provides an extended example of how companies consider antidilution in a complex situation with multiple securities.

EPS Presentation and Disclosure

A company should present both basic and diluted EPS information as shown in [Illustration 16.30](#).

Earnings per ordinary share	
Basic earnings per share	<u>\$3.30</u>
Diluted earnings per share	<u>\$2.70</u>

[ILLUSTRATION 16.30](#) EPS Presentation—Complex Capital Structure

When the earnings of a period include discontinued operations, a company should show per share amounts for the following: income from continuing operations, discontinued operations, and net income. Companies that report a discontinued operation should present per share amounts **for those line items** either on the face of the income statement or in the notes to the financial statements. [Illustration 16.31](#) shows a presentation reporting discontinued operations.

Basic earnings per share	
Income from continuing operations	\$3.80
Discontinued operations (loss)	<u>(0.80)</u>
Net income	<u>\$3.00</u>
Diluted earnings per share	
Income from continuing operations	\$3.35
Discontinued operations (loss)	<u>(0.65)</u>
Net income	<u>\$2.70</u>

[ILLUSTRATION 16.31](#) EPS Presentation, with Discontinued Operations

The following information should also be disclosed.

1. The amounts used as the numerators in calculating basic and diluted earnings per share, and a reconciliation of those amounts to net income or loss. The reconciliation should include the individual effect of each class of instruments that affects earnings per share.
2. The weighted-average ordinary shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other. The reconciliation should include the individual effect of each class of instruments that affects earnings per share.
3. Instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future but were not included in the calculation of diluted earnings per share because they are antidilutive for the period(s) presented.
4. A description of ordinary share transactions or potential ordinary share transactions that occur after the reporting period and that would have significantly changed the number of ordinary shares or potential ordinary shares outstanding at the end of the period if those transactions had occurred before the end of the reporting period.

Note that if the number of ordinary or potential ordinary shares outstanding increases as a result of a share dividend or share split, or decreases as a result of diluted EPS calculations, such changes in the number of shares should be disclosed (see [Underlying Concepts](#)).

Underlying Concepts

Providing additional EPS information in addition to the presentation on the face of the income statement is an application of the full disclosure principle.

[Illustration 16.32](#) presents the reconciliation and the related disclosure to meet the requirements of this standard. [\[12\]](#)

		For the Year Ended 2022		
		Income (Numerator)	Shares (Denominator)	Per Share Amount
Numerator amounts	Income from continued operations	\$7,500,000		
	Less: Preference share dividends	(45,000)		
Per share calculation	Basic EPS	7,455,000	3,991,666	<u>\$1.87</u>
Potentially dilutive securities shares	Warrants		30,768	
	Convertible preference shares	45,000	308,333	
	Convertible bonds (net of tax)	60,000	50,000	
Reconciliation schedule	Diluted EPS	<u>\$7,560,000</u>	<u>4,380,767</u>	<u>\$1.73</u>
Share options to purchase 1,000,000 shares of ordinary shares at \$85 per share were outstanding during the second half of 2022 but were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the ordinary shares. The options were still outstanding at the end of year 2022 and expire on June 30, 2032.				

[ILLUSTRATION 16.32](#) Reconciliation for Basic and Diluted EPS

Summary of EPS Computation

Computation of earnings per share is a complex issue. It is also a controversial area because many securities, although technically not ordinary shares, have many of their basic characteristics. Indeed, some companies have issued these other securities rather than ordinary shares in order to avoid an adverse dilutive effect on earnings per share.

[Illustrations 16.33](#) and [16.34](#) display the elementary points of calculating earnings per share in a simple capital structure and in a complex capital structure.

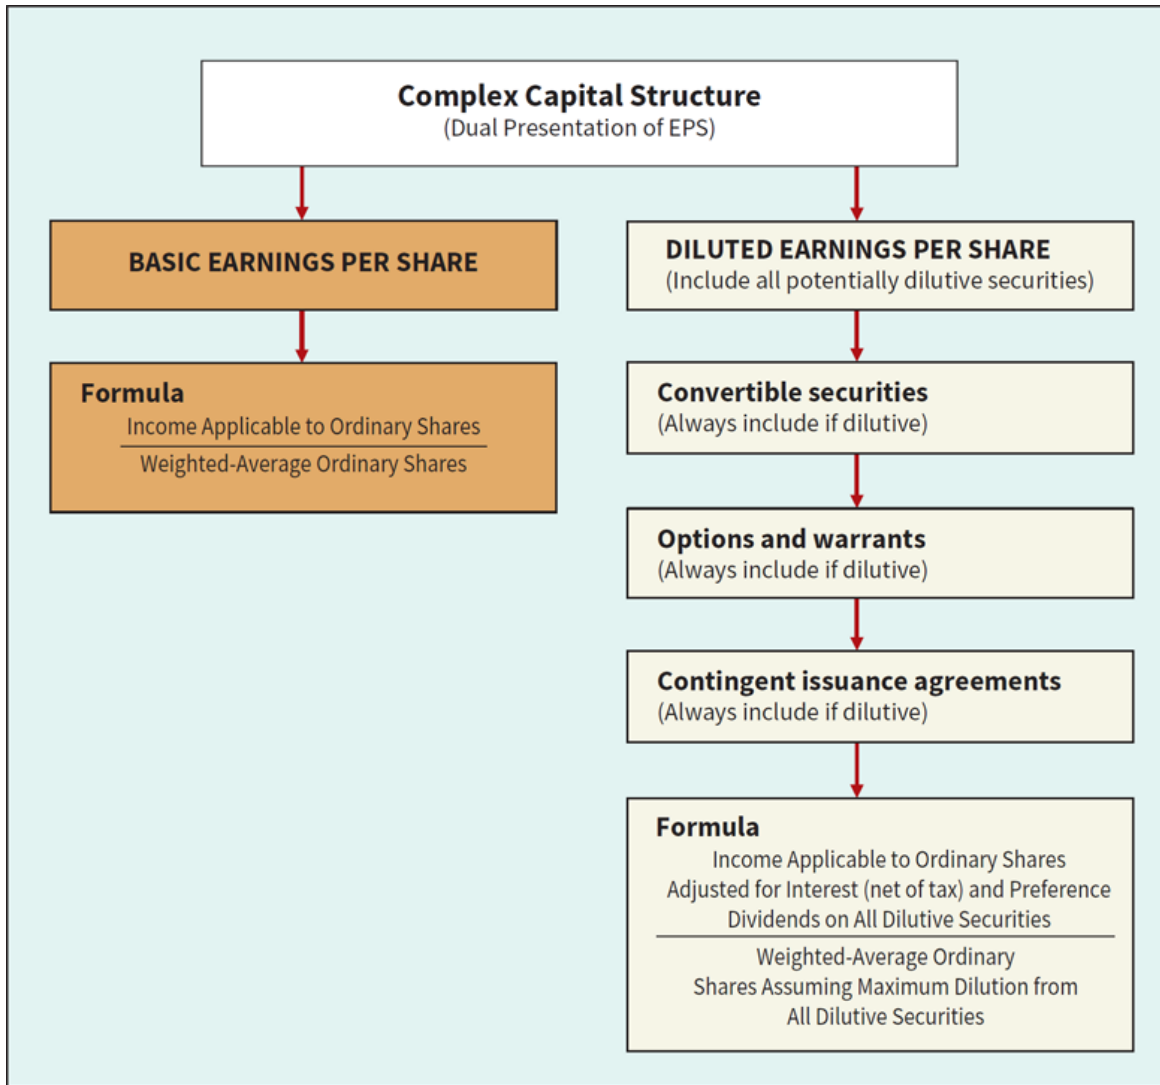

ILLUSTRATION 16.34 Calculating EPS, Complex Capital Structure

APPENDIX 16A

Accounting for Share-Appreciation Rights

LEARNING OBJECTIVE *6

Explain the accounting for share-appreciation rights plans.

A major disadvantage of many share-option plans is that an executive must pay income tax on the difference between the market price of the share and the option price at the **date of exercise**. This feature of share-option plans (those referred to as **non-qualified**) could be a financial hardship for an executive who wishes to keep the shares (rather than sell them immediately) because he or she would have to pay not only income tax but the option price as well. In another type of plan (an **incentive plan**), the executive pays no taxes at exercise but may need to borrow to finance the exercise price, which leads to related interest cost.

One solution to this problem was the creation of **share-appreciation rights (SARs)**. In this type of plan, the company gives an executive the right to receive compensation equal to the share appreciation. **Share appreciation** is the excess of the market price of the shares at the date of exercise over a pre-established price. The company may pay the share appreciation in cash, shares, or a combination of the two.

The major advantage of SARs is that the executive often does not have to make a cash outlay at the date of exercise but receives a payment for the share appreciation. Unlike shares acquired under a share-option plan, the company does not issue the shares that constitute the basis for computing the appreciation in a SARs plan. Rather, the company simply awards the executive cash or shares having a fair value equivalent to the appreciation. The accounting for share-appreciation rights depends on whether the company classifies the rights as equity or as a liability.

SARs—Share-Based Equity Awards

Companies classify SARs as **equity awards** if at the date of exercise the holder receives shares from the company upon exercise.²⁰ In essence, SARs are essentially equivalent to a share option. The major difference relates to the form of payment. With the share option, the holder pays the exercise price and then receives the shares. In an equity SAR, the holder receives shares in an amount equal to the **share-price appreciation** (the difference between the market price and the pre-established price). The accounting for SARs when they are equity awards follows the accounting used for share options. At the date of grant, the company determines a fair value for the SAR and then allocates this amount to compensation expense over the service period of the employees.

SARs—Share-Based Liability Awards

Companies classify SARs as liability awards if at the date of exercise the holder receives a cash payment. In this case, the holder is not receiving additional shares but a cash payment equal to the amount of share-price appreciation. The company's compensation expense therefore changes as the value of the liability changes.

A company uses the following approach to record share-based liability awards:

1. Measure the fair value of the award at the grant date and accrue compensation over the service period.
2. Remeasure the fair value each reporting period until the award is settled; adjust the compensation cost each period for changes in fair value prorated for the portion of the service period completed.
3. Once the service period is completed, determine compensation expense each subsequent period by reporting the full change in market price as an adjustment to compensation expense.

For liability awards, the company estimates the fair value of the SARs using an option-pricing model. The company then allocates this total estimated compensation cost over the service period, recording expense (or a decrease in expense if fair value declines) in each period. At the end of each period, total compensation expense reported to date should equal the percentage of the total service period that has elapsed, multiplied by the total estimated compensation cost.

For example, assume that the service period is 40 percent complete, and total estimated compensation is \$100,000. The company reports cumulative compensation expense to date of \$40,000 ($\$100,000 \times .40$).

The method of allocating compensation expense is called the **percentage approach**. In this method, in the first year of, say, a four-year plan, the company charges one-fourth of the estimated cost to date. In the second year, it charges off two-fourths, or 50 percent, of the estimated cost to date, less the amount already recognized in the first year. In the third year, it charges off three-fourths of the estimated cost to date, less the amount recognized previously. In the fourth year, it charges off the remaining compensation expense.

A special problem arises when the exercise date is past the service period. In the previous example, if the share-appreciation rights were not exercised at the end of four years, in the fifth year the company would have to account for the difference in the market price and the pre-established price. In this case, the company adjusts compensation expense whenever a change in the market price of the shares **occurs in subsequent reporting periods until the rights expire or are exercised, whichever comes first**.

Increases or decreases in the fair value of the SAR between the date of grant and the exercise date, therefore, result in a change in the measure of compensation. Some periods will have credits to compensation expense if the fair value decreases from one period to the next. The credit to compensation expense, however, cannot exceed previously recognized compensation expense. In other words, **cumulative compensation expense cannot be negative**.

Share-Appreciation Rights Example

Assume that Brazil Hotels, SA establishes a share-appreciation rights plan on January 1, 2022. The plan entitles executives to receive cash at the date of exercise for the difference between the share's market price and the pre-established price of R\$10 on 10,000 SARs. The fair value of the SARs on December 31, 2022, is R\$3, and the service period runs for two years (2022–2023). **Illustration 16A.1** indicates the amount of compensation expense to be recorded each period, assuming that the executives hold the SARs for three years, at which time they exercise the rights.

Share-Appreciation Rights Schedule of Compensation Expense							
(1)	(2)	(3)	(4)	(5)			
Date	Fair Value	Cumulative Compensation Recognizable ^a	Percentage Accrued ^b	Cumulative Compensation Accrued to Date	Expense 2022	Expense 2023	Expense 2024
12/31/22	R\$3	R\$30,000	50%	R\$ 15,000	R\$15,000		
				55,000		R\$55,000	
12/31/23	7	70,000	100%	70,000			
				(20,000)			R\$(20,000)
12/31/24	5	50,000	100%	R\$ 50,000			

^aCumulative compensation for unexercised SARs to be allocated to periods of service.

^bThe percentage accrued is based upon a 2-year service period (2022–2023).

ILLUSTRATION 16A.1 Compensation Expense, Share-Appreciation Rights

In 2022, Brazil Hotels records compensation expense of R\$15,000 because 50 percent of the R\$30,000 total compensation cost estimated at December 31, 2022, is allocable to 2022. In 2023, the fair value increased to R\$7 per right (R\$70,000 total). The company recorded additional compensation expense of R\$55,000 (R\$70,000 minus R\$15,000).

The executives held the SARs through 2024, during which time the fair value declined to R\$5 (and the obligation to the executives equals R\$50,000). Brazil Hotels recognizes the decrease by recording a R\$20,000 credit to compensation expense and a debit to Liability under Share-Appreciation Plan. Note that after the service period ends, since the rights are still outstanding, the company adjusts the rights to market at December 31, 2024. Any such credit to compensation expense cannot exceed previous charges to expense attributable to that plan.

As the company records the compensation expense each period, the corresponding credit is to a liability account, because the company will pay the share appreciation in cash. Brazil Hotels records compensation expense in the first year as follows.

Compensation Expense	15,000	
Liability under Share-Appreciation Plan		15,000

The company would credit the liability account for R\$55,000 again in 2023. In 2024, when it records negative compensation expense, Brazil would debit the account for R\$20,000. The entry to record the negative compensation expense is as follows.

Liability under Share-Appreciation Plan	20,000	
Compensation Expense		20,000

At December 31, 2024, the executives receive R\$50,000 (which equals the market price of the shares less the pre-established price). Brazil would remove the liability with the following entry.

--	--	--

Liability under Share-Appreciation Plan	50,000	
Cash		50,000

Compensation expense can increase or decrease substantially from one period to the next. The reason is that compensation expense is remeasured each year, which can lead to large swings in compensation expense.

APPENDIX 16B

Comprehensive Earnings per Share Example

LEARNING OBJECTIVE *7

Compute earnings per share in a complex situation.

This appendix illustrates the method of computing dilution when many securities are involved. In [Illustration 16B.1](#), we present a section of the statement of financial position of Webster Corporation for analysis. Assumptions related to the capital structure follow the statement of financial position.

Webster Corporation Statement of Financial Position (partial) At December 31, 2022	
Equity	
10% cumulative, convertible preference shares, par value \$100; 100,000 shares authorized, 25,000 shares issued and outstanding	\$ 2,500,000
Share capital—ordinary, par value \$1,500,000 shares authorized, 500,000 shares issued and outstanding	500,000
Share premium	2,000,000
Retained earnings	9,000,000
Total equity	<u>\$14,000,000</u>
Long-term debt	
Notes payable, 14%	\$ 1,000,000
Convertible bonds payable (Issue A)	2,500,000
Convertible bonds payable (Issue B)	2,500,000
Total long-term debt	<u>\$ 6,000,000</u>

Notes and Assumptions
December 31, 2022

1. Options were granted in July 2020 to purchase 50,000 ordinary shares at \$20 per share. The average market price of Webster's ordinary shares during 2022 was \$30 per share. All options are still outstanding at the end of 2022.
2. Both convertible bonds were issued in 2021. Each convertible bond is convertible into 40 shares of ordinary shares. (Each bond has a face value of \$1,000.) In 2022, interest expense of \$200,000 on the liability component of convertible bonds (Issue A) is recorded, and interest expense of \$250,000 is recorded on the liability component of convertible bonds (Issue B).
3. The 10 percent cumulative, convertible preference shares were issued at the beginning of 2022 at par. Each preference share is convertible into four ordinary shares.
4. The average income tax rate is 40 percent.
5. The 500,000 ordinary shares were outstanding during the entire year.
6. Preference dividends were not declared in 2022.
7. Net income was \$1,750,000 in 2022.
8. No bonds or preference shares were converted during 2022.

ILLUSTRATION 16B.1 Statement of Financial Position for Comprehensive Illustration

The computation of basic earnings per share for 2022 starts with the amount based upon the weighted-average ordinary shares outstanding, as shown in [Illustration 16B.2](#).

Net income	\$1,750,000
Less: 10% cumulative, convertible preference share dividend requirements	250,000
Income applicable to ordinary shareholders	<u>\$1,500,000</u>
Weighted-average ordinary shares outstanding	<u>500,000</u>
Earnings per ordinary share	<u>\$3.00</u>

ILLUSTRATION 16B.2 Computation of Earnings per Share—Simple Capital Structure

Note the following points concerning this calculation.

1. When preference shares are cumulative, the company subtracts the preference dividend to arrive at income applicable to ordinary shares, whether the dividend is declared or not.
2. The company must compute earnings per share of \$3 as a starting point because it is the per share amount that is subject to reduction due to the existence of convertible securities and options.

Diluted Earnings Per Share

The steps for computing diluted earnings per share are:

1. Determine, for each dilutive security, the per share effect assuming exercise/conversion.
2. Rank the results from Step 1 from smallest to largest earnings effect per share. That is, rank the results from most dilutive to least dilutive.
3. Beginning with the earnings per share based upon the weighted-average of ordinary shares outstanding (\$3), recalculate earnings per share by adding the smallest per share effects from Step 2. If the results from this recalculation are less than \$3, proceed to the next smallest per share effect and recalculate earnings per share. Continue this process so long as each recalculated earnings per share is smaller than the previous amount. The process will end either because there are no more securities to test or a particular security maintains or increases earnings per share (is antidilutive).

We'll now apply the three steps to Webster Corporation. (Note that net income and income available to ordinary shareholders are not the same if preference dividends are declared or cumulative.) Webster Corporation has four securities that could reduce EPS: options, convertible bonds (Issue A), convertible bonds (Issue B), and the convertible preference shares.

The first step in the computation of diluted earnings per share is to determine a per share effect for each potentially dilutive security. [Illustrations 16B.3](#) through [16B.6](#) illustrate these computations.

Number of shares under option	50,000
Option price per share	× \$20
Proceeds upon assumed exercise of options	<u>\$1,000,000</u>
Average 2022 market price of ordinary shares	<u>\$30</u>
Treasury shares that could be acquired with proceeds (\$1,000,000 ÷ \$30)	<u>33,333</u>
Excess of shares under option over treasury shares that could be repurchased (50,000 – 33,333)	<u>16,667</u>
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\text{None}}{16,667 \text{ shares}} =$	<u>\$0</u>

ILLUSTRATION 16B.3 Per Share Effect of Options (Treasury-Share Method), Diluted Earnings per Share

Interest expense on bonds (Issue A) for year	\$200,000
Income tax reduction due to interest (.40 × \$200,000)	<u>80,000</u>
Interest expense avoided (net of tax)	<u>\$120,000</u>
Number of ordinary shares issued assuming conversion of bonds (2,500 bonds × 40 shares)	<u>100,000</u>
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$120,000}{100,000 \text{ shares}} =$	<u>\$1.20</u>

ILLUSTRATION 16B.4 Per Share Effect of Issue A Bonds (If-Converted Method), Diluted Earnings per Share

Interest expense on bonds (Issue B) for year	\$250,000
Income tax reduction due to interest (.40 × \$250,000)	<u>100,000</u>
Interest expense avoided (net of tax)	<u>\$150,000</u>
Number of ordinary shares issued assuming conversion of bonds (2,500 bonds × 40 shares)	<u>100,000</u>
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$150,000}{100,000 \text{ shares}} =$	<u>\$1.50</u>

ILLUSTRATION 16B.5 Per Share Effect of Issue B Bonds (If-Converted Method), Diluted Earnings per Share

Dividend requirement on cumulative preference share (25,000 shares × \$10)	\$250,000
Income tax effect (dividends not a tax deduction)	none
Dividend requirement avoided	\$250,000
Number of ordinary shares issued assuming conversion of preference shares (4 × 25,000 shares)	100,000
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$250,000}{100,000 \text{ shares}} =$	<u>\$2.50</u>

ILLUSTRATION 16B.6 Per Share Effect of 10% Convertible Preference Shares (If-Converted Method), Diluted Earnings per Share

Illustration 16B.7 shows the ranking of all four potentially dilutive securities.

	Effect per Share
1. Options	\$ 0
2. Convertible bonds (Issue A)	1.20
3. Convertible bonds (Issue B)	1.50
4. 10% convertible preference	2.50

ILLUSTRATION 16B.7 Ranking of Per Share Effects (Smallest to Largest), Diluted Earnings per Share

The next step is to determine earnings per share giving effect to the ranking in [Illustration 16B.7](#). Starting with the earnings per share of \$3 computed previously, add the incremental effects of the options to the original calculation, as shown in [Illustration 16B.8](#).

Options	
Income applicable to ordinary shareholders	\$1,500,000
Add: Incremental numerator effect of options	none
Total	\$1,500,000
Weighted-average ordinary shares outstanding	500,000
Add: Incremental denominator effect of options (Illustration 16B.3)	16,667
Total	516,667
Recomputed earnings per share (\$1,500,000 ÷ 516,667 shares)	<u>\$2.90</u>

ILLUSTRATION 16B.8 Recomputation of EPS Using Incremental Effect of Options

Since the recomputed earnings per share is reduced (from \$3 to \$2.90), the effect of the options is dilutive. Again, we could have anticipated this effect because the average market price (\$30) exceeded the option price (\$20).

Assuming that Webster converts the bonds (Issue A), recomputed earnings per share is as shown in [Illustration 16B.9](#).

Convertible Bonds (Issue A)	
Numerator from previous calculation	\$1,500,000
Add: Interest expense avoided (net of tax)	120,000
Total	<u>\$1,620,000</u>
Denominator from previous calculation (shares)	516,667
Add: Number of ordinary shares assumed issued upon conversion of bonds	100,000
Total	<u>616,667</u>
Recomputed earnings per share ($\$1,620,000 \div 616,667$ shares)	<u><u>\$2.63</u></u>

ILLUSTRATION 16B.9 Recomputation of EPS Using Incremental Effect of Convertible Bonds (Issue A)

Since the recomputed earnings per share is reduced (from \$2.90 to \$2.63), the effect of the bonds (Issue A) is dilutive.

Next, assuming Webster converts the bonds (Issue B), the company recomputes earnings per share as shown in [Illustration 16B.10](#).

Convertible Bonds (Issue B)	
Numerator from previous calculation	\$1,620,000
Add: Interest expense avoided (net of tax)	150,000
Total	<u>\$1,770,000</u>
Denominator from previous calculation (shares)	616,667
Add: Number of ordinary shares assumed issued upon conversion of bonds	100,000
Total	<u>716,667</u>
Recomputed earnings per share ($\$1,770,000 \div 716,667$ shares)	<u><u>\$2.47</u></u>

ILLUSTRATION 16B.10 Recomputation of EPS Using Incremental Effect of Convertible Bonds (Issue B)

Since the recomputed earnings per share is reduced (from \$2.63 to \$2.47), the effect of the convertible bonds (Issue B) is dilutive.

The final step is the recomputation that includes the 10 percent preference shares. This is shown in [Illustration 16B.11](#).

10% Convertible Preference	
Numerator from previous calculation	\$1,770,000
Add: Dividend requirement avoided	250,000
Total	<u>\$2,020,000</u>
Denominator from previous calculation (shares)	716,667
Add: Number of ordinary shares assumed issued upon conversion of preference shares	100,000
Total	<u>816,667</u>
Recomputed earnings per share ($\$2,020,000 \div 816,667$ shares)	<u>\$2.47</u>

ILLUSTRATION 16B.11 Recomputation of EPS Using Incremental Effect of 10% Convertible Preference Shares

Since the recomputed earnings per share is not reduced, the effect of the 10 percent convertible preference shares are not dilutive. Diluted earnings per share is \$2.47. The per share effects of the preference shares are not used in the computation.

Finally, [Illustration 16B.12](#) shows Webster Corporation's disclosure of earnings per share on its income statement.

Net income	<u>\$1,750,000</u>
Basic earnings per ordinary share (Note X)	<u>\$3.00</u>
Diluted earnings per ordinary share	<u>\$2.47</u>

ILLUSTRATION 16B.12 Income Statement Presentation, EPS

A company uses income from continuing operations (adjusted for preference dividends) to determine whether potential ordinary shares are dilutive or antidilutive. Some refer to this measure as the **control number**. To illustrate, assume that Barton Company provides the information as shown in [Illustration 16B.13](#).

Income from continuing operations	\$2,400,000
Loss from discontinued operations	<u>3,600,000</u>
Net loss	<u>\$1,200,000</u>
Weighted-average ordinary shares outstanding	1,000,000
Potential ordinary shares	200,000

ILLUSTRATION 16B.13 Barton Company Data

Barton reports basic and dilutive earnings per share as shown in [Illustration 16B.14](#).

Basic earnings per share	
Income from continuing operations	\$2.40
Loss from discontinued operations	3.60
Net loss	\$1.20
Diluted earnings per share	
Income from continuing operations	\$2.00
Loss from discontinued operations	3.00
Net loss	\$1.00

ILLUSTRATION 16B.14 Basic and Diluted EPS

As this shows, basic earnings per share from continuing operations is higher than the diluted earnings per share from continuing operations. The reason: The diluted earnings per share from continuing operations includes an additional 200,000 shares of potential ordinary shares in its denominator.²¹

Companies use income from continuing operations as the control number because many of them show income from continuing operations (or a similar line item above net income if it appears on the income statement), but report a final net loss due to a loss on discontinued operations. If a company uses final net loss as the control number, basic and diluted earnings per share would be the same because the potential ordinary shares are antidilutive.²²

Learning Objectives Review

1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.

Convertible debt is accounted for as a compound instrument because it contains both a liability and an equity component. IFRS requires that compound instruments be separated into their liability and equity components for purposes of accounting. Companies use the with-and-without method to value compound instruments. If companies convert bonds into other securities, the principal accounting problem is to determine the amount at which to record the securities exchanged for the bonds; the book value method is considered IFRS. The retirement of convertible debt is considered a debt extinguishment, and the difference between the carrying amount of the retired convertible debt and the cash paid should result in a gain or loss.

When convertible preference shares are converted, a company uses the book value approach. It debits Share Capital—Preference, along with the related Share Premium—Conversion Equity, and credits Share Capital—Ordinary and Share Premium—Ordinary (if any excess exists).

2 Describe the accounting for share warrants and for share warrants issued with other securities.

Share warrants: Companies should allocate the proceeds from the sale of debt with warrants between the two securities using the with-and-without method. *Share rights:* No entry is required when a company issues rights to existing shareholders. The company needs only to make a memorandum entry to indicate the number of rights issued to existing shareholders and to ensure that the company has additional unissued shares registered for issuance in case the shareholders exercise the rights.

3 Describe the accounting and reporting for share compensation plans.

Companies must use the fair value approach to account for share-based compensation. Under this approach, a company computes total compensation expense based on the fair value of the options that it expects to vest on the grant date. Companies recognize compensation expense in the periods in which the employee performs the services. Restricted-share plans follow the same general accounting principles as those for share options. Companies estimate total compensation cost at the grant date based on the fair value of the restricted shares; they expense that cost over the service period.

When first proposed, there was considerable opposition to the recognition provisions contained in the fair value approach. The reason: That approach could result in substantial, previously unrecognized compensation expense. Many small companies believed that the standard would place them at a competitive disadvantage with larger companies that can withstand higher compensation charges. Offsetting such opposition is the need for greater transparency in financial reporting, on which our capital markets depend.

4 Compute basic earnings per share.

When a company has both ordinary and preference shares outstanding, it subtracts the current-year preference shares dividend from net income to arrive at income available to ordinary shareholders. The formula for computing earnings per share is net income less preference share dividends, divided by the weighted-average ordinary shares outstanding.

5 Compute diluted earnings per share.

A complex capital structure requires a dual presentation of earnings per share, each with equal prominence on the face of the income statement. These two presentations are referred to as basic earnings per share and diluted earnings per share. Basic earnings per share relies on the number of weighted-average ordinary shares outstanding (i.e., equivalent to EPS for a simple capital structure). Diluted earnings per share indicates the dilution of earnings per share that will occur if all potential issuances of ordinary shares that would reduce earnings per share takes place. Companies with complex capital structures should exclude antidilutive securities when computing earnings per share.

***6 Explain the accounting for share-appreciation rights plans.**

The accounting for share-appreciation rights depends on whether the rights are classified as equity- or liability-based. If equity-based, the accounting is similar to that used for share options. If liability-based, companies remeasure compensation expense each period and allocate it over the service period using the percentage approach.

***7 Compute earnings per share in a complex situation.**

For diluted EPS, make the following computations. (1) For each potentially dilutive security, determine the per share effect assuming exercise/conversion. (2) Rank the results from most dilutive to least dilutive. (3) Recalculate EPS starting with the most dilutive and continue adding securities until EPS does not change or becomes larger.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

On January 1, 2023, Scutaro Company issued 10-year, \$200,000 face value, 6% bonds at par (payable annually on January 1). Each \$1,000 bond is convertible into 30 shares of Scutaro \$2 par value ordinary shares. The company has had 10,000 ordinary shares (and no preference shares) outstanding throughout its life. None of the bonds have been converted as of the end of 2024.

Scutaro also adopted a share-option plan that granted options to key executives to purchase 4,000 shares of the company's ordinary shares. The options were granted on January 2, 2023, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company (the service period is 2 years). The options expire 6 years from the date of grant. The option price was set at \$4, and the fair value option-pricing model determines the total compensation expense to be \$18,000. All of the options were exercised during the year 2025: 3,000 on January 3 when the market price was \$6, and 1,000 on May 1 when the market price was \$7 a share. (Ignore all tax effects.)

Instructions

- Prepare the journal entry Scutaro would have made on January 1, 2023, to record the issuance of the bonds. The fair value of the debt without a conversion option (with an 8% effective rate) is \$173,159.
- Prepare the journal entry to record interest expense and compensation expense in 2024.
- Scutaro's net income was \$30,000 in 2024, and \$27,000 in 2023. Compute basic and diluted earnings per share for Scutaro for 2024 and 2023. Scutaro's average share price was \$4.40 in 2023 and \$5 in 2024.
- Assume that 75 percent of the holders of Scutaro's convertible bonds convert their bonds to shares on January 1, 2025, when Scutaro's shares are trading at \$8 per

share. Scutaro pays \$2 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion.

Solution

- a. Under IFRS, proceeds from the issuance of convertible debt are recorded partly as debt and partly as equity.

Cash	200,000	
Bonds Payable		173,159
Share Premium—Conversion Equity		26,841

<p>*150 bonds \times \$2 per bond = \$300 bond conversion expense **\$200,000 \times .75 = \$150,000 of bonds converted \$150,000 \div \$1,000 per bond = 150 bonds 150 bonds \times 30 shares per bond = 4,500 new shares issued 4,500 shares \times \$2 par value = \$9,000 increase in share account $[(\\$132,760 + \\$20,131) - \\$9,000] = \\$143,891$ increase in share premium account</p>		

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. What is meant by a dilutive security?
2. Briefly explain why companies issue convertible securities.
3. Discuss the similarities between convertible debt and debt issued with share warrants.
4. Bridgewater SA offered holders of its 1,000 convertible bonds a premium of €160 per bond to induce conversion into ordinary shares. Upon conversion of all the bonds, Bridgewater SA recorded the €160,000 premium as a reduction of Share Premium—Ordinary. Comment on Bridgewater's treatment of the €160,000 "sweetener."
5. Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.
6. What are the arguments for giving separate accounting recognition to the conversion feature of a convertible bond?
7. Four years after issue, debentures with a face value of £1,000,000 and book value of £960,000 are tendered for conversion into 80,000 ordinary shares immediately after an interest payment date. At that time, the market price of the debentures is 104, and the ordinary shares are selling at £14 per share (par value £10). The company records the conversion as follows.

Bonds Payable	960,000	
Share Premium—Conversion Equity		10,000
Share Capital—Ordinary		800,000
Share Premium—Ordinary		150,000

Discuss the propriety of this accounting treatment.

8. On July 1, 2022, Roberts AG issued €3,000,000 of 9% bonds payable in 20 years. The bonds include warrants giving the bondholder the right to purchase for €30 one ordinary share of €1 par value at any time during the next 10 years. The bonds were sold for €3,000,000. The net present value of the debt at the time of issuance was €2,900,000. Prepare the journal entry to record this transaction.

9. What are share rights? How does the issuing company account for them?

10. Briefly explain the accounting requirements for share compensation plans under IFRS.

11. Cordero Corporation has an employee share-purchase plan which permits all full-time employees to purchase 10 ordinary shares on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased less a 10% discount. How is this discount accounted for by Cordero?

12. What date or event does the profession believe should be used in determining the value of a share compensation plan? What arguments support this position?

13. Over what period of time should compensation cost for a share-option plan be allocated?

14. How is compensation expense for a share-option plan computed using the fair value approach?

15. What are the advantages of using restricted shares to compensate employees?

16. At December 31, 2022, Ruiz SA had 600,000 ordinary shares issued and outstanding, 400,000 of which had been issued and outstanding throughout the year and 200,000 of which were issued on October 1, 2022. Net income for 2022 was R\$1,750,000, and dividends declared on preference shares were R\$400,000. Compute Ruiz's earnings per ordinary share.

17. What effect do share dividends or share splits have on the computation of the weighted-average ordinary shares outstanding?

18. Define the following terms.

- Basic earnings per share.
- Potentially dilutive security.
- Diluted earnings per share.
- Complex capital structure.
- Potential ordinary shares.

- 19.** What are the computational guidelines for determining whether a convertible security is to be reported as part of diluted earnings per share?
- 20.** Discuss why options and warrants may be considered potentially dilutive ordinary shares for the computation of diluted earnings per share.
- 21.** Explain how convertible securities are determined to be potentially dilutive ordinary shares and how those convertible securities that are not considered to be potentially dilutive ordinary shares enter into the determination of earnings per share data.
- 22.** Explain the treasury-share method as it applies to options and warrants in computing dilutive earnings per share data.
- 23.** Earnings per share can affect market prices of ordinary shares. Can market prices affect earnings per share? Explain.
- 24.** What is meant by the term antidilution? Give an example.
- 25.** What type of earnings per share presentation is required in a complex capital structure?
- *26.** How is antidilution determined when multiple securities are involved?

Brief Exercises

BE16.1 (LO 1) Archer plc issued £4,000,000 par value, 7% convertible bonds at 99 for cash. The net present value of the debt without the conversion feature is £3,800,000. Prepare the journal entry to record the issuance of the convertible bonds.

BE16.2 (LO 1) Petrenko SA has outstanding 2,000 €1,000 bonds, each convertible into 50 shares of €10 par value ordinary shares. The bonds are converted on December 31, 2022. The bonds payable have a carrying value of €1,950,000, and there is conversion equity of €20,000. Record the conversion using the book value method.

BE16.3 (LO 1) Pechstein Corporation issued 2,000 shares of \$10 par value ordinary shares upon conversion of 1,000 shares of \$50 par value preference shares. The preference shares were originally issued at \$60 per share. The ordinary shares are trading at \$26 per share at the time of conversion. Record the conversion of the convertible preference shares.

BE16.4 (LO 2) Eisler Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable share warrant. At issuance, the net present value of the bonds without the warrants was \$1,970,000. Prepare the journal entry to record the issuance of the bonds and the share warrants.

BE16.5 (LO 2) Parsons SpA issued 3,000 €1,000 bonds at 98. Each bond was issued with one detachable share warrant. At issuance, the net present value of the bonds without the warrants was €2,910,000. Prepare the journal entry to record the issuance of the bonds and the share warrants.

BE16.6 (LO 3) On January 1, 2022, Barwood Ltd. granted 5,000 options to executives. Each option entitles the holder to purchase one share of Barwood's £5 par value ordinary shares at £50 per share at any time during the next 5 years. The market price of the shares is £65 per share on the date of grant. The fair value of the options at the grant date is £150,000. The period of benefit is 2 years. Prepare Barwood's journal entries for January 1, 2022, and December 31, 2022 and 2023.

BE16.7 (LO 3) Refer to the data for Barwood Ltd. in BE16.6. Repeat the requirements, assuming that instead of options, Barwood granted 2,000 restricted shares.

BE16.8 (LO 3) On January 1, 2022 (the date of grant), Lutz Corporation issues 2,000 restricted shares to its executives. The fair value of these shares is \$75,000, and their par value is \$10,000. The shares are forfeited if the executives do not complete 3 years of employment with the company. Prepare the journal entry (if any) on January 1, 2022, and on December 31, 2022, assuming the service period is 3 years.

BE16.9 (LO 4) Kalin AG had 2022 net income of €1,000,000. During 2022, Kalin paid a dividend of €2 per share on 100,000 preference shares. During 2022, Kalin had outstanding 250,000 ordinary shares. Compute Kalin's 2022 earnings per share.

BE16.10 (LO 4) Douglas Corporation had 120,000 ordinary shares outstanding on January 1, 2022. On May 1, 2022, Douglas issued 60,000 ordinary shares. On July 1, Douglas purchased 10,000 treasury shares, which were reissued on October 1. Compute Douglas's weighted-average ordinary shares outstanding for 2022.

BE16.11 (LO 4) Tomba Group had 300,000 ordinary shares outstanding on January 1, 2022. On May 1, Tomba issued 30,000 ordinary shares. (a) Compute the weighted-average ordinary shares outstanding if the 30,000 shares were issued for cash. (b) Compute the weighted-average ordinary shares outstanding if the 30,000 shares were issued in a share dividend.

BE16.12 (LO 5) Rockland SA reported net income of R\$300,000 in 2022 and had 100,000 ordinary shares outstanding throughout the year. Also outstanding all year was R\$800,000 of 10% bonds, which are convertible into 16,000 ordinary shares. The interest expense on the liability component of the convertible bonds was R\$64,000. Rockland's tax rate is 40%. Compute Rockland's 2022 diluted earnings per share.

BE16.13 (LO 5) DiCenta AG reported net income of €270,000 in 2022 and had 50,000 ordinary shares outstanding throughout the year. Also outstanding all year were 5,000 shares of cumulative preference shares, each convertible into 2 ordinary shares. The preference shares pay an annual dividend of €5 per share. DiCenta's tax rate is 40%. Compute DiCenta's 2022 diluted earnings per share.

BE16.14 (LO 5) Bedard Ltd. reported net income of 300,000 in 2022 and had 200,000 ordinary shares outstanding throughout the year. Also outstanding all year were 45,000 options to purchase ordinary shares at 10 per share. The average market price of the shares during the year was 15. Compute diluted earnings per share.

BE16.15 (LO 4) The 2022 income statement of Wasmeier SE showed net income of €480,000 and a loss from discontinued operations of €120,000. Wasmeier had 100,000 shares of ordinary shares outstanding all year. Prepare Wasmeier's income statement presentation of earnings per share.

***BE16.16 (LO 6)** Ferraro, Inc. established a share-appreciation rights (SARs) program on January 1, 2022, which entitles executives to receive cash at the date of exercise for the difference between the market price of the shares and the pre-established price of \$20 on 5,000 SARs. The required service period is 2 years. The fair value of the SARs is determined to be \$4 on December 31, 2022, and \$9 on December 31, 2023. Compute Ferraro's compensation expense for 2022 and 2023.

Exercises

E16.1 (LO 1) (Issuance and Repurchase of Convertible Bonds) Angela AG issues 2,000 convertible bonds at January 1, 2022. The bonds have a 3-year life and are issued at par with a face value of €1,000 per bond, giving total proceeds of €2,000,000. Interest is payable annually at 6%. Each bond is convertible into 250 ordinary shares (par value of €1). When the bonds are issued, the market rate of interest for similar debt without the conversion option is 8%.

Instructions

- Compute the liability and equity component of the convertible bond on January 1, 2022.
- Prepare the journal entry to record the issuance of the convertible bond on January 1, 2022.
- Prepare the journal entry to record the repurchase of the convertible bond for cash at January 1, 2025, its maturity date.

E16.2 (LO 1) (Issuance and Repurchase of Convertible Bonds) Assume the same information in [E16.1](#), except that Angela AG converts its convertible bonds on January 1, 2023.

Instructions

- Compute the carrying value of the bond payable on January 1, 2023.
- Prepare the journal entry to record the conversion on January 1, 2023.
- Assume that the bonds were repurchased on January 1, 2023, for €1,940,000 cash instead of being converted. The net present value of the liability component of the convertible bonds on January 1, 2023, is €1,900,000. Prepare the journal entry to record the repurchase on January 1, 2023.

E16.3 (LO 1) (Issuance and Repurchase of Convertible Bonds) On January 1, 2022, Cai Ltd. issued a 10% convertible bond at par, with a face value of ¥100,000, maturing on January 1, 2032 (amounts in thousands). The bond is convertible into ordinary shares of Cai at a conversion price of ¥2,500 per share. Interest is payable annually. At date of issue, Cai could have issued at par non-convertible debt with a 10-year term bearing an interest rate of 11%.

Instructions

- Prepare the journal entry to record the issuance of the convertible debt on January 1, 2022.
- On January 1, 2025, Cai makes a tender offer to the holder of the convertible debt to repurchase the bond for ¥112,000, which the holder accepts. At the date of repurchase, Cai could have issued non-convertible debt with a 7-year term at an effective-interest rate of 8%. Prepare the journal entry to record this repurchase on January 1, 2025.

E16.4 (LO 1) (Issuance, Conversion, Repurchase of Convertible Bonds) On January 1, 2022, Lin plc issued a convertible bond with a par value of £50,000 in the market for £60,000. The bonds are convertible into 6,000 ordinary shares of £1 per share par value. The bond has a 5-year life and has a stated interest rate of 10% payable annually. The market interest rate for a similar non-convertible bond at January 1, 2022, is 8%. The liability component of the bond is computed to be £53,993. The following bond amortization schedule is provided for this bond.

Effective-Interest Method 10% Bond Discounted At 8%				
Date	Cash Paid	Interest Expense	Premium Amortized	Carrying Amount of Bonds
1/1/22				£53,993
12/31/22	£5,000	£4,319	£681	53,312
12/31/23	5,000	4,265	735	52,577
12/31/24	5,000	4,206	794	51,783
12/31/25	5,000	4,143	857	50,926
12/31/26	5,000	4,074	926	50,000

Instructions

- Prepare the journal entry to record the issuance of the convertible bond on January 1, 2022.
- Prepare the journal entry to record the payment of interest on December 31, 2023.
- Assume that the bonds were converted on December 31, 2024. The fair value of the liability component of the bond is determined to be £54,000 on December 31, 2024. Prepare the journal entry to record the conversion on December 31, 2024. Assume that the accrual of interest related to 2024 has been recorded.
- Assume that the convertible bonds were repurchased on December 31, 2024, for £55,500 instead of being converted. As indicated, the liability component of the bond is determined to be £54,000 on December 31, 2024. Assume that the accrual of interest related to 2024 has been recorded.
- Assume that the bonds matured on December 31, 2026, and Lin repurchased the bonds. Prepare the entry or entries to record this transaction.

E16.5 (LO 1) (Conversion of Bonds) Schuss SA issued €3,000,000 of 10%, 10-year convertible bonds on April 1, 2022, at 98. The bonds were dated April 1, 2022, with interest payable April 1 and October 1. Bond discount is amortized semiannually using the effective-interest method. The net present value of the bonds without the conversion feature discounted at 12% (its market rate) was €2,655,888.

On April 1, 2023, €1,000,000 of these bonds were converted into 30,000 shares of €20 par value ordinary shares. Accrued interest was paid in cash at the time of conversion.

Instructions

- Prepare the entry to record the issuance of the convertible bond on April 1, 2022.

- b. Prepare the entry to record the interest expense at October 1, 2022.
- c. Prepare the entry or entries to record the conversion on April 1, 2023. (The book value method is used.)

E16.6 (LO 1) (Conversion of Bonds) Gabel Company has bonds payable outstanding with a carrying value of \$406,000. When issued, Gabel recorded \$3,500 of conversion equity. Each of the 400 \$1,000 bonds is convertible into 20 ordinary shares with par value of \$50 per share. All bonds are converted into ordinary shares.

Instructions

Assuming that the book value method was used, what entry would be made?

E16.7 (LO 1, 2) (Issuance and Conversion of Bonds) For each of the unrelated transactions described below, present the entry or entries required to record each transaction.

1. Coyle SA issued €10,000,000 par value 10% convertible bonds at 99. If the bonds had not been convertible, the company's investment banker determines that they would have been sold at 95.
2. Lambert AG issued €10,000,000 par value 10% bonds at 98. One share warrant was issued with each €100 par value bond. The net present value of the bonds without the warrants was €9,600,000.
3. Sepracor AG called its convertible debt in 2022. Assume the following related to the transaction. The 11%, €10,000,000 par value bonds were converted into 1,000,000 shares of €1 par value ordinary shares on July 1, 2022. The carrying amount of the debt on July 1 was €9,700,000. The Share Premium—Conversion Equity account had a balance of €200,000, and the company paid an additional €75,000 to the bondholders to induce conversion of all the bonds. The company records the conversion using the book value method.

E16.8 (LO 2) (Issuance of Bonds with Share Warrants) Sun Ltd. has decided to raise additional capital by issuing HK\$175,000 face value of bonds with a coupon rate of 10%. In discussions with investment bankers, it was determined that to help the sale of the bonds, share warrants should be issued at the rate of one warrant for each HK\$100 bond sold. The fair value of the bonds without the warrants is HK\$136,000. The proceeds upon issuance of the bonds and warrants was HK\$150,000.

Instructions

- a. What entry should be made at the time of the issuance of the bonds and warrants?
- b. If the warrants were non-detachable, would the entries be different? Discuss.

E16.9 (LO 2) (Issuance of Bonds with Share Warrants) On September 1, 2022, Tokachi Group sold at 104 (plus accrued interest) 30,000 of its 8%, 10-year, ¥10,000 face value, non-convertible bonds with detachable share warrants. Each bond carried two detachable warrants. Each warrant was for one ordinary share at a specified option price of ¥1,500 per share. The net present value of bonds is determined to be ¥290,000,000. Interest is payable on December 1 and June 1.

Instructions

Prepare in general journal format the entry to record the issuance of the bonds.

E16.10 (LO 2) (Issuance of Bonds with Share Warrants) On May 1, 2022, Barkley SA issued 3,000 €1,000 bonds at 102. Each bond was issued with one detachable share warrant. The fair value of the bonds on May 1, 2022, was €2,940,000.

Instructions

- Prepare the entry to record the issuance of the bonds and warrants.
- Assume the same facts as part (a), except that the warrants had an estimated fair value of €25. Prepare the entry to record the issuance of the bonds and warrants.

E16.11 (LO 3) (Issuance and Exercise of Share Options) On November 1, 2021, Olympic plc adopted a share-option plan that granted options to key executives to purchase 40,000 shares of the company's £10 par value ordinary shares. The options were granted on January 2, 2022, and were vested 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from date of grant. The option price was set at £40, and the fair value option-pricing model determines the total compensation expense to be £600,000.

All of the options were exercised during the year 2024: 30,000 on January 3 when the market price was £67, and 10,000 on May 1 when the market price was £77 a share.

Instructions

Prepare journal entries relating to the share-option plan for the years 2022, 2023, and 2024. Assume that the employees perform services equally in 2022 and 2023.

E16.12 (LO 3) (Issuance, Exercise, and Forfeiture of Share Options) On January 1, 2022, Magilla SA granted share options to officers and key employees for the purchase of 20,000 of the company's €10 par ordinary shares at €25 per share. The options were exercisable by grantees still in the employ of the company within a 5-year period, beginning January 1, 2024, and ending December 31, 2028. The service period for this award is 2 years. Assume that the fair value option-pricing model determines total compensation expense to be €400,000.

On April 1, 2023, 3,000 options were forfeited when the employees resigned from the company. The market price of the ordinary shares was €35 per share on this date.

On March 31, 2024, 12,000 options were exercised when the market price of the ordinary shares was €40 per share.

Instructions

Prepare journal entries to record issuance of the share options, forfeiture of the share options, exercise of the share options, and charges to compensation expense, for the years ended December 31, 2022, 2023, and 2024.

E16.13 (LO 3) (Issuance, Exercise, and Expiration of Share Options) On January 1, 2021, Tsang Ltd. granted 10,000 options to key executives. Each option allows the executive to purchase one share of Tsang's HK\$5 par value ordinary shares at a price of HK\$20 per share. The options were exercisable within a 2-year period beginning January 1, 2023, if the grantee was still employed by the company at the time of the exercise (the service period is

2 years). On the grant date, Tsang's shares were trading at HK\$25 per share, and a fair value option-pricing model determines total compensation to be HK\$450,000.

On May 1, 2023, 9,000 options were exercised when the market price of Tsang's shares were HK\$30 per share. The remaining options lapsed in 2025 because executives decided not to exercise their options.

Instructions

Prepare the necessary journal entries related to the share-option plan for the years 2021 through 2025.

E16.14 (LO 3) (Accounting for Restricted Shares) Derrick plc issues 4,000 restricted shares to its CFO, Dane Yaping, on January 1, 2022. The shares have a fair value of £120,000 on this date. The service period related to these restricted shares is 4 years. Vesting occurs if Yaping stays with the company for 4 years. The par value of the shares is £5. At December 31, 2023, the fair value of the shares is £145,000.

Instructions

- Prepare the journal entries to record the restricted shares on January 1, 2022 (the date of grant), and December 31, 2023.
- On March 4, 2024, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

E16.15 (LO 3) (Accounting for Restricted Shares) Lopez SpA issues 10,000 restricted shares to its CFO, Juan Carlos, on January 1, 2022. The shares have a fair value of €500,000 on this date. The service period related to the restricted shares is 5 years. Vesting occurs if Carlos stays with the company for 6 years. The par value of the shares is €10. At December 31, 2022, the fair value of the shares is €450,000.

Instructions

- Prepare the journal entries to record the restricted shares on January 1, 2022 (the date of grant), and December 31, 2023.
- On January 1, 2027, Carlos leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

E16.16 (LO 4) (Weighted-Average Ordinary Shares) Portillo SA uses a calendar year for financial reporting. The company is authorized to issue 9,000,000 R\$10 par ordinary shares. At no time has Portillo issued any potentially dilutive securities. Listed below is a summary of Portillo's ordinary share activities.

1. Number of ordinary shares issued and outstanding at December 31, 2021	2,400,000
2. Shares issued as a result of a 10% share dividend on September 30, 2022	240,000
3. Shares issued for cash on March 31, 2023	2,000,000
Number of ordinary shares issued and outstanding at December 31, 2023	4,640,000
4. A 2-for-1 share split of Portillo's ordinary shares took place on March 31, 2024	

Instructions

- Compute the weighted-average ordinary shares used in computing earnings per ordinary share for 2022 on the 2023 comparative income statement.
- Compute the weighted-average ordinary shares used in computing earnings per ordinary share for 2023 on the 2023 comparative income statement.
- Compute the weighted-average ordinary shares to be used in computing earnings per ordinary share for 2023 on the 2024 comparative income statement.
- Compute the weighted-average ordinary shares to be used in computing earnings per ordinary share for 2024 on the 2024 comparative income statement.

E16.17 (LO 4) (EPS: Simple Capital Structure) On January 1, 2022, Chang Ltd. had 480,000 ordinary shares outstanding. During 2022, it had the following transactions that affected the ordinary share account.

February 1	Issued 120,000 shares
March 1	Issued a 20% share dividend
May 1	Acquired 100,000 treasury shares
June 1	Issued a 3-for-1 share split
October 1	Reissued 60,000 treasury shares

Instructions

- Determine the weighted-average ordinary shares outstanding for 2022.
- Assume that Chang Ltd. earned net income of ¥3,256,000,000 during 2022. In addition, it had 100,000 shares of 9%, ¥100 par, non-convertible, non-cumulative preference shares outstanding for the entire year. Because of liquidity considerations, however, the company did not declare and pay a preference dividend in 2022. Compute earnings per share for 2022, using the weighted-average ordinary shares determined in part (a).
- Assume the same facts as in part (b), except that the preference shares were cumulative. Compute earnings per share for 2022.
- Assume the same facts as in part (b), except that net income included a loss from discontinued operations of ¥432,000,000. The loss from discontinued operations is net of applicable income taxes. Compute earnings per share for 2022.

E16.18 (LO 4) (EPS: Simple Capital Structure) Ott Company had 210,000 ordinary shares outstanding on December 31, 2022. During the year 2023, the company issued 8,000 shares on May 1 and retired 14,000 shares on October 31. For the year 2023, Ott Company reported net income of £229,690 after a loss on discontinued operations of £40,600 (net of tax).

Instructions

What earnings per share data should be reported at the bottom of its income statement?

E16.19 (LO 4) (EPS: Simple Capital Structure) Huang Ltd. presented the following data (yen in thousands).

Net income	¥2,200,000
------------	------------

Preference shares: 50,000 shares outstanding, ¥100 par, 8% cumulative, not convertible	5,000,000
Ordinary shares: Shares outstanding 1/1	600,000
Issued for cash, 5/1	300,000
Acquired treasury shares for cash, 8/1	150,000
2-for-1 share split, 10/1	

Instructions

Compute earnings per share.

E16.20 (LO 4) (EPS: Simple Capital Structure) A portion of the statement of income and retained earnings of Pierson Inc. for the current year follows.

Income from continuing operations		\$15,000,000
Loss on discontinued operations, net of applicable income tax (Note 1)		1,340,000
Net income		13,660,000
Retained earnings at the beginning of the year		83,250,000
		96,910,000
Dividends declared:		
On preference shares—\$6.00 per share	\$ 300,000	
On ordinary shares—\$1.75 per share	14,875,000	15,175,000
Retained earnings at the end of the year		<u>\$81,735,000</u>

Note 1. During the year, Pierson Inc. had a loss from discontinued operations of \$1,340,000 after applicable income tax reduction of \$1,200,000.

At the end of the current year, Pierson Inc. has outstanding 8,000,000 shares of \$10 par ordinary shares and 50,000 shares of 6% preference shares.

On April 1 of the current year, Pierson Inc. issued 1,000,000 ordinary shares for \$32 per share to help recover from the loss on discontinued operations.

Instructions

Compute the earnings per share on ordinary shares for the current year as it should be reported to shareholders.

E16.21 (LO 4) (EPS: Simple Capital Structure) On January 1, 2022, Bailey Industries had shares outstanding as follows.

6% cumulative preference shares, €100 par value, issued and outstanding 10,000 shares	€1,000,000
Ordinary shares €10 par value, issued and outstanding 200,000 shares	2,000,000

To acquire the net assets of three smaller companies, Bailey authorized the issuance of an additional 170,000 ordinary shares. The acquisitions took place as shown below.

--	--

Date of Acquisition	Shares Issued
Company A: April 1, 2022	60,000
Company B: July 1, 2022	80,000
Company C: October 1, 2022	30,000

On May 14, 2022, Bailey realized a €90,000 (before taxes) gain from discontinued operations. On December 31, 2022, Bailey recorded net income of €300,000 before tax and exclusive of the gain.

Instructions

Assuming a 40% tax rate, compute the earnings per share data that should appear on the financial statements of Bailey Industries as of December 31, 2022.

E16.22 (LO 4) (EPS: Simple Capital Structure) At January 1, 2022, Cameron Company's outstanding shares included the following.

280,000 shares of R\$50 par value, 7% cumulative preference shares

800,000 shares of R\$1 par value ordinary shares

Net income for 2022 was R\$2,830,000. No cash dividends were declared or paid during 2022. On February 15, 2023, however, all preference dividends in arrears were paid, together with a 5% share dividend on ordinary shares. There were no dividends in arrears prior to 2022.

On April 1, 2022, 450,000 ordinary shares were sold for R\$10 per share. On October 1, 2022, 110,000 ordinary shares were purchased for R\$20 per share and held as treasury shares.

Instructions

Compute earnings per share for 2022. Assume that financial statements for 2022 were issued in March 2023.

E16.23 (LO 5) (EPS with Convertible Bonds, Various Situations) In 2022, Buraka Enterprises issued, at par, 75 1,000, 8% bonds, each convertible into 100 ordinary shares. The liability component of convertible bonds was 950 per bond, based on a market rate of interest of 10%. Buraka had revenues of 17,500 and expenses other than interest and taxes of 8,400 for 2023. (Assume that the tax rate is 40%.) Throughout 2023, 2,000 ordinary shares were outstanding; none of the bonds was converted or redeemed.

Instructions

- Compute diluted earnings per share for 2023.
- Assume the same facts as those assumed for part (a), except that the 75 bonds were issued on September 1, 2023 (rather than in 2022), and none have been converted or redeemed.
- Assume the same facts as assumed for part (a) except that 25 of the 75 bonds were actually converted on July 1, 2023.

E16.24 (LO 5) (EPS with Convertible Bonds) On June 1, 2021, Bluhm Company and Amanar Company merged to form Davenport SA. A total of 800,000 shares were issued to

complete the merger. The new company reports on a calendar-year basis.

On April 1, 2023, the company issued an additional 600,000 shares for cash. All 1,400,000 shares were outstanding on December 31, 2023.

Davenport SA also issued €600,000 of 20-year, 8% convertible bonds at par on July 1, 2023. Each €1,000 bond converts to 40 ordinary shares at any interest date. None of the bonds have been converted to date. The interest expense on the liability component of convertible bonds for 2023 was €30,000.

Davenport SA is preparing its annual report for the fiscal year ending December 31, 2023. The annual report will show earnings per share figures based upon a reported after-tax net income of €1,540,000. (The tax rate is 40%.)

Instructions

Determine the following for 2023.

- a. The number of shares to be used for calculating:
 1. Basic earnings per share.
 2. Diluted earnings per share.
- b. The earnings figures to be used for calculating:
 1. Basic earnings per share.
 2. Diluted earnings per share.

E16.25 (LO 1, 5) (EPS with Convertible Bonds and Preference Shares) The Ottey Corporation issued 10-year, \$4,000,000 par, 7% callable convertible subordinated debentures on January 2, 2022. The bonds have a par value of \$1,000, with interest payable annually. The interest expense recorded on the liability component of the convertible bond for 2022 was \$320,000. The current conversion ratio is 14:1, and in 2 years it will increase to 18:1. At the date of issue, the bonds were sold at 98. Ottey's effective tax was 35%. Net income in 2022 was \$7,500,000, and the company had 2,000,000 shares outstanding during the entire year.

Instructions

- a. Prepare a schedule to compute both basic and diluted earnings per share.
- b. Discuss how the schedule would differ if the security was convertible preference shares.

E16.26 (LO 1, 5) (EPS with Convertible Bonds and Preference Shares) On January 1, 2022, Lund SA issued 10-year, €3,000,000 face value, 6% bonds, at par. Each €1,000 bond is convertible into 15 ordinary shares of Lund. Lund's net income in 2023 was €240,000, and its tax rate was 40%. Interest expense on the liability component in 2023 was €210,000. The company had 100,000 ordinary shares outstanding throughout 2022. None of the bonds were converted in 2022.

Instructions

- a. Compute diluted earnings per share for 2022.

- b. Compute diluted earnings per share for 2022, assuming the same facts as above, except that €1,000,000 of 6% convertible preference shares were issued instead of the bonds. Each €100 preference share is convertible into 5 ordinary shares of Lund.

E16.27 (LO 5) (EPS with Options, Various Situations) Zambrano plc net income for 2022 is £40,000. The only potentially dilutive securities outstanding were 1,000 options issued during 2021, each exercisable for one share at £8. None has been exercised, and 10,000 ordinary shares were outstanding during 2022. The average market price of Zambrano's shares during 2022 was £20.

Instructions

- a. Compute diluted earnings per share. (Round to two decimal places.)
- b. Assume the same facts as those assumed for part (a), except that the 1,000 options were issued on October 1, 2022 (rather than in 2021). The average market price during the last 3 months of 2022 was £20.

E16.28 (LO 5) (EPS with Contingent Issuance Agreement) Brooks Inc. recently purchased Donovan Corp., a large midwestern home painting company. One of the terms of the merger was that if Donovan's income for 2023 was \$110,000 or more, 10,000 additional shares would be issued to Donovan's shareholders in 2024. Donovan's income for 2022 was \$125,000.

Instructions

- a. Would the contingent shares have to be considered in Brooks' 2022 earnings per share computations?
- b. Assume the same facts, except that the 10,000 shares are contingent on Donovan's achieving a net income of \$130,000 in 2023. Would the contingent shares have to be considered in Brooks' earnings per share computations for 2022?

E16.29 (LO 5) (EPS with Warrants) Werth AG earned €260,000 during a period when it had an average of 100,000 ordinary shares outstanding. The ordinary shares sold at an average market price of €15 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one ordinary share for €10 for each warrant exercised.

Instructions

- a. Are the warrants dilutive?
- b. Compute basic earnings per share.
- c. Compute diluted earnings per share.

***E16.30 (LO 6) (Share-Appreciation Rights)** On December 31, 2019, Flessel plc issues 120,000 share-appreciation rights to its officers entitling them to receive cash for the difference between the market price of its shares and a pre-established price of £10. The fair value of the SARs is estimated to be £4 per SAR on December 31, 2020; £1 on December 31, 2021; £11 on December 31, 2022; and £9 on December 31, 2023. The service period is 4 years, and the exercise period is 7 years.

Instructions

- Prepare a schedule that shows the amount of compensation expense allocable to each year affected by the share-appreciation rights plan.
- Prepare the entry at December 31, 2023, to record compensation expense, if any, in 2023.
- Prepare the entry on December 31, 2023, assuming that all 120,000 SARs are exercised.

***E16.31 (LO 6) (Share-Appreciation Rights)** Dominquez SA establishes a share-appreciation rights program that entitles its new president Dan Scott to receive cash for the difference between the market price of the shares and a pre-established price of R\$30 (also market price) on December 31, 2020, on 40,000 SARs. The date of grant is December 31, 2020, and the required employment (service) period is 4 years. Scott exercises all of the SARs in 2026. The fair value of the SARs is estimated to be R\$6 per SAR on December 31, 2021; R\$9 on December 31, 2022; R\$15 on December 31, 2023; R\$8 on December 31, 2024; and R\$18 on December 31, 2025.

Instructions

- Prepare a 5-year (2021–2025) schedule of compensation expense pertaining to the 40,000 SARs granted to Scott.
- Prepare the journal entry for compensation expense in 2021, 2024, and 2025 relative to the 40,000 SARs.

Problems

P16.1 (LO 1, 2, 3) Groupwork (Entries for Various Dilutive Securities) The equity section of Martino AG at the beginning of the current year appears below.

Share capital—ordinary, €10 par value, authorized 1,000,000 shares, 300,000 shares issued and outstanding	€3,000,000
Share premium—ordinary	600,000
Retained earnings	570,000

During the current year, the following transactions occurred.

- The company issued to the shareholders 100,000 rights. Ten rights are needed to buy one share at €32. The rights were void after 30 days. The market price of the shares at this time was €34 per share.
- The company sold to the public a €200,000, 10% bond issue at 104. The company also issued with each €100 bond one detachable share-purchase warrant, which provided for the purchase of ordinary shares at €30 per share. The net present value of the bonds without the warrants was €192,000.
- All but 5,000 of the rights issued in (1) were exercised in 30 days.
- At the end of the year, 80% of the warrants in (2) had been exercised, and the remaining were outstanding and in good standing.

5. During the current year, the company granted share options for 10,000 ordinary shares to company executives. Using a fair value option-pricing model, the company determines that each option is worth €10. The option price is €30. The options were to expire at year-end and were considered compensation for the current year.
6. All but 1,000 shares related to the share-option plan were exercised by year-end. The expiration resulted because one of the executives failed to fulfill an obligation related to the employment contract.

Instructions

- a. Prepare general journal entries for the current year to record the transactions listed above.
- b. Prepare the equity section of the statement of financial position at the end of the current year. Assume that retained earnings at the end of the current year is €750,000.

P16.2 (LO 3) (Share-Option Plan) Berg Company adopted a share-option plan on November 30, 2021, that provided that 70,000 shares of \$5 par value ordinary shares be designated as available for the granting of options to officers of the company at a price of \$9 a share. The market price was \$12 a share on November 30, 2021.

On January 2, 2022, options to purchase 28,000 shares were granted to president Tom Winter—15,000 for services to be rendered in 2022 and 13,000 for services to be rendered in 2023. Also on that date, options to purchase 14,000 shares were granted to vice president Michelle Bennett—7,000 for services to be rendered in 2022 and 7,000 for services to be rendered in 2023. The market price of the shares was \$14 a share on January 2, 2022. The options were exercisable for a period of 1 year following the year in which the services were rendered. The fair value of the options on the grant date was \$4 per option.

In 2023, neither the president nor the vice president exercised their options because the market price of the shares was below the exercise price. The market price was \$8 a share on December 31, 2023, when the options for 2022 services lapsed.

On December 31, 2024, both Winter and Bennett exercised their options for 13,000 and 7,000 shares, respectively, when the market price was \$16 a share.

Instructions

Prepare the necessary journal entries in 2021 when the share-option plan was adopted, in 2022 when options were granted, in 2023 when options lapsed, and in 2024 when options were exercised.

P16.3 (LO 3) (Share-Based Compensation) Assume that Sarazan SA has a share-option plan for top management. Each share option represents the right to purchase a R\$1 par value ordinary share in the future at a price equal to the fair value of the shares at the date of the grant. Sarazan has 5,000 share options outstanding, which were granted at the beginning of 2022. The following data relate to the option grant.

Exercise price for options	R\$40
Market price at grant date (January 1, 2022)	R\$40
Fair value of options at grant date (January 1, 2022)	R\$6

Service period

5 years

Instructions

- Prepare the journal entry or entries for the first year of the share-option plan.
- Prepare the journal entry or entries for the first year of the plan assuming that, rather than options, 700 shares of restricted shares were granted at the beginning of 2022.
- Now assume that the market price of Sarazan shares on the grant date was R\$45 per share. Repeat the requirements for (a) and (b).
- Sarazan would like to implement an employee share-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Explain how employee share-purchase plans are recorded.

P16.4 (LO 4, 5, 7) Groupwork (EPS with Complex Capital Structure) Amy Dyken, controller at Fitzgerald Pharmaceutical Industries, a public company, is currently preparing the calculation for basic and diluted earnings per share and the related disclosure for Fitzgerald's financial statements. Selected financial information for the fiscal year ended June 30, 2022, is shown below.

Fitzgerald Pharmaceutical Industries Selected Statement of Financial Position Information June 30, 2022	
Equity	
Share capital—preference, 6% cumulative, €50 par value, 100,000 shares authorized, 25,000 shares issued and outstanding	€ 1,250,000
Share capital—ordinary, €1 par, 10,000,000 shares authorized, 1,000,000 shares issued and outstanding	1,000,000
Share premium—ordinary (includes any amounts for options and conversions)	4,000,000
Retained earnings	6,000,000
Total equity	€12,250,000
Long-term debt	
Notes payable, 10%	€ 1,000,000
Convertible bonds payable	5,000,000
10% bonds payable	6,000,000
Total long-term debt	€12,000,000

The following transactions have also occurred at Fitzgerald.

- Options were granted on July 1, 2021, to purchase 200,000 shares at €15 per share. Although no options were exercised during fiscal year 2022, the average price per ordinary share during fiscal year 2022 was €20 per share.
- Each bond was issued at face value. The convertible bonds will convert into ordinary shares at 50 shares per €1,000 bond. The conversion is exercisable after 5 years, and

the bonds were issued in 2020. The interest on the liability component of the convertible bonds payable for the fiscal year ending June 30, 2022, was €450,000.

3. The preference shares were issued in 2020.
4. There are no preference dividends in arrears; however, preference dividends were not declared in fiscal year 2022.
5. The 1,000,000 ordinary shares were outstanding for the entire 2022 fiscal year.
6. Net income for fiscal year 2022 was €1,500,000, and the average income tax rate is 40%.

Instructions

For the fiscal year ended June 30, 2022, calculate the following for Fitzgerald Pharmaceutical Industries.

- a. Basic earnings per share.
- b. Diluted earnings per share.

P16.5 (LO 4) (Basic EPS: Two-Year Presentation) Meng Group is preparing the comparative financial statements for the annual report to its shareholders for fiscal years ended May 31, 2022, and May 31, 2023 (yen in thousands). The income from continuing operations for each year was ¥1,800,000 and ¥2,500,000, respectively. In both years, the company incurred a 10% interest expense on ¥2,400,000 of debt, an obligation that requires interest-only payments for 5 years. In 2023, the company experienced a loss from discontinued operations, net of tax, of ¥360,000. The company uses a 40% effective tax rate for income taxes.

The capital structure of Meng Group on June 1, 2021, consisted of 1 million ordinary shares outstanding and 20,000 shares of ¥50 par value, 6%, cumulative preference shares. There were no preference dividends in arrears, and the company had not issued any convertible securities, options, or warrants.

On October 1, 2021, Meng sold an additional 500,000 ordinary shares at ¥20 per share. Meng distributed a 20% share dividend on the ordinary shares outstanding on January 1, 2022. On December 1, 2022, Meng was able to sell an additional 800,000 ordinary shares at ¥22 per share. These were the only ordinary share transactions that occurred during the 2 fiscal years.

Instructions

- a. Identify whether the capital structure at Meng Group is a simple or complex capital structure, and explain why.
- b. Determine the weighted-average ordinary shares that Meng Group would use in calculating earnings per share for the fiscal year ended:
 1. May 31, 2022.
 2. May 31, 2023.
- c. Prepare, in good form, a comparative income statement, beginning with income from operations, for Meng Group for the fiscal years ended May 31, 2022, and May 31, 2023.

This statement will be included in Meng's annual report and should display the appropriate earnings per share presentations.

P16.6 (LO 5) Groupwork (Computation of Basic and Diluted EPS) Charles Austin of the controller's office of Thompson Corporation was given the assignment of determining the basic and diluted earnings per share values for the year ending December 31, 2023. Austin has compiled the information listed below.

1. The company is authorized to issue 8,000,000 \$10 par value ordinary shares. As of December 31, 2022, 2,000,000 shares had been issued and were outstanding.
2. The per share market prices of the ordinary shares on selected dates were as follows.

	Price per Share
July 1, 2022	\$20.00
Jan. 1, 2023	21.00
Apr. 1, 2023	25.00
July 1, 2023	11.00
Aug. 1, 2023	10.50
Nov. 1, 2023	9.00
Dec. 31, 2023	10.00

3. A total of 700,000 shares of an authorized 1,200,000 shares of convertible preference shares have been issued on July 1, 2022. Each share had a par value of \$25 and a cumulative dividend of \$3 per share. The shares are convertible into ordinary shares at the rate of one convertible preference share for one ordinary share. The rate of conversion is to be automatically adjusted for share splits and share dividends. Dividends are paid quarterly on September 30, December 31, March 31, and June 30.
4. Thompson Corporation is subject to a 40% income tax rate.
5. The after-tax net income for the year ended December 31, 2023, was \$11,550,000.

The following specific activities took place during 2023.

1. January 1—A 5% ordinary share dividend was issued. The dividend had been declared on December 1, 2022, to all shareholders of record on December 29, 2022.
2. April 1—A total of 400,000 shares of the \$3 convertible preference shares were converted into ordinary shares. The company issued new ordinary shares and retired the preference shares. This was the only conversion of the preference shares during 2023.
3. July 1—A 2-for-1 split of the ordinary shares became effective on this date. The board of directors had authorized the split on June 1.
4. August 1—A total of 300,000 ordinary shares were issued to acquire a factory building.
5. November 1—A total of 24,000 ordinary shares were purchased on the open market at \$9 per share. These shares were to be held as treasury shares and were still in the treasury as of December 31, 2023.

6. Ordinary share cash dividends—Cash dividends to ordinary shareholders were declared and paid as follows.

April 15—\$0.30 per share.

October 15—\$0.20 per share.

7. Preference share cash dividends—Cash dividends to preference shareholders were declared and paid as scheduled.

Instructions

- Determine the number of shares used to compute basic earnings per share for the year ended December 31, 2023.
- Determine the number of shares used to compute diluted earnings per share for the year ended December 31, 2023.
- Compute the numerator in the basic earnings per share calculation for the year ended December 31, 2023.

P16.7 (LO 4, 5, 7) (Computation of Basic and Diluted EPS) The information below pertains to Barkley plc for 2022.

Net income for the year	£1,200,000
8% convertible bonds issued at par (£1,000 per bond); each bond is convertible into 30 shares of ordinary shares; the liability component of the bonds is £1,800,000 based on a market rate of 9%	2,000,000
6% convertible, cumulative preference shares, £100 par value; each share is convertible into 3 shares of ordinary shares	4,000,000
Ordinary shares, £10 par value	6,000,000
Tax rate for 2022	40%
Average market price of ordinary shares	£25 per share

There were no changes during 2022 in the number of ordinary shares, preference shares, or convertible bonds outstanding. There are no treasury shares. The company also has ordinary share options (granted in a prior year) to purchase 75,000 ordinary shares at £20 per share.

Instructions

- Compute basic earnings per share for 2022.
- Compute diluted earnings per share for 2022.

P16.8 (LO 4, 7) (EPS with Share Dividend and Discontinued Operations) Agassi AG is preparing the comparative financial statements to be included in the annual report to shareholders. Agassi employs a fiscal year ending May 31.

Income before income tax for Agassi was €1,400,000 and €660,000, respectively, for fiscal years ended May 31, 2023 and 2022. Agassi experienced a loss from discontinued

operations of €400,000 in March 2023. A 40% combined income tax rate pertains to any and all of Agassi AG profits, gains, and losses.

Agassi's capital structure consists of preference shares and ordinary shares. The company has not issued any convertible securities or warrants, and there are no outstanding share options.

Agassi issued 40,000 shares of €100 par value, 6% cumulative preference shares in 2019. All of these shares are outstanding, and no preference dividends are in arrears.

There were 1,000,000 shares of €1 par ordinary shares outstanding on June 1, 2021. On September 1, 2022, Agassi sold an additional 400,000 ordinary shares at €17 per share. Agassi distributed a 20% share dividend on the ordinary shares outstanding on December 1, 2022. These were the only ordinary share transactions during the past 2 fiscal years.

Instructions

- a. Determine the weighted-average ordinary shares that would be used in computing earnings per share on the current comparative income statement for:
 1. The year ended May 31, 2022.
 2. The year ended May 31, 2023.
- b. Starting with income before income tax, prepare a comparative income statement for the years ended May 31, 2023 and 2022. The statement will be part of Agassi AG annual report to shareholders and should include appropriate earnings per share presentation.
- c. The capital structure of a company is the result of its past financing decisions. Furthermore, the earnings per share data presented on a company's financial statements is dependent upon the capital structure.
 1. Explain why Agassi AG is considered to have a simple capital structure.
 2. Describe how earnings per share data would be presented for a company that has a complex capital structure.

Concepts for Analysis

CA16.1 (LO 1, 2, 3, 5) (Dilutive Securities, EPS) Two students are discussing the current chapter on dilutive securities and earnings per share. Here are some of the points raised in their discussion.

1. Is there a difference between issuing convertible debt versus issuing debt with share warrants? Also, does it make a difference whether the share warrants are detachable or non-detachable?
2. Why is it that companies are not permitted to adjust compensation expense for share options when the options become worthless because the share price does not increase in value?
3. What is the rationale for using the treasury-share method in earnings per share computations?
4. Why do companies have to report compensation expense for employee share-purchase plans? After the employee receives the shares, the price can go up or down, so what is

the benefit that the employee is receiving?

Instructions

Prepare a response to each of the questions asked by the students.

CA16.2 (LO 3) Ethics (Ethical Issues—Compensation Plan) The executive officers of Rouse Corporation have a performance-based compensation plan. The performance criteria of this plan are linked to growth in earnings per share. When annual EPS growth is 12%, the Rouse executives earn 100% of the shares; if growth is 16%, they earn 125%. If EPS growth is lower than 8%, the executives receive no additional compensation.

In 2022, Gail Devers, the controller of Rouse, reviews year-end estimates of bad debt expense and warranty expense. She calculates the EPS growth at 15%. Kurt Adkins, a member of the executive group, remarks over lunch one day that the estimate of bad debt expense might be decreased, increasing EPS growth to 16.1%. Devers is not sure she should do this because she believes that the current estimate of bad debts is sound. On the other hand, she recognizes that a great deal of subjectivity is involved in the computation.

Instructions

Answer the following questions.

- a. What, if any, is the ethical dilemma for Devers?
- b. Should Devers' knowledge of the compensation plan be a factor that influences her estimate?
- c. How should Devers respond to Adkins' request?

CA16.3 (LO 2, 3) Writing (Share Warrants—Various Types) For various reasons a company may issue warrants to purchase its ordinary shares at specified prices that, depending on the circumstances, may be less than, equal to, or greater than the current market price. For example, warrants may be issued:

1. To existing shareholders on a pro rata basis.
2. To certain key employees under an incentive share-option plan.
3. To purchasers of the company's bonds.

Instructions

For each of the three examples of how share warrants are used:

- a. Explain why they are used.
- b. Discuss the significance of the price (or prices) at which the warrants are issued (or granted) in relation to (1) the current market price of the company's shares, and (2) the length of time over which they can be exercised.
- c. Describe the information that should be disclosed in financial statements, or notes thereto, that are prepared when share warrants are outstanding in the hands of the three groups listed above.

CA16.4 (LO 3) Writing (Share Compensation Plans) The following item appeared on the Internet concerning the requirement to expense share options.

“Here We Go Again!” by Jack Ciesielski (2/21/2005, www.accountingobserver.com/blog/2005/02/here-we-go-again) “On February 17, Congressman David Dreier (R–CA), and Congresswoman Anna Eshoo (D–CA), officially entered Silicon Valley’s bid to gum up the launch of honest reporting of share option compensation: They co-sponsored a bill to ‘preserve broad-based employee share option plans and give investors critical information they need to understand how employee share options impact the value of their shares.’ You know what “critical information” they mean: stuff like the share compensation for the top five officers in a company, with a rigged value set as close to zero as possible. Investors *crave* this kind of information. Other ways the good Congresspersons want to “help” investors: The bill ‘also requires the SEC to study the effectiveness of those disclosures over three years, during which time, no new accounting standard related to the treatment of share options could be recognized. Finally, the bill requires the Secretary of Commerce to conduct a study and report to Congress on the impact of broad-based employee share option plans on expanding employee corporate ownership, skilled worker recruitment and retention, research and innovation, economic growth, and international competitiveness.’

It’s the old “four corners” basketball strategy: stall, stall, stall. In the meantime, hope for regime change at your opponent, the standard-setter.”

Instructions

- What are the accounting requirements related to share-based compensation?
- How do the provisions of IFRS in this area differ from the bill introduced by members of the U.S. Congress (Dreier and Eshoo), which would require expensing for options issued to only the top five officers in a company? Which approach do you think would result in more useful information? (Focus on comparability.)
- The bill in the U.S. Congress urges a standard that preserves “the ability of companies to use this innovative tool to attract talented employees.” Write a response to these congresspeople explaining the importance of neutrality in financial accounting and reporting.

CA16.5 (LO 4, 5) (EPS: Preference Dividends, Options, and Convertible Debt)

Earnings per share (EPS) is the single most reported financial statistic about modern companies. Daily published quotations of share prices have recently been expanded to include for many securities a “times earnings” figure that is based on EPS. Securities analysts often focus their discussions on the EPS of the companies they study.

Instructions

- Explain how dividends or dividend requirements on any class of preference shares that may be outstanding affect the computation of EPS.
- One of the technical procedures applicable in EPS computations is the treasury-share method. Briefly describe the circumstances under which it might be appropriate to apply the treasury-share method.

- c. Convertible debentures are considered potentially dilutive ordinary shares. Explain how convertible debentures are handled for purposes of EPS computations.

CA16.6 (LO 4, 5) (EPS Concepts and Effect of Transactions on EPS) Chorkina Corporation, a new audit client of yours, has not reported earnings per share data in its annual reports to shareholders in the past. The treasurer, Beth Botsford, requested that you furnish information about the reporting of earnings per share data in the current year's annual report in accordance with IFRS.

Instructions

- a. Define the term "earnings per share" as it applies to a company with a capitalization structure composed of only one class of ordinary shares. Explain how earnings per share should be computed and how the information should be disclosed in the company's financial statements.
- b. Discuss the treatment, if any, that should be given to each of the following items in computing earnings per share of ordinary shares for financial statement reporting.
 1. Outstanding preference shares issued at a premium with a par value liquidation right.
 2. The exercise at a price below market price but above book value of an ordinary share option issued during the current fiscal year to officers of the company.
 3. The replacement of a machine immediately prior to the close of the current fiscal year at a cost 20% above the original cost of the replaced machine. The new machine will perform the same function as the old machine, which was sold for its book value.
 4. The declaration of current dividends on cumulative preference shares.
 5. The acquisition of some of the company's outstanding ordinary shares during the current fiscal year. The shares were classified as treasury shares.
 6. A 2-for-1 share split of ordinary shares during the current fiscal year.
 7. A provision created out of retained earnings for a contingent liability from a possible lawsuit.

CA16.7 (LO 5) Writing (EPS, Antidilution) Brad Dolan, a shareholder of Rhode Corporation, has asked you, the firm's accountant, to explain why his share warrants were not included in diluted EPS. In order to explain this situation, you must briefly explain what dilutive securities are, why they are included in the EPS calculation, and why some securities are antidilutive and thus not included in this calculation.

Instructions

Write Mr. Dolan a 1–1.5 page letter explaining why the warrants are not included in the calculation. Use the following data to help you explain this situation.

Rhode Corporation earned \$228,000 during the period, when it had an average of 100,000 ordinary shares outstanding. The ordinary shares sold at an average market price of \$25 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one ordinary share at \$30 per warrant.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Under M&S's share-based compensation plan, share options are granted annually to key managers and directors.
 1. How many options were granted during 2019 under the plan?
 2. How many options were exercisable at year-end 2019?
 3. How many options were exercised in 2019, and what was the average price of those exercised?
 4. How many years from the grant date do the options expire?
 5. To what accounts are the proceeds from these option exercises credited?
 6. What was the number of outstanding options at year-end 2019, and at what average exercise price?
- b. What number of diluted weighted-average shares outstanding was used by M&S in computing earnings per share for 2019 and 2018? What was M&S's diluted earnings per share in 2019 and 2018?
- c. What other share-based compensation plans does M&S have?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What employee share-option compensation plans are offered by adidas and Puma?
- b. What are the weighted-average ordinary shares used by adidas and Puma in 2018 and 2017 to compute diluted EPS?
- c. What was the diluted net income per share for adidas and Puma for 2018 and 2017?

Accounting, Analysis, and Principles

On January 1, 2022, Garner issued 10-year, €200,000 face value, 6% bonds at par. Each €1,000 bond is convertible into 30 shares of Garner €2, par value, ordinary shares. Interest on the bonds is paid annually on December 31. The market rate for Garner's non-convertible debt is 9%. The company has had 10,000 ordinary shares (and no preference shares) outstanding throughout its life. None of the bonds have been converted as of the end of 2023. (Ignore all tax effects.)

Accounting

- a. Prepare the journal entry Garner would have made on January 1, 2022, to record the issuance of the bonds, and prepare an amortization table for the first three years of the bonds.
- b. Garner's net income was €30,000 in 2023, and €27,000 in 2022. Compute basic and diluted earnings per share for Garner for 2023 and 2022.
- c. Assume that all of the holders of Garner's convertible bonds convert their bonds to shares on January 2, 2024, when Garner's shares are trading at €32 per share. Garner pays €50 per bond to induce bondholders to convert. Prepare the journal entry to record the conversion, using the book value method.

Analysis

Show how Garner will report income and EPS for 2023 and 2022. Briefly discuss the importance of IFRS for EPS to analysts evaluating companies based on price-earnings ratios. Consider comparisons for a company over time, as well as comparisons between companies at a point in time.

Principles

In order to converge U.S. GAAP and IFRS, U.S. standard-setters (the FASB) are considering whether the equity element of a convertible bond should be reported as equity. Describe how the journal entry you made in part (a) above would differ under U.S. GAAP. In terms of the accounting principles discussed in [Chapter 2](#), what does IFRS for convertible debt accomplish that U.S. GAAP potentially sacrifices? What does U.S. GAAP for convertible debt accomplish that IFRS potentially sacrifices?

Research Case

Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- Briefly discuss the objectives for the accounting for share-based compensation. What is the role of fair value measurement?
- The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What are the IFRS

requirements for the accounting for an employee share-purchase plan?

Global Accounting Insights

LEARNING OBJECTIVE 8

Compare the accounting for dilutive securities and earnings per share under IFRS and U.S. GAAP.

Both the FASB and the IASB are working on a standard related to the distinction between liabilities and equity. The U.S. GAAP approach to account for certain dilutive securities, such as convertible debt and debt issued with share warrants, is different from that of IFRS. The accounting and disclosure requirements for accounting for share options and EPS computations are similar between U.S. GAAP and IFRS.

Relevant Facts

Similarities

- U.S. GAAP and IFRS follow the same model for recognizing share-based compensation: The fair value of shares and options awarded to employees is recognized over the period to which the employees' services relate.
- Although the calculation of basic and diluted earnings per share is similar between U.S. GAAP and IFRS, the Boards are working to resolve the few minor differences in EPS reporting. One proposal in the FASB project concerns contracts that can be settled in either cash or shares. IFRS requires that share settlement must be used, while U.S. GAAP gives companies a choice. The FASB project proposes adopting the IFRS approach, thus converging U.S. GAAP and IFRS in this regard.

Differences

- A significant difference between U.S. GAAP and IFRS is the accounting for securities with characteristics of debt and equity, such as convertible debt. Under U.S. GAAP, all of the proceeds of convertible debt are recorded as long-term debt. Under IFRS, convertible bonds are "bifurcated"—separated into the equity component (the value of the conversion option) of the bond issue and the debt component.
- Related to employee share-purchase plans, these plans under U.S. GAAP are often considered non-compensatory, and therefore no compensation is recorded. However, certain conditions must exist before a plan can be considered non-compensatory (see the discussion below in the [About the Numbers](#) section for U.S. GAAP treatment). Under IFRS, all employee share-purchase plans are deemed to be compensatory; that is, compensation expense is recorded for the amount of the discount.
- Modification of a share option results in the recognition of any incremental fair value under both U.S. GAAP and IFRS. However, if the modification leads to a reduction, U.S. GAAP permits the reduction. IFRS does not.

- Other EPS differences relate to (1) the treasury-share method and how the proceeds from extinguishment of a liability should be accounted for, and (2) how to compute the weighted average of contingently issuable shares.

About the Numbers

Accounting for Convertible Bonds

As indicated, a significant difference in U.S. GAAP and IFRS is the accounting for convertible debt. To illustrate, assume **PepsiCo** (USA) issued, at par, \$10 million of 10-year convertible bonds with a coupon rate of 4.75%. Assuming the conversion is settled in shares, PepsiCo makes the following entry to record the issuance under U.S. GAAP.

Cash	10,000,000	
Bonds Payable		10,000,000

Under IFRS, PepsiCo must split out the liability and equity component—the value of the conversion option—of the bond issue.

Thus, IFRS records separately the bond issue's debt and equity components. Many believe this provides a more faithful representation of the impact of the bond issue. However, there are concerns about reliability of the method used to estimate the liability component of the bond.

Employee Stock-Purchase Plans Under U.S. GAAP

Employee stock-purchase plans (ESPPs) generally permit all employees to purchase shares at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its common stock (ordinary shares) among employees. Under U.S. GAAP, these plans are considered compensatory unless they satisfy **all three** conditions presented below.

1. Substantially all full-time employees may participate on an equitable basis.
2. The discount relative to the market price is small. That is, the discount does not exceed the per share amount of costs avoided by not having to raise cash in a public offering. If the amount of the discount is 5% or less, no compensation needs to be recorded.
3. The plan offers no substantive option feature.

For example, Masthead Company's stock-purchase plan allowed employees who met minimal employment qualifications to purchase its shares at a 5% reduction from market price for a short period of time. The reduction from market price is not considered compensatory. Why? Because the per share amount of the costs avoided by not having to raise the cash in a public offering equals 5%. Companies that offer their employees a compensatory ESPP should record the compensation expense over the service life of the employees.

It is difficult for some companies to claim that their ESPPs are non-compensatory (and therefore not record compensation expense) unless they change their discount policy, which in the past often was 15%. If they change their discount policy to 5%, participation in these plans will undoubtedly be lower. As a result, it is likely that some U.S. companies will end up dropping these plans.

On the Horizon

The FASB has been working on a standard that will likely converge with IFRS standards in the accounting for convertible debt. Similar to the IASB, the FASB is examining the classification of hybrid securities; the IASB is seeking comment on a discussion document similar to the FASB Preliminary Views document, “Financial Instruments with Characteristics of Equity.” It is hoped that the Boards will develop a converged standard in this area. While U.S. GAAP and IFRS are similar as to the presentation of EPS, the Boards have been considering a project to resolve remaining differences related to earnings per share computations.

GAAP Self-Test Questions

1. All of the following are key similarities between U.S. GAAP and IFRS with respect to accounting for dilutive securities and EPS **except**:
 - a. the model for recognizing share-based compensation.
 - b. the calculation of basic and diluted EPS.
 - c. the accounting for convertible debt.
 - d. the accounting for modifications of share option, when the value increases.
2. Which of the following statements is **correct**?
 - a. IFRS separates the proceeds of a convertible bond between debt and equity by determining the fair value of the debt component before the equity component.
 - b. When there is a choice of settlement of an option for cash or shares, share settlement is assumed by both IFRS and U.S. GAAP.
 - c. IFRS separates the proceeds of a convertible bond between debt and equity, based on relative fair values.
 - d. Both U.S. GAAP and IFRS separate the proceeds of convertible bonds between debt and equity.
3. Under IFRS, convertible bonds:
 - a. are separated into the bond component and the expense component.
 - b. are separated into debt and equity components.
 - c. are separated into their components based on relative fair values.
 - d. All of the above.
4. Mae Jong Corp. issues \$1,000,000 of 10% bonds payable, which may be converted into 10,000 shares of \$2 par value ordinary shares. The market rate of interest on similar bonds is 12%. Interest is payable annually on December 31, and the bonds were issued for total proceeds of \$1,000,000. Under U.S. GAAP, in accounting for these bonds, Mae Jong Corp. will:
 - a. first assign a value to the equity component, then determine the liability component.

- b. assign no value to the equity component since the conversion privilege is not separable from the bond.
- c. first assign a value to the liability component based on the face amount of the bond.
- d. use the “with-and-without” method to value the compound instrument.

5. Anazazi Co. offers all its 10,000 employees the opportunity to participate in an employee share-purchase plan. Under the terms of the plan, the employees are entitled to purchase 100 ordinary shares (par value \$1 per share) at a 3% discount. The purchase price must be paid immediately upon acceptance of the offer. There is no option feature in the plan. In total, 8,500 employees accept the offer, and each employee purchases on average 80 shares at \$26.68 per share (market price \$27.50). Under U.S. GAAP, Anazazi Co. will record:

- a. no compensation since the plan is used to raise capital, not compensate employees.
- b. compensation expense of \$850,000.
- c. compensation expense of \$22,678,000.
- d. compensation expense of \$697,000.

GAAP Concepts and Application

GAAP16.1 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for share-based compensation.

GAAP16.2 Norman SA., a fast-growing golf equipment company, uses IFRS. It is considering the issuance of convertible bonds. The bonds mature in 10 years, have a face value of €400,000, and pay interest annually at a rate of 4%. The net present value of the liability component is €365,000. Greg Shark is curious as to the difference in accounting for these bonds if the company were to use U.S. GAAP. (a) Prepare the entry to record the issuance of the bonds at par under IFRS. (b) Repeat the requirement for part (a), assuming application of U.S. GAAP to the bond issuance. (c) Which approach provides the better accounting? Explain.

GAAP16.3 Drug company **Sepracor, Inc.**, (USA) reported the following information in a recent annual report (amounts in thousands). The company prepares its financial statements in accordance with U.S. GAAP.

Current liabilities	\$ 554,114
Convertible subordinated debt	648,020
Total liabilities	1,228,313
Stockholders' equity	176,413
Net income	58,333

Analysts attempting to compare Sepracor to international drug companies may face a challenge due to differences in accounting for convertible debt under IFRS. Under *IAS 32*, “Financial Instruments,” convertible bonds, at issuance, must be classified separately into their debt and equity components based on estimated fair value.

Instructions

- a. Compute the following ratios for Sepracor, Inc. (Assume that year-end balances approximate annual averages.)
 1. Return on assets.
 2. Return on shareholders' equity.
 3. Debt to assets ratio.
- b. Briefly discuss the operating performance and financial position of Sepracor. Industry averages for these ratios were ROA 3.5%, return on equity 16%, and debt to assets 75%. Based on this analysis, would you make an investment in the company's 5% convertible bonds? Explain.
- c. Assume you want to compare Sepracor to a company like **Bayer** (DEU), which prepares its financial statements in accordance with IFRS. Assuming that the fair value of the liability component of Sepracor's convertible bonds is \$398,020, how would you adjust the analysis above to make valid comparisons between Sepracor and Bayer?

Answers to GAAP Self-Test Questions

1. c 2. a 3. b 4. b 5. a

Notes

- 1 Presently, the IASB is working to develop a standard that will improve the financial reporting requirements for financial instruments with characteristics of debt and equity. It recognizes that the line between debt and equity is sometimes blurred and therefore classification of these instruments is inconsistent. At this point, the Board has focused on identification of a presentation that would help address challenges in practice in classifying financial instruments that will or may be settled in the issuer's own equity instruments. In particular, the Board explored potential clarifications to the underlying principle for classifying derivatives in the issuer's own equity. See the IFRS website for more information.
- 2 As with any investment, a buyer has to be careful. For example, **Wherehouse Entertainment Inc.** (USA), which had 6¼ percent convertibles outstanding, was taken private in a leveraged buyout. As a result, the convertible was suddenly as risky as a junk bond of a highly leveraged company with a coupon of only 6¼ percent. As one holder of the convertibles noted, "What's even worse is that the company will be so loaded down with debt that it probably won't have enough cash flow to make its interest payments. And the convertible debt we hold is subordinated to the rest of Wherehouse's debt." These types of situations have made convertibles less attractive and have led to the introduction of takeover protection covenants in some convertible bond offerings. Further, sometimes convertibles are permitted to be called at par, and therefore the conversion premium may be lost.
- 3 Transaction costs related to the liability and equity components are allocated in proportion to the proceeds received from the two components. *For purposes of homework, use the Share Premium—Conversion Equity account to record the equity component.* In practice, there may be considerable variance in the accounts used to record this component.

- 4 From the illustration, it is apparent that buying warrants can be an “all or nothing” proposition.
- 5 These factors include the volatility of the underlying shares, the expected life of the options, the risk-free rate during the option life, and the expected dividends during the option life.
- 6 “To vest” means “to earn the rights to.” An employee’s award becomes vested at the date that the employee’s right to receive or retain shares or cash under the award is no longer contingent on remaining in the service of the employer.
- 7 Companies sometimes modify the terms and conditions on which the share options were granted, to reward outstanding performance or provide a morale boost for some or all employees. Modifications may reduce the exercise period, extend the term of the options, or increase the number of shares issuable upon exercise. Modifications to share-based arrangements that decrease the fair value of the grant are basically ignored. However, if the fair value of the grant increases due to a modification, then the incremental fair value of the modified grant should be accounted for as additional compensation expense over the remaining vesting period.
- 8 Most companies base vesting on future service for a period of generally three to five years. Vesting may also be conditioned on some performance target such as revenue, net income, cash flows, or some combination of these three factors. The employee also collects dividends on the restricted shares. These dividends generally must be repaid if forfeiture occurs.
- 9 There are numerous variations on restricted-share plans, including restricted-share units (for which the shares are issued at the end of the vesting period) and restricted-share plans with performance targets, such as EPS or share price growth.
- 10 As indicated, employee share-purchase plans offer company shares to workers through payroll deduction, often at significant discounts. Unfortunately, many employees do not avail themselves of this benefit. Hopefully, if you have the opportunity to purchase your company’s shares at a significant discount, you will take advantage of the plan. By not participating, you are “leaving money on the table.”
- 11 In general, a non-public enterprise is an enterprise whose debt or equity securities are not traded in a public market on a foreign or domestic securities exchange or in the over-the-counter market (including securities quoted locally or regionally). An enterprise is not considered a non-public enterprise when its financial statements are issued in preparation for the sale of any class of securities in a public market.
- 12 A potential ordinary share is a financial instrument or other contract that may entitle its holder to ordinary shares. Examples of potential ordinary shares are (1) convertible debt and convertible preference shares that are convertible into ordinary shares, (2) options and warrants, and (3) shares that would be issued upon the satisfaction of conditions resulting from contractual arrangements, such as the purchase of a business or other assets. These concepts are discussed later in this chapter.
- 13 Recall that an ordinary share is an equity instrument that is subordinate to all other classes of equity instruments. In addition, we assume that ordinary shares relate only to

the controlling interest. As a result, the earnings per share computation does not include earnings related to the non-controlling interest.

[14](#) Issuance of these types of securities is typical in mergers and compensation plans.

[15](#) As indicated earlier, a convertible bond is a compound instrument that has both a liability and an equity component. As a result, the interest expense reported on the income statement will not equal the interest paid in cash during the period. The interest adjustment in the numerator is based on interest expense reported on the income statement. That is, interest expense, net of tax, is added back to net income.

[16](#) Conversion of bonds is dilutive because EPS with conversion (£1.97) is less than basic EPS (£2.10). See [Appendix 16B](#) for a comprehensive evaluation of antidilution with multiple securities.

[17](#) The incremental number of shares may be more simply computed:

$$\frac{\text{Market price} - \text{Option price}}{\text{Market price}} \times \text{Number of options} = \text{Number of shares}$$

$$\frac{€50 - €30}{€50} \times 1,500 \text{ options} = 600 \text{ shares}$$

[18](#) Options and warrants have essentially the same assumptions and computational problems, although warrants may allow or require the tendering of some other security, such as debt, in lieu of cash upon exercise. This subject is beyond the scope of this text.

[19](#) In addition to contingent issuances of shares, other situations that might lead to dilution are the issuance of both participating securities and two-class ordinary shares. The reporting of these types of securities in EPS computations is beyond the scope of this text.

[20](#) Some SARs can be settled in shares or cash. When a SAR can be settled in shares or cash at the issuer's option, the SAR is always considered to be settled in shares. [\[13\]](#)

[21](#) A company that does not report a discontinued operation uses net income as the control number.

[22](#) If a company reports a loss from continuing operations, basic and diluted earnings per share will be the same because potential ordinary shares will be antidilutive even if the company reports final net income. The IASB believes that comparability of EPS information will be improved by using income from continuing operations as the control number.

CHAPTER 17

Investments

LEARNING OBJECTIVES

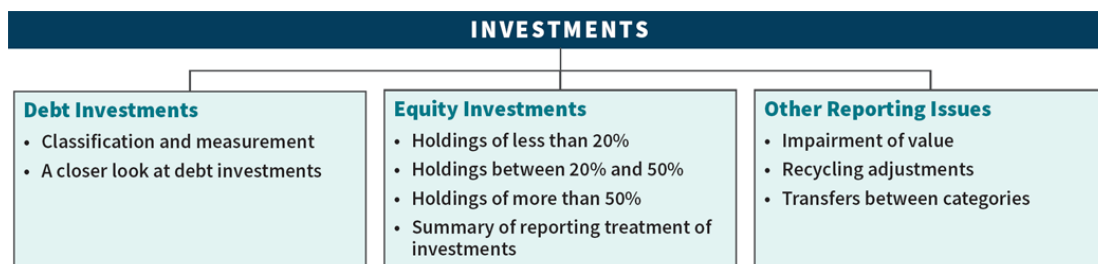

After studying this chapter, you should be able to:

1. Describe the accounting for debt investments.
2. Describe the accounting for equity investments.
3. Explain the equity method of accounting.
4. Evaluate other major issues related to debt and equity investments.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 17

The accounting for financial assets is controversial. The hope is that a relatively new standard (*IFRS 9*) will provide information on recognition, measurement, and disclosure of financial assets that will be helpful to financial statement users. This chapter discusses the key accounting issues related to debt and equity investments. Appendices to this chapter discuss the accounting for derivative instruments and fair value disclosures. The content and organization of the chapter are as follows.

Winners and Losers

Valuing financial assets such as loans, derivatives, and other debt investments, as well as equity investments is a challenge. The fundamental question is: Should financial instruments be valued at amortized cost, fair value, or by other measures? As one writer noted, the opinion that fair value accounting weakens financial and economic stability has persisted among many companies, regulators, and politicians. On the other hand, investors and others believe that fair value is the right answer because it is more transparent information. So, what to do?

Recently, the IASB has issued a standard on financial assets (*IFRS 9*) that uses a mixed-attribute approach. Some financial assets are valued at amortized cost and others at fair value. Subsequently, a survey of accredited financial analysts on *IFRS 9* contained the following question on the standard: “Do you agree that the IASB’s new standard requiring classification into amortized cost or fair value will improve the decision-usefulness of overall financial instrument accounting?” The survey results indicate that just 47 percent believe the IASB’s approach improves the decision-usefulness of information. This lukewarm support for these rules is somewhat troubling given that the group surveyed is representative of the IASB’s key constituency—investors and creditors.

Interestingly, the European Union initially refused to adopt the requirements of *IFRS 9*, arguing that this standard requires **too much** fair value information. Nevertheless, the standard was issued and, after some modifications by the IASB, was eventually endorsed by the European Union. As a result, companies that comply with IFRS began using this standard in 2018.

In the United States, a standard that is similar in many respects to *IFRS 9* was also recently adopted. Much like the reaction from the European Union, the U.S. response has been less than favorable. Specifically, the requirement to report most investments in equity at fair value has not been well received. For example, **Berkshire Hathaway** (USA) posted a \$1.14 billion first quarter loss in 2018 because of \$6.2 billion losses on equity investments that the company

must now count in income as a result of the new standard. These losses resulted because of the following equity investments: shares of **Wells Fargo** (USA) lost 13.6 percent during the quarter, **Coca-Cola** (USA) shares lost 5.3 percent, and **American Express** (USA) was down 6.1 percent.

The CEO of Berkshire Hathaway, Warren Buffett, was not happy to have to report these losses, indicating that this new measurement distorts Berkshire's earnings. Specifically, "these investment gains and losses are often meaningless in terms of understanding our reported results or evaluating our periodic economic performance." He went on to note: "If you look at the figure of operating earnings—which we look at—we actually earned a record amount in any quarter we've ever had."

At the same time, other companies benefited from the change in accounting for equity investments. For example, **Google's** parent company **Alphabet** (USA), reported a \$3 billion gain as a result of equity investments in **Uber Technologies** (USA) and other hot technology companies that are closely held.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Debt Investments

LEARNING OBJECTIVE 1

Describe the accounting for debt investments.

In [Chapter 7](#), we discussed two types of financial assets—cash and receivables.¹ In this chapter, we discuss two other financial assets—

debt investments and equity investments. Companies have different motivations for investing in debt or equity securities issued by other companies.² **One motivation is to earn a high rate of return.** For example, **Nokia** (FIN) can receive interest revenue from a debt investment or dividend revenue from an equity investment. In addition, it can realize capital gains on both types of securities. **Another motivation for investing (in equity securities) is to secure certain operating or financing arrangements with another company.** For example, Nokia may be able to exercise some control over motherboard suppliers based on its significant (but not controlling) equity investments.

Classification and Measurement of Financial Assets

Financial assets include debt investments and equity investments. Two criteria are used to determine how financial assets should be classified and measured.

1. **What is the company's business model for managing its financial asset?** That is, is it the company's business model to hold the financial asset to collect contractual cash flows rather than to sell the instrument prior to its contractual maturity to realize its fair value changes?
2. **What are the contractual cash flow characteristics of the financial investment?** That is, do the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding?

Debt Investments

Companies measure debt investments at amortized cost or fair value.

Amortized Cost

Debt investments that meet the two criteria described above (the company plans to hold them and to collect contractual cash flows), are

measured at amortized cost. **Amortized cost** is the initial recognition amount of the debt investment minus repayments plus or minus cumulative amortization and net of any reduction for uncollectibility. For example, assume that **Mitsubishi** (JPN) purchases a bond investment that it intends to hold to maturity. Mitsubishi's business model for this type of investment is to collect interest and principal to the maturity date. The payment dates for the interest and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at amortized cost because its business model is to hold the bond investment to maturity, and the contractual terms require cash flow payments of principal and interest over the bond investment term. [2]

Fair Value

Debt investments that do not meet one or both of these two criteria are measured and reported at fair value. Fair value is the amount for which an asset could be exchanged between knowledgeable willing parties in an arm's length transaction. For example, assume Mitsubishi purchased bonds as part of a trading strategy to speculate on interest rate changes. In this case, Mitsubishi is not intending to hold the bonds to maturity and therefore its business model is to sell the bonds before maturity. When this situation occurs, then the bond investment is reported at fair value. Various objectives may be consistent with this business model, for example, managing liquidity, maintaining a particular interest yield profile, or matching the duration of financial liabilities to the duration of the assets they are funding.³

Equity Investments

Equity investments are generally recorded and reported at fair value. Equity investments do not have a maturity date and do not have a fixed interest and principal payment schedule. As a result, reporting equity investments at fair value is considered more relevant than reporting these investments at cost. **Illustration 17.1** summarizes the classification and measurement of debt and equity investments.

Classification	Assessment of Accounting Criteria	Measurement
Debt	Meets business model (held-for-collection) and contractual cash flow tests.	Amortized cost
	Does not meet the business model test (trading, held-for-collection and selling).	Fair value
Equity	Does not meet contractual cash flow test.	Fair value [*]
[*] For some equity investments for which the investor exercises some control over the investee, use the equity method.		

ILLUSTRATION 17.1 Classification and Measurement

Within this section, we explain the accounting for investments in debt. We address equity securities later in the chapter.

A Closer Look at Debt Investments

Debt securities represent a creditor relationship with another company. Debt securities include government securities, municipal securities, company bonds, convertible debt, and commercial paper.

Debt investments are characterized by contractual payments on specified dates of principal and interest on the principal amount outstanding. In general, IFRS requires that companies group investments in debt securities into three separate categories for accounting and reporting purposes. [4]

1. **Held-for-collection:** Investments held with the objective of holding assets in order to **collect contractual cash flows**. The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.
2. **Held-for-collection and selling:** Investments held with the objective to both **collect contractual cash flows and sell financial assets**. The contractual terms of the financial asset

give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

3. **Trading:** All debt investments not held-for-collection or held-for-collection and selling. These investments are bought and held primarily for sale in the near term to generate income on short-term price differences.

Illustration 17.2 identifies these categories, along with the accounting and reporting treatments required for each.

Category	Valuation	Unrealized Gains or Losses	Other Income
Held-for-collection	Amortized cost	Not recognized	Interest when earned; gains and losses from sale.
Held-for-collection and selling	Fair value	Recognized as other comprehensive income and as a separate component of equity	Interest when earned; gains and losses from sale.
Trading securities	Fair value	Recognized in net income	Interest when earned; gains and losses from sale.

ILLUSTRATION 17.2 Accounting for Debt Investments by Category

Debt Investments—Held-for-Collection (HFC)

Only debt investments can be measured at amortized cost. If a company like **Carrefour** (FRA) makes an investment in the bonds of **Nokia** (FIN), it will receive contractual cash flows of interest over the life of the bonds and repayment of the principal at maturity. If it is Carrefour's strategy to hold this investment in order to receive these cash flows over the life of the bond, it has a held-for-collection (HFC) strategy and it will measure the investment at amortized cost.⁴

Example: Debt Investment at Amortized Cost

To illustrate the accounting for a debt investment at amortized cost, assume that Robinson SA purchased €100,000 of 8 percent bonds of Evermaster AG on January 1, 2022, at a discount, paying €92,278. The bonds mature January 1, 2027, and yield 10 percent; interest is payable each July 1 and January 1. Robinson records the investment as follows.

January 1, 2022		
Debt Investments	92,278	
Cash		92,278

 Calculator Solution for Bond Price		
	Inputs	Answer
N	10	
I	5	
PV	?	-92,278
PMT	4,000	
FV	100,000	

As indicated in [Chapter 14](#), companies must amortize premiums or discounts using the **effective-interest method**. They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply

that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration 17.3 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

8% Bonds Purchased to Yield 10%				
Date	Cash Received	Interest Revenue	Bond Discount Amortization	Carrying Amount of Bonds
1/1/22				€ 92,278
7/1/22	€ 4,000 ^a	€ 4,614 ^b	€ 614 ^c	92,892 ^d
1/1/23	4,000	4,645	645	93,537
7/1/23	4,000	4,677	677	94,214
1/1/24	4,000	4,711	711	94,925
7/1/24	4,000	4,746	746	95,671
1/1/25	4,000	4,783	783	96,454
7/1/25	4,000	4,823	823	97,277
1/1/26	4,000	4,864	864	98,141
7/1/26	4,000	4,907	907	99,048
1/1/27	4,000	4,952	952	100,000
	<u>€40,000</u>	<u>€47,722</u>	<u>€7,722</u>	
^a €4,000 = €100,000 × .08 × ⁶ / ₁₂ ^b €4,614 = €92,278 × .10 × ⁶ / ₁₂ ^c €614 = €4,614 – €4,000 ^d €92,892 = €92,278 + €614				

ILLUSTRATION 17.3 Schedule of Interest Revenue and Bond Discount Amortization—Effective-Interest Method

Robinson records the receipt of the first semiannual interest payment on July 1, 2022 (using the data in [Illustration 17.3](#)), as follows.

July 1, 2022		
Cash	4,000	
Debt Investments	614	
Interest Revenue		4,614

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2022, as follows.

December 31, 2022		
Interest Receivable	4,000	
Debt Investments	645	
Interest Revenue		4,645

Robinson reports its investment in Evermaster bonds in its December 31, 2022, financial statements, as shown in [Illustration 17.4](#).⁵

Statement of Financial Position	
Long-term investments	
Debt investments	€93,537
Current assets	
Interest receivable	€ 4,000
Income Statement	
Other income and expense	
Interest revenue (€4,614 + €4,645)	€ 9,259

ILLUSTRATION 17.4 Reporting of Bond Investments at Amortized Cost

Sometimes, a company sells a bond investment before its maturity. For example, Robinson SA may sell securities as part of a change in its investment strategy to move away from five-year debt investments, like the Evermaster bonds, to invest in shorter-term bonds. Such a

strategy would allow the bonds to reprice more frequently in response to interest rate changes. Let's assume that Robinson sells its investment in Evermaster bonds on November 1, 2024, at 99¾ plus accrued interest. The discount amortization from July 1, 2024, to November 1, 2024, is €522 ($\frac{4}{6} \times \text{€}783$). Robinson records this discount amortization as follows.

November 1, 2024		
Debt Investments	522	
Interest Revenue		522

Illustration 17.5 shows the computation of the realized gain on the sale.

Selling price of bonds (exclusive of accrued interest)		€99,750
Less: Book value of bonds on November 1, 2024:		
Amortized cost, July 1, 2024	€95,671	
Add: Discount amortized for the period July 1, 2024, to November 1, 2024	<u>522</u>	96,193
Gain on sale of bonds		<u>€ 3,557</u>

ILLUSTRATION 17.5 Computation of Gain on Sale of Bonds

Robinson records the sale of the bonds as follows.

November 1, 2024		
Cash (€99,750 + €2,667)	102,417	
Interest Revenue ($\frac{4}{6} \times \text{€}4,000$)		2,667
Debt Investments		96,193
Gain on Sale of Investments		3,557

The credit to Interest Revenue represents accrued interest for four months, for which the purchaser pays cash. The debit to Cash represents the selling price of the bonds plus accrued interest

(€99,750 + €2,667). The credit to Debt Investments represents the book value of the bonds on the date of sale. The credit to Gain on Sale of Investments represents the excess of the selling price over the book value of the bonds.

Debt Investments—Held-for-Collection and Selling (HFCS)

As indicated, if the objective of the business model is to hold a debt investment to collect its contractual cash flows, the debt investment is measured at amortized cost. However, if the objective of the business model is not only to collect contractual cash flows but also to sell debt securities, then the debt investment is measured at fair value. For example, a company like **Carrefour** (FRA) may wish to hold to collect but may also need to sell investments to manage liquidity needs or maintain a yield profile.

This held-for-collection and selling (HFCS) business model therefore recognizes fair value on the statement of financial position because the companies may choose to sell the debt investment. However, changes in fair value are recognized in other comprehensive income rather than in the profit and loss statement to minimize the volatility of net income. [7] When a debt investment is sold, then the company recognizes a gain or loss on the income statement by recycling the amounts recorded in accumulated other comprehensive income into the income statement (see [Underlying Concepts](#)).

Underlying Concepts

Recognizing unrealized gains and losses in equity is an application of the concept of comprehensive income.

Example: Single Security

To illustrate the accounting for HFCS securities, assume that Graff plc purchases £100,000, 10 percent, five-year bonds on January 1, 2022, with interest payable on July 1 and January 1. The bonds sell for

£108,111, which results in a bond premium of £8,111 and an effective-interest rate of 8 percent.

Graff records the purchase of the bonds as follows.⁶

January 1, 2022		
Debt Investments	108,111	
Cash		108,111

 Calculator Solution for Bond Price		
	Inputs	Answer
N	10	
I	4	
PV	?	-108,111
PMT	5,000	
FV	100,000	

Illustration 17.6 presents the effect of the premium amortization on the interest revenue Graff records each period using the effective-interest method.

10% Bonds Purchased to Yield 8%				
Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
1/1/22				£108,111
7/1/22	£ 5,000^a	£ 4,324^b	£ 676^c	107,435 ^d
1/1/23	5,000	4,297	703	106,732
7/1/23	5,000	4,269	731	106,001
1/1/24	5,000	4,240	760	105,241
7/1/24	5,000	4,210	790	104,451
1/1/25	5,000	4,178	822	103,629
7/1/25	5,000	4,145	855	102,774
1/1/26	5,000	4,111	889	101,885
7/1/26	5,000	4,075	925	100,960
1/1/27	5,000	4,040	960	100,000
	<u>£50,000</u>	<u>£41,889</u>	<u>£8,111</u>	
^a £5,000 = £100,000 × .10 × $\frac{6}{12}$ ^c £676 = £5,000 – £4,324				
^b £4,324 = £108,111 × .08 × $\frac{6}{12}$ ^d £107,435 = £108,111 – £676				

ILLUSTRATION 17.6 Schedule of Interest Revenue and Bond Premium Amortization—Effective-Interest Method

The entry to record interest revenue on July 1, 2022, is as follows.

July 1, 2022		
Cash	5,000	
Debt Investments		676
Interest Revenue		4,324

At December 31, 2022, Graff makes the following entry to recognize interest revenue.

December 31, 2022		
Interest Receivable	5,000	
Debt Investments		703
Interest Revenue		4,297

As a result, Graff reports interest revenue for 2022 of £8,621 (£4,324 + £4,297).

To apply fair value to these debt investments, assume that at year-end the fair value of the bonds is £105,000 and that the carrying amount of the investments is £106,732. Comparing this fair value with the carrying amount (amortized cost) of the bonds at December 31, 2022, Graff recognizes an unrealized holding loss of £1,732 (£106,732 – £105,000). It reports this loss as other comprehensive income. Graff makes the following entry.

December 31, 2022		
Unrealized Holding Gain or Loss—Equity	1,732	
Fair Value Adjustment		1,732

The Unrealized Holding Gain or Loss—Equity account is used to indicate that any change in fair value will be reported as part of equity in the statement of financial position. Also, Graff uses a valuation account instead of crediting the Debt Investments account. The use of the **Fair Value Adjustment**⁷ account enables the company to maintain a record of its amortized cost. Because the adjustment account has a credit balance in this case, Graff subtracts it from the balance of the Debt Investments account to determine fair value. Graff reports this fair value amount on the statement of financial position. At each reporting date, Graff reports the bonds at fair value with an adjustment to the Unrealized Holding Gain or Loss—Equity account.

Example: Portfolio of Securities

To illustrate the accounting for a portfolio of securities, assume that Webb AG has two debt securities classified as held-for-collection and

selling. [Illustration 17.7](#) identifies the amortized cost, fair value, and the amount of the unrealized gain or loss.

HFCS Debt Security Portfolio December 31, 2022			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Watson SE 8% bonds	€ 93,537	€103,600	€10,063
Anacomp Group 10% bonds	200,000	180,400	(19,600)
Total of portfolio	€293,537	€284,000	(9,537)
Previous fair value adjustment balance			—0—
Fair value adjustment—Cr.			€ (9,537)

[ILLUSTRATION 17.7](#) Computation of Fair Value Adjustment—HFCS (2022)

The fair value of Webb’s HFCS portfolio totals €284,000. The gross unrealized gains are €10,063, and the gross unrealized losses are €19,600, resulting in a net unrealized loss of €9,537. That is, the fair value of HFCS securities is €9,537 lower than its amortized cost. Webb makes an adjusting entry to a valuation allowance to record the decrease in value and to record the loss as follows.

December 31, 2022		
Unrealized Holding Gain or Loss—Equity	9,537	
Fair Value Adjustment		9,537

Webb reports the unrealized holding loss of €9,537 as other comprehensive income and a reduction of equity. Recall that companies exclude from net income any unrealized holding gains and losses related to HFCS securities. Unrealized Holding Gain or Loss—Equity is then closed to Accumulated Other Comprehensive Income as shown in the following entry.

December 31, 2022

December 31, 2022		
Accumulated Other Comprehensive Income	9,537	
Unrealized Holding Gain or Loss—Equity		9,537

Accumulated Other Comprehensive Income is reported as part of equity in the statement of financial position.

Sale of HFCS Securities

If a company sells bonds carried as investments in HFCS securities before the maturity date, it must make entries to remove from the Debt Investments account the amortized cost of bonds sold. To illustrate, assume that Webb AG sold the Watson bonds (from [Illustration 17.7](#)) on July 1, 2023, for €90,000, at which time it had an amortized cost of €94,214. [Illustration 17.8](#) shows the computation of the realized loss.

Amortized cost (Watson bonds)	€94,214
Less: Selling price of bonds	<u>90,000</u>
Loss on sale of bonds	<u>€ 4,214</u>

[ILLUSTRATION 17.8](#) Computation of Loss on Sale of Bonds

Webb records the sale of the Watson bonds as follows.

July 1, 2023		
Cash	90,000	
Loss on Sale of Investments	4,214	
Debt Investments		94,214

Webb reports this realized loss in the “Other income and expense” section of the income statement.⁸ Assuming no other purchases and sales of bonds in 2023, Webb on December 31, 2023, prepares the information shown in [Illustration 17.9](#).

HFCS Debt Security Portfolio December 31, 2023			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Anacomp Group 10% bonds (total portfolio)	€200,000	€195,000	€(5,000)
Previous fair value adjustment balance—Cr.			(9,537)
Fair value adjustment—Dr.			€ 4,537

ILLUSTRATION 17.9 Computation of Fair Value Adjustment—HFCS (2023)

Webb has an unrealized holding loss of €5,000. However, the Fair Value Adjustment account already has a credit balance of €9,537. To reduce the adjustment account balance to €5,000, Webb debits it for €4,537, as follows.

December 31, 2023		
Fair Value Adjustment	4,537	
Unrealized Holding Gain or Loss—Equity		4,537

Financial Statement Presentation

Webb's December 31, 2023, statement of financial position and the 2023 income statement include the items and amounts shown in **Illustration 17.10** (the Anacomp bonds are long-term investments but are not intended to be held to maturity).

Statement of Financial Position	
Investments	
Debt investments (HFCS)	€195,000
Current assets	
Interest receivable	€ xxx
Equity	
Accumulated other comprehensive loss	€ 5,000
Income Statement	
Other income and expense	
Interest revenue	€ xxx
Loss on sale of investments	€ 4,214

ILLUSTRATION 17.10 Reporting of HFCS Securities

Some favor including the unrealized holding gain or loss in net income rather than reporting it as other comprehensive income. However, some companies, particularly financial institutions, note that recognizing gains and losses on assets, but not liabilities, introduces substantial volatility in net income. They argue that hedges often exist between assets and liabilities so that gains in assets are offset by losses in liabilities, and vice versa. In short, to recognize gains and losses only on the asset side is unfair and not representative of the economic activities of the company.

This argument convinced the IASB. As a result, companies **do not include in net income** these unrealized gains and losses on debt investments classified as held-for-collection and selling. However, even this approach solves only some of the problems because **volatility of capital** still results. This is of concern to financial institutions because regulators restrict financial institutions' operations based on their level of capital. However, companies can still manage their net income by engaging in **gains trading** (i.e., selling the winners and holding the losers).

Debt Investments—Trading

In some cases, companies both manage and evaluate investment performance on a fair value basis. In these situations, these investments are managed and evaluated based on a documented risk-management or investment strategy based on fair value information. For example, some companies often hold debt investments with the intention of selling them in a short period of time. These debt investments are often referred to as **trading investments** because companies frequently buy and sell these investments to generate profits from short-term differences in price.

Companies report trading securities at fair value, with unrealized holding gains and losses reported as part of net income. Similar to held-for-collection or HFCS investments, companies are required to amortize any discount or premium. A **holding gain or loss** is the net change in the fair value of a security from one period to another, exclusive of dividend or interest revenue recognized but not received. In short, the IASB says to adjust the trading securities to fair value, at each reporting date. In addition, companies report the change in value as part of net income, not other comprehensive income.

To illustrate, assume that on December 31, 2022, Western Publishing determined the distribution of its trading securities portfolio, as shown in **Illustration 17.11**. (Assume that 2022 is the first year that Western Publishing held trading securities.) At the date of acquisition, Western Publishing recorded these trading securities at cost, in the account entitled Debt Investments. This is the first valuation of this recently purchased portfolio.

Trading Debt Security Portfolio December 31, 2022			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Burlington Northern 6% bonds	€ 43,860	€ 51,500	€ 7,640
GM Corporation 7% bonds	184,230	175,200	(9,030)
Charter Communications 8% bonds	86,360	91,500	<u>5,140</u>
Total of portfolio	<u>€314,450</u>	<u>€318,200</u>	3,750
Previous fair value adjustment balance			—0—
Fair value adjustment—Dr.			<u>€ 3,750</u>

ILLUSTRATION 17.11 Computation of Fair Value Adjustment—Trading Securities Portfolio (2022)

The total cost of Western Publishing's trading portfolio is €314,450. The gross unrealized gains are €12,780 (€7,640 + €5,140), and the gross unrealized losses are €9,030, resulting in a net unrealized gain of €3,750. The fair value of trading securities is €3,750 greater than its cost.

At December 31, Western Publishing makes an adjusting entry to the Fair Value Adjustment account, to record both the increase in value and the unrealized holding gain.

December 31, 2022		
Fair Value Adjustment	3,750	
Unrealized Holding Gain or Loss—Income		3,750

Because the Fair Value Adjustment account balance is a debit, Western Publishing adds it to the cost of the Debt Investments account to arrive at a fair value for the trading securities. Western Publishing reports this fair value amount on the statement of financial position.

As with other debt investments, when a trading investment is sold, the Debt Investments account is reduced by the amount of the amortized cost of the bonds. Any realized gain or loss is recorded in the “Other income or expense” section of the income statement. The Fair Value Adjustment account is then adjusted at year-end for the unrealized gains or losses on the remaining securities in the trading investment portfolio.

When securities are actively traded, the IASB believes that the investments should be reported at fair value on the statement of financial position. In addition, changes in fair value (unrealized gains and losses—income) should be reported in the “other income and expense” section of the income statement. Such reporting on trading securities provides more relevant information to existing and prospective shareholders.

Fair Value Option

In some situations, a company meets the criteria for accounting for a debt investment at amortized cost, but it would rather account for the investment at fair value, with all gains and losses related to changes in fair value reported in income. The most common reason is to address a measurement or recognition “mismatch.” For example, assume that **Pirelli** (ITA) purchases debt investments that it plans to manage on a held-for-collection basis (and account for at amortized cost). Pirelli also manages and evaluates this investment in conjunction with a related liability that is measured at fair value. Pirelli has a mismatch on these related financial assets because, even though the fair value of the investment may change, no gains and losses are recognized, while gains and losses on the liability are recorded in income.⁹

To address this mismatch, **companies have the option to report most financial assets at fair value.** This option is applied on an instrument-by-instrument basis and is generally available only at the time a company first purchases the financial asset. If a company chooses to use the fair value option, it measures this instrument at fair value until the company no longer has ownership. [9] By choosing the fair value option for the debt investment, Pirelli records

gains and losses in income, which will offset the gains and losses recorded on the liability, thereby providing more relevant information about these related financial assets.¹⁰

To illustrate, assume that Hardy AG purchases bonds issued by the German Central Bank. Hardy plans to hold the debt investment until it matures in five years. At December 31, 2022, the amortized cost of this investment is €100,000; its fair value at December 31, 2022, is €113,000. If Hardy chooses the fair value option to account for this investment, it makes the following entry at December 31, 2022.

December 31, 2022		
Debt Investment (German bonds)	13,000	
Unrealized Holding Gain or Loss—Income		13,000

In this situation, Hardy uses the Debt Investment account to record the change in fair value at December 31. It does not use the Fair Value Adjustment account because the accounting for the fair value option is on an investment-by-investment basis rather than on a portfolio basis. Because Hardy selected the fair value option, the unrealized gain or loss is recorded as part of net income even though it is managing the investment on a held-for-collection basis. Hardy must continue to use fair value to record this investment until it no longer has ownership of the security.

What Do the Numbers Mean?

What Is Fair Value?

In a letter to market regulators, the International Accounting Standards Board (IASB) said some European financial institutions should have booked bigger losses on their Greek government bond holdings. The IASB criticized inconsistencies in the way financial institutions wrote down the value of their Greek sovereign debt in their quarterly earnings.

The IASB said “some companies” were not using market prices to calculate the fair value of their Greek bond holdings, relying instead on internal models. While some claimed this was because the market for Greek debt had become illiquid, the IASB disagreed. “Although the level of trading activity in Greek government bonds has decreased, transactions are still taking place,” IASB chair Hans Hoogervorst wrote.

European banks, which had taken a 3 billion hit on their Greek bond holdings, employed markedly different approaches to valuing the debt. The write-downs disclosed in their quarterly results varied from 21 to 50 percent, showing a wide range of views on what they expect to get back from their holdings. Jacques Chahine, head of **J. Chahine Capital** (LUX) which manages €320 billion in assets, noted that “the Greek debt issue has been treated lightly. And it’s not just Greek debt—all of it needs to be written down, including Spain, Italy.”

Especially egregious, stated one accounting expert, were the findings that companies use their own more optimistic assumptions in some instances as a substitute for external pricing sources. “What that is saying is: ‘Fair value is what you want the value to be. Pick a number....’ That’s especially troublesome.”

Sources: Susanne Craig and Jonathan Weil, “SEC Targets Morgan Stanley Values,” *Wall Street Journal* (November 8, 2004), p. C3; and “Accounting Board Criticizes European Banks on Greek Debt,” *The New York Times* (August 30, 2011).

Equity Investments

LEARNING OBJECTIVE 2

Describe the accounting for equity investments.

An **equity investment** represents ownership interest, such as ordinary, preference, or other capital shares. It also includes rights to acquire or dispose of ownership interests at an agreed-upon or determinable price, such as in warrants and rights. The cost of equity investments is measured at the purchase price of the security. Broker's commissions and other fees incidental to the purchase are recorded as expense. [\[10\]](#)

The degree to which one company (**investor**) acquires an interest in the shares of another company (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. The classification of such investments depends on the percentage of the investee voting shares that is held by the investor:

1. Holdings of less than 20 percent (**fair value**)—investor has passive interest.
2. Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
3. Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

[Illustration 17.12](#) lists these levels of interest or influence and the corresponding valuation and reporting method that companies must apply to the investment.

Percentage of Ownership	0% \longleftrightarrow 20% \longleftrightarrow 50% \longleftrightarrow 100%		
Level of influence	Little or None	Significant	Control
Valuation method	Fair Value	Equity Method	Consolidation

ILLUSTRATION 17.12 Levels of Influence Determine Accounting Methods

The accounting and reporting for equity investments therefore depend on the level of influence and the type of security involved, as shown in Illustration 17.13.

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Holdings less than 20%			
1. Trading	Fair value	Recognized in net income	Dividends declared; gains and losses from sale.
2. Non-Trading Option	Fair value	Recognized in “Other comprehensive income” and as separate component of equity	Dividends declared; gains and losses from sale.
Holdings between 20% and 50%	Equity method	Not recognized	Proportionate share of investee’s net income; gains and losses from sale.
Holdings more than 50%	Consolidation	Not recognized	Not applicable.

ILLUSTRATION 17.13 Accounting and Reporting for Equity Investments by Category

Holdings of Less Than 20%

When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. As indicated in [Illustration 17.13](#), there are two classifications for holdings less than 20 percent. Under IFRS, the presumption is that equity investments are held-for-trading. That is, companies hold these securities to profit from price changes. As with debt investments that are held-for-trading, the general accounting and reporting rule for these investments is to value the securities at fair value and record unrealized gains and losses in net income (**fair value**).¹¹

However, some equity investments are held for purposes other than trading. For example, a company may be required to hold an equity investment in order to sell its products in a particular area. In this situation, the recording of unrealized gains and losses in income, as is required for trading investments, is not indicative of the company's performance with respect to this investment. As a result, IFRS allows companies to classify some equity investments as non-trading. **Non-trading equity investments** are recorded at fair value on the statement of financial position, with unrealized gains and losses reported in other comprehensive income. [\[12\]](#)

Equity Investments—Trading (Income)

Upon acquisition, companies record equity investments at fair value.^{[12](#)} To illustrate, assume that on November 3, 2022, Republic SA purchased ordinary shares of three companies, each investment representing less than a 20 percent interest. These shares are held-for-trading.

	Cost
Burberry	€259,700
Nestlé	317,500
St. Regis Pulp Co.	141,350
Total cost	<u>€718,550</u>

Republic records these investments as follows.

November 3, 2022		
Equity Investments	718,550	
Cash		718,550

On December 6, 2022, Republic receives a cash dividend of €4,200 on its investment in the ordinary shares of Nestlé. It records the cash dividend as follows.

December 6, 2022		
Cash	4,200	

December 6, 2022		
Dividend Revenue		4,200

All three of the investee companies reported net income for the year, but only Nestlé declared and paid a dividend to Republic. But recall that when an investor owns less than 20 percent of the shares of another company, it is presumed that the investor has relatively little influence on the investee. As a result, **net income earned by the investee is not a proper basis for recognizing income from the investment by the investor.** Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor earns net income only when the investee declares cash dividends.**

At December 31, 2022, Republic's equity investment portfolio has the carrying value and fair value shown in [Illustration 17.14](#).

Equity Investment Portfolio December 31, 2022			
Investments	Carrying Value	Fair Value	Unrealized Gain (Loss)
Burberry	€259,700	€275,000	€ 15,300
Nestlé	317,500	304,000	(13,500)
St. Regis Pulp Co.	141,350	104,000	(37,350)
Total of portfolio	€718,550	€683,000	(35,550)
Previous fair value adjustment balance			—0—
Fair value adjustment—Cr.			€(35,550)

ILLUSTRATION 17.14 Computation of Fair Value Adjustment—Equity Investment Portfolio (2022)

For Republic's equity investment portfolio, the gross unrealized gains are €15,300, and the gross unrealized losses are €50,850 (€13,500 +

€37,350), resulting in a net unrealized loss of €35,550. The fair value of the equity investment portfolio is below cost by €35,550.

Republic records the net unrealized gains and losses related to changes in the fair value of **equity** investments in an Unrealized Holding Gain or Loss—Income account. Republic reports this amount as “Other income and expense.” In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Income account and crediting the Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

December 31, 2022		
Unrealized Holding Gain or Loss—Income	35,550	
Fair Value Adjustment		35,550

On January 23, 2023, Republic sells all of its Burberry ordinary shares, receiving €287,220. [Illustration 17.15](#) shows the computation of the realized gain on the sale.

Net proceeds from sale	€287,220
Cost of Burberry shares	<u>259,700</u>
Gain on sale of shares	<u>€ 27,520</u>

ILLUSTRATION 17.15 Computation of Gain on Sale of Burberry Shares

Republic records the sale as follows.

January 23, 2023		
Cash	287,220	
Equity Investments		259,700
Gain on Sale of Investments		27,520

In addition, assume that on February 10, 2023, Republic purchases €255,000 of Continental Trucking ordinary shares (20,000 shares × €12.75 per share), plus brokerage commissions of €1,850.

Illustration 17.16 lists Republic's equity investment portfolio as of December 31, 2023.

Equity Investment Portfolio December 31, 2023			
Investments	Carrying Value	Fair Value	Unrealized Gain (Loss)
Continental Trucking	€255,000 ^a	€278,350	€ 23,350
Nestlé	317,500	362,550	45,050
St. Regis Pulp Co.	141,350	139,050	(2,300)
Total of portfolio	<u>€713,850</u>	<u>€779,950</u>	66,100
Previous fair value adjustment balance—Cr.			(35,550)
Fair value adjustment—Dr.			<u>€101,650</u>

^aThe brokerage commissions are expensed.

ILLUSTRATION 17.16 Computation of Fair Value Adjustment—Equity Investment Portfolio (2023)

At December 31, 2023, the fair value of Republic's equity investment portfolio exceeds carrying value by €66,100 (unrealized gain). The Fair Value Adjustment account had a credit balance of €35,550 at December 31, 2023. To adjust its December 31, 2023, equity investment portfolio to fair value, the company debits the Fair Value Adjustment account for €101,650 (€35,550 + €66,100). Republic records this adjustment as follows.

December 31, 2023		
Fair Value Adjustment	101,650	
Unrealized Holding Gain or Loss—Income		101,650

Equity Investments—Non-Trading (OCI)

The accounting entries to record non-trading equity investments are the same as for trading equity investments, except for recording the

unrealized holding gain or loss. For non-trading equity investments, companies **report the unrealized holding gain or loss as other comprehensive income**. Thus, the account titled Unrealized Holding Gain or Loss—Equity is used.

To illustrate, assume that on December 10, 2022, Republic SA purchases 1,000 ordinary shares of Hawthorne Company for €20.75 per share (total cost €20,750). The investment represents less than a 20 percent interest. Hawthorne is a distributor for Republic products in certain locales, the laws of which require a minimum level of share ownership of a company in that region. The investment in Hawthorne meets this regulatory requirement. As a result, Republic accounts for this investment at fair value, with unrealized gains and losses recorded in other comprehensive income (OCI).¹³ Republic records this investment as follows.

December 10, 2022		
Equity Investment (Hawthorne)	20,750	
Cash		20,750

The Equity Investment (Hawthorne) account is used because the non-trading classification is applied on an investment by investment basis rather than on a portfolio basis.

On December 27, 2022, Republic receives a cash dividend of €450 on its investment in the ordinary shares of Hawthorne Company. It records the cash dividend as follows.

December 27, 2022		
Cash	450	
Dividend Revenue		450

Similar to the accounting for trading investments, when an investor owns less than 20 percent of the ordinary shares of another company, it is presumed that the investor has relatively little influence on the investee. Therefore, **the investor earns income when the investee declares cash dividends**.

At December 31, 2022, Republic's investment in Hawthorne has the carrying value and fair value shown in [Illustration 17.17](#).

Non-Trading Equity Investment	Carrying Value	Fair Value	Unrealized Gain (Loss)
Hawthorne Company	€20,750	€24,000	€3,250

ILLUSTRATION 17.17 Computation of Fair Value Adjustment—Non-Trading Equity Investment (2022)

For Republic's non-trading investment, the unrealized gain is €3,250. That is, the fair value of the Hawthorne investment exceeds cost by €3,250. Because Republic has classified this investment as non-trading, Republic records the unrealized gains and losses related to changes in the fair value of this non-trading **equity** investment in an Unrealized Holding Gain or Loss—Equity account. Republic reports this amount **as a part of other comprehensive income and as a component of accumulated other comprehensive income (reported in equity)**. In this case, Republic prepares an adjusting entry crediting the Unrealized Holding Gain or Loss—Equity account and debiting the Equity Investment account to record the increase in fair value and to record the gain as follows.

December 31, 2022		
Equity Investment (Hawthorne)	3,250	
Unrealized Holding Gain or Loss—Equity		3,250

As indicated, the Equity Investment (Hawthorne) account is used to record the change in fair value because the non-trading classification is applied on investment by investment basis, rather than on a portfolio basis.

Republic reports its equity investments in its December 31, 2022, financial statements as shown in [Illustration 17.18](#).

Statement of Financial Position	
Investments	
Equity investment (Hawthorne)	€24,000
Equity	
Accumulated other comprehensive gain	€ 3,250
Statement of Comprehensive Income	
Other income and expense	
Dividend revenue	€ 450
Other comprehensive income	
Unrealized holding gain	€ 3,250

ILLUSTRATION 17.18 Financial Statement Presentation of Equity Investments at Fair Value (2022)

During 2023, sales of Republic products through Hawthorne as a distributor did not meet management's goals. As a result, Republic withdrew from these markets. On December 20, 2023, Republic sold all of its Hawthorne Company ordinary shares, receiving proceeds of €22,500. Before Republic records the sale, it first updates the fair value of the Hawthorne Company equity investment to fair value and recognizes any unrealized gain or loss as shown in [Illustration 17.19](#).

Non-Trading Equity Investment	
Fair value of Hawthorne equity investment (December 31, 2022)	€24,000
Fair value of Hawthorne equity investment (December 20, 2023)	22,500
Unrealized Holding Loss—Equity	<u>€ 1,500</u>

ILLUSTRATION 17.19 Adjustment to Carrying Value of Investment

Republic makes the following entry to reduce the equity investment and recognize the unrealized holding loss for Hawthorne as follows.

December 20, 2023		
Unrealized Holding Gain or Loss—Equity	1,500	
Equity Investment (Hawthorne)		1,500

The following entry is then made to record the sale of the investment.

December 20, 2023		
Cash	22,500	
Equity Investment (Hawthorne)		22,500

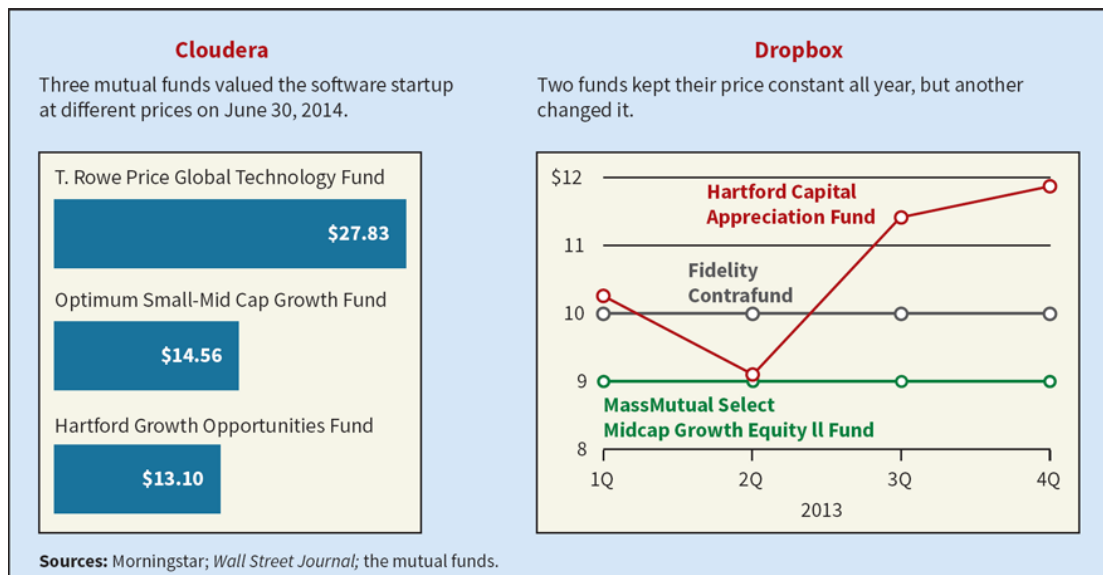

As indicated, recognition of the sale does not result in a gain or loss because the equity investment is stated at fair value. Note that all gains and losses on the non-trading investment are recorded in equity.¹⁴

In summary, the accounting for non-trading equity investments deviates from the general provisions for equity investments. The IASB noted that while fair value provides the most useful information about equity investments, recording unrealized gains or losses in other comprehensive income is more representative for non-trading equity investments. **[15]**

What Do the Numbers Mean?

The Fair Value Challenge

For another illustration of fair value measurement challenges—this time for equity investments—consider the example of mutual funds, which hold shares of private technology companies. The following graphs show the wide range of valuations for **Cloudera** (USA) and **Dropbox** (USA) and demonstrate how values of these private technology companies can deviate among investment funds.

What to do? Everyone seems to agree that determining the worth of these investments is a time-consuming process that must be monitored. For investors, it is important to understand the composition of the mutual funds they purchase. The amount of hard-to-sell shares is an indicator of how easily mutual fund investors would be able to recover their investment.

Sources: K. Grind, “SEC Takes Closer Look at Startup Valuations,” *Wall Street Journal* (November 18, 2015); and K. Grind, “Mutual Funds Flail at Valuing Hot Startups Like Uber,” *Wall Street Journal* (October 29, 2015).

Holdings Between 20% and 50%

LEARNING OBJECTIVE 3

Explain the equity method of accounting.

An investor company with an interest of less than 50 percent in an investee company does not possess legal control. However, an investment in voting shares of less than 50 percent still gives an investor the ability to exercise significant influence over the operating and financial policies of an investee. [16] For example, the technology company **Lenovo Group** (CHN) owns 25.4 percent of **Beijing Lenovo Healthcare Information Technology** (CHN). The latter is important to Lenovo, as cloud-based medical information systems are expected to be increasingly used by hospitals and other health providers. Lenovo's significant (but not controlling) ownership stake in a medical technology company helps Lenovo understand how computers will be used in healthcare information systems.

Significant influence may be indicated in several ways. Examples include representation on the board of directors, participation in policy-making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency.

Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings. To achieve a reasonable degree of uniformity in application of the "significant influence" criterion, the profession concluded that an investment (direct or indirect) of 20 percent or more of the voting shares of an investee should lead to a presumption that in the absence of evidence to the contrary, an investor has the ability to exercise significant influence over an investee.¹⁵

In instances of "significant influence" (generally an investment of 20 percent or more), the investor must account for the investment using the **equity method**.

Equity Method

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company

originally records the investment at the cost of the shares acquired but subsequently adjusts the amount each period for changes in the investee's net assets. That is, **the investor's proportionate share of the earnings (or losses) of the investee periodically increases (or decreases) the investment's carrying amount. All dividends received by the investor from the investee also decrease the investment's carrying amount.** The equity method recognizes that the investee's earnings increase the investee's net assets, and that the investee's losses and dividends decrease these net assets.

To illustrate the equity method and compare it with the fair value method, assume that Maxi Company purchases a 20 percent interest in Mini Company. To apply fair value in this example, assume that Maxi does not have the ability to exercise significant influence and classifies the investment as trading. Where this example applies the equity method, assume that the 20 percent interest permits Maxi to exercise significant influence. [Illustration 17.20](#) shows the entries.

Note that under **fair value**, Maxi reports as revenue only the cash dividends received from Mini. **The earning of net income by Mini (the investee) is not considered a proper basis for recognition of income from the investment by Maxi (the investor).** Why? Mini may permanently retain in the business any increased net assets resulting from its profitable operation. Therefore, Maxi only recognizes revenue when it receives dividends from Mini.

Entries by Maxi Company					
Fair Value			Equity Method		
On January 2, 2022, Maxi Company acquired 48,000 shares (20% of Mini Company ordinary shares) at a cost of \$10 a share.					
Equity Investments	480,000		Equity Investments	480,000	
Cash		480,000	Cash		480,000
For the year 2022, Mini Company reported net income of \$200,000; Maxi Company's share is 20%, or \$40,000.					
No entry			Equity Investments	40,000	
			Investment Income		40,000
At December 31, 2022, the Mini Company 48,000 shares have a fair value (market price) of \$12 a share, or \$576,000.					
Fair Value Adjustment	96,000		No entry		
Unrealized Holding Gain or Loss—Income		96,000			
On January 28, 2023, Mini Company announced and paid a cash dividend of \$100,000; Maxi Company received 20%, or \$20,000.					
Cash	20,000		Cash	20,000	
Dividend Revenue		20,000	Equity Investments		20,000
For the year 2023, Mini reported a net loss of \$50,000; Maxi Company's share is 20%, or \$10,000.					
No entry			Investment Loss	10,000	
			Equity Investments		10,000
At December 31, 2023, the Mini Company 48,000 shares have a fair value (market price) of \$11 a share, or \$528,000.					
Unrealized Holding Gain or Loss—Income	48,000		No entry		
Fair Value Adjustment					
[((\$480,000 + \$96,000) – \$528,000)]		48,000			

ILLUSTRATION 17.20 Comparison of Fair Value and Equity Method

Under the **equity method**, Maxi reports as revenue its share of the net income reported by Mini. Maxi records the cash dividends received from Mini as a decrease in the investment carrying value. As a result, Maxi records its share of the net income of Mini in the year when it is recognized. With significant influence, Maxi can ensure that Mini will pay dividends, if desired, on any net asset increases resulting from net income. To wait until receiving a dividend ignores the fact that Maxi is better off if the investee has earned income.

Using dividends as a basis for recognizing income poses an additional problem. For example, assume that the investee reports a net loss. However, the investor exerts influence to force a dividend payment from the investee. In this case, the investor reports income even though the investee is experiencing a loss. **In other words, using dividends as a basis for recognizing income fails to report properly the economics of the situation** (see **Underlying Concepts**).

Underlying Concepts

A low level of ownership indicates that a company should defer the income from an investee until cash is received (e.g., a dividend).

For some companies, equity accounting can be a real pain to the bottom line. For example, [Amazon.com](#) (USA), the pioneer of Internet retailing, at one time struggled to turn a profit. Furthermore, some of Amazon's equity investments had resulted in Amazon's earnings performance going from bad to worse. At one time, Amazon disclosed equity stakes in such companies as **Altera International** (USA), **Basis Technology** (USA), [Drugstore.com](#) (USA), and [Eziba.com](#) (USA). These equity investees reported losses that made Amazon's already bad bottom line even worse, accounting for up to 22 percent of its reported loss in one year alone.

Investee Losses Exceed Carrying Amount

If an investor's share of the investee's losses exceeds the carrying amount of the investment, should the investor recognize additional losses? Ordinarily, the investor should discontinue applying the equity method and not recognize additional losses.

If the investor's potential loss is not limited to the amount of its original investment (by guarantee of the investee's obligations or other commitment to provide further financial support) or if imminent return to profitable operations by the investee appears to be assured, the investor should recognize additional losses. [\[18\]](#)

Holdings of More Than 50%

When one company acquires a voting interest of more than 50 percent in another company, it is said to have a **controlling interest**. In such a relationship, the investor company is referred to as the **parent** and the investee company as the **subsidiary**. Companies present the investment in the ordinary shares of the subsidiary as a long-term investment on the separate financial statements of the parent.

When the parent treats the investment as a subsidiary, the parent generally prepares **consolidated financial statements**.

Consolidated financial statements treat the parent and subsidiary companies as a single economic entity. (Advanced accounting courses extensively discuss the subject of when and how to prepare consolidated financial statements.) Whether or not consolidated financial statements are prepared, the parent company generally accounts for the investment in the subsidiary **using the equity method** as explained in the previous section of this chapter.

What Do the Numbers Mean?

Who's in Control Here?

Lenovo Group (CHN) owns a significant percentage (25.4 percent) of **Beijing Lenovo Healthcare Information Technology** (CHN). The core business of Beijing Lenovo Healthcare is to develop cloud-based software to help the operations of hospitals and other healthcare providers. This company is important to Lenovo, as cloud-based medical information systems (which use computers that Lenovo produces) are expected to become widely adopted by hospitals and other health providers.

Because Lenovo owns less than 50 percent of the shares, Lenovo does not consolidate Beijing Lenovo Healthcare but instead accounts for its investment using the *equity method*. Under the equity method, Lenovo reports a single income item for its profits from Beijing Lenovo Healthcare and only the net amount of its investment in the statement of financial position. Equity method accounting gives Lenovo a pristine statement of financial position and income statement by separating the assets, liabilities, and profit margins of the related companies from its laptop computer businesses.

Lenovo also owns a 49 percent interest in **Lenovo Educational Technology** (CHN), which is focused on talent development in vocational technology, as well as a 47.7 percent interest in **Shareit Technology Holdings Inc.** (CHN), which develops software to assist users in sharing files such as photos and videos. In both cases, Lenovo uses the equity method of accounting.

Some are critical of equity method accounting; they argue that some investees, such as the 49-percent-owned companies, should be consolidated. The IASB has tightened up consolidation rules, so that companies will be more likely to consolidate more of their 20- to 50-percent-owned investments. For example, Lenovo has now consolidated Lenovo Educational Technology and Shareit

Technology Holdings Inc., as it effectively controls these equity method investments. See *IFRS 10, Consolidated Financial Statements* (most recently amended in 2015), and the IFRS website for more information.

Summary of Reporting Treatment of Investments

Illustration 17.21 summarizes the major debt and equity investment classifications and their reporting treatment.

Classification	Valuation Approach and Reporting on the Statement of Financial Position	Income Effects
Debt Investment		
1. Held-for-Collection	Amortized cost.	Interest is recognized as revenue.
2. Held-for-Collection and Selling	Fair value.	Interest is recognized as revenue. Unrealized holding gains and losses are included in other comprehensive income.
3. Not Held-for-Collection, Trading	Fair value.	Interest is recognized as revenue. Unrealized holding gains and losses are included in income.
4. Fair Value Option	Fair value.	Interest is recognized as revenue. Unrealized holding gains and losses are included in income.
Equity Investment		
1. Trading	Fair value.	Dividends are recognized as revenue. Unrealized holding gains and losses are included in income

		income.
2. Non-Trading Option	Fair value.	Dividends are recognized as revenue. Unrealized holding gains and losses are not included in income but in other comprehensive income.
3. Equity Method	Investments originally recorded at cost with periodic adjustment for the investor's share of the investee's income or loss, and decreased by all dividends received from the investee.	Revenue is recognized to the extent of the investee's income or loss reported subsequent to the date of the investment.
4. Consolidation	Consolidated financial statements.	Revenue is recognized to the extent of the investee's income or loss reported subsequent to the date of the investment.

The fair value option to Other Comprehensive Income (OCI) for non-trading equity investments is reported differently than HFCS debt investments. Under this non-trading election for equity investments, the cumulative change in fair value remains in equity and is not recycled through profit and loss.

ILLUSTRATION 17.21 Summary of Investment Accounting Approaches

Other Reporting Issues

LEARNING OBJECTIVE 4

Evaluate other major issues related to debt and equity investments.

We have identified the basic issues involved in accounting for investments in debt and equity securities. In addition, the following issues relate to the accounting for investments.

1. Impairment of value.
2. Recycling adjustments.
3. Reclassifications between categories.

Impairment of Value

As indicated in [Chapter 7](#) for receivables, companies use the expected credit loss (ECL) model to measure impairment of receivables. To recognize the impairment, a company increases (debits) Bad Debt Expense and credits Allowance for Doubtful Accounts for the amount of the impairment. When it is probable that a company will be unable to collect all amounts due under the terms of the transaction, the receivable is permanently written off by a debit to Loss on Impairment and a credit to Accounts Receivable. The rules for debt investments (debt securities and loans) reported at **amortized cost** follow a similar approach

A company should evaluate every investment accounted for at amortized cost, at each reporting date, to determine if it has suffered **impairment**—a loss in value such that the fair value of the investment is below its carrying value. For example, if an investee experiences a bankruptcy or a significant liquidity crisis, the investor may suffer a permanent loss. **If the company determines that an**

investment is impaired, it writes down the amortized cost basis of the individual security to reflect this loss in value. The company accounts for the write-down as a realized loss, and it includes the amount in net income.

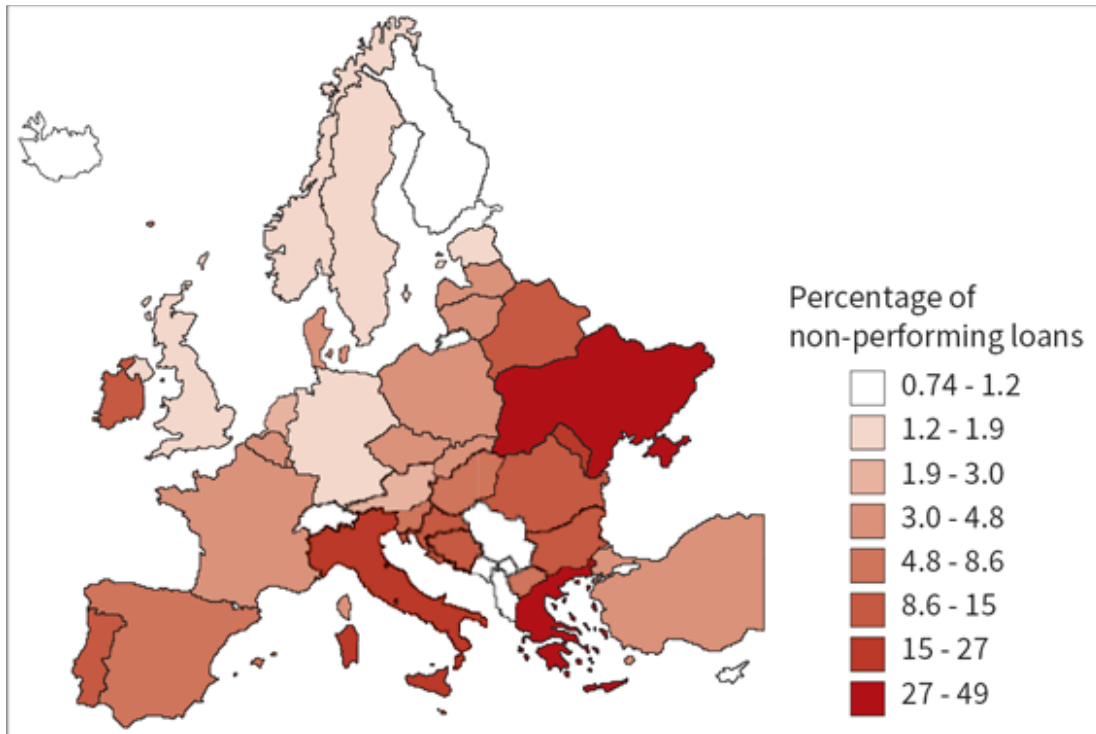

What Do the Numbers Mean?

Will We Be Ready the Next Time Around?

We now have a single impairment model, based on expected credit losses, to measure impairments of financial assets, including loans and notes receivable (discussed in [Chapter 7](#)) and debt investments. While the impact of the 2008 financial crisis has been absorbed in most parts of the world, including Europe, there are both lingering effects and an awareness that the next downturn in the economy will arrive at some point.

In Europe, the current level of non-performing loans has been improving and is now at or near pre-crisis levels. In the most recent period reported, the ratio of non-performing loans to total loans is down to 3.1 percent. This compares favorably both to levels in the years following the financial crisis when the ratio was over 7 percent, and the pre-crisis levels, which were in the 2.5 to 3.0 percent range.

However, while the overall level is improving and headed toward normal levels, the levels in various countries differ significantly. As the following visualization illustrates, a number of countries are at 3 percent or even lower. Several countries are above that level and some are substantially above 3 percent, with the highest levels in the 25 to 50 percent range, representing seriously weak banking economies.

Source: Adapted from Bank nonperforming loans to total gross loans (%) – Europe. Index Mundi.

www.indexmundi.com/facts/indicators/FB.AST.NPER.ZS/map/europe.

What remains to be seen is how the Eurozone in general, and the specific countries with elevated levels of non-performing loans, will adjust to address this problem. A further question is how the adoption of *IFRS 9*, with its expected credit losses model, will function during the next period when credit quality is under stress. This is particularly relevant given the yet-to-be-realized economic effects of Covid-19. The objective of this model is to give both banks and bank investors, for example, a better early warning of deteriorating credit quality. If the model works, it will provide the entire Eurozone economy, along with the rest of the world, with more timely information and relevant information. This should, in turn, lead to better responses and the possibility of mitigating the impact on the rest of the economy.

Impairment—Debt Investments Measured at Amortized Cost

At December 31, 2021, Mayhew Ltd. has a debt investment in Bao Group, purchased at par for ¥200,000 (amounts in thousands). The investment has a term of four years, with annual interest payments at 10 percent, paid at the end of each year (the historical effective-interest rate is 10 percent). This debt investment is classified as held-for-collection. [19]¹⁶ Unfortunately, Bao is experiencing significant financial difficulty and indicates that it will be unable to make all payments according to the contractual terms. That is, there has been a significant increase in credit risk for this Bao investment since Mayhew purchased it. Mayhew uses the present value method for measuring the required impairment loss. **Illustration 17.22** shows the cash flow schedule prepared for this analysis (amounts in thousands).¹⁷

December 31	Contractual Cash Flows	Expected Cash Flows	Loss of Cash Flows
2022	¥ 20,000	¥ 16,000	¥ 4,000
2023	20,000	16,000	4,000
2024	20,000	16,000	4,000
2025	220,000	216,000	4,000
Total cash flows	<u>¥280,000</u>	<u>¥264,000</u>	<u>¥16,000</u>

ILLUSTRATION 17.22 Investment Cash Flows

As indicated, the expected cash flows of ¥264,000 are less than the contractual cash flows of ¥280,000. The amount of the impairment to be recorded equals the difference between the recorded investment of ¥200,000 and the present value of the expected cash flows, as shown in **Illustration 17.23**.

Recorded investment		¥200,000
Less:	Present value of ¥200,000 due in 4 years at 10% (Table 6-2); $FV(PVF_{4,10\%})$; $(¥200,000 \times .68301)$	¥136,602
	Present value of ¥16,000 interest receivable annually for 4 years at 10% (Table 6-4); $R(PVF-OA_{4,10\%})$; $(¥16,000 \times 3.16986)$	<u>50,718</u>
		187,320
Loss on impairment		<u>¥ 12,680</u>

ILLUSTRATION 17.23 Computation of Impairment Loss

The loss due to the impairment is ¥12,680.¹⁸ Why isn't it ¥16,000 (¥280,000 – ¥264,000)? A loss of ¥12,680 is recorded because Mayhew must measure the loss at a present value amount, not at an undiscounted amount. Mayhew recognizes an impairment loss of ¥12,680 by debiting Loss on Impairment for the expected loss. At the same time, it reduces the overall value of the investment. The journal entry to record the loss is therefore as follows.

December 31, 2022		
Loss on Impairment	12,680	
Allowance for Impaired Debt Investments		12,680

Recovery of Impairment Loss

Subsequent to recording an impairment, events or economic conditions may change such that the extent of the impairment loss decreases (e.g., due to an improvement in the debtor's credit rating). In this situation, some or all of the previously recognized impairment loss should be reversed with a debit to the Allowance for Impaired Debt Investments account and a credit to Recovery of Impairment Loss.

For example, assume that on March 31, 2023, Mayhew determines that Bao's credit risk has declined significantly and decides to reverse

the impairment by making the following entry.

March 31, 2023		
Allowance for Impaired Debt Investments	12,680	
Recovery of Impairment Loss		12,680

Similar to the accounting for impairments of receivables shown in [Chapter 7](#), the reversal of impairment losses should not result in a carrying amount of the investment that exceeds the amortized cost that would have been reported had the impairment not been recognized.

Impairment—Debt Investments Measured at Fair Value (HFCS)

As indicated earlier, some companies have debt investments that are held-for-collection and selling (HFCS). Companies that have this type of debt investment report the investment at fair value, and any changes in fair value are reported in other comprehensive income. Companies that have HFCS debt investments measured at fair value through other comprehensive income use a different impairment model.

To illustrate, assume that Alexander AG purchases a HFCS debt investment on July 1, 2022, for €1,000,000 (its face value). The debt investment has an interest rate of 7 percent and a maturity date of July 1, 2027. At December 31, 2022, the fair value of the investment has declined to €960,000, due to an increase in market interest rates. The entries to record this debt investment in 2022 are shown in [Illustration 17.24](#).

July 1, 2022: To record the purchase of the debt investment.		
Debt Investments	1,000,000	
Cash		1,000,000
December 31, 2022: To record interest revenue on the debt investment.		
Cash $[(€1,000,000 \times .07) \div 2]$	35,000	
Interest Revenue		35,000
December 31, 2022: To record the decrease in fair value of the debt investment.		
Unrealized Holding Gain or Loss—Equity	40,000	
Fair Value Adjustment (€1,000,000 – €960,000)		40,000
December 31, 2022: To close the unrealized gain or loss—equity.		
Accumulated Other Comprehensive Income	40,000	
Unrealized Holding Gain or Loss—Equity		40,000

ILLUSTRATION 17.24 HFCS Impairment Entries

At December 31, 2022, Alexander AG's financial statements are as shown in **Illustration 17.25**.

Statement of Financial Position	
Assets	
Debt investments (€1,000,000 – €40,000)	€960,000
Equity	
Accumulated other comprehensive income (loss)	€(40,000)
Income Statement	
Other income and expense	
Interest revenue	€35,000

ILLUSTRATION 17.25 Financial Statement Presentation

The fair value decline of €40,000 was caused by an increase in the market rate of interest. What happens if the €40,000 decline is caused by (1) a change of €10,000 due to market interest rate changes and (2) an impairment of €30,000 due to credit risk? In this case, the third entry in **Illustration 17.24** changes because the impairment loss of €30,000 is reported in the income statement, not in other comprehensive income. The entries to record the impairment and the

change in fair value and related closing entry for Unrealized Holding Gain or Loss—Equity are shown in [Illustration 17.26](#).¹⁹

To record the decrease in the fair value of the debt investment:			
Loss on Impairment	30,000		
Unrealized Holding Gain or Loss—Equity	10,000		
Allowance for Impaired Debt Investments		30,000	
Fair Value Adjustment		10,000	
To close the Unrealized Gain or Loss—Equity account:			
Accumulated Other Comprehensive Income	10,000		
Unrealized Gain or Loss—Equity			10,000

ILLUSTRATION 17.26 Impairment Entries—Increase in Credit Risk

As indicated, Alexander uses a separate allowance account for impairment, with a corresponding charge to net income.²⁰ At December 31, 2022, Alexander's financial statements are as shown in [Illustration 17.27](#).

Statement of Financial Position	
Assets	
Debt investments (€1,000,000 – €30,000 – €10,000)*	€960,000
Equity	
Accumulated other comprehensive loss	€(10,000)
Income Statement	
Other income and expense	
Interest revenue	€35,000
Loss on impairment	30,000
*Fair value adjustment €(10,000); Allowance for impaired debt investments €(30,000)	

ILLUSTRATION 17.27 Financial Statement Presentation

If we assume that Alexander sells its debt investment on January 1, 2023, for €960,000 (its fair value at that time), the entry is as follows.

January 1, 2023		
Cash	960,000	
Loss on Sale of Debt Investment	10,000	
Allowance for Impaired Debt Investments	30,000	
Debt Investments		1,000,000
Fair Value Adjustment	10,000	
Accumulated Other Comprehensive Income		10,000

Because of this entry, the loss due to the reduction in fair value of €40,000 is now fully recognized; that is, €30,000 was recognized on December 31, 2022, and the remaining €10,000 on January 1, 2023. What happens if Alexander decides to keep its debt investment and later determines that its credit risk on this investment has decreased by €15,000? In this case, it makes the following entry.

Allowance for Impaired Debt Investments	15,000	
Recovery of Impairment Loss		15,000

The accounting for impairments related to debt investments and equity investments (holdings of less than 20 percent), **which are recorded at fair value with unrealized gains and losses through net income**, is straightforward. That is, if fair value is less than cost, the decline in value is reported through net income.

[**Illustration 17.28**](#) provides a summary of the guidelines related to impairments.

Asset Measurement Basis	Impairment Model
Loans, receivables, and debt securities measured at amortized cost.	Expected credit losses recognized in net income.
Debt securities measured at fair value with gains and losses recorded in other comprehensive income.	Expected credit losses recognized in income; remaining fair value change recorded in other comprehensive income.
Debt and equity securities measured at fair value with gains and losses recorded in net income.	Impairment measured as the difference between the lower-of-amortized-cost-or-fair value (debt securities) or lower-of-cost-or-fair value (equity securities).

ILLUSTRATION 17.28 Impairment Model Summary

Recycling Adjustments

As we indicated in [Chapter 4](#), companies may display the components of other comprehensive income in one of two ways: (1) in a combined statement of income and comprehensive income, or (2) in a separate statement of comprehensive income that begins with net income.

Reporting Issues

Single-Period Example

To provide a single-period example of the reporting of investment securities and related gain or loss on held-for-collection and selling (HFCS) investments, assume that on January 1, 2022, Hinges plc had cash and share capital—ordinary of £50,000. At that date, the company had no other asset, liability, or equity balances. On January 2, Hinges purchased for cash £50,000 of debt securities classified as HFCS. On June 30, Hinges sold part of the HFCS security debt portfolio, realizing a gain as shown in [Illustration 17.29](#).

Fair value of securities sold	£22,000
Less: Cost of securities sold	<u>20,000</u>
Realized gain	<u>£ 2,000</u>

ILLUSTRATION 17.29 Computation of Realized Gain

Hinges did not purchase or sell any other securities during 2022. It received £3,000 in interest during the year. At December 31, 2022, the remaining portfolio is as shown in [**Illustration 17.30**](#).

Fair value of portfolio	£34,000
Less: Cost of portfolio	<u>30,000</u>
Unrealized gain	<u>£ 4,000</u>

ILLUSTRATION 17.30 Computation of Unrealized Gain

[**Illustration 17.31**](#) shows the company's income statement for 2022.

Hinges plc Income Statement For the Year Ended December 31, 2022	
Interest revenue	£3,000
Gain (realized) on investment in securities	<u>2,000</u>
Net income	<u>£5,000</u>

ILLUSTRATION 17.31 Income Statement

The company reports its change in the unrealized holding gain in a statement of comprehensive income as shown in [**Illustration 17.32**](#).

Hinges plc Statement of Comprehensive Income For the Year Ended December 31, 2022	
Net income (includes realized gain of £2,000)	£5,000
Other comprehensive income: Unrealized holding gain	4,000
Comprehensive income	<u>£9,000</u>

ILLUSTRATION 17.32 Statement of Comprehensive Income

Its statement of changes in equity appears in **Illustration 17.33**.

Hinges plc Statement of Changes in Equity For the Year Ended December 31, 2022				
	Share Capital— Ordinary	Retained Earnings	Accumulated Other Comprehensive Income	Total
Beginning balance	£50,000	£ —0—	£ —0—	£50,000
Add: Net income		5,000		5,000
Other comprehensive income			4,000	4,000
Ending balance	<u>£50,000</u>	<u>£5,000</u>	<u>£4,000</u>	<u>£59,000</u>

The comparative statement of financial position is shown below in **Illustration 17.34**.

Hinges plc Comparative Statement of Financial Position		
	1/1/22	12/31/22
Assets		
Debt investments		£34,000
Cash	£50,000	25,000
Total assets	£50,000	£59,000
Equity		
Share capital—ordinary	£50,000	£50,000
Retained earnings		5,000
Accumulated other comprehensive income		4,000
Total equity	£50,000	£59,000

ILLUSTRATION 17.34 Comparative Statement of Financial Position

This example indicates how an unrealized gain or loss on HFCS debt investments affects all the financial statements. Note that a company must disclose the components that comprise accumulated other comprehensive income.

Multi-Period Example

When a company sells securities during the year, double-counting of the realized gains or losses in comprehensive income can occur. This double-counting results when a company reports unrealized gains or losses in other comprehensive income in a prior period and reports these gains or losses as part of net income in the current period.

To ensure that gains and losses are not counted twice when a sale occurs, a **reclassification adjustment** is necessary. [23] To illustrate, assume that Open AG has the two HFCS debt investments in its portfolio at the end of 2021 (its first year of operations) shown in **Illustration 17.35**.

Investments	Amortized Cost	Fair Value	Unrealized Holding Gain (Loss)
Lehman Inc. bonds 6%	£ 80,000	£105,000	£25,000
Woods Co. bonds 7%	120,000	135,000	15,000
Total of portfolio	£200,000	£240,000	40,000
Previous fair value adjustment balance			—0—
Fair value adjustment—Dr.			£40,000

ILLUSTRATION 17.35 HFCS Investment Portfolio (2021)

The entry to record the unrealized holding gain in 2021 is as follows.

December 31, 2021		
Fair Value Adjustment	40,000	
Unrealized Holding Gain or Loss—Equity		40,000

If Open reports net income in 2021 of €350,000, it presents a statement of comprehensive income as shown in **Illustration 17.36**.

Open AG Statement of Comprehensive Income For the Year Ended December 31, 2021	
Net income	€350,000
Other comprehensive income Unrealized holding gain	40,000
Comprehensive income	€390,000

ILLUSTRATION 17.36 Statement of Comprehensive Income (2021)

At December 31, 2021, Open reports on its statement of financial position debt investments of €240,000 (cost €200,000 plus fair value adjustment of €40,000) and accumulated other comprehensive income in equity of €40,000. The entry to transfer Unrealized Holding

Gain or Loss—Equity to Accumulated Other Comprehensive Income is as follows.

December 31, 2021 (Closing Entry)		
Unrealized Holding Gain or Loss—Equity	40,000	
Accumulated Other Comprehensive Income		40,000

On August 10, 2022, Open sells its Lehman Inc. bonds for €105,000 and realizes a gain on the sale of €25,000 (€105,000 – €80,000). The journal entry to record this transaction is as follows.

August 10, 2022		
Cash	105,000	
Debt Investments		80,000
Gain on Sale of Investments		25,000

At the end of 2022, the fair value of the Woods Co. bonds increased an additional €20,000 (€155,000 – €135,000), to €155,000.

[**Illustration 17.37**](#) shows the computation of the change in the Fair Value Adjustment account (based on only the Woods Co. investment).

Investments	Cost	Fair Value	Unrealized Holding Gain (Loss)
Woods Co. bonds 7%	€120,000	€155,000	€35,000
Previous fair value adjustment balance—Dr.			(40,000)
Fair value adjustment—Cr.			€ (5,000)

[ILLUSTRATION 17.37](#) HFCS Investment Portfolio (2022)

The entry to record the unrealized holding gain or loss in 2022 is as follows.

December 31, 2022		
Unrealized Holding Gain or Loss—Equity	5,000	
Fair Value Adjustment		5,000

If we assume that Open reports net income of €720,000 in 2022, including the realized sale on the Lehman bonds, its statement of comprehensive income is presented as shown in [Illustration 17.38](#).

Open AG Statement of Comprehensive Income For the Year Ended December 31, 2022	
Net income (includes €25,000 realized gain on Lehman bonds)	€720,000
Other comprehensive income Unrealized holding loss	(5,000)
Comprehensive income	<u>€715,000</u>

[ILLUSTRATION 17.38](#) Statement of Comprehensive Income (2022)

At December 31, 2022, Open reports on its statement of financial position debt investments of €155,000 (cost €120,000 plus a fair value adjustment of €35,000) and accumulated other comprehensive income in equity of €35,000 (€40,000 – €5,000). The entry to transfer Unrealized Holding Gain or Loss—Equity to Accumulated Other Comprehensive Income is as follows.

December 31, 2022 (Closing Entry)		
Accumulated Other Comprehensive Income	5,000	
Unrealized Holding Gain or Loss—Equity		5,000

In 2021, Open included the unrealized gain on the Lehman Inc. bonds in comprehensive income. In 2022, Open sold the bonds. It reported the realized gain (€25,000) in net income, which increased comprehensive income again. To avoid double-counting this gain, Open makes a **recycling adjustment** to eliminate the realized gain from the computation of comprehensive income in 2022.

This reclassification adjustment may be made in the income statement, in accumulated other comprehensive income or in a note to the financial statements. The IASB prefers to show the reclassification amount in accumulated other comprehensive income

in the notes to the financial statements. For Open AG, this presentation is as shown in [Illustration 17.39](#).

Open AG Notes to Financial Statements Accumulated Other Comprehensive Income		
Beginning balance, January 1, 2022		€40,000
Current-period other comprehensive income (€155,000 – €135,000)	€ 20,000	
Amount reclassified from accumulated other comprehensive income	<u>(25,000)</u>	
Unrealized holding loss		<u>(5,000)</u>
Ending balance, December 31, 2022		<u>€35,000</u>

[ILLUSTRATION 17.39](#) Note Disclosure of Reclassification Adjustments

Transfers Between Categories

Transferring an investment from one category to another should occur only when the business model for managing the investment changes (often referred to as reclassifications). The IASB expects such changes to be rare. [\[24\]](#) Companies account for transfers prospectively, at the beginning of the accounting period after the change in the business model.^{[21](#)}

To illustrate, assume that **British Sky Broadcasting Group plc** (GBR) has a portfolio of debt investments that are classified as trading; that is, the debt investments are not held-for-collection but managed to profit from interest rate changes. As a result, it accounts for these investments at fair value. At December 31, 2021, British Sky has the following balances related to these securities.

Debt investments	£1,200,000
Fair value adjustment	<u>125,000</u>
Carrying value	<u>£1,325,000</u>

As part of its strategic planning process, completed in the fourth quarter of 2021, British Sky management decides to move from its prior strategy—which requires active management—to a held-for-collection strategy for these debt investments. British Sky makes the following entry to reclassify these securities to the held-for-collection classification.

January 1, 2022		
Debt Investments	125,000	
Fair Value Adjustment		125,000

Therefore, at January 1, 2022, the debt investments are stated at fair value. However, in subsequent periods, British Sky will account for the investment at amortized cost. The effective-interest rate used in the amortized cost model is the rate used to discount the future cash flows to the fair value of British Sky's debt investment of £1,325,000 (£1,200,000 + £125,000) on January 1, 2022.

Evolving Issue

Fair Value Controversy

The reporting of investments is controversial. Some favor the present approach, which reflects a mixed-attribute model based on a company's business model for managing the investment and the type of security. Under this model, some debt investments are accounted for at amortized cost and others at fair value. Others call for fair value measurement for all financial assets, with gains and losses recorded in income. In this section, we look at some of the major unresolved issues.

- **Measurement based on business model.** Companies value debt investments at fair value or amortized cost, depending on the business model and cash flow tests for managing the investments. Some believe that this framework provides the most relevant information about the performance of these investments. Others disagree; they note that two identical debt investments could be reported in different ways in the financial statements. They argue that this approach increases complexity and reduces the understandability of financial statements. Furthermore, the held-for-collection classification relies on management's plans, which can change. In other words, the classifications are subjective, resulting in arbitrary and non-comparable classifications.
- **Gains trading.** Debt investments classified as held-for-collection are reported at amortized cost; unrealized gains and losses on these investments are not recognized in income. Similarly, the unrealized gains or losses on non-trading equity investments also bypass income. Although significant trading out of these classifications might call into question management's business model assertions with respect to these classifications, a company can engage in "gains trading" (also referred to as "cherry picking," "snacking," or "sell the

best and keep the rest”). In gains trading, companies sell their “winners,” reporting the gains in income, and hold on to the losers. Furthermore, as one IASB member noted, during the financial crisis of 2008 some of the most significant losses were recorded on investments that qualified for accounting in which unrealized gains or losses were not reported in income. That is, fair value accounting would have provided much more timely information on these investments when the markets needed it the most.

- **Liabilities not fairly valued.** Many argue that if companies report investments (assets) at fair value, they also should report liabilities at fair value. Why? By recognizing changes in value on only one side of the statement of financial position (the asset side), a high degree of volatility can occur in the income and equity amounts. Further, financial institutions are involved in asset and liability management (not just asset management). Viewing only one side may lead managers to make uneconomic decisions as a result of the accounting. As we discussed in [Chapter 14](#), there is debate on the usefulness of fair value estimates for liabilities.

The IASB and the FASB believe that fair value information for many financial assets and financial liabilities provides more useful and relevant information than a cost-based system. The Boards take this position because fair value reflects the current cash equivalent of the financial instrument rather than the cost of a past transaction. As a consequence, only fair value provides an understanding of the current worth of the investment. Under *IFRS 9*, companies must report fair values for more types of financial assets relative to prior standards in this area. However, an exception is allowed for some debt investments. Whether this approach results in an improvement in the reporting for debt and equity investments remains to be seen.

APPENDIX 17A Accounting for Derivative Instruments

LEARNING OBJECTIVE *5

Describe the uses of and accounting for derivatives.

Until the early 1970s, most financial managers worked in a cozy, if unthrilling, world. Since then, constant change caused by volatile markets, new technology, and deregulation has increased the risks to businesses. In response, the financial community developed products to manage these risks.

These products—called **derivative financial instruments** or simply **derivatives**—are useful for managing risk. Companies use the fair values or cash flows of these instruments to offset the changes in fair values or cash flows of the at-risk assets. The development of powerful computing and communication technology has aided the growth in derivative use. This technology provides new ways to analyze information about markets as well as the power to process high volumes of payments.

Defining Derivatives

In order to understand derivatives, consider the following examples.

Example 1—Forward Contract. Assume that a company like **Lenovo** (CHN) believes that the price of **Spotify**'s (LUX) shares will increase substantially in the next three months. Unfortunately, it does not have the cash resources to purchase the shares today. Lenovo therefore enters into a contract with a broker for delivery of 1,000,000 Spotify shares in three months at the price of \$37 per share.

Lenovo has entered into a **forward contract**, a type of derivative. As a result of the contract, Lenovo **has received the right** to receive 1,000,000 Spotify shares in three months. Further, it **has an obligation** to pay \$37 per share at that time. What is the benefit of this derivative contract? Lenovo can buy Spotify shares today and take

delivery in three months. If the price goes up, as it expects, Lenovo profits. If the price goes down, Lenovo loses.

Example 2—Option Contract. Now suppose that Lenovo needs two weeks to decide whether to purchase Spotify shares. It therefore enters into a different type of contract, one that gives it the right to purchase Spotify shares at the current price any time within the next two weeks. As part of the contract, the broker charges \$30,000 for holding the contract open for two weeks at a set price.

Lenovo has now entered into an **option contract**, another type of derivative. As a result of this contract, **it has received the right, but not the obligation**, to purchase these shares. If the price of the Spotify shares increases in the next two weeks, Lenovo exercises its option. In this case, the cost of the shares is the price of the shares stated in the contract, plus the cost of the option contract. If the price does not increase, Lenovo does not exercise the contract but still incurs the cost for the option.

The forward contract and the option contract both involve a future delivery of shares. The value of the contract relies on the underlying asset—the Spotify shares. Thus, these financial instruments are known as derivatives because they **derive their value from** values of other assets (e.g., ordinary shares, bonds, or commodities). Or, put another way, their value relates to a market-determined indicator (e.g., share price, interest rates, or the London Stock Exchange composite index).

In this appendix, we discuss the accounting for three different types of derivatives:

1. Financial forwards or financial futures.
2. Options.
3. Swaps.

Who Uses Derivatives, and Why?

Whether to protect for changes in interest rates, the weather, share prices, oil prices, or foreign currencies, derivative contracts help to smooth the fluctuations caused by various types of risks. A company that wants to ensure against certain types of business risks often uses derivative contracts to achieve this objective.²²

Producers and Consumers

To illustrate, assume that Heartland AG is a large producer of potatoes for the consumer market. The present price for potatoes is excellent. Unfortunately, Heartland needs two months to harvest its potatoes and deliver them to the market. Because Heartland expects the price of potatoes to drop in the coming months, it signs a forward contract. It agrees to sell its potatoes today at the current market price for delivery in two months.

Who would buy this contract? Suppose **McDonald's Corporation** (USA) is on the other side of the contract. McDonald's wants to have potatoes (for French fries) in two months and believes that prices will increase. McDonald's is therefore agreeable to accepting delivery in two months at current prices. It knows that it will need potatoes in two months and that it can make an acceptable profit at this price level.

In this situation, if the price of potatoes increases before delivery, Heartland loses and McDonald's wins. Conversely, if the price decreases, Heartland wins and McDonald's loses. However, the objective is not to gamble on the outcome. Regardless of which way the price moves, both Heartland and McDonald's have received a price at which they obtain an acceptable profit. In this case, although Heartland is a **producer** and McDonald's is a **consumer**, both companies are **hedgers**. They both **hedge their positions** to ensure an acceptable financial result.

Commodity prices are volatile. They depend on weather, crop production, and general economic conditions. For the producer and the consumer to plan effectively, it makes good sense to lock in specific future revenues or costs in order to run their businesses successfully.

Speculators and Arbitrageurs

In some cases, instead of McDonald's taking a position in the forward contract, a speculator may purchase the contract from Heartland. The **speculator** bets that the price of potatoes will rise, thereby increasing the value of the forward contract. The speculator, who may be in the market for only a few hours, will then sell the forward contract to another speculator or to a company like McDonald's.

Arbitrageurs also use derivatives. These market players attempt to exploit inefficiencies in markets. They seek to lock in profits by simultaneously entering into transactions in two or more markets. For example, an arbitrageur might trade in a futures contract. At the same time, the arbitrageur will also trade in the commodity underlying the futures contract, hoping to achieve small price gains on the difference between the two. Markets rely on speculators and arbitrageurs to keep the market liquid on a daily basis.

In these illustrations, we explained why Heartland (the producer) and McDonald's (the consumer) would become involved in a derivative contract. Consider other types of situations that companies face.

1. Airlines, like **Japan Airlines** (JPN), **British Airways** (GBR), and **Delta** (USA), are affected by changes in the price of jet fuel.
2. Financial institutions, such as **Barclays** (GBR), **Deutsche Bank** (DEU), and **ING** (NLD), are involved in borrowing and lending funds that are affected by changes in interest rates.
3. Multinational companies, like **Nokia** (FIN), **Coca-Cola** (USA), and **Siemens** (DEU), are subject to changes in foreign exchange rates.

In fact, most companies are involved in some form of derivatives transactions. Companies give these reasons (in their annual reports) as to why they use derivatives:

1. **ExxonMobil** (USA) uses derivatives to hedge its exposure to fluctuations in interest rates, foreign currency exchange rates, and hydrocarbon prices.

2. **HSBC** (GBR) uses derivatives to manage foreign currency exchange rates and interest rates.
3. **GlaxoSmithKline** (GBR) uses derivatives to manage the impact of interest rate and foreign exchange rate changes on earnings and cash flows.

Many companies use derivatives extensively and successfully. However, derivatives can be dangerous. All parties involved must understand the risks and rewards associated with these contracts.²³

Basic Principles in Accounting for Derivatives

The IASB concluded that derivatives such as forwards and options are assets and liabilities. It also concluded that companies should report them in the statement of financial position **at fair value**.²⁴ The Board believes that fair value will provide statement users the best information about derivatives. Relying on some other basis of valuation for derivatives, such as historical cost, does not make sense. Why? Because many derivatives have a historical cost of zero. Furthermore, the markets for derivatives, and the assets upon which derivatives' values rely, are well developed. As a result, the Board believes that companies can determine reliable fair value amounts for derivatives.²⁵

On the income statement, a company should recognize any unrealized gain or loss in income if it uses the derivative for speculation purposes. If using the derivative for hedging purposes, the accounting for any gain or loss depends on the type of hedge used. We discuss the accounting for hedging transactions later in the appendix.

In summary, companies follow these guidelines in accounting for derivatives.

1. Recognize derivatives in the financial statements as assets and liabilities.
2. Report derivatives at fair value.

3. Recognize gains and losses resulting from speculation in derivatives immediately in income.
4. Report gains and losses resulting from hedge transactions differently, depending on the type of hedge.

Derivative Financial Instrument (Speculation)

To illustrate the measurement and reporting of a derivative for speculative purposes, we examine a derivative whose value depends on the market price of Laredo AG ordinary shares. A company can realize a gain from the increase in the value of the Laredo shares with the use of a derivative, such as a call option.²⁶ A **call option** gives the holder the right, but not the obligation, to buy shares at a preset price. This price is often referred to as the **strike price** or the **exercise price**.

For example, assume a company enters into a call option contract with Baird Investment SA, which gives it the option to purchase Laredo shares at €100 per share.²⁷ If the price of Laredo shares increases above €100, the company can exercise this option and purchase the shares for €100 per share. If Laredo's shares never increase above €100 per share, the call option is worthless.

Accounting Entries. To illustrate the accounting for a call option, assume that the company purchases a call option contract on January 2, 2022, when Laredo shares are trading at €100 per share. The contract gives it the option to purchase 1,000 shares (referred to as the **notional amount**) of Laredo shares at an option price of €100 per share. The option expires on April 30, 2022. The company purchases the call option for €400 and makes the following entry.

January 2, 2022		
Call Option	400	
Cash		400

This payment is referred to as the **option premium**. It is generally much less than the cost of purchasing the shares directly. The option premium consists of two amounts: (1) intrinsic value and (2) time

value. [Illustration 17A.1](#) shows the formula to compute the option premium.

$$\text{Option Premium} = \text{Intrinsic Value} + \text{Time Value}$$

[ILLUSTRATION 17A.1](#) Option Premium Formula

Intrinsic value is the difference between the market price and the preset strike price at any point in time. It represents the amount realized by the option holder, if exercising the option immediately. On January 2, 2022, the intrinsic value is zero because the market price equals the preset strike price.

Time value refers to the option's value over and above its intrinsic value. Time value reflects the possibility that the option has a fair value greater than zero. How? Because there is some expectation that the price of Laredo shares will increase above the strike price during the option term. As indicated, the time value for the option is €400 (as the intrinsic value is zero).²⁸

The following additional data are available with respect to the call option.

Date	Market Price of Laredo Shares	Time Value of Call Option
March 31, 2022	€120 per share	€100
April 16, 2022	€115 per share	€ 60

As indicated, on March 31, 2022, the price of Laredo shares increases to €120 per share. The intrinsic value of the call option contract is now €20,000. That is, the company can exercise the call option and purchase 1,000 shares from Baird Investment for €100 per share. It can then sell the shares in the market for €120 per share. This gives the company a gain of €20,000 (€120,000 – €100,000) on the option contract.²⁹ It records the increase in the intrinsic value of the option as follows.

March 31, 2022

March 31, 2022		
Call Option	20,000	
Unrealized Holding Gain or Loss—Income		20,000

As indicated, a market appraisal indicates that the time value of the option at March 31, 2022, is €100.³⁰ The company records this change in value of the option as follows.

March 31, 2022		
Unrealized Holding Gain or Loss—Income	300	
Call Option (€400 – €100)		300

At March 31, 2022, the company reports the call option in its statement of financial position at fair value of €20,100.³¹ The unrealized holding gain increases net income for the period. The loss on the time value of the option decreases net income.

On April 16, 2022, the company settles the option before it expires. To properly record the settlement, it updates the value of the option for the decrease in the intrinsic value of €5,000 ($[(€20 - €15)] \times 1,000$) as follows.

April 16, 2022		
Unrealized Holding Gain or Loss—Income	5,000	
Call Option		5,000

The decrease in the time value of the option of €40 (€100 – €60) is recorded as follows.

April 16, 2022		
Unrealized Holding Gain or Loss—Income	40	
Call Option		40

Thus, at the time of the settlement, the call option's carrying value is as follows.

Call Option

Call Option			
January 2, 2022	400	March 31, 2022	300
March 31, 2022	20,000	April 16, 2022	5,000
		April 16, 2022	40
Balance, April 16, 2022	15,060		

The company records the settlement of the option contract with Baird as follows.

April 16, 2022		
Cash	15,000	
Loss on Settlement of Call Option	60	
Call Option		15,060

Illustration 17A.2 summarizes the effects of the call option contract on net income.

Date	Transaction	Income (Loss) Effect
March 31, 2022	Net increase in value of call option (€20,000 – €300)	€19,700
April 16, 2022	Decrease in value of call option (€5,000 + €40)	(5,040)
April 16, 2022	Settle call option	(60)
	Total net income	€14,600

ILLUSTRATION 17A.2 Effect on Income—Derivative Financial Instrument

The accounting summarized in [Illustration 17A.2](#) is in accord with IFRS. That is, because the call option meets the definition of an asset, the company records it in the statement of financial position on March 31, 2022. Furthermore, it reports the call option at fair value, with any gains or losses reported in income.

Differences Between Traditional and Derivative Financial Instruments

How does a traditional financial instrument differ from a derivative one? A derivative financial instrument has the following three basic characteristics. [28]

1. **The instrument has an underlying.** An **underlying** is a specified interest rate, security price, commodity price, index of prices or rates, or other market-related variable. The value of the derivative will move with the value of the underlying. For example, the value of the call option increased in value when the value of the Laredo shares increased. In this case, the underlying is the share price. Most derivatives also include a **notional amount**, which is the quantity or number that is used to determine the total value of the derivative. In the Laredo example, 1,000 shares is the notional amount
2. **The instrument requires little or no investment at the inception of the contract.** To illustrate, the company paid a small premium to purchase the call option—an amount much less than if it had purchased the Laredo shares as a direct investment.
3. **The instrument will settle at a future date.** Call options have terms. In the Laredo example, the term is the period during which the purchaser of the option has the right to exercise the option to purchase Laredo's shares for €100 per share. In some cases, the derivative will permit **net settlement**. In net settlement, the holder of the option will elect to simply receive the net amount of cash (market price less the option price) when settling the contract rather than when actually purchasing the shares at the option price.

Illustration 17A.3 summarizes the differences between traditional and derivative financial instruments. Here, we use an equity investment (trading) for the traditional financial instrument and a call option as an example of a derivative one.

Feature	Traditional Financial Instrument Equity Investment (Trading)	Derivative Financial Instrument (Call Option)
Value of the investment	Share price times the number of shares.	Change in share price (underlying) multiplied by number of shares (notional amount).
Initial investment	Investor pays full cost.	Initial investment is much less than full cost.
Settlement	Deliver shares to receive cash.	Deliver cash to receive shares at the option price or receive the net cash amount, based on changes in share price multiplied by the number of shares.

ILLUSTRATION 17A.3 Features of Traditional and Derivative Financial Instruments

Derivatives Used for Hedging

LEARNING OBJECTIVE *6

Explain the accounting for hedges.

Flexibility in use, and the low-cost features of derivatives relative to traditional financial instruments, explain the popularity of derivatives. An additional use for derivatives is in risk management. For example, companies such as **Coca-Cola** (USA), **BP** (GBR), and **Siemens** (DEU) borrow and lend substantial amounts in credit markets. In doing so, they are exposed to significant **interest rate risk**. That is, they face substantial risk that the fair values or cash flows of interest-sensitive assets or liabilities will change if interest rates increase or

decrease. These same companies also have significant international operations. As such, they are also exposed to **exchange rate risk**—the risk that changes in foreign currency exchange rates will negatively impact the profitability of their international businesses.

Companies can use derivatives to offset the negative impacts of changes in interest rates or foreign currency exchange rates. This use of derivatives is referred to as **hedging**.

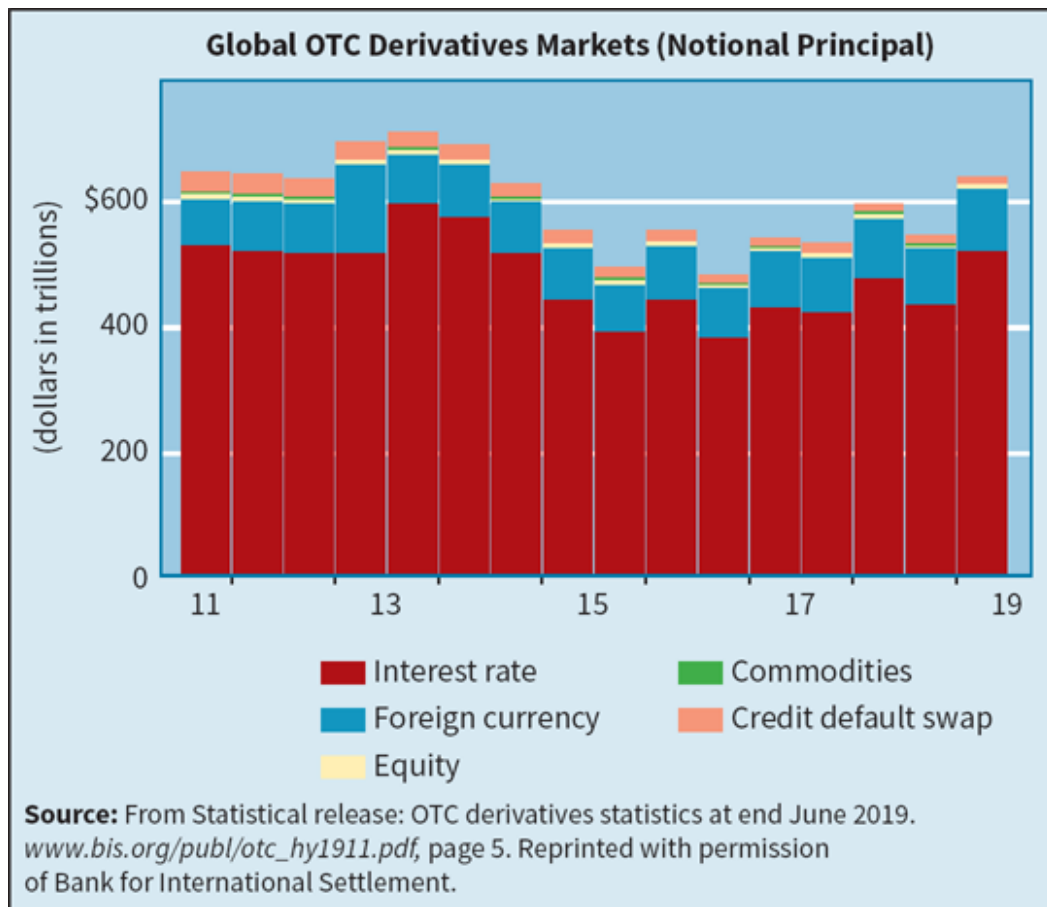

The IASB established accounting and reporting standards for derivative financial instruments used in hedging activities. IFRS allows special accounting for two types of hedges—fair value and cash flow hedges.^{[32](#)}

What Do the Numbers Mean?

Risky Business

As shown in the following graph, the derivatives market is quite large. In the most recent period, the total notional amount of the derivatives market was over \$640 trillion, and interest rate derivatives were almost 82 percent of the total market. This is not surprising, as the primary players in the market for derivatives are various financial institutions, which continue to find new uses for derivatives for speculation and risk management. The second most common derivative contracts are foreign currency derivatives. Again, this is not surprising as companies manage the risk of changing exchange rates in the various countries around the world where they do business.

Financial engineers continue to develop new uses for derivatives, many times through the use of increasingly complex webs of transactions, spanning a number of markets. As new uses for derivatives appear, the financial system as a whole can be dramatically affected. As a result, some market-watchers are concerned about the risk that a crisis in one company or sector could bring the entire financial system to its knees.

This was the case during the 2008 financial crisis, when credit default swaps were used to facilitate the sales of mortgage-backed securities (MBS). However, when the real estate market went south, the MBS defaulted, exposing large international financial institutions, such as **Barclays** (GBR) and **AIG** (USA) to massive losses. The losses were so widespread that government bailouts were required to prevent international securities markets from collapsing. In response, market regulators are proposing new rules to mitigate risks to broader markets from derivatives trading.

Sources: P. Davis, “Bill on Derivatives Overhaul Is Long Overdue,” *Wall Street Journal* (April 14, 2010); and *OTC Derivatives Statistics at End-June 2019*, Bank for International Settlements (November 2019).

Fair Value Hedge

In a **fair value hedge**, a company uses a derivative to hedge (offset) the exposure to changes in the fair value of a recognized asset or

liability or of an unrecognized commitment. In a perfectly hedged position, the gain or loss on the fair value of the derivative equals and offsets that of the hedged asset or liability.

To illustrate a fair value hedge, assume that on December 1, 2022, Hayward Tire Fabricators holds an inventory of 1,000 tractor tires, with a cost of €200 per tire. Hayward has been building an inventory of tractor tires in anticipation of demand for these tires in the upcoming spring planting season. Hayward records the inventory on its statement of financial position at €200,000 ($1,000 \times €200$), using lower-of-FIFO-cost-or-net realizable value.

Illustration 17A.4 indicates how Hayward reports the tire inventory in its balance sheet at December 31, 2022, assuming none of the tires have been sold.

Hayward Tire Fabricators Statement of Financial Position (partial) December 31, 2022	
Current assets	
Inventory	€200,000

ILLUSTRATION 17A.4 Statement of Financial Position Presentation of Inventory

Hayward could benefit from an increase in the price of tires (based on realized gross profit on tire sales). But until it sells the tires, the company is exposed to the risk that the value of the tire inventory will decline. Hayward wishes to hedge its exposure to fair value declines for its tire inventory (the inventory is pledged as collateral for one of its bank loans).

To hedge this risk, Hayward locks in the value of its tire inventory on January 2, 2023, by purchasing a put option to sell rubber at a fixed price. Hayward designates the option as a fair value hedge of the tire inventory. This put option (which expires in nine months) gives Hayward the option to sell 4,000 pounds of rubber at a price of €50 per pound, which is the current spot price for rubber in the market.

Since the exercise price equals the current market price, no entry is necessary at inception of the put option.³³

January 2, 2023		
No entry required. A memorandum indicates the signing of the put option contract and its designation as a fair value hedge for the rubber inventory.		

At March 31, 2023, the fair value of the inventory has declined by 10 percent. Hayward records the following entry for the tire inventory.

March 31, 2023		
Unrealized Holding Gain or Loss—Income (€200,000 × .10)	20,000	
Allowance to Reduce Inventory to Fair Value		20,000

Note that upon designation of the hedge, the accounting for the inventory fair value change deviates from regular IFRS.³⁴ That is, Hayward records an unrealized holding loss in income, even though it has not yet sold the inventory. **If Hayward had not followed this accounting, a mismatch of gains and losses in the income statement would result.** Thus, special accounting for the hedged item (in this case, the tire inventory) is necessary in a fair value hedge.

The following journal entry records the increase in value of the put option to sell rubber, assuming that the spot price for rubber declined by 10 percent.

March 31, 2023		
Put Option	20,000	
Unrealized Holding Gain or Loss—Income		20,000

The decline in the spot price of rubber results in an increase in the fair value of the put option. That is, Hayward could realize a gain on the put option, by purchasing 4,000 pounds of rubber in the open market for €45 ($.90 \times €50$), and then exercise the put option, selling the

rubber for €50 per pound. This results in a gain to Hayward of €20,000 (4,000 pounds × €5).³⁵

Illustration 17A.5 indicates how Hayward reports the amounts related to the Inventory and the put option.

Hayward Tire Fabricators Statement of Financial Position (partial) March 31, 2023	
Current assets	
Inventory (net of the allowance of €20,000)	€180,000
Put option	20,000

ILLUSTRATION 17A.5 Statement of Financial Position Presentation of Fair Value Hedge

As indicated, the increase in fair value on the option offsets or hedges the decline in value of Hayward's tire inventory. By using fair value accounting for both the inventory and the put option, the financial statements reflect the underlying substance of Hayward's net exposure to the risks of holding the inventory. That is, the statement of financial position reports the amount that Hayward would receive for the inventory and the put option contract if Hayward sold and settled them, respectively.

Illustration 17A.6 indicates the reporting of the effects of the hedging transaction on income for the quarter ended March 31, 2023.

Hayward Tire Fabricators Income Statement (partial) For the Quarter Ended March 31, 2023	
Other income	
Unrealized holding gain—put option	€20,000
Unrealized holding loss—inventory	(20,000)

ILLUSTRATION 17A.6 Income Statement Presentation of Fair Value Hedge

The income statement indicates that the gain on the put option offsets the loss on the inventory.³⁶ The reporting for these financial instruments, even when they reflect a hedging relationship, illustrates why the IASB argues that fair value accounting provides the most relevant information about financial instruments, including derivatives.

Cash Flow Hedge

Companies use **cash flow hedges** to hedge exposures to **cash flow risk**, which results from the variability in cash flows. The IASB allows special accounting for cash flow hedges. Generally, companies measure and report derivatives at fair value on the statement of financial position. They report gains and losses directly in net income. However, companies account for derivatives used in cash flow hedges at fair value on the statement of financial position, but they **record gains or losses in equity as part of other comprehensive income**. [30]

To illustrate, assume that in September 2022 Allied Can Ltd. anticipates purchasing 1,000 metric tons of aluminum in January 2023. Concerned that prices for aluminum will increase in the next few months, Allied wants to hedge the risk that it might pay higher prices for inventory in January 2023. As a result, Allied enters into an aluminum futures contract.

A **futures contract** gives the holder the right and the obligation to purchase an asset at a preset price for a specified period of time.³⁷ In this case, the aluminum futures contract gives Allied the right and the obligation to purchase 1,000 metric tons of aluminum for ¥1,550 per ton (amounts in thousands). This contract price is good until the contract expires in January 2023. The underlying for this derivative is the price of aluminum. If the price of aluminum rises above ¥1,550, the value of the futures contract to Allied increases. Why? Because Allied will be able to purchase the aluminum at the lower price of ¥1,550 per ton.³⁸

Allied enters into the futures contract on September 1, 2022. Assume that the price to be paid today for inventory to be delivered in January—the **spot price**—equals the contract price. With the two prices equal, the futures contract has no value. Therefore, no entry is necessary.

September 1, 2022		
No entry required. A memorandum entry indicates the signing of the futures contract.		

At December 31, 2022, the price for January delivery of aluminum increases to ¥1,575 per metric ton. Allied makes the following entry to record the increase in the value of the futures contract.

December 31, 2022		
Futures Contract	25,000	
Unrealized Holding Gain or Loss—Equity ([¥1,575 – ¥1,550] × 1,000 tons)		25,000

Allied reports the futures contract in the statement of financial position as a current asset. It reports the gain on the futures contract as part of other comprehensive income.

Since Allied has not yet purchased and sold the inventory, this gain arises from an **anticipated transaction**. In this type of transaction, a company accumulates in equity gains or losses on the futures contract as part of other comprehensive income until the period in which it sells the inventory, thereby affecting earnings.

In January 2023, Allied purchases 1,000 metric tons of aluminum for ¥1,575 and makes the following entry.³⁹

January 2023		
Aluminum Inventory	1,575,000	
Cash (¥1,575 × 1,000 tons)		1,575,000

At the same time, Allied makes final settlement on the futures contract. It records the following entry.

January 2023		
Cash	25,000	
Futures Contract (¥1,575,000 – ¥1,550,000)		25,000

Through use of the futures contract derivative, Allied fixes the cost of its inventory. The ¥25,000 futures contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of ¥1,575,000. The result: net cash outflow of ¥1,550 per metric ton, as desired. As [Illustration 17A.7](#) shows, Allied has therefore effectively hedged the cash flow for the purchase of inventory.

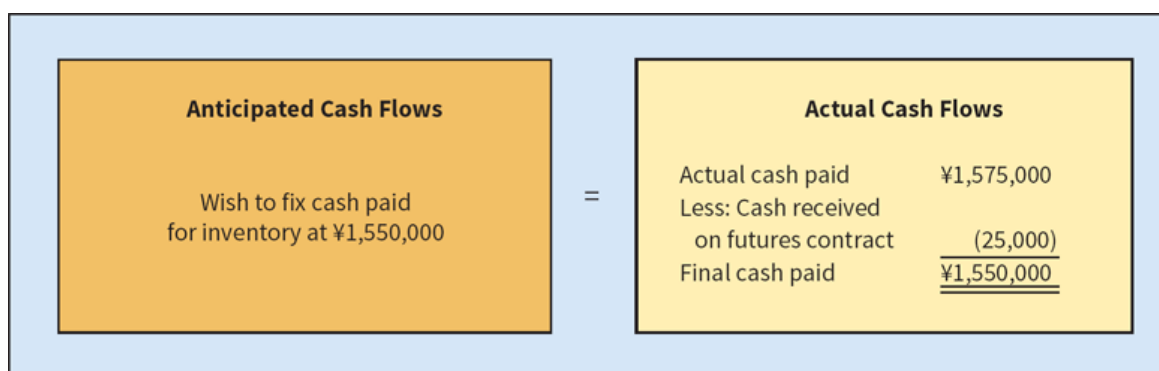

ILLUSTRATION 17A.7 Effect of Hedge on Cash Flows

There are no income effects at this point. Allied accumulates in equity the gain on the futures contract as part of other comprehensive income until the period when it sells the inventory, affecting earnings through cost of goods sold.

For example, assume that Allied processes the aluminum into finished goods (cans). The total cost of the cans (including the aluminum purchases in January 2023) is ¥1,700,000. Allied sells the cans in July 2023 for ¥2,000,000, and records this sale as follows.

July 2023		
Cash	2,000,000	
Sales Revenue		2,000,000
Cost of Goods Sold	1,700,000	
Inventory (cans)		1,700,000

Since the effect of the anticipated transaction has now affected earnings, Allied makes the following entry related to the hedging transaction.

July 2023		
Unrealized Holding Gain or Loss—Equity	25,000	
Cost of Goods Sold		25,000

The gain on the futures contract, which Allied reported as part of other comprehensive income, now reduces cost of goods sold. As a result, the cost of aluminum included in the overall cost of goods sold is ¥1,550,000. The futures contract has worked as planned. Allied has managed the cash paid for aluminum inventory and the amount of cost of goods sold.

Other Reporting Issues

LEARNING OBJECTIVE *7

Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

The preceding examples illustrate the basic reporting issues related to the accounting for derivatives. Next, we discuss the following additional issues:

1. The accounting for embedded derivatives.
2. Qualifying hedge criteria.

Embedded Derivatives

As we indicated at the beginning of this appendix, rapid innovation in the development of complex financial instruments drove efforts toward unifying and improving the accounting standards for derivatives. In recent years, this innovation has led to the development of **hybrid securities**. These securities have

characteristics of both debt and equity. They often combine traditional and derivative financial instruments.

For example, a convertible bond (discussed in [Chapter 16](#)) is a hybrid instrument. It consists of two parts: (1) a debt security, referred to as the **host security**, combined with (2) an option to convert the bond to ordinary shares, the **embedded derivative**.

In accounting for embedded derivatives, some support an approach similar to the accounting for other derivatives; that is, **separate the embedded derivative from the host security** and then account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**. However, the IASB, based on concerns about the complexity of the bifurcation approach, required that the embedded derivative and host security be accounted for as a single unit.⁴⁰ The accounting followed is based on the classification of the host security.⁴¹

Qualifying Hedge Criteria

The IASB identified certain criteria that hedging transactions must meet before allowing the special accounting for hedges. The IASB designed these criteria to ensure the use of hedge accounting in a consistent manner across different hedge transactions. The general criteria relate to the following areas.

1. **Documentation, risk management, and designation.** At inception of the hedge, there must be formal **documentation** of the hedging relationship, the company's **risk management** objective, and the strategy for undertaking the hedge. **Designation** refers to identifying the hedging instrument, the hedged item or transaction, the nature of the risk being hedged, and how the hedging instrument will offset changes in the fair value or cash flows attributable to the hedged risk. [31]

The IASB decided that documentation and designation are critical to the implementation of the special accounting for hedges.

Without these requirements, companies might try to apply the hedge accounting provisions retroactively, only in response to

negative changes in market conditions, to offset the negative impact of a transaction on the financial statements. Allowing special hedge accounting in such a setting could mask the speculative nature of the original transaction.

2. **Effectiveness of the hedging relationship.** At inception and on an ongoing basis, the hedging relationship should be **effective** in achieving offsetting changes in fair value or cash flows. Companies must assess effectiveness whenever preparing financial statements. **[32]**

The general guideline for effectiveness is that the fair values or cash flows of the hedging instrument (the derivative) and the hedged item exhibit a high degree of correlation. In our earlier hedging examples (put option and the futures contract on aluminum inventory), the fair values and cash flows are perfectly correlated. That is, when the cash payment for the inventory purchase increased, it offset, euro for euro, the cash received on the futures contract.

If the effectiveness criterion is not met, either at inception or because of changes following inception of the hedging relationship, IFRS no longer allows special hedge accounting. The company should then account for the derivative or the part of the derivative that is not effective in the hedging relationship as a free-standing derivative.⁴²

3. **Effect on reported earnings of changes in fair values or cash flows.** A change in the fair value of a hedged item or variation in the cash flow of a hedged forecasted transaction must have the potential to change the amount recognized in reported earnings. There is no need for special hedge accounting if a company accounts for both the hedging instrument and the hedged item at fair value under existing IFRS. In this case, earnings will properly reflect the offsetting gains and losses.⁴³

For example, special accounting is not needed for a fair value hedge of a trading security, because a company accounts for both the investment and the derivative at fair value on the statement

of financial position with gains or losses reported in earnings. Thus, “special” hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under IFRS.⁴⁴

Summary of Derivatives Accounting

Illustration 17A.8 summarizes the accounting provisions for derivatives and hedging transactions.

Derivative Use	Accounting for Derivative	Accounting for Hedged Item	Common Example
Speculation	At fair value with unrealized holding gains and losses recorded in income.	Not applicable.	Call or put option on an equity security.
Hedging Fair value	At fair value with holding gains and losses recorded in income.	At fair value with gains and losses recorded in income.	Put option to hedge the fair value of inventory.
Cash flow	At fair value with unrealized holding gains and losses from the hedge recorded in other comprehensive income, and reclassified in income when the hedging transaction’s cash flows affect earnings.	Use other IFRS for the hedged item.	Use of a futures contract to hedge a forecasted purchase of inventory.

ILLUSTRATION 17A.8 Summary of Derivative Accounting under IFRS

As indicated, the general accounting for derivatives relies on fair values. IFRS also establishes special accounting guidance when companies use derivatives **for hedging purposes**. For example, when a company uses a put option to hedge price changes in its tire inventory in a fair value hedge (see the Hayward example earlier), it records unrealized gains on the inventory in earnings, which is not IFRS for these assets without such a hedge. This special accounting is justified in order to accurately report the nature of the hedging relationship in the statement of financial position (recording both the put option and the investment at fair value) and in the statement of comprehensive income (reporting offsetting gains and losses in the same period).

Special accounting also is used for cash flow hedges. Companies account for derivatives used in qualifying cash flow hedges at fair value on the statement of financial position but record unrealized holding gains or losses in other comprehensive income until selling or settling the hedged item. In a cash flow hedge, a company continues to record the hedged item at its historical cost.

Disclosure requirements for derivatives are complex. Recent pronouncements on fair value information and financial instruments provide a helpful disclosure framework for reporting derivative instruments. In general, companies that have derivatives are required to disclose the objectives for holding or issuing those instruments (speculation or hedging), the hedging context (fair value or cash flow), and the strategies for achieving risk-management objectives.

Comprehensive Hedge Accounting Example

To provide a comprehensive example of hedge accounting, we examine the use of an interest rate swap. First, let's consider how swaps work and why companies use them.

Options and futures trade on organized securities exchanges. Because of this, options and futures have standardized terms. Although that standardization makes the trading easier, it limits the flexibility needed to tailor contracts to specific circumstances. In addition, most

types of derivatives have relatively short time horizons, thereby excluding their use for reducing long-term risk exposure.

As a result, many companies instead turn to the swap, a very popular type of derivative. A **swap** is a transaction between two parties in which the first party promises to make a payment to the second party. Similarly, the second party promises to make a simultaneous payment to the first party.

The most common type of swap is the **interest rate swap**. In this type, one party makes payments based on a fixed or floating rate, and the second party does just the opposite. In most cases, large money-center banks bring together the two parties. These banks handle the flow of payments between the parties, as shown in **Illustration 17A.9**.

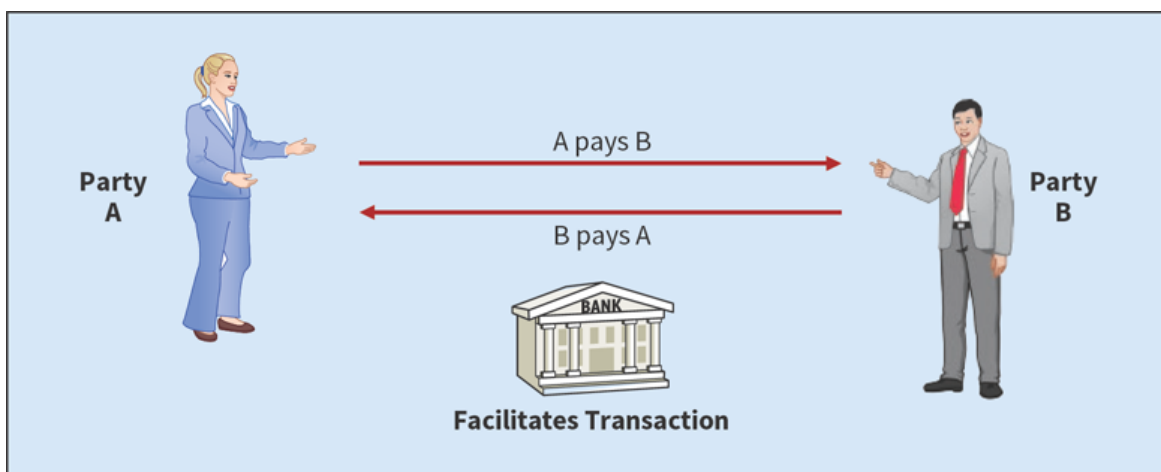

ILLUSTRATION 17A.9 Swap Transaction

Fair Value Hedge

To illustrate the use of an interest rate swap in a fair value hedge, assume that Jones AG issues €1,000,000 of five-year, 8 percent bonds on January 2, 2022. Jones records this transaction as follows.

January 2, 2022		
Cash	1,000,000	
Bonds Payable		1,000,000

Jones offered a fixed interest rate to appeal to investors. But Jones is concerned that if market interest rates decline, the fair value of the liability will increase. The company will then suffer an economic loss.⁴⁵ To protect against the risk of loss, Jones hedges the risk of a decline in interest rates by entering into a five-year interest rate swap contract. Jones agrees to the following terms:

1. Jones will receive fixed payments at 8 percent (based on the €1,000,000 amount).
2. Jones will pay variable rates, based on the market rate in effect for the life of the swap contract. The variable rate at the inception of the contract is 6.8 percent.

As [**Illustration 17A.10**](#) shows, this swap allows Jones to change the interest on the bonds payable from a fixed rate to a variable rate.

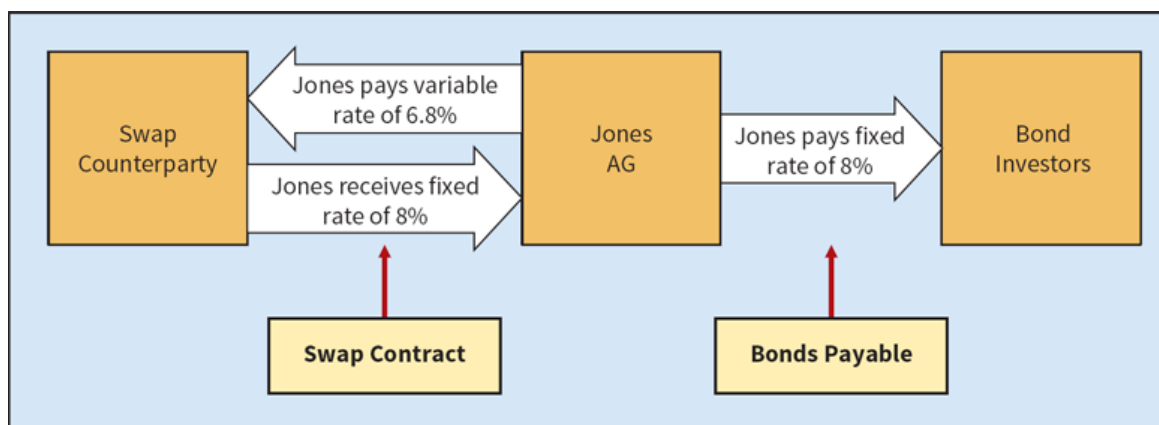

ILLUSTRATION 17A.10 Interest Rate Swap

The settlement dates for the swap correspond to the interest payment dates on the debt (December 31). On each interest payment (settlement) date, Jones and the counterparty compute the difference between current market interest rates and the fixed rate of 8 percent, and determine the value of the swap.⁴⁶ If interest rates decline, the value of the swap contract to Jones increases (Jones has a gain), while at the same time Jones's fixed-rate debt obligation increases (Jones has an economic loss).

The swap is an effective risk-management tool in this setting. Its value relates to the same underlying (interest rates) that will affect the value of the fixed-rate bond payable. Thus, if the value of the swap goes up, it offsets the loss related to the debt obligation.

Assuming that Jones enters into the swap on January 2, 2022 (the same date as the issuance of the debt), the swap at this time has no value. Therefore, no entry is necessary.

January 2, 2022		
No entry required. A memorandum entry indicates the signing of the swap contract.		

At the end of 2022, Jones makes the interest payment on the bonds. It records this transaction as follows.

December 31, 2022		
Interest Expense	80,000	
Cash ($.08 \times \text{€}1,000,000$)		80,000

At the end of 2022, market interest rates have declined substantially. Therefore, the value of the swap contract increases. Recall (see [Illustration 17A.10](#)) that in the swap, Jones receives a fixed rate of 8 percent, or €80,000 ($\text{€}1,000,000 \times .08$), and pays a variable rate (6.8%), or €68,000. Jones therefore receives €12,000 ($\text{€}80,000 - \text{€}68,000$) as a settlement payment on the swap contract on the first interest payment date. Jones records this transaction as follows.

December 31, 2022		
Cash	12,000	
Interest Expense		12,000

In addition, a market appraisal indicates that the value of the interest rate swap has increased €40,000. Jones records this increase in value as follows.⁴⁷

December 31, 2022		
Swap Contract	40,000	

December 31, 2022		
Unrealized Holding Gain or Loss—Income		40,000

Jones reports this swap contract in the statement of financial position. It reports the gain on the hedging transaction in the income statement. Because interest rates have declined, the company records a loss and a related increase in its liability as follows.

December 31, 2022		
Unrealized Holding Gain or Loss—Income	40,000	
Bonds Payable		40,000

Jones reports the loss on the hedging activity in net income. It adjusts bonds payable in the statement of financial position to fair value.

Financial Statement Presentation of an Interest Rate Swap

Illustration 17A.11 indicates how Jones reports the asset and liability related to this hedging transaction on the statement of financial position.

Jones AG	
Statement of Financial Position (partial)	
December 31, 2022	
Current assets	
Swap contract	€ 40,000
Non-current liabilities	
Bonds payable	€1,040,000

ILLUSTRATION 17A.11 Statement of Financial Position Presentation of Fair Value Hedge

The effect on Jones's statement of financial position is the addition of the swap asset and an increase in the carrying value of the bonds payable. **Illustration 17A.12** indicates how Jones reports the effects of this swap transaction in the income statement.

Jones AG Income Statement (partial) For the Year Ended December 31, 2022		
Interest expense (€80,000 – €12,000)		€68,000
Other income and expense		
Unrealized holding gain—swap contract	€40,000	
Unrealized holding loss—bonds payable	(40,000)	
Net gain (loss)		€ –0–

ILLUSTRATION 17A.12 Income Statement Presentation of Fair Value Hedge

On the income statement, Jones reports interest expense of €68,000. Jones has effectively changed the debt's interest rate from fixed to variable. That is, by receiving a fixed rate and paying a variable rate on the swap, the company converts the fixed rate on the bond payable to variable. This results in an effective interest rate of 6.8 percent in 2022.⁴⁸ Also, the gain on the swap offsets the loss related to the debt obligation. Therefore, the net gain or loss on the hedging activity is zero.

Illustration 17A.13 shows the overall impact of the swap transaction on the financial statements.

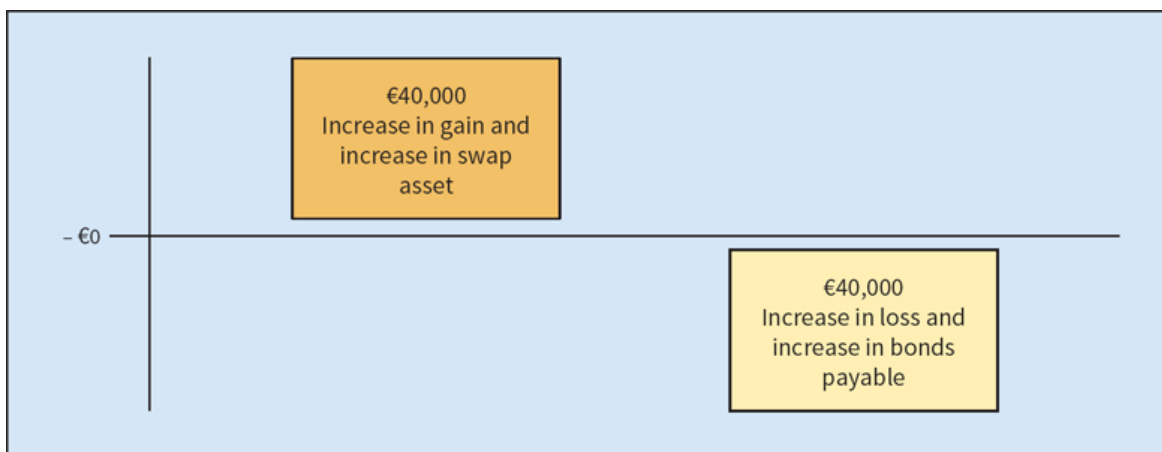

ILLUSTRATION 17A.13 Impact on Financial Statements of Fair Value Hedge

In summary, to account for fair value hedges (as illustrated in the Jones example) **record the derivative at its fair value in the statement of financial position, and record any gains and losses in income.** Thus, the gain on the swap offsets or hedges the loss on the bond payable, due to the decline in interest rates.

By adjusting the hedged item (the bond payable in the Jones case) to fair value, with the gain or loss recorded in earnings, the accounting for the Jones bond payable deviates from amortized cost. This special accounting is justified in order to report accurately the nature of the hedging relationship between the swap and the bond payable in the statement of financial position (both the swap and the debt obligation are recorded at fair value) and in the income statement (offsetting gains and losses are reported in the same period).⁴⁹

Controversy and Concluding Remarks

Companies need rules to properly measure and report derivatives in financial statements. However, some argue that reporting derivatives at fair value results in unrealized gains and losses that are difficult to interpret. Others raise concerns about the complexity and cost of implementing IFRS in this area.

However, we believe that the benefits of using fair value and reporting derivatives at fair value will far outweigh any implementation costs. As the volume and complexity of derivatives and hedging transactions continue to grow, so does the risk that investors and creditors will be exposed to unexpected losses arising from derivative transactions. Statement readers must have comprehensive information concerning many derivative financial instruments and the effects of hedging transactions using derivatives.

APPENDIX 17B Fair Value Disclosures

LEARNING OBJECTIVE *8

Describe required fair value disclosures.

As indicated in the chapter, the IASB believes that fair value information is relevant for making effective business decisions. However, others express concern about fair value measurements for two reasons: (1) the lack of reliability related to the fair value measurements in certain cases, and (2) the ability to manipulate fair value measurements to achieve financial results inconsistent with the underlying economics of the situation.

The Board recognizes these concerns and has attempted to develop a sound conceptual basis for measuring and reporting fair value information. In addition, it has placed emphasis on developing guidelines for reporting fair value information for financial instruments because many of these instruments have relatively active markets for which valuations can be reliably determined. The purpose of this appendix is to explain the disclosure requirements for financial instruments related to fair value information. [34]

Disclosure of Fair Value Information: Financial Instruments

One requirement related to fair value disclosure is that both the cost and the fair value of all financial instruments be reported in the notes to the financial statements. This enables financial statement users to understand the fair value of the company's financial instruments and the potential gains and losses that might occur in the future as a result of these instruments.

The Board also decided that companies should disclose information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. Two reasons for additional disclosure beyond the simple itemization of fair values are:

1. **Differing levels of reliability exist in the measurement of fair value information.** It therefore is important to understand the varying risks involved in measurement. It is difficult to incorporate these levels of uncertainty into the financial statements. Disclosure provides a framework for addressing the qualitative aspects related to risk and measurement.
2. **Changes in the fair value of financial instruments are reported differently in the financial statements, depending on the type of financial instrument involved and whether the fair value option is employed.** Note disclosure provides an opportunity to explain more precisely the impact that changes in the value of financial instruments have on financial results. In assessing the inputs, the Board recognizes that the reliability of the fair value measurement is of extreme importance. Many financial instruments are traded in active markets, and their valuation is not difficult. Other instruments are complex/illiquid, and their valuation is difficult.

To highlight these levels of reliability in valuation, the IASB established a fair value hierarchy. As discussed in [Chapter 2](#), this hierarchy identifies three broad levels—1, 2, and 3—related to the measurement of fair values. Level 1 is the most reliable measurement because fair value is based on quoted prices in active markets *for identical assets or liabilities*. Level 2 is less reliable; it is not based on quoted market prices for identical assets and liabilities but instead may be based on *similar assets or liabilities*. Level 3 is least reliable; it uses unobservable inputs that reflect the company's assumption as to the value of the financial instrument.

[**Illustration 17B.1**](#) is an example of a fair value note disclosure for Sabathia Company. It includes both the fair value amounts and the reliability level. (A similar disclosure would be presented for liabilities.)

Sabathia Company Notes to the Financial Statements				
(amounts in thousands)	Fair Value Measurements at Reporting Data Using			
Description	Fair Value 12/31/22	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Trading securities	\$115	\$105	\$10	
Non-trading securities	75	75		
Derivatives	60	25	15	\$20
Venture capital investments	10			10
Total	<u>\$260</u>	<u>\$205</u>	<u>\$25</u>	<u>\$30</u>

ILLUSTRATION 17B.1 Example of Fair Value Hierarchy

For assets and liabilities measured at fair value and classified as Level 3, a reconciliation of Level 3 changes for the period is required. In addition, companies should report an analysis of how Level 3 changes in fair value affect total gains and losses and their impact on net income. **Illustration 17B.2** is an example of this disclosure.

Sabathia Company
Notes to the Financial Statements

(amounts in thousands)	Fair Value Measurements Using Significant Unobservable Inputs (Level 3)		
	Derivatives	Venture Capital Investments	Total
Beginning balance	\$14	\$11	\$25
Total gains or losses (realized/unrealized)			
Included in earnings (or changes in net assets)	11	(3)	8
Included in other comprehensive income	4		4
Purchases, issuances, and settlements	(7)	2	(5)
Transfers in and/or out of Level 3	(2)		(2)
Ending balance	<u>\$20</u>	<u>\$10</u>	<u>\$30</u>
The amount of total gains or losses for the period included in earnings (or changes in net assets) attributable to the change in unrealized gains or losses relating to assets still held at the reporting date	<u>\$ 7</u>	<u>\$ 2</u>	<u>\$ 9</u>
Gains and losses (realized and unrealized) included in earnings (or changes in net assets) for the period (above) are reported in trading revenues and in other revenues as follows.			
	Trading Other	Revenues Revenues	

Sabathia Company Notes to the Financial Statements		
Total gains or losses included in earnings (or changes in net assets) for the period (as shown in the table above)	<u>\$11</u>	<u>\$(3)</u>
Change in unrealized gains or losses relating to assets still held at reporting date	<u>\$7</u>	<u>\$2</u>

ILLUSTRATION 17B.2 Reconciliation of Level 3 Inputs

Sabathia Company's disclosure provides to the user of the financial statements an understanding of the following:

1. The carrying amount and the fair value of the company's financial instruments segregated by level of measurement subjectivity. Thus, financial statement users have a basis for judging what credence should be given to the fair value amounts.
2. For Level 3 financial instruments, a reconciliation of the balance from the beginning to the end of the period. This reconciliation enables users to understand the composition of the change. It is important because these calculations are most affected by subjective estimates and could be subject to manipulation.
3. The impact of changes in fair value on the net assets of the company from one period to the next.

For companies that choose to use the fair value option for some or all of their financial instruments, they are permitted to incorporate the entire guidelines related to fair value measurement into one master schedule, or they can provide in a separate schedule information related solely to the fair value option.

Finally, companies must provide the following (with special emphasis on Level 3 measurements):

1. Quantitative information about significant unobservable inputs used for all Level 3 measurements.

2. A qualitative discussion about the sensitivity of recurring Level 3 measurements to changes in the unobservable inputs disclosed, including interrelationships between inputs.
3. A description of the company's valuation process.
4. Any transfers between Levels 1 and 2 of the fair value hierarchy.
5. Information about non-financial assets measured at fair value at amounts that differ from the assets' highest and best use.
6. The proper hierarchy classification for items that are not recognized on the statement of financial position but are disclosed in the notes to the financial statements.

A typical disclosure related to Level 3 fair value measurements is presented in [**Illustration 17B.3**](#).

(amounts in millions)	Fair Value at 12/31/2022	Valuation Technique(s)	Unobservable Input	Range (Weighted- Average)
Residential mortgage- backed securities	125	Discounted cash flow	Constant prepayment rate Probability of default Loss severity	3.5%–5.5% (4.5%) 5%–50% (10%) 40%–100% (60%)
Collateralized debt obligations	35	Consensus pricing	Offered quotes Comparability adjustments (%)	20–45 –10% – +15% (+5%)
Direct venture capital investments Healthcare	53	Discounted cash flow	Weighted- average cost of capital Long-term revenue growth rate Long-term pretax operating margin Discount for lack of marketability ^a Control premium ^a	7%–16% (12.1%) 2%–5% (4.2%) 3%–20% (10.3%) 5%–20% (17%) 10%–30% (20%)
		Market- comparable companies	EBITDA multiple ^b Revenue multiple ^b Discount for lack of marketability ^a	6.5–12 (9.5) 1.0–3.0 (2.0) 5%–20% (10%)

			Control premium ^a	10%–20% (12%)
Credit contracts	38	Option model	Annualized volatility of credit ^c Counterparty credit risk ^d Own credit risk ^d	10%–20% 0.5–3.5% 0.3–2.0%

^aRepresents amounts used when the reporting entity has determined that market participants would take into account these premiums and discounts when pricing the investments.

^bRepresents amounts used when the reporting entity has determined that market participants would use such multiples when pricing the investments.

^cRepresents the range of the volatility curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

^dRepresents the range of the credit default swap spread curves used in the valuation analysis that the reporting entity has determined market participants would use when pricing the contracts.

(Note: For liabilities, a similar table should be presented.)

ILLUSTRATION 17B.3 Quantitative Information about Level 3 Fair Value Measurements

Disclosure of Fair Values: Impaired Assets or Liabilities

In addition to financial instruments, companies often have assets or liabilities that are re-measured on a non-recurring basis due to impairment. In this case, the fair value hierarchy can highlight the

reliability of the measurement, coupled with the related gain or loss for the period. **Illustration 17B.4** highlights this disclosure for McClung plc.

McClung plc Notes to the Financial Statements				
(amounts in millions)		Fair Value Measurements Using:		
Description	Year Ended 12/31/22	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Long-lived assets held and used	£75	—	£75	—
Goodwill	30	—	—	£30
Long-lived assets held for sale	26	—	26	—
<p>Long-lived assets held and used with a carrying amount of £100 million were written down to their fair value of £75 million, resulting in an impairment charge of £25 million, which was included in earnings for the period.</p> <p>Goodwill with a carrying amount of £65 million was written down to its fair value of £30 million, resulting in an impairment charge of £35 million, which was included in earnings for the period.</p> <p>Long-lived assets held for sale with a carrying amount of £35 million were written down to their fair value of £26 million, less cost to sell of £6 million (or £20 million), resulting in a loss of £15 million, which was included in earnings for the period.</p>				

ILLUSTRATION 17B.4 Disclosure of Fair Value, with Impairment

Conclusion

As a result of joint IASB and FASB standard-setting efforts, we now have convergence with respect to fair value measurement, in terms of both the definition and measurement guidelines when fair value is the measurement approach in IFRS and U.S. GAAP. In addition, IFRS and U.S. GAAP have the same fair value disclosure requirements, as illustrated in this appendix. As the former chair of the IASB noted, this “marks the completion of a major convergence project and is a fundamentally important element of our joint response to the global crisis. The result is clearer and more consistent guidance on measuring fair value, where its use is already required.”

Learning Objectives Review

1 Describe the accounting for debt investments.

Financial assets (debt and equity investments) are accounted for at amortized cost or fair value. Debt investments are characterized by (1) a business model related to holding assets in order to collect contractual cash flows, and (2) by contractual payments on specified dates of principal and interest on the principal amount outstanding. For debt investments: (1) Carry and report **held-for-collection debt**

securities at amortized cost. (2) Value **held-for-collection and selling debt securities** at fair value, with unrealized holding gains or losses reported as other comprehensive income and as a separate component of equity. (3) Value **trading debt securities** for reporting purposes at fair value, with unrealized holding gains or losses included in net income.

Companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The **fair value option** is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

2 Describe the accounting for equity investments.

The degree to which one company (investor) acquires an interest in the ordinary shares of another company (investee) generally determines the accounting treatment for the investment. Long-term investments by one company in the ordinary shares of another can be classified according to the percentage of the voting shares of the investee held by the investor. Companies apply fair value to holdings below 20 percent (generally trading). Under this approach, a company reports the equity investment at fair value each reporting period irrespective of the investee's earnings or dividends paid to it. Unrealized gains and losses are reported in "Other income and expense" on the income statement. For equity investments held for purposes other than trading (non-trading option), companies may account for the investment at fair value on the statement of financial position, with unrealized gains and losses reported in other comprehensive income.

3 Explain the equity method of accounting.

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at cost but subsequently adjusts the amount each period for changes in the net assets of the investee. That is, the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. All dividends received by the investor from the investee decrease the investment's carrying amount. A company applies the equity method to investment holdings between 20 percent and 50 percent of ownership. Equity investments with holdings greater than 50 percent are accounted for using consolidation procedures.

4 Evaluate other major issues related to debt and equity investments.

Impairments. Impairments of investments are based on a fair value test relative to the carrying value of the investment. Impairments arising due to credit deterioration are measured based on the expected credit loss model with impairment losses recorded in income. See [Illustration 17.28](#) for a summary of the impairment models.

Recycling. A company needs a recycling adjustment when it reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current or in previous periods. Companies should report unrealized holding gains or losses related to held-for-collection and selling investments in other comprehensive income and the aggregate balance as accumulated other comprehensive income on the statement of financial position.

Transfers. Transfers of securities between categories of investments (reclassifications) occur when a company changes its business model for managing the investments. Transfers are accounted for prospectively, at the beginning of the period following the business model change.

***5 Describe the uses of and accounting for derivatives.**

Any company or individual that wants to ensure against different types of business risks may use derivative contracts to achieve this objective. In general, these transactions involve some type of hedge. Speculators also use derivatives, attempting to find an enhanced return. Speculators are very important to the derivatives market because they keep it liquid on a daily basis. Arbitrageurs attempt to exploit inefficiencies in various derivative contracts. A company primarily uses derivatives for purposes of hedging its exposure to fluctuations in interest rates, foreign currency exchange rates, and commodity prices.

The **basic guidelines for accounting for derivatives** require companies to recognize derivatives in the financial statements as assets and liabilities, and report them at fair value. Companies should recognize gains and losses resulting from speculation immediately in income. They report gains and losses resulting from hedge transactions in different ways, depending on the type of hedge.

Companies report derivative financial instruments in the statement of financial position and record them at fair value. Except for derivatives used in hedging, companies record realized and unrealized gains and losses on derivative financial instruments in income.

***6 Explain the accounting for hedges.**

Accounting for a fair value hedge. A company records the derivative used in a qualifying fair value hedge at its fair value in the statement of financial position, recording any gains and losses in income. In addition, the company also accounts for the item being hedged with the derivative at fair value. By adjusting the hedged item to fair value, with the gain or loss recorded in earnings, the accounting for the hedged item may deviate from IFRS in the absence of a hedge relationship. This special accounting is justified in order to report accurately the nature of the hedging relationship between the derivative hedging instruments and the hedged item. A company reports both in the statement of financial position, reporting offsetting gains and losses in income in the same period.

Accounting for a cash flow hedge. Companies account for derivatives used in qualifying cash flow hedges at fair value on the statement of financial position but record gains or losses in equity as part of other comprehensive income. Companies accumulate these gains or losses, and reclassify them in income when the hedging transaction's cash flows affect earnings. Accounting is according to IFRS for the hedged item.

***7 Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.**

A company should, based on the classification of the host security, account for a hybrid security containing a host security and an embedded derivative as a single unit. Special hedge accounting is allowed only for hedging relationships that meet certain criteria. The main criteria are as follows. (1) There is formal documentation of the hedging relationship, the company's risk management objective, and the strategy for undertaking the hedge, and the company designates the derivative as either a cash flow or fair value hedge. (2) The company expects the hedging relationship to be highly effective in achieving offsetting changes in fair value or cash flows. (3) "Special" hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under IFRS.

***8 Describe required fair value disclosures.**

The IASB has developed required fair value disclosures in response to concerns about the reliability of fair value measures. Disclosure elements include fair value amounts and reliability levels as well as impaired assets and liabilities.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Rogers AG carries an account in its general ledger called Investments, which contained the following debits for investment purchases and no credits.

Feb. 1, 2022	Jordy SA ordinary shares, €100 par, 200 shares	€ 37,400
April 1	Government bonds, 5%, due April 1, 2032, interest payable April 1 and October 1, 100 bonds at €1,000 each	100,000
July 1	Driver Ltd. 6% bonds, par €50,000, dated March 1, 2018, purchased at par plus accrued interest, interest payable annually on March 1, due March 1, 2042	51,000

Instructions

- Prepare the entry or entries to reclassify the amounts in the Investments account to the appropriate investment and income accounts at December 31, 2022. The bonds are classified as held-for-collection and selling.
- Prepare the entry to record the accrued interest on December 31, 2022.
- The fair values of the securities on December 31, 2022, were:

Jordy SA ordinary shares	€ 33,800 (1% of total shares)
--------------------------	-------------------------------

Government bonds	124,700
Driver Ltd. bonds	58,600

What entry or entries, if any, should be made?

- d. The government bonds were sold on July 1, 2023, for €119,200 plus accrued interest. Give the proper entry.
- e. Now assume Rogers' investment in Jordy represents 30% of Jordy's shares. Prepare the 2022 entries for the investment in Jordy shares. In 2022, Jordy declared and paid dividends of €9,000 (on September 30) and reported net income of €30,000.

Solution

a.

December 31, 2022		
Equity Investments	37,400	
Debt Investments (HFCS)	150,000	
(€100,000 + €50,000)		
Interest Revenue ($€50,000 \times .06 \times \frac{4}{12}$)	1,000	
Investments		188,400

b.

December 31, 2022		
Interest Receivable	3,750	
Interest Revenue		3,750*
*($€100,000 \times .05 \times \frac{3}{12} = €1,250$; $€50,000 \times .06 \times \frac{10}{12} = €2,500$; $€1,250 + €2,500 = €3,750$)		

c.

December 31, 2022	
Fair Value Adjustment	33,300
Unrealized Holding Gain or Loss—Equity	33,300

HFCS Portfolio December 31, 2022			
Securities	Cost	Fair Value	Unrealized Gain (Loss)
Government bonds	€100,000	€124,700	€24,700
Driver Ltd. bonds	50,000	58,600	8,600
Total	€150,000	€183,300	33,300
Previous fair value adjustment balance			0
Fair value adjustment—Dr.			€33,300
Unrealized Holding Gain or Loss—Income		3,600	
Fair Value Adjustment (€37,400 – €33,800)			3,600

d.

July 1, 2023		
Cash (€119,200 + €1,250)	120,450	
Debt Investments (HFCS)		100,000
Interest Revenue ($€100,000 \times .05 \times \frac{3}{12}$)		1,250
Gain on Sale of Investments		19,200

e.

February 1, 2022		
Equity Investments	37,400	
Cash		37,400
September 30, 2022		
Cash	2,700	
Equity Investments ($.30 \times €9,000$)		2,700
December 31, 2022		
Equity Investments	9,000	
Investment Income ($.30 \times €30,000$)		9,000

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Describe the two criteria for determining the valuation of financial assets.
2. Which types of investments are valued at amortized cost? Explain the rationale for this accounting.
3. What is amortized cost? What is fair value?
4. Identify and explain the three types of classifications for investments in debt securities.
5. Lady Gaga Co. recently made an investment in the bonds issued by Chili Peppers Inc. Lady Gaga's business model for this investment is to profit from selling in response to changes in market interest rates. How should this investment be classified by Lady Gaga? Explain.
6. Consider the bond investment by Lady Gaga in Question 5. Discuss the accounting for this investment if Lady Gaga's business model is (a) to hold the investment to collect interest while outstanding and to receive the principal at maturity and (b) held-for-collection and selling.
7. On July 1, 2022, Wheeler AG purchased €4,000,000 of Duggen Company's 8% bonds, due on July 1, 2027. The bonds, which pay interest semiannually on January 1 and July 1, were purchased for €3,604,062 to yield 10%. Determine the amount of interest revenue Wheeler should report on its income statement for year ended December 31, 2022, assuming Wheeler plans to hold this investment to collect contractual cash flows.

- 8.** If the bonds in Question 7 are classified as trading and they have a fair value at December 31, 2022, of €3,700,000, prepare the journal entry (if any) at December 31, 2022, to record this transaction.
- 9.** Indicate how unrealized holding gains and losses should be reported for investments classified as (a) trading (b) held-for-collection, and (c) held-for-collection and selling.
- 10.** (a) Assuming no Fair Value Adjustment account balance at the beginning of the year, prepare the adjusting entry at the end of the year if Laura Fashions' trading bond investment has a fair value €60,000 below carrying value. (b) Assume the same information as in part (a), except that Laura Fashions has a debit balance in its Fair Value Adjustment account of €10,000 at the beginning of the year. Prepare the adjusting entry at year-end.
- 11.** What is the fair value option? Briefly describe its application to debt investments.
- 12.** Franklin Corp. has an investment that it has held for several years. When it purchased the investment, Franklin accounted for the investment at amortized cost. Can Franklin use the fair value option for this investment? Explain.
- 13.** Identify and explain the different types of classifications for equity investments.
- 14.** Why is the held-for-collection classification not applicable to equity investments?
- 15.** Hayes Company purchased 10,000 ordinary shares of Kenyon Co., paying \$26 per share plus \$1,500 in broker fees. Hayes plans to actively trade this investment. Prepare the entry to record this investment.
- 16.** Hayes Company sold 10,000 shares of Kenyon Co. that it bought in Question 15 for \$27.50 per share, incurring \$1,770 in brokerage commissions. The carrying value of the investment is \$260,000. Prepare the entry to record the sale of this investment.
- 17.** Distinguish between the accounting treatment for non-trading equity investments and trading equity investments.

- 18.** What constitutes “significant influence” when an investor’s financial interest is below the 50% level?
- 19.** Explain how the investment account is affected by investee activities under the equity method.
- 20.** When the equity method is applied, what amounts relate to the investment, and where will these amounts be reported in the financial statements?
- 21.** Hiram Co. uses the equity method to account for investments in ordinary shares. What accounting should be made for dividends received from these investments subsequent to the date of investment?
- 22.** Raleigh plc has an investment with a carrying value (equity method) on its books of £170,000 representing a 30% interest in Borg Company, which suffered a £620,000 loss this year. How should Raleigh handle its proportionate share of Borg’s loss?
- 23.** Where on the asset side of the statement of financial position are amounts related to equity investments classified as trading and non-trading reported? Explain.
- 24.** Explain why recycling adjustments are necessary.
- 25.** When is a debt investment considered impaired? Explain how to account for the impairment of a held-for-collection debt investment.
- 26.** Briefly discuss how a transfer of investments from the trading category to the held-for-collection category affects the financial statements.
- 27.** Briefly describe the unresolved issues related to fair value accounting.
- *28.** What is meant by the term underlying as it relates to derivative financial instruments?
- *29.** What are the main distinctions between a traditional financial instrument and a derivative financial instrument?
- *30.** What is the purpose of a fair value hedge?

- ***31.** In what situation will the unrealized holding gain or loss on a non-trading equity investment be reported in income?
- ***32.** Why might a company become involved in an interest rate swap contract to receive fixed interest payments and pay variable?
- ***33.** What is the purpose of a cash flow hedge?
- ***34.** Where are gains and losses related to cash flow hedges involving anticipated transactions reported?
- ***35.** What are hybrid securities? Give an example of a hybrid security.

Brief Exercises

BE17.1 (LO 1) On January 1, 2022, Garfield AG made an investment in €80,000 of the 9%, 5-year bonds of Chester Corporation for €74,086, which provides an 11% return. Garfield plans to hold these bonds to collect contractual cash flows. Prepare Garfield's journal entries for (a) the purchase of the investment, and (b) the receipt of annual interest on December 31 and discount amortization.

BE17.2 (LO 1) Use the information from BE17.1 but assume the bonds are purchased as a held-for-collection and selling investment. Prepare Garfield's journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.) The bonds have a year-end fair value of €75,500.

BE17.3 (LO 1) Use the information from BE17.1 but assume Garfield plans to actively trade the bonds to profit from market interest rate changes. Prepare Garfield's journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. The bonds have a year-end fair value of €75,500.

BE17.4 (LO 1) Carow SA purchased on January 1, 2022, as a held-for-collection investment, €60,000 of the 8%, 5-year bonds of Harrison, Inc. for €65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of

the investment, and (b) the receipt of semiannual interest and premium amortization.

BE17.5 (LO 1) Refer to the information in BE17.4. Assume that, to address a measurement mismatch, Carow elects the fair value option for this debt investment. Prepare the journal entry at December 31, 2022, assuming the fair value of the bonds is €64,000.

BE17.6 (LO 1) Hendricks Corporation purchased \$50,000 of bonds at par. Hendricks has an active trading business model for this investment. At December 31, Hendricks received annual interest of \$2,000, and the fair value of the bonds was \$47,400. Prepare Hendricks' journal entries for (a) the purchase of the investment, (b) the interest received, and (c) the fair value adjustment.

BE17.7 (LO 2) Fairbanks Corporation purchased 400 ordinary shares of Sherman Inc. as a trading investment for £13,200. During the year, Sherman paid a cash dividend of £3.25 per share. At year-end, Sherman shares were selling for £34.50 per share. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.

BE17.8 (LO 2) Use the information from BE17.7 but assume the shares were purchased to meet a non-trading regulatory requirement. Prepare Fairbanks' journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.

BE17.9 (LO 2) Cleveland Company has a non-trading equity investment portfolio valued at \$4,000. Its cost was \$3,300. Prepare the journal entry at year-end.

BE17.10 (LO 3) Zoop Corporation purchased for \$300,000 a 30% interest in Murphy, Inc. This investment enables Zoop to exert significant influence over Murphy. During the year, Murphy earned net income of \$180,000 and paid dividends of \$60,000. Prepare Zoop's journal entries related to this investment.

BE17.11 (LO 4) Hillsborough Co. has a held-for-collection investment in the bonds of Schuyler Corp. with a carrying (and fair) value of \$70,000. Due to poor economic prospects for Schuyler,

Hillsborough determined that it will not be able to collect all contractual cash flows and the bonds have decreased in value to \$60,000. It is determined that this is a permanent loss in value. Prepare the journal entry, if any, to record the reduction in value.

BE17.12 (LO 4) Presented below are two independent cases related to held-for-collection and selling debt investments.

	Case 1	Case 2
Amortized cost	\$40,000	\$100,000
Fair value	30,000	110,000
Expected credit losses	4,000	4,000

For each case, determine the amount of impairment loss, if any, and the journal entry to record the impairment.

BE17.13 (LO 4) Cameron Company has a portfolio of debt investments that it has managed as a trading investment. At December 31, 2022, Cameron had the following balances related to this portfolio: debt investments, £250,000; fair value adjustment, £10,325 (Dr). Cameron management decides to change its business model for these investments to a held-for-collection strategy, beginning in January 2023. Prepare the journal entry to transfer these investments to the held-for-collection classification.

Exercises

E17.1 (LO 1, 2) (Investment Classifications) For the following investments, identify whether they are:

1. Debt investments—held-for-collection.
2. Debt investments—held-for-collection and selling.
3. Debt investments—trading.
4. Trading equity investments.
5. Non-trading equity investments.

Each case is independent of the other.

- a. A bond that will mature in 4 years was bought 1 month ago when the price dropped. As soon as the value increases, which is expected next month, it will be sold.
- b. 10% of the outstanding shares of Farm-Co are purchased. The company is planning on eventually getting a total of 30% of its outstanding shares.
- c. 10-year bonds were purchased this year. The bonds mature at the first of next year, and the company plans to sell the bonds if interest rates fall.
- d. Bonds that will mature in 5 years are purchased. The company has a strategy to hold them to collect interest payments and principal of the bonds at maturity.
- e. A bond that matures in 10 years was purchased. The company is investing money set aside for an expansion project planned 10 years from now.
- f. Ordinary shares in a distributor are purchased to meet a regulatory requirement for doing business in the distributor's region. The investment will be held indefinitely.

E17.2 (LO 1) (Debt Investments) On January 1, 2022, Jennings SA purchased at par 10% bonds having a maturity value of €300,000. They are dated January 1, 2022, and mature January 1, 2027, with interest receivable December 31 of each year. The bonds are held to collect contractual cash flows.

Instructions

- a. Prepare the journal entry at the date of the bond purchase.
- b. Prepare the journal entry to record the interest received for 2022.
- c. Prepare the journal entry to record the interest received for 2023.

E17.3 (LO 1) (Debt Investments) On January 1, 2022, Roosevelt Company purchased 12% bonds having a maturity value of \$500,000 for \$537,907.40. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2022, and mature January 1, 2027, with

interest received December 31 of each year. Roosevelt's business model is to hold these bonds to collect contractual cash flows.

Instructions

- Prepare the journal entry at the date of the bond purchase.
- Prepare a bond amortization schedule.
- Prepare the journal entry to record the interest received and the amortization for 2022.
- Prepare the journal entry to record the interest received and the amortization for 2023.

E17.4 (LO 1) (Debt Investments) Assume the same information as in E17.3 except that Roosevelt has an active trading strategy for these bonds. The fair value of the bonds at December 31 of each year-end is as follows.

2022	\$534,200	2025	\$517,000
2023	\$515,000	2026	\$500,000
2024	\$513,000		

Instructions

- Prepare the journal entry at the date of the bond purchase.
- Prepare the journal entries to record the interest received and recognition of fair value for 2022.
- Prepare the journal entry to record the recognition of fair value for 2023.
- Discuss how the response to (c) will be different assuming Roosevelt has a strategy of held-for-collection and selling.

E17.5 (LO 1) (Debt Investments) On January 1, 2022, Morgan Company acquires \$300,000 of Nicklaus, Inc., 9% bonds at a price of \$278,384. The interest is payable each December 31, and the bonds mature December 31, 2024. The investment will provide Morgan Company a 12% yield. The bonds are classified as held-for-collection.

Instructions

- Prepare a 3-year schedule of interest revenue and bond discount amortization. (Round to nearest cent.)
- Prepare the journal entry for the interest receipt of December 31, 2023, and the discount amortization.

E17.6 (LO 1) (HFCS Debt Securities Entries and Financial Statement Presentation) At December 31, 2022, the held-for-collection and selling debt portfolio for Steffi Graf SA is as follows.

Security	Amortized Cost	Fair Value	Unrealized Gain (Loss)
A	€17,500	€15,000	(€2,500)
B	12,500	14,000	1,500
C	23,000	25,500	2,500
Total	€53,000	€54,500	1,500
Previous fair value adjustment balance—Dr.			400
Fair value adjustment—Dr.			€1,100

On January 20, 2023, Steffi Graf SA sold security A for €15,100. The sale proceeds are net of brokerage fees.

Instructions

- Prepare the adjusting entry at December 31, 2022, to report the portfolio at fair value.
- Show the statement of financial position presentation of the investment-related accounts at December 31, 2022. (Ignore notes presentation.)
- Prepare the journal entry for the 2023 sale of security A.

E17.7 (LO 1) (Fair Value Option) Refer to the information in E17.3 and assume that Roosevelt elected the fair value option for this held-for-collection investment.

Instructions

- Prepare any entries necessary at December 31, 2022, assuming the fair value of the bonds is \$540,000.
- Prepare any entries necessary at December 31, 2023, assuming the fair value of the bonds is \$525,000.

E17.8 (LO 1) (Fair Value Option) Presented below is selected information related to the financial instruments of Dawson Ltd. at December 31, 2022 (amounts in thousands). This is Dawson Ltd.'s first year of operations.

	Carrying Amount	Fair Value (at December 31)
Debt investments (intent is to hold for collection)	¥ 40,000	¥ 41,000
Bonds payable	220,000	195,000

Instructions

- Dawson elects to use the fair value option whenever possible. Assuming that Dawson's net income is ¥100,000 in 2022 before reporting any financial instrument gains or losses, determine Dawson's net income for 2022.
- Record the journal entry, if any, necessary at December 31, 2022, to record the fair value option for the bonds payable.

E17.9 (LO 4) (Comprehensive Income Disclosure) Assume the same information as E17.6 and that Steffi Graf SA reports net income in 2022 of €120,000 and in 2023 of €140,000. Total holding gains (including any realized holding gain or loss) equal €40,000 in 2023.

Instructions

- Prepare a statement of comprehensive income for 2022, starting with net income.

- b. Prepare a statement of comprehensive income for 2023, starting with net income.

E17.10 (LO 2) (Entries for Equity Investments) The following information is available for Kinney plc at December 31, 2022, regarding its investments.

Investments	Cost	Fair Value
3,000 ordinary shares of Petty Company	£40,000	£46,000
1,000 preference shares of Dowe Inc.	25,000	22,000
	<u>£65,000</u>	<u>£68,000</u>

Instructions

- Prepare the adjusting entry (if any) for 2022, assuming the investments are classified as trading.
- Prepare the adjusting entry (if any) for 2022, assuming the investments are classified as non-trading.
- Discuss how the amounts reported in the financial statements are affected by the entries in (a) and (b).

E17.11 (LO 2) (Equity Investments) On December 31, 2022, Zurich SA provided you with the following information regarding its trading investments.

December 31, 2022			
Investments (Trading)	Cost	Fair Value	Unrealized Gain (Loss)
Stargate AG shares	€20,000	€19,000	€(1,000)
Carolina Co. shares	10,000	9,000	(1,000)
Vectorman NV shares	<u>20,000</u>	<u>20,600</u>	<u>600</u>
Total of portfolio	<u>€50,000</u>	<u>€48,600</u>	<u>(1,400)</u>
Previous fair value adjustment balance			-0-

December 31, 2022			
Fair value adjustment—Cr.			€(1,400)

During 2023, Carolina shares were sold for €9,500. The fair value of the shares on December 31, 2023, was Stargate shares—€19,300; Vectorman shares—€20,500.

Instructions

- Prepare the adjusting journal entry needed on December 31, 2022.
- Prepare the journal entry to record the sale of the Carolina Co. shares during 2023.
- Prepare the adjusting journal entry needed on December 31, 2023.

E17.12 (LO 2) (Equity Investment Entries and Reporting)

Player Corporation makes an equity investment costing \$73,000 and classifies it as non-trading. At December 31, the fair value of the investment is \$67,000.

Instructions

Prepare the adjusting entry to report the investment properly. Indicate the statement presentation of the accounts in your entry.

E17.13 (LO 2) (Equity Investment Entries and Financial Statement Presentation) At December 31, 2022, the equity investment portfolio for Wenger, Inc. is as follows.

Investment	Cost	Fair Value	Unrealized Gain (Loss)
A	\$17,500	\$15,000	\$(2,500)
B	12,500	14,000	1,500
C	23,000	25,500	2,500
Total	<u>\$53,000</u>	<u>\$54,500</u>	1,500
Previous fair value adjustment balance—Dr.			<u>200</u>
Fair value adjustment—Dr.			\$1,300

On January 20, 2023, Wenger, Inc. sold investment A for \$15,300. The sale proceeds are net of brokerage fees.

Instructions

- a. Prepare the adjusting entry at December 31, 2022, to report the portfolio at fair value.
- b. Show the statement of financial position presentation of the investment-related accounts at December 31, 2022. (Ignore notes presentation.)
- c. Prepare the journal entry or entries for the 2023 sale of investment A.
- d. Repeat requirement (a), assuming the portfolio of investments is non-trading.

E17.14 (LO 2) (Equity Investment Entries) Capriati Corporation made the following cash investments during 2022, which is the first year in which Capriati invested in securities.

1. On January 15, purchased 9,000 ordinary shares of Gonzalez Company at \$33.50 per share plus a commission of \$1,980.
2. On April 1, purchased 5,000 ordinary shares of Belmont Co. at \$52.00 per share plus a commission of \$3,370.
3. On September 10, purchased 7,000 preference shares of Thep Co. at \$26.50 per share plus a commission of \$4,910.

On May 20, 2022, Capriati sold 3,000 shares of Gonzalez Company at a market price of \$35 per share less brokerage commissions, taxes, and fees of \$2,850. The year-end fair values per share were Gonzalez \$30, Belmont \$55, and Thep \$28. In addition, the chief accountant of Capriati told you that Capriati Corporation plans to actively trade these investments.

Instructions

- Prepare the journal entries to record the above three investment purchases.
- Prepare the journal entry for the investment sale on May 20.
- Compute the unrealized gains or losses and prepare the adjusting entries for Capriati on December 31, 2022.

E17.15 (LO 2, 3) (Journal Entries for Fair Value and Equity Methods) Presented below are two independent situations.

Situation 1: Hatcher Cosmetics acquired 10% of the 200,000 ordinary shares of Ramirez Fashion at a total cost of \$14 per share on March 18, 2022. On June 30, Ramirez declared and paid a \$75,000 cash dividend. On December 31, Ramirez reported net income of \$122,000 for the year. At December 31, the market price of Ramirez Fashion was \$15 per share. The investment is classified as trading.

Situation 2: Holmes, Inc. obtained significant influence over Nadal Corporation by buying 25% of Nadal's 30,000 outstanding ordinary shares at a total cost of \$9 per share on January 1, 2022. On June 15, Nadal declared and paid a cash dividend of \$36,000. On December 31, Nadal reported a net income of \$85,000 for the year.

Instructions

Prepare all necessary journal entries in 2022 for both situations.

E17.16 (LO 3) (Equity Method) Gator plc invested £1,000,000 in Demo Co. for 25% of its outstanding shares. Demo Co. pays out 40% of net income in dividends each year.

Instructions

Use the information in the following T-account for the investment in Demo to answer the following questions.

Investment in Demo Co.	
1,000,000	
130,000	
	52,000

- How much was Gator plc's share of Demo Co.'s net income for the year?
- How much was Gator plc's share of Demo Co.'s dividends for the year?
- What was Demo Co.'s total net income for the year?
- What was Demo Co.'s total dividends for the year?

E17.17 (LO 2) (Equity Investments—Trading) Feiner Ltd. purchased 300 shares of Guttman plc for £40 each this year and classified the investment as a trading investment. Feiner sold 100 shares for £43 each. At year-end, the price per share dropped to £35.

Instructions

Prepare the journal entries for these transactions and any year-end adjustments.

E17.18 (LO 2) (Equity Investments—Trading) Swanson plc has the following trading investment portfolio on December 31, 2022.

Investments (Trading)	Cost	Fair Value
1,500 ordinary shares of Parker, Inc.	£ 71,500	£ 69,000
5,000 ordinary shares of Beilman Company	180,000	175,000
400 preference shares of Duncan, Inc.	60,000	61,600
	<u>£311,500</u>	<u>£305,600</u>

All of the investments were purchased in 2022. In 2023, Swanson completed the following investment transactions.

March 1	Sold the 1,500 ordinary shares of Parker, Inc., @ £45 less fees of £1,200.
April 1	Bought 700 ordinary shares of McDowell Corp., @ £75 plus fees of £1,300.

Swanson Company's portfolio of trading investments appeared as follows on December 31, 2023.

--	--	--

Investments (Trading)	Cost	Fair Value
5,000 ordinary shares of Beilman Company	£180,000	£175,000
700 ordinary shares of McDowell Company	52,500	50,400
400 preference shares of Duncan, Inc.	60,000	58,000
	<u>£292,500</u>	<u>£283,400</u>

Instructions

Prepare the general journal entries for Swanson for:

- The 2022 adjusting entry.
- The sale of the Parker shares.
- The purchase of the McDowell shares.
- The 2023 adjusting entry for the trading portfolio.

E17.19 (LO 2, 3) (Fair Value and Equity Method Compared)

Chen Group acquired 20% of the outstanding ordinary shares of Cho Ltd. on December 31, 2022. The purchase price was ¥125,000,000 for 50,000 shares. Cho declared and paid an ¥80 per share cash dividend on June 30 and on December 31, 2023. Cho reported net income of ¥73,000,000 for 2023. The fair value of Cho's shares was ¥2,700 per share at December 31, 2023.

Instructions

- Prepare the journal entries for Chen for 2022 and 2023, assuming that Chen cannot exercise significant influence over Cho. The investments should be classified as trading.
- Prepare the journal entries for Chen for 2022 and 2023, assuming that Chen can exercise significant influence over Cho.
- At what amount is the investment reported on the statement of financial position under each of these methods at December 31, 2023? What is the effect on net income reported in 2023 under each of these methods?

E17.20 (LO 3) (Equity Method) On January 1, 2022, Meredith plc purchased 25% of the ordinary shares of Pirates Company for £200,000. During the year, Pirates earned net income of £80,000 and paid dividends of £20,000.

Instructions

Prepare the entries for Meredith to record the purchase and any additional entries related to this investment in Pirates Company in 2022.

E17.21 (LO 4) (Impairment) Cairo Corporation has government bonds classified as held-for-collection at December 31, 2022. These bonds have a par value of \$800,000, an amortized cost of \$800,000, and a fair value of \$740,000. In evaluating the bonds, Cairo determines the bonds have a \$60,000 permanent decline in value. That is, the company believes that impairment accounting is now appropriate for these bonds.

Instructions

- a. Prepare the journal entry to recognize the impairment.
- b. What is the new cost basis of the bonds? Given that the maturity value of the bonds is \$800,000, should Cairo Corporation amortize the difference between the carrying amount and the maturity value over the life of the bonds?
- c. At December 31, 2023, the fair value of the municipal bonds is \$760,000. Prepare the entry (if any) to record this information.

E17.22 (LO 4) (Impairment) Komissarov SA has a debt investment in the bonds issued by Keune AG. The bonds were purchased at par for €400,000 and, at the end of 2022, have a remaining life of 3 years with annual interest payments at 10%, paid at the end of each year. This debt investment is classified as held-for-collection. Keune is facing a tough economic environment and informs its investors that it will be unable to make all payments according to the contractual terms. The controller of Komissarov has prepared the following revised expected cash flow forecast for this bond investment.

Dec. 31	Expected Cash Flows
2023	€ 35,000
2024	35,000
2025	385,000
Total cash flows	<u>€455,000</u>

Instructions

- Determine the impairment loss for Komissarov at December 31, 2022.
- Prepare the entry to record the impairment loss for Komissarov at December 31, 2022.
- On January 15, 2023, Keune receives a major capital infusion from a private equity investor. It informs Komissarov that the bonds now will be paid according to the contractual terms. Briefly describe how Komissarov would account for the bond investment in light of this new information.

E17.23 (LO 4) (Impairment) Elaina Company has the following investment as of December 31, 2022:

Investment in debt securities of FourSquare Company	\$3,300,000
-----------------------------------------------------	-------------

The carrying value and the fair value of the investment are the same at December 31, 2022. Elaina's debt investment is considered held-for-collection. At December 31, 2023, the debt investment securities of FourSquare are valued at \$2,500,000. Assume that these investments are considered impaired.

Instructions

- Prepare the journal entries to record the impairment of these securities at December 31, 2023.
- Assuming the fair value of its debt investment is \$2,950,000, what entries, if any, should be recorded in 2024 related to

impairment?

- c. Prepare the journal entries at December 31, 2024, assuming these securities are not impaired. (Ignore interest revenue entries.)
- d. Assume that the debt investment in FourSquare Company was held-for-collection and selling and the expected credit loss was \$250,000. Prepare the journal entry to record this impairment on December 31, 2023.

***E17.24 (LO 5) (Derivative Transaction)** On January 2, 2022, Jones Company purchases a call option for \$300 on Merchant ordinary shares. The call option gives Jones the option to buy 1,000 shares of Merchant at a strike price of \$50 per share. The market price of a Merchant share is \$50 on January 2, 2022 (the intrinsic value is therefore \$0). On March 31, 2022, the market price for Merchant shares is \$53 per share, and the time value of the option is \$200.

Instructions

- a. Prepare the journal entry to record the purchase of the call option on January 2, 2022.
- b. Prepare the journal entry or entries to recognize the change in the fair value of the call option as of March 31, 2022.
- c. What was the effect on net income of entering into the derivative transaction for the period January 2 to March 31, 2022? (Ignore tax effects.)

***E17.25 (LO 6) (Fair Value Hedge)** On January 2, 2022, MacCloud SA issued a 4-year, €100,000 note at 6% fixed interest, interest payable semiannually. MacCloud now wants to change the note to a variable-rate note.

As a result, on January 2, 2022, MacCloud enters into an interest rate swap where it agrees to receive 6% fixed and pay LIBOR of 5.7% for the first 6 months on €100,000. At each 6-month period, the variable rate will be reset. The variable rate is reset to 6.7% on June 30, 2022.

Instructions

- a. Compute the net interest expense to be reported for this note and related swap transaction as of June 30, 2022.
- b. Compute the net interest expense to be reported for this note and related swap transaction as of December 31, 2022.

***E17.26 (LO 6) (Cash Flow Hedge)** On January 2, 2022, Parton Company issues a 5-year, \$10,000,000 note at LIBOR, with interest paid annually. The variable rate is reset at the end of each year. The LIBOR rate for the first year is 5.8%.

Parton Company decides it prefers fixed-rate financing and wants to lock in a rate of 6%. As a result, Parton enters into an interest rate swap to pay 6% fixed and receive LIBOR based on \$10 million. The variable rate is reset to 6.6% on January 2, 2023.

Instructions

- a. Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2022.
- b. Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2023.

***E17.27 (LO 6) (Fair Value Hedge)** Sarazan Ltd. issues a 4-year, 7.5% fixed-rate interest only, non-prepayable £1,000,000 note payable on December 31, 2022. It decides to change the interest rate from a fixed rate to variable rate and enters into a swap agreement with M&S Corp. The swap agreement specifies that Sarazan will receive a fixed rate at 7.5% and pay variable with settlement dates that match the interest payments on the debt. Assume that interest rates have declined during 2023 and that Sarazan received £13,000 as an adjustment to interest expense for the settlement at December 31, 2023. The loss related to the debt (due to interest rate changes) was £48,000. The value of the swap contract increased £48,000.

Instructions

- a. Prepare the journal entry to record the payment of interest expense on December 31, 2023.

- b. Prepare the journal entry to record the receipt of the swap settlement on December 31, 2023.
- c. Prepare the journal entry to record the change in the fair value of the swap contract on December 31, 2023.
- d. Prepare the journal entry to record the change in the fair value of the debt on December 31, 2023.

***E17.28 (LO 6) (Call Option)** On August 15, 2022, Outkast Co. invested idle cash by purchasing a call option on Counting Crows Inc. ordinary shares for \$360. The notional value of the call option is 400 shares, and the option price is \$40. (Market price of a Counting Crows share is \$40.) The option expires on January 31, 2023. The following data are available with respect to the call option.

Date	Market Price of Counting Crows Shares	Time Value of Call Option
September 30, 2022	\$48 per share	\$180
December 31, 2022	46 per share	65
January 15, 2023	47 per share	30

Instructions

Prepare the journal entries for Outkast for the following dates.

- a. Investment in call option on Counting Crows shares on August 15, 2022.
- b. September 30, 2022—Outkast prepares financial statements.
- c. December 31, 2022—Outkast prepares financial statements.
- d. January 15, 2023—Outkast settles the call option on the Counting Crows shares.

***E17.29 (LO 7) (Cash Flow Hedge)** Choi Golf uses titanium in the production of its specialty drivers. Choi anticipates that it will need to

purchase 200 ounces of titanium in October 2022, for clubs that will be shipped in the holiday shopping season. However, if the price of titanium increases, this will increase the cost to produce the clubs, which will result in lower profit margins.

To hedge the risk of increased titanium prices, on May 1, 2022, Choi enters into a titanium futures contract and designates this futures contract as a cash flow hedge of the anticipated titanium purchase. The notional amount of the contract is 200 ounces, and the terms of the contract give Choi the right and the obligation to purchase titanium at a price of ¥50,000 per ounce. The price will be good until the contract expires on November 30, 2022.

Assume the following data with respect to the price of the call options and the titanium inventory purchase.

Date	Spot Price for November Delivery
May 1, 2022	¥50,000 per ounce
June 30, 2022	52,000 per ounce
September 30, 2023	52,500 per ounce

Instructions

Present the journal entries for the following dates/transactions.

- May 1, 2022—Inception of futures contract, no premium paid.
- June 30, 2022—Choi prepares financial statements.
- September 30, 2022—Choi prepares financial statements.
- October 5, 2022—Choi purchases 200 ounces of titanium at ¥52,500 per ounce and settles the futures contract.
- December 15, 2022—Choi sells clubs containing titanium purchased in October 2022 for ¥25,000,000. The cost of the finished goods inventory is ¥14,000,000.
- Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on

December 31, 2022.

Problems

P17.1 (LO 1) (Debt Investments) Presented below is an amortization schedule related to Spangler Company's 5-year, \$100,000 bond with a 7% interest rate and a 5% yield, purchased on December 31, 2019, for \$108,660.

Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
12/31/19				\$108,660
12/31/20	\$7,000	\$5,433	\$1,567	107,093
12/31/21	7,000	5,354	1,646	105,447
12/31/22	7,000	5,272	1,728	103,719
12/31/23	7,000	5,186	1,814	101,905
12/31/24	7,000	5,095	1,905	100,000

The following schedule presents a comparison of the amortized cost and fair value of the bonds at year-end.

	12/31/20	12/31/21	12/31/22	12/31/23	12/31/24
Amortized cost	\$107,093	\$105,447	\$103,719	\$101,905	\$100,000
Fair value	106,500	107,500	105,650	103,000	100,000

Instructions

- Prepare the journal entry to record the purchase of these bonds on December 31, 2019, assuming the bonds are classified as held-for-collection investments.
- Prepare the journal entry or entries related to the held-for-collection bonds for 2020.
- Prepare the journal entry or entries related to the held-for-collection bonds for 2022.

- d. Prepare the journal entry or entries to record the purchase of these bonds, assuming they are classified as trading.
- e. Prepare the journal entry or entries related to the bonds for 2020, assuming they are classified: (1) trading, and (2) held-for-collection and selling (HFCS).
- f. Prepare the journal entry or entries related to the trading bonds for 2022.

P17.2 (LO 1) (Debt Investments, Fair Value Option) On January 1, 2022, Novotna AG purchased €400,000, 8% bonds of Aguirre Co. for €369,114. The bonds were purchased to yield 10% interest. Interest is payable semiannually on July 1 and January 1. The bonds mature on January 1, 2027. Novotna Company plans to hold the bonds to collect contractual cash flows. On January 1, 2024, Novotna Company sold the bonds for €370,726 after receiving interest to meet its liquidity needs.

Instructions

- a. Prepare the journal entry to record the purchase of bonds on January 1.
- b. Prepare the amortization schedule for the bonds.
- c. Prepare the journal entries to record the semiannual interest on July 1, 2022, and December 31, 2022.
- d. Prepare the journal entry to record the sale of the bonds on January 1, 2024.
- e. Assume that Novotna elected the fair value option for this investment. If the fair value of Aguirre bonds is €368,000 on December 31, 2022, prepare the necessary adjusting entry.

P17.3 (LO 1, 2) (Debt and Equity Investments) Cardinal Paz Corp. carries an account in its general ledger called Investments, which contains debits for investment purchases, and no credits, with the following descriptions.

Feb.	Sharapova Company ordinary shares, \$100 par, 200	\$ 37,400
------	---------------------------------------------------	-----------

1, 2022	shares	
April 1	Government bonds, 11%, due April 1, 2028, interest payable	
	April 1 and October 1, 110 bonds of \$1,000 par each	110,000
July 1	McGrath Company 12% bonds, par \$50,000, dated March 1, 2022 purchased at 104, plus accrued interest payable annually on March 1, due March 1, 2042	54,000

Instructions

(Round all computations to the nearest dollar.)

- Prepare entries necessary to classify the amounts into proper accounts, assuming that Paz plans to actively manage these investments.
- Prepare the entry to record the accrued interest on December 31, 2022.
- The fair values of the investments on December 31, 2022, were:

Sharapova Company shares	\$ 31,800
Government bonds	124,700
McGrath Company bonds	58,600

What entry or entries, if any, would you recommend be made?

- The government bonds were sold on July 1, 2023, for \$119,200 plus accrued interest. Give the proper entry.

P17.4 (LO 1) (Debt Investments) Presented below is information taken from a bond investment amortization schedule with related fair values provided. These bonds are managed to profit from changes in market interest rates.

	12/31/22	12/31/23	12/31/24
Amortized cost	\$491,150	\$519,442	\$550,000
Fair value	497,000	509,000	550,000

Instructions

- a. Indicate whether the bonds were purchased at a discount or at a premium.
- b. Prepare the adjusting entry to record the bonds at fair value at December 31, 2022. The Fair Value Adjustment account has a debit balance of €1,000 prior to adjustment.
- c. Prepare the adjusting entry to record the bonds at fair value at December 31, 2023.
- d. Repeat the requirements for (c), assuming the investments are held under a held-for-collection and selling strategy.

P17.5 (LO 2) (Equity Investment Entries and Disclosures)

Parnevik Company has the following investments in its investment portfolio on December 31, 2022 (all investments were purchased in 2022): (1) 3,000 ordinary shares of Anderson Co. which cost \$58,500, (2) 10,000 ordinary shares of Munter Ltd. which cost \$580,000, and (3) 6,000 preference shares of King Company which cost \$255,000. The Fair Value Adjustment account shows a credit of \$10,100 at the end of 2022.

In 2023, Parnevik completed the following investment transactions.

1. On January 15, sold 3,000 ordinary shares of Anderson at \$22 per share less fees of \$2,150.
2. On April 17, purchased 1,000 ordinary shares of Castle at \$33.50 per share plus fees of \$1,980.

On December 31, 2023, the fair values per share of these investments were: Munter \$61, King \$40, and Castle \$29. Parnevik classifies these investments as trading.

Instructions

- a. Prepare the entry for the sale on January 15, 2023.
- b. Prepare the journal entry to record the purchase on April 17, 2023.

- c. Compute the unrealized gains or losses and prepare the adjusting entry for Parnevik on December 31, 2023.
- d. How should the unrealized gains or losses be reported on Parnevik's financial statements?
- e. Assuming the investment in King Company preference shares is classified as non-trading, briefly describe the accounting and reporting of this investment.

P17.6 (LO 2) (Equity Investments) McElroy plc has the following portfolio of investments at September 30, 2022, its last reporting date.

Trading Investments	Cost	Fair Value
Horton, Inc. ordinary (5,000 shares)	£215,000	£200,000
Monty, Inc. preference (3,500 shares)	133,000	140,000
Oakwood Corp. ordinary (1,000 shares)	180,000	179,000

On October 10, 2022, the Horton shares were sold at a price of £54 per share. In addition, 3,000 ordinary shares of Patriot were acquired at £54.50 per share on November 2, 2022. The December 31, 2022, fair values were Monty £106,000, Patriot £132,000, and Oakwood £193,000. All the investments are classified as trading.

Instructions

- a. Prepare the journal entries to record the sale, purchase, and adjusting entries related to the trading investments in the last quarter of 2022.
- b. How would the entries in part (a) change if the investments were classified as non-trading?

P17.7 (LO 1, 4) (Debt Investment Entries) The following information relates to the debt investments of Wildcat Welders.

1. On February 1, the company purchased 10% bonds of Gibbons plc having a par value of £300,000 at 100 plus accrued interest. Interest is payable April 1 and October 1.

2. On April 1, semiannual interest is received.
3. On July 1, 9% bonds of Sampson, Inc. were purchased. These bonds with a par value of £200,000 were purchased at 100 plus accrued interest. Interest dates are June 1 and December 1.
4. On September 1, bonds with a par value of £60,000, purchased on February 1, are sold at 99 plus accrued interest.
5. On October 1, semiannual interest is received.
6. On December 1, semiannual interest is received.
7. On December 31, the fair value of the bonds purchased February 1 and July 1 are 95 and 93, respectively.

Instructions

- a. Prepare any journal entries you consider necessary, including year-end entries (December 31), assuming these investments are managed to profit from changes in market interest rates.
- b. Indicate how the journal entries would change if Wildcat classified the investments as held-for-collection and selling.
- c. If Wildcat classified these as held-for-collection investments, explain how the journal entries would differ from those in part (a).
- d. Assume that Wildcat elects the fair value option for these investments under the part (b) conditions. Briefly discuss how the accounting would change.

P17.8 (LO 2, 3) (Fair Value and Equity Method) Brooks Corp. is a medium-sized company specializing in quarrying stone for building construction. The company has long dominated the market, at one time achieving a 70% market penetration. During prosperous years, the company's profits, coupled with a conservative dividend policy, resulted in funds available for outside investment. Over the years, Brooks has had a policy of investing idle cash in equity investments. In particular, Brooks has made periodic investments in the company's principal supplier, Norton Industries. Although the firm currently

owns 12% of the outstanding ordinary shares of Norton Industries, Brooks does not have significant influence over the operations of Norton Industries.

Cheryl Thomas has recently joined Brooks as assistant controller, and her first assignment is to prepare the 2022 year-end adjusting entries for the accounts that are valued by the “fair value” rule for financial reporting purposes. Thomas has gathered the following information about Brooks’ pertinent accounts.

1. Brooks has trading equity investments related to Delaney Motors and Patrick Electric. During this fiscal year, Brooks purchased 100,000 shares of Delaney Motors for \$1,400,000; these shares currently have a fair value of \$1,600,000. Brooks’ investment in Patrick Electric has not been profitable; the company acquired 50,000 shares of Patrick in April 2022 at \$20 per share, a purchase that currently has a value of \$720,000.
2. Prior to 2022, Brooks invested \$22,500,000 in Norton Industries and has not changed its holdings this year. This investment in Norton Industries was valued at \$21,500,000 on December 31, 2021. Brooks’ 12% ownership of Norton Industries has a current fair value of \$22,225,000.

Instructions

- a. Prepare the appropriate adjusting entries for Brooks as of December 31, 2022, to reflect the application of the “fair value” rule for both classes of investments described above.
- b. For both classes of investments presented above, describe how the results of the valuation adjustments made in (a) would be reflected in Brooks’ 2022 financial statements.
- c. Prepare the entries for the Norton investment, assuming that Brooks owns 25% of Norton’s shares. Norton reported income of \$500,000 in 2022 and paid cash dividends of \$100,000.

P17.9 (LO 2) (Financial Statement Presentation of Equity Investments) Kennedy Company has the following portfolio of

trading investments at December 31, 2022.

Investment	Quantity	Percent Interest	Per Share	
			Cost	Market
Frank, Inc.	2,000 shares	8%	\$11	\$16
Ellis Corp.	5,000 shares	14%	23	19
Mendota Company	4,000 shares	2%	31	24

On December 31, 2023, Kennedy's portfolio of trading investments consisted of the following investments.

Investment	Quantity	Percent Interest	Per Share	
			Cost	Market
Ellis Corp.	5,000 shares	14%	\$23	\$28
Mendota Company	4,000 shares	2%	31	23
Mendota Company	2,000 shares	1%	25	23

At the end of year 2023, Kennedy Company changed the classification of its investment in Frank, Inc. to non-trading when the shares were selling for \$8 per share.

Instructions

- What should be reported on Kennedy's December 31, 2022, statement of financial position relative to these equity investments?
- What should be reported on the face of Kennedy's December 31, 2023, statement of financial position relative to the trading investments? What should be reported to reflect the transactions above in Kennedy's 2023 income statement?

P17.10 (LO 2) (Equity Investments) Castleman Holdings plc had the following investment portfolio at January 1, 2022.

Evers Company	1,000 shares @ £15 each	£15,000

Rogers Company	900 shares @ £20 each	18,000
Chance Company	500 shares @ £9 each	4,500
Non-trading investments at cost		37,500
Fair value adjustment		(7,500)
Non-trading investments at fair value		<u>£30,000</u>

During 2022, the following transactions took place.

1. On March 1, Rogers Company paid a £2 per share dividend.
2. On April 30, Castleman Holdings sold 300 shares of Chance Company for £11 per share.
3. On May 15, Castleman Holdings purchased 100 more shares of Evers Co. at £16 per share.
4. At December 31, 2022, the shares had the following price per share values: Evers £17, Rogers £19, and Chance £8.

During 2023, the following transactions took place.

5. On February 1, Castleman Holdings sold the remaining Chance shares for £8 per share.
6. On March 1, Rogers Company paid a £2 per share dividend.
7. On December 21, Evers Company declared a cash dividend of £3 per share to be paid in the next month.
8. At December 31, 2023, the shares had the following price per shares values: Evers £19 and Rogers £21.

Instructions

- a. Prepare journal entries for each of the above transactions.
- b. Prepare a partial statement of financial position showing the Investments account at December 31, 2022 and 2023.

- c. Briefly describe how the accounting would change if the Evers investment was classified as trading.

P17.11 (LO 2) (Investments—Statement Presentation)

Fernandez SA invested its excess cash in equity investments during 2022. The business model for these investments is to profit from trading on price changes.

Instructions

- a. As of December 31, 2022, the equity investment portfolio consisted of the following.

Investment	Quantity		Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares		€ 15,000	€ 21,000
Poley Corp.	2,000 shares		40,000	42,000
Arnold Aircraft	2,000 shares		72,000	60,000
		Totals	€127,000	€123,000

What should be reported on Fernandez's December 31, 2022, statement of financial position relative to these investments?

What should be reported on Fernandez's 2022 income statement?

- b. During the year 2023, Fernandez sold 2,000 shares of Poley Corp. for €38,200 and purchased 2,000 more shares of Lindsay Jones, Inc. and 1,000 shares of Duff Company. On December 31, 2023, Fernandez's equity investment portfolio consisted of the following.

Investment	Quantity		Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares		€ 15,000	€ 20,000
Lindsay Jones, Inc.	2,000 shares		33,000	40,000
Duff Company	1,000 shares		16,000	12,000
Arnold Aircraft	2,000 shares		72,000	22,000
		Totals	€136,000	€ 94,000

What should be reported on Fernandez's December 31, 2023, statement of financial position? What should be reported on

Fernandez's 2023 income statement?

- c. During the year 2024, Fernandez sold 3,000 shares of Lindsay Jones, Inc. for €39,900 and 500 shares of Duff Company at a loss of €2,700. On December 31, 2024, Fernandez's equity investment portfolio consisted of the following.

Investment	Quantity		Cost	Fair Value
Arnold Aircraft	2,000 shares		€72,000	€82,000
Duff Company	500 shares		8,000	6,000
		Totals	€80,000	€88,000

What should be reported on the face of Fernandez's December 31, 2024, statement of financial position? What should be reported on Fernandez's 2024 income statement?

***P17.12 (LO 5) (Derivative Financial Instrument)** The treasurer of Miller AG has read on the Internet that the price of Wade Inc. ordinary shares is about to take off. In order to profit from this potential development, Miller purchased a call option on Wade shares on July 7, 2022, for €240. The call option is for 200 shares (notional value), and the strike price is €70. (The market price of a Wade share on that date is €70.) The option expires on January 31, 2023. The following data are available with respect to the call option.

Date	Market Price of Wade Shares	Time Value of Call Option
September 30, 2022	€77 per share	€180
December 31, 2022	75 per share	65
January 4, 2023	76 per share	30

Instructions

Prepare the journal entries for Miller for the following dates.

- a. July 7, 2022—Investment in call option on Wade shares.

- b. September 30, 2022—Miller prepares financial statements.
- c. December 31, 2022—Miller prepares financial statements.
- d. January 4, 2023—Miller settles the call option on the Wade shares.

***P17.13 (LO 5) (Derivative Financial Instrument)** Johnstone AG purchased a put option on Ewing ordinary shares on July 7, 2022, for €240. The put option is for 200 shares, and the strike price is €70. (The market price of an ordinary share of Ewing on that date is €70.) The option expires on January 31, 2023. The following data are available with respect to the put option.

Date	Market Price of Ewing Shares	Time Value of Put Option
September 30, 2022	€77 per share	€125
December 31, 2022	75 per share	50
January 31, 2023	78 per share	0

Instructions

Prepare the journal entries for Johnstone for the following dates.

- a. July 7, 2022—Investment in put option on Ewing shares.
- b. September 30, 2022—Johnstone prepares financial statements.
- c. December 31, 2022—Johnstone prepares financial statements.
- d. January 31, 2023—Put option expires.

***P17.14 (LO 5) (Free-Standing Derivative)** Warren Co. purchased a put option on Echo ordinary shares on January 7, 2022, for \$360. The put option is for 400 shares, and the strike price is \$85 (which equals the price of an Echo share on the purchase date). The option expires on July 31, 2022. The following data are available with respect to the put option.

--	--	--

Date	Market Price of Eco Shares	Time Value of Put Option
March 31, 2022	€80 per share	€200
June 30, 2022	82 per share	90
July 6, 2022	77 per share	25

Instructions

Prepare the journal entries for Warren for the following dates.

- January 7, 2022—Investment in put option on Echo shares.
- March 31, 2022—Warren prepares financial statements.
- June 30, 2022—Warren prepares financial statements.
- July 6, 2022—Warren settles the put option on the Echo shares.

***P17.15 (LO 6) (Fair Value Hedge Interest Rate Swap)** On December 31, 2022, Mercantile Corp. had a \$10,000,000, 8% fixed-rate note outstanding, payable in 2 years. It decides to enter into a 2-year swap with Chicago First Bank to convert the fixed-rate debt to variable-rate debt. The terms of the swap indicate that Mercantile will receive interest at a fixed rate of 8.0% and will pay a variable rate equal to the 6-month LIBOR rate, based on the \$10,000,000 amount. The LIBOR rate on December 31, 2022, is 7%. The LIBOR rate will be reset every 6 months and will be used to determine the variable rate to be paid for the following 6-month period.

Mercantile Corp. designates the swap as a fair value hedge. Assume that the hedging relationship meets all the conditions necessary for hedge accounting. The 6-month LIBOR rate and the swap and debt fair values are as follows.

Date	6-Month LIBOR Rate	Swap Fair Value	Debt Fair Value
December 31, 2022	7.0%	—	\$10,000,000
June 30, 2023	7.5%	\$(200,000)	9,800,000
December 31,	6.0%	60,000	10,060,000

2023			
------	--	--	--

Instructions

- a. Present the journal entries to record the following transactions.
 1. The entry, if any, to record the swap on December 31, 2022.
 2. The entry to record the semiannual debt interest payment on June 30, 2023.
 3. The entry to record the settlement of the semiannual swap amount receivables at 8%, less amount payable at LIBOR, 7%.
 4. The entry to record the change in the fair value of the debt on June 30, 2023.
 5. The entry to record the change in the fair value of the swap at June 30, 2023.
- b. Indicate the amount(s) reported on the statement of financial position and income statement related to the debt and swap on December 31, 2022.
- c. Indicate the amount(s) reported on the statement of financial position and income statement related to the debt and swap on June 30, 2023.
- d. Indicate the amount(s) reported on the statement of financial position and income statement related to the debt and swap on December 31, 2023.

***P17.16 (LO 6) (Cash Flow Hedge)** Suzuki Jewelry Group uses gold in the manufacture of its products. Suzuki anticipates that it will need to purchase 500 ounces of gold in October 2022, for jewelry that will be shipped for the holiday shopping season. However, if the price of gold increases, Suzuki's cost to produce its jewelry will increase, which would reduce its profit margins.

To hedge the risk of increased gold prices, on April 1, 2022, Suzuki enters into a gold futures contract and designates this futures contract as a cash flow hedge of the anticipated gold purchase. The notional

amount of the contract is 500 ounces, and the terms of the contract give Suzuki the right and the obligation to purchase gold at a price of ¥30,000 per ounce. The price will be good until the contract expires on October 31, 2022.

Assume the following data with respect to the price of the gold inventory purchase.

Date	Spot Price for October Delivery
April 1, 2022	¥30,000 per ounce
June 30, 2022	31,000 per ounce
September 30, 2022	31,500 per ounce

Instructions

Prepare the journal entries for the following transactions.

- April 1, 2022—Inception of the futures contract, no premium paid.
- June 30, 2022—Suzuki prepares financial statements.
- September 30, 2022—Suzuki prepares financial statements.
- October 10, 2022—Suzuki purchases 500 ounces of gold at ¥31,500 per ounce and settles the futures contract.
- December 20, 2022—Suzuki sells jewelry containing gold purchased in October 2022 for ¥35,000,000. The cost of the finished goods inventory is ¥20,000,000.
- Indicate the amount(s) reported on the statement of financial position and income statement related to the futures contract on June 30, 2022.
- Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2022.

***P17.17 (LO 6) (Fair Value Hedge)** On October 15, 2022, Oil Products plc purchased 4,000 barrels of fuel oil with a cost of £240,000 (£60 per barrel). Oil Products is holding this inventory in

anticipation of the winter 2023 heating season. Oil Products accounts for its inventory at the lower-of-FIFO-cost-or-net realizable value. To hedge against potential declines in the value of the inventory, Oil Products also purchased a put option on the fuel oil. Oil Products paid an option premium of £300 for the put option, which gives Oil Products the option to sell 4,000 barrels of fuel oil at a strike price of £60 per gallon. The option expires on March 1, 2023. The following data are available with respect to the values of the fuel of inventory and the put option.

Date	Market Price of Fuel Oil	Time Value of Put Option
October 31, 2022	£58 per gallon	£175
November 30, 2022	57 per gallon	105
December 31, 2022	54 per gallon	40

Instructions

- a. Prepare the journal entries of Oil Products for the following dates.
 1. October 15, 2022—Oil Products purchases fuel oil and the put option on fuel oil.
 2. October 31, 2022—Oil Products prepares financial statements.
 3. November 30, 2022—Oil Products prepares financial statements.
 4. December 31, 2022—Oil Products prepares financial statements.
- b. Indicate the amount(s) reported on the statement of financial position and income statement related to the fuel oil inventory and the put option on November 30, 2022.
- c. Indicate the amount(s) reported on the statement of financial position and income statement related to the fuel oil and the put

option on December 31, 2022.

Concepts for Analysis

CA17.1 (LO 1, 2) (Issues Raised About Investments) You have just started work for Warren AG as part of the controller's group involved in current financial reporting problems. Jane Henshaw, controller for Warren, is interested in your accounting background because the company has experienced a series of financial reporting surprises over the last few years. Recently, the controller has learned from the company's auditors that there is authoritative literature that may apply to its debt and equity investments. She assumes that you are familiar with literature in this area and asks how the following situations should be reported in the financial statements.

Situation 1: Investments that are actively traded are reported in the current assets section and have a fair value that is €4,200 lower than cost.

Situation 2: A debt investment whose fair value is currently less than cost is transferred to the held-for-collection category.

Situation 3: A debt investment whose fair value is currently less than cost is classified as non-current but is to be reclassified as current.

Situation 4: A company's portfolio of debt investments at fair value consists of the bonds of one company. At the end of the prior year, the fair value of the bonds was 50% of original cost, and this reduction in value was reported as an impairment. However, at the end of the current year, the fair value of the bonds had appreciated to twice the original cost.

Instructions

What is the effect upon carrying value and earnings for each of the situations above? Assume that these situations are unrelated.

CA17.2 (LO 2) (Equity Investments) Lexington Co. has the following equity investments on December 31, 2022 (its first year of

operations).

	Cost	Fair Value
Greenspan Corp. ordinary shares	\$20,000	\$19,000
Summerset Company ordinary shares	9,500	8,800
Tinkers Company ordinary shares	20,000	20,600
	<u>\$49,500</u>	<u>\$48,400</u>

During 2023, Summerset Company shares were sold for \$9,200, the difference between the \$9,200 and the “fair value” of \$8,800 being recorded as a “Gain on Sale of Investments.” The market price of the shares on December 31, 2023, was Greenspan Corp. shares \$19,900, Tinkers Company shares \$20,500.

Instructions

- What justification is there for valuing these investments at fair value and reporting the unrealized gain or loss in income?
- How should Lexington Company apply this rule on December 31, 2022? Explain.
- Did Lexington Company properly account for the sale of the Summerset Company shares? Explain.
- Are there any additional entries necessary for Lexington Company at December 31, 2023, to reflect the facts on the financial statements in accordance with IFRS? Explain.

CA17.3 (LO 1, 2) (Financial Statement Effect of Investments)

Presented below are three unrelated situations involving investments.

Situation 1: A debt investment portfolio, whose fair value is currently less than cost, is classified as trading but is to be reclassified as held-for-collection.

Situation 2: A debt investment portfolio with an aggregate fair value in excess of cost includes one particular debt investment whose fair value has declined to less than one-half of the original cost. The decline in value is considered to be permanent.

Situation 3: The portfolio of trading equity investments has a cost in excess of fair value of £13,500. The portfolio of non-trading equity investments has a fair value in excess of cost of £28,600.

Instructions

What is the effect upon carrying value and earnings for each of the situations above?

CA17.4 (LO 2) (Equity Investments) The IASB issued accounting guidance to clarify accounting methods and procedures with respect to debt and equity investments. An important part of the statement concerns the distinction between held-for-collection debt investments, held-for-collection and selling debt investments, trading debt and equity investments, and non-trading equity investments.

Instructions

- a. Why does a company maintain separate investment portfolios for these different types of investments?
- b. What factors should be considered in determining whether investments should be classified as held-for-collection, held-for-collection and selling, trading, or non-trading? How do these factors affect the accounting treatment for unrealized losses?

CA17.5 (LO 3) (Investment Accounted for Under the Equity Method) On July 1, 2023, Fontaine Company purchased for cash 40% of the outstanding ordinary shares of Knoblett Company. Both Fontaine Company and Knoblett Company have a December 31 year-end. Knoblett Company, whose shares are actively traded in the over-the-counter market, reported its total net income for the year to Fontaine Company and also paid cash dividends on November 15, 2023, to Fontaine Company and its other shareholders.

Instructions

How should Fontaine Company report the above facts in its December 31, 2023, statement of financial position and its income statement for the year then ended? Discuss the rationale for your answer.

CA17.6 (LO 3) Writing (Equity Investments) On July 1, 2022, Selig Company purchased for cash 40% of the outstanding ordinary shares of Spoor Corporation. Both Selig and Spoor have a December 31 year-end. Spoor Corporation, whose shares are actively traded on the American Stock Exchange, paid a cash dividend on November 15, 2022, to Selig Company and its other shareholders. It also reported its total net income for the year of \$920,000 to Selig Company.

Instructions

Prepare a one-page memorandum of instructions on how Selig Company should report the above facts in its December 31, 2022, statement of financial position and its 2022 income statement. In your memo, identify and describe the method of valuation you recommend. Provide rationale where you can. Address your memo to the chief accountant at Selig Company.

CA17.7 (LO 1, 2, 4) Ethics (Fair Value) Addison Manufacturing holds a large portfolio of debt and equity investments. The fair value of the portfolio is greater than its original cost, even though some investments have decreased in value. Sam Beresford, the financial vice president, and Angie Nielson, the controller, are near year-end in the process of classifying for the first time this investment portfolio in accordance with IFRS. Beresford wants to classify those investments that have increased in value during the period as trading investments in order to increase net income this year. He wants to classify all the investments that have decreased in value as non-trading (the equity investments) and as held-for-collection (the debt investments).

Nielson disagrees. She wants to classify those investments that have decreased in value as trading and those that have increased in value as non-trading (equity) and held-for-collection (debt). She contends that the company is having a good earnings year and that recognizing the losses will help to smooth the income this year. As a result, the company will have built-in gains for future periods when the company may not be as profitable.

Instructions

Answer the following questions.

- a. Will classifying the portfolio as each proposes actually have the effect on earnings that each says it will?
- b. Is there anything unethical in what each of them proposes? Who are the stakeholders affected by their proposals?
- c. Assume that Beresford and Nielson properly classify the entire portfolio into trading, non-trading, and held-for-collection categories. But then each proposes to sell just before year-end the investments with gains or with losses, as the case may be, to accomplish their effect on earnings. Is this unethical?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What investments does M&S report in fiscal year 2019, and where are these investments reported in its financial statements?
- b. How are M&S's investments valued? How does M&S determine fair value?
- c. How does M&S use derivative financial instruments?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual

reports, including the notes to the financial statements, are available online.

Instructions

Based on the information contained in these financial statements, determine each of the following for each company.

- Cash used in or for investing activities during 2018 (from the statement of cash flows).
- What information do adidas and Puma provide on the classifications of their investments?

Financial Statement Analysis Case

Union Planters

Union Planters is a bank holding company (that is, a company that owns banks). Union Planters manages \$32 billion in assets, the largest of which is its loan portfolio of \$19 billion. However, like other banks, it has significant debt investments, in addition to its loan portfolio. These investments vary from short-term to long-term in nature. As a consequence, consistent with the requirements of accounting rules, Union Planters reports both the fair value and amortized cost of its investments. The following facts were found in a recent Union Planters' annual report.

(amounts in millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Trading account assets	\$ 275	—	—	\$ 275
Non-trading equity investments	8,209	\$108	\$15	8,302
Net income				224
Net investment gains (losses)				(9)

Instructions

- a. Why do you suppose Union Planters purchases investments, rather than simply making loans? Why does it purchase investments that vary both in terms of their maturities and in type (debt versus equity)?
- b. When should Union Planters account for its investments at fair value and amortized cost?
- c. In what ways does classifying investments into different categories (trading or non-trading) assist investors in evaluating the profitability of a company like Union Planters?
- d. Could Union Planters adjust its investment portfolio to increase reported profit? If so, how much could it have increased reported profit? Why do you suppose it chose not to do this?

Accounting, Analysis, and Principles

Instar Company has several investments in other companies. The following information regarding these investments is available at December 31, 2022.

1. Instar holds bonds issued by Dorsel Corp. The bonds have an amortized cost of \$320,000 (which is par value) and their fair value at December 31, 2022, is \$400,000. Instar plans to hold the bonds to collect contractual cash flows until they mature on December 31, 2032. The bonds pay interest at 10%, payable annually on December 31.
2. Instar has invested idle cash in the equity investments of several publicly traded companies. Instar intends to sell these investments during the first quarter of 2023, when it will need the cash to acquire seasonal inventory. These equity investments have a cost basis of \$800,000 and a fair value of \$920,000 at December 31, 2022.
3. Instar has an ownership stake in one of the companies that supplies Instar with various components that Instar uses in its products. Instar owns 6% of the ordinary shares of the supplier, does not have any representation on the supplier's board of

directors, does not exchange any personnel with the supplier, and does not consult with the supplier on any of the supplier's operating, financial, or strategic decisions. The cost basis of the investment in the supplier is \$1,200,000, and the fair value of the investment at December 31, 2022, is \$1,550,000. Instar may sell the investment if it needs cash. The supplier reported net income of \$80,000 for 2022 and paid no dividends.

4. Instar owns 1% of Forter Corp. ordinary shares. The cost basis of the investment in Forter is \$200,000, and the fair value at December 31, 2022, is \$187,000. Instar does not intend to trade the investment because it helps it meet regulatory requirements to sell its products in Forter's market area. The investment is not considered impaired.
5. Instar purchased 25% of the shares of Slobbaer Co. for \$900,000. Instar has significant influence over the operating activities of Slobbaer Co. During 2022, Slobbaer Co. reported net income of \$300,000 and paid a dividend of \$100,000. The fair value of the Slobbaer shares at December 31, 2022, is \$925,000.

Accounting

- a. Determine whether each of the investments described above should be classified as held-for-collection, trading, non-trading equity, or equity method investment.
- b. Prepare any December 31, 2022, journal entries needed for Instar relating to Instar's various investments in other companies. Assume 2022 is Instar's first year of operations.

Analysis

What is the effect on Instar's 2022 net income (as reported on Instar's income statement) of its investments in other companies?

Principles

Briefly explain the different rationales for the different accounting and reporting rules for different types of investments in other

companies.

Research Case

Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the shares of one of its suppliers, Teton Co. Teton’s shares trade on the over-the-counter market but trading activity is quite low. Cascade plans to classify these investments as trading. The company would like you to conduct some research on the accounting for these investments.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Since the Teton shares are not actively traded, Cascade argues that this investment's market prices do not provide a good fair value measurement. According to the authoritative literature, what factors should be evaluated to conclude that a market price cannot be used as an estimate of fair value?
- b. To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-for-collection; Cascade is pretty sure it will hold the bonds for 5 years. What criteria must be met for Cascade to classify it as held-for-collection?

Global Accounting Insights

LEARNING OBJECTIVE 9

Compare the accounting for investments under IFRS and U.S. GAAP.

Until recently, when the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and U.S. GAAP were, for the most part, very similar. While *IFRS 9* introduces new investment classifications relative to U.S. GAAP, both IFRS and U.S. GAAP have increased situations when investments are accounted for at fair value, with gains and losses recorded in income.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to investments.

Similarities

- U.S. GAAP and IFRS use similar classifications for financial assets: cash, loans and receivables, investments, and derivatives.
- Both IFRS and U.S. GAAP require that financial assets be sorted into specific categories for measurement and classification purposes.
- Held-to-maturity (U.S. GAAP) and held-for-collection (IFRS) investments are accounted for at amortized cost. Gains and losses on some investments are reported in other comprehensive income.
- Amortized cost or fair value is used depending upon the classification of the financial instrument.
- The definitions of amortized cost and fair value are the same.
- Both U.S. GAAP and IFRS use the same test to determine whether the equity method of accounting should be used, that is, significant influence with a general guideline of over 20 percent ownership.
- U.S. GAAP and IFRS are similar in the accounting for the fair value option. That is, the option to use fair value must be made at initial recognition, the selection is irrevocable, and gains and losses are reported as part of income.
- Under both U.S. GAAP and IFRS, credit losses are recognized in income.

Differences

- While U.S. GAAP classifies debt investments as trading, available-for-sale, and held-to-maturity, IFRS classifies debt investments as held-for-collection, held-for-collection and selling, and trading.
- U.S. GAAP requires that all changes in fair value for **all equity securities** be reported as part of income. IFRS requires that changes in fair value for **non-trading equity securities** be reported as part of other comprehensive income.

- While the measurement of impairments is similar under U.S. GAAP and IFRS, U.S. GAAP measures impairments based on lifetime expected credit losses. IFRS uses lifetime expected losses for financial assets that have experienced a significant increase in credit risk since initial recognition (otherwise, the credit loss allowance is based on 12-month expected credit losses).
- U.S. GAAP generally does not permit the reversal of an impairment charge related to held-to-maturity debt investments and equity investments. IFRS allows reversals of impairments of held-for-collection investments.
- While U.S. GAAP and IFRS are similar in the accounting for the fair value option, one difference is that U.S. GAAP permits the fair value option for all financial assets; IFRS allows the fair value option if doing so reduces an accounting mismatch.

About the Numbers

Investments in Debt Securities

To provide useful information, under U.S. GAAP, companies account for investments based on the type of security (debt or equity) and their **intent** with respect to the investment as indicated in the following table.

Summary of Investment Accounting Approaches		
Type of Security	Management Intent	Valuation Approach
Debt	No plans to sell	Amortized cost
	Plan to sell	Fair value
Equity	Plan to sell	Fair value
	Exercise some control	Equity method

Debt Investment Classifications

Debt securities represent a creditor relationship with another entity. Debt securities include U.S. government securities, municipal securities, company bonds, convertible debt, and commercial paper. Trade accounts receivable and loans receivable are not debt securities

because they do not meet the definition of a security. Companies group investments in debt securities into three separate categories for accounting and reporting purposes:

- **Held-to-maturity:** Debt securities that the company has the positive intent and ability to hold to maturity.
- **Trading:** Debt securities bought and held primarily for sale in the near term to generate income on short-term price differences.
- **Available-for-sale:** Debt securities not classified as held-to-maturity or trading securities.

The following table summarizes these categories, along with the accounting and reporting treatments required for each.

Accounting for Debt Securities by Category			
Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Held-to-maturity	Amortized cost	Not recognized	Interest when earned; gains and losses from sale
Trading securities	Fair value	Recognized in net income	Interest when earned; gains and losses from sale
Available-for-sale	Fair value	Recognized as other comprehensive income and as separate component of stockholders' equity	Interest when earned; gains and losses from sale

As in IFRS, **amortized cost** is the acquisition cost adjusted for the amortization of discount or premium, if appropriate. **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

On the Horizon

At one time, both the FASB and IASB indicated that they believed that all financial instruments should be reported at fair value and that changes in fair value should be reported as part of net income. Through recent standards in this area, the Boards continue to move toward that goal. U.S. GAAP and IFRS are substantially converged, except for non-trading equity investments and the measurement of credit losses.

GAAP Self-Test Questions

1. All of the following are key similarities between U.S. GAAP and IFRS with respect to accounting for investments **except**:

- a. IFRS and U.S. GAAP require the same accounting for all equity securities.
- b. IFRS and U.S. GAAP apply the equity method to significant-influence equity investments.
- c. IFRS and U.S. GAAP have a fair value option for financial instruments.
- d. the accounting for impairment of investments is similar, although IFRS allows recovery of impairment losses.

2. Which of the following statements is **correct**?

- a. IFRS does not permit the equity method of accounting.
- b. U.S. GAAP permits recovery of impairment losses on investments.
- c. Under IFRS, non-trading equity investments are accounted for at amortized cost.
- d. IFRS and U.S. GAAP both have a trading debt investment classification.

3. U.S. GAAP does not require companies to measure their financial assets at fair value except when:

- a. the equity method of accounting is used.
- b. the financial asset is a trading debt investment.
- c. the financial asset is an equity investment of less than 20% of shares outstanding.
- d. an investment is classified as trading.

4. Select the investment accounting approach with the correct valuation approach:

	Not Held-to-Maturity	Held-to-Maturity
a.	Amortized cost	Amortized cost
b.	Fair value	Fair value
c.	Fair value	Amortized cost
d.	Amortized cost	Fair value

5. Under U.S. GAAP, a company:

- a. should evaluate only equity investments for impairment.
- b. accounts for an impairment as an unrealized loss and includes it as a part of other comprehensive income and as a component of accumulated other comprehensive income until realized.
- c. accounts for an impairment loss on debt investments based on lifetime expected credit losses.
- d. All of the answer choices are correct.

GAAP Concepts and Application

GAAP17.1 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for investments.

GAAP17.2 Ramirez Company has a held-for-collection investment in the 6%, 20-year bonds of Soto Company. The investment was originally purchased for \$1,200,000 in 2021. Early in 2022, Ramirez recorded an impairment of \$300,000 on the Soto investment, due to Soto's financial distress. In 2023, Soto returned to profitability, and the investment was no longer impaired. What entry does Ramirez make in 2023 under (a) U.S. GAAP and (b) IFRS?

GAAP17.3 Discuss how recent IFRS developments in the accounting for investments might affect convergence with U.S. GAAP.

Answers to GAAP Self-Test Questions

1. a 2. d 3. a 4. c 5. c

Notes

- 1 Several different types of assets qualify as financial assets. These include cash, a contractual right to receive cash (e.g., receivables, loans, and bonds), and an equity instrument of another entity (e.g., ordinary or preference shares), which is a contractual right to a residual claim in the net assets of another entity. In contrast, the value of physical assets such as land and buildings comes from their use in the business and do not arise from a contractual claim. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.)
- 2 A **security** is a share, participation, or other interest in property, or in an enterprise of the issuer or an obligation of the issuer, that has the following three characteristics: (1) it either is represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer; (2) it is commonly traded on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment; and (3) it either is one of a class or series, or by its terms is divisible into a class or series of shares, participations, interests, or obligations.

- 3 The IASB indicates that the business model should be considered first and that the contractual cash flow characteristics should be considered only for financial assets (e.g., debt investments) that are eligible to be measured at amortized cost. It states that both classification conditions are essential to ensure that amortized cost provides useful information about debt investments. [3]
- 4 Classification as held-for-collection does not mean the security must be held to maturity. For example, a company may sell an investment before maturity if (1) the security does not meet the company's investment strategy (e.g., the company has a policy to invest in only AAA-rated bonds but the bond investment's credit rating has declined), (2) a company changes its strategy to invest only in securities within a certain maturity range, or (3) the company needs to sell a security to fund certain capital expenditures. However, if a company begins trading held-for-collection investments on a regular basis, it should assess whether such trading is consistent with the held-for-collection classification. [5]
- 5 Although the example here is based on a single investment, the IASB indicates that companies evaluate the investment strategy (or business model for managing the investments) at a higher level of aggregation than the individual security. As a result, a company may have more than one investment strategy. That is, a company may hold a portfolio of investments that is managed to collect contractual cash flows and another portfolio of investments that is managed to realize gains and losses on fair value changes. [6]
- 6 Companies may incur brokerage and transaction costs in purchasing securities. For investments accounted for at fair value (both debt and equity), IFRS requires that these costs be expensed and reported in the "Other income and expense" section of the income statement. As a result, these costs are not added to the cost of the investment. [8]
- 7 Various account titles might be used instead of Fair Value Adjustment, such as Fair Value Allowance or Valuation Allowance

for Debt Investments. *For homework problems, use the account title Fair Value Adjustment.*

- [8](#) On the date of sale, any unrealized gains or losses on the sold security are not adjusted in accumulated other comprehensive income. This adjustment occurs at year-end when the entire portfolio is evaluated for fair value adjustment.
- [9](#) Companies may also use the fair value option for investments held-for-collection and selling. In this case, unrealized holding gains and losses on the debt investment are recorded in income.
- [10](#) As discussed in [Chapter 14](#), companies may elect the fair value option and report liabilities with the change in fair value reported in income. An exception to this guideline is when a portion of the change in fair value is due to a change in a company's own credit risk; in that case, the change is recognized in other comprehensive income (with no recycling).
- [11](#) Fair value at initial recognition is the transaction price (exclusive of brokerage and other transaction costs). Subsequent fair value measurements should be based on market prices, if available. While IFRS requires that all equity investments be measured at fair value, cost may be an appropriate estimate of fair value for an equity investment in certain limited cases. [\[11\]](#)
- [12](#) Companies should record equity investments acquired in **exchange for non-cash consideration** (property or services) at the fair value of the consideration given, if the fair value can be measured reliably. Otherwise, the value of the exchange can be determined with reference to the fair value of the equity investment. Accounting for numerous purchases of securities requires the preservation of information regarding the cost of individual purchases, as well as the dates of purchases and sales. If **specific identification** is not possible, companies may use the **average-cost** method for multiple purchases of the same class of security. The **first-in, first-out** (FIFO) method of assigning costs

to investments at the time of sale is also acceptable and normally employed.

- 13** The IASB provided the fair value through other comprehensive income option (FVOCI), recognizing that some investments are made primarily for non-financial reasons (e.g., strategic alliances). Rather than trying to define strategic alliances or a general principal for identifying such assets, the IASB decided to make the FVOCI optional. The classification of an equity investment as non-trading is irrevocable. This approach is designed to provide some discipline to the application of the non-trading option, which allows unrealized gains and losses to bypass net income. **[13]**
- 14** Once non-trading equity investments are sold, companies may transfer the balance of unrealized holding gains or losses in accumulated other comprehensive income to retained earnings. Transferring the balance to retained earnings has merit, as these gains or losses would have been recorded in net income in a prior period if these securities were accounted for as trading securities. Some contend that these unrealized gains or losses should be “recycled”; that is, these amounts should be recorded in net income when a non-trading investment is sold. The IASB rejected this approach because it would increase the complexity of the accounting for these investments. **[14]**
- 15** Cases in which an investment of 20 percent or more might not enable an investor to exercise significant influence include (1) the investee opposes the investor’s acquisition of its shares, (2) the investor and investee sign an agreement under which the investor surrenders significant shareholder rights, (3) the investor’s ownership share does not result in “significant influence” because majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regard to the views of the investor, and (4) the investor tries and fails to obtain representation on the investee’s board of directors. **[17]**
- 16** Note that impairment tests are conducted only for debt investments that are held-for-collection (which are accounted for at

amortized cost). Other debt and equity investments are measured at fair value each period; thus, an impairment test is not needed.

[17](#) Under IFRS, because the credit risk has increased significantly, the expected cash flows used in the impairment analysis should reflect lifetime expected losses on the investment. If credit risk has not increased significantly, the loss amount is measured at an amount equal to 12-month expected credit losses. For either 12-month or lifetime credit losses, the cash flows (which may be assessed on an individual or collective basis) are based on (a) probability-weighted amounts from a range of possible outcomes, (b) the time value of money, and (c) reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions, and forecasts of future economic conditions. [\[20\]](#)

[18](#) Many question this present value calculation because it uses the investment's historical effective-interest rate—not the current market rate. As a result, the present value computation does not reflect the fair value of the debt investment, and many believe the impairment loss is misstated. The IASB specified use of the historical effective-interest rate, citing the difficulty in distinguishing interest rate changes due to changes in credit risk and other market risks. [\[21\]](#)

[19](#) Alexander continues to recognize interest revenue on the debt investment, using the historical effective interest rate. If the impairment does not reflect a significant credit deterioration, the effective interest is based on the carrying amount of the investment, without adjustment for the impairment. If the impairment reflects significant credit deterioration, the effective-interest increase is computed on the carrying amount less the impairment. See PWC, “IFRS 9—Expected Credit Losses,” *In Depth* No. 2014–16 (August 13, 2014), p. 2.

[20](#) This means that impairments are recorded as realized fair value changes, whereas fair value changes not related to impairments are treated as unrealized until the debt investment is derecognized. In

addition, disclosure in the notes to the financial statements would identify the causes for the decrease in the value of the debt investment from its amortized cost. [22]

21 The Board rejected retrospective application because recasting prior periods according to the new investment model would not reflect how the investments were managed in the prior periods. The IASB indicates that a change in a company's investment business model is a significant and demonstrable event, and it is likely that this change will be disclosed when the change occurs. Note that other types of transfers are also permitted, such as non-trading to held-for-collection and vice versa, but these situations should be rare. [25]

22 Derivatives are traded on many exchanges throughout the world. In addition, many derivative contracts (primarily interest rate swaps) are privately negotiated.

23 There are some well-publicized examples of companies that have suffered considerable losses using derivatives. For example, companies such as **Fannie Mae** (USA), **Enron** (USA), **Showa Shell Sekiyu** (JPN), **Metallgesellschaft** (DEU), **Procter & Gamble** (USA), and **Air Products & Chemicals** (USA) incurred significant losses from investments in derivative instruments.

24 IFRS covers accounting and reporting for all derivative instruments, whether financial or not. In this appendix, we focus on derivative financial instruments because of their widespread use in practice. [26]

25 As discussed in earlier chapters, fair value is defined as "the amount for which an asset could be exchanged or a liability settled between knowledgeable, willing parties in an arm's length transaction." Fair value is therefore a market-based measure. The IASB has also developed a fair value hierarchy, which indicates the reporting of valuation techniques to use to determine fair value. *Level 1* fair value measures are based on observable inputs that reflect quoted prices for identical assets or liabilities in active

markets. *Level 2* measures are based on inputs other than the quoted prices included in Level 1, which can be corroborated with observable data. *Level 3* fair values are based on unobservable inputs (e.g., a company's own data or assumptions). Thus, Level 1 is the most reliable because it is based on quoted prices, like a closing share price in the *Financial Times*. Level 2 is the next most reliable and would rely on evaluating similar assets or liabilities in active markets. For Level 3 (the least reliable), much judgment is needed, based on the best information available, to arrive at a relevant and reliable fair value measurement. [27]

26 Investors can use a different type of option contract—a **put option**—to realize a gain if anticipating a decline in the value of Laredo shares. A put option gives the holder the option to sell shares at a preset price. Thus, a put option **increases** in value when the underlying asset **decreases** in value.

27 Baird Investment SA is referred to as the **counterparty**. Counterparties frequently are investment bankers or other companies that hold inventories of financial instruments.

28 This initial cost is estimated using option-pricing models, such as that based on the Black-Scholes equation. The volatility of the underlying shares, the expected life of the option, the risk-free rate of interest, and expected dividends on the underlying shares during the option term affect the Black-Scholes fair value estimate.

29 In practice, investors generally do not have to actually buy and sell the Laredo shares to settle the option and realize the gain. This is referred to as the **net settlement** feature of option contracts.

30 The decline in value reflects both the decreased likelihood that the Laredo shares will continue to increase in value over the option period and the shorter time to maturity of the option contract.

31 As indicated earlier, the total value of the option at any point in time equals the intrinsic value plus the time value.

- 32 IFRS also addresses the accounting for certain foreign currency hedging transactions. In general, these transactions are special cases of the two hedges we discuss here. [29] Understanding of foreign currency hedging transactions requires knowledge related to consolidation of multinational entities, which is beyond the scope of this text.
- 33 To simplify the example, we assume no premium is paid for the option. A put option on rubber is a good candidate for this hedge because the rubber raw material is the primary driver of fair value changes on tires.
- 34 The accounting for inventory is discussed in Chapters 8 and 9. In this example, the inventory is not subject to a lower-of-cost-or-net realizable value assessment.
- 35 In practice, Hayward generally does not have to actually buy and sell the rubber in the commodity market to realize this gain. Rather, unless the counterparty wants to hold the rubber, Hayward can “close out” the contract by having the counterparty pay it €20,000 in cash. This is an example of the net settlement feature of derivatives.
- 36 Note that the fair value changes in the option contract will not offset *increases* in the value of the Hayward inventory. Should the price of rubber increase above €50 per pound, Hayward would have no incentive to exercise the put option.
- 37 A **futures contract** is a firm contractual agreement between a buyer and seller for a specified asset on a fixed date in the future. The contract also has a standard specification so both parties know exactly what is being traded. A **forward** is similar but is not traded on an exchange and does not have standardized conditions.
- 38 As with the earlier call option example, the actual aluminum does not have to be exchanged. Rather, the parties to the futures contract settle by paying the cash difference between the futures price and the price of aluminum on each settlement date (referred to as net settlement).

- 39 In practice, futures contracts are settled on a daily basis. For our purposes, we show only one settlement for the entire amount.
- 40 A company can also designate such a derivative as a hedging instrument. The company would apply the hedge accounting provisions outlined earlier in the chapter.
- 41 As discussed in [Chapter 16](#), the **issuer** of the convertible bonds would bifurcate the option component of the convertible bonds payable.
- 42 The accounting for the part of a derivative that is not effective in a hedge is at fair value, with gains and losses recorded in income.
- 43 IFRS gives companies the option to measure most types of financial instruments—from equity investments to debt issued by the company—at fair value. Changes in fair value are recognized in net income each reporting period. Thus, IFRS provides companies with the opportunity to hedge their financial instruments without the complexity inherent in applying hedge accounting provisions.
- [33]**
- 44 An important criterion specific to cash flow hedges is that the forecasted transaction in a cash flow hedge is “highly probable.” A company should support this probability by observable facts such as frequency of similar past transactions and its financial and operational ability to carry out the transaction.
- 45 This economic loss arises because Jones is locked into the 8 percent interest payments even if rates decline.
- 46 The underlying for an interest rate swap is some index of market interest rates. The most commonly used index is the London Interbank Offer Rate (LIBOR). In this example, we assume the LIBOR is 6.8 percent.
- 47 Theoretically, this fair value change reflects the present value of expected future differences in variable and fixed interest rates.

- 48 Jones will apply similar accounting and measurement at future interest payment dates. Thus, if interest rates increase, Jones will continue to receive 8 percent on the swap (records a loss) but will also be locked into the fixed payments to the bondholders at an 8 percent rate (records a gain).
- 49 An interest rate swap can also be used in a cash flow hedge. A common setting is the cash flow risk inherent in having variable rate debt as part of a company's debt structure. In this situation, the variable debt issuer can hedge the cash flow risk by entering into a swap contract to receive variable rate cash flows but pay a fixed rate. The cash received on the swap contract will offset the variable cash flows to be paid on the debt obligation at each interest payment date.

CHAPTER 18

Revenue Recognition

LEARNING OBJECTIVES

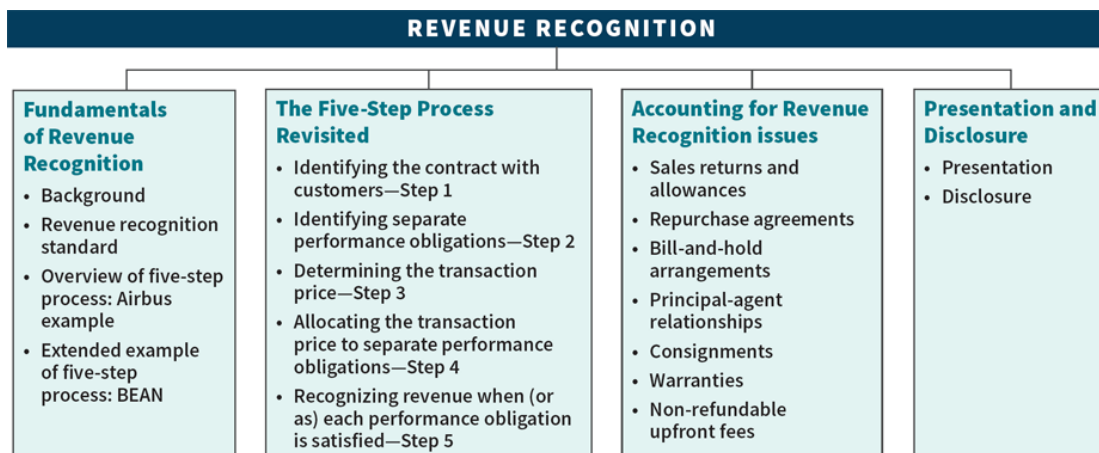

After studying this chapter, you should be able to:

1. Understand the fundamental concepts related to revenue recognition and measurement.
2. Understand and apply the five-step revenue recognition process.
3. Apply the five-step process to major revenue recognition issues.
4. Describe presentation and disclosure regarding revenue.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here. Because of the converged IASB/FASB standard on revenue recognition, there is no *Global Accounting Insights* in this chapter.

PREVIEW OF CHAPTER 18

As indicated in the following opening story, the issue of when revenue should be recognized is complex. The many methods of marketing products and services make it difficult to develop guidelines that will apply to all situations. This chapter provides you with general guidelines used in most business transactions. The content and organization of the chapter are as follows.

It's Back

Revenue recognition practices are the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees. Consider the following situations.

- **Rolls-Royce** (GBR) was questioned by investors about the revenue recognition practices for its “Totalcare” contracts, where engines are sold at little or no profit but tie the customer into long-term servicing and parts purchases. When it was revealed that market regulators were exploring these revenue practices and changes in how Rolls booked fees from its risk-sharing partnerships, the company’s share price slipped to a one-year low.
- The former co-chairman and CEO of **Qwest Communications International Inc.** (USA) and eight other former Qwest officers and employees were charged with fraud and other violations of U.S. securities laws. Three of these people fraudulently characterized non-recurring revenue from one-time sales as revenue from recurring data and Internet services. Internal correspondence likened Qwest’s dependence on these transactions to fill the gap between actual and projected revenue to an addiction.
- **Sinovel Wind Group** (CHN) was scrutinized by Chinese regulators over accounting problems related to its turbine business. The accounting irregularities led to an overstatement of revenue by 10 percent and profits by 20 percent in its first year as a public company. Sinovel attributed the error to incorrectly recognizing revenue for uncompleted projects. Following the investigation, Sinovel’s founder resigned as chairman but remained on the board of directors.

Though the cases cited involved fraud and irregularity, not all revenue recognition errors are intentional. For example, **Turquoise Hill Resources** (CAN) restated its financial results for three years due to revenue recognition irregularities. The restatement corrected errors in the accounting treatment for sales contracts, which provide for transfer of title—and revenue recognition—upon loading the coal onto customers’ trucks. It was determined that, due to the changing nature of the contracts, revenue should not be recognized until customers pay.

One of the most significant challenges related to revenue recognition is the amount of judgment that is involved in deciding how to report revenue transactions. Since 2016, the auditors of public companies in the European Economic Area have been required to report the areas they considered to be “key audit matters” (KAMs). As the term implies, these are the areas of the audit that were of the most significance, and for which significant auditor judgment is

required. Unsurprisingly, revenue and other income has been one of the most frequently noted matters. To date, this item has been the second most frequently reported, representing almost 18 percent of the KAMs. The only matters more frequently reported are related to asset impairments.

Revenue numbers are also attracting more attention from investors these days. A concern expressed recently is that revenue growth is not robust, and increases in net income (the bottom line) are caused by factors such as low financing costs and lower labor costs, which in the long run may not be sustainable. So more focus is now being given to a company's top-line revenue number, as many believe strong revenue growth suggests a more profitable company in the future.

Companies have recently implemented the substantially revised standard on revenue recognition that hopefully will improve the reporting of revenue transactions. This standard provides a set of guidelines to follow in determining when revenue should be reported and how it should be measured. The standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced. After studying this chapter, you should have a good understanding of these revenue recognition concepts.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Fundamentals of Revenue Recognition

LEARNING OBJECTIVE 1

Understand the fundamental concepts related to revenue recognition and measurement.

Background

Revenue is one of the most important measures of financial performance that a company reports. Revenue provides insights into a company's past and future performance and is a significant driver of other performance measures, such as EBITDA, net income, and earnings per share. Therefore, establishing robust guidelines for recognizing revenue is a standard-setting priority.

Most revenue transactions pose few problems for revenue recognition. That is, most companies initiate and complete transactions at the same time. However, not all transactions are that simple. For example, consider a cell phone contract between a company such as **Vodafone** (GBR) and a customer. Vodafone often provides a customer with a package that may include a handset, free minutes of talk time, data downloads, and text messaging service. In addition, some providers will bundle that with a fixed-line broadband service. At the same time, the customer may pay for these services in a variety of ways, possibly receiving a discount on the handset and then paying higher prices for connection fees and so forth. In some cases, depending on the package purchased, the company may provide free upgrades in subsequent periods. How, then, should Vodafone report the various pieces of this sale? The answer is not obvious.

Both the IASB and the FASB have indicated that the state of reporting for revenue was unsatisfactory. IFRS was criticized because it lacked guidance in a number of areas. For example, IFRS had one general standard on revenue recognition—*IAS 18*—plus some limited guidance related to certain minor topics. In contrast, U.S. GAAP had numerous standards related to revenue recognition (by some counts, well over 100), but many believed the standards were often inconsistent with one another. Thus, the accounting for revenue provided a most fitting contrast of the principles-based (IFRS) and rules-based (U.S. GAAP) approaches.¹

In 2014, the IASB issued a converged standard on revenue recognition entitled *Revenue from Contracts with Customers*. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) To address the inconsistencies and weaknesses of the previous approaches, a comprehensive revenue recognition standard now applies to a wide range of transactions and industries. The Boards believe this standard will improve IFRS and U.S. GAAP by:

- a. Providing a more robust framework for addressing revenue recognition issues.
- b. Improving comparability of revenue recognition practices across entities, industries, jurisdictions, and capital markets.
- c. Simplifying the preparation of financial statements by reducing the number of requirements to which companies must refer.
- d. Requiring enhanced disclosures to help financial statement users better understand the amount, timing, and uncertainty of revenue that is recognized. [2]

Revenue Recognition Standard

The recent revenue recognition standard, *Revenue from Contracts with Customers*, adopts an **asset-liability approach** as the basis for revenue

recognition. The asset-liability approach recognizes and measures revenue based on changes in assets and liabilities. The Boards decided that focusing on (a) the recognition and measurement of assets and liabilities and (b) changes in those assets or liabilities over the life of the contract brings more discipline to the measurement of revenue, compared to the “risks and rewards” criteria in prior standards.

Under the asset-liability approach, companies account for revenue based on the asset or liability arising from contracts with customers (see **Underlying Concepts**). Companies analyze contracts with customers because contracts initiate revenue transactions. Contracts indicate the terms of the transaction, provide the measurement of the consideration, and specify the promises that must be met by each party.

Underlying Concepts

The asset-liability approach is consistent with the conceptual framework approach to recognition.

Illustration 18.1 shows the key concepts related to the standard on revenue recognition.

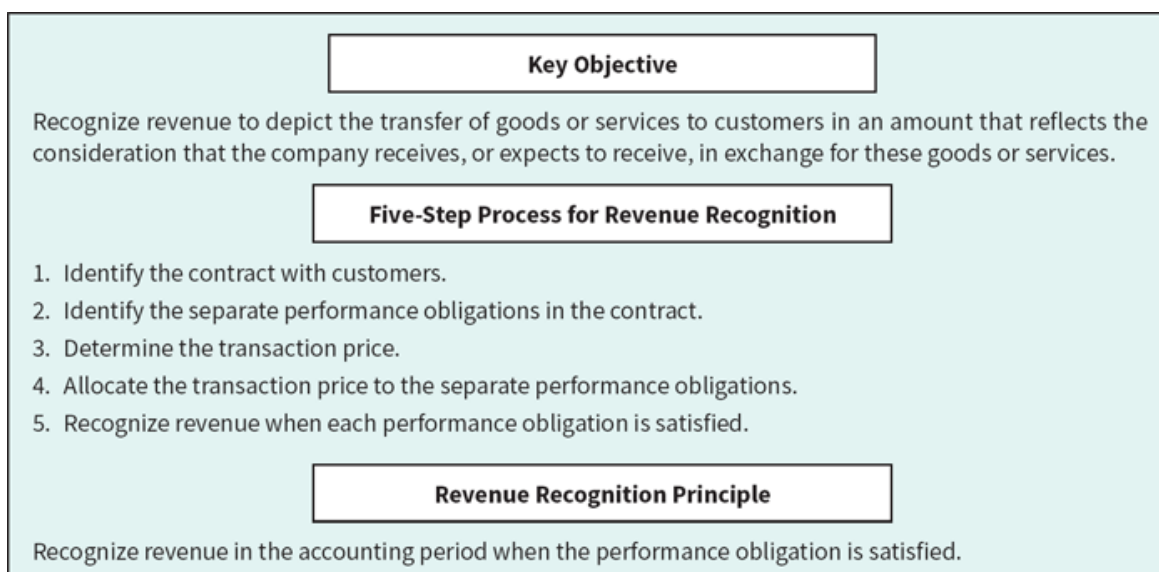

ILLUSTRATION 18.1 Key Concepts of Revenue Recognition

The standard first identifies the key objective of revenue recognition, which is followed by a five-step process that companies should use to ensure that revenue is measured and reported correctly.

The culmination of the process is the **revenue recognition principle**, which states that revenue is recognized when the performance obligation is satisfied.

We examine all steps in more detail in the following section.

Overview of the Five-Step Process—Airbus Example

Assume that **Airbus** (FRA) signs a contract to sell airplanes to **Cathay Pacific Airlines** (HKG) for €100 million. [Illustration 18.2](#) shows the five steps that Airbus follows to recognize revenue.

As indicated, Step 5 is when Airbus recognizes revenue related to the sale of the airplanes to Cathay Pacific. At this point, Airbus delivers the airplanes to Cathay Pacific and satisfies its performance obligation. In essence, a change in control from Airbus to Cathay Pacific occurs. Cathay Pacific now controls the assets because it has the ability to direct the use of and obtain substantially all the remaining benefits from the airplanes. Control also includes Cathay Pacific's ability to prevent other companies from directing the use of, or receiving the benefits from, the airplanes.

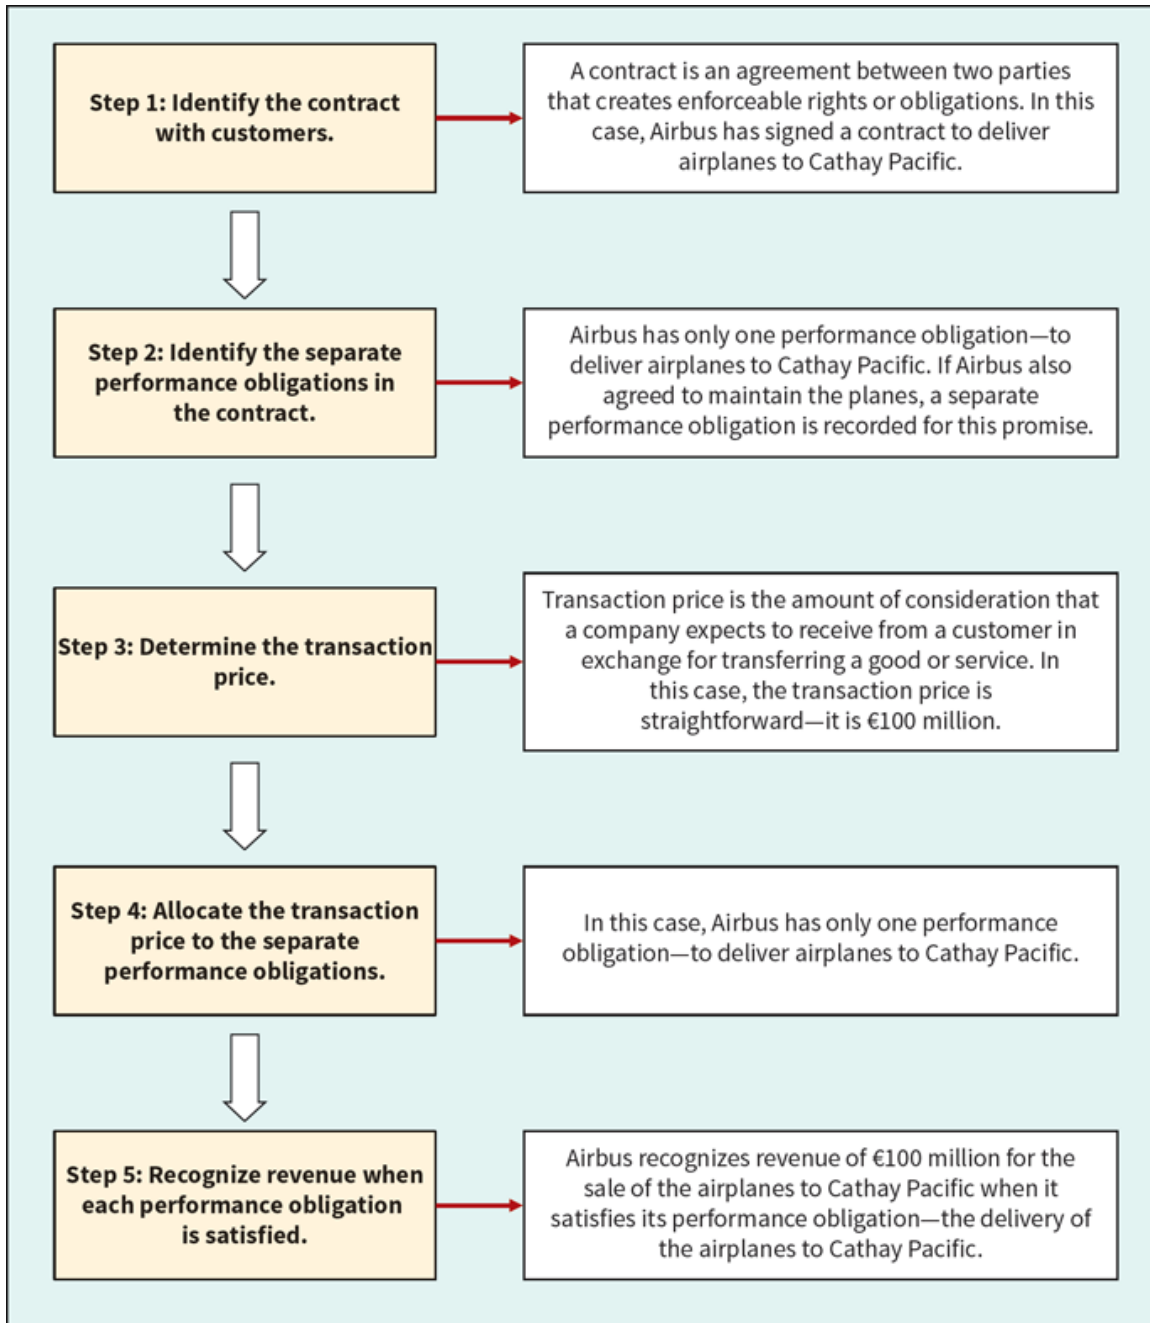

ILLUSTRATION 18.2 Five Steps of Revenue Recognition

Extended Example of the Five-Step Process: BEAN

To provide another application of the basic principles of the five-step revenue recognition model, we use a coffee and wine business called BEAN. BEAN serves gourmet coffee, espresso, lattes, teas, and smoothies. It also sells various pastries, coffee beans, other food products, wine, and beer.

Identifying the Contract with Customers—Step 1

Assume that Tyler Angler orders a large cup of black coffee costing \$3 from BEAN. Tyler gives \$3 to a BEAN barista, who pours the coffee into a large cup and gives it to Tyler.

Question: How much revenue should BEAN recognize on this transaction?

Step 1 We first must determine whether a valid contract exists between BEAN and Tyler. Here are the components of a valid contract and how it affects BEAN and Tyler.

1. **The contract has commercial substance:** Tyler gives cash for the coffee.
2. **The parties have approved the contract:** Tyler agrees to purchase the coffee and BEAN agrees to sell it.
3. **Identification of the rights of the parties is established:** Tyler has the right to the coffee and BEAN has the right to receive \$3.
4. **Payment terms are identified:** Tyler agrees to pay \$3 for the coffee.
5. **It is probable that the consideration will be collected:** BEAN receives \$3 before it delivers the coffee. [3]²

From this information, it appears that BEAN and Tyler have a valid contract with one another.

Step 2 The next step is to identify BEAN's performance obligation(s), if any. The answer is straightforward—BEAN has a performance obligation to provide a large cup of coffee to Tyler. BEAN has no other performance obligation for any other good or service.

Step 3 BEAN must determine the transaction price related to the sale of the coffee. The price of the coffee is \$3, and no discounts or other adjustments are available. Therefore, the transaction price is \$3.

Step 4 BEAN must allocate the transaction price to all performance obligations. Given that BEAN has only one performance obligation, no allocation is necessary.

Step 5 Revenue is recognized when the performance obligation is satisfied. BEAN satisfies its performance obligation when Tyler obtains control of the coffee. The following conditions are indicators that control of the coffee has passed to Tyler:

- a. BEAN has the right to payment for the coffee.

- b. BEAN has transferred legal title to the coffee.
- c. BEAN has transferred physical possession of the coffee.
- d. Tyler has significant risks (e.g., he might spill the coffee) and rewards of ownership (he gets to drink the coffee).
- e. Tyler has accepted the asset.

Solution: BEAN should recognize \$3 in revenue from this transaction when Tyler receives the coffee.

Identifying Separate Performance Obligations—Step 2

The following day, Tyler orders another large cup of coffee for \$3 and also purchases two bagels at a price of \$5. The barista provides these products and Tyler pays \$8.

Question: How much revenue should BEAN recognize on the purchase of these two items?

Step 1 A valid contract exists as it meets the five conditions necessary for a contract to be enforceable as discussed in the previous example.

Step 2 BEAN must determine whether the sale of the coffee and the sale of the two bagels involve one or two performance obligations. In the previous transaction between BEAN and Tyler, this determination was straightforward because BEAN provided a single distinct product (a large cup of coffee), and therefore only one performance obligation existed. However, an arrangement to purchase coffee and bagels may have more than one performance obligation. Multiple performance obligations exist when the following two conditions are satisfied:

1. BEAN must provide a distinct product or service. In other words, BEAN must be able to sell the coffee and the bagels separately from one another.
2. BEAN's products are distinct within the contract. In other words, if the performance obligation is not highly dependent on, or interrelated with, other promises in the contract, then each performance obligation should be accounted for separately. Conversely, if each of these products is interdependent and interrelated, these products are combined and reported as one performance obligation. **[4]**

The large cup of coffee and the two bagels appear to be distinct from one another and are not highly dependent or interrelated. That is, BEAN can sell the coffee

and the two bagels separately, and Tyler benefits separately from the coffee and the bagels.

BEAN has two performance obligations—one for the sale of the coffee and one for the sale of the bagels.

Step 3 The transaction price is \$8 (\$3 + \$5).

Step 4 BEAN has two performance obligations: to provide (1) a large cup of coffee and (2) the two bagels. Each of these obligations is distinct and not interrelated (and priced separately); no allocation of the transaction price is necessary. That is, the coffee sale is recorded at \$3 and the sale of the bagels is priced at \$5.

Step 5 BEAN has satisfied both performance obligations when the coffee and bagels are given to Tyler (control of the product has passed to the customer).

Solution: BEAN should recognize \$8 (\$3 + \$5) of revenue when Tyler receives the coffee and bagels.

Determining the Transaction Price—Step 3

BEAN decides to provide an additional incentive to its customers to shop at its store. BEAN roasts its own coffee beans and sells the beans wholesale to grocery stores, restaurants, and other commercial companies. In addition, it sells the coffee beans at its retail location. BEAN is interested in stimulating sales of its Smoke Jumper coffee beans on Tuesdays, a slow business day for the store. Normally, these beans sell for \$10 for a 12-ounce bag, but BEAN decides to cut the price by \$1 when customers buy them on Tuesdays (the discounted price is now \$9 per bag). Tyler has come to the store on a Tuesday, decides to purchase a bag of Smoke Jumper beans, and pays BEAN \$9.

Question: How much revenue should BEAN recognize on this transaction?

Step 1 As in our previous examples, with the sale of a large cup of coffee or the sale of a large cup of coffee and two bagels, a valid contract exists. The same is true for the sale of Smoke Jumper beans.

Step 2 The identification of the performance obligation is straightforward. BEAN has a performance obligation to provide a bag of Smoke Jumper coffee beans to Tyler. BEAN has no other performance obligation to provide a product or service.

Step 3 The transaction price for a bag of Smoke Jumper beans sold to Tyler is \$9, not \$10. The transaction price is the amount that a company expects to

receive from a customer in exchange for transferring goods and services. [5] The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider adjustments such as when they make payments or provide some other consideration to their customers (e.g., a coupon) as part of a revenue arrangement.³

Step 4 BEAN allocates the transaction price to the performance obligations. Given that there is only one performance obligation, no allocation is necessary.

Step 5 BEAN has satisfied the performance obligation, as control of the product has passed to Tyler.

Solution: BEAN should recognize \$9 of revenue when Tyler receives the Smoke Jumper coffee beans.

Allocating the Transaction Price to Separate Performance Obligations—Step 4

For revenue arrangements with multiple performance obligations, BEAN might be required to allocate the transaction price to more than one performance obligation in the contract. If an allocation is needed, the transaction price is allocated to the various performance obligations based on their relative standalone selling prices. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone item. [6]

BEAN wants to provide even more incentive for customers to buy its coffee beans, as well as purchase a cup of coffee. BEAN therefore offers customers a \$2 discount on the purchase of a large cup of coffee when they buy a bag of its premium Motor Moka beans (which normally sell for \$12) at the same time. Tyler decides this offer is too good to pass up and buys a bag of Motor Moka beans for \$12 and a large cup of coffee for \$1. As indicated earlier, a large cup of coffee normally retails for \$3 at BEAN.

Question: How much revenue should BEAN recognize on the purchase of these two items?

Step 1 In our previous situations, valid contracts have existed. The same is also true for the sale of a bag of Motor Moka beans and the large cup of coffee.

Step 2 The bag of Motor Moka beans and the large cup of coffee are distinct from one another and are not highly dependent on or highly interrelated with the other. BEAN can sell a bag of the Motor Moka beans and a large cup of coffee separately. Furthermore, Tyler benefits separately from both the large cup of coffee and the Motor Moka coffee beans.

Step 3 BEAN's transaction price is \$13 (\$12 for the bag of Motor Moka beans and \$1 for the large cup of coffee).

Step 4 BEAN allocates the transaction price to the two performance obligations based on their relative standalone selling prices. The standalone selling price of a bag of Motor Moka beans is \$12, and the large cup of coffee is \$3. The allocation of the transaction price of \$13 is as follows.

Product	Standalone Selling Price	Percentage		Allocated Amount	
Motor Moka beans (one bag)	\$12	80%	$(\$12 \div \$15)$	\$10.40	$(\$13 \times .80)$
Large cup of coffee	3	20	$(\$3 \div \$15)$	2.60	$(\$13 \times .20)$
Total	\$15	100%		\$13.00	

As indicated, the total transaction price (\$13) is allocated \$10.40 to the bag of Motor Moka beans and \$2.60 to the large cup of coffee.

Step 5 BEAN has satisfied both performance obligations as control of the bag of Motor Moka beans and the large cup of coffee has passed to Tyler.

Solution: BEAN should recognize revenue of \$13, comprised of revenue from the sale of the Motor Moka beans at \$10.40 and the sale of the large cup of coffee at \$2.60.

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5

As indicated in the examples presented, BEAN satisfied its performance obligation(s) when Tyler obtained control of the product(s). Change in control is the deciding factor in determining when a performance obligation is satisfied. A customer controls the product or service when the customer has the ability to direct the use of and obtain substantially all the remaining benefits from the product. Control also includes Tyler's ability to prevent other companies from directing the use of, or receiving benefits from, the coffee or coffee beans. As discussed earlier, the indicators that Tyler has obtained control are as follows:

- BEAN has the right to payment for the coffee.
- BEAN has transferred legal title to the coffee.
- BEAN has transferred physical possession of the coffee.
- Tyler has significant risks and rewards of ownership.

e. Tyler has accepted the asset.⁴

The Five-Step Process Revisited

LEARNING OBJECTIVE 2

Understand and apply the five-step revenue recognition process.

The **Airbus** and BEAN examples provide a basic understanding of the five-step process used to recognize revenue. We now discuss more technical issues related to the implementation of these five steps.

Identifying the Contract with Customers—Step 1

A **contract** is an agreement between two or more parties that creates enforceable rights or obligations. Contracts can be written, oral, or implied from customary business practice (such as the BEAN contract with Tyler). Revenue is recognized only when a valid contract exists. On entering into a contract with a customer, a company obtains rights to receive consideration from the customer and assumes obligations to transfer goods or services to the customer (performance obligations). The combination of those rights and performance obligations gives rise to an (net) asset or (net) liability.

In some cases, there are multiple contracts related to an arrangement; accounting for each contract may or may not occur, depending upon the circumstances. These situations often develop when not only a product is provided but some type of service is performed as well. To be valid, a contract must meet the five conditions illustrated in the BEAN example.⁵ If the contract is wholly unperformed and each party can unilaterally terminate the contract without compensation, then revenue should not be recognized until one or both of the parties has performed. A basic contract where these issues are discussed follows in **Illustration 18.3**.

Contracts and Recognition

Facts: On March 1, 2022, Margo Company enters into a contract to transfer a product to Soon Yoon on July 31, 2022. The contract is structured such that Soon Yoon is required to pay the full contract price of \$5,000 on August 31, 2022. The cost of the goods transferred is \$3,000. Margo delivers the product to Soon Yoon on July 31, 2022. Either party can unilaterally terminate the contract without compensation.

Question: What journal entries should Margo Company make in regards to this contract in 2022?

Solution: No entry is required on March 1, 2022, because neither party has performed on the contract. On July 31, 2022, Margo delivers the product and therefore should recognize revenue on that date as it satisfies its performance obligation by delivering the product to Soon Yoon.

The journal entry to record the sale and related cost of goods sold is as follows.

July 31, 2022		
Accounts Receivable	5,000	
Sales Revenue		5,000
Cost of Goods Sold	3,000	
Inventory		3,000

After receiving the cash payment on August 31, 2022, Margo makes the following entry.

August 31, 2022		
Cash	5,000	
Accounts Receivable		5,000

ILLUSTRATION 18.3 Basic Revenue Transaction

A key feature of the revenue arrangement is that the contract between the two parties is not recorded (does not result in a journal entry) until one or both of the parties perform under the contract. **Until performance occurs, no net asset or net liability occurs.**

Identifying Separate Performance Obligations—Step 2

A **performance obligation** is a promise to provide a product or service to a customer. This promise may be explicit, implicit, or possibly based on customary business practice. To determine whether a performance obligation exists, the company must provide a distinct product or service to the customer.

A product or service is distinct when a customer is able to benefit from a good or service on its own or together with other readily available resources. This situation typically occurs when the company can sell a good or service on a standalone basis (i.e., separately). For example, BEAN provided a good (a large cup of coffee) on a standalone basis to Tyler. Tyler benefited from this cup of coffee by consuming it.

To determine whether a company has to account for multiple performance obligations, the company's promise to sell the good or service to the customer must be separately identifiable from other promises within the contract (that is, the good or service must be distinct within the contract). **The objective is to determine whether the nature of a company's promise is to transfer individual goods and services to the customer or to transfer a combined item (or items) for which individual goods or services are inputs.**

For example, when BEAN sold Tyler a large cup of coffee and two bagels, Bean had two performance obligations. In that case, the large cup of coffee had a standalone selling price and the two bagels had a standalone selling price—even though the two promises may be part of one contract.

Conversely, assume that BEAN sold a large latte (comprised of coffee and milk) to Tyler. In this case, BEAN sold two distinct products (coffee and milk), but these two goods are not distinct within the contract. That is, the coffee and milk in the latte are highly interdependent or interrelated within the contract. As a result, the products are combined and reported as one performance obligation.

To illustrate another situation, assume that **Tata Motors** (IND) sells an automobile to Marquart Auto Dealers at a price that includes six months of telematics services such as navigation and remote diagnostics. These telematics services are regularly sold on a standalone basis by Tata Motors for a monthly fee. After the six-month period, the consumer can renew these services on a fee basis with Tata Motors. The question is whether Tata Motors sold one or two products. If we look at Tata Motors' objective, it appears that it is to sell two goods, the automobile and the telematic services. **Both are distinct (they can be sold separately) and are not interdependent.**

As another example, SoftTech Inc. licenses customer-relationship software to Lopez Company. In addition to providing the software itself, SoftTech promises to perform consulting services by extensively customizing the software to Lopez's information technology environment, for total consideration of \$600,000. In this

case, the objective of SoftTech appears to be to transfer a combined product and service for which individual goods and services are inputs. In other words, SoftTech is providing a significant service by integrating the goods and services (the license and the consulting service) into one combined item for which Lopez has contracted. In addition, the software is significantly customized by SoftTech in accordance with specifications negotiated by Lopez. As a result, **the license and the consulting services are distinct but interdependent, and therefore should be accounted for as one performance obligation.**⁶

Determining the Transaction Price—Step 3

The **transaction price** is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services. The transaction price in a contract is often easily determined because the customer agrees to pay a fixed amount to the company over a short period of time. In other contracts, companies must consider the following factors. ^[8]

- Variable consideration.
- Time value of money.
- Non-cash consideration.
- Consideration paid or payable to the customer.

Variable Consideration

In some cases, the price of a good or service is dependent on future events. These future events might include price increases, volume discounts, rebates, credits, performance bonuses, or royalties. In these cases, the company estimates the amount of variable consideration it will receive from the contract to determine the amount of revenue to recognize. Companies use either the **expected value**, which is a probability-weighted amount, or the **most likely amount** in a range of possible amounts to estimate variable consideration (see **Underlying Concepts**). Companies select among these two methods based on which approach better predicts the amount of consideration to which a company is entitled. ^[9] **Illustration 18.4** highlights the issues to be considered in selecting the appropriate method.

Underlying Concepts

The expected value approach is also illustrated in [Chapter 6](#) to determine the liability for warranties.

Expected Value: Probability-weighted amount in a range of possible consideration amounts.	Most Likely Amount: The single most likely amount in a range of possible consideration outcomes.
<ul style="list-style-type: none"> • May be appropriate if a company has a large number of contracts with similar characteristics. • Can be based on a limited number of discrete outcomes and probabilities. 	<ul style="list-style-type: none"> • May be appropriate if the contract has only two possible outcomes.

ILLUSTRATION 18.4 Estimating Variable Consideration

Illustration 18.5 provides an application of the two estimation methods.

Estimating Variable Consideration

Facts: Peabody Construction Company enters into a contract with a customer to build a warehouse for \$100,000, with a performance bonus of \$50,000 that will be paid based on the timing of completion. The amount of the performance bonus decreases by 10% per week for every week beyond the agreed-upon completion date. The contract requirements are similar to contracts that Peabody has performed previously, and management believes that such experience is predictive for this contract. Management estimates that there is a 60% probability that the contract will be completed by the agreed-upon completion date, a 30% probability that it will be completed 1 week late, and only a 10% probability that it will be completed 2 weeks late.

Question: How should Peabody account for this revenue arrangement?

Solution: The transaction price should include management's estimate of the amount of consideration to which Peabody will be entitled. Management has concluded that the **probability-weighted method** is the most predictive approach for estimating the variable consideration in this situation:

On time: 60% chance of \$150,000 [$\$100,000 + (\$50,000 \times 1.0)$]	= \$ 90,000
1 week late: 30% chance of \$145,000 [$\$100,000 + (\$50,000 \times .90)$]	= 43,500
2 weeks late: 10% chance of \$140,000 [$\$100,000 + (\$50,000 \times .80)$]	= 14,000
	<u>\$147,500</u>

Thus, the total transaction price is \$147,500 based on the probability-weighted estimate. Management should update its estimate at each reporting date.

Using a most likely outcome approach may be more predictive if a performance bonus is binary (Peabody either will or will not earn the performance bonus), such that Peabody earns either \$50,000 for completion on the agreed-upon date or nothing for completion after the agreed-upon date. In this scenario, if management believes that Peabody will meet the deadline and estimates the consideration using the **most likely outcome**, the total transaction price would be \$150,000 (the outcome with 60% probability).

ILLUSTRATION 18.5 Transaction Price—Variable Consideration

A word of caution—a company only **allocates variable consideration if it is reasonably assured that it will be entitled to that amount**. Companies therefore may only recognize variable consideration if (1) they have experience with similar contracts and are able to estimate the cumulative amount of revenue, and (2) based on experience, it is highly probable that there will not be a significant reversal of revenue previously recognized.⁷ If these criteria are not met, **revenue recognition is constrained**. [11] [Illustration 18.6](#) provides an example of how the revenue constraint works.

Revenue Constraint

Facts: On January 1, Shera Company enters into a contract with Hornung Inc. to perform asset-management services for 1 year. Shera receives a quarterly management fee based on a percentage of Hornung's assets under management at the end of each quarter. In addition, Shera receives a performance-based incentive fee of 20% of the fund's return in excess of the return of an observable index at the end of the year.

Shera accounts for the contract as a single performance obligation to perform investment-management services for 1 year because the services are interdependent and interrelated. To recognize revenue for satisfying the performance obligation over time, Shera selects an output method of measuring progress toward complete satisfaction of the performance obligation. Shera has had a number of these types of contracts with customers in the past.

Question: At what point should Shera recognize the management fee and the performance-based incentive fee related to Hornung?

Solution: Shera should record the management fee each quarter as it performs the management of the fund. However, Shera should not record the incentive fee until the end of the year. Although Shera has experience with similar contracts, that experience is not predictive of the outcome of the current contract because the amount of consideration is highly susceptible to volatility in the market. In addition, the incentive fee has a large number and high variability of possible consideration amounts. Thus, revenue related to the incentive fee is constrained (not recognized) until the incentive fee is known at the end of the year.

[ILLUSTRATION 18.6](#) Transaction Price—Revenue Constraint

Time Value of Money

Timing of payment to the company sometimes does not match the transfer of the goods or services to the customer. In most situations, companies receive consideration after the product is provided or the service performed. In essence, the company provides financing for the customer.

Companies account for the time value of money if the contract **involves a significant financing component**. When a sales transaction involves a significant financing component (i.e., interest is accrued on consideration to be paid over time), the fair value is determined either by measuring the consideration received or by discounting the payment using an imputed interest rate. The imputed interest rate is the more clearly determinable of either (1) the prevailing rate for a similar instrument of an issuer with a similar credit rating, or (2) a rate of interest that discounts the nominal amount of the instrument to the current sales price of the goods or services. The company will report the effects of the financing as interest revenue. [Illustration 18.7](#) provides an example of a financing transaction.

Extended Payment Terms

Facts: On July 1, 2022, SEK Industries sold goods to Grant Company for R\$900,000 in exchange for a 4-year, zero-interest-bearing note with a face amount of R\$1,416,163. The goods have an inventory cost on SEK's books of R\$590,000.

Question: (a) How much revenue should SEK record on July 1, 2022? (b) How much revenue should it report related to this transaction on December 31, 2022?

Solution:

- SEK should record revenue of R\$900,000 on July 1, 2022, which is the fair value of the inventory in this case.
- SEK is also financing this purchase and records interest revenue on the note over the 4-year period. In this case, the interest rate is imputed and is determined to be 12%. SEK records interest revenue of R\$54,000 ($.12 \times \frac{1}{2} \times \text{R\$}900,000$) at December 31, 2022.

The entry to record SEK's sale to Grant Company is as follows.

July 1, 2022		
Notes Receivable (R\$1,416,163 – R\$516,163)	900,000	
Sales Revenue		900,000

The related entry to record the cost of goods sold is as follows.

July 1, 2022		
Cost of Goods Sold	590,000	
Inventory		590,000

SEK makes the following entry to record (accrue) interest revenue at the end of the year.

December 31, 2022		
Notes Receivable	54,000	
Interest Revenue ($.12 \times \frac{1}{2} \times \text{R\$}900,000$)		54,000

ILLUSTRATION 18.7 Transaction Price—Extended Payment Terms

As a practical expedient, companies are not required to reflect the time value of money to determine the transaction price if the time period for payment is less than a year. [\[12\]](#)

Non-Cash Consideration

Companies sometimes receive consideration in the form of goods, services, or other non-cash consideration. When these situations occur, **companies generally recognize revenue on the basis of the fair value of what is received**. For example, assume that Raylin Company receives ordinary shares of Monroe Company in payment for consulting services. In that case, Raylin Company recognizes revenue in the amount of the fair value of the ordinary shares received. If Raylin cannot determine this amount, then it should estimate the selling price of the services performed and recognize this amount as revenue.

In addition, companies sometimes receive contributions (e.g., donations and gifts). A contribution is often some type of asset (e.g., securities, land, buildings, or use of facilities), but it could be the forgiveness of debt. In these cases, companies recognize revenue for the fair value of the consideration received. Similarly, customers sometimes contribute goods or services, such as equipment or labor, as consideration for goods provided or services performed. This consideration should be recognized as revenue based on the fair value of the consideration received.

Consideration Paid or Payable to Customers

Companies often make payments to their customers as part of a revenue arrangement. Consideration paid or payable may include discounts, volume rebates, coupons, free products, or services. In general, these elements reduce the consideration received and the revenue to be recognized. [Illustration 18.8](#) provides an example of this type of transaction.

Volume Discount

Facts: Sansung Group offers its customers a 3% volume discount if they purchase at least ¥2 million of its product during the calendar year. On March 31, 2022, Sansung has made sales of ¥700,000 to Artic Co. In the previous 2 years, Sansung sold over ¥3,000,000 to Artic in the period April 1 to December 31. Assume that Sansung prepares financial statements quarterly.

Question: How much revenue should Sansung recognize for the first 3 months of 2022?

Solution: In this case, Sansung should reduce its revenue by ¥21,000 ($¥700,000 \times .03$) because it is probable that it will provide this rebate. Revenue is therefore ¥679,000 ($¥700,000 - ¥21,000$). To not recognize this volume discount overstates Sansung's revenue for the first 3 months of 2022. In other words, the appropriate revenue is ¥679,000, not ¥700,000.

Given these facts, Sansung makes the following entry on March 31, 2022, to recognize revenue.

Accounts Receivable	679,000	
Sales Revenue		679,000

Assuming that Sansung's customer **meets the discount threshold**, Sansung makes the following entry to record collection of accounts receivable.

Cash	679,000	
Accounts Receivable		679,000

If Sansung's customer **fails to meet the discount threshold**, Sansung makes the following entry to record collection of accounts receivable.

Cash	700,000	
Accounts Receivable		679,000
Sales (Volume) Discounts Forfeited		21,000

As indicated in [Chapter 7](#), Sales Discounts Forfeited is reported in the "Other income and expense" section of the income statement.

ILLUSTRATION 18.8 Transaction Price—Volume Discount

In many cases, companies provide cash discounts to customers for a short period of time (often referred to as prompt settlement discounts). For example, assume

that terms are payment due in 60 days, but if payment is made within five days, a two percent discount is given (referred to as 2/5, net 60). These prompt settlement discounts should reduce revenues, if material. In most cases, companies record the revenue at full price (gross) and record a sales discount if payment is made within the discount period.

Allocating the Transaction Price to Separate Performance Obligations—Step 4

Companies often have to allocate the transaction price to more than one performance obligation in a contract. If an allocation is needed, the transaction price allocated to the various performance obligations is based on their relative fair values. The best measure of fair value is what the company could sell the good or service for on a standalone basis, referred to as the **standalone selling price**. If this information is not available, companies should use their best estimate of what the good or service might sell for as a standalone unit.

[Illustration 18.9](#) summarizes the approaches that companies follow (in preferred order of use).

Allocation Approach	Implementation
Adjusted market assessment approach	Evaluate the market in which a company sells goods or services and estimate the price that customers in that market are willing to pay for those goods or services. That approach also might include referring to prices from the company's competitors for similar goods or services and adjusting those prices as necessary to reflect the company's costs and margins.
Expected cost plus a margin approach	Forecast expected costs of satisfying a performance obligation and then add an appropriate margin for that good or service.
Residual approach	If the standalone selling price of a good or service is highly variable or uncertain, then a company may estimate the standalone selling price by reference to the total transaction price less the sum of the observable standalone selling prices of other goods or services promised in the contract. ⁸

[ILLUSTRATION 18.9](#) Transaction Price—Allocation

To illustrate, Travis Merchants enters into a contract with a customer to sell Products A, B, and C in exchange for £100,000. Travis regularly sells Product A separately, and therefore the standalone selling price is directly observable at £50,000. The standalone selling price of Product B is estimated using the

adjusted market assessment approach and is determined to be £30,000. Travis decides to use the residual approach to value Product C, as it has confidence that Products A and B are valued correctly. The selling price for the products is allocated as shown in [Illustration 18.10](#).

Product	Price	Rationale
A	£ 50,000	Directly observable using standalone selling price.
B	30,000	Directly observable using adjusted market assessment approach.
C	20,000	$[\text{£}100,000 - (\text{£}50,000 + \text{£}30,000)]$; using the residual approach given reliability of the two above measurements.
Total transaction price	<u>£100,000</u>	

ILLUSTRATION 18.10 Residual Value Allocation

[Illustrations 18.11](#) and [18.12](#) are additional examples of the measurement issues involved in allocating the transaction price.

Multiple Performance Obligations—Example 1

Facts: Lonnie Company enters into a contract to build, run, and maintain a highly complex piece of electronic equipment for a period of 5 years, commencing upon delivery of the equipment. There is a fixed fee for each of the build, run, and maintenance deliverables, and any progress payments made are non-refundable. It is determined that the transaction price must be allocated to the three performance obligations: building, running, and maintaining the equipment. There is verifiable evidence of the selling price for the building and maintenance but not for running the equipment.

Question: What procedure should Lonnie Company use to allocate the transaction price to the three performance obligations?

Solution: The performance obligations relate to building the equipment, running the equipment, and maintaining the equipment. As indicated, Lonnie can determine verifiable standalone selling prices for the equipment and the maintenance agreements. The company then can make a best estimate of the selling price for running the equipment, using the adjusted market assessment approach or expected cost plus a margin approach. Lonnie next applies the proportional standalone selling price method at the inception of the transaction to determine the proper allocation to each performance obligation. Once the allocation is performed, Lonnie recognizes revenue independently for each performance obligation using regular revenue recognition criteria.

If, on the other hand, Lonnie is unable to estimate the standalone selling price for running the equipment because such an estimate is highly variable or uncertain, Lonnie may use a residual approach. In this case, Lonnie uses the standalone selling prices of the equipment and maintenance agreements and subtracts these prices from the total transaction price to arrive at a residual value for running the equipment.

ILLUSTRATION 18.11 Allocation—Multiple Performance Obligations

Multiple Performance Obligations—Example 2

Facts: Handler Company is an established manufacturer of equipment used in the construction industry. Handler's products range from small to large individual pieces of automated machinery to complex systems containing numerous components. Unit selling prices range from \$600,000 to \$4,000,000 and are quoted inclusive of installation and training. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Handler has the following arrangement with Chai Company.

- Chai purchases equipment from Handler for a price of \$2,000,000 and chooses Handler to do the installation. Handler charges the same price for the equipment irrespective of whether it does the installation or not. (Some companies do the installation themselves because they either prefer their own employees to do the work or because of relationships with other customers.) The installation service included in the arrangement is estimated to have a standalone selling price of \$20,000.
- The standalone selling price of the training sessions is estimated at \$50,000. Other companies can also perform these training services.
- Chai is obligated to pay Handler the \$2,000,000 upon the delivery and installation of the equipment.
- Handler delivers and completes installation of the equipment on November 1, 2022. Training related to the equipment starts once the installation is completed and lasts for 1 year. The equipment has a useful life of 10 years.

Questions: (a) What are the performance obligations for purposes of accounting for the sale of the equipment? (b) If there is more than one performance obligation, how should the payment of \$2,000,000 be allocated to various components?

Solution:

- a. Handler's primary objective is to sell equipment. The other services (installation and training) can be performed by other parties if necessary. As a result, the equipment, installation, and training are three separate products or services. Each of these items has a standalone selling price, and the items are not interdependent.

- b. The total revenue of \$2,000,000 should be allocated to the three components based on their relative standalone selling prices. In this case, the standalone selling price of the equipment is \$2,000,000, the installation fee is \$20,000, and the training is \$50,000. The total standalone selling price therefore is \$2,070,000 (\$2,000,000 + \$20,000 + \$50,000). The allocation is as follows.

Equipment	\$1,932,367 $[(\$2,000,000 \div \$2,070,000) \times \$2,000,000]$
Installation	\$19,324 $[(\$20,000 \div \$2,070,000) \times \$2,000,000]$
Training	\$48,309 $[(\$50,000 \div \$2,070,000) \times \$2,000,000]$

Handler makes the following entry on November 1, 2022, to record both sales revenue and service revenue on the installation, as well as unearned service revenue.

November 1, 2022		
Cash	2,000,000	
Service Revenue (installation)		19,324
Unearned Service Revenue		48,309
Sales Revenue		1,932,367

Assuming the cost of the equipment is \$1,500,000, the entry to record cost of goods sold is as follows.

November 1, 2022		
Cost of Goods Sold	1,500,000	
Inventory		1,500,000

As indicated by these entries, Handler recognizes revenue from the sale of the equipment on November 1, 2022. In addition, it recognizes revenue for the installation fee because these services have been performed.

Handler recognizes the training revenues on a straight-line basis starting on November 1, 2022, or \$4,026 ($\$48,309 \div 12$) per month for 1 year (unless a more appropriate method such as the percentage-of-completion method—discussed in the next section—is warranted). The journal entry to recognize the training revenue for 2 months in 2022 is as follows.

December 31, 2022		
Unearned Service Revenue	8,052	
Service Revenue (training) ($\$4,026 \times 2$)		8,052

Therefore, Handler recognizes revenue at December 31, 2022, in the amount of \$1,959,743 (\$1,932,367 + \$19,324 + \$8,052). Handler makes the following journal entry to recognize the remaining training revenue in 2023, assuming adjusting entries are made at year-end.

December 31, 2023		
Unearned Service Revenue	40,257	
Service Revenue (training) (\$48,309 – \$8,052)		40,257

ILLUSTRATION 18.12 Multiple Performance Obligations—Product, Installation, and Service

Recognizing Revenue When (or as) Each Performance Obligation Is Satisfied—Step 5

A company satisfies its performance obligation when the customer obtains control of the good or service. As indicated in the Handler example (in [Illustration 18.12](#)) and the BEAN example, the concept of change in control is the deciding factor in determining when a performance obligation is satisfied. The customer controls the product or service when it has the ability to direct the use of and obtain substantially all the remaining benefits from the asset or service. Control also includes the customer's ability to prevent other companies from directing the use of, or receiving the benefits, from the asset or service.

[Illustration 18.13](#) summarizes the indicators that the customer has obtained control. [14]

1. The company has a right to payment for the asset.
2. The company has transferred legal title to the asset.
3. The company has transferred physical possession of the asset.
4. The customer has significant risks and rewards of ownership.
5. The customer has accepted the asset.

ILLUSTRATION 18.13 Change in Control Indicators

This is a list of indicators, not requirements or criteria. Not all of the indicators need to be met for management to conclude that control has transferred and revenue can be recognized. Management must use judgment to determine whether the factors collectively indicate that the customer has obtained control. This assessment should be focused primarily on the customer's perspective.

Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the following three criteria is met.

1. The customer receives and consumes the benefits as the seller performs.
2. The customer controls the asset as it is created or enhanced (e.g., a builder constructs a building on a customer's property).
3. The company does not have an alternative use for the asset created or enhanced (e.g., an aircraft manufacturer builds specialty jets to a customer's specifications); and either (a) the customer receives benefits as the company performs, and therefore the task would not need to be re-performed, or (b) the company has a right to payment, and this right is enforceable.

Illustration 18.14 provides an example of the point in time when revenue should be recognized.

Timing of Revenue Recognition

Facts: Gomez Software enters into a contract with Hurly Company to develop and install customer relationship management (CRM) software. Progress payments are made upon completion of each stage of the contract. If the contract is terminated, then the partially completed CRM software passes to Hurly Company. Gomez Software is prohibited from redirecting the software to another customer.

Question: At what point should Gomez Software recognize revenue related to its contract with Hurly Company?

Solution: Gomez Software does not create an asset with an alternative use because it is prohibited from redirecting the software to another customer. In addition, Gomez Software is entitled to payments for performance to date and expects to complete the project. Therefore, Gomez Software concludes that the contract meets the criteria for recognizing revenue over time.

ILLUSTRATION 18.14 Satisfying a Performance Obligation

A company recognizes revenue from a performance obligation over time by measuring the progress toward completion. The method selected for measuring progress should depict the transfer of control from the company to the customer. **For many service arrangements, revenue is recognized on a straight-line basis because the performance obligation is being satisfied ratably**

over the contract period. In other settings (e.g., long-term construction contracts), companies use various methods to determine the extent of progress toward completion. The most common are the cost-to-cost and units-of-delivery methods. The objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures.

Input measures (e.g., costs incurred and labor hours worked) are efforts devoted to a contract. Output measures (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed, etc.) track results. Neither is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

The most popular input measure used to determine the progress toward completion is the cost-to-cost basis. Under this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. The percentage-of-completion method is discussed more fully in [Appendix 18A](#), which examines the accounting for long-term contracts.

Summary

[Illustration 18.15](#) provides a summary of the five-step revenue recognition process.

Step in Process	Description	Implementation
1. Identify the contract with customers.	A contract is an agreement that creates enforceable rights or obligations.	A company applies the revenue guidance to contracts with customers.
2. Identify the separate performance obligations in the contract.	A performance obligation is a promise in a contract to provide a product or service to a customer. A performance obligation exists if the customer can benefit from the good or service on its own or together with other readily available resources.	A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct, but are all interdependent and interrelated, these goods and services are combined and reported as one performance obligation.
3. Determine the transaction price.	The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods and services.	In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) non-cash consideration, and (4) consideration paid or payable to customer.
4. Allocate the transaction price to the separate performance obligations.	If more than one performance obligation exists, allocate the transaction price based on relative fair values.	The best measure of fair value is what the good or service could be sold for on a standalone basis (standalone selling price). Estimates of standalone selling price can be based on (1) adjusted market assessment, (2) expected cost plus a margin approach, or (3) a residual approach.
5. Recognize	A company satisfies its performance obligation	Companies satisfy performance obligations either at a point in time

revenue when each performance obligation is satisfied.	when the customer obtains control of the good or service.	or over a period of time. Companies recognize revenue over a period of time if one of the following criteria is met: (1) the customer receives and consumes the benefits as the seller performs, (2) the customer controls the asset as it is created, or (3) the company does not have an alternative use for the asset.

ILLUSTRATION 18.15 Summary of the Five-Step Revenue Recognition Process

Accounting for Revenue Recognition Issues

LEARNING OBJECTIVE 3

Apply the five-step process to major revenue recognition issues.

This section addresses revenue recognition issues found in practice. Most of these issues relate to determining the transaction price (Step 3) and evaluating when control of the product or service passes to the customer (Step 5). The revenue recognition principle and the concept of control are illustrated for the following situations.

- Sales returns and allowances.
- Repurchase agreements.
- Bill-and-hold arrangements.
- Principal-agent relationships.
- Consignments.
- Warranties.
- Non-refundable upfront fees.

Sales Returns and Allowances

Sales returns and allowances are very common for many companies that sell goods to customers. For example, assume that Fafco Solar sells solar panels to customers on account. Fafco grants customers the right of return for these panels for various reasons (e.g., dissatisfaction with the product) and to receive any combination of the following.

1. A full or partial refund of any consideration paid.
2. A credit that can be applied against amounts owed, or that will be owed, to the seller.
3. Another product in exchange.

To account for these sales returns and allowances, Fafco should recognize the following:

- a. Revenue for the transferred solar panels in the amount of consideration to which Fafco is reasonably assured to be entitled (considering the products to be returned or allowance granted).
- b. An asset (and corresponding adjustment to cost of goods sold) for the goods expected to be returned from customers.

Credit Sales with Returns and Allowances

To illustrate the accounting for a return situation in more detail, assume that on January 12, 2022, Venden NV sells 100 cameras for €100 each on **account** to Amaya SA. Venden allows Amaya to return any unused cameras within 45 days of purchase. The cost of each product is €60. Venden estimates that:

1. Three products will be returned.
2. The cost of recovering the products will be immaterial.
3. The returned products are expected to be resold at a profit.

On January 24, Amaya returns two of the cameras because they are the wrong color. On January 31, Venden prepares financial statements and determines that it is likely that only one more camera will be returned. Venden makes the following entries related to these transactions.

The Sales Returns and Allowances account is a contra account to Sales Revenue. The Returned Inventory account is used to separate returned inventory from regular inventory.

To record the sale of the cameras and related cost of goods sold on January 12, 2022		
Accounts Receivable	10,000	
Sales Revenue (100 × €100)		10,000
Cost of Goods Sold	6,000	
Inventory (100 × €60)		6,000
To record the return of the two cameras on January 24, 2022		
Sales Returns and Allowances	200	
Accounts Receivable (2 × €100)		200
Returned Inventory	120	
Cost of Goods Sold (2 × €60)		120

On January 31, 2022, Venden prepares financial statements. As indicated earlier, Venden originally estimated that the most likely outcome was that three cameras would be returned. Venden believes the original estimate is correct and makes the following adjusting entries to account for expected returns at January 31, 2022.

To record expected sales returns on January 31, 2022		
Sales Returns and Allowances	100	
Refund Liability (1 × €100)		100
To record the expected return of the one camera and related reduction in Cost of Goods Sold		
Estimated Inventory Returns	60	
Cost of Goods Sold (1 × €60)		60

The Refund Liability account is a current liability. The Estimated Inventory Returns account will generally be added to the Returned Inventory account at the end of the reporting period.⁹

For the month of January, Venden's income statement reports the information presented in [Illustration 18.16](#).

Sales revenue (100 × €100)	€10,000
Less: Sales returns and allowances (€200 + €100)	<u>300</u>
Net sales	9,700
Cost of goods sold (97 × €60)	<u>5,820</u>
Gross profit	€ 3,880

ILLUSTRATION 18.16 Income Statement Reporting

As a result, at the end of the reporting period, the net sales reflects the amount that Venden is expected to be entitled to collect.

Venden reports the information in the statement of financial position as of January 31, 2022 as shown in [Illustration 18.17](#).

Accounts receivable (€10,000 – €200)	€9,800
Returned inventory (including estimated) (3 × €60)	180
Refund liability	100

ILLUSTRATION 18.17 Statement of Financial Position Reporting

Cash Sales with Returns and Allowances

Assume now that Venden sold the cameras to Amaya **for cash** instead of on account. In this situation, Venden makes the following entries related to these transactions.

To record the sale of the cameras and related cost of goods sold on January 12, 2022		
Cash	10,000	
Sales Revenue (100 × €100)		10,000
Cost of Goods Sold	6,000	
Inventory (100 × €60)		6,000

Assuming that Venden did not pay cash at the time of the return of the two cameras to Amaya on January 24, 2022, the entries to record the return of the two cameras and related cost of goods sold are as follows.

To record the return of two cameras on January 24, 2022		
Sales Returns and Allowances	200	
Refund Liability (2 × €100)		200
Returned Inventory	120	
Cost of Goods Sold (2 × €60)		120

Venden records a refund liability to Amaya to recognize that it owes Amaya for the return of two cameras. As indicated earlier, the Sales Returns and Allowances account is a contra-revenue account. The Returned Inventory account is used to separate returned inventory from regular inventory.

On January 31, 2022, Venden prepares financial statements. As indicated earlier, Venden estimates that the most likely outcome is that one more camera will be returned. Venden therefore makes the following adjusting entries.

To record expected sales returns on January 31, 2022		
Sales Returns and Allowances	100	
Refund Liability (1 × €100)		100
To record the expected return of the one camera and related Cost of Goods Sold		
Estimated Inventory Returns	60	
Cost of Goods Sold (1 × €60)		60

At January 31, 2022, Venden records a refund liability to recognize its estimated additional liability to Amaya for expected future returns. The Estimated Inventory Returns account will generally be added to the Returned Inventory account at the end of the reporting period to identify returned and estimated inventory returns.

Illustration 18.18 presents the information related to these sales that will be reported on Venden's income statement for the month of January.

Sales revenue ($100 \times \text{€}100$)	€10,000
Less: Sales returns and allowances ($3 \times \text{€}100$)	<u>300</u>
Net sales	9,700
Cost of goods sold ($97 \times \text{€}60$)	<u>5,820</u>
Gross profit	€ 3,880

ILLUSTRATION 18.18 Income Statement Reporting Sales Returns and Allowances

On Venden's statement of financial position as of January 31, 2022, the information is reported as shown in **Illustration 18.19**.

Cash (assuming no cash payments to date to Amaya)	€10,000
Returned inventory (including estimated) ($3 \times \text{€}60$)	180
Refund liability ($\text{€}200 + \text{€}100$)	300

ILLUSTRATION 18.19 Statement of Financial Position Reporting Sales Returns and Allowances

Companies record the returned asset in a separate account from inventory to provide transparency. The carrying value of the returned asset is subject to impairment testing, separate from the inventory. If a company is unable to estimate the level of returns with any reliability, it should not report any revenue until the returns become predictive.

What Do the Numbers Mean?

Boomerang Sales!

With the explosive growth and increasing competition in the e-commerce world, many new business opportunities and challenges have arisen. For example, the furniture retailer **Wayfair Inc.** (USA) has needed to sort out how to deliver home furnishings (including large furniture items) to their customers, which is a much more challenging task than small-package delivery. The company reports it has established multiple warehouses in the United States, Canada, and Europe, and primarily uses its own employees for home delivery rather than third-party delivery companies.

As sales have increased, another challenge has arisen in the e-commerce world—returns. For an industry that ships millions of packages a week, retailers are now also dealing with returns that can represent as much as one-third of their original sales. The return rate is especially high for retailers that sell clothing and footwear items, where sizing and other factors contribute to returns.

The challenge has reached a point where companies are designing special “reverse logistics” processes to deal with the returned items. For example, it has been documented that returned items require 20 percent more warehouse space, compared to items that have not yet been sold.

As discussed in the chapter, companies must consider the possibility of returns and how they can impact reported revenues. The issue of returns is both an operations and an accounting issue.

Phillips, “Holiday Returns Already Are Flooding Parcel Networks,” *Wall Street Journal* (December 20, 2018); Steve Dennis, “The Ticking Time Bomb of E-Commerce Returns,” [Forbes.com](https://www.forbes.com/sites/stevedennis/2018/02/12/the-ticking-time-bomb-of-e-commerce-returns/) (February 12, 2018); Diana Olick, “The Surge in Online-Shopping Returns Has Boosted the Warehouse Sector,” [CNBC.com](https://www.cnbc.com/2019/01/04/warehouse-sector-boasted-by-online-shopping-returns.html) (January 4, 2019).

Repurchase Agreements

In some cases, companies enter into **repurchase agreements**, which allow them to transfer an asset to a customer but have an unconditional (forward) obligation or unconditional right (call option) to repurchase the asset at a later date. In these situations, the question is whether the company sold the asset.¹⁰ Generally, companies report these transactions as a financing (borrowing). That is, if the selling company has a forward obligation or call option to repurchase the asset for an amount **greater than or equal to its selling price**, then the

transaction is a financing transaction by the company.¹¹ [Illustration 18.20](#) examines the issues related to a repurchase agreement.

Repurchase Agreement

Facts: Morgan Ltd., an equipment dealer, sells equipment on January 1, 2022, to Lane Construction for £100,000. It agrees to repurchase this equipment (an unconditional obligation) from Lane Construction on December 31, 2023, for a price of £121,000.

Question: Should Morgan Ltd. record a sale for this transaction?

Solution: For a sale and repurchase agreement, the terms of the agreement need to be analyzed to determine whether Morgan Ltd. has transferred control to the customer, Lane Construction. As indicated earlier, control of an asset refers to the ability to direct the use of and obtain substantially all the benefits from the asset. Control also includes the ability to prevent other companies from directing the use of and receiving the benefit from a good or service. In this case, Morgan continues to have control of the asset because it has agreed to repurchase the asset at an amount greater than the selling price. Therefore, this agreement is a financing transaction and not a sale. Thus, the asset is not removed from the books of Morgan.

Assuming that an interest rate of 10% is imputed from the agreement, Morgan makes the following entries to record this agreement. Morgan records the financing on January 1, 2022, as follows.

January 1, 2022		
Cash	100,000	
Liability to Lane Construction		100,000

Morgan records interest on December 31, 2022, as follows.

December 31, 2022		
Interest Expense	10,000	
Liability to Lane Construction ($£100,000 \times .10$)		10,000

Morgan records interest and retirement of its liability to Lane as follows.

December 31, 2023		
Interest Expense	11,000	
Liability to Lane Construction ($£110,000 \times .10$)		11,000
Liability to Lane Construction	121,000	
Cash ($£100,000 + £10,000 + £11,000$)		121,000

ILLUSTRATION 18.20 Recognition—Repurchase Agreement

Rather than Morgan Ltd. having a forward or call option to repurchase the asset, assume that Lane Construction **has the option** to require Morgan Ltd. to repurchase the asset at December 31, 2023. This option is a put option; that is, Lane has the option to put the asset back to Morgan. In this situation, Lane has control of the asset, as it can keep the equipment or sell it to Morgan or to some other third party. The value of a put option increases when the value of the underlying asset (in this case, the equipment) decreases. In determining how to account for this transaction, Morgan has to determine whether Lane will have an economic incentive to exercise this put option at the end of 2023.

Specifically, Lane has a significant economic incentive to exercise its put option if the value of the equipment declines. In this case, the transaction is generally reported as a financing transaction as shown in [Illustration 18.20](#). That is, Lane will return (put) the equipment back to Morgan if the repurchase price exceeds the fair value of the equipment. For example, if the repurchase price of the equipment is £150,000 but its fair value is £125,000, Lane is better off returning the equipment to Morgan.

Conversely, if Lane does not have a significant economic incentive to exercise its put option, then the transaction should be reported as a sale of a product with a right of return.

Bill-and-Hold Arrangements

A **bill-and-hold arrangement** is a contract under which an entity bills a customer for a product but the entity retains physical possession of the product until it is transferred to the customer at a point in time in the future. Bill-and-hold sales result when the buyer is not yet ready to take delivery but does take title and accepts billing. For example, a customer may request a company to enter into such an arrangement because of (1) lack of available space for the product, (2) delays in its production schedule, or (3) more than sufficient inventory in its distribution channel. [\[16\] Illustration 18.21](#) provides an example of a bill-and-hold arrangement.

Bill and Hold

Facts: Butler A.S. sells ₪450,000 (cost ₪280,000) of fireplaces on March 1, 2022, to a local coffee shop, Baristo, which is planning to expand its locations around the city. Under the agreement, Baristo asks Butler to retain these fireplaces in its warehouses until the new coffee shops that will house the fireplaces are ready. Title passes to Baristo at the time the agreement is signed.

Question: When should Butler recognize the revenue from this bill-and-hold arrangement?

Solution: When to recognize revenue in a bill-and-hold arrangement depends on the circumstances. Butler determines when it has satisfied its performance obligation to transfer a product by evaluating when Baristo obtains control of that product. For Baristo to have obtained control of a product in a bill-and-hold arrangement, it must meet all of the conditions for change in control plus all of the following criteria:

- a. The reason for the bill-and-hold arrangement must be substantive.
- b. The product must be identified separately as belonging to Baristo.
- c. The product currently must be ready for physical transfer to Baristo.
- d. Butler cannot have the ability to use the product or to direct it to another customer.

In this case, assuming that the above criteria were met in the contract, revenue recognition should be permitted at the time the contract is signed. Butler has transferred control to Baristo; that is, Butler has a right to payment for the fireplaces and legal title has transferred.

Butler makes the following entry to record the bill-and-hold sale and related cost of goods sold.

March 1, 2022		
Accounts Receivable	450,000	
Sales Revenue		450,000
Cost of Goods Sold	280,000	
Inventory		280,000

ILLUSTRATION 18.21 Recognition—Bill and Hold

Principal-Agent Relationships

In a **principal-agent relationship**, the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer. Examples of principal-agent relationships are as follows.

- Preferred Travel Company (agent) facilitates the booking of cruise excursions by finding customers for Regency Cruise Company (principal).
- **Priceline** (USA) (agent) facilitates the sale of various services such as car rentals for **Hertz** (USA) (principal).

In these types of situations, amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives (usually a percentage of total revenue). **Illustration 18.22** provides an example of the issues related to principal-agent relationships.

Principal-Agent Relationship

Facts: Fly-Away Travel sells airplane tickets for **British Airways (BA)** (GBR) to various customers.

Question: What are the performance obligations in this situation and how should revenue be recognized for both the principal and agent?

Solution: The principal in this case is BA and the agent is Fly-Away Travel. Because BA has the performance obligation to provide air transportation to the customer, it is the principal. Fly-Away Travel facilitates the sale of the airline ticket to the customer in exchange for a fee or commission. Its performance obligation is to arrange for BA to provide air transportation to the customer.

Although Fly-Away collects the full airfare from the customer, it then remits this amount to BA less the commission. Fly-Away therefore should not record the full amount of the fare as revenue on its books—to do so overstates revenue. Its revenue is the commission, not the full price. Control of performing the air transportation is with BA, not Fly-Away Travel.

ILLUSTRATION 18.22 Recognition—Principal-Agent Relationship

Some might argue that there is no harm in Fly-Away recording revenue for the full price of the ticket and then charging the cost of the ticket against the revenue (often referred to as the **gross method** of recognizing revenue). Others note that this approach overstates the agent's revenue and is misleading. The revenue received is the commission for providing the travel services, not the full fare price (often referred to as the **net approach**). The profession believes the net approach is the correct method for recognizing revenue in a principal-agent relationship. As a result, the IASB has developed specific criteria to determine when a principal-agent relationship exists.¹² An important feature in deciding whether Fly-Away is acting as an agent is whether the amount it earns is predetermined, being either a fixed fee per transaction or a stated percentage of the amount billed to the customer.

Consignments

A common principal-agent relationship involves consignments. In these cases, manufacturers (or wholesalers) deliver goods but retain title to the goods until they are sold. This specialized method of marketing certain types of products makes use of an agreement known as a **consignment**. Under this arrangement, the **consignor** (manufacturer or wholesaler) ships merchandise to the **consignee** (dealer), who is to act as an agent for the consignor in selling the merchandise. Both consignor and consignee are interested in selling—the former to make a profit or develop a market, the latter to make a commission on the sale.

The consignee accepts the merchandise and agrees to exercise due diligence in caring for and selling it. The consignee remits to the consignor cash received from customers, after deducting a sales commission and any chargeable expenses. In consignment sales, the consignor uses a modified version of the point-of-sale basis of revenue recognition. That is, the consignor recognizes revenue only after receiving notification of the sale.

The consignor carries the merchandise as inventory throughout the consignment, separately classified as Inventory (consignments). **The consignee does not record the merchandise as an asset on its books.** Upon sale of the merchandise, the consignee has **a liability for the net amount due the consignor.** The consignor periodically receives from the consignee a report called **account sales** that shows the merchandise received, merchandise sold, expenses chargeable to the consignment, and cash remitted. Revenue is then recognized by the consignor. Analysis of a consignment arrangement is provided in **Illustration 18.23**.

Sales on Consignment

Facts: Nelba Manufacturing ships merchandise costing €36,000 on consignment to Best Value Stores. Nelba pays €3,750 of freight costs, and Best Value pays €2,250 for local advertising costs that are reimbursable from Nelba. By the end of the period, Best Value has sold two-thirds of the consigned merchandise for €40,000 cash. Best Value notifies Nelba of the sales, retains a 10% commission, and remits the cash due Nelba.

Question: What are the journal entries that the consignor (Nelba) and the consignee (Best Value) make to record this transaction?

Solution:

Nelba Mfg. (Consignor)		Best Value Stores (Consignee)	
Shipment of consigned merchandise			
Inventory (consignments)	36,000	No entry (record memo of merchandise received).	
Finished Goods Inventory	36,000		
Payment of freight costs by consignor			
Inventory (consignments)	3,750	No entry.	
Cash	3,750		
Payment of advertising by consignee			
No entry until notified.		Receivable from Consignor	2,250
		Cash	2,250
Sales of consigned merchandise			
No entry until notified.		Cash	40,000
		Payable to Consignor	40,000
Notification of sales and expenses and remittance of amount due			
Cash	33,750	Payable to Consignor	40,000
Advertising Expense	2,250	Receivable from	
Commission Expense	4,000*	Consignor	2,250
Revenue from		Commission Revenue	4,000
Consignment Sales	40,000	Cash	33,750
*€40,000 × .10			
Adjustment of inventory on consignment for cost of sales			
Cost of Goods Sold	26,500	No entry.	
Inventory (consignments)	26,500		
[$\frac{2}{3} \times (\text{€}36,000 + \text{€}3,750) = \text{€}26,500$]			

ILLUSTRATION 18.23 Recognition—Sales on Consignment

Under the consignment arrangement, the consignor accepts the risk that the merchandise might not sell and relieves the consignee of the need to commit part of its working capital to inventory. Consignors use a variety of systems and account titles to record consignments, but they all share the common goal of postponing the recognition of revenue until it is known that a sale to a third party has occurred. **Consignees only recognize commission revenue.**

Warranties

As discussed in [Chapter 13](#), companies often provide one of two types of **warranties** to customers:

1. Warranties that the product **meets agreed-upon specifications in the contract at the time the product is sold**. This type of warranty is included in the sales price of a company's product and is often referred to as an **assurance-type warranty**.
2. Warranties that provide an **additional service beyond the assurance-type warranty**. This warranty is not included in the sales price of the product and is referred to as a **service-type warranty**. As a consequence, it is recorded as a separate performance obligation.

Companies do not record a separate performance obligation for assurance-type warranties. This type of warranty is nothing more than a quality guarantee that the good or service is free from defects at the point of sale. In this case, the sale of the product and the related assurance warranty are one performance obligation, as they are interdependent of and interrelated with each other. The objective for companies that issue an assurance warranty is to provide a combined item (product and a warranty).

These types of obligations should be expensed in the period the goods are provided or services performed. In addition, the company should record a warranty liability. The estimated amount of the liability includes all the costs that the company will incur after sale due to the correction of defects or deficiencies required under the warranty provisions.

In addition, companies sometimes provide customers with an option to purchase a warranty separately. In most cases, these extended warranties provide the customer a service beyond fixing defects that existed at the time of sale. For example, when you purchase a TV, you are entitled to the company's warranty. You will also undoubtedly be offered an extended warranty on the product at an additional cost. These service-type warranties represent a **separate service and**

are an additional performance obligation. The service-type warranty is sold separately and therefore has a standalone selling price. In this case, the objective of the company is to sell an additional service to customers. As a result, companies should allocate a portion of the transaction price to this performance obligation, if provided. The company recognizes revenue in the period that the service-type warranty is in effect. [Illustration 18.24](#) presents an example of both an assurance-type and a service-type warranty.

Warranties

Facts: Maverick Company sold 1,000 Rollomatics on October 1, 2022, at a total price of \$6,000,000, with a warranty guarantee that the product was free of defects. The cost of the Rollomatics is \$4,000,000. The term of this assurance warranty is 2 years, with an estimated cost of \$80,000. In addition, Maverick sold extended warranties related to 400 Rollomatics for 3 years beyond the 2-year period for \$18,000. On November 22, 2022, Maverick incurred labor costs of \$3,000 and part costs of \$25,000 related to the assurance warranties. Maverick prepares financial statements on December 31, 2022. It estimates that its future assurance warranty costs will total \$44,000 at December 31, 2022.

Question: What are the journal entries that Maverick Company should make in 2022 related to the sale of the Rollomatics and the assurance and extended warranties?

Solution: Maverick makes the following entries in 2022 related to Rollomatics sold with warranties.

October 1, 2022		
To record the sale of the Rollomatics and the related extended warranties:		
Cash (\$6,000,000 + \$18,000)	6,018,000	
Sales Revenue		6,000,000
Unearned Warranty Revenue		18,000
To record the cost of goods sold and reduce the inventory of Rollomatics:		
Cost of Goods Sold	4,000,000	
Inventory		4,000,000
November 22, 2022		
To record the warranty costs incurred:		
Warranty Expense	28,000	
Salaries and Wages Payable		3,000
Inventory (parts)		25,000
December 31, 2022		
To record the adjusting entry related to its assurance warranty at the end of the year:		
Warranty Expense	44,000	
Warranty Liability		44,000

ILLUSTRATION 18.24 Recognition—Performance Obligations and Warranties

Maverick Company makes an adjusting entry to record a liability for the expected warranty costs related to the sale of the Rollomatics. As the [Chapter 13](#) examples illustrated, when actual warranty costs are incurred in 2023, the Warranty Liability account is reduced.¹³

In most cases, Unearned Warranty Revenue (related to the service-type warranty) is recognized on a straight-line basis as Warranty Revenue over the three-year period to which it applies. Revenue related to the extended warranty is not recognized until the warranty becomes effective on October 1, 2024. If financial statements are prepared on December 31, 2024, Maverick makes the following entry to recognize revenue:

Unearned Warranty Revenue	1,500	
Warranty Revenue $[(\$18,000 \div 36) \times 3]$		1,500

As indicated, the company also recognizes revenue related to the service-type warranty over the three-year period that extends beyond the assurance warranty period (two years). In most cases, the unearned warranty revenue is recognized on a straight-line basis. The costs associated with the service-type warranty are expensed as incurred.

Non-refundable Upfront Fees

Companies sometimes receive payments (**upfront fees**) from customers before they deliver a product or perform a service. Upfront payments generally relate to the initiation, activation, or setup of a good or service to be provided or performed in the future. In most cases, these upfront payments are non-refundable. Examples include fees paid for membership in a health club or buying club, and activation fees for phone, Internet, or cable.

Companies must determine whether these non-refundable advance payments are for products or services in the current period. In most situations, these payments are for future delivery of products and services and should therefore not be recorded as revenue at the time of payment. In some cases, the upfront fee is viewed as being similar to a renewal option for future products and services at a reduced price. An example would be a health club where once the initiation fee is paid, no additional fee is necessary upon renewal. [Illustration 18.25](#) provides an example of an upfront fee payment.

Upfront fee Considerations

Facts: Erica Felise signs a 1-year contract with Bigelow Health Club. The terms of the contract are that Erica is required to pay a non-refundable initiation fee of £200 and a membership fee of £50 per month. Bigelow determines that its customers, on average, renew their annual membership two times before terminating their membership.

Question: What is the amount of revenue Bigelow Health Club should recognize in the first year?

Solution: In this case, the membership fee arrangement may be viewed as a single performance obligation (similar services are provided in all periods). That is, Bigelow is providing a discounted price in the second and third years for the same services, and this should be reflected in the revenue recognized in those periods. Bigelow determines the total transaction price to be £2,000—the upfront fee of £200 and the three years of monthly fees of £1,800 ($£50 \times 36$)—and allocates it over the 3 years. In this case, Bigelow would report revenue of £55.56 ($£2,000 \div 36$) each month for 3 years. *Unless otherwise instructed, use this approach for homework problems.*¹⁴

ILLUSTRATION 18.25 Transaction Price—Upfront Fee Considerations

Summary

Illustration 18.26 provides a summary of the additional issues related to transfer of control and revenue recognition.

Issue	Description	Implementation
Sales returns and allowances	Return of product by customer (e.g., due to dissatisfaction with the product) in exchange for refunds, a credit against amounts owed or that will be owed, and/or another product in exchange.	Seller may recognize (a) a liability (and an adjustment to revenue for products expected to be returned), and (b) an asset (and corresponding adjustment to cost of goods sold) for the goods returned from customers.
Repurchase agreements	Seller has an obligation or right to repurchase the asset at a later date.	Generally, if the company has an obligation or right to repurchase the asset for an amount greater than its selling price, then the transaction is a financing transaction.
Bill-and-hold arrangements	Results when the buyer is not yet ready to take delivery but does take title and accepts billing.	Revenue is recognized depending on when the customer obtains control of that product.
Principal-agent relationships	Arrangement in which the principal's performance obligation is to provide goods or perform services for a customer. The agent's performance obligation is to arrange for the principal to provide these goods or services to a customer.	Amounts collected on behalf of the principal are not revenue of the agent. Instead, revenue for the agent is the amount of the commission it receives. The principal recognizes revenue when the goods or services are sold to a third-party customer.
Consignments	A principal-agent relationship in which the consignor (manufacturer or wholesaler) ships merchandise to the consignee (dealer), who is to act as an agent for the consignor in selling the merchandise.	The consignor recognizes revenue only after receiving notification of the sale and the cash remittance from the consignee (consignor carries the merchandise as inventory throughout the consignment). The consignee records commission revenue (usually some percentage of the selling price).
Warranties	Warranties can be assurance-type (product meets agreed-upon	A separate performance obligation is not recorded for assurance-type warranties (considered part of the

	specifications) or service-type (provides additional service beyond the assurance-type warranty).	product). Service-type warranties are recorded as a separate performance obligation. Companies should allocate a portion of the transaction price to service-type warranties, when present.
Non-refundable upfront fees	Upfront payments generally relate to initiation, activation, or setup activities for a good or service to be delivered in the future.	The upfront payment should be allocated over the periods benefited.

ILLUSTRATION 18.26 Summary—Other Revenue Recognition Issues

Presentation and Disclosure

LEARNING OBJECTIVE 4

Describe presentation and disclosure regarding revenue.

Presentation

Companies use an asset-liability approach to recognize revenue. For example, when **Cereal Partners** (CHE) delivers cereal to **Carrefour** (FRA) (satisfying its performance obligation), it has a right to consideration from Carrefour and therefore has a contract asset. If, on the other hand, Carrefour performs first, by prepaying for this cereal, Cereal Partners has a contract liability. Companies must present these contract assets and contract liabilities on their statements of financial position.

Contract Assets and Liabilities

Contract assets are of two types: (1) unconditional rights to receive consideration because the company has satisfied its performance obligation with a customer, and (2) conditional rights to receive consideration because the company has satisfied one performance obligation but must satisfy another performance obligation in the contract before it can bill the customer. Companies should report unconditional rights to receive consideration as a receivable on the statement of financial position. Conditional rights on the statement of financial position should be reported separately as contract assets. **Illustration 18.27** provides an example of the accounting and reporting for a contract asset.

Contract Asset

Facts: On January 1, 2022, Finn ASA enters into a contract to transfer Product A and Product B to Obermine Overstock for €100,000. The contract specifies that payment for Product A will not occur until Product B is also delivered. In other words, payment will not occur until both Product A and Product B are transferred to Obermine. Finn determines that standalone selling prices are €30,000 for Product A and €70,000 for Product B. Finn delivers Product A to Obermine on February 1, 2022. On March 1, 2022, Finn delivers Product B to Obermine.

Question: What journal entries should Finn make regarding to this contract in 2022?

Solution: No entry is required on January 1, 2022, because neither party has performed on the contract. On February 1, 2022, Finn records the following entry.

February 1, 2022		
Contract Asset	30,000	
Sales Revenue		30,000

On February 1, Finn has satisfied its performance obligation and therefore reports revenue of €30,000. However, it does not record an accounts receivable at this point because it does not have an unconditional right to receive the €100,000 unless it also transfers Product B to Obermine. In other words, a contract asset occurs generally when a company must satisfy another performance obligation before it is entitled to bill the customer. When Finn transfers Product B on March 1, 2022, it makes the following entry.

March 1, 2022		
Accounts Receivable	100,000	
Contract Asset		30,000
Sales Revenue		70,000

ILLUSTRATION 18.27 Contract Asset Recognition and Presentation

As indicated above, a **contract liability** is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer. A contract liability is generally referred to as

Unearned Sales Revenue, Unearned Service Revenue, or another appropriate account title. [**Illustration 18.28**](#) provides an example of the recognition and presentation of a contract liability.

Contract Liability

Facts: On March 1, 2022, Henly Company enters into a contract to transfer a product to Propel Inc. on July 31, 2022. It is agreed that Propel will pay the full price of \$10,000 in advance on April 15, 2022. Henly delivers the product on July 31, 2022. The cost of the product is \$7,500.

Question: What journal entries are required in 2022?

Solution: No entry is required on March 1, 2022, because neither party has performed on the contract. On receiving the cash on April 15, 2022, Henly records the following entry.

April 15, 2022		
Cash	10,000	
Unearned Sales Revenue		10,000

On satisfying the performance obligation on July 31, 2022, Henly records the following entry to record the sale.

July 31, 2022		
Unearned Sales Revenue	10,000	
Sales Revenue		10,000

In addition, Henly records cost of goods sold as follows.

Cost of Goods Sold	7,500	
Inventory		7,500

ILLUSTRATION 18.28 Contract Liability Recognition and Presentation

Companies are not required to use the terms “contract assets” and “contract liabilities” on the statement of financial position. For example, contract liabilities are performance obligations and therefore more descriptive titles (as noted earlier) such as unearned service revenue, unearned sales revenue, repurchase liability, and return liability may be used where appropriate. For contract assets,

it is important that financial statement users can differentiate between unconditional and conditional rights through appropriate account presentation.

Contract Modifications

Companies sometimes change the terms of a contract while it is ongoing; this is referred to as a **contract modification**. When this occurs, companies determine whether a new contract (and performance obligations) results or whether the existing contract is still in effect, but with modifications.

Separate Performance Obligation

A company accounts for a contract modification as a new contract if **both** of the following conditions are satisfied:

- The promised **goods or services are distinct** (i.e., the company sells them separately and they are not interdependent with other goods and services), and
- The company has the right to receive an amount of **consideration that reflects the standalone selling price** of the promised goods or services.

[\[18\]](#)

For example, Crandall Co. has a contract to sell 100 products to a customer for \$10,000 (\$100 per product) at various points in time over a six-month period. After 60 products have been delivered, Crandall modifies the contract by promising to deliver 20 more products for an additional \$1,900, or \$95 per product (which is the standalone selling price of the products at the time of the contract modification). Crandall regularly sells the products separately. In this situation, the contract modification for the additional 20 products is, in effect, a **new and separate contract** because it meets both of the conditions above. That is, it does not affect the accounting for the original contract.

Given a new contract, Crandall will recognize an additional \$4,000 $[(100 \text{ units} - 60 \text{ units}) \times \$100]$ related to the original contract terms and \$1,900 $(20 \text{ units} \times \$95)$ related to the new products. Total revenue after the modification is therefore \$5,900 $(\$4,000 + \$1,900)$.

Prospective Modification

What if Crandall Co. determines that the additional products are not a separate performance obligation? This might arise if the new products are not priced at the proper standalone selling price or if they are not distinct. In this situation, companies generally account for the modification using a prospective approach.

Under the prospective approach, Crandall should account for the effect of the change in the period of change as well as future periods if the change affects both. Crandall should not change previously reported results. For Crandall, the amount recognized as revenue for each of the remaining products would be a blended price of \$98.33, computed as shown in [Illustration 18.29](#).

Consideration for products not yet delivered under original contract (\$100 × 40)	\$4,000
Consideration for products to be delivered under the contract modification (\$95 × 20)	1,900
Total remaining revenue	<u>\$5,900</u>
Revenue per remaining unit (\$5,900 ÷ 60) = \$98.33	

ILLUSTRATION 18.29 Revenue Under Prospective Modification

Under the prospective approach, this computation differs from that in the separate performance obligation approach because revenue on the remaining units is recognized at the blended price. Total revenue after the modification is therefore \$5,900 (60 units × \$98.33). [Illustration 18.30](#) shows the revenue reported under the two contract modification approaches for Crandall Co.

	Revenue Recognized Prior to Modification	Revenue Recognized After Modification	Total Revenue Recognized
Separate performance obligation	\$6,000	\$5,900	\$11,900
No separate performance obligation—prospectively	\$6,000	\$5,900	\$11,900

ILLUSTRATION 18.30 Comparison of Contract Modification Approaches

As indicated, whether a modification is treated as a separate performance obligation or prospectively, the same amount of revenue is recognized before and after the modification. However, under the prospective approach, a blended price (\$98.33) is used for sales in the periods after the modification.¹⁵

Costs to Fulfill a Contract

Companies may also report assets associated with fulfillment costs related to a revenue arrangement. Companies divide fulfillment costs (contract acquisition costs) into two categories:

1. Those that give rise to an asset.
2. Those that are expensed as incurred.

Companies recognize an asset for the incremental costs if these costs are incurred to obtain a contract with a customer. In other words, incremental costs are those that a company would not incur if the contract had not been obtained (e.g., selling commissions). Additional examples that give rise to an asset are as follows.

- a. Direct labor, direct materials, and allocation of costs that relate directly to the contract (e.g., costs of contract management and supervision, insurance, and depreciation of tools and equipment).
- b. Costs that generate or enhance resources of the company that will be used in satisfying performance obligations in the future. Such costs include intangible design or engineering costs that will continue to give rise to benefits in the future.

Other costs that are expensed as incurred include general and administrative costs (unless those costs are explicitly chargeable to the customer under the contract) as well as costs of wasted materials, labor, or other resources to fulfill the contract that were not reflected in the price of the contract. That is, **companies only capitalize costs that are direct, incremental, and recoverable** (assuming that the contract period is more than one year).

Illustration 18.31 provides an example of costs capitalized to fulfill a contract.

As a practical expedient, a company recognizes the incremental costs of obtaining a contract as an expense when incurred if the amortization period of the asset that the company otherwise would have recognized is one year or less.

Contract Costs

Facts: Rock Integrators enters into a contract to operate Dello Company's information technology data center for 5 years. Rock Integrators incurs selling commission costs of \$10,000 to obtain the contract. Before performing the services, Rock Integrators designs and builds a technology platform that interfaces with Dello's systems. That platform is not transferred to Dello. Dello promises to pay a fixed fee of \$20,000 per month. Rock Integrators incurs the following additional costs: design services for the platform \$40,000, hardware for the platform \$120,000, software \$90,000, and testing of data center \$100,000.

Question: What are Rock Integrators' costs for fulfilling the contract to Dello Company?

Solution: The \$10,000 selling commission costs related to obtaining the contract are recognized as an asset. The design services cost of \$40,000 and the hardware for the platform of \$120,000 are also capitalized. As the technology platform is independent of the contract, the pattern of amortization of this platform may not be related to the terms of the contract. The testing costs are expensed as incurred; in general, these costs are not recoverable.

ILLUSTRATION 18.31 Recognition—Contract Costs

Collectibility

As indicated earlier, if it is probable that the transaction price will not be collected, this is an indication that the parties are not committed to their obligations. As a result, one of the criteria for the existence of a contract is not met, and therefore revenue is not recognized.

Any time a company sells a product or performs a service on account, a collectibility issue occurs. **Collectibility** refers to a customer's credit risk, that is, the risk that a customer will be unable to pay the amount of consideration in accordance with the contract. Under the revenue guidance—as long as a contract exists (it is probable that the customer will pay)—the amount recognized as revenue is not adjusted for customer credit risk.

Thus, companies report the revenue gross (without consideration of credit risk) and then present an allowance for any impairment due to bad debts (recognized initially and subsequently in accordance with the respective bad debt guidance).

An impairment related to bad debts is reported as an operating expense in the income statement. As a result, whether a company will get paid for satisfying a performance obligation is not a consideration in determining revenue recognition. [\[20\]](#)

Disclosure

The disclosure requirements for revenue recognition are designed to help financial statement users understand the nature, amount, timing, and uncertainty of revenue and cash flows arising from contracts with customers. To achieve that objective, companies disclose qualitative and quantitative information about all of the following:

- **Contracts with customers.** These disclosures include the disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations.
- **Significant judgments.** These disclosures include judgments and changes in these judgments that affect the determination of the transaction price, the allocation of the transaction price, and the determination of the timing of revenue.
- **Assets recognized from costs incurred to fulfill a contract.** These disclosures include the closing balances of assets recognized to obtain or fulfill a contract, the amount of amortization recognized, and the method used for amortization.

To implement these requirements and meet the disclosure objectives, companies provide a range of disclosures, as summarized in [Illustration 18.32](#). [\[21\]](#)¹⁶

Disclosure Type	Requirements
Disaggregation of revenue	Disclose disaggregated revenue information in categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors. Reconcile disaggregated revenue to revenue for reportable segments.
Reconciliation of contract balances	Disclose opening and closing balances of contract assets (e.g., unbilled receivables) and liabilities (e.g., deferred revenue) and provide a qualitative description of significant changes in these amounts. Disclose the amount of revenue recognized in the current period relating to performance obligations satisfied in a prior period (e.g., from contracts with variable consideration). Disclose the opening and closing balances of trade receivables if not presented elsewhere.
Remaining performance obligations	Disclose the amount of the transaction price allocated to remaining performance obligations not subject to significant revenue reversal. Provide a narrative discussion of potential additional revenue in constrained arrangements.
Costs to obtain or fulfill contracts	Disclose the closing balances of capitalized costs to obtain and fulfill a contract and the amount of amortization in the period. Disclose the method used to determine amortization for each reporting period.
Other qualitative disclosures	Disclose significant judgments and changes in judgments that affect the amount and timing of revenue from contracts with customers. Disclose how management determines the minimum amount of revenue not subject to the variable consideration constraint.

ILLUSTRATION 18.32 Revenue Disclosures

Evolving Issue

Converged, Converging, or Diverging?

After six years of hard work, the IASB and the FASB were able to create a converged revenue recognition standard. In fact, at the time of issuance by both Boards, it was viewed as a significant milestone in the journey to have a single set of high-quality global accounting standards. In the press release announcing the issuance of the standard, the IASB chair, Hans Hoogervorst, said, “The successful conclusion of this project is a major achievement for both Boards. Together, we have improved the revenue requirements of both IFRS and U.S. GAAP, while managing to achieve a fully converged standard. Our attention now turns to ensuring a successful transition to these new requirements.”

While the result of their work is laudable, there were some differences between the two standards even at the time of issuance. In addition, since the standard was issued, both Boards have made several modifications and interpretations which, in some cases, have actually widened the differences between the two standards.

The most significant difference at the time of issuance was the meaning of the word “probable.” Under IFRS, *probable* is defined to mean “more likely than not,” which means more than 50 percent likely. Under U.S. GAAP, *probable* generally means “likely to occur” and is typically considered to be in the 75 percent to 80 percent range.

Since the standards were issued, several accounting policy options have been included in the U.S. standard that have not been included in IFRS. For example, the U.S. standard provides an accounting policy election to determine whether shipping services provided by a third party are a separate performance obligation. IFRS does not provide this election. Further, the U.S. standard provides that taxes collected from customers (for example, sales taxes) can be excluded from revenue as an accounting policy elective. *IFRS 15* discusses whether taxes should be included in the total amount of revenue but requires a jurisdiction-by-jurisdiction analysis as a final determination.

The licensing of intellectual property is a very challenging area in the application of revenue recognition. Both in the initial release and in subsequent modifications, the two standards have diverged in this area. For example, the U.S. standard contains two categories of intellectual property—functional and symbolic—whereas these two categories are not present in *IFRS 15*.

APPENDIX 18A

Long-Term Construction Contracts

LEARNING OBJECTIVE *5

Apply the percentage-of-completion method for long-term contracts.

Revenue Recognition over Time

For the most part, companies recognize revenue at the point of sale because that is when the performance obligation is satisfied. However, as indicated in the chapter, under certain circumstances companies recognize revenue over time. The most notable context in which revenue is recognized over time is long-term construction contract accounting.

Long-term contracts frequently provide that the seller (builder) may bill the purchaser at intervals, as it reaches various points in the project. Examples of long-term contracts are construction-type contracts, development of military and commercial aircraft, weapons-delivery systems, and space exploration hardware. When the project consists of separable units, such as a group of buildings or miles of roadway, contract provisions may provide for delivery in installments. In that case, the seller would bill the buyer and transfer title at stated stages of completion, such as the completion of each building unit or every 10 miles of road. The accounting records should record sales when installments are “delivered.”

A company satisfies a performance obligation and recognizes revenue over time if at least one of the following three criteria is met: [\[22\]](#)

1. The customer simultaneously receives and consumes the benefits of the seller’s performance as the seller performs.
2. The company’s performance creates or enhances an asset (for example, work in process) that the customer controls as the asset is created or enhanced; or
3. The company’s performance does not create an asset with an alternative use. For example, the asset cannot be used by another customer. In addition to this alternative use element, at least *one* of the following criteria must be met:

- a. Another company would not need to substantially re-perform the work the company has completed to date if that other company were to fulfill the remaining obligation to the customer.
- b. The company has a right to payment for its performance completed to date, and it expects to fulfill the contract as promised.¹⁷

Therefore, if criterion 1, 2, or 3 is met, then a company recognizes revenue over time *if it can reasonably estimate its progress toward satisfaction of the performance obligations*. That is, it recognizes revenues and gross profits each period based upon the progress of the construction—referred to as the **percentage-of-completion method**. The company accumulates construction costs plus gross profit recognized to date in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

The rationale for using percentage-of-completion accounting is that under most of these contracts the buyer and seller have enforceable rights. The buyer has the legal right to require specific performance on the contract. The seller has the right to require progress payments that provide evidence of the buyer's ownership interest. As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression.

Alternatively, if the criteria for recognition over time are not met, the company recognizes revenues and gross profit at a point in time, that is, when the contract is completed. In these cases, contract revenue is recognized only to the extent of costs incurred that are expected to be recoverable. Once all costs are recognized, profit is recognized. This approach is referred to as the **cost-recovery (zero-profit) method**. The company accumulates construction costs in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

Percentage-of-Completion Method

The **percentage-of-completion method** recognizes revenues, costs, and gross profit as a company makes progress toward completion on a long-term contract. To defer recognition of these items until completion of the entire contract is to misrepresent the efforts (costs) and accomplishments (revenues) of the accounting periods during the contract. In order to apply the percentage-of-completion method, a company must have some basis or standard for measuring the progress toward completion at particular interim dates.

Measuring the Progress Toward Completion

As one practicing accountant wrote, “The big problem in applying the percentage-of-completion method ... has to do with the ability to make reasonably accurate estimates of completion and the final gross profit.” Companies use various methods to determine the **extent of progress toward completion**. The most common are the *cost-to-cost* and *units-of-delivery* methods.

As indicated in the chapter, the objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures. **Input measures** (costs incurred, labor hours worked) are efforts devoted to a contract. **Output measures** (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed) track results. Neither measure is universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

Both input and output measures have certain disadvantages. The input measure is based on an established relationship between a unit of input and productivity. If inefficiencies cause the productivity relationship to change, inaccurate measurements result. Another potential problem is front-end loading, in which significant upfront costs result in higher estimates of completion. To avoid this problem, companies should disregard some early-stage construction costs—for example, costs of uninstalled materials or costs of subcontracts not yet performed—if they do not relate to contract performance.

Similarly, output measures can produce inaccurate results if the units used are not comparable in time, effort, or cost to complete. For example, using floors (stories) completed can be deceiving. Completing the first floor of an eight-story building may require more than one-eighth the total cost because of the substructure and foundation construction.

The most popular input measure used to determine the progress toward completion is the **cost-to-cost basis**. Under this basis, a company like **Ultra Electronics Holdings** (GBR) measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. **Illustration 18A.1** shows the formula for the cost-to-cost basis.

Costs Incurred to Date	=	Percent Complete
Most Recent Estimate of Total Costs		

ILLUSTRATION 18A.1 Formula for Percentage-of-Completion, Cost-to-Cost Basis

Once Ultra Electronics Holdings knows the percentage that costs incurred bear to total estimated costs, it applies that percentage to the total revenue or the estimated total gross profit on the contract. The resulting amount is the revenue or the gross profit to be recognized to date. [Illustration 18A.2](#) shows this computation.

Percent Complete	×	Estimated Total Revenue (or Gross Profit)	=	Revenue (or Gross Profit) to Be Recognized to Date
-------------------------	---	--------------------------------------------------	---	-----------------------------------------------------------

[ILLUSTRATION 18A.2](#) Formula for Total Revenue (or Gross Profit) to Be Recognized to Date

To find the amounts of revenue and gross profit recognized each period, Ultra Electronics Holdings subtracts total revenue or gross profit recognized in prior periods, as shown in [Illustration 18A.3](#).

Revenue (or Gross Profit) to Be Recognized to Date	–	Revenue (or Gross Profit) Recognized in Prior Periods	=	Current-Period Revenue (or Gross Profit)
-----------------------------------------------------------	---	--------------------------------------------------------------	---	-------------------------------------------------

[ILLUSTRATION 18A.3](#) Formula for Amount of Current-Period Revenue (or Gross Profit) Cost-to-Cost Basis

Because **the cost-to-cost method is widely used** (without excluding other bases for measuring progress toward completion), we have adopted it for use in our examples.

Example of Percentage-of-Completion Method—Cost-to-Cost Basis

To illustrate the percentage-of-completion method, assume that Hardhat Construction has a contract to construct a £4,500,000 bridge at an estimated cost of £4,000,000. The contract starts in July 2022, and the bridge is to be completed in October 2024. The following data pertain to the construction period. (Note that by the end of 2023, Hardhat has revised the estimated total cost from £4,000,000 to £4,050,000.)

	2022	2023	2024
Costs to date	£1,000,000	£2,916,000	£4,050,000
Estimated costs to complete	3,000,000	1,134,000	—
Progress billings during the year	900,000	2,400,000	1,200,000
Cash collected during the year	750,000	1,750,000	2,000,000

Hardhat would compute the percent complete as shown in [Illustration 18A.4](#).

	2022	2023	2024
Contract price	<u>£4,500,000</u>	<u>£4,500,000</u>	<u>£ 4,500,000</u>
Less estimated cost:			
Costs to date	1,000,000	2,916,000	4,050,000
Estimated costs to complete	<u>3,000,000</u>	<u>1,134,000</u>	— —
Estimated total costs	<u>4,000,000</u>	<u>4,050,000</u>	<u>4,050,000</u>
Estimated total gross profit	<u>£ 500,000</u>	<u>£ 450,000</u>	<u>£ 450,000</u>
Percent complete	25%	72%	100%
	$\left(\frac{£1,000,000}{£4,000,000} \right)$	$\left(\frac{£2,916,000}{£4,050,000} \right)$	$\left(\frac{£4,050,000}{£4,050,000} \right)$

ILLUSTRATION 18A.4 Application of Percentage-of-Completion Method, Cost-to-Cost Basis

On the basis of the data above, Hardhat would make the following entries to record (1) the costs of construction, (2) progress billings, and (3) collections. These entries appear as summaries of the many transactions that would be entered individually as they occur during the year.

	2022		2023		2024	
To record costs of construction:						
Construction in Process	1,000,000		1,916,000		1,134,000	
Materials, Cash, Payables, etc.		1,000,000		1,916,000		1,134,000
To record progress billings:						
Accounts Receivable	900,000		2,400,000		1,200,000	
Billings on Construction in Process		900,000		2,400,000		1,200,000
To record collections:						
Cash	750,000		1,750,000		2,000,000	
Accounts Receivable		750,000		1,750,000		2,000,000

ILLUSTRATION 18A.5 Journal Entries—Percentage-of-Completion Method, Cost-to-Cost Basis

In this example, the costs incurred to date are a measure of the extent of progress toward completion. To determine this, Hardhat evaluates the costs incurred to date as a proportion of the estimated total costs to be incurred on the project. The estimated revenue and gross profit that Hardhat will recognize for each year are calculated as shown in [Illustration 18A.6](#).

	To Date	Recognized in Prior Years	Recognized in Current Year
2022			
Revenues (£4,500,000 × .25)	£1,125,000		£1,125,000
Costs	<u>1,000,000</u>		<u>1,000,000</u>
Gross profit	<u>£ 125,000</u>		<u>£ 125,000</u>
2023			
Revenues (£4,500,000 × .72)	£3,240,000	£1,125,000	£2,115,000
Costs	<u>2,916,000</u>	<u>1,000,000</u>	<u>1,916,000</u>
Gross profit	<u>£ 324,000</u>	<u>£ 125,000</u>	<u>£ 199,000</u>
2024			
Revenues (£4,500,000 × 1.00)	£4,500,000	£3,240,000	£1,260,000
Costs	<u>4,050,000</u>	<u>2,916,000</u>	<u>1,134,000</u>
Gross profit	<u>£ 450,000</u>	<u>£ 324,000</u>	<u>£ 126,000</u>

ILLUSTRATION 18A.6 Percentage-of-Completion Revenue, Costs, and Gross Profit by Year

Illustration 18A.7 shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

	2022		2023		2024	
To recognize revenue and gross profit:						
Construction in Process (gross profit)	125,000		199,000		126,000	
Construction Expenses	1,000,000		1,916,000		1,134,000	
Revenue from Long-Term Contracts		1,125,000		2,115,000		1,260,000
To record completion of the contract:						
Billings on Construction in Process					4,500,000	
Construction in Process						4,500,000

ILLUSTRATION 18A.7 Journal Entries to Recognize Revenue and Gross Profit and to Record Contract Completion—Percentage-of-Completion Method, Cost-to-Cost Basis

Note that **Hardhat debits gross profit (as computed in [Illustration 18A.6](#)) to Construction in Process**. Similarly, it credits Revenue from Long-Term Contracts for the amounts computed in [Illustration 18A.6](#). Hardhat then debits the difference between the amounts recognized each year for revenue and gross profit to a nominal account, Construction Expenses (similar to Cost of Goods Sold in a manufacturing company). It reports that amount in the income statement as the actual cost of construction incurred in that period. For example, in 2022 Hardhat uses the actual costs of £1,000,000 to compute both the gross profit of £125,000 and the percent complete (25 percent).

Hardhat continues to accumulate costs in the Construction in Process account, in order to maintain a record of total costs incurred (plus recognized gross profit) to date. Although theoretically a series of “sales” takes place using the percentage-of-completion method, the selling company cannot remove the inventory cost until the construction is completed and transferred to the new owner. Hardhat’s Construction in Process account for the bridge would include the summarized

entries over the term of the construction project as shown in [Illustration 18A.8](#).

Construction in Process				
2022 construction costs	£1,000,000	12/31/24	to close completed project	
2022 recognized gross profit	125,000			
2023 construction costs	1,916,000			£4,500,000
2023 recognized gross profit	199,000			
2024 construction costs	1,134,000			
2024 recognized gross profit	126,000			
Total	£4,500,000	Total		£4,500,000

ILLUSTRATION 18A.8 Content of Construction in Process Account—Percentage-of-Completion Method

Recall that the Hardhat Construction example contained a **change in estimated costs**: In the second year, 2023, it increased the estimated total costs from £4,000,000 to £4,050,000. The change in estimate is accounted for in a **cumulative catch-up manner**, as indicated in the chapter. This is done by first adjusting the percent completed to the new estimate of total costs. Next, Hardhat deducts the amount of revenues and gross profit recognized in prior periods from revenues and gross profit computed for progress to date. That is, it accounts for the change in estimate in the period of change. That way, the statement of financial position at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.

Financial Statement Presentation—Percentage-of-Completion

Generally, when a company records a receivable from a sale, it reduces the Inventory account. Under the percentage-of-completion method, however, the company continues to carry both the receivable and the inventory. Subtracting the balance in the **Billings account** from Construction in Process avoids double-counting the inventory. During the life of the contract, Hardhat reports in the statement of financial position the difference between the Construction in Process and the Billings on Construction in Process accounts. If that amount is a debit, Hardhat reports it **as a current asset**; if it is a credit, it reports it **as a current liability**.

At times, the costs incurred plus the gross profit recognized to date (the balance in Construction in Process) exceed the billings. In that case, Hardhat reports this excess as a current asset entitled “Costs and recognized profit in excess of

billings.” Hardhat can at any time calculate the unbilled portion of revenue recognized to date by subtracting the billings to date from the revenue recognized to date, as illustrated for 2022 for Hardhat Construction in [Illustration 18A.9](#).

Contract revenue recognized to date: £4,500,000	×	£1,000,000	£1,125,000
		£4,000,000	
Billings to date			(900,000)
Unbilled revenue			<u>£ 225,000</u>

ILLUSTRATION 18A.9 Computation of Unbilled Contract Price at 12/31/22

At other times, the billings exceed costs incurred and gross profit to date. In that case, Hardhat reports this excess as a current liability entitled “Billings in excess of costs and recognized profit.”

What happens, as is usually the case, when companies have more than one project going at a time? When a company has a number of projects, costs exceed billings on some contracts and billings exceed costs on others. In such a case, the company segregates the contracts. The asset side includes only those contracts on which costs and recognized profit exceed billings. The liability side includes only those on which billings exceed costs and recognized profit. Separate disclosures of the volume of billings and costs are preferable to a summary presentation of the net difference.

Using data from the bridge example, Hardhat Construction would report the status and results of its long-term construction activities in 2022 under the percentage-of-completion method as shown in [Illustration 18A.10](#).

Hardhat Construction	
Income Statement (from Illustration 18A.6)	2022
Revenue from long-term contracts	£1,125,000
Costs of construction	<u>1,000,000</u>
Gross profit	<u>£ 125,000</u>

Statement of Financial Position (12/31)	2022
Current assets	
Inventory	
Construction in process	£1,125,000
Less: Billings	<u>900,000</u>
Costs and recognized profit in excess of billings	£225,000
Accounts receivable (£900,000 – £750,000)	150,000

ILLUSTRATION 18A.10 Financial Statement Presentation—Percentage-of-Completion Method (2022)

In 2023, its financial statement presentation is as shown in [Illustration 18A.11](#).

Hardhat Construction	
Income Statement (from Illustration 18A.6)	2023
Revenue from long-term contracts	£2,115,000
Costs of construction	<u>1,916,000</u>
Gross profit	<u>£ 199,000</u>

Statement of Financial Position (12/31)	2023
Current assets	
Accounts receivable (£150,000 + £2,400,000 – £1,750,000)	£ 800,000
Current liabilities	
Billings	£3,300,000
Less: Construction in process	<u>3,240,000</u>
Billings in excess of costs and recognized profit	60,000

ILLUSTRATION 18A.11 Financial Statement Presentation—Percentage-of-Completion Method (2023)

In 2024, Hardhat’s financial statements only include an income statement because the bridge project was completed and settled as shown in [Illustration 18A.12](#).

Hardhat Construction	
Income Statement (from Illustration 18A.6)	2024
Revenue from long-term contracts	£1,260,000
Costs of construction	1,134,000
Gross profit	<u>£ 126,000</u>

ILLUSTRATION 18A.12 Financial Statement Presentation—Percentage-of-Completion Method (2024)

In addition, Hardhat should disclose the information shown in [Illustration 18A.13](#) each year.

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the percentage-of-completion method of accounting. These contracts generally extend for periods in excess of one year. The amounts of revenues and profits recognized each year are based on the ratio of costs incurred to the total estimated costs. Costs included in construction in process include direct materials, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred and are not allocated to construction contracts.

ILLUSTRATION 18A.13 Percentage-of-Completion Method Note Disclosure

Cost-Recovery (Zero-Profit) Method

LEARNING OBJECTIVE *6

Apply the cost-recovery method for long-term contracts.

During the early stages of a contract, a company like **Alcatel-Lucent Enterprise** (FRA) may not be able to estimate reliably the outcome of a long-term construction contract. Nevertheless, Alcatel-Lucent Enterprise is confident that it will recover the contract costs incurred. In this case, Alcatel-Lucent Enterprise uses the **cost-recovery (zero-profit) method**. This method

recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is gross profit recognized.

To illustrate the cost-recovery method for the bridge project illustrated on the preceding pages, Hardhat Construction would report the following revenues and costs for 2022–2024, as shown in [Illustration 18A.14](#).

	To Date	Recognized in Prior Years	Recognized in Current Year
2022			
Revenues (costs incurred)	£1,000,000		£1,000,000
Costs	1,000,000		1,000,000
Gross profit	£ 0		£ 0
2023			
Revenues (costs incurred)	£2,916,000	£1,000,000	£1,916,000
Costs	2,916,000	1,000,000	1,916,000
Gross profit	£ 0	£ 0	£ 0
2024			
Revenues (£4,500,000 × 1.00)	£4,500,000	£2,916,000	£1,584,000
Costs	4,050,000	2,916,000	1,134,000
Gross profit	£ 450,000	£ 0	£ 450,000

[ILLUSTRATION 18A.14](#) Cost-Recovery Method Revenue, Costs, and Gross Profit by Year

[Illustration 18A.15](#) shows Hardhat's entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

	2022		2023		2024	
Construction Expenses	1,000,000		1,916,000			
Revenue from Long-Term Contracts		1,000,000		1,916,000		
(To recognize costs and related expenses)						
Construction in Process (Gross Profit)					450,000	
Construction Expenses					1,134,000	
Revenue from Long-Term Contracts						1,584,000
(To recognize costs and related expenses)						
Billings on Construction in Process					4,500,000	
Construction in Process						4,500,000
(To record completion of the contract)						

ILLUSTRATION 18A.15 Journal Entries—Cost-Recovery Method

As indicated, no gross profit is recognized in 2022 and 2023. In 2024, Hardhat then recognizes gross profit and closes the Billings and Construction in Process

accounts.

Illustration 18A.16 compares the amount of gross profit that Hardhat Construction would recognize for the bridge project under the two revenue recognition methods.

	Percentage-of-Completion	Cost-Recovery
2022	£125,000	£ 0
2023	199,000	0
2024	126,000	450,000

ILLUSTRATION 18A.16 Comparison of Gross Profit Recognized under Different Methods

Under the cost-recovery method, Hardhat Construction would report its long-term construction activities as shown in **Illustration 18A.17**.

Hardhat Construction			
Income Statement	2022	2023	2024
Revenue from long-term contracts	£1,000,000	£1,916,000	£1,584,000
Costs of construction	1,000,000	1,916,000	1,134,000
Gross profit	£ 0	£ 0	£ 450,000

Statement of Financial Position (12/31)		2022	2023	2024
Current assets				
Inventories				
Construction in process	£1,000,000			
Less: Billings	<u>900,000</u>			
Costs in excess of billings		£ 100,000		£ – 0–
Accounts receivable		150,000	£ 800,000	– 0–
Current liabilities				
Billings	£3,300,000			
Less: Construction in process	<u>2,916,000</u>			
Billings in excess of costs and recognized profits			£ 384,000	£ – 0–

Note 1. Summary of significant accounting policies.

Long-Term Construction Contracts. The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the cost-recovery method. These contracts generally extend for periods in excess of one year. Contract costs and billings are accumulated during the periods of construction, and revenues are recognized only to the extent of costs incurred that are expected to be recoverable. Only after all costs are incurred is net income recognized. Costs included in construction in process include direct material, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred.

ILLUSTRATION 18A.17 Financial Statement Presentation—Cost-Recovery Method

Long-Term Contract Losses

LEARNING OBJECTIVE *7

Identify the proper accounting for losses on long-term contracts.

Two types of losses can become evident under long-term contracts:

1. **Loss in the current period on a profitable contract.** This condition arises when, during construction, there is a significant increase in the estimated total contract costs but the increase does not eliminate all profit on the contract. Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate (discussed in [Chapter 22](#)).
2. **Loss on an unprofitable contract.** Cost estimates at the end of the current period may indicate that a loss will result on completion of the *entire* contract. Under both the percentage-of-completion and the cost-recovery methods, the company must recognize in the current period the entire expected contract loss.

The treatment described for unprofitable contracts is consistent with the accounting custom of anticipating foreseeable losses to avoid overstatement of current and future income (conservatism).¹⁸

Loss in Current Period

To illustrate a loss in the current period on a contract expected to be profitable upon completion, we'll continue with the Hardhat Construction bridge project. Assume that on December 31, 2023, Hardhat estimates the costs to complete the bridge contract at £1,468,962 instead of £1,134,000. Assuming all other data are the same as before, Hardhat would compute the percentage complete and recognize the loss as shown in [Illustration 18A.18](#). Compare these computations with those for 2023 in [Illustration 18A.4](#). The “percent complete” has dropped, from 72 percent to 66½ percent, due to the increase in estimated future costs to complete the contract.

Cost to date (12/31/23)	£2,916,000
Estimated costs to complete (revised)	1,468,962
Estimated total costs	<u>£4,384,962</u>
Percent complete ($£2,916,000 \div £4,384,962$)	66½%
Revenue recognized in 2023 ($£4,500,000 \times .665$) – £1,125,000	£1,867,500
Costs incurred in 2023	1,916,000
Loss recognized in 2023	<u>£ (48,500)</u>

ILLUSTRATION 18A.18 Computation of Recognizable Loss, 2023— Loss in Current Period

The 2023 loss of £48,500 is a cumulative adjustment of the “excessive” gross profit recognized on the contract in 2022. Instead of restating the prior period, the company absorbs the prior period misstatement entirely in the current period. In this illustration, the adjustment was large enough to result in recognition of a loss.

Hardhat Construction would record the loss in 2023 as follows.

Construction Expenses	1,916,000	
Construction in Process (loss)		48,500
Revenue from Long-Term Contracts		1,867,500

Hardhat will report the loss of £48,500 on the 2023 income statement as the difference between the reported revenue of £1,867,500 and the costs of £1,916,000.¹⁹ **Under the cost-recovery method, the company does not recognize a loss in 2023.** Why not? Because the company still expects the contract **to result in a profit**, to be recognized in the year of completion.

Loss on an Unprofitable Contract

To illustrate the accounting for an **overall loss on a long-term contract**, assume that at December 31, 2023, Hardhat Construction estimates the costs to complete the bridge contract at £1,640,250 instead of £1,134,000. Revised estimates for the bridge contract are as follows.

	2022	2023
	Original Estimates	Revised Estimates
Contract price	£4,500,000	£4,500,000
Estimated total cost	4,000,000	<u>4,556,250*</u>

Estimated gross profit	£ 500,000	
Estimated loss		<u>£ (56,250)</u>
	<u>*(£2,916,000 + £1,640,250)</u>	

Under the percentage-of-completion method, Hardhat recognized £125,000 of gross profit in 2022 (see [Illustration 18A.18](#)). This amount must be offset in 2023 because it is no longer expected to be realized. In addition, since losses must be recognized as soon as estimable, the company must recognize the total estimated loss of £56,250 in 2023. Therefore, Hardhat must recognize a total loss of £181,250 (£125,000 + £56,250) in 2023.

[Illustration 18A.19](#) shows Hardhat's computation of the revenue to be recognized in 2023.

Revenue recognized in 2023:	
Contract price	£4,500,000
Percent complete	× .64*
Revenue recognizable to date	<u>2,880,000</u>
Less: Revenue recognized prior to 2023	<u>1,125,000</u>
Revenue recognized in 2023	<u>£1,755,000</u>
*Cost to date (12/31/23)	<u>£2,916,000</u>
Estimated cost to complete	<u>1,640,250</u>
Estimated total costs	<u>£4,556,250</u>
Percent complete: £2,916,000 ÷ £4,556,250 = 64%	

**ILLUSTRATION 18A.19 Computation of Revenue Recognizable, 2023
—Unprofitable Contract**

To compute the construction costs to be expensed in 2023, Hardhat adds the total loss to be recognized in 2023 (£125,000 + £56,250) to the revenue to be recognized in 2023. [Illustration 18A.20](#) shows this computation.

Revenue recognized in 2023 (computed above)		£1,755,000
Total loss recognized in 2023:		
Reversal of 2022 gross profit	£125,000	
Total estimated loss on the contract	<u>56,250</u>	<u>181,250</u>
Construction cost expensed in 2023		<u>£1,936,250</u>

**ILLUSTRATION 18A.20 Computation of Construction Expense, 2023
—Unprofitable Contract**

Hardhat Construction would record the long-term contract revenues, expenses, and loss in 2023 as follows.

Construction Expenses	1,936,250	
Construction in Process (loss)		181,250
Revenue from Long-Term Contracts		1,755,000

At the end of 2023, Construction in Process has a balance of £2,859,750 as shown in [Illustration 18A.21](#).²⁰

Construction in Process			
2022 Construction costs	1,000,000		
2022 Recognized gross profit	125,000		
2023 Construction costs	1,916,000	2023 Recognized loss	181,250
Balance	2,859,750		

ILLUSTRATION 18A.21 Content of Construction in Process Account at End of 2023—Unprofitable Contract

Under the cost-recovery method, Hardhat also would recognize the contract loss of £56,250 through the following entry in 2023 (the year in which the loss first became evident).

Loss from Long-Term Contracts	56,250	
Construction in Process (loss)		56,250

Just as the Billings account balance cannot exceed the contract price, neither can the balance in Construction in Process exceed the contract price. In circumstances where the Construction in Process balance exceeds the billings, the company can deduct the recognized loss from such accumulated costs on the statement of financial position. That is, under both the percentage-of-completion and the cost-recovery methods, the provision for the loss (the credit) may be combined with Construction in Process, thereby reducing the inventory balance. In those circumstances, however (as in the 2023 example above), where the billings exceed the accumulated costs, Hardhat must report separately on the statement of financial position, as a current liability, the amount of the estimated loss. Under both the percentage-of-completion and the cost-recovery methods, Hardhat would take the £56,250 loss, as estimated in 2023, from the Construction in Process account and report it separately as a current liability titled “Estimated liability from long-term contracts.”

APPENDIX 18B

Revenue Recognition for Franchises

LEARNING OBJECTIVE *8

Explain revenue recognition for franchises.

In this appendix, we cover a common yet unique type of business transaction—franchises. As indicated throughout this chapter, companies recognize revenue when performance obligations in a revenue arrangement are satisfied.

Franchises represent a challenging area because a variety of performance obligations may exist in a given franchise agreement. As a result, companies must carefully analyze franchise agreements to identify the separate performance obligations, determine when performance obligations are met, and, therefore, when revenue should be recognized.²¹

Four types of franchising arrangements have evolved: (1) manufacturer-retailer, (2) manufacturer-wholesaler, (3) service sponsor–retailer, and (4) wholesaler-retailer. The fastest-growing category of franchising, and the one that has given rise to accounting challenges, is the third category, **service sponsor–retailer**. Included in this category are such industries and businesses as:

- Soft ice cream/frozen yogurt stores (**Snowflake Gelato, FROZ, TCBY, Dairy Queen**)
- Food drive-ins (**Quick, Nordsee, McDonald's, KFC**)
- Restaurants (**La Boucherie, Mitchells and Butlers, Pizza Hut**)
- Motels (**Steinberger, Radisson, Marriott**)
- Auto rentals (**Europcar, Hertz, Avis**)
- Others (**Body Shop, Sport 2000, Swatch, EuroSPAR, 7-Eleven Stores**)

Franchise companies derive their revenue from one or both of two sources: (1) from the sale of initial franchises and related assets or services, and (2) from continuing fees based on the operations of franchises. The **franchisor** (the party who grants business rights under the franchise) normally provides the **franchisee** (the party who operates the franchised business) with the following services.

1. Assistance in site selection: (a) analyzing location and (b) negotiating lease.
2. Evaluation of potential income.

3. Supervision of construction activity: (a) obtaining financing, (b) designing building, and (c) supervising contractor while building.
4. Assistance in the acquisition of signs, fixtures, and equipment.
5. Bookkeeping and advisory services: (a) setting up franchisee's records; (b) advising on income, real estate, and other taxes; and (c) advising on local regulations of the franchisee's business.
6. Employee and management training.
7. Quality control.
8. Advertising and promotion.

In the past, it was standard practice for franchisors to recognize the entire franchise fee at the date of sale, whether the fee was received then or was collectible over a long period of time. Frequently, franchisors recorded the entire amount as revenue in the year of sale, even though many of the services were yet to be performed and uncertainty existed regarding the collection of the entire fee. (In effect, the franchisors were counting their fried chickens before they were hatched.) However, a **franchise agreement** may provide for refunds to the franchisee if certain conditions are not met, and franchise fee profit can be reduced sharply by future costs of obligations and services to be rendered by the franchisor.

Franchise Accounting

As indicated, the performance obligations in a franchise arrangement relate to the right to open a business, use of the trade name or other intellectual property of the franchisor, and continuing services, such as marketing help, training, and in some cases supplying inventory and inventory management. Franchisors commonly charge an initial franchise fee as well as continuing franchise fees. The **initial franchise fee** is payment for establishing the franchise relationship and providing some initial services. **Continuing franchise fees** are received in return for the continuing rights granted by the franchise agreement and for providing such services as management training, advertising and promotion, legal assistance, and other support. **Illustration 18B.1** provides an example of a franchise arrangement.

Franchise

Facts: Tum's Pizza Inc. enters into a franchise agreement on December 31, 2022, giving Food Fight Corp. the right to operate as a franchisee of Tum's Pizza for 5 years. Tum's charges Food Fight an initial franchise fee of \$50,000 for the right to operate as a franchisee. Of this amount, \$20,000 is payable when Food Fight signs the agreement, and the note balance is payable in five annual payments of \$6,000 each on December 31. As part of the arrangement, Tum's helps locate the site, negotiate the lease or purchase of the site, supervise the construction activity, and provide employee training and the equipment. Similar training services and equipment are sold separately.

Food Fight also promises to pay ongoing royalty payments of 1% of its annual sales (payable each January 31 of the following year) and is obliged to purchase products from Tum's at its current standalone selling prices at the time of purchase. The credit rating of Food Fight indicates that money can be borrowed at 8%. The present value of an ordinary annuity of five annual receipts of \$6,000, each discounted at 8%, is \$23,957. The discount of \$6,043 represents the interest revenue to be accrued by Tum's over the payment period.

Question: What are the performance obligations in this arrangement and the point in time at which the performance obligations for Tum's are satisfied and revenue is recognized?

Solution: To identify the performance obligations, Tum's must determine whether the promised rights, site selection and construction services, training services, and equipment are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because they are not sold separately and cannot be used with other goods or services that are readily available to the franchisee. Therefore, those combined rights give rise to a single performance obligation. Tum's satisfies the performance obligation to grant those rights at the point in time when Food Fight obtains control of the rights. That is, once Food Fight begins operating the store, Tum's has no further obligation with respect to these rights.
- Training services and equipment are distinct because similar services and equipment are sold separately. Tum's satisfies those performance obligations when it transfers the services and equipment to Food Fight.
- Tum's cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to those sales-based royalty amounts.

That is, these payments represent variable consideration. Therefore, Tum's recognizes revenue for the royalties when (or as) the uncertainty is resolved.

Tum's promise to stand ready to provide products to the franchisee in the future at standalone selling prices is not accounted for as a separate performance obligation in the contract because it does not provide Food Fight with a material right. Thus, revenue from those sales is recorded in the future when the sales are made.

ILLUSTRATION 18B.1 Recognition—Franchise Arrangement

To illustrate the accounting for this franchise, consider the following values for allocation of the transaction price at December 31, 2022.

Rights to the trade name, market area, and proprietary know-how	\$20,000
Training services	9,957
Equipment (cost of \$10,000)	<u>14,000</u>
Total transaction price	<u>\$43,957</u>

Training is completed in January 2023, the equipment is installed in January 2023, and Food Fight holds a grand opening on February 2, 2023. The entries for the Tum's franchise arrangement are summarized in **Illustration 18B.2**.

Tum's signs the agreement and receives upfront payment and note on December 31, 2022		
Cash	20,000	
Notes Receivable (\$30,000 – \$6,043)	23,957	
Unearned Franchise Revenue		20,000
Unearned Service Revenue (training)		9,957
Unearned Sales Revenue (equipment)		14,000
Franchise opens; Tum's satisfies the performance obligations related to the franchise rights, training, and equipment (that is, Tum's has no further obligations related to these elements of the franchise) on February 2, 2023		
Unearned Franchise Revenue	20,000	
Franchise Revenue		20,000
Unearned Service Revenue (training)	9,957	
Service Revenue (training)		9,957
Unearned Sales Revenue (equipment)	14,000	
Sales Revenue		14,000
Cost of Goods Sold	10,000	
Inventory		10,000

ILLUSTRATION 18B.2 Franchise Entries—Inception and Commencement of Operations

As indicated, when Food Fight begins operations, Tum's satisfies the performance obligations related to the franchise rights, training, and equipment under the franchise agreement. That is, Tum's has no further obligations related to these elements of the franchise.

During 2023, Food Fight does well, recording \$525,000 of sales in its first year of operations. The entries for Tum's related to the first year of operations of the franchise are summarized in **Illustration 18B.3**.

To record continuing franchise fees on December 31, 2023		
Accounts Receivable (\$525,000 × .01)	5,250	
Franchise Revenue		5,250
To record payment received and interest revenue on note on December 31, 2023		
Cash	6,000	
Notes Receivable		6,000
Notes Receivable (\$23,957 × .08)	1,917	
Interest Revenue		1,917

ILLUSTRATION 18B.3 Franchise Entries—First Year of Franchise Operations

Tum's will make similar entries in subsequent years of the franchise agreement.

Recognition of Franchise Rights Revenue over Time

In the franchise example presented in [Illustration 18B.1](#), Tum's transferred control of the franchise rights at a point in time—that is, when the franchisee began operations and could benefit from control of the rights—with no further involvement by Tum's. In other situations, depending on the economic substance of the rights, the franchisor may be providing **access to the right** rather than transferring control of the franchise rights. In this case, **the franchise revenue is recognized over time**, rather than at a point in time. The franchise arrangement presented in [Illustration 18B.4](#) provides an example of a franchise agreement with revenue recognized over time.

Franchise Revenue over Time

Facts: Tech Solvers Corp. is a franchisor in the emerging technology consulting service business. Tech Solvers' stores provide a range of computing services (hardware/software installation, repairs, data backup, device syncing, and network solutions) on popular Apple and PC devices. Each franchise agreement gives a franchisee the right to open a Tech Solvers store and sell Tech Solvers' products and services in the area for 5 years. Under the contract, Tech Solvers also provides the franchisee with a number of services to support and enhance the franchise brand, including (a) advising and consulting on the operations of the store; (b) communicating new hardware and software developments, and service techniques; (c) providing business and training manuals; and (d) providing advertising programs and training. Largely a service operation (all parts and other supplies are purchased as needed by customers), Tech Solvers provides few upfront services to franchisees. Instead, the franchisee recruits service technicians, who are given Tech Solvers' training materials (online manuals and tutorials), which are updated for technology changes on a monthly basis at a minimum.

Tech Solvers enters into a franchise agreement on December 15, 2022, giving a franchisee the rights to operate a Tech Solvers franchise for 5 years. Tech Solvers charges an initial franchise fee of \$5,000 for the right to operate as a franchisee, payable upon signing the contract. Tech Solvers also receives ongoing royalty payments of 7% of the franchisee's annual sales (payable each January 15 of the following year). The franchise begins operations in January 2023 and recognizes \$85,000 of revenue in 2023.

Question: What are the performance obligations in this arrangement and the point in time at which the performance obligations will be satisfied and revenue will be recognized?

Solution: To identify the performance obligations, Tech Solvers must determine whether the promised rights and the ongoing franchisee technology support and training services are distinct.

- Rights to the trade name, market area, and proprietary know-how for 5 years are not individually distinct because they are not sold separately and cannot be used with other goods or services that are readily available to the franchisee. In addition, these licensed rights have a close connection with the underlying Tech Solvers' intellectual property (its ability to keep its service and training materials up-to-date). Therefore, those combined rights and the ongoing training materials are a single performance

obligation. Tech Solvers satisfies the performance obligation over time. That is, once the franchisee begins operating a Tech Solvers franchise, Tech Solvers is providing access to the rights and must continue to perform updates and services.

- Tech Solvers cannot recognize revenue for the royalty payments because it is not reasonably assured to be entitled to those revenue-based royalty amounts. That is, these payments represent variable consideration. Therefore, Tech Solvers recognizes revenue for the royalties when (or as) the uncertainty is resolved.

ILLUSTRATION 18B.4 Revenue Recognition over Time—Franchise

The entries for Tech Solvers related to the franchise are summarized in **Illustration 18B.5**.

Franchise agreement signed and receipt of upfront payment and note on December 15, 2022		
Cash	5,000	
Unearned Franchise Revenue		5,000
Franchise begins operations in January 2023 and records \$85,000 of revenue for the year ended December 31, 2023, on December 31, 2023		
Unearned Franchise Revenue	1,000	
Franchise Revenue (\$5,000 ÷ 5)		1,000
Accounts Receivable	5,950	
Franchise Revenue (\$85,000 × .07)		5,950
To record payment received from franchisee on January 15, 2024		
Cash	5,950	
Accounts Receivable		5,950

ILLUSTRATION 18B.5 Franchise Entries—Revenue Recognized over Time

As indicated, Tech Solvers satisfies the performance obligation related to the franchise rights and training materials over time (in this case, on a straight-line basis). Continuing franchise fees are recognized when uncertainty related to the variable consideration is resolved.

In summary, analysis of the characteristics of the Tech Solvers franchise indicates that it does not reflect a right that is transferred at a point in time. That is, Tech Solvers has a continuing obligation to provide updated materials and ongoing support, suggesting the control of the right has not been transferred to the franchisee. Thus, revenue from the franchise rights is recognized over time.

Learning Objectives Review

1 Understand the fundamental concepts related to revenue recognition and measurement.

Most revenue transactions pose few problems for revenue recognition. This is because, in many cases, the transaction is initiated and completed at the same time. Increasing complexity of business and revenue arrangements have resulted in revenue recognition practices being identified as the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees, but are also sometimes due to incomplete and inconsistent accounting guidelines for revenue recognition. A recent standard provides a set of guidelines to follow in determining when revenue should be reported and how it should be measured. The standard is comprehensive and applies to all companies. As a result, comparability and consistency in reporting revenue should be enhanced.

The five steps in the revenue recognition process are: (1) identify the contract with customers, (2) identify the separate performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the separate performance obligations, and (5) recognize revenue when each performance obligation is satisfied.

2 Understand and apply the five-step revenue recognition process.

Identify the contract with customers. A contract is an agreement that creates enforceable rights or obligations. A company applies the revenue guidance to contracts with customers.

Identify the separate performance obligations in the contract. A performance obligation is a promise in a contract to provide a product or service to a customer. A contract may be comprised of multiple performance obligations. The accounting for multiple performance obligations is based on evaluation of whether the product or service is distinct within the contract. If each of the goods or services is distinct, but all are interdependent and interrelated, these goods and services are combined and reported as one performance obligation.

Determine the transaction price. The transaction price is the amount of consideration that a company expects to receive from a customer in exchange for

transferring goods and services. In determining the transaction price, companies must consider the following factors: (1) variable consideration, (2) time value of money, (3) non-cash consideration, and (4) consideration paid or payable to a customer.

Allocate the transaction price to the separate performance obligations.

If more than one performance obligation exists in a contract, allocate the transaction price based on relative standalone selling prices. Estimates of standalone selling price can be based on (1) an adjusted market assessment, (2) the expected cost plus a margin approach, or (3) a residual approach.

Recognize revenue when the company satisfies its performance obligation.

A company satisfies its performance obligation when the customer obtains control of the good or service. Companies satisfy performance obligations either at a point in time or over a period of time. Companies recognize revenue over a period of time if one of the following criteria is met: (1) the customer receives and consumes the benefits as the seller performs, (2) the customer controls the asset as it is created, or (3) the company does not have an alternative use for the asset.

3 Apply the five-step process to major revenue recognition issues.

Refer to [Illustration 18.26](#) for a summary of the accounting for (a) sales returns and allowances, (b) repurchase agreements, (c) bill-and-hold arrangements, (d) principal-agent relationships, (e) consignments, (f) warranties, and (g) non-refundable upfront fees.

4 Describe presentation and disclosure regarding revenue.

Under the asset-liability approach for recognizing revenue, companies present contract assets and contract liabilities on their statements of financial position. Contract assets are rights to receive consideration. A contract liability is a company's obligation to transfer goods or services to a customer for which the company has received consideration from the customer. Companies must determine if new performance obligations are created by a contract modification and may also report assets associated with fulfillment costs and contract acquisition costs related to a revenue arrangement. Companies disclose qualitative and quantitative information about (a) contracts with customers with disaggregation of revenue, presentation of opening and closing balances in contract assets and contract liabilities, and significant information related to their performance obligations; (b) significant judgments that affect the determination of the transaction price, the allocation of the transaction price, and the

determination of the timing of revenue; and (c) assets recognized from costs incurred to fulfill a contract.

***5 Apply the percentage-of-completion method for long-term contracts.**

To apply the percentage-of-completion method to long-term contracts, a company must have some basis for measuring the progress toward completion at particular interim dates. One of the most popular input measures used to determine the progress toward completion is the cost-to-cost basis. Using this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs to complete the contract. The company applies that percentage to the total revenue or the estimated total gross profit on the contract, to arrive at the amount of revenue or gross profit to be recognized to date.

***6 Apply the cost-recovery method for long-term contracts.**

Under this method, companies recognize gross profit only at the point of sale, that is, when the company completes the contract. The company accumulates costs of long-term contracts in process and current billings. This method (sometimes referred to as the zero-profit method) recognizes revenue only to the extent of costs incurred that are expected to be recoverable. Profit is recognized only after all costs are incurred.

***7 Identify the proper accounting for losses on long-term contracts.**

Two types of losses can become evident under long-term contracts. (1) *Loss in current period on a profitable contract*: Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate. (2) *Loss on an unprofitable contract*: Under both the percentage-of-completion and the cost-recovery methods, the company must recognize in the current period the entire expected contract loss.

***8 Explain revenue recognition for franchises.**

In a franchise arrangement, the franchisor satisfies its performance obligation for a franchise license when control of the franchise rights is transferred, generally when the franchisee begins operation of the franchise. In situations where the franchisor provides *access to the rights* rather than transferring control of the

franchise rights, the franchise rights' revenue is recognized over time rather than at a point in time. Franchisors recognize continuing franchise fees over time (as uncertainty related to the variable consideration is resolved).

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Outback Industries manufactures emergency power equipment. Its most popular generator is a model called the E-Booster, which has a retail price of \$1,500 and costs Outback \$740 to manufacture. It sells the E-Booster on a standalone basis directly to businesses, as well as providing installation services. Outback also distributes the E-Booster through a consignment agreement with Lenz Home Store. Income data for Outback's first quarter of 2022 from operations other than the E-Booster generator are as follows.

Revenues	\$6,500,000
Expenses	4,350,000

Outback has the following information related to four E-Booster revenue arrangements during the first quarter of 2022.

1. Outback entered into an arrangement with the Grocers Co-op to deliver E-Boosters for the meat lockers in the grocers' stores. Outback provides a 5% volume discount for E-Boosters purchased by Grocers Co-op if at least \$450,000 of E-Boosters are purchased during 2022. By March 31, 2022, Outback has made sales of \$360,000 ($\$1,500 \times 240$ generators) to Grocers Co-op. Based on prior experience with this promotion in two neighboring states, the discount threshold is met for the year if more than one-half of the target has been met by mid-year.
2. On January 1, 2022, Outback sells 20 E-Boosters to Nick's Liquors. Nick's signs a 6-month note due in 6 months at an annual interest rate of 12%. Outback allows Nick's to return any E-Boosters that it cannot use within 120 days and receive a full refund. Based on prior experience, Outback estimates that three units will be returned (using the most likely outcome approach). Outback's costs to recover the products will be immaterial, and the returned generators are expected to be resold at a profit. No E-Boosters have been returned as of March 31, 2022, and Outback still estimates that three units will be returned in the future.

3. Outback sells 30 E-Boosters to First Bank, to provide uninterrupted power for bank branches with ATMs, for a total contract price of \$50,000. In addition to the E-Boosters, Outback also provides installation at a standalone selling price of \$200 per E-Booster; the cost to Outback to install is \$150 per E-Booster. The E-Boosters are delivered and installed on March 1, 2022, and full payment is made to Outback.
4. Outback ships 300 E-Boosters to Lenz Home Store on consignment. By March 31, 2022, Lenz Home Store has sold three-fourths of the consigned merchandise at the listed price of \$1,500 per unit. Lenz Home Store notifies Outback of the sales, retains an 8% commission, and remits the cash due to Outback.

Instructions

- a. Determine income for Outback Industries for the first quarter of 2022. (Ignore taxes.)
- b. In reviewing the credit history of Nick's Liquors, Outback has some concerns about the collectibility of the full amount due on the note. Briefly discuss how collectibility of the note affects revenue recognition and income measurement for Outback.

Solution

- a. The amount of revenue and expense recognized on each of the arrangements is as follows.

1.	Sales revenue $ [.95 \times (\$1,500 \times 240)]$		\$342,000	
	Cost of goods sold $ (\$740 \times 240)$		<u>177,600</u>	
	Gross profit			\$164,400
2.	Sales revenue $ (20 \times \$1,500)$		30,000	
	Less: Estimated returns $ (3 \times \$1,500)$		<u>4,500</u>	
	Net sales		25,500	
	Cost of goods sold $ (17 \times \$740)$		<u>12,580</u>	
	Gross profit		12,920	
	Interest revenue $ (\$30,000 \times .12 \times \frac{3}{12})$		<u>900</u>	
	Income on this arrangement			13,820
3.	The total transaction price of \$50,000 is allocated between the equipment and installation. The transaction price for the			

equipment and installation is allocated based on relative standalone selling prices:				
Equipment: $\$44,118 = (\$45,000 \div \$51,000^*) \times \$50,000$ Installation: $\$5,882 = (\$6,000 \div \$51,000) \times \$50,000$ $^*\$45,000 + \$6,000$				
Sales revenue	\$44,118			
Cost of goods sold ($30 \times \$740$)	<u>22,200</u>			
Gross profit		21,918		
Installation revenue	5,882			
Installation expense ($30 \times \$150$)	<u>4,500</u>			
Net profit		<u>1,382</u>		
Income on this arrangement				23,300
4. Sales revenue ($225^* \times \$1,500$)		337,500		
Cost of goods sold ($225 \times \$740$)		<u>166,500</u>		
Gross profit		171,000		
Commission expense ($\$337,500 \times .08$)		<u>27,000</u>		
Net income on this arrangement				<u>144,000</u>
Income on E-Booster				<u>\$345,520</u>
$^*300 \times .75$				
Outback Industries' income for the quarter: $\$6,500,000 - \$4,350,000 + \$345,520 = \$2,495,520$.				

- b. Whether a company will get paid for satisfying a performance obligation is not a consideration in determining revenue recognition. That is, the amount recognized is not adjusted for customer credit risk. If significant doubt exists at contract inception about collectibility, Outback reports the revenue gross and then presents an allowance for any impairment due to bad debts, which will reduce net income and which is reported as an operating expense in the income statement.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. Explain the current environment regarding revenue recognition.
2. What was viewed as a major criticism of IFRS as it relates to revenue recognition?
3. Describe the revenue recognition principle.
4. Identify the five steps in the revenue recognition process.
5. Describe the critical factor in evaluating whether a performance obligation is satisfied.
6. When is revenue recognized in the following situations? (a) Revenue from selling products, (b) revenue from services performed, (c) revenue from permitting others to use company assets, and (d) revenue from disposing of assets other than products.
7. Explain the importance of a contract in the revenue recognition process.
8. On October 10, 2022, Executor SpA entered into a contract with Belisle Inc. to transfer Executor's specialty products (sales value of €10,000, cost of €6,500) on December 15, 2022. Belisle agrees to make a payment of €5,000 upon delivery and signs a promissory note to pay the remaining balance on January 15, 2023. What entries does Executor make in 2022 on this contract? Ignore time value of money considerations.
9. What is a performance obligation? Under what conditions does a performance obligation exist?
10. When must multiple performance obligations in a revenue arrangement be accounted for separately?
11. Engelhart Implements Inc. sells tractors to area farmers. The price for each tractor includes GPS positioning service for 9 months (which facilitates field settings for planting and harvesting equipment). The GPS service is regularly sold on a standalone basis by Engelhart for a monthly fee. After the 9-month period, the consumer can renew the service on a fee basis. Does Engelhart have one or multiple performance obligations? Explain.
12. What is the transaction price? What additional factors related to the transaction price must be considered in determining the transaction price?
13. What are some examples of variable consideration? What are the two approaches for estimating variable consideration?
14. Allee Corp. is evaluating a revenue arrangement to determine proper revenue recognition. The contract is for construction of 10 speedboats for a contract price of \$400,000. The customer needs the boats in its showrooms by February 1,

2023, for the sales season; the customer provides a bonus payment of \$21,000 if all boats are delivered by the February 1 deadline. The bonus is reduced by \$7,000 each week that the boats are delivered after the deadline until no bonus is paid if the boats are delivered after February 15, 2023. Allee frequently includes such bonus terms in its contracts and thus has good historical data for estimating the probabilities of completion at different dates. It estimates an equal probability (25%) for each full delivery outcome. What approach should Allee use to determine the transaction price for this contract? Explain.

15. Refer to the information in Question 14. Assume that Allee has limited experience with a construction project on the same scale as the 10 speedboats. How does this affect the accounting for the variable consideration?

16. In measuring the transaction price, explain the accounting for (a) time value of money and (b) non-cash consideration.

17. What is the proper accounting for volume discounts on sales of products?

18. On what basis should the transaction price be allocated to various performance obligations? Identify the approaches for allocating the transaction price.

19. Fuhremann Co. is a full-service manufacturer of surveillance equipment. Customers can purchase any combination of equipment, installation services, and training as part of Fuhremann's security services. Thus, these performance obligations are separate with individual standalone selling prices. Laplante Ltd. purchased cameras, installation, and training at a total price of £80,000. Estimated standalone selling prices of the equipment, installation, and training are £90,000, £7,000, and £3,000, respectively. How should the transaction price be allocated to the equipment, installation, and training?

20. When does a company satisfy a performance obligation? Identify the indicators of satisfaction of a performance obligation.

21. Under what conditions does a company recognize revenue over a period of time?

22. How do companies recognize revenue from a performance obligation over time?

23. Explain the accounting for sales with right of return.

24. What are the reporting issues in a sale with a repurchase agreement?

25. Explain a bill-and-hold arrangement. When is revenue recognized in these situations?

26. Explain a principal-agent relationship and its significance to revenue recognition.

- 27.** What is the nature of a sale on consignment?
- 28.** What are the two types of warranties? Explain the accounting for each type.
- 29.** Campus Cellular provides cell phones and 1 year of cell service to students for an upfront, non-refundable fee of \$300 and a usage fee of \$5 per month. Students may renew the service for each year they are on campus (on average, students renew their service one time). What amount of revenue should Campus Cellular recognize in the first year of the contract?
- 30.** Describe the conditions when contract assets and liabilities are recognized and presented in financial statements.
- 31.** Explain the accounting for contract modifications.
- 32.** Explain the reporting for (a) costs to fulfill a contract and (b) collectibility.
- 33.** What qualitative and quantitative disclosures are required related to revenue recognition?
- *34.** What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.
- *35.** For what reasons should the percentage-of-completion method be used over the cost-recovery method whenever possible?
- *36.** What methods are used in practice to determine the extent of progress toward completion? Identify some “input measures” and some “output measures” that might be used to determine the extent of progress.
- *37.** What are the two types of losses that can become evident in accounting for long-term contracts? What is the nature of each type of loss? How is each type accounted for?
- *38.** Why in franchise arrangements may it be improper to recognize the entire franchise fee as revenue at the date of sale?
- *39.** How should a franchisor account for continuing franchise fees and routine sales of equipment and supplies to franchisees?

Brief Exercises

BE18.1 (LO 1) Leno Computers manufactures tablet computers for sale to retailers such as Fallon Electronics. Leno sold and delivered 200 tablet computers to Fallon for \$20,000 on January 5, 2022. Fallon agreed to pay for the 200 tablet computers within 30 days. Fallon has a good credit rating and should have no difficulty in making payment to Leno. (a) Explain whether a valid contract exists between Leno Computers and Fallon Electronics. (b) Leno

Computers has not yet delivered the tablet computers to Fallon Electronics. What might cause a valid contract not to exist between Leno and Fallon?

BE18.2 (LO 1) On May 10, 2022, Cosmo Co. enters into a contract to deliver a product to Greig Inc. on June 15, 2022. Greig agrees to pay the full contract price of \$2,000 on July 15, 2022. The cost of the goods is \$1,300. Cosmo delivers the product to Greig on June 15, 2022, and receives payment on July 15, 2022. Prepare the journal entries for Cosmo related to this contract. Either party may terminate the contract without compensation until one of the parties performs.

BE18.3 (LO 1, 2) Hillside Company enters into a contract with Sanchez Inc. to provide a software license and 3 years of customer support. The customer-support services require specialized knowledge that only Hillside Company's employees can provide. How many performance obligations are in the contract?

BE18.4 (LO 2) Destin Company signs a contract to manufacture a new 3D printer for \$80,000. The contract includes installation which costs \$4,000 and a maintenance agreement over the life of the printer at a cost of \$10,000. The printer cannot be operated without the installation. Destin Company as well as other companies could provide the installation and maintenance agreement. What are Destin Company's performance obligations in this contract?

BE18.5 (LO 2) Ismail Construction enters into a contract to design and build a hospital. Ismail is responsible for the overall management of the project and identifies various goods and services to be provided, including engineering, site clearance, foundation, procurement, construction of the structure, piping and wiring, installation of equipment, and finishing. Does Ismail have a single performance obligation to the customer in this revenue arrangement? Explain.

BE18.6 (LO 2) Nair A.G. enters into a contract with a customer to build an apartment building for €1,000,000. The customer hopes to rent apartments at the beginning of the school year and provides a performance bonus of €150,000 to be paid if the building is ready for rental beginning August 1, 2023. The bonus is reduced by €50,000 each week that completion is delayed. Nair commonly includes these completion bonuses in its contracts and, based on prior experience, estimates the following completion outcomes:

Completed by	Probability
August 1, 2023	70%
August 8, 2023	20
August 15, 2023	5
After August 15, 2023	5

Determine the transaction price for this contract.

BE18.7 (LO 2) Referring to the revenue arrangement in BE18.6, determine the transaction price for the contract, assuming (a) Nair is only able to estimate whether or not the building can be completed by August 1, 2023 (Nair estimates that there is a 70% chance that the building will be completed by August 1, 2023), and (b) Nair has limited information with which to develop a reliable estimate of completion by the August 1, 2023, deadline.

BE18.8 (LO 2) Presented below are three revenue recognition situations.

- a. Yang sells goods to MTN for ¥1,000,000, payment due at delivery.
- b. Yang sells goods on account to Grifols for ¥800,000, payment due in 30 days.
- c. Yang sells goods to Magnus for ¥500,000, payment due in two installments, the first installment payable in 18 months and the second payment due 6 months later. The present value of the future payments is ¥464,000.

Indicate the transaction price for each of these situations and when revenue will be recognized.

BE18.9 (LO 2) On January 2, 2022, Adani SE sells goods to Geo Company in exchange for a zero-interest-bearing note with a face value of €11,000, with payment due in 12 months. The fair value of the goods at the date of sale is €10,000 (cost €6,000). Prepare the journal entry or entries to record this transaction on January 2, 2022. How much total revenue should be recognized in 2022?

BE18.10 (LO 2) On March 1, 2022, Parnevik Company sold goods to Goosen Inc. for \$660,000 in exchange for a 5-year, zero-interest-bearing note in the face amount of \$1,062,937 (an imputed rate of 10%). The goods have an inventory cost on Parnevik's books of \$400,000. Prepare the journal entries for Parnevik on (a) March 1, 2022, and (b) December 31, 2022.

BE18.11 (LO 2, 3) Telephone Sellers sells prepaid telephone cards to customers. Telephone Sellers then pays the telecommunications company, TeleExpress, for the actual use of its telephone lines related to the prepaid telephone cards. Assume that Telephone Sellers sells £4,000 of prepaid cards in January 2022. It then pays TeleExpress based on usage, which turns out to be 50% in February, 30% in March, and 20% in April. The total payment by Telephone Sellers for TeleExpress lines over the 3 months is £3,000. Indicate how much income Telephone Sellers should recognize in January, February, March, and April.

BE18.12 (LO 2, 3) Manual Company sells goods to Nolan Company during 2022. It offers Nolan the following rebates based on total sales to Nolan. If total sales to Nolan are 10,000 units, it will grant a rebate of 2%. If it sells up to 20,000 units, it will grant a rebate of 4%. If it sells up to 30,000 units, it will grant a

rebate of 6%. In the first quarter of the year, Manual sells 11,000 units to Nolan at a sales price of \$110,000. Manual, based on past experience, has sold over 40,000 units to Nolan, and these sales normally take place in the third quarter of the year. What amount of revenue should Manual report for the sale of the 11,000 units in the first quarter of the year?

BE18.13 (LO 3) On July 10, 2022, Amodt Music sold CDs to retailers on account and recorded sales revenue of \$700,000 (cost \$560,000). Amodt grants the right to return CDs that do not sell in 3 months following delivery. Past experience indicates that the normal return rate is 15%. By October 11, 2022, retailers returned CDs to Amodt and were granted credit of \$78,000. Prepare Amodt's journal entries to record (a) the sale on July 10, 2022, (b) \$78,000 of returns on October 11, 2022, and (c) any entry necessary on October 31, 2022. Assume that Amodt prepares financial statement on October 31, 2022.

BE18.14 (LO 3) Kristin Company sells 300 units of its products for \$20 each to Logan Inc. for cash. Kristin allows Logan to return any unused product within 30 days and receive a full refund. The cost of each product is \$12. To determine the transaction price, Kristin decides that the approach that is most predictive of the amount of consideration to which it will be entitled is the probability-weighted amount. Using the probability-weighted amount, Kristin estimates that (1) 10 products will be returned and (2) the returned products are expected to be resold at a profit. Indicate the amount of (a) net sales, (b) estimated liability for refunds, and (c) cost of goods sold that Kristin should report in its financial statements (assume that none of the products have been returned at the financial statement date).

BE18.15 (LO 3) On June 1, 2022, Mills Company sells €200,000 of shelving units to a local retailer, ShopBarb, which is planning to expand its stores in the area. Under the agreement, ShopBarb asks Mills to retain the shelving units at its factory until the new stores are ready for installation. Title passes to ShopBarb at the time the agreement is signed. The shelving units are delivered to the stores on September 1, 2022, and ShopBarb pays in full. Prepare the journal entries for this bill-and-hold arrangement (assuming that conditions for recognizing the sale as a bill-and-hold sale have been met) for Mills on June 1 and September 1, 2022. The cost of the shelving units to Mills is €110,000.

BE18.16 (LO 3) Travel SA sells tickets for a Caribbean cruise on ShipAway Cruise Lines to Carmel Company employees. The total cruise package price to Carmel Company employees is €70,000. Travel SA receives a commission of 6% of the total price. Travel SA therefore remits €65,800 to ShipAway. Prepare the journal entry to record the remittance and revenue recognized by Travel SA on this transaction.

BE18.17 (LO 3) Jansen Corporation shipped \$20,000 of merchandise on consignment to Gooch Company. Jansen paid freight costs of \$2,000. Gooch Company paid \$500 for local advertising, which is reimbursable from Jansen. By year-end, 60% of the merchandise had been sold for \$21,500. Gooch notified Jansen, retained a 10% commission, and remitted the cash due to Jansen. Prepare Jansen's journal entry when the cash is received.

BE18.18 (LO 3) Talarczyk Company sold 10,000 Super-Spreaders on December 31, 2022, at a total price of \$1,000,000, with a warranty guarantee that the product was free of any defects. The cost of the spreaders sold is \$550,000. The assurance warranties extend for a 2-year period and are estimated to cost \$40,000. Talarczyk also sold extended warranties (service-type warranties) related to 2,000 spreaders for 2 years beyond the 2-year period for \$12,000. Given this information, determine the amounts to report for the following at December 31, 2022: sales revenue, warranty expense, unearned warranty revenue, warranty liability, and cash.

BE18.19 (LO 4) On May 1, 2022, Mount Company enters into a contract to transfer a product to Eric Company on September 30, 2022. It is agreed that Eric will pay the full price of \$25,000 in advance on June 15, 2022. Eric pays on June 15, 2022, and Mount delivers the product on September 30, 2022. Prepare the journal entries required for Mount in 2022.

BE18.20 (LO 3) Nate Beggs signs a 1-year contract with BlueBox Video. The terms of the contract are that Nate is required to pay a non-refundable initiation fee of €100. No annual membership fee is charged in the first year. After the first year, membership can be renewed by paying an annual membership fee of €5 per month. BlueBox determines that its customers, on average, renew their annual membership three times after the first year before terminating their membership. What amount of revenue should BlueBox recognize in its first year?

BE18.21 (LO 4) Stengel Co. enters into a 3-year contract to perform maintenance service for Laplante SE. Laplante promises to pay €100,000 at the beginning of each year (the standalone selling price of the service at contract inception is €100,000 per year). At the end of the second year, the contract is modified and the fee for the third year of service, which reflects a reduced menu of maintenance services to be performed at Laplante locations, is reduced to €80,000 (the standalone selling price of the services at the beginning of the third year is €80,000 per year). Briefly describe the accounting for this contract modification.

***BE18.22 (LO 5)** Ting Group began work on a ¥7,000,000 contract in 2022 to construct an office building. During 2022, Ting Group incurred costs of ¥1,700,000, billed its customers for ¥1,200,000, and collected ¥960,000. At December 31, 2022, the estimated additional costs to complete the project total

¥3,300,000. Prepare Ting's 2022 journal entries using the percentage-of-completion method.

***BE18.23 (LO 6)** Guillen, Inc. began work on a \$7,000,000 contract in 2022 to construct an office building. Guillen uses the cost-recovery method. At December 31, 2022, the balances in certain accounts were Construction in Process \$1,715,000, Accounts Receivable \$240,000, and Billings on Construction in Process \$1,000,000. Indicate how these accounts would be reported in Guillen's December 31, 2022, statement of financial position.

***BE18.24 (LO 7)** Archer Construction Company began work on a \$420,000 construction contract in 2022. During 2022, Archer incurred costs of \$278,000, billed its customer for \$215,000, and collected \$175,000. At December 31, 2022, the estimated additional costs to complete the project total \$162,000. Prepare Archer's journal entry to record profit or loss, if any, using the percentage-of-completion method.

***BE18.25 (LO 8)** Frozen Delight, Inc. charges an initial franchise fee of \$75,000 for the right to operate as a franchisee of Frozen Delight. Of this amount, \$25,000 is collected immediately. The remainder is collected in four equal annual installments of \$12,500 each. These installments have a present value of \$41,402. As part of the total franchise fee, Frozen Delight also provides training (with a fair value of \$2,000) to help franchisees get the store ready to open. The franchise agreement is signed on April 1, 2022, training is completed and the store opens on July 1, 2022. Prepare the journal entries required by Frozen Delight in 2022.

Exercises

E18.1 (LO 1) (Fundamentals of Revenue Recognition) Presented below are five different situations. Provide an answer to each of these questions.

1. The Kawaski Jeep dealership sells both new and used Jeeps. Some of the Jeeps are used for demonstration purposes; after 6 months, these Jeeps are then sold as used vehicles. Should Kawaski Jeep record these sales of used Jeeps as revenue or as a gain?
2. One of the main indicators of whether control has passed to the customer is whether revenue has been earned. Is this statement correct?
3. One of the five steps in determining whether revenue should be recognized is whether the sale has been realized. Do you agree?
4. One of the criteria that contracts must meet to apply the revenue standard is that collectibility of the sales price must be reasonably possible. Is this correct?

5. Many believe the distinction between revenue and gains is important in the financial statements. Given that both revenues and gains increase net income, why is the distinction important?

E18.2 (LO 1) (Fundamentals of Revenue Recognition) Respond to the questions related to the following statements.

1. A wholly unperformed contract is one in which the company has neither transferred the promised goods or services to the customer nor received, or become entitled to receive, any consideration. Why are these contracts not recorded in the accounts?
2. Performance obligations are the unit of account for purposes of applying the revenue recognition standard and therefore determine when and how revenue is recognized. Is this statement correct?
3. Elaina Company contracts with a customer and provides the customer with an option to purchase additional goods for free or at a discount. Should Elaina Company account for this option?
4. The transaction price is generally not adjusted to reflect the customer's credit risk, meaning the risk that the customer will not pay the amount to which the entity is entitled under the contract. Comment on this statement.

E18.3 (LO 1, 2) (Existence of a Contract) On May 1, 2022, Richardson Inc. entered into a contract to deliver one of its specialty mowers to Kickapoo Landscaping Co. The contract requires Kickapoo to pay the contract price of €900 in advance on May 15, 2022. Kickapoo pays Richardson on May 15, 2022, and Richardson delivers the mower (with cost of €575) on May 31, 2022.

Instructions

- a. Prepare the journal entry on May 1, 2022, for Richardson.
- b. Prepare the journal entry on May 15, 2022, for Richardson.
- c. Prepare the journal entry on May 31, 2022, for Richardson.

E18.4 (LO 2) (Determine Transaction Price) Jupiter Company sells goods to Danone Inc. by accepting a note receivable on January 2, 2022. The goods have a sales price of \$610,000 (cost of \$500,000). The terms are net 30. If Danone pays within 5 days, however, it receives a cash discount of \$10,000. Past history indicates that the cash discount will be taken. On January 28, 2022, Danone makes payment to Jupiter for the full sales price.

Instructions

- a. Prepare the journal entry or entries to record the sale and related cost of goods sold for Jupiter Company on January 2, 2022, and the payment on January 28, 2022. Assume that Jupiter Company records the January 2, 2022, transaction using the net method.
- b. Prepare the journal entry or entries to record the sale and related cost of goods sold for Jupiter Company on January 2, 2022, and the payment on January 28, 2022. Assume that Jupiter Company records the January 2, 2022, transaction using the gross method.

E18.5 (LO 2) (Determine Transaction Price) Jeff Heun, president of Concrete Always, agrees to construct a concrete cart path at Dakota Golf Club. Concrete Always enters into a contract with Dakota to construct the path for \$200,000. In addition, as part of the contract, a performance bonus of \$40,000 will be paid based on the timing of completion. The performance bonus will be paid fully if completed by the agreed-upon date. The performance bonus decreases by \$10,000 per week for every week beyond the agreed-upon completion date. Jeff has been involved in a number of contracts that had performance bonuses as part of the agreement in the past. As a result, he is fairly confident that he will receive a good portion of the performance bonus. Jeff estimates, given the constraints of his schedule related to other jobs, that there is 55% probability that he will complete the project on time, a 30% probability that he will be 1 week late, and a 15% probability that he will be 2 weeks late.

Instructions

- a. Determine the transaction price that Concrete Always should compute for this agreement.
- b. Assume that Jeff Heun has reviewed his work schedule and decided that it makes sense to complete this project on time. Assuming that he now believes that the probability for completing the project on time is 90% (otherwise it will be finished 1 week late), determine the transaction price.

E18.6 (LO 2) (Determine Transaction Price) Bill Amends, owner of Real Estate Inc., buys and sells commercial properties. Recently, he sold land for \$3,000,000 to the Blackhawk Group, a developer that plans to build a new shopping mall. In addition to the \$3,000,000 sales price, Blackhawk Group agrees to pay Real Estate Inc. 1% of the retail sales of the mall for 10 years. Blackhawk estimates that retail sales in a typical mall are \$1,000,000 a year. Given the substantial increase in online sales in the retail market, Bill had originally indicated that he would prefer a higher price for the land instead of the 1% royalty arrangement and suggested a price of \$3,250,000. However, Blackhawk would not agree to those terms.

Instructions

What is the transaction price for the land and related royalty payment that Real Estate Inc. should record?

E18.7 (LO 2) (Determine Transaction Price) Blair Biotech enters into a licensing agreement with Pang Pharmaceutical for a drug under development. Blair will receive a payment of ¥10,000,000 if the drug receives regulatory approval. Based on prior experience in the drug-approval process, Blair determines that the drug has a 90% chance of approval, and a 10% chance of denial.

Instructions

- a. Determine the transaction price of the arrangement for Blair Biotech.
- b. Assuming that regulatory approval was granted on December 20, 2022, and that Blair received the payment from Pang on January 15, 2023, prepare the journal entries for Blair. The license meets the criteria for point-in-time revenue recognition.

E18.8 (LO 2, 3) (Determine Transaction Price) Aaron's Agency sells an insurance policy offered by Capital Insurance Company for a commission of \$100 on January 2, 2022. In addition, Aaron will receive an additional commission of \$10 each year for as long as the policyholder does not cancel the policy. After selling the policy, Aaron does not have any remaining performance obligations. Based on Aaron's significant experience with these types of policies, it estimates that policyholders on average renew the policy for 4.5 years. It has no evidence to suggest that previous policyholder behavior will change.

Instructions

- a. Determine the transaction price of the arrangement for Aaron, assuming 100 policies are sold.
- b. Determine the revenue that Aaron will recognize in 2022.

E18.9 (LO 2, 3) (Determine Transaction Price) Taylor Marina has 300 available slips that rent for \$800 per season. Payments must be made in full by the start of the boating season, April 1, 2023. The boating season ends October 31, and the marina has a December 31 year-end. Slips for future seasons may be reserved if paid for by December 31, 2023. Under a new policy, if payment for 2024 season slips is made by December 31, 2023, a 5% discount is allowed. If payment for 2025 season slips is made by December 31, 2023, renters get a 20% discount (this promotion hopefully will provide cash flow for major dock repairs).

On December 31, 2022, all 300 slips for the 2023 season were rented at full price. On December 31, 2023, 200 slips were reserved and paid for the 2024 boating season, and 60 slips were reserved and paid for the 2025 boating season.

Instructions

- a. Prepare the appropriate journal entries for December 31, 2022, and December 31, 2023.
- b. Assume the marina operator is unsophisticated in business. Explain the managerial significance of the above accounting to this person.

E18.10 (LO 2) (Allocate Transaction Price) Geraths Windows manufactures and sells custom storm windows for three-season porches. Geraths also provides installation service for the windows. The installation process does not involve changes in the windows, so this service can be performed by other vendors. Geraths enters into the following contract on July 1, 2022, with a local homeowner. The customer purchases windows for a price of \$2,400 and chooses Geraths to do the installation. Geraths charges the same price for the windows whether it does the installation, or not. The installation service is estimated to have a standalone selling price of \$600. The customer pays Geraths \$2,000 (which equals the standalone selling price of the windows, at a cost of \$1,100) upon delivery and the remaining balance upon installation of the windows. The windows are delivered on September 1, 2022, Geraths completes installation on October 15, 2022, and the customer pays the balance due.

Instructions

Prepare the journal entries for Geraths in 2022. (Round amounts to nearest dollar.)

E18.11 (LO 2) (Allocate Transaction Price) Refer to the revenue arrangement in [E18.10](#).

Instructions

Repeat the requirements, assuming that (a) Geraths estimates the standalone selling price of the installation based on an estimated cost of \$400 plus a margin of 20% on installation cost, and that (b) given the uncertainty of finding skilled labor, Geraths is unable to develop a reliable estimate for the standalone selling price of the installation. (Round amounts to nearest dollar.)

E18.12 (LO 3) (Allocate Transaction Price) Shaw Ltd. sells goods that cost £300,000 to Ricard Company for £410,000 on January 2, 2022. The sales price includes an installation fee, which has a standalone selling price of £40,000. The standalone selling price of the goods is £370,000. The installation is considered a separate performance obligation and is expected to take 6 months to complete.

Instructions

- a. Prepare the journal entries (if any) to record the sale on January 2, 2022.
- b. Shaw prepares an income statement for the first quarter of 2022, ending on March 31, 2022 (installation was completed on June 18, 2022). How much revenue should Shaw recognize related to its sale to Ricard?

E18.13 (LO 3) (Allocate Transaction Price) Crankshaft Company manufactures equipment. Crankshaft's products range from simple automated machinery to complex systems containing numerous components. Unit selling prices range from €200,000 to €1,500,000 and are quoted inclusive of installation. The installation process does not involve changes to the features of the equipment and does not require proprietary information about the equipment in order for the installed equipment to perform to specifications. Crankshaft has the following arrangement with Winkerbean SA.

- Winkerbean purchases equipment from Crankshaft for a price of €1,000,000 and contracts with Crankshaft to install the equipment. Crankshaft charges the same price for the equipment whether it does the installation or not. Using market data, Crankshaft determines installation service is estimated to have a standalone selling price of €50,000. The cost of the equipment is €600,000.
- Winkerbean is obligated to pay Crankshaft the €1,000,000 upon the delivery and installation of the equipment.

Crankshaft delivers and installs the equipment on September 30, 2022. The equipment has a useful life of 10 years. Assume that the equipment and the installation are two distinct performance obligations which should be accounted for separately.

Instructions

- a. How should the transaction price of €1,000,000 be allocated among the service obligations?
- b. Prepare the journal entries for Crankshaft for this revenue arrangement on September 30, 2022, assuming Crankshaft receives payment when installation is completed.

E18.14 (LO 3) (Allocate Transaction Price) Refer to the revenue arrangement in [E18.13](#).

Instructions

Repeat requirements (a) and (b), assuming that Crankshaft does not have the market data to determine the standalone selling price of the installation services. As a result, an expected cost plus margin approach is used. The cost of installation is €36,000; Crankshaft prices these services with a 25% margin relative to cost.

E18.15 (LO 3) (Allocate Transaction Price) Appliance Center is an experienced home appliance dealer. Appliance Center also offers a number of services for the home appliances that it sells. Assume that Appliance Center sells ovens on a standalone basis. Appliance Center also sells installation services and maintenance services for ovens. However, Appliance Center does not offer installation or maintenance services to customers who buy ovens from other vendors. Pricing for ovens is as follows.

Oven only	\$ 800
Oven with installation service	850
Oven with maintenance services	975
Oven with installation and maintenance services	1,000

In each instance in which maintenance services are provided, the maintenance service is separately priced within the arrangement at \$175. Additionally, the incremental amount charged by Appliance Center for installation approximates the amount charged by independent third parties. Ovens are sold subject to a general right of return. If a customer purchases an oven with installation and/or maintenance services, in the event Appliance Center does not complete the service satisfactorily, the customer is only entitled to a refund of the portion of the fee that exceeds \$800.

Instructions

- Assume that a customer purchases an oven with both installation and maintenance services for \$1,000. Based on its experience, Appliance Center believes that it is probable that the installation of the equipment will be performed satisfactorily to the customer. Assume that the maintenance services are priced separately (i.e., the three components are distinct). Identify the separate performance obligations related to the Appliance Center revenue arrangement.
- Indicate the amount of revenue that should be allocated to the oven, the installation, and the maintenance contract.

E18.16 (LO 3) (Sales with Returns) On March 10, 2022, Steele Company sold to Barr Hardware 200 tool sets at a price of \$50 each (cost \$30 per set) with terms of n/60, f.o.b. shipping point. Steele allows Barr to return any unused tool

sets within 60 days of purchase. Steele estimates that: (1) 10 sets will be returned, (2) the cost of recovering the products will be immaterial, and (3) the returned tools sets can be resold at a profit. On March 25, 2022, Barr returned six tool sets and received a credit to its account.

Instructions

- a. Prepare journal entries for Steele to record (1) the sale on March 10, 2022, (2) the return on March 25, 2022, and (3) any adjusting entries required on March 31, 2022 (when Steele prepares financial statements). Steele believes the original estimate of returns is correct.
- b. Indicate the income statement and statement of financial position reporting by Steele at March 31, 2022, of the information related to the Barr sales transaction.

E18.17 (LO 3) (Sales with Returns) Refer to the revenue arrangement in [E18.16](#). Assume that instead of selling the tool sets on credit, Steele sold them for cash.

Instructions

- a. Prepare journal entries for Steele to record (1) the sale on March 10, 2022, (2) the return on March 25, 2022, and (3) any adjusting entries required on March 31, 2022 (when Steele prepares financial statements). Steele believes the original estimate of returns is correct.
- b. Indicate the income statement and statement of financial position reporting by Steele at March 31, 2022, of the information related to the Barr sale.

E18.18 (LO 3) (Sales with Allowances) On October 2, 2022, Laplante Company sold \$6,000 of its elite camping gear (with a cost of \$3,600) to Lynch Outfitters. As part of the sales agreement, Laplante includes a provision that, if Lynch is dissatisfied with the product, Laplante will grant an allowance on the sales price or agree to take the product back (although returns are rare, given the long-term relationship between Laplante and Lynch). Laplante expects total allowances to Lynch to be \$800. On October 16, 2022, Laplante grants an allowance of \$400 to Lynch because the color for some of the items delivered was not the same as what appeared in the catalog.

Instructions

- a. Prepare journal entries for Laplante to record (1) the sale on October 2, 2022, (2) the granting of the allowance on October 16, 2022, and, (3) any adjustment required on October 31, 2022 (when Laplante prepares financial

statements). Laplante now estimates additional allowances of \$250 will be granted to Lynch in the future.

- b. Indicate the reporting of information related to the Lynch transaction in Laplante's October 31, 2022 income statement and statement of financial position.

E18.19 (LO 3) (Sales with Returns) On June 3, 2022, Hunt Company sold to Ann Mount merchandise having a sales price of \$8,000 (cost \$6,000) with terms of n/60, f.o.b. shipping point. Hunt estimates that merchandise with a sales value of \$800 will be returned. An invoice totaling \$120 was received by Mount on June 8 from Olympic Transport Service for the freight cost. Upon receipt of the goods, on June 8, Mount returned to Hunt \$300 of merchandise containing flaws. Hunt expects the returned items to be resold at a profit. The freight on the returned merchandise was \$24, paid by Hunt on June 8. On July 16, the company received a check for the balance due from Mount. No further returns are expected.

Instructions

Prepare journal entries for Hunt Company to record all the events in June and July.

E18.20 (LO 3) (Sales with Returns) Organic Growth Company is presently testing a number of new agricultural seed planters that it has recently developed. To stimulate interest, it has decided to grant to five of its largest customers the unconditional right of return to these products if not fully satisfied. The right of return extends for 4 months. Organic Growth estimates returns of 20%. Organic Growth sells these planters on account for \$1,500,000 (cost \$750,000) on January 2, 2022. Customers are required to pay the full amount due by March 15, 2022.

Instructions

- a. Prepare the journal entry for Organic Growth at January 2, 2022.
- b. Assume that one customer returns the planters on March 1, 2022, due to unsatisfactory performance. Prepare the journal entry to record this transaction, assuming this customer purchased \$100,000 of planters from Organic Growth. The other receivables are collected.
- c. Assume Organic Growth prepares financial statements quarterly. Prepare the necessary entries (if any) to adjust Organic Growth's financial results for the above transactions on March 31, 2022, assuming remaining expected returns of \$200,000.

E18.21 (LO 3) (Sales with Returns) Uddin Publishing Co. publishes college textbooks that are sold to bookstores on the following terms. Each title has a fixed wholesale price, terms f.o.b. shipping point, and payment is due 60 days after shipment. The retailer may return a maximum of 30% of an order at the retailer's expense. Sales are made only to retailers who have good credit ratings. Past experience indicates that the normal return rate is 12%. The costs of recovery are expected to be immaterial, and the textbooks are expected to be resold at a profit.

Instructions

- a. Identify the revenue recognition criteria that Uddin should employ concerning textbook sales, and briefly discuss the reasoning for your answer.
- b. On July 1, 2022, Uddin shipped books invoiced at \$15,000,000 (cost \$12,000,000). Prepare the journal entry to record this transaction.
- c. On October 3, 2022, \$1.5 million of the invoiced July sales were returned according to the return policy, and the remaining \$13.5 million was paid. Prepare the journal entries for the return and payment.
- d. Assume Uddin prepares financial statements on October 31, 2022, the close of the fiscal year. No other returns are anticipated. Indicate the amounts reported on the income statement and statement of financial position related to the above transactions.

E18.22 (LO 3) (Sales with Repurchase) Cramer AG sells idle machinery to Enyart SE on July 1, 2022, for €40,000. Cramer agrees to repurchase this equipment from Enyart on June 30, 2023, for a price of €42,400 (an imputed interest rate of 6%).

Instructions

- a. Prepare the journal entry for Cramer for the transfer of the asset to Enyart on July 1, 2022.
- b. Prepare any other necessary journal entries for Cramer in 2022.
- c. Prepare the journal entry for Cramer when the machinery is repurchased on June 30, 2023.

E18.23 (LO 3) (Repurchase Agreement) Zagat Ltd. enters into an agreement on March 1, 2022, to sell Werner Metal aluminum ingots. As part of the agreement, Zagat also agrees to repurchase the ingots on May 1, 2022, at the original sales price of €200,000 plus 2%.

Instructions

- a. Prepare Zagat's journal entry necessary on March 1, 2022.
- b. Prepare Zagat's journal entry for the repurchase of the ingots on May 1, 2022.

E18.24 (LO 3) (Bill and Hold) Wood-Mode Company is involved in the design, manufacture, and installation of various types of wood products for large construction projects. Wood-Mode recently completed a large contract for Stadium Ltd., which consisted of building 35 different types of concession counters for a new soccer arena under construction. Under the terms of the contract, Stadium will pay Wood-Mode £2,000,000 upon completion of the counters. Unfortunately, due to the depressed economy, the completion of the new soccer arena is now delayed. Stadium has therefore asked Wood-Mode to hold the counters for 2 months at its manufacturing plant until the arena is completed. Stadium acknowledges in writing that it ordered the counters and now own them. The time that Wood-Mode Company must hold the counters is totally dependent on when the arena is completed. Because Wood-Mode has not received additional progress payments for the counters due to the delay, Stadium has provided a deposit of £300,000.

Instructions

- a. Explain this type of revenue recognition transaction.
- b. What factors should be considered in determining when to recognize revenue in this transaction?
- c. Prepare the journal entry or entries that Wood-Mode should make, assuming it signed a valid sales contract and received at the time the £300,000 deposit.

E18.25 (LO 3) (Consignment Sales) On May 3, 2022, Eisler Company consigned 80 freezers, costing \$500 each, to Remmers Company. The cost of shipping the freezers amounted to \$840 and was paid by Eisler Company. On December 30, 2022, a report was received from the consignee, indicating that 40 freezers had been sold for \$750 each. Remittance was made by the consignee for the amount due after deducting a commission of 6%, advertising of \$200, and total installation costs of \$320 on the freezers sold.

Instructions

- a. Compute the inventory value of the units unsold in the hands of the consignee.
- b. Compute the profit for the consignor for the units sold.
- c. Compute the amount of cash that will be remitted by the consignee.

E18.26 (LO 3) (Warranty Arrangement) On January 2, 2022, Grando Company sells production equipment to Fargo Inc. for \$50,000. Grando includes a 2-year assurance warranty with the sale of all its equipment. The customer receives and pays for the equipment on January 2, 2022. During 2022, Grando incurs costs related to warranties of \$900. At December 31, 2022, Grando estimates that \$650 of warranty costs will be incurred in the second year of the warranty.

Instructions

- Prepare the journal entry or entries to record this transaction during 2022 (assuming financial statements are prepared on December 31, 2022). (Ignore cost of goods sold.)
- Repeat the requirements for (a), assuming that in addition to the assurance warranty, Grando sold an extended warranty (service-type warranty) for an additional 2 years (2024–2025) for \$800.

E18.27 (LO 3) (Warranties) Celic SA manufactures and sells computers, which include an assurance-type warranty for the first 90 days. Celic offers an optional extended coverage plan under which it will repair or replace any defective part for 3 years from the expiration of the assurance-type warranty. Because the optional extended coverage plan is sold separately, Celic determines that the 3 years of extended coverage represents a separate performance obligation. The total transaction price for the sale of a computer and an extended warranty is €3,600 on October 1, 2022. Celic determines the standalone selling price of the computer and the warranty are €3,200 and €400, respectively. Based on historical experience, Celic estimates that it will incur €200 in costs to repair defects that arise within the 90-day coverage period for the assurance-type warranty. The cost of the computer is €1,440. Assume that the €200 in costs to repair defects in the computer occurred on October 25, 2022.

Instructions

- Prepare the journal entry or entries to record the October transactions related to sale of the computer.
- Briefly describe the accounting for the service-type warranty after the 90-day assurance-type warranty period.

E18.28 (LO 4) (Existence of a Contract) On January 1, 2022, Gordon Co. enters into a contract to sell a customer a wiring base and shelving unit that sits on the base in exchange for \$3,000. The contract requires delivery of the base first but states that payment for the base will not be made until the shelving unit is delivered. Gordon identifies two performance obligations and allocates \$1,200

of the transaction price to the wiring base and the remainder to the shelving unit. The cost of the wiring base is \$700; the shelves have a cost of \$320.

Instructions

- a. Prepare the journal entry for Gordon on January 1, 2022.
- b. Prepare the journal entry for Gordon on February 5, 2022, when the wiring base is delivered to the customer.
- c. Prepare the journal entry for Gordon on February 25, 2022, when the shelving unit is delivered to the customer and Gordon receives full payment.

E18.29 (LO 4) (Contract Modification) In September 2022, Gaertner Corp. commits to selling 150 of its iPhone-compatible docking stations to Better Buy Co. for \$15,000 (\$100 per product). The stations are delivered to Better Buy over the next 6 months. After 90 stations are delivered, the contract is modified, and Gaertner promises to deliver an additional 45 products for an additional \$4,275 (\$95 per station). All sales are cash on delivery.

Instructions

- a. Prepare the journal entry for Gaertner for the sale of the first 90 stations. The cost of each station is \$54.
- b. Prepare the journal entry for the sale of 10 more stations after the contract modification, assuming that the price for the additional stations reflects the standalone selling price at the time of the contract modification. In addition, the additional stations are distinct from the original products, as Gaertner regularly sells the products separately.
- c. Prepare the journal entry for the sale of 10 more stations (as in [b]), assuming that the pricing for the additional products *does not* reflect the standalone selling price of the additional products and the prospective method is used.

E18.30 (LO 4) (Contract Modification) Tyler Financial Services performs bookkeeping and tax-reporting services to startup companies in the Oconomowoc area. On January 1, 2022, Tyler entered into a 3-year service contract with Walleye Tech. Walleye promises to pay \$10,000 at the beginning of each year, which at contract inception is the standalone selling price for these services. At the end of the second year, the contract is modified and the fee for the third year of services is reduced to \$8,000. In addition, Walleye agrees to pay an additional \$20,000 at the beginning of the third year to cover the contract for 3 additional years (i.e., 4 years remain after the modification). The extended contract services are similar to those provided in the first 2 years of the contract.

Instructions

- a. Prepare the journal entries for Tyler in 2022 and 2023 related to this service contract.
- b. Prepare the journal entries for Tyler in 2024 related to the modified service contract, assuming a prospective approach.
- c. Repeat the requirements for part (b), assuming Tyler and Walleye agree on a revised set of services (fewer bookkeeping services but more tax services) in the extended contract period and the modification results in a separate performance obligation.

E18.31 (LO 4) (Contract Costs) Rex's Reclaimers entered into a contract with Dan's Demolition to manage the processing of recycled materials on Dan's various demolition projects. Services for the 3-year contract include collecting, sorting, and transporting reclaimed materials to recycling centers or contractors who will reuse them. Rex's incurs selling commission costs of €2,000 to obtain the contract. Before performing the services, Rex's also designs and builds receptacles and loading equipment that interface with Dan's demolition equipment at a cost of €27,000. These receptacles and equipment are retained by Rex's and can be used for other projects. Dan's promises to pay a fixed fee of €12,000 per year, payable every 6 months for the services under the contract. Rex's incurs the following costs: design services for the receptacles to interface with Dan's equipment €3,000, loading equipment controllers €6,000, and special testing and inspection fees €2,000 (some of Dan's projects are on government property).

Instructions

- a. Determine the costs that should be capitalized as part of Rex's Reclaimers revenue arrangement with Dan's Demolition.
- b. Dan's also expects to incur general and administrative costs related to this contract, as well as costs of wasted materials and labor that likely cannot be factored into the contract price. Can these costs be capitalized? Explain.

E18.32 (LO 4) (Contract Costs, Collectibility) Refer to the information in [E18.31](#).

Instructions

- a. Does the accounting for capitalized costs change if the contract is for 1 year rather than 3 years? Explain.
- b. Dan's Demolition is a startup company; as a result, there is more than insignificant uncertainty about Dan's ability to make the 6-month payments

on time. Does this uncertainty affect the amount of revenue to be recognized under the contract? Explain.

***E18.33 (LO 5, 6) (Recognition of Profit on Long-Term Contracts)**

During 2022, Nilsen Company started a construction job with a contract price of \$1,600,000. The job was completed in 2024. The following information is available.

	2022	2023	2024
Costs incurred to date	\$400,000	\$825,000	\$1,070,000
Estimated costs to complete	600,000	275,000	—0—
Billings to date	300,000	900,000	1,600,000
Collections to date	270,000	810,000	1,425,000

Instructions

- Compute the amount of gross profit to be recognized each year, assuming the percentage-of-completion method is used.
- Prepare all necessary journal entries for 2023.
- Compute the amount of gross profit to be recognized each year, assuming the cost-recovery method is used.

***E18.34 (LO 5) (Analysis of Percentage-of-Completion Financial Statements)**

In 2022, Steinrotter Construction began construction work under a 3-year contract. The contract price was €1,000,000. Steinrotter uses the percentage-of-completion method for financial accounting purposes. The income to be recognized each year is based on the proportion of cost incurred to total estimated costs for completing the contract. The financial statement presentations relating to this contract at December 31, 2022, are shown below.

Statement of Financial Position		
Accounts receivable		€18,000
Construction in process	€65,000	
Less: Billings	<u>61,500</u>	
Costs and recognized profit in excess of billings		3,500
Income Statement		
Income (before tax) on the contract recognized in 2022		€19,500

Instructions

- How much cash was collected in 2022 on this contract?

b. What was the initial estimated total income before tax on this contract?

***E18.35 (LO 5) (Gross Profit on Uncompleted Contract)** On April 1, 2022, Dougherty Inc. entered into a cost plus fixed fee contract to construct an electric generator for Altom Corporation. At the contract date, Dougherty estimated that it would take 2 years to complete the project at a cost of \$2,000,000. The fixed fee stipulated in the contract is \$450,000. Dougherty appropriately accounts for this contract under the percentage-of-completion method. During 2022, Dougherty incurred costs of \$800,000 related to the project. The estimated cost at December 31, 2022, to complete the contract is \$1,200,000. Altom was billed \$600,000 under the contract.

Instructions

Prepare a schedule to compute the amount of gross profit to be recognized by Dougherty under the contract for the year ended December 31, 2022. Show supporting computations in good form.

***E18.36 (LO 5, 6) (Recognition of Revenue on Long-Term Contract and Entries)** Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2022, Hamilton began work under contract #E2-D2, which provided for a contract price of \$2,200,000. Other details follow:

	2022	2023
Costs incurred during the year	\$640,000	\$1,425,000
Estimated costs to complete, as of December 31	960,000	—0—
Billings during the year	420,000	1,680,000
Collections during the year	350,000	1,500,000

Instructions

- What portion of the total contract price would be recognized as revenue in 2022? In 2023?
- Assuming the same facts as those above except that Hamilton uses the cost-recovery method of accounting, what amount of the total contract price would be recognized as revenue in 2023?
- Prepare a complete set of journal entries for 2022 (using the percentage-of-completion method).

***E18.37 (LO 5, 6) (Recognition of Profit and Statement of Financial Position Amounts for Long-Term Contracts)** Yanmei Construction Company began operations on January 1, 2022. During the year, Yanmei Construction entered into a contract with Lundquist Corp. to construct a

manufacturing facility. At that time, Yanmei estimated that it would take 5 years to complete the facility at a total cost of \$4,500,000. The total contract price for construction of the facility is \$6,000,000. During the year, Yanmei incurred \$1,185,800 in construction costs related to the construction project. The estimated cost to complete the contract is \$4,204,200. Lundquist Corp. was billed and paid 25% of the contract price.

Instructions

Prepare schedules to compute the amount of gross profit to be recognized for the year ended December 31, 2022, and the amount to be shown as “costs and recognized profit in excess of billings” or “billings in excess of costs and recognized profit” at December 31, 2022, under each of the following methods. Show supporting computations in good form.

- a. Cost-recovery method.
- b. Percentage-of-completion method.

***E18.38 (LO 8) (Franchise Entries)** Pacific Crossburgers Inc. charges an initial franchise fee of \$70,000. Upon the signing of the agreement (which covers 3 years), a payment of \$28,000 is due. Thereafter, three annual payments of \$14,000 are required. The credit rating of the franchisee is such that it would have to pay interest at 10% to borrow money. The franchise agreement is signed on May 1, 2022, and the franchise commences operation on July 1, 2022.

Instructions

Prepare the journal entries in 2022 for the franchisor under the following assumptions. (Round to the nearest dollar.)

- a. No future services are required by the franchisor once the franchise starts operations.
- b. The franchisor has substantial services to perform, once the franchise begins operations, to maintain the value of the franchise.
- c. The total franchise fee includes training services (with a value of \$2,400) for the period leading up to the franchise opening and for 2 months following opening.

***E18.39 (LO 8) (Franchise Fee, Initial Down Payment)** On January 1, 2022, Lesley Benjamin signed an agreement, covering 5 years, to operate as a franchisee of Campbell Inc. for an initial franchise fee of \$50,000. The amount of \$10,000 was paid when the agreement was signed, and the balance is payable in five annual payments of \$8,000 each, beginning January 1, 2023. The agreement provides that the down payment is non-refundable and that no future services are

required of the franchisor once the franchise commences operations on April 1, 2022. Lesley Benjamin's credit rating indicates that she can borrow money at 11% for a loan of this type.

Instructions

- a. Prepare journal entries for Campbell for 2022-related revenue for this franchise arrangement.
- b. Prepare journal entries for Campbell for 2022-related revenue for this franchise arrangement, assuming that in addition to the franchise rights, Campbell also provides 1 year of operational consulting and training services, beginning on the signing date. These services (included in the contract price) have a value of \$3,600.
- c. Repeat the requirements for part (a), assuming that Campbell must provide services to Benjamin throughout the franchise period to maintain the franchise value.

Problems

P18.1 (LO 2, 3) (Allocate Transaction Price, Upfront Fees) Tablet Tailors sells tablet PCs combined with Internet service, which permits the tablet to connect to the Internet anywhere and set up a Wi-Fi hot spot. It offers two bundles with the following terms.

1. Tablet Bundle A sells a tablet with 3 years of Internet service. The price for the tablet and a 3-year Internet connection service contract is €500. The standalone selling price of the tablet is €250 (the cost to Tablet Tailors is €175). Tablet Tailors sells the Internet access service independently for an upfront payment of €300. On January 2, 2022, Tablet Tailors signed 100 contracts, receiving a total of €50,000 in cash.
2. Tablet Bundle B includes the tablet and Internet service plus a service plan for the tablet PC (for any repairs or upgrades to the tablet or the Internet connections) during the 3-year contract period. That product bundle sells for €600. Tablet Tailors provides the 3-year tablet service plan as a separate product with a standalone selling price of €150. Tablet Tailors signed 200 contracts for Tablet Bundle B on July 1, 2022, receiving a total of €120,000 in cash.

Instructions

- a. Prepare any journal entries to record the revenue arrangement for Tablet Bundle A on January 2, 2022, and December 31, 2022.

- b. Prepare any journal entries to record the revenue arrangement for Tablet Bundle B on July 1, 2022, and December 31, 2022.
- c. Repeat the requirements for part (a), assuming that Tablet Tailors has no reliable data with which to estimate the standalone selling price for the Internet service.

P18.2 (LO 2, 3, 4) (Allocate Transaction Price, Modification of Contract) Refer to the Tablet Bundle A revenue arrangement in P18.1. In response to competitive pressure for Internet access for Tablet Bundle A, after 2 years of the 3-year contract, Tablet Tailors offers a modified contract and extension incentive. The extended contract services are similar to those provided in the first 2 years of the contract. Signing the extension and paying €90 (which equals the standalone selling of the revised Internet service package) extends access for 2 more years of Internet connection. Forty Tablet Bundle A customers sign up for this offer.

Instructions

- a. Prepare the journal entries when the contract is signed on January 2, 2024, for the 40 extended contracts. Assume the modification does not result in a separate performance obligation.
- b. Prepare the journal entries on December 31, 2024, for the 40 extended contracts (the first year of the revised 3-year contract).

P18.3 (LO 2, 3) (Allocate Transaction Price, Discounts, Time Value) Grill Master Company sells total outdoor grilling solutions, providing gas and charcoal grills, accessories, and installation services for custom patio grilling stations.

Instructions

Respond to the requirements related to the following independent revenue arrangements for Grill Master products and services.

- a. Grill Master offers contract GM205, which is comprised of a free-standing gas grill for small patio use plus installation to a customer's gas line for a total price \$800. On a standalone basis, the grill sells for \$700 (cost \$425), and Grill Master estimates that the standalone selling price of the installation service (based on cost-plus estimation) is \$150. (The selling of the grill and the installation services should be considered two performance obligations.) Grill Master signed 10 GM205 contracts on April 20, 2022, and customers paid the contract price in cash. The grills were delivered and installed on May 15, 2022. Prepare journal entries for Grill Master for GM205 in April and May 2022.

- b. The State of Kentucky is planning major renovations in its parks during 2022 and enters into a contract with Grill Master to purchase 400 durable, easy maintenance, standard charcoal grills during 2022. The grills are priced at \$200 each (with a cost of \$160 each), and Grill Master provides a 6% volume discount if the state purchases at least 300 grills during 2022. On April 17, 2022, Grill Master delivered and received payment for 280 grills. Based on prior experience with the State of Kentucky renovation projects, the delivery of this many grills makes it certain that the state will meet the discount threshold. Prepare the journal entries for Grill Master for grills sold on April 17, 2022. Assume the company records sales transaction net.
- c. Grill Master sells its specialty combination gas/wood-fired grills to local restaurants. Each grill is sold for \$1,000 (cost \$550) on credit with terms 3/30, net/90. Prepare the journal entries for the sale of 20 grills on September 1, 2022, and upon payment, assuming the customer paid on (1) September 25, 2022, and (2) October 15, 2022. Assume the company records sales net.
- d. On October 1, 2022, Grill Master sold one of its super deluxe combination gas/charcoal grills to a local builder. The builder plans to install it in one of its "Parade of Homes" houses. Grill Master accepted a 3-year, zero-interest-bearing note with face amount of \$5,324. The grill has an inventory cost of \$2,700. An interest rate of 10% is an appropriate market rate of interest for this customer. Prepare the journal entries on October 1, 2022, and December 31, 2022.

P18.4 (LO 2, 3) (Allocate Transaction Price, Discounts, Time Value)

Economy Appliance Co. manufactures low-price, no-frills appliances that are in great demand for rental units. Pricing and cost information on Economy's main products are as follows.

Item	Standalone Selling Price (Cost)
Refrigerator	\$500 (\$260)
Range	560 (275)
Stackable washer/dryer unit	700 (400)

Customers can contract to purchase each item individually at the stated prices or as a three-item bundle with a price of \$1,800. The bundle price includes delivery and installation. Economy also provides installation (not a separate performance obligation).

Instructions

Respond to the requirements related to the following independent revenue arrangements for Economy Appliance Co.

- a. On June 1, 2022, Economy sold 100 washer/dryer units without installation to Wangerin Rentals for \$70,000. Wangerin is a newer customer and is unsure how this product will work in its older rental units. Economy offers a 60-day return privilege and estimates, based on prior experience with sales on this product, 4% of the units will be returned. Prepare the journal entries for the sale and related cost of goods sold on June 1, 2022.
- b. YellowCard Property Managers operates upscale student apartment buildings. On May 1, 2022, Economy signs a contract with YellowCard for 300 appliance bundles to be delivered and installed in one of its new buildings. YellowCard pays 20% cash at contract signing and will pay the balance upon installation no later than August 1, 2022. Prepare journal entries for Economy on (1) May 1, 2022, and (2) August 1, 2022, when all appliances are installed.
- c. Refer to the arrangement in (b). It would help YellowCard secure lease agreements with students if the installation of the appliance bundles can be completed by July 1, 2022. YellowCard offers a 10% bonus payment if Economy can complete installation by July 1, 2022. Economy estimates its chances of meeting the bonus deadline to be 90%, based on a number of prior contracts of similar scale. Repeat the requirement for part (b), given this bonus provision. Assume installation is completed by July 1, 2022.
- d. Epic Rentals would like to take advantage of the bundle price for its 400-unit project; on February 1, 2022, Economy signs a contract with Epic for 400 bundles. Under the agreement, Economy will hold the appliance bundles in its warehouses until the new rental units are ready for installation. Epic pays 10% cash at contract signing. On April 1, 2022, Economy completes manufacture of the appliances in the Epic bundle order and places them in the warehouse. Economy and Epic have documented the warehouse arrangement and identified the units designated for Epic. The units are ready to ship, and Economy may not sell these units to other customers. Prepare journal entries for Economy on (1) February 1, 2022, and (2) April 1, 2022.

P18.5 (LO 2, 3) (Allocate Transaction Price, Returns, and

Consignments) Ritt Ranch & Farm is a distributor of ranch and farm equipment. Its products include small tools, power equipment for trench-digging and fencing, grain dryers, and barn winches. Most products are sold direct via its company catalog and Internet site. However, given some of its specialty products, select farm implement stores carry Ritt's products. Pricing and cost information on three of Ritt's most popular products are as follows.

--	--

Item	Standalone Selling Price (Cost)
Mini-trencher	\$ 3,600 (\$2,000)
Power fence hole auger	1,200 (800)
Grain/hay dryer	14,000 (11,000)

Instructions

Respond to the requirements related to the following independent revenue arrangements for Ritt Ranch & Farm.

- On January 1, 2022, Ritt sells 40 augers to Mills Farm Services for \$48,000. Mills signs a 6-month note at an annual interest rate of 12%. Ritt allows Mills to return any auger that it cannot use within 60 days and receive a full refund. Based on prior experience, Ritt estimates that 5% of units sold to customers like Mills will be returned (using the most likely outcome approach). Ritt's costs to recover the products will be immaterial, and the returned augers are expected to be resold at a profit. Prepare the journal entry for Ritt on January 1, 2022.
- On August 10, 2022, Ritt sells 16 mini-trenchers to a farm co-op in western Minnesota. Ritt provides a 4% volume discount on the mini-trenchers if the co-op has a 15% increase in purchases from Ritt compared to the prior year. Given a slowdown in the farm economy, sales to the co-op have been flat, and it is highly uncertain that the benchmark will be met. Prepare the journal entry for Ritt on August 10, 2022.
- Ritt sells three grain/hay dryers to a local farmer at a total contract price of \$45,200. In addition to the dryers, Ritt provides installation, which has a standalone selling price of \$1,000 per unit installed. The contract payment also includes a \$1,200 maintenance plan for the dryers for 3 years after installation. Ritt signs the contract on June 20, 2022, and receives a 20% down payment from the farmer. The dryers are delivered and installed on October 1, 2022, and full payment is made to Ritt. Prepare the journal entries for Ritt in 2022 related to this arrangement.
- On April 25, 2022, Ritt ships 100 augers to Farm Depot, a farm supply dealer in Nebraska, on consignment. By June 30, 2022, Farm Depot has sold 60 of the consigned augers at the listed price of \$1,200 per unit. Farm Depot notifies Ritt of the sales, retains a 10% commission, and remits the cash due Ritt. Prepare the journal entries for Ritt and Farm Depot for the consignment arrangement.

P18.6 (LO 3) (Warranty, Customer Loyalty Program) Hale Hardware takes pride in being the “shop around the corner” that can compete with the big-

box home improvement stores by providing good service from knowledgeable sales associates (many of whom are retired local handymen). Hale has developed the following two revenue arrangements to enhance its relationships with customers, and hopes to increase its bottom line.

1. Hale sells a specialty portable winch that is popular with many of the local customers for use at their lake homes (putting docks in and out, launching boats, etc.). The Hale winch is a standard manufacture winch, which Hale modifies so that it can be used for a variety of tasks. Hale sold 70 of these winches during 2022 at a total price of \$21,000, with a warranty guarantee that the product was free of any defects. The cost of winches sold is \$16,000. The assurance warranties are for a 3-year period with an estimated cost of \$2,100. In addition, Hale sold extended warranties related to 20 Hale winches for 2 years beyond the 3-year period for \$400 each.
2. To bolster its already strong customer base, Hale implemented a customer loyalty program that rewards a customer with 1 loyalty point for every \$10 of purchases on a select group of Hale products. Each point is redeemable for a \$1 discount on any purchases of Hale merchandise in the following 2 years. During 2022, customers purchased select group products for \$100,000 (all products are sold to provide a 45% gross profit) and earned 10,000 points redeemable for future purchases. The standalone selling price of the purchased products is \$100,000. Based on prior experience with incentives programs like this, Hale expects 9,500 points to be redeemed related to these sales (Hale appropriately uses this experience to estimate the value of future consideration related to bonus points).

Instructions

- a. Identify the separate performance obligations in the Hale warranty and bonus point programs, and briefly explain the point in time when the performance obligations are satisfied.
- b. Prepare the journal entries for Hale related to the sales of Hale winches with warranties.
- c. Prepare the journal entries for the bonus point sales for Hale in 2022.
- d. How much additional sales revenue is recognized by Hale in 2023, assuming 4,500 bonus points are redeemed?

P18.7 (LO 3) (Customer Loyalty Program) Martz SA has a customer loyalty program that rewards a customer with 1 customer loyalty point for every €10 of purchases. Each point is redeemable for a €3 discount on any future purchases. On July 2, 2022, customers purchase products for €300,000 (with a cost of

€171,000) and earn 30,000 points redeemable for future purchases. Martz expects 25,000 points to be redeemed. Martz estimates a standalone selling price of €2.50 per point (or €75,000 total) on the basis of the likelihood of redemption. The points provide a material right to customers that they would not receive without entering into a contract. As a result, Martz concludes that the points are a separate performance obligation.

Instructions

- Determine the transaction price for the product and the customer loyalty points.
- Prepare the journal entries to record the sale of the product and related points on July 2, 2022.
- At the end of the first reporting period (July 31, 2022), 10,000 loyalty points are redeemed. Martz continues to expect 25,000 loyalty points to be redeemed in total. Determine the amount of loyalty point revenue to be recognized at July 31, 2022.

P18.8 (LO 2, 3) (Time Value, Gift Cards) Presented below are two independent revenue arrangements for Colbert Company.

Instructions

Respond to the requirements related to each revenue arrangement.

- Colbert sells 3D printer systems. Recently, Colbert provided a special promotion of zero-interest financing for 2 years on any new 3D printer system. Assume that Colbert sells Lyle Cartright a 3D system, receiving a \$5,000 zero-interest-bearing note on January 1, 2022. The cost of the 3D printer system is \$4,000. Colbert imputes a 6% interest rate on this zero-interest note transaction. Prepare the journal entry to record the sale on January 1, 2022, and compute the total amount of revenue to be recognized in 2022.
- Colbert sells 20 non-refundable \$100 gift cards for 3D cartridges on March 1, 2022. The cartridges have a standalone selling price of \$100 (cost \$80). The gift cards' expiration date is June 30, 2022. Colbert estimates that customers will not redeem 10% of these gift cards. The cumulative pattern of redemption is as follows.

	Redemption Total
March 31	50%
April 30	80

June 30	85
---------	----

Prepare the 2022 journal entries related to the gift cards at March 1, March 31, April 30, and June 30.

***P18.9 (LO 5, 6) (Recognition of Profit on Long-Term Contract)**

Shanahan Construction Company has entered into a contract beginning January 1, 2022, to build a parking complex. It has been estimated that the complex will cost \$600,000 and will take 3 years to construct. The complex will be billed to the purchasing company at \$900,000. The following data pertain to the construction period.

	2022	2023	2024
Costs to date	\$270,000	\$450,000	\$610,000
Estimated costs to complete	330,000	150,000	—0—
Progress billings to date	270,000	550,000	900,000
Cash collected to date	240,000	500,000	900,000

Instructions

- Using the percentage-of-completion method, compute the estimated gross profit that would be recognized during each year of the construction period.
- Using the cost-recovery method, compute the estimated gross profit that would be recognized during each year of the construction period.

***P18.10 (LO 5, 6, 7) (Long-Term Contract with Interim Loss)** On March 1, 2022, Pechstein Construction Company contracted to construct a factory building for Fabrik Manufacturing Inc. for a total contract price of \$8,400,000. The building was completed by October 31, 2024. The annual contract costs incurred, estimated costs to complete the contract, and accumulated billings to Fabrik for 2022, 2023, and 2024 are given below.

	2022	2023	2024
Contract costs incurred during the year	\$2,880,000	\$2,230,000	\$2,190,000
Estimated costs to complete the contract at 12/31	3,520,000	2,190,000	—0—
Billings to Fabrik during the year	3,200,000	3,500,000	1,700,000

Instructions

- Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2022, 2023, and 2024. (Ignore income taxes.)

- b. Using the cost-recovery method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2022, 2023, and 2024. (Ignore incomes taxes.)

***P18.11 (LO 5, 6, 7) (Long-Term Contract with an Overall Loss)** On July 1, 2022, Torvill Construction Company Inc. contracted to build an office building for Gumbel Corp. for a total contract price of \$1,900,000. On July 1, Torvill estimated that it would take between 2 and 3 years to complete the building. On December 31, 2024, the building was deemed substantially completed. Following are accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to Gumbel for 2022, 2023, and 2024.

	At 12/31/22	At 12/31/23	At 12/31/24
Contract costs incurred to date	\$ 300,000	\$1,200,000	\$2,100,000
Estimated costs to complete the contract	1,200,000	800,000	—0—
Billings to Gumbel	300,000	1,100,000	1,850,000

Instructions

- Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2022, 2023, and 2024. (Ignore income taxes.)
- Using the cost-recovery method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2022, 2023, and 2024. (Ignore income taxes.)

***P18.12 (LO 8) (Franchise Revenue)** Amigos Burrito Inc. sells franchises to independent operators throughout the United States. The contract with a franchisee includes the following provisions.

- The franchisee is charged an initial fee of \$120,000. Of this amount, \$20,000 is payable when the agreement is signed, and a \$100,000 zero-interest-bearing note is payable with a \$20,000 payment at the end of each of the 5 subsequent years. The present value of an ordinary annuity of five annual receipts of \$20,000, each discounted at 10%, is \$75,816.
- The initial franchise fee collected by Amigos is to be refunded and the remaining obligation canceled if, for any reason, the franchisee fails to open the franchise.
- In return for the initial franchise fee, Amigos agrees to (a) assist the franchisee in selecting the location for the business, (b) negotiate the lease for the land, (c) obtain financing and assist with building design, (d) supervise construction, (e) establish accounting and tax records, and (f)

provide expert advice over a 5-year period relating to such matters as employee and management training, quality control, and promotion. This continuing involvement by Amigos helps maintain the brand value of the franchise.

4. In addition to the initial franchise fee, the franchisee is required to pay to Amigos a monthly fee of 2% of sales for menu planning, recipe innovations, and the privilege of purchasing ingredients from Amigos at or below prevailing market prices.

Amigos Burrito's management estimates that the value of the services rendered to the franchisee at the time the contract is signed is \$20,000. All franchisees to date have opened their locations at the scheduled time, and none have defaulted on any of the notes receivable. The credit ratings of all franchisees would entitle them to borrow at the current interest rate of 10%.

Instructions

- a. Discuss the alternatives that Amigos Burrito Inc. might use to account for the franchise fees.
- b. Prepare the journal entries for the initial and continuing franchise fees, assuming:
 1. Franchise agreement is signed on January 5, 2022.
 2. Amigos completes franchise startup tasks and the franchise opens on July 1, 2022.
 3. The franchisee records \$260,000 in sales in the first 6 months of operations and remits the monthly franchise fee on December 31, 2022.
- c. Briefly describe the accounting for unearned franchise fees, assuming that once the franchise opens. Amigos has little or no involvement with the franchisee related to expert advice on employee and management training, quality control, and promotion.

Concepts for Analysis

CA18.1 (LO 1) (Five-Step Revenue Process) Revenue is recognized based on a five-step process that is applied to a company's revenue arrangements.

Instructions

- a. Briefly describe the five-step process.
- b. Explain the importance of contracts when analyzing revenue arrangements.

- c. How are fair value measurement concepts applied in implementation of the five-step process?
- d. How does the five-step process reflect application of the definitions of assets and liabilities?

CA18.2 (LO 2) (Satisfying Performance Obligations) Judy Schaeffer is trying to understand the revenue recognition principle as it relates to the five-step revenue recognition process.

Instructions

- a. Describe the revenue recognition principle.
- b. Briefly discuss how the revenue recognition principle relates to the definitions of assets and liabilities. What is the importance of control?
- c. Judy recalls that previous revenue recognition guidance required that revenue not be recognized unless the revenue was realized or realizable (also referred to as collectibility). Is collectibility a consideration in the recognition of revenue? Explain.

CA18.3 (LO 2) (Recognition of Revenue—Theory) Revenue is usually recognized at the point of sale (a point in time). Under special circumstances, however, bases other than the point of sale are used for the timing of revenue recognition.

Instructions

- a. Why is the point of sale usually used as the basis for the timing of revenue recognition?
- b. Disregarding the special circumstances when bases other than the point of sale are used, discuss the merits of each of the following objections to the point-of-sale basis of revenue recognition:
 - 1. It is too conservative because revenue is earned throughout the entire process of production.
 - 2. It is not conservative enough because accounts receivable do not represent disposable funds, sales returns and allowances may be made, and collection and bad debt expenses may be incurred in a later period.
- c. Revenue may also be recognized over time. Give an example of the circumstances in which revenue is recognized over time and accounting merits of its use instead of the point-of-sale basis.

CA18.4 (LO 2) (Recognition of Revenue—Theory) Revenue is recognized for accounting purposes when a performance obligation is satisfied. In some situations, revenue is recognized over time as the fair values of assets and liabilities change. In other situations, however, accountants have developed guidelines for recognizing revenue at the point of sale.

Instructions

(Ignore income taxes.)

- a. Explain and justify why revenue is often recognized at time of sale.
- b. Explain in what situations it would be appropriate to recognize revenue over time.

CA18.5 (LO 3) (Discounts) Fahey AG sells Stairmasters to a retailer, Physical Fitness SE, for €2,000,000. Fahey has a history of providing price concessions on this product if the retailer has difficulty selling the Stairmasters to customers. Fahey has experience with sales like these in the past and estimates that the maximum amount of price concessions is €300,000.

Instructions

- a. Determine the amount of revenue that Fahey should recognize for the sale of Stairmasters to Physical Fitness SE.
- b. According to IFRS, in some situations, the amount of revenue recognized may be constrained. Explain how the accounting for the Stairmasters sales might be affected by the revenue constraint due to variable consideration or returns.
- c. Some believe that revenue recognition should be constrained by collectibility. Is such a view consistent with IFRS? Explain.

CA18.6 (LO 3, 4) (Recognition of Revenue from Subscriptions) *Cutting Edge* is a monthly magazine that has been on the market for 18 months. It currently has a circulation of 1.4 million copies. Negotiations are underway to obtain a bank loan in order to update the magazine's facilities. *Cutting Edge* is producing close to capacity and expects to grow at an average of 20% per year over the next 3 years.

After reviewing the financial statements of *Cutting Edge*, Andy Rich, the bank loan officer, has indicated that a loan could be offered to *Cutting Edge* only if it can increase its current ratio, and decrease its debt to equity ratio to a specified level. Jonathan Embry, the marketing manager of *Cutting Edge*, devises a plan to meet these requirements. Embry wants to initiate an advertising campaign to immediately increase circulation. After purchasing another magazine's mailing

list, the marketing department will contact potential customers. The campaign will include:

1. An offer to subscribe to *Cutting Edge* at three-fourths the normal price.
2. A special offer for all new subscribers: at any time a subscriber can request the most current world atlas at a guaranteed price of £2.
3. An unconditional guarantee that any subscriber will receive a full refund if dissatisfied with the magazine.

Although the offer of a full refund is risky, Embry claims that few people will ask for a refund after receiving half of their subscription issues. Embry notes that other magazine companies have tried this sales promotion technique and experienced great success. The average cancellation rate has been 25%. On average, each company increased its initial circulation threefold and in the long run increased circulation to twice the level that existed before the promotion. In addition, it is anticipated that 60% of the new subscribers will take advantage of the atlas premium. Embry feels confident that the new subscriptions resulting from the advertising campaign will increase the current ratio and decrease the debt to equity ratio.

You are the controller of *Cutting Edge* and must give your opinion of the proposed plan.

Instructions

- a. When should revenue from the new subscriptions be recognized?
- b. How would you classify the estimated sales returns stemming from the unconditional guarantee?
- c. How should the atlas premium be recorded? Is the estimate of premium claims a liability? Explain.
- d. Does the proposed plan achieve the goals of increasing the current ratio and decreasing the debt to equity ratio?

CA18.7 (LO 3, 4) (Recognition of Revenue—Bonus Credits) Griseta & Dubel Inc. was formed early this year to sell merchandise credits to merchants, who distribute the credits free to their customers. For example, customers can earn additional credits based on the dollars they spend with a merchant (e.g., airlines and hotels). Accounts for accumulating the credits, and catalogs illustrating the merchandise for which the credits may be exchanged, are maintained online. Centers with inventories of merchandise premiums have been established for redemption of the credits. Merchants may not return unused credits to Griseta & Dubel.

The following schedule summarizes Griseta & Dubel’s expectations for the percentages of a normal month’s activity, which is defined as the level of operations expected when expansion of activities ceases or tapers off to a stable rate. The company expects that it will reach this level in the third year and that sales of credits will average \$6,000,000 per month throughout the year.

Month	Actual Credit Sales Percent	Merchandise Premium Purchases Percent	Credit Redemptions Percent
6th	30%	40%	10%
12th	60	60	45
18th	80	80	70
24th	90	90	80
30th	100	100	95

Griseta & Dubel plans to adopt an annual closing date at the end of each 12 months of operation.

Instructions

- Discuss the factors to be considered in determining when revenue should be recognized.
- Apply the revenue recognition factors to the Griseta & Dubel Inc. revenue arrangement.
- Provide statement of financial position accounts that should be used, and indicate how each should be classified.

CA18.8 (LO 2) Ethics (Revenue Recognition—Membership Fees) Muscle Health Club (MHC) offers 1-year memberships. Membership fees are due in full at the beginning of the individual membership period. As an incentive to new customers, MHC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. As a result of this policy, Richard Nies, company controller, recognized revenue ratably over the life of the membership. MHC is in the process of preparing its year-end financial statements. Rachel Avery, MHC’s treasurer, is concerned about the company’s lackluster performance this year. She reviews the financial statements Nies prepared and tells Nies to recognize membership revenue when the fees are received.

Instructions

Answer the following questions.

- a. What are the ethical issues involved?
- b. What should Nies do?

***CA18.9 (LO 5) Writing (Long-Term Contract—Percentage-of-Completion)** Widjaja Group is accounting for a long-term construction contract using the percentage-of-completion method. The 4-year contract is currently in its second year. The latest estimates of total contract costs indicate that the contract will be completed at a profit to Widjaja Group.

Instructions

- a. What is the theoretical justification for Widjaja Group's use of the percentage-of-completion method?
- b. How would progress billings be accounted for? Include in your discussion the classification of progress billings in Widjaja Group's financial statements.
- c. How would the income recognized in the second year of the 4-year contract be determined using the cost-to-cost method of determining percentage of completion?
- d. What would be the effect on earnings per share, in the first year of the 4-year contract, of using the percentage-of-completion method instead of the cost-recovery method? Discuss.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What were M&S's sales for 2019?
- b. What was the percentage of increase or decrease in M&S's sales from 2018 to 2019?
- c. In its notes to the financial statements, what criteria does M&S use to recognize revenue?

- d. How does M&S account for discounts and loyalty schemes? Does the accounting conform to accrual-accounting concepts? Explain.

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What were adidas's and Puma's net revenues (sales) for the year 2018? Which company increased its revenues more (amounts and percentage) from 2017 to 2018?
- Are the revenue recognition policies of adidas and Puma similar? Explain.
- In which foreign countries (geographic areas) did adidas (see Note) and Puma experience significant revenues in 2018?

Financial Statement Analysis Case

British Airways

The following note appears in the "Summary of Significant Accounting Policies" section of the annual report of **British Airways** (GBR).

Summary of significant accounting policies (in part)

Revenue

Passenger and cargo revenue is recognised when the transportation service is provided. Passenger tickets net of discounts are recorded as current liabilities in the 'sales in advance of carriage' account until recognised as revenue. Unused tickets are recognised as revenue using estimates regarding the timing of recognition based on the terms and conditions of the ticket and historical trends. Other revenue is recognised at the time the service is provided. Commission costs are recognised at the same time as the revenue to which they relate and are charged to operating expenditure.

Key accounting estimates and judgments

Passenger revenue recognition

Passenger revenue is recognised when the transportation is provided. Ticket sales that are not expected to be used for transportation ('unused tickets') are

recognised as revenue using estimates regarding the timing of recognition based on the terms and conditions of the ticket and historical trends. During the current year, changes in estimates regarding the timing of revenue recognition primarily for unused flexible tickets were made, resulting in increased revenue in the current year of £109 million. During the prior year, changes in estimates regarding the timing of revenue recognition for unused restricted tickets were made, resulting in increased revenue in the prior year of £36 million. Both the above changes reflect more accurate and timely data obtained through the increased use of electronic tickets.

Instructions

- Identify the revenue recognition policies used by British Airways as discussed in its note on significant accounting policies.
- Under what conditions are the revenue recognition methods identified in the first paragraph of British Airways' note acceptable?
- From the information provided in the second paragraph of British Airways' note, identify the type of operation being described and defend the acceptability of the revenue recognition method.

Accounting, Analysis, and Principles

Diversified Industries manufactures sump-pumps. Its most popular product is called the Super Soaker, which has a retail price of \$1,200 and costs \$540 to manufacture. It sells the Super Soaker on a standalone basis directly to businesses. Diversified also provides installation services for these commercial customers, who want an emergency pumping capability (with regular and back-up generator power) at their businesses. Diversified also distributes the Super Soaker through a consignment agreement with Menards. Income data for the first quarter of 2022 from operations other than the Super Soaker are as follows.

Revenues	\$9,500,000
Expenses	7,750,000

Diversified has the following information related to two Super Soaker revenue arrangements during the first quarter of 2022.

- Diversified sells 30 Super Soakers to businesses in flood-prone areas for a total contract price of \$54,600. As part of the contract, Diversified also provides installation (at a cost of \$150 per pump). On a standalone basis, the fair value of this service is \$200 per unit installed. The contract payment also includes a \$10 per month service plan for the pumps for 3 years after installation (Diversified's cost to provide this service is \$7 per month). The

Super Soakers are delivered and installed on March 1, 2022, and full payment is made to Diversified. Any discount is applied to the pump/installation bundle.

2. Diversified ships 300 Super Soakers to Menards on consignment. By March 31, 2022, Menards has sold two-thirds of the consigned merchandise at the listed price of \$1,200 per unit. Menards notifies Diversified of the sales, retains a 5% commission, and remits the cash due Diversified.

Accounting

Determine Diversified Industries' 2022 first-quarter net income. (Ignore taxes.)

Analysis

Determine free cash flow (see [Chapter 5](#)) for Diversified Industries for the first quarter of 2022. In the first quarter, Diversified had depreciation expense of \$175,000 and a net increase in working capital (change in accounts receivable and accounts payable) of \$250,000. In the first quarter, capital expenditures were \$500,000; Diversified paid dividends of \$120,000.

Principles

Explain how the five-step revenue recognition process, when applied to Diversified's two revenue arrangements, reflects the concept of control in the definition of an asset and trade-offs between relevance and faithful representation.

Research Case

Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions and allowing customers to order items on a bill-and-hold basis can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, generous return or bill-and-hold provisions might lead to challenges to revenue recognition under IFRS. The company CFO would like you to research the issue to provide an authoritative answer.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). Under the Standards Development tab, click on Work plan for IFRS and go to Revenue Recognition. Click on “Summary of Board Deliberations.” When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is the authoritative literature addressing revenue recognition when right of return exists?
- b. What is meant by “right of return”? “Bill and hold”?
- c. Describe the accounting when there is a right of return.
- d. When goods are sold on a bill-and-hold basis, what conditions must be met to recognize revenue upon receipt of the order?

Notes

1 See, for example, “Preliminary Views on Revenue Recognition in Contracts with Customers,” *IASB/FASB Discussion Paper* (December 19, 2008). Some noted that U.S. GAAP has so many standards that at times they are inconsistent with each other in applying basic principles. In addition, even with the many standards, no comprehensive guidance was provided for service transactions. Conversely, IFRS lacked guidance in certain fundamental areas, such as multiple-deliverable arrangements. In addition, there were inconsistencies in applying revenue recognition principles to long-term contracts versus other elements of revenue recognition.

2 BEAN disregards revenue guidance for a contract that is wholly unperformed and for which each party can unilaterally terminate the contract without

compensation.

- 3 We provide expanded discussion and examples of variation in transaction price, including variable consideration, later in the chapter.
- 4 While in the BEAN example, recognition occurred at a point in time, in certain cases companies satisfy performance obligations over a period of time. We address the criteria for determining point-in-time versus over-time recognition later in the chapter.
- 5 A valid contract exists when (1) the contract has commercial substance, (2) the parties have approved the contract, (3) the contract identifies the rights of the parties, (4) payment terms are identified, and (5) it is probable that the consideration will be collected. The IASB included this last criterion (which acts like a collectibility threshold) because the Board concluded that the assessment of a customer's credit risk was important to determine whether a contract is valid. That is, under the revenue standard (discussed later in the chapter), collectibility is not a consideration for determining whether revenue is recognized. However, collectibility may be a consideration in assessing whether parties to the contract are committed to perform. In determining whether it is probable that a company will collect the amount of consideration to which it is entitled, the company assesses both the customer's ability and intent to pay as amounts become due. [7]
- 6 In practice, determining whether multiple performance obligations exist can be complex. Indicators that help to understand whether performance obligations should be accounted for separately are (1) the performance obligations have a standalone selling price and (2) the goods or services are not highly interdependent or interrelated. *For homework purposes, you need to determine the objective of the transaction.* If the objective is to transfer individual goods or services, then account for these performance obligations separately.
- 7 Conditions such as one of the following would indicate that the revenue is constrained (or not recognized):
 1. The amount of consideration is highly susceptible to factors outside the company's influence. Factors include volatility in a market, the judgment of third parties, weather conditions, and a high risk of obsolescence of the promised good or service.
 2. The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.
 3. The company's experience (or other evidence) with similar types of performance obligations is limited.

4. The contract has a large number and broad range of possible consideration amounts. [\[10\]](#)

[8](#) A selling price is highly variable when a company sells the same good or service to different customers (at or near the same time) for a broad range of amounts. A selling price is uncertain when a company has not yet established a price for a good or service and the good or service has not previously been sold. [\[13\]](#)

[9](#) As indicated, at the date of sale, both sales revenue and accounts receivable are recorded at their gross amounts without consideration of sales returns and allowances. Then, at the end of the reporting period, adjusting entries are made, resulting in both sales revenues and accounts receivable being reported at net amounts, and which reflect actual and estimated returns and allowances. As discussed in [Chapter 7](#), most companies follow this adjusting entry approach because estimating net sales at the date of sale is often difficult and time-consuming. In addition, recording accounts receivables net at the sale date may lead to a lack of correspondence between the control account and the subsidiary ledger related to accounts receivable. By waiting to make the necessary adjusting entries at the end of the reporting period, information related to actual sales returns and allowances is available, and a company still achieves the IASB's objective of reflecting accounts receivable and sales revenue at the amount the company is entitled to receive (and inventories and cost of goods sold at cost).

[10](#) Beyond financing motivations, a company may transfer inventory to another party on a short-term basis to avoid inventory taxes. If the counterparty is able to use the inventory during the transfer period, the transaction may more appropriately be accounted for as a rental agreement.

[11](#) If the repurchase price is less than the selling price, then the transaction is accounted for as a lease. [\[15\]](#) The accounting for leases is discussed in [Chapter 21](#).

[12](#) Indicators that the company's performance obligation is to arrange for the providing of goods or the performing of services by another party (i.e., the company is an agent and should recognize revenue in the net amount) include the following: (a) the other party is primarily responsible for fulfilling the contract; (b) the company does not have inventory risk before or after the customer order, during shipping, or on return; and (c) the company does not have latitude in establishing prices for the other party's goods or services and, hence, the benefit that the company can receive from those goods or services is constrained. [\[17\]](#)

- 13** As with the accounting for sales returns and allowances, the entries shown here reflect a gross (as opposed to net) treatment of the warranty obligation. That is, at the date of sale, Maverick recorded sales with an assurance warranty at the gross amount, without adjustment for expected warranty costs (sometimes referred to as the expense warranty approach). Then at the end of the accounting period when financial statements are prepared, Maverick prepares adjusting entries to record a liability for any remaining estimated warranty expenses (after accounting for actual warranty expenditures). Companies generally do not use the net method because it requires additional analysis and bookkeeping to adjust the warranty liability for unused warranty claims.
- 14** The initiation fee might be viewed as a separate performance obligation (it provides a renewal option at a lower price than normally charged, perhaps with different services). In this situation, in the first period, Bigelow would report revenue of £600 ($£50 \times 12$). The initiation fee would then be allocated to years two and three (£100 in each year) unless forfeited earlier.
- 15** Another approach to account for a contract modification is to report the information in a cumulative catch-up manner. In other words, assuming that these new products are part of the original contract, companies adjust the revenue account to reflect the cumulative effect for periods prior to when the modification occurred. An example of a catch-up situation is a long-term construction contract, which is discussed in more detail in [Appendix 18A](#). Use of the prospective approach avoids the complexity of opening up the accounting for previously satisfied performance obligations. However, it ignores any adjustments to revenue that have already been recognized. **[19]** *For homework purposes, unless instructed otherwise, use the prospective approach for modifications that do not result in a separate performance obligation.* Expanded discussion of the prospective and cumulative catch-up (retrospective) approaches to accounting changes is provided in [Chapter 22](#).
- 16** See *PricewaterhouseCoopers Dateline 2013–2014*.
- 17** The right to payment for performance completed to date does not need to be for a fixed amount. However, the company must be entitled to an amount that would compensate the company for performance completed to date (even if the customer can terminate the contract for reasons other than the company's failure to perform as promised). Compensation for performance completed to date includes payment that approximates the selling price of the goods or services transferred to date (for example, recovery of the company's costs plus a reasonable profit margin).

- 18** The accounting for losses reflects application of the accounting for onerous contracts. **[23]**
- 19.** In 2024, Hardhat Construction will recognize the remaining 33½ percent of the revenue (£1,507,500), with costs of £1,468,962 as expected, and will report a gross profit of £38,538. The total gross profit over the three years of the contract would be £115,038 [$£125,000$ (2022) – $£48,500$ (2023) + $£38,538$ (2024)]. This amount is the difference between the total contract revenue of £4,500,000 and the total contract costs of £4,384,962.
- 20** If the costs in 2024 are £1,640,250 as projected, at the end of 2024 the Construction in Process account will have a balance of £1,640,250 + £2,859,750, or £4,500,000, equal to the contract price. When the company records the revenue remaining to be recognized in 2024 of £1,620,000 [$£4,500,000$ (total contract price) – $£1,125,000$ (2022) – $£1,755,000$ (2023)] with the construction expense to be recognized in 2024 of £1,620,000 [total costs of £4,556,250 less the total costs recognized in prior years of £2,936,250 (2022, £1,000,000; 2023, £1,936,250)], a zero profit results. Thus, the total loss has been recognized in 2023, the year in which it first became evident.
- 21** Franchises are an example of a license, or a similar right, to use intellectual property. In such arrangements, a company grants a customer the right to use, but not own, intellectual property of the company. Other examples of intellectual property include (1) software and technology; (2) motion pictures, music, and other forms of media and entertainment; and (3) patents, trademarks, and copyrights. Generally, revenue is recognized in these situations when the customer obtains control of the rights. In some cases, a license is a promise to provide a right, which transfers to the customer at a point in time. In other cases, a license is a promise to provide access to an entity's intellectual property, which transfers benefits to the customer over time. **[24]**

CHAPTER 19

Accounting for Income Taxes

LEARNING OBJECTIVES

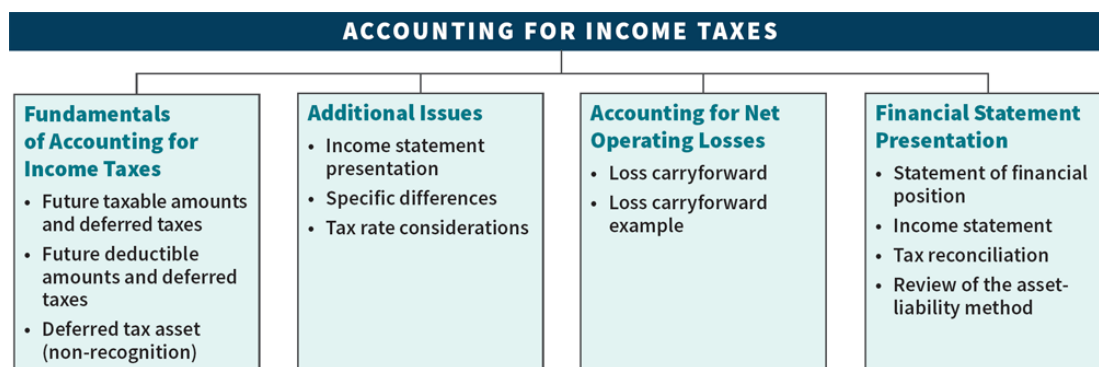

After studying this chapter, you should be able to:

1. Describe the fundamentals of accounting for income taxes.
2. Identify additional issues in accounting for income taxes.
3. Explain the accounting for loss carryforwards.
4. Describe the presentation of deferred income taxes in financial statements.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 19

As the following opening story indicates, companies spend a considerable amount of time and effort to minimize their income tax payments. And with good reason, as income taxes are a major cost of doing business for most companies. Yet, at the same time, companies must present financial information to the investment community that provides a clear picture of present and potential tax obligations and tax benefits. In this chapter, we discuss the basic guidelines that companies must follow in reporting income taxes. The content and organization of the chapter are as follows.

Safe (Tax) Haven?

One set of costs that companies manage are those related to taxes. In today's competitive markets, managers are expected to look for loopholes in the tax law that a company can exploit to pay less tax to various tax authorities. By paying less in taxes, companies have more cash available to fund operations, finance expansion, and create new jobs. What happens, though, when companies push the tax-saving envelope? Well, they may face a tax audit, the results of which could hurt their financial statements.

Amazon.com (USA) is a notable example of a company that maneuvered to reduce its taxable income. It managed its tax costs down by locating part of its business in Ireland in a legal structure that paid zero taxes, while operating its retail business in another structure. **Amazon Europe Holding Technologies SCS (AEHT)**, a Luxembourg legal entity, held the legal right to use Amazon's intellectual property outside of the United

States. The bulk of Amazon's European business was conducted by **Amazon EU Sarl**. While these businesses were profitable, Amazon EU Sarl paid a royalty to AEHT that resulted in Amazon EU Sarl paying very little in income taxes. The net result of this structure was that Amazon paid only €3.06 billion in taxes over the past decade despite having earned €815.22 billion in revenue and €24.10 billion in profits.

Regulators have been increasing their scrutiny of tax-evasion transactions that do not serve a legitimate business purpose. In the case of Amazon, in 2017 the European Commission ordered Luxembourg to recoup €250 million in taxes that it says the country should have charged Amazon. The finding against Amazon follows a similar finding against **Apple Inc.** (USA), in which the European Commission ordered Apple to paid €13 billion in back taxes related to its structure in Ireland. A recent report from Fair Tax Mark, a tax fairness group, indicates that a group of firms referred to as the "Silicon Six" (**Facebook**, Apple, Amazon, **Netflix**, **Google**, and **Microsoft**) avoided paying over €90 billion in taxes through various aggressive tax structures over the last decade.

The **G20**, a group of finance ministers and central bank governors from 20 major economies (19 countries plus the European Union), has been at the forefront of efforts to establish a more effective, efficient, and fair international tax system. Here are some key elements identified by this group for implementation.

1. In an increasingly borderless world, **strengthening international cooperation in tax matters** is essential to ensuring the integrity of national tax systems and maintaining trust in governments.
2. **The development of a new global tax standard with automatic exchange of information.** Recent developments involving undisclosed foreign bank accounts have highlighted the urgent need to move to this new standard. The **Global Forum** (an international body for ensuring the implementation of the internationally agreed-upon standards of transparency and exchange of information on request in the tax area) will establish a mechanism to monitor and review the effective implementation of the new tax standard.
3. **International collective efforts to address the tax base erosion resulting from international tax planning.** Base erosion and profit shifting (BEPS) relate chiefly to instances where the interaction of different tax rules result in tax planning that may be used by

multinational enterprises to artificially shift profits out of the countries where they are earned, resulting in very low taxes or even no taxes. If left unchecked, these practices undermine the fairness and integrity of our tax systems. They fundamentally distort competition because businesses that engage in cross-border BEPS strategies gain a competitive advantage over enterprises that operate mostly at the domestic level. Fair, transparent, and efficient tax systems are not only key pillars for sound public finances but also provide a sustainable framework for dynamic economies.

4. **Encouraging countries to examine how their domestic tax laws contribute to BEPS.** Such efforts help ensure that international and domestic tax rules do not allow or encourage multinational enterprises to reduce overall taxes paid by artificially shifting profits to low-tax jurisdictions. International tax rules, which date back to the 1920s, have not kept pace with the changing business environment, including the growing importance of intangibles and the digital economy.

Hopefully, through the efforts of these organizations and others, a more balanced and fair international tax system will emerge.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Fundamentals of Accounting for Income Taxes

LEARNING OBJECTIVE 1

Describe the fundamentals of accounting for income taxes.

Up to this point, you have learned the basic guidelines that companies use to report information to investors and creditors. Companies also must file income tax returns following the guidelines developed by the appropriate tax authority. Because IFRS and tax regulations differ in a number of ways,

so frequently do pretax financial income and taxable income. Consequently, the amount that a company reports as tax expense will differ from the amount of taxes payable to the tax authority. [Illustration 19.1](#) highlights these differences.

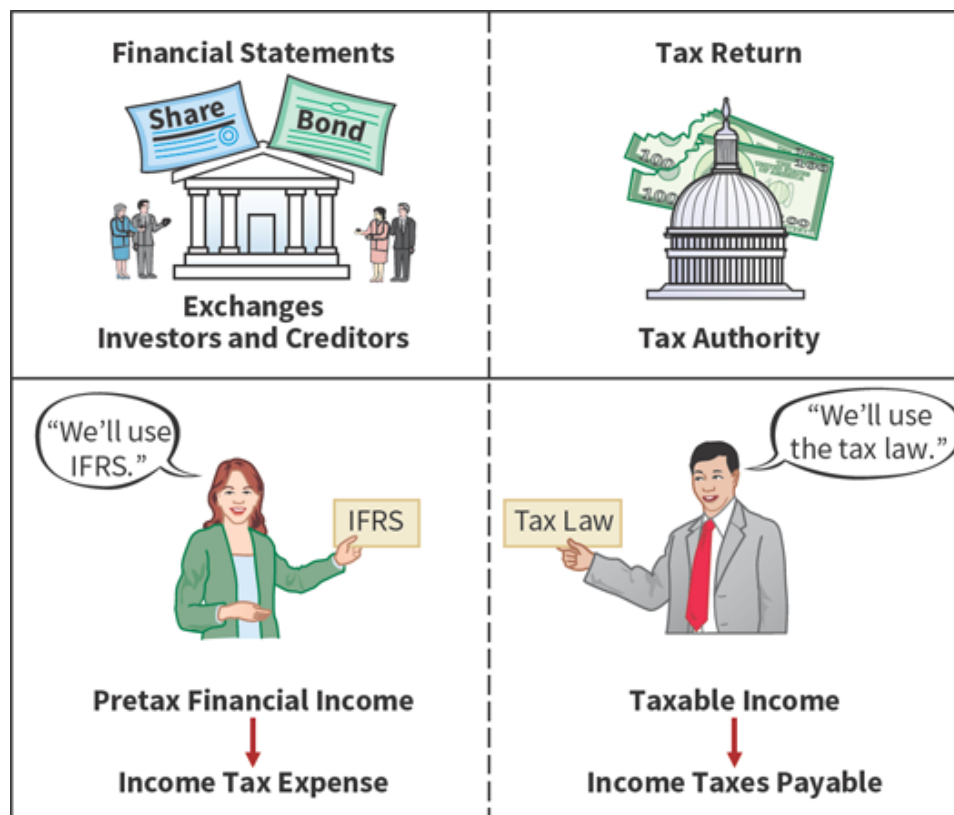

ILLUSTRATION 19.1 Fundamental Differences Between Financial and Tax Reporting

Pretax financial income is a *financial reporting* term. It also is often referred to as *income before taxes*, *income for financial reporting purposes*, or *income for book purposes*. Companies determine pretax financial income according to IFRS. They measure it with the objective of providing useful information to investors and creditors.

Taxable income (income for tax purposes) is a *tax accounting* term. It indicates the amount used to compute income taxes payable. Companies determine taxable income according to the tax regulations. Income taxes provide money to support government operations.

To illustrate how differences in IFRS and tax rules affect financial reporting and taxable income, assume that Chelsea Inc. reported revenues of \$130,000 and expenses of \$60,000 in each of its first three years of

operations. [Illustration 19.2](#) shows the (partial) income statement over these three years.

Chelsea Inc. IFRS Reporting				
	2022	2023	2024	Total
Revenues	\$130,000	\$130,000	\$130,000	
Expenses	60,000	60,000	60,000	
Pretax financial income	<u>\$ 70,000</u>	<u>\$ 70,000</u>	<u>\$ 70,000</u>	<u>\$210,000</u>
Income tax expense (40%)	<u>\$ 28,000</u>	<u>\$ 28,000</u>	<u>\$ 28,000</u>	<u>\$ 84,000</u>

ILLUSTRATION 19.2 Financial Reporting Income

For tax purposes (following the tax rules), Chelsea reported the same expenses to the tax authority in each of the years. But, as [Illustration 19.3](#) shows, Chelsea reported taxable revenues of \$100,000 in 2022, \$150,000 in 2023, and \$140,000 in 2024.

Chelsea Inc. Tax Reporting				
	2022	2023	2024	Total
Revenues	\$100,000	\$150,000	\$140,000	
Expenses	60,000	60,000	60,000	
Taxable income	<u>\$ 40,000</u>	<u>\$ 90,000</u>	<u>\$ 80,000</u>	<u>\$210,000</u>
Income taxes payable (40%)	<u>\$ 16,000</u>	<u>\$ 36,000</u>	<u>\$ 32,000</u>	<u>\$ 84,000</u>

ILLUSTRATION 19.3 Tax Reporting Income

Income tax expense and income taxes payable differed over the three years but were equal **in total**, as [Illustration 19.4](#) shows.

Chelsea Inc. Income Tax Expense and Income Taxes Payable				
	2022	2023	2024	Total
Income tax expense	\$28,000	\$ 28,000	\$ 28,000	\$84,000
Income taxes payable	16,000	36,000	32,000	84,000
Difference	\$12,000	\$ (8,000)	\$ (4,000)	\$ 0

ILLUSTRATION 19.4 Comparison of Income Tax Expense to Income Taxes Payable

The differences between income tax expense and income taxes payable in this example arise for a simple reason. For financial reporting, companies use the full accrual method to report revenues. For tax purposes, they generally use a modified cash basis. As a result, Chelsea reports pretax financial income of \$70,000 and income tax expense of \$28,000 for each of the three years. However, taxable income fluctuates. For example, in 2022 taxable income is only \$40,000, so Chelsea owes just \$16,000 to the tax authority that year. Chelsea classifies the income taxes payable as a current liability on the statement of financial position.

As [Illustration 19.4](#) indicates, for Chelsea the \$12,000 (\$28,000 – \$16,000) difference between income tax expense and income taxes payable in 2022 reflects taxes that it will pay in future periods. This \$12,000 difference is often referred to as a **deferred tax amount**. In this case, it is a **deferred tax liability**. In cases where taxes will be lower in the future, Chelsea records a **deferred tax asset**. We explain the measurement and accounting for deferred tax liabilities and assets in the following two sections.¹

Future Taxable Amounts and Deferred Taxes

The example summarized in [Illustration 19.4](#) shows how income taxes payable can differ from income tax expense. This can happen when there are temporary differences between the amounts reported for tax purposes and those reported for book purposes. A **temporary difference** is the difference between the tax basis of an asset or liability and its reported (carrying or book) amount in the financial statements, which will result in taxable amounts or deductible amounts in future years. **Taxable**

amounts increase taxable income in future years. **Deductible amounts** decrease taxable income in future years.

In Chelsea's situation, the only difference between the book basis and tax basis of the assets and liabilities relates to accounts receivable that arose from revenue recognized for book purposes. [Illustration 19.5](#) indicates that Chelsea reports accounts receivable at \$30,000 in the December 31, 2022, IFRS-basis statement of financial position. However, the receivables have a zero tax basis.

Per Books	12/31/22	Per Tax Return	12/31/22
Accounts receivable	<u>\$30,000</u>	Accounts receivable	<u>\$-0-</u>

ILLUSTRATION 19.5 Temporary Difference, Accounts Receivable

What will happen to the \$30,000 temporary difference that originated in 2022 for Chelsea? Assuming that Chelsea expects to collect \$20,000 of the receivables in 2023 and \$10,000 in 2024, this collection results in future taxable amounts of \$20,000 in 2023 and \$10,000 in 2024. These future taxable amounts will cause taxable income to exceed pretax financial income in both 2023 and 2024.

An assumption inherent in a company's IFRS statement of financial position is that companies recover and settle the assets and liabilities at their reported amounts (carrying amounts). This assumption creates a requirement under accrual accounting to recognize *currently* the deferred tax consequences of temporary differences. That is, companies recognize the amount of income taxes that are payable (or refundable) when they recover and settle the reported amounts of the assets and liabilities, respectively. [Illustration 19.6](#) shows the reversal of the temporary difference described in [Illustration 19.5](#) and the resulting taxable amounts in future periods.

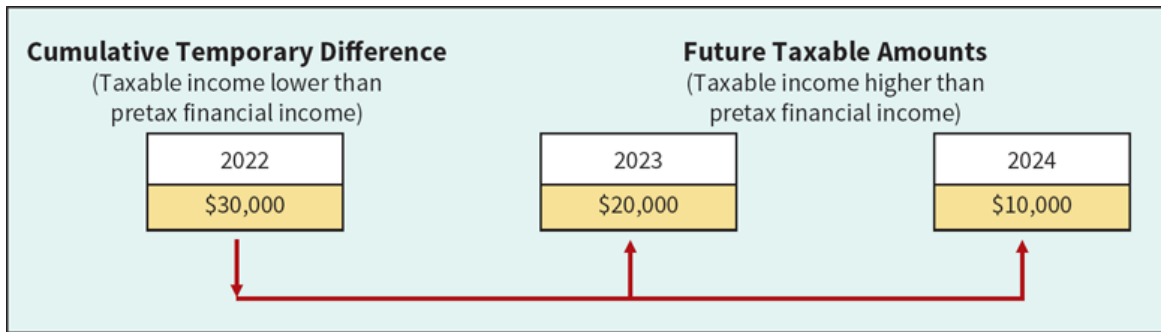

ILLUSTRATION 19.6 Reversal of Temporary Difference, Chelsea Inc.

Chelsea assumes that it will collect the accounts receivable and report the \$30,000 collection as taxable revenues in future tax returns. A payment of income tax in both 2023 and 2024 will occur. Chelsea should therefore record in its books in 2022 the deferred tax consequences of the revenue and related receivables reflected in the 2022 financial statements. Chelsea does this by recording a deferred tax liability.

Deferred Tax Liability

A **deferred tax liability** is the deferred tax consequences attributable to taxable temporary differences. In other words, **a deferred tax liability represents the increase in taxes payable in future years as a result of taxable temporary differences existing at the end of the current year.**

Recall from the Chelsea example that income taxes payable is \$16,000 ($\$40,000 \times .40$) in 2022 (see [Illustration 19.4](#)). In addition, a temporary difference exists at year-end because Chelsea reports the revenue and related accounts receivable differently for book and tax purposes. The book basis of accounts receivable is \$30,000, and the tax basis is zero. Thus, the total deferred tax liability at the end of 2022 is \$12,000, computed as shown in [Illustration 19.7](#).

Book basis of accounts receivable	\$30,000
Tax basis of accounts receivable	<u>—0—</u>
Cumulative temporary difference at the end of 2022	30,000
Tax rate	<u>× .40</u>
Deferred tax liability at the end of 2022	<u>\$12,000</u>

ILLUSTRATION 19.7 Computation of Deferred Tax Liability, End of 2022

Companies may also compute the deferred tax liability by preparing a schedule that indicates the future taxable amounts due to existing temporary differences. Such a schedule, as shown in [Illustration 19.8](#), is particularly useful when the computations become more complex.

	Future Years		
	2023	2024	Total
Future taxable amounts	\$20,000	\$10,000	\$30,000
Tax rate	× .40	× .40	
Deferred tax liability at the end of 2022	<u>\$ 8,000</u>	<u>\$ 4,000</u>	<u>\$12,000</u>

ILLUSTRATION 19.8 Schedule of Future Taxable Amounts

Because it is the first year of operations for Chelsea, there is no deferred tax liability at the beginning of the year. Chelsea computes the income tax expense for 2022 as shown in [Illustration 19.9](#).

Deferred tax liability at end of 2022	\$12,000
Deferred tax liability at beginning of 2022	<u>—0—</u>
Deferred tax expense for 2022	12,000
Current tax expense for 2022 (income taxes payable)	<u>16,000</u>
Income tax expense (total) for 2022	<u>\$28,000</u>

ILLUSTRATION 19.9 Computation of Income Tax Expense, 2022

This computation indicates that income tax expense has two components—**current tax expense** (the amount of income taxes payable for the period) and deferred tax expense. **Deferred tax expense** is the increase in the

deferred tax liability balance from the beginning to the end of the accounting period.

Companies credit taxes due and payable to Income Taxes Payable and credit the increase in deferred taxes to Deferred Tax Liability. They then debit the sum of those two items to Income Tax Expense. For Chelsea, it makes the following entry at the end of 2022.

Income Tax Expense	28,000	
Income Taxes Payable		16,000
Deferred Tax Liability		12,000

At the end of 2023 (the second year), the difference between the book basis and the tax basis of the accounts receivable is \$10,000. Chelsea multiplies this difference by the applicable tax rate to arrive at the deferred tax liability of \$4,000 ($\$10,000 \times .40$), which it reports at the end of 2023. Income taxes payable for 2023 is \$36,000 (see [Illustration 19.3](#)) and the income tax expense for 2023 is as shown in [Illustration 19.10](#).

Deferred tax liability at end of 2023	\$ 4,000
Deferred tax liability at beginning of 2023	<u>12,000</u>
Deferred tax expense (benefit) for 2023	(8,000)
Current tax expense for 2023 (income taxes payable)	<u>36,000</u>
Income tax expense (total) for 2023	<u>\$28,000</u>

ILLUSTRATION 19.10 Computation of Income Tax Expense, 2023

At the end of 2024 (the third and final year), the difference between the book basis and the tax basis of the receivable is zero. Income taxes payable for 2024 is \$32,000 ([Illustration 19.3](#)), and the income tax expense for 2024 is \$28,000 as shown in [Illustration 19.11](#).

Deferred tax liability at end of 2024	\$ -0-
Deferred tax liability at beginning of 2024	(4,000)
Deferred tax expense (benefit) for 2024	(4,000)
Current tax expense for 2024 (income taxes payable)	32,000
Income tax expense (total) for 2024	\$28,000

ILLUSTRATION 19.11 Computation of Income Tax Expense, 2024

Chelsea records the income tax expense, the change in deferred tax liability, and income taxes payable for 2024 as follows.

Income Tax Expense	28,000	
Deferred Tax Liability	4,000	
Income Taxes Payable		32,000

The Deferred Tax Liability account at the end of 2024 is shown in **Illustration 19.12**.

Deferred Tax Liability			
2023	8,000	2022	12,000
2024	4,000		

ILLUSTRATION 19.12 Deferred Tax Liability Account after Reversals

As indicated, the Deferred Tax Liability account has a zero balance at the end of 2024.

Financial Statement Effects

Chelsea reports the information on its statements of financial position for 2022–2024 as shown in **Illustration 19.13**.

Year-End	Income Taxes Payable	Deferred Tax Liability
2022	\$16,000	\$12,000
2023	36,000	4,000
2024	32,000	—0—

ILLUSTRATION 19.13 Statement of Financial Position Presentation, Deferred Tax Liabilities

Income taxes payable is reported as a current liability, and the deferred tax liability is reported as a non-current liability.

On its income statement, Chelsea reports the information as shown in [Illustration 19.14](#), from information taken from [Illustration 19.2](#).

For the Year Ended	2022	2023	2024
Income before income taxes	\$70,000	\$70,000	\$70,000
Income tax expense	28,000	28,000	28,000
Net income	<u>\$42,000</u>	<u>\$42,000</u>	<u>\$42,000</u>

ILLUSTRATION 19.14 Income Statement Presentation, Income Tax Expense

Companies also are required to show the components of income tax expense either in the income statement or in the notes to the financial statements. For example, if Chelsea reported this information in the income statement for 2022, the presentation is as shown in [Illustration 19.15](#).

Income Statement (partial)		
Income before income taxes		\$70,000
Income tax expense		
Current	\$16,000	
Deferred	<u>12,000</u>	<u>28,000</u>
Net income		<u>\$42,000</u>

ILLUSTRATION 19.15 Components of Income Tax Expense

What Do the Numbers Mean?

“Real Liabilities”

Some analysts dismiss deferred tax liabilities when assessing the financial strength of a company. But the IASB indicates that the deferred tax liability meets the definition of a liability because:

1. **It results from past events.** In the Chelsea example, the company performed services for customers and recognized revenue in 2022 for financial reporting purposes but deferred it for tax purposes.
2. **It is a present obligation.** Taxable income in future periods will exceed pretax financial income as a result of this temporary difference. Thus, a present obligation exists.
3. **It will require a transfer of economic resources.** Taxable income and taxes due in future periods will result from past events. The payment of these taxes when they come due in the future periods requires transfer of resources.

A set of studies indicates that deferred taxes do provide incremental information about future tax payments and that the market views deferred tax assets and liabilities similarly to other assets and liabilities.

Sources: B. Ayers, “Deferred Tax Accounting Under SFAS No. 109: An Empirical Investigation of Its Incremental Value-Relevance Relative to APB No. 11,” *The Accounting Review* (April 1998); and R. Laux, “The Association Between Deferred Tax Assets and Liabilities and Future Tax Payments,” *The Accounting Review* (February 2013).

Future Deductible Amounts and Deferred Taxes

Assume that during 2022, Cunningham Inc. estimated its warranty costs related to the sale of microwave ovens to be \$500,000, to be paid evenly over the next two years. For book purposes, Cunningham reported warranty expense and a related estimated liability for warranties of \$500,000 in its 2022 financial statements. For tax purposes, **the warranty tax deduction is not allowed until paid**. Therefore, Cunningham recognizes no warranty liability on a tax-basis statement of

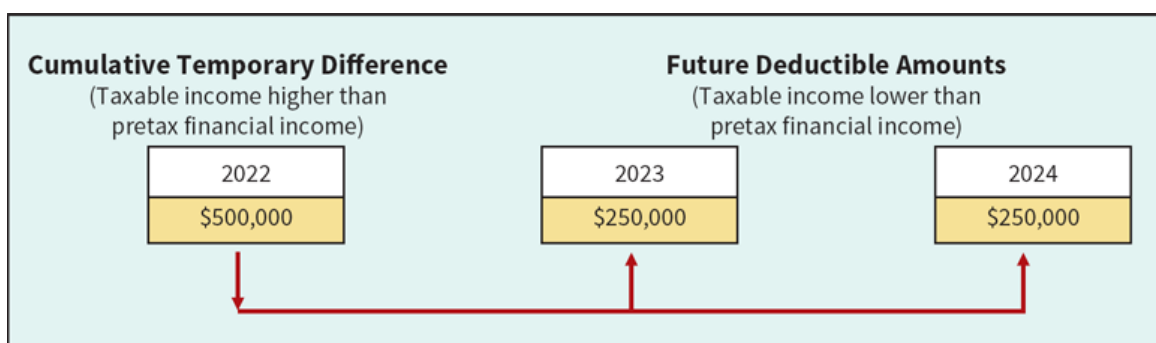

financial position. [Illustration 19.16](#) shows the statement of financial position difference at the end of 2022.

Per Books	12/31/22	Per Tax Return	12/31/22
Estimated liability for warranties	<u>\$500,000</u>	Estimated liability for warranties	<u>\$-0-</u>

[ILLUSTRATION 19.16](#) Temporary Difference, Warranty Liability

When Cunningham provides goods and services, thereby reducing the warranty liability, it reports an expense (deductible amount) for tax purposes. Because of this temporary difference, Cunningham should recognize in 2022 the tax benefits (positive tax consequences) for the tax deductions that will result from the future settlement of the liability. Cunningham reports this future tax benefit in the December 31, 2022, statement of financial position as a **deferred tax asset**.

We can think about this situation another way. Deductible amounts occur in future tax returns. These **future deductible amounts** cause taxable income to be less than pretax financial income in the future as a result of an existing temporary difference. Cunningham's temporary difference originates (arises) in one period (2022) and reverses over two periods (2023 and 2024). [Illustration 19.17](#) diagrams this situation.

[ILLUSTRATION 19.17](#) Reversal of Temporary Difference, Cunningham Inc.

Deferred Tax Asset

A **deferred tax asset** is the deferred tax consequence attributable to deductible temporary differences. In other words, a **deferred tax asset** represents the increase in taxes refundable (or saved) in future

years as a result of deductible temporary differences existing at the end of the current year.

To illustrate, assume that Hunt Company has revenues of \$900,000 for both 2022 and 2023. It also has operating expenses of \$400,000 for each of these years. In addition, Hunt accrues a loss and related liability of \$50,000 for financial reporting purposes in 2022 because of pending litigation. Hunt cannot deduct this amount for tax purposes until it pays the liability, expected in 2023. As a result, a deductible amount will occur in 2023 when Hunt settles the liability, causing taxable income to be lower than pretax financial information. [**Illustration 19.18**](#) shows both the IFRS and tax reporting over the two years.

IFRS Reporting		
	2022	2023
Revenues	\$900,000	\$900,000
Expenses (operating)	400,000	400,000
Litigation loss	50,000	—0—
Pretax financial income	\$450,000	\$500,000
Tax rate	× .40	× .40
Income tax expense	\$180,000	\$200,000
Tax Reporting		
	2022	2023
Revenues	\$900,000	\$900,000
Expenses (operating)	400,000	400,000
Litigation loss	—0—	50,000
Taxable income	\$500,000	\$450,000
Tax rate	× .40	× .40
Income taxes payable	\$200,000	\$180,000

ILLUSTRATION 19.18 IFRS and Tax Reporting, Hunt Company

In this case, Hunt records a deferred tax asset of \$20,000 at the end of 2022 because it represents taxes that will be saved in future periods as a result of a deductible temporary difference existing at the end of 2022.

[**Illustration 19.19**](#) shows the computation of the deferred tax asset at the end of 2022 (assuming a 40 percent tax rate).

Book basis of litigation liability	\$50,000
Tax basis of litigation liability	<u>—0—</u>
Cumulative temporary difference at the end of 2022	50,000
Tax rate	<u>× .40</u>
Deferred tax asset at the end of 2022	<u><u>\$20,000</u></u>

ILLUSTRATION 19.19 Computation of Deferred Tax Asset, End of 2022

Hunt can also compute the deferred tax asset by preparing a schedule that indicates the future deductible amounts due to deductible temporary differences. [Illustration 19.20](#) shows this schedule.

	Future Years
Future deductible amounts	\$50,000
Tax rate	<u>× .40</u>
Deferred tax asset at the end of 2022	<u><u>\$20,000</u></u>

ILLUSTRATION 19.20 Schedule of Future Deductible Amounts

Assuming that 2022 is Hunt's first year of operations and that income taxes payable is \$200,000, Hunt computes its income tax expense as shown in [Illustration 19.21](#).

Deferred tax asset at end of 2022	\$ 20,000
Deferred tax asset at beginning of 2022	<u>—0—</u>
Deferred tax expense (benefit) for 2022	(20,000)
Current tax expense for 2022 (income taxes payable)	<u>200,000</u>
Income tax expense (total) for 2022	<u><u>\$180,000</u></u>

ILLUSTRATION 19.21 Computation of Income Tax Expense, 2022

The **deferred tax benefit** results from the increase in the deferred tax asset from the beginning to the end of the accounting period (similar to the Chelsea example earlier). The deferred tax benefit is a negative component of income tax expense. The total income tax expense of \$180,000 on the income statement for 2022 thus consists of two elements—current tax expense of \$200,000 and a deferred tax benefit of \$20,000. Hunt makes

the following journal entry at the end of 2022 to record income tax expense, deferred income taxes, and income taxes payable.

Income Tax Expense	180,000	
Deferred Tax Asset	20,000	
Income Taxes Payable		200,000

At the end of 2023 (the second year), the difference between the book value and the tax basis of the litigation liability is zero. Therefore, there is no deferred tax asset at this date. Assuming that income taxes payable for 2023 is \$180,000, Hunt computes income tax expense for 2023 as shown in [Illustration 19.22](#).

Deferred tax asset at the end of 2023	\$ —0—
Deferred tax asset at the beginning of 2023	20,000
Deferred tax expense (benefit) for 2023	20,000
Current tax expense for 2023 (income taxes payable)	180,000
Income tax expense (total) for 2023	<u>\$200,000</u>

ILLUSTRATION 19.22 Computation of Income Tax Expense, 2023

The company records income taxes for 2023 as follows.

Income Tax Expense	200,000	
Deferred Tax Asset		20,000
Income Taxes Payable		180,000

The total income tax expense of \$200,000 on the income statement for 2023 thus consists of two elements—current tax expense of \$180,000 and deferred tax expense of \$20,000.

Financial Statement Effects

Hunt Company reports the following information on its statements of financial position for 2022 and 2023 as shown in [Illustration 19.23](#).

Year-End	Income Taxes Payable	Deferred Tax Asset
2022	\$200,000	\$20,000
2023	180,000	–0–

ILLUSTRATION 19.23 Statement of Financial Position Presentation, Deferred Tax Asset

Income taxes payable is reported as a current liability, and the deferred tax asset is reported as a non-current asset. On its income statement, Hunt Company reports the information as shown in Illustration 19.24.

Hunt Company Income Statement For the Year Ending December 31, 2022		
Revenues		\$900,000
Expenses (operating)		400,000
Litigation loss		<u>50,000</u>
Income before income taxes		450,000
Income tax expense (benefit)		
Current	\$200,000	
Deferred	<u>(20,000)</u>	<u>180,000</u>
Net income		<u><u>\$270,000</u></u>

ILLUSTRATION 19.24 Income Statement Presentation, Deferred Tax Asset

As illustrated, Hunt reports both the current portion (the amount of income taxes payable for the period) and the deferred portion of the income tax expense. In this case, the deferred amount is subtracted from the current portion to arrive at the proper income tax expense.

Illustration 19.25 shows the Deferred Tax Asset account at the end of 2023.

Deferred Tax Asset			
2022	20,000	2023	20,000

ILLUSTRATION 19.25 Deferred Tax Asset Account after Reversals

What Do the Numbers Mean?

“Real Assets”

A key issue in accounting for income taxes is whether a company should recognize a deferred tax asset in the financial records. Based on the conceptual definition of an asset, a deferred tax asset meets the three main conditions for an item to be recognized as an asset:

1. **It results from past events.** In the Hunt example, the accrual of the loss contingency is the past event that gives rise to a future deductible temporary difference.
2. **It is a present economic resource.** Taxable income exceeds pretax financial income in the current year (2022). However, in the next year the exact opposite occurs. That is, taxable income is lower than pretax financial income. Because this deductible temporary difference reduces taxes payable in the future, a probable future benefit exists at the end of the current period.
3. **The entity controls access to the benefits.** Hunt can obtain the benefit of existing deductible temporary differences by reducing its taxes payable in the future. Hunt has the exclusive right to that benefit and can control others' access to it.

Market analysts' reactions to the **write-off** of deferred tax assets also supports their treatment as assets. When **Twitter** (USA) reported that it was writing off its net U.S. deferred tax assets, analysts believed that Twitter was signaling that it would not realize the future benefits of these tax deductions. Thus, Twitter should write down these assets like other assets.

Sources: J. Weil and S. Liesman, “Stock Gurus Disregard Most Big Write-Offs but They Often Hold Vital Clues to Outlook,” *Wall Street Journal Online* (December 31, 2001); and V. Fleischer, “Why Twitter May Have to Pay Income Taxes One Day,” *The New York Times* (November 6, 2013).

Deferred Tax Asset (Non-Recognition)

Companies recognize a deferred tax asset for all deductible temporary differences. However, based on available evidence, a company should

reduce a deferred tax asset if it is probable that it **will not realize** some portion or all of the deferred tax asset. “**Probable**” means a level of likelihood of at least slightly more than 50 percent.

Assume that Jensen SA has a deductible temporary difference of €1,000,000 at the end of its first year of operations. Its tax rate is 40 percent, which means it records a deferred tax asset of €400,000 ($€1,000,000 \times .40$). Assuming €900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income taxes payable as follows.

Income Tax Expense	500,000	
Deferred Tax Asset	400,000	
Income Taxes Payable		900,000

After careful review of all available evidence, Jensen determines that it is probable that it will not realize €100,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

Income Tax Expense	100,000	
Deferred Tax Asset		100,000

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary difference. Jensen **simultaneously recognizes a reduction in the carrying amount of the deferred tax asset**. Jensen then reports a deferred tax asset of €300,000 in its statement of financial position.

Jensen evaluates the deferred tax asset account at the end of each accounting period. If, at the end of the next period, it expects to realize €350,000 of this deferred tax asset, Jensen makes the following entry to adjust this account.

Deferred Tax Asset (€350,000 – €300,000)	50,000	
Income Tax Expense		50,000

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs to adjust the deferred tax asset. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses

will continue. Therefore, Jensen will lose the benefit of the future deductible amounts.

Generally, sufficient taxable income arises from temporary taxable differences that will reverse in the future or from a tax-planning strategy that will generate taxable income in the future. [Illustration 19.26](#) shows how **Ahold Delhaize** (NLD/BEL) describes its reporting of deferred tax assets.

Ahold Delhaize

Note 10 (partial)

Significant judgment is required in determining whether deferred tax assets are realizable. Ahold Delhaize determines this on the basis of expected taxable profits arising from the reversal of recognized deferred tax liabilities and on the basis of budgets, cash flow forecasts, and impairment models. Where utilization is not considered probable, deferred tax assets are not recognized.

ILLUSTRATION 19.26 Deferred Tax Asset Disclosure

Additional Issues

LEARNING OBJECTIVE 2

Identify additional issues in accounting for income taxes.

Income Statement Presentation

Circumstances dictate whether a company should add or subtract the change in deferred income taxes to or from income taxes payable in computing income tax expense. For example, a company adds an increase in a deferred tax liability to income taxes payable. On the other hand, it subtracts an increase in a deferred tax asset from income taxes payable.

The formula in [Illustration 19.27](#) is used to compute income tax expense (benefit).

Income Taxes		Change in		Total
Payable or	±	Deferred Income	=	Income Tax
Refundable		Taxes		Expense or
				Benefit

ILLUSTRATION 19.27 Formula to Compute Income Tax Expense

In the income statement or in the notes to the financial statements, a company should disclose the significant components of income tax expense attributable to continuing operations. Given the previous information related to Chelsea, the company reports its income statement as shown in [Illustration 19.28](#).

Chelsea Inc. Income Statement For the Year Ending December 31, 2022		
Revenues		\$130,000
Expenses		60,000
Income before income taxes		70,000
Income tax expense		
Current	\$16,000	
Deferred	12,000	28,000
Net income		\$ 42,000

ILLUSTRATION 19.28 Income Statement Presentation of Income Tax Expense

As illustrated, Chelsea reports both the current portion (amount of income taxes payable for the period) and the deferred portion of income tax expense. Another option is to simply report the total income tax expense on the income statement and then indicate in the notes to the financial statements the current and deferred portions. Income tax expense is often referred to as “Provision for income taxes.” Using this terminology, the

current provision is \$16,000, and the provision for deferred taxes is \$12,000.

Specific Differences

Numerous items create differences between pretax financial income and taxable income. For purposes of accounting recognition, these differences are of two types: (1) temporary and (2) permanent.

Temporary Differences

Taxable temporary differences are temporary differences that will result in taxable amounts in future years when the related assets are recovered. **Deductible temporary differences** are temporary differences that will result in deductible amounts in future years, when the related book liabilities are settled. Taxable temporary differences give rise to recording deferred tax liabilities. Deductible temporary differences give rise to recording deferred tax assets. [Illustration 19.29](#) provides examples of temporary differences.

Determining a company's temporary differences may prove difficult. A company should prepare a statement of financial position for tax purposes that it can compare with its IFRS statement of financial position. Many of the differences between the two statements of financial position are temporary differences.

Originating and Reversing Aspects of Temporary Differences

An **originating temporary difference** is the initial difference between the book basis and the tax basis of an asset or liability, regardless of whether the tax basis of the asset or liability exceeds or is exceeded by the book basis of the asset or liability. A **reversing difference**, on the other hand, occurs when eliminating a temporary difference that originated in prior periods and then removing the related tax effect from the deferred tax account.

<p>Revenues or gains are taxable after they are recognized in financial income (deferred tax liability).</p> <p>An asset (e.g., accounts receivable or investment) may be recognized for revenues or gains that will result in taxable amounts in future years (deferred tax liability) when the asset is recovered. Examples:</p> <ol style="list-style-type: none"> 1. Sales accounted for on the accrual basis for financial reporting purposes and on the installment (cash) basis for tax purposes. 2. Contracts accounted for under the percentage-of-completion method for financial reporting purposes and the cost-recovery method (zero-profit method) for tax purposes. 3. Investments accounted for under the equity method for financial reporting purposes and under the cost method for tax purposes. 4. Gain on involuntary conversion of non-monetary asset which is recognized for financial reporting purposes but deferred for tax purposes. 5. Unrealized holding gains for financial reporting purposes (including use of the fair value option) but deferred for tax purposes.
<p>Expenses or losses are deductible after they are recognized in financial income (deferred tax asset).</p> <p>A liability (or contra asset) may be recognized for expenses or losses that will result in deductible amounts in future years (deferred tax assets) when the liability is settled. Examples:</p> <ol style="list-style-type: none"> 1. Product warranty liabilities. 2. Estimated liabilities related to discontinued operations or restructurings. 3. Litigation accruals. 4. Bad debt expense recognized using the allowance method for financial reporting purposes; direct write-off method used for tax purposes. 5. Share-based compensation expense. 6. Unrealized holding losses for financial reporting purposes (including use of the fair value option) but deferred for tax purposes.
<p>Revenues or gains are taxable before they are recognized in financial income (deferred tax asset).</p> <p>A liability may be recognized for an advance payment for goods or services to be provided or performed in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or perform services (or future refunds to those who cancel their orders) that settle the liability will result in deductible amounts in future years (deferred tax assets). Examples:</p> <ol style="list-style-type: none"> 1. Subscriptions received in advance. 2. Advance rental receipts. 3. Sales and leasebacks for financial reporting purposes (income deferral) but reported as sales for tax purposes. 4. Prepaid contracts and royalties received in advance.
<p>Expenses or losses are deductible before they are recognized in financial income (deferred tax liability).</p> <p>The cost of an asset may have been deducted for tax purposes faster than it was expensed for financial reporting purposes. Amounts received upon future recovery of the amount of the asset for financial reporting (through use or sale) will exceed the remaining tax basis of the asset and thereby result in taxable amounts in future years (deferred tax liabilities). Examples:</p> <ol style="list-style-type: none"> 1. Depreciable property, depletable resources, and intangibles. 2. Deductible pension funding exceeding expense. 3. Prepaid expenses that are deducted on the tax return in the period paid. 4. Development costs that are deducted on the tax return in the period paid.

ILLUSTRATION 19.29 Examples of Temporary Differences

For example, assume that Sharp plc has tax depreciation in excess of book depreciation of £2,000 in 2020, 2021, and 2022. Further, it has an excess of book depreciation over tax depreciation of £3,000 in 2023 and 2024 for the same asset. Assuming a tax rate of 30 percent for all years involved, the Deferred Tax Liability account shown in [Illustration 19.30](#) reflects the following.

Deferred Tax Liability					
Tax Effects of Reversing Differences	2023	900	2020	600	Tax Effects of Originating Differences
	2024	900	2021	600	
			2022	600	

ILLUSTRATION 19.30 Tax Effects of Originating and Reversing Differences

The originating differences for Sharp in each of the first three years are £2,000. The related tax effect of each originating difference is £600. The

reversing differences in 2023 and 2024 are each £3,000. The related tax effect of each is £900.

Permanent Differences

Some differences between taxable income and pretax financial income are permanent. **Permanent differences** result from items that (1) enter into pretax financial income but **never** into taxable income, or (2) enter into taxable income but **never** into pretax financial income.

Governments enact a variety of tax law provisions to attain certain political, economic, and social objectives. Some of these provisions exclude certain revenues from taxation, limit the deductibility of certain expenses, and permit the deduction of certain other expenses in excess of costs incurred. A company that has tax-free income, non-deductible expenses, or allowable deductions in excess of cost has an effective tax rate that differs from its statutory (regular) tax rate.

Since permanent differences affect only the period in which they occur, they do not give rise to future taxable or deductible amounts. As a result, **companies recognize no deferred tax consequences for permanent differences.** [Illustration 19.31](#) shows examples of permanent differences, given typical country laws.

Items are recognized for financial reporting purposes but not for tax purposes.
Examples: <ol style="list-style-type: none">1. Interest received on certain types of government obligations.2. Expenses incurred in obtaining tax-exempt income.3. Fines and expenses resulting from a violation of law.4. Charitable donations recognized as expense but sometimes not deductible for tax purposes.
Items are recognized for tax purposes but not for financial reporting purposes.
Examples: <ol style="list-style-type: none">1. "Percentage depletion" of natural resources in excess of their cost.2. The deduction for dividends received from other companies, sometimes considered tax-exempt.

[ILLUSTRATION 19.31](#) Examples of Permanent Differences

Examples of Temporary and Permanent Differences

To illustrate the computations used when both temporary and permanent differences exist, assume that Bio-Tech AG reports pretax financial income of €200,000 in each of the years 2020, 2021, and 2022. The company is

subject to a 30 percent tax rate and has the following differences between pretax financial income and taxable income.

1. Bio-Tech reports an installment sale of €18,000 in 2020 for tax purposes it recognizes the sales over an 18-month period at a constant amount per month beginning January 1, 2021. It recognizes the entire sale for book purposes in 2020.
2. It pays life insurance premiums for its key officers of €5,000 in 2021 and 2022. Although not tax-deductible, Bio-Tech expenses the premiums for book purposes.

The installment sale is a temporary difference, whereas the life insurance premium is a permanent difference. [Illustration 19.32](#) shows the reconciliation of Bio-Tech's pretax financial income to taxable income and the computation of income taxes payable.

	2020	2021	2022
Pretax financial income	€200,000	€200,000	€200,000
Permanent difference			
Non-deductible expense		5,000	5,000
Temporary difference			
Installment sale	(18,000)	12,000	6,000
Taxable income	182,000	217,000	211,000
Tax rate	× .30	× .30	× .30
Income taxes payable	€ 54,600	€ 65,100	€ 63,300

ILLUSTRATION 19.32 Reconciliation and Computation of Income Taxes Payable

Note that Bio-Tech **deducts** the installment sales revenue from pretax financial income to arrive at taxable income. The reason: Pretax financial income includes the installment sales revenue; taxable income does not. Conversely, it **adds** the €5,000 insurance premium to pretax financial income to arrive at taxable income. The reason: Pretax financial income records an expense for this premium, but for tax purposes the premium is not deductible. As a result, pretax financial income is lower than taxable income. Therefore, the life insurance premium must be added back to pretax financial income to reconcile to taxable income.

Bio-Tech records income taxes for 2020, 2021, and 2022 as follows.

December 31, 2020		
Income Tax Expense (€54,600 + €5,400)	60,000	
Deferred Tax Liability (€18,000 × .30)		5,400
Income Taxes Payable (€182,000 × .30)		54,600
December 31, 2021		
Income Tax Expense (€65,100 – €3,600)	61,500	
Deferred Tax Liability (€12,000 × .30)	3,600	
Income Taxes Payable (€217,000 × .30)		65,100
December 31, 2022		
Income Tax Expense (€63,300 – €1,800)	61,500	
Deferred Tax Liability (€6,000 × .30)	1,800	
Income Taxes Payable (€211,000 × .30)		63,300

Bio-Tech has one temporary difference, which originates in 2020 and reverses in 2021 and 2022. It recognizes a deferred tax liability at the end of 2020 because the temporary difference causes future taxable amounts. As the temporary difference reverses, Bio-Tech reduces the deferred tax liability. There is no deferred tax amount associated with the difference caused by the non-deductible insurance expense because it is a permanent difference.

Although an enacted tax rate of 30 percent applies for all three years, the effective rate differs from the enacted rate in 2021 and 2022. Bio-Tech computes the **effective tax rate** by dividing total income tax expense for the period by pretax financial income. The effective rate is 30 percent for 2020 ($€60,000 \div €200,000 = 30\%$) and 30.75 percent for 2021 and 2022 ($€61,500 \div €200,000 = 30.75\%$).

Tax Rate Considerations

In our previous illustrations, the enacted tax rate did not change from one year to the next. Thus, to compute the deferred income tax amount to report on the statement of financial position, a company simply multiplies the cumulative temporary difference by the current tax rate. Using Bio-Tech as an example, it multiplies the cumulative temporary difference of €18,000 by the enacted tax rate, 30 percent in this case, to arrive at a deferred tax liability of €5,400 ($€18,000 \times .30$) at the end of 2020.

Future Tax Rates

What happens if tax rates change in the future? In this case, a company should use the **substantially enacted tax rate** expected to apply.² A company must consider presently enacted changes in the tax rate that will become effective in the future when determining the tax rate that should apply to existing temporary differences. For example, assume that Wang Group at the end of 2019 has the following cumulative temporary difference of ¥300,000, computed as shown in **Illustration 19.33**.

Book basis of depreciable assets	¥1,000,000
Tax basis of depreciable assets	700,000
Cumulative temporary difference	¥ 300,000

ILLUSTRATION 19.33 Computation of Cumulative Temporary Difference

Furthermore, assume that the ¥300,000 will reverse and result in taxable amounts in the future, with the enacted tax rates as shown in **Illustration 19.34**.

	2020	2021	2022	2023	2024	Total
Future taxable amounts	¥80,000	¥70,000	¥60,000	¥50,000	¥40,000	¥300,000
Tax rate	× .40	× .40	× .35	× .30	× .30	
Deferred tax liability	¥32,000	¥28,000	¥21,000	¥15,000	¥12,000	¥108,000

ILLUSTRATION 19.34 Deferred Tax Liability Based on Future Rates

The total deferred tax liability at the end of 2019 is ¥108,000. Wang may only use tax rates other than the current rate when the future tax rates have been enacted, as is the case in this example. **If new rates are not yet enacted for future years, Wang should use the current rate.**

In some countries, the applicable tax rate depends on how the carrying amount of an asset or liability is recovered or settled. For example, a company could be operating a plant that it intends to hold for continued use. The tax rate on normal operations is 35 percent. On the other hand, if the company wishes to sell the plant and the related capital gain or loss is

subject to a tax rate of 15 percent, then the applicable tax rate may change.
[2]

Revision of Future Tax Rates

When a change in the tax rate is enacted, companies should record its effect on the existing deferred income tax accounts immediately. **A company reports the effect as an adjustment to income tax expense in the period of the change.**

Assume that on December 10, 2021, a new income tax act is signed into law that lowers the company tax rate from 40 percent to 35 percent, effective January 1, 2023. If Hostel Co. has one temporary difference at the beginning of 2021 related to \$3 million of excess tax depreciation, then it has a Deferred Tax Liability account with a balance of \$1,200,000 ($\$3,000,000 \times .40$) at January 1, 2021. If taxable amounts related to this difference are scheduled to occur equally in 2022, 2023, and 2024, the deferred tax liability at the end of 2021 is \$1,100,000, computed as shown in **Illustration 19.35**.

	2022	2023	2024	Total
Future taxable amounts	\$1,000,000	\$1,000,000	\$1,000,000	\$3,000,000
Tax rate	$\times .40$	$\times .35$	$\times .35$	
Deferred tax liability	<u>\$ 400,000</u>	<u>\$ 350,000</u>	<u>\$ 350,000</u>	<u>\$1,100,000</u>

ILLUSTRATION 19.35 Schedule of Future Taxable Amounts and Related Tax Rates

Hostel recognizes the decrease of \$100,000 ($\$1,200,000 - \$1,100,000$) at the end of 2021 in the deferred tax liability as follows.

Deferred Tax Liability	100,000	
Income Tax Expense		100,000

Company tax rates do not change often. Therefore, companies usually employ the current rate. However, tax rates in some jurisdictions change more frequently, and they require adjustments in deferred income taxes accordingly.³

What Do the Numbers Mean?

Global Tax Rates

If you are concerned about your tax rate and the taxes you pay, you might want to consider moving to the Cayman Islands or the Bahamas, which have a tax rate of zero percent. However, you would not want to move to Brazil. Yes, the people of Brazil are known for delicious food, great fun, and wonderful music, but the party might stop when it comes time to pay taxes because the tax rate is one of the highest on Earth—36 percent!

Taxes are also a big deal to companies. For example, the Organisation for Economic Cooperation and Development (OECD) is an international organization of 36 countries that accepts the principles of a free-market economy. Most OECD members are high-income economies and are regarded as developed countries. However, companies in the OECD can be subject to significant tax levies, as indicated in the following table.

Highest Corporate Income Tax Rates for OECD Countries			
1. France	32%	6. Greece	28%
2. Australia	30	7. New Zealand	28
3. Mexico	30	8. Austria	25
4. Portugal	30	9. Chile	25
5. Belgium	29	10. South Korea	25

On the low end of the tax rate spectrum are Hungary and Switzerland, with tax rates of 9.0 and 8.5 percent, respectively. Indeed, corporate tax rates have been dropping around the world as countries attempt to spur

capital investment, which in turn encourages international tax competition. As discussed in the opening story, companies adjust their structures to move their income from high-tax-rate countries to lower-tax-rate countries. The OECD and the G20 have specifically launched an initiative called BEPS (Base Erosion and Profit Shifting) to address this issue.

If these initiatives result in changes in the tax rates applied to future deductible and taxable amounts, be prepared for significant remeasurement of deferred tax assets and liabilities.

Source: The rates reported in the above list reflect the base company rate in effect in 2019 as reported by the OECD (oecd.org/tax/tax-policy/tax-database/ and www.oecd.org/tax/beps/). Effective rates paid may vary depending on country-specific additional levies for such items as unemployment, local taxes, and, in the case of Japan, earthquake damage assessments. Effective rates may be lower due to credits for investments and capital gains. Current corporate tax rates are available at the **KPMG** (USA) website.

Accounting for Net Operating Losses

LEARNING OBJECTIVE 3

Explain the accounting for loss carryforwards.

Every management hopes its company will be profitable. But hopes and profits may not materialize. For a start-up company, it is common to accumulate operating losses while it expands its customer base but before it realizes economies of scale. For an established company, major events such as a labor strike, rapidly changing regulatory and competitive forces, a tsunami, or a general economic recession such as that experienced in the wake of the COVID-19 pandemic can cause expenses to exceed revenues—a net operating loss.

A **net operating loss (NOL)** occurs for tax purposes in a year when tax-deductible expenses exceed taxable revenues. An inequitable tax burden would result if companies were taxed during profitable periods without receiving any tax relief during periods of net operating losses. Under certain circumstances, therefore, tax laws permit taxpayers to use the losses of one year to offset the profits of other years.

Companies accomplish this income-averaging provision through the **carryforward of net operating losses**. Under this provision, a company

pays no income taxes for a year in which it incurs a net operating loss. In addition, it can reduce future taxes payable as discussed on the following pages.

Loss Carryforward

Through the use of a **loss carryforward**, a company may carry the net operating loss forward to offset future taxable income and reduce taxes payable in future years.⁴ [Illustration 19.36](#) shows this approach.

[ILLUSTRATION 19.36](#) Loss Carryforward Procedure

Operating losses can be substantial. For example, **VW Group** (DEU) had €2.5 billion in tax loss carryforwards at the end of 2018. At VW's effective tax rate, that would imply over €500 million in reduced taxes if it is able to generate taxable income.

Loss Carryforward Example

Because companies use carryforwards to offset future taxable income, the **tax effect of a loss carryforward** represents **future tax savings**. However, realization of the future tax benefit depends on future earnings, an uncertain prospect.

The key accounting issue is whether there should be different requirements for recognition of a deferred tax asset for (a) deductible temporary differences, and (b) operating loss carryforwards. The IASB's position is that in substance these items are the same—both are tax-deductible amounts in future years. As a result, the Board concluded that there **should not be different requirements** for recognition of a deferred tax asset from deductible temporary differences and operating loss carryforwards.⁵

Carryforward (Recognition)

To illustrate the accounting procedures for a net operating loss carryforward, assume that Groh Inc. has no temporary or permanent differences. Groh experiences a net operating loss of \$200,000 in 2022 and takes advantage of the carryforward provision. In 2022, the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$40,000 ($\$200,000 \times .20$), assuming that the enacted future tax rate is 20 percent. Groh records the benefit of the carryforward in 2022 as follows.

Deferred Tax Asset	40,000	
Income Tax Expense (Loss Carryforward)		40,000

Groh establishes a Deferred Tax Asset account for the benefits of future tax savings. The account credited [Income Tax Expense (Loss Carryforward)] is a contra income tax expense item, which Groh presents on the 2022 income statement shown in [Illustration 19.37](#). The \$40,000 is the **deferred tax benefit** for 2022, which results from an increase in the deferred tax asset.

Groh Inc.	
Income Statement (partial) for 2022	
Operating loss before income taxes	\$(200,000)
Income tax benefit	
Deferred	40,000*
Net loss	<u>\$(160,000)</u>
*Carryforward ($\$200,000 \times .20$)	

ILLUSTRATION 19.37 Recognition of the Benefit of the Loss Carryforward in the Loss Year

For 2023, assume that Groh returns to profitable operations and has taxable income of \$250,000 (prior to adjustment for the NOL carryforward), subject to a 20 percent tax rate. Groh then realizes the benefits of the carryforward for tax purposes in 2023, which it recognized for accounting purposes in 2022. Groh computes the income taxes payable for 2023 as shown in [Illustration 19.38](#).

Taxable income prior to loss carryforward	\$ 250,000
Loss carryforward deduction	(200,000)
Taxable income for 2023	50,000
Tax rate	× .20
Income taxes payable for 2023	\$ 10,000

ILLUSTRATION 19.38 Computation of Income Taxes Payable with Realized Loss Carryforward

Groh records income taxes in 2023 as follows.

Income Tax Expense	50,000	
Deferred Tax Asset		40,000
Income Taxes Payable		10,000

The benefits of the NOL carryforward, realized in 2023, reduce the Deferred Tax Asset account to zero.

The 2023 income statement appears in Illustration 19.39.

Groh Inc.		
Income Statement (partial) for 2023		
Income before income taxes		\$250,000
Income tax expense		
Current	\$10,000	
Deferred	40,000	50,000
Net income		\$200,000

ILLUSTRATION 19.39 Presentation of the Benefit of Loss Carryforward Realized in 2023, Recognized in 2022

Carryforward (Non-Recognition)

Let us return to the Groh example. Assume that it is more likely than not that Groh will *not* realize the entire NOL carryforward in future years. In this situation, Groh does not recognize a deferred tax asset for the loss carryforward because it is probable that it will not realize the carryforward. As a result, there is no journal entry in 2022 for income taxes by Groh.

Illustration 19.40 shows Groh's 2022 income statement presentation.

Groh Inc.	
Income Statement (partial) for 2022	
Operating loss before income taxes	\$(200,000)
Income tax expense	
Deferred	<u>-0-</u>
Net loss	<u>\$(200,000)</u>

ILLUSTRATION 19.40 Recognition of Benefit of Loss Carryforward Only

In 2023, assuming that Groh has taxable income of \$250,000 (before considering the carryforward) subject to a tax rate of 20 percent, it realizes the deferred tax asset. Groh records the following entries.

To recognize deferred tax assets and loss carryforward:		
Deferred Tax Asset	40,000	
Income Tax Expense (Loss Carryforward)		40,000
To record current and deferred income taxes:		
Income Tax Expense	50,000	
Deferred Tax Asset		40,000
Income Taxes Payable		10,000

Groh reports the \$40,000 Income Tax Expense (Loss Carryforward) on the 2023 income statement. The company did not recognize it in 2022 because it was probable that it would not be realized. Assuming that Groh derives the income for 2023 from continuing operations, it prepares the income statement as shown in **Illustration 19.41**.

Groh Inc.		
Income Statement (partial) for 2023		
Income before income taxes		\$250,000
Income tax expense		
Current	\$ 50,000	
Deferred	(40,000)	<u>10,000</u>
Net income		<u>\$240,000</u>

ILLUSTRATION 19.41 Recognition of Benefit of Loss Carryforward When Realized

Another method is to report only one line for total income tax expense of \$10,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

Non-Recognition Revisited

Whether the company will realize a deferred tax asset depends on whether sufficient taxable income exists or will exist within the carryforward period available under tax law. [Illustration 19.42](#) shows possible sources of taxable income and related factors that companies can consider in assessing the probability that taxable income will be available against which the unused tax losses or unused tax credits can be utilized.⁶

Taxable Income Sources	
a.	Whether the company has sufficient taxable temporary differences relating to the same tax authority, which will result in taxable amounts against which the unused tax losses or unused tax credits can be utilized before they expire;
b.	Whether it is probable that the company will have taxable profits before the unused tax losses or unused tax credits expire;
c.	Whether the unused tax losses result from identifiable causes, which are unlikely to recur; and
d.	Whether tax-planning opportunities are available to the company that will create taxable profit in the period in which the unused tax losses or unused tax credits can be utilized. [3]
Source: Adapted from International Accounting Standard 12, Income Taxes (London, U.K.: International Accounting Standards Committee Foundation, 2001), par. 36.	

[ILLUSTRATION 19.42](#) Possible Sources of Taxable Income

To the extent that it is not probable that taxable profit will be available against which the unused tax losses or unused tax credits can be utilized, the deferred tax asset is not recognized.

Forming a conclusion that recognition of a loss carryforward is probable is difficult when there is negative evidence (such as cumulative losses in recent years). However, companies often cite positive evidence indicating that recognition of the carryforward is warranted.⁷

Unfortunately, the subjective nature of determining an impairment for a deferred tax asset provides a company with an opportunity to manage its earnings. As one accounting expert notes, “The ‘probable’ provision is perhaps the most judgmental clause in accounting.” Some companies may recognize the loss carryforward immediately and then use it to increase income as needed. Others may take the income immediately to increase capital or to offset large negative charges to income.

Evolving Issue

Uncertain Tax Positions

Uncertain tax positions are tax positions for which the tax authorities may disallow a deduction in whole or in part. Uncertain tax positions often arise when a company takes an aggressive approach in its tax planning. Examples are instances in which the tax law is unclear or the company may believe that the risk of audit is low. Uncertain tax positions give rise to tax benefits either by reducing income tax expense or related payables, or by increasing an income tax refund receivable or deferred tax asset.

Unfortunately, companies have not recorded these effects consistently in the accounting and reporting of uncertain tax positions. Some companies have not recognized a tax benefit unless it is probable that the benefit will be realized and can be reasonably estimated. Other companies have used a lower threshold, such as that found elsewhere in the existing authoritative literature (e.g., “more likely than not”). Thus, there has been diversity in practice concerning the accounting and reporting of uncertain tax positions.

In response, the IASB recently issued rules for companies to follow when there is uncertainty about whether a tax position will be sustained upon review by a tax authority. [4] If the company concludes it is probable that a particular tax treatment will be accepted, the company then determines taxable profit (tax loss), tax bases, unused tax losses, unused tax credits, or tax rates consistent with the tax treatment included in its income tax filings. If it is not probable that a tax position will be accepted, companies estimate the effect of the tax treatment using either the **most likely amount** or the **expected value of the tax treatment** (on taxable profit (tax loss), tax bases, unused tax losses, unused tax credits, or tax rates). The decision should be based on which method provides better predictions of the resolution of the uncertainty. These rules should reduce diversity in practice on the reporting of uncertain tax positions and bring IFRS closer to U.S. GAAP, which has similar guidelines.

Financial Statement Presentation

LEARNING OBJECTIVE 4

Describe the presentation of deferred income taxes in financial statements.

Statement of Financial Position

Companies classify taxes receivable or payable as current assets or current liabilities. Although current tax assets and liabilities are separately recognized and measured, they are often offset in the statement of financial position. The offset occurs because companies normally have a legally enforceable right to set off a current tax asset (Income Taxes Receivable) against a current tax liability (Income Taxes Payable) when they relate to income taxes levied by the same taxation authority. ^[5] Deferred tax assets and deferred tax liabilities are also separately recognized and measured but may be offset in the statement of financial position.⁸ The net deferred tax asset or net deferred tax liability is reported in the non-current section of the statement of financial position.⁹

To illustrate, assume that K. Scott Company has four deferred tax items at December 31, 2022, as shown in [Illustration 19.43](#).

Temporary Difference	Resulting Deferred Tax	
	(Asset)	Liability
1. Rent collected in advance: recognized when performance obligation satisfied for accounting purposes and when received for tax purposes.	\$(42,000)	
2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$214,000
3. Recognition of profits on installment sales during period of sale for accounting purposes and during period of collection for tax purposes.		45,000
4. Warranty liabilities: recognized for accounting purposes at time of sale; for tax purposes at time paid.	(12,000)	
Totals	<u>\$(54,000)</u>	<u>\$259,000</u>

ILLUSTRATION 19.43 Classification of Temporary Differences

As indicated, K. Scott has a total deferred tax asset of \$54,000 and a total deferred tax liability of \$259,000. Assuming these two items can be offset, K. Scott reports a deferred tax liability of \$205,000 (\$259,000 – \$54,000) in the non-current liability section of its statement of financial position.

To provide another illustration, **Wm Morrison Supermarkets plc** (GBR) reports its information related to income taxes on its consolidated balance sheet (statement of financial position) and related note on defined income taxes as shown in **Illustration 19.44**.

Wm Morrison Supermarkets plc
Consolidated Balance Sheet
3 February 2019
 (£ in millions)

			2019	2018
	Current liabilities			
	Current tax liabilities		27	15
	Non-current liabilities			
	Deferred tax liabilities	(Note 2.3)	483	478

2.3 Deferred tax	2019	2018
Deferred tax liability	487	480
Deferred tax asset	(4)	(2)
Net deferred tax liability	483	478

IAS 12 'Income taxes' permits the offsetting of balances within the same tax jurisdiction. All of the deferred tax assets are available for offset against deferred tax liabilities.

The movements in deferred tax (liabilities)/assets during the period are shown below:

	Property, plant and equipment	Pensions	Other short-term temporary differences	Total
Current period				
At 5 February 2018	364	101	13	478

ILLUSTRATION 19.44 Income Tax Reporting

In Note 2.3, Morrison Supermarkets explains how the net deferred tax liability is computed as well as the composition of the liability. A user of the financial statements and related notes therefore understands what comprises the net deferred tax liability of £483 million, which provides insight into the likelihood of future cash outflows related to the net deferred tax liability.

Income Statement

Companies allocate income tax expense (or benefit) to continuing operations, discontinued operations, other comprehensive income, and prior period adjustments. This approach is referred to as **intraperiod tax allocation**. In addition, the components of income tax expense (benefit) may include:

1. Current tax expense (benefit).
2. Any adjustments recognized in the period for current tax of prior periods.
3. The amount of deferred tax expense (benefit) relating to the origination and reversal of temporary differences.
4. The amount of deferred tax expense (benefit) relating to changes in tax rates or the imposition of new taxes.

5. The amount of the benefit arising from a previously unrecognized tax loss, tax credit, or temporary difference of a prior period that is used to reduce current and deferred tax expense.^{[10](#)}

To illustrate, the relevant portion of the consolidated statement of comprehensive income of Morrison Supermarkets is presented in [**Illustration 19.45**](#).

2.2.2 Tax on items charged in other comprehensive expense and equity

	2019	2018
Remeasurement of defined benefit pension schemes	17	55
Cash flow hedges	1	(4)
Share-based payment	–	6
Total tax on items included in other comprehensive income and equity	<u>18</u>	<u>57</u>

[ILLUSTRATION 19.46](#) Components of Income Tax

As shown in [Illustration 19.46](#), income taxes decreased profit by £76 million. In addition, taxes related to other comprehensive expense and equity are shown net of tax. [Illustration 19.46](#) also provides information that identifies the components of the tax charge of £76 million. In addition, the individual tax effects related to other comprehensive expense and equity of £18 million are explained.

Tax Reconciliation

Another important disclosure is the reconciliation of actual tax expense and the applicable tax rate. Companies either provide:

- A numerical reconciliation between tax expense (benefit) and the product of accounting profit multiplied by the applicable tax rate(s), disclosing also the basis on which the applicable tax rate(s) is (are) computed; or
- A numerical reconciliation between the average effective tax rate and the applicable tax rate, disclosing also the basis on which the applicable tax rate is computed.

Morrison Supermarkets provides the first type of reconciliation but also notes that the effective tax rate is higher than the applicable (standard) rate, as shown in a continuation of its tax note in [Illustration 19.47](#).

Wm Morrison Supermarkets plc

(£ in millions)

2.2.3 Tax reconciliation

The reconciliation below shows how the tax charge of £76m (2018: £69m) has arisen on profit before taxation of £320m (2018: £380m).

The tax for the period is higher (2018: lower) than the standard rate of corporation tax in the UK of 19% (2018: 19.16%).

The differences are explained below:

	2019	2018
Profit before taxation	320	380
Profit before taxation at 19% (2018: 19.16%)	61	73
Effects of:		
Recurring items:		
Expenses not deductible for tax purposes	(1)	(6)
Disallowed depreciation on UK properties	21	20
Deferred tax on Safeway acquisition assets	(2)	(4)
Adjustments in respect to prior periods	12	(2)
Non-recurring items:		
Profit on property transactions	(1)	(8)
Tax impact of impairment and related items	(14)	(4)
Tax charge for the period	76	69

Factors affecting current and future tax charges

The effective tax rate for the year was 23.7% (2018: 18.2%). The normalized tax rate for the year (excluding the impact of property transactions, business disposals, tax rate changes, and other adjustments) was 23.5% (2018: 23.8%).

The normalized tax rate was 4.5% above the UK statutory rate of 19%. The main factor increasing the normalized tax rate is disallowed depreciation on UK properties which reflects the Group's strategy to maintain a majority freehold estate.

Legislation to reduce the standard rate of corporation tax to 17% from 1 April 2020 was included in Finance Act 2016 and was enacted in the prior periods. Accordingly, deferred tax has been provided at 19% or 17% depending on when the temporary difference is expected to reverse (2018: 19% or 17%).

There have been no indications of any further changes to the rate of corporation tax after 1 April 2020.

ILLUSTRATION 19.47 Tax Reconciliation Disclosure

In explaining the relationship between tax expense (benefit) and accounting income, companies use an applicable tax rate that provides the most meaningful information to the users of its financial statements.¹¹

These income tax disclosures are required for several reasons:

- 1. Assessing quality of earnings.** Many investors seeking to assess the quality of a company's earnings are interested in the relation between pretax financial income and taxable income. Analysts carefully examine earnings that are enhanced by a favorable tax effect, particularly if the tax effect is non-recurring. For Morrison Supermarkets, it is interesting to note that its standard tax rate is greater than the effective tax rate (taxes paid divided by income before income taxes). A change in the tax rate, non-taxable profits on property transactions, and a prior period adjustment are the primary reasons for this situation.
- 2. Making better predictions of future cash flows.** Examination of the deferred portion of income tax expense provides information as to whether taxes payable are likely to be higher or lower in the future. In Morrison Supermarkets' case, analysts expect future taxable amounts and higher tax payments, due to lower depreciation in the future. It also appears that Morrison Supermarkets is generating other deductible amounts related to pensions, share-based payments, and other short-term temporary differences. These deferred tax items indicate that actual tax payments for Morrison Supermarkets will be

lower than the tax expense reported on the income statement in the future. Conversely, the tax rate is expected to drop to as low as 18 percent, which will lead to lower current and deferred taxes.

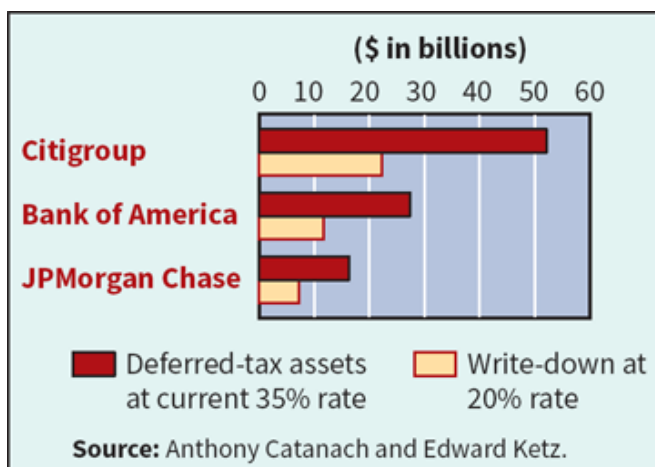

3. **Predicting future cash flows for operating loss carryforwards.** Companies should disclose the amounts and expiration dates of any operating loss carryforwards for tax purposes. From this disclosure, analysts determine the amount of income that the company may recognize in the future on which it will pay no income tax. Morrison Supermarkets has no loss carryforwards.^{[12](#)}

What Do the Numbers Mean?

The Tax Twist

As indicated in the information related to the tax reconciliation at **Wm Morrison Supermarkets plc** (GBR), a favorable development for the company is that tax rates decreased from 21.3 percent in 2015 to 20.2 percent in 2016. In addition, it is likely that rates will drop to 17 percent in the near future. As indicated in [Illustration 19.47](#), this may lead to an additional reduction of deferred income taxes of £44 million, which will result in income tax expense also being decreased.

However, the reduction in rates can be a double-edged sword for companies that have large deferred tax asset balances. A tax rate decrease means that deferred tax assets are worth less, since lower tax bills mean fewer opportunities to use deferred tax assets before they expire. **Citigroup** (USA), for example, indicated that a reduction in its tax rate could lead to a deferred tax write-off of \$4 billion to \$5 billion. The following graphic illustrates how that might happen if U.S. rates dropped from 35 percent to 20 percent, which was proposed by some politicians.

So there is a tax twist in a tax rate reduction, which may not be positive for some companies that have large deferred tax asset balances.

Review of the Asset-Liability Method

The IASB believes that the **asset-liability method** (sometimes referred to as the **liability approach**) is the most consistent method for accounting for income taxes. One objective of this approach is to recognize the amount of taxes payable or refundable for the current year. A second objective is to recognize **deferred tax liabilities and assets** for the **future tax consequences** of events that have been recognized in the financial statements or tax returns.

To implement the objectives, companies apply some basic principles in accounting for income taxes at the date of the financial statements, as listed in **Illustration 19.48**.

Basic Principles
<p>a. A current tax liability or asset is recognized for the estimated taxes payable or refundable on the tax return for the current year.</p> <p>b. A deferred tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences and carryforwards.</p> <p>c. The measurement of current and deferred tax liabilities and assets is based on provisions of the enacted tax law; the effects of future changes in tax laws or rates are not anticipated.</p> <p>d. The measurement of deferred tax assets is reduced, if necessary, by the amount of any tax benefits that, based on available evidence, are not expected to be realized.</p>

ILLUSTRATION 19.48 Basic Principles of the Asset-Liability Method

Illustration 19.49 diagrams the procedures for implementing the asset-liability method.

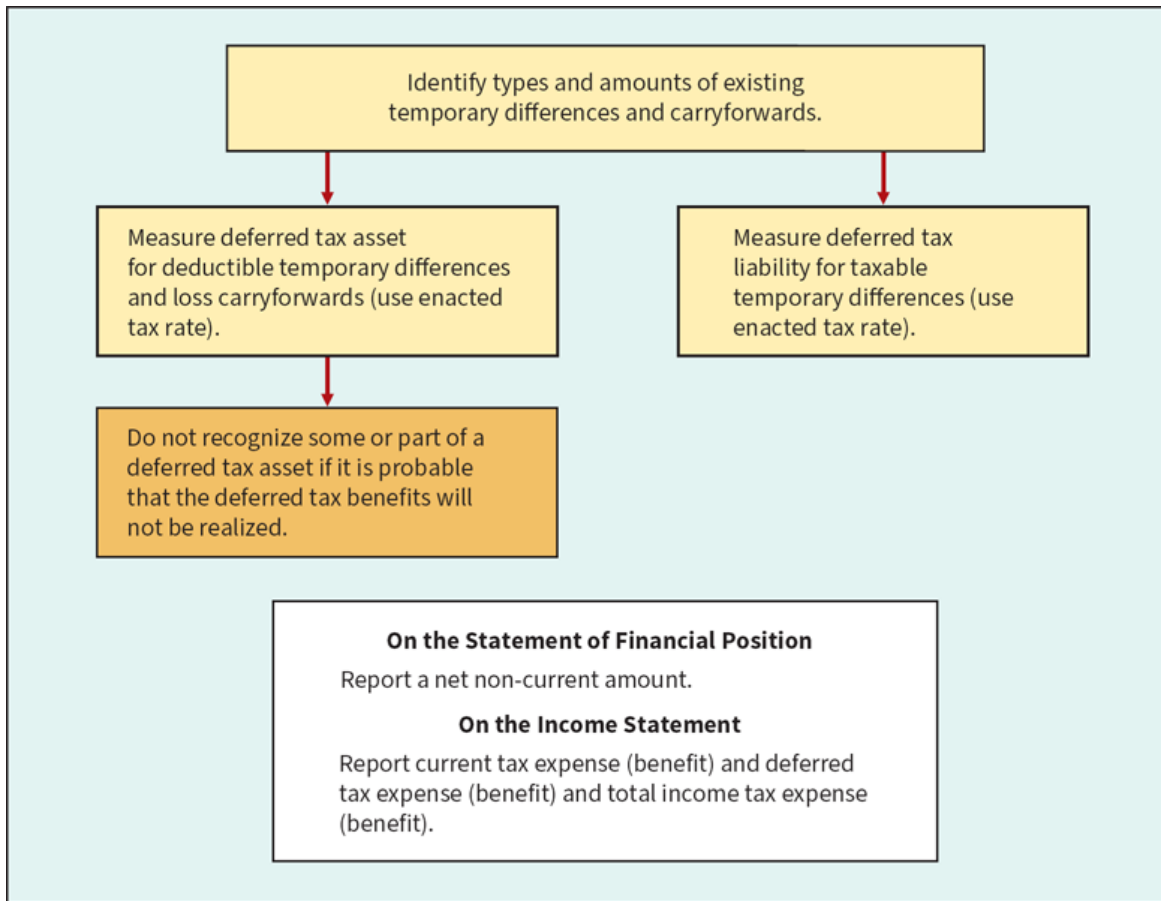

ILLUSTRATION 19.49. Procedures for Computing and Reporting Deferred Income Taxes

As an aid to understanding deferred income taxes, we provide the following glossary.

Key Deferred Income Tax Terms

Carryforwards. Deductions or credits that cannot be utilized on the tax return during a year and that may be carried forward to reduce taxable income or taxes payable in a future year. An **operating loss carryforward** is an excess of tax deductions over gross income in a year. A **tax carryforward** is the amount by which tax credits available for utilization exceed statutory limitations.

Current Tax Expense. The amount of income taxes paid or payable for a year as determined by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues for that year.

Deductible Temporary Difference. Temporary differences that result in deductible amounts in future years when recovering or settling the related asset or liability, respectively.

Deferred Tax Asset. The deferred tax consequences attributable to deductible temporary differences and carryforwards.

Deferred Tax Consequences. The future effects on income taxes as measured by the enacted tax rate and provisions of the enacted tax law resulting from temporary differences and carry-forwards at the end of the current year.

Deferred Tax Expense (Benefit). The change during the year in a company's deferred tax liabilities and assets.

Deferred Tax Liability. The deferred tax consequences attributable to taxable temporary differences.

Income Taxes. Domestic and foreign federal (national), state, and local (including franchise) taxes based on income.

Income Taxes Currently Payable. Refer to current tax expense.

Income Tax Expense (Benefit). The sum of current tax expense (benefit) and deferred tax expense (benefit).

Taxable Income. The excess of taxable revenues over tax-deductible expenses and exemptions for the year as defined by the governmental tax authority.

Taxable Temporary Difference. Temporary differences that result in taxable amounts in future years when recovering or settling the related asset or liability, respectively.

Tax-Planning Strategy. An action that meets certain criteria and that a company implements to realize a tax benefit for an operating loss or tax carryforward before it expires. Companies consider tax-planning strategies when assessing whether to recognize a deferred tax asset.

Temporary Difference. A difference between the tax basis of an asset or liability and its reported amount in the financial statements, which will result in taxable or deductible amounts in future years when recovering or settling the reported amount of the asset or liability, respectively.

APPENDIX 19A Comprehensive Example of Interperiod Tax Allocation

LEARNING OBJECTIVE *5

Apply the concepts and procedures of interperiod tax allocation.

This appendix presents a comprehensive illustration of a deferred income tax problem with several temporary and permanent differences. The example follows one company through two complete years (2021 and 2022). **Study it carefully.** It should help you understand the concepts and procedures presented in the chapter.

First Year—2021

Akai Ltd., which began operations at the beginning of 2021, produces various products on a contract basis. Each contract generates an income of ¥80,000 (amounts in thousands). Some of Akai's contracts provide for the customer to pay on an installment basis. Under these contracts, Akai collects one-fifth of the contract revenue in each of the following four years. For financial reporting purposes, the company recognizes income in the year of completion (accrual basis); for tax purposes, Akai recognizes income in the year cash is collected (installment basis).

Presented below is information related to Akai's operations for 2021.

1. In 2021, the company completed seven contracts that allow for the customer to pay on an installment basis. Akai recognized the related income of ¥560,000 for financial reporting purposes. It reported only ¥112,000 of income on installment sales on the 2021 tax return. The company expects future collections on the related receivables to result in taxable amounts of ¥112,000 in each of the next four years.
2. At the beginning of 2021, Akai purchased depreciable assets with a cost of ¥540,000. For financial reporting purposes, Akai depreciates these assets using the straight-line method over a six-year service life. The depreciation schedules for both financial reporting and tax purposes are shown as follows.

Year	Depreciation for Financial Reporting Purposes	Depreciation for Tax Purposes	Difference
2021	¥ 90,000	¥108,000	¥(18,000)
2022	90,000	172,800	(82,800)
2023	90,000	103,680	(13,680)
2024	90,000	62,208	27,792
2025	90,000	62,208	27,792
2026	90,000	31,104	58,896
	<u>¥540,000</u>	<u>¥540,000</u>	<u>¥ —0—</u>

3. The company warrants its product for two years from the date of completion of a contract. During 2021, the product warranty liability accrued for financial reporting purposes was ¥200,000, and the amount paid for the satisfaction of warranty liability was ¥44,000. Akai expects to settle the remaining ¥156,000 by expenditures of ¥56,000 in 2022 and ¥100,000 in 2023.
4. In 2021, non-taxable governmental bond interest revenue was ¥28,000.
5. During 2021, non-deductible fines and penalties of ¥26,000 were paid.
6. Pretax financial income for 2021 amounts to ¥412,000.
7. Tax rates enacted before the end of 2021 were:

--	--

2021	50%
2022 and later years	40%

8. The accounting period is the calendar year.

9. The company is expected to have taxable income in all future years.

Taxable Income and Income Taxes Payable—2021

The first step is to determine Akai's income taxes payable for 2021 by calculating its taxable income. [Illustration 19A.1](#) shows this computation.

Pretax financial income for 2021	¥412,000
Permanent differences:	
Non-taxable revenue—governmental bond interest	(28,000)
Non-deductible expenses—fines and penalties	26,000
Temporary differences:	
Excess contract income per books (¥560,000 – ¥112,000)	(448,000)
Excess depreciation per tax (¥108,000 – ¥90,000)	(18,000)
Excess warranty expense per books (¥200,000 – ¥44,000)	156,000
Taxable income for 2021	<u>¥100,000</u>

ILLUSTRATION 19A.1 Computation of Taxable Income, 2021

Akai computes income taxes payable on taxable income for ¥100,000 as shown in [Illustration 19A.2](#).

Taxable income for 2021	¥100,000
Tax rate	× .50
Income taxes payable (current tax expense) for 2021	<u>¥ 50,000</u>

ILLUSTRATION 19A.2 Computation of Income Taxes Payable, End of 2021

Computing Deferred Income Taxes—End of 2021

The schedule in [Illustration 19A.3](#) summarizes the temporary differences and the resulting future taxable and deductible amounts.

	Future Years					
	2022	2023	2024	2025	2026	Total
Future taxable						
(deductible)						
amounts:						
Installment sales	¥112,000	¥112,000	¥112,000	¥112,000		¥448,000
Depreciation	(82,800)	(13,680)	27,792	27,792	¥58,896	18,000
Warranty costs	(56,000)	(100,000)				(156,000)

ILLUSTRATION 19A.3 Schedule of Future Taxable and Deductible Amounts, End of 2021

Akai computes the amounts of deferred income taxes to be reported at the end of 2021 as shown in Illustration 19A.4.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Installment sales	¥448,000	40%		¥179,200
Depreciation	18,000	40%		7,200
Warranty costs	(156,000)	40%	¥(62,400)	
Totals	¥310,000		¥(62,400)	¥186,400*

*Because only a single tax rate is involved in all relevant years, these totals can be reconciled: $¥310,000 \times .40 = (¥62,400) + ¥186,400$

ILLUSTRATION 19A.4 Computation of Deferred Income Taxes, End of 2021

A temporary difference is caused by the use of the accrual basis for financial reporting purposes and the installment method for tax purposes. This temporary difference will result in future taxable amounts and hence a deferred tax liability. Because of the installment contracts completed in 2021, a temporary difference of ¥448,000 originates that will reverse in equal amounts over the next four years. The company expects to have

taxable income in all future years, and there is only one enacted tax rate applicable to all future years. Akai uses that rate (40 percent) to compute the entire deferred tax liability resulting from this temporary difference.

The temporary difference caused by different depreciation policies for books and for tax purposes originates over three years and then reverses over three years. This difference will cause deductible amounts in 2022 and 2023 and taxable amounts in 2024, 2025, and 2026. These amounts sum to a net future taxable amount of ¥18,000 (which is the cumulative temporary difference at the end of 2021). Because the company expects to have taxable income in all future years and because there is only one tax rate enacted for all of the relevant future years, Akai applies that rate to the net future taxable amount to determine the related net deferred tax liability.

The third temporary difference is caused by different methods of accounting for warranties. This difference will result in deductible amounts in each of the two future years it takes to reverse. Because the company expects to report a positive income on all future tax returns and because there is only one tax rate enacted for each of the relevant future years, Akai uses that 40 percent rate to calculate the resulting deferred tax asset.

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2021

To determine the deferred tax expense (benefit), Akai needs to compare the beginning and ending balances of the deferred income tax accounts.

Illustration 19A.5 shows that computation.

Deferred tax asset at the end of 2021	¥ 62,400
Deferred tax asset at the beginning of 2021	—0—
Deferred tax expense (benefit)	¥ (62,400)
Deferred tax liability at the end of 2021	¥186,400
Deferred tax liability at the beginning of 2021	—0—
Deferred tax expense (benefit)	¥186,400

ILLUSTRATION 19A.5 Computation of Deferred Tax Expense (Benefit), 2021

The ¥62,400 increase in the deferred tax asset causes a deferred tax benefit to be reported in the income statement. The ¥186,400 increase in the deferred tax liability during 2021 results in a deferred tax expense.

[Illustration 19A.6](#) shows these two amounts **net** to a deferred tax expense of ¥124,000 for 2021.

Deferred tax expense (benefit)	¥ (62,400)
Deferred tax expense (benefit)	<u>186,400</u>
Net deferred tax expense for 2021	<u>¥124,000</u>

ILLUSTRATION 19A.6 Computation of Net Deferred Tax Expense, 2021

Akai then computes the total income tax expense as shown in [Illustration 19A.7](#).

Current tax expense for 2021	¥ 50,000
Deferred tax expense for 2021	<u>124,000</u>
Income tax expense (total) for 2021	<u>¥174,000</u>

ILLUSTRATION 19A.7 Computation of Total Income Tax Expense, 2021

Akai records income taxes payable, deferred income taxes, and income tax expense as follows.

Income Tax Expense	174,000	
Deferred Tax Asset	62,400	
Income Taxes Payable		50,000
Deferred Tax Liability		186,400

Financial Statement Presentation—2021

Companies should classify deferred tax assets and liabilities as non-current on the statement of financial position. Deferred tax assets are therefore netted against deferred tax liabilities to compute a net deferred asset (liability). [Illustration 19A.8](#) shows the classification of Akai's deferred tax accounts at the end of 2021.

	Resulting Deferred Tax	
Temporary Difference	(Asset)	Liability
Installment sales		¥179,200
Depreciation		7,200
Warranty costs	¥(62,400)	
Totals	¥(62,400)	¥186,400

ILLUSTRATION 19A.8 Classification of Deferred Tax Accounts, End of 2021

As seen in [Illustration 19A.9](#), the statement of financial position at the end of 2021 reports the following.

Non-current liabilities	
Deferred tax liability (¥186,400 – ¥62,400)	¥124,000
Current liabilities	
Income taxes payable	¥ 50,000

ILLUSTRATION 19A.9 Statement of Financial Position Presentation of Deferred Taxes, 2021

Akai's income statement for 2021 reports the following, as shown in [Illustration 19A.10](#).

Income before income taxes		¥412,000
Income tax expense		
Current	¥ 50,000	
Deferred	124,000	174,000
Net income		¥238,000

ILLUSTRATION 19A.10 Income Statement Presentation of Income Tax Expense, 2021

Second Year—2022

1. During 2022, Akai collected ¥112,000 from customers for the receivables arising from contracts completed in 2021. The company

expects recovery of the remaining receivables to result in taxable amounts of ¥112,000 in each of the following three years.

2. In 2022, the company completed four new contracts that allow for the customer to pay on an installment basis. These installment sales created new installment receivables. Future collections of these receivables will result in reporting income of ¥64,000 for tax purposes in each of the next four years.
3. During 2022, Akai continued to depreciate the assets acquired in 2021 according to the depreciation schedules presented earlier. Thus, depreciation amounted to ¥90,000 for financial reporting purposes and ¥172,800 for tax purposes.
4. An analysis at the end of 2022 of the product warranty liability account shows the following details.

Balance of liability at beginning of 2022	¥156,000
Expense for 2022 income statement purposes	180,000
Amount paid for contracts completed in 2021	(56,000)
Amount paid for contracts completed in 2022	(50,000)
Balance of liability at end of 2022	<u>¥230,000</u>

The balance of the liability is expected to require expenditures in the future as follows.

¥100,000	in 2023 due to 2021 contracts
50,000	in 2023 due to 2022 contracts
80,000	in 2024 due to 2022 contracts
<u>¥230,000</u>	

5. During 2022, non-taxable governmental bond interest revenue was ¥24,000.
6. Akai accrued a loss of ¥172,000 for financial reporting purposes because of pending litigation. This amount is not tax-deductible until the period the loss is realized, which the company estimates to be 2030.
7. Pretax financial income for 2022 amounts to ¥504,800.
8. The enacted tax rates still in effect are:

2021	50%
------	-----

2022 and later years	40%
----------------------	-----

Taxable Income and Income Taxes Payable—2022

Akai computes taxable income for 2022 as shown in [Illustration 19A.11](#).

Pretax financial income for 2022	¥504,800
Permanent difference:	
Non-taxable revenue—governmental bond interest	(24,000)
Reversing temporary differences:	
Collection on 2021 installment sales	112,000
Payments on warranties from 2021 contracts	(56,000)
Originating temporary differences:	
Excess contract income per books—2022 contracts	(256,000)
Excess depreciation per tax	(82,800)
Excess warranty expense per books—2022 contracts	130,000
Loss accrual per books	172,000
Taxable income for 2022	¥500,000

ILLUSTRATION 19A.11 Computation of Taxable Income, 2022

[Illustration 19A.12](#) shows income taxes payable for 2022.

Taxable income for 2022	¥500,000
Tax rate	× .40
Income taxes payable (current tax expense) for 2022	¥200,000

ILLUSTRATION 19A.12 Computation of Income Taxes Payable, End of 2022

Computing Deferred Income Taxes—End of 2022

The schedule in [Illustration 19A.13](#) summarizes the temporary differences existing at the end of 2022 and the resulting future taxable and deductible amounts.

	Future Years					
	2023	2024	2025	2026	2030	Total
Future taxable (deductible) amounts:						
Installment sales—2021	¥112,000	¥112,000	¥112,000			¥336,000
Installment sales—2022	64,000	64,000	64,000	¥64,000		256,000
Depreciation	(13,680)	27,792	27,792	58,896		100,800
Warranty costs	(150,000)	(80,000)				(230,000)
Loss accrual					¥(172,000)	(172,000)

ILLUSTRATION 19A.13 Schedule of Future Taxable and Deductible Amounts, End of 2022

Akai computes the amounts of deferred income taxes to be reported at the end of 2022 as shown in **Illustration 19A.14**.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Installment sales	¥592,000*	40%		¥236,800
Depreciation	100,800	40%		40,320
Warranty costs	(230,000)	40%	¥ (92,000)	
Loss accrual	(172,000)	40%	(68,800)	
Totals	¥290,800		¥(160,800)	¥277,120**

*Cumulative temporary difference = ¥336,000 + ¥256,000

**Because of a flat tax rate, these totals can be reconciled: ¥290,800 × .40 = ¥(160,800) + ¥277,120

ILLUSTRATION 19A.14 Computation of Deferred Income Taxes, End of 2022

Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2022

To determine the deferred tax expense (benefit), Akai must compare the beginning and ending balances of the deferred income tax accounts, as shown in **Illustration 19A.15**.

Deferred tax asset at the end of 2022	¥160,800
Deferred tax asset at the beginning of 2022	62,400
Deferred tax expense (benefit)	¥ (98,400)
Deferred tax liability at the end of 2022	¥277,120
Deferred tax liability at the beginning of 2022	186,400
Deferred tax expense (benefit)	¥ 90,720

ILLUSTRATION 19A.15 Computation of Deferred Tax Expense (Benefit), 2022

The deferred tax expense (benefit) and the total income tax expense for 2022 are therefore as shown in [Illustration 19A.16](#).

Deferred tax expense (benefit)	¥ (98,400)
Deferred tax expense (benefit)	90,720
Deferred tax benefit for 2022	(7,680)
Current tax expense for 2022	200,000
Income tax expense (total) for 2022	¥192,320

ILLUSTRATION 19A.16 Computation of Total Income Tax Expense, 2022

The deferred tax expense of ¥90,720 and the deferred tax benefit of ¥98,400 net to a deferred tax benefit of ¥7,680 for 2022.

Akai records income taxes for 2022 with the following journal entry.

Income Tax Expense	192,320	
Deferred Tax Asset	98,400	
Income Taxes Payable		200,000
Deferred Tax Liability		90,720

Financial Statement Presentation—2022

[Illustration 19A.17](#) shows the classification of Akai's deferred tax accounts at the end of 2022.

	Resulting Deferred Tax	
Temporary Difference	(Asset)	Liability
Installment sales		¥236,800
Depreciation		40,320
Warranty costs	¥ (92,000)	
Loss accrual	(68,800)	
Totals	<u>¥(160,800)</u>	<u>¥277,120</u>

ILLUSTRATION 19A.17 Classification of Deferred Tax Accounts, End of 2022

As shown in Illustration 19A.18, Akai's statement of financial position at the end of 2022 reports the following amounts.

Non-current liabilities	
Deferred tax liability (¥277,120 – ¥160,800)	¥116,320
Current liabilities	
Income taxes payable	¥200,000

ILLUSTRATION 19A.18 Statement of Financial Position Presentation of Deferred Taxes, End of 2022

The income statement for 2022 reports the following amounts as shown in Illustration 19A.19.

Income before income taxes		¥504,800
Income tax expense		
Current	¥200,000	
Deferred	(7,680)	192,320
Net income		<u>¥312,480</u>

ILLUSTRATION 19A.19 Income Statement Presentation of Income Tax Expense, 2022

APPENDIX 19B Accounting for Net Operating Loss Carrybacks

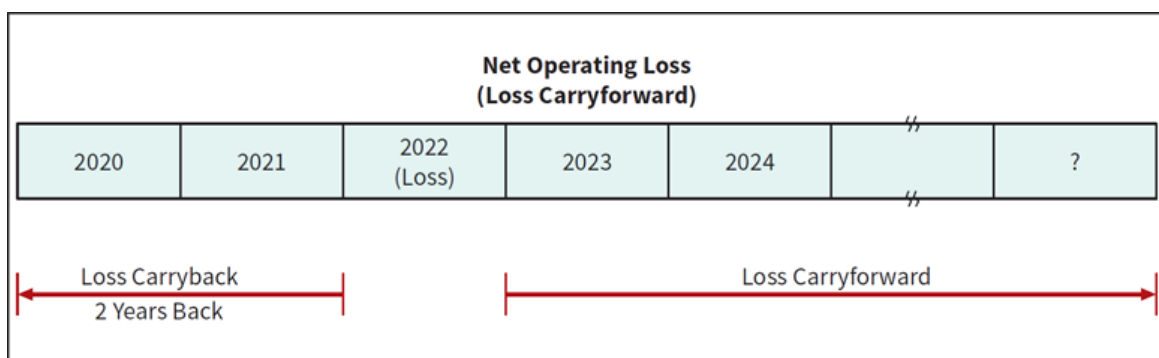

LEARNING OBJECTIVE *6

Explain the accounting for loss carrybacks.

As discussed in the chapter, many countries permit the carryforward of current net operating losses to offset future taxable income. Some countries also permit net operating losses to be carried back as well. In most cases, the carryback period is limited. For example, carrybacks are permitted in Canada for three years, and in both France and Japan for one year. In many other countries, including Austria, Colombia, and Hong Kong, no carrybacks are permitted, only carryforwards.¹³ In this appendix, we present the accounting for loss carrybacks when they are available to a company.

Loss Carryback

Through use of a **loss carryback**, a company may carry the net operating loss back two years and receive refunds for income taxes paid in those years. The company must apply the loss to the earlier year first and then to the second year. It may **carry forward** any loss remaining after the two-year carryback to offset future taxable income. [Illustration 19B.1](#) diagrams the loss carryback procedure, assuming a loss in 2022.

[ILLUSTRATION 19B.1](#) Loss Carryback Procedure

Loss Carryback Example

To illustrate the accounting procedures for a net operating loss carryback, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the following.

--	--	--	--

Year	Taxable Income or Loss	Tax Rate	Tax Paid
2019	\$ 50,000	20%	\$10,000
2020	100,000	15%	15,000
2021	200,000	25%	50,000
2022	(500,000)	—	—0—

In 2022, Groh incurs a net operating loss that it decides to carry back. Assuming a two-year carryback, Groh generally must apply the carryback first to the **second year preceding the loss year**. Therefore, it carries the loss back first to 2020. Then, Groh carries back any unused loss to 2021. Accordingly, Groh files amended tax returns for 2020 and 2021, receiving refunds for the \$65,000 (\$15,000 + \$50,000) of taxes paid in those years.

For accounting as well as tax purposes, the \$65,000 represents the **tax effect (tax benefit)** of the loss carryback. Groh should recognize this tax effect in 2022, the loss year. Since the tax loss gives rise to a refund that is both measurable and currently realizable, Groh should recognize the associated tax benefit in this loss period.

Groh makes the following journal entry for 2022.

Income Tax Refund Receivable	65,000	
Income Tax Expense (Loss Carryback)		65,000

Groh reports the account debited, **Income Tax Refund Receivable**, on the statement of financial position as a current asset at December 31, 2022. It reports the account credited on the income statement for 2022 as shown in **Illustration 19B.2**.

Groh Inc. Income Statement (partial) for 2022	
Operating loss before income taxes	\$(500,000)
Income tax benefit	
Income tax expense (loss carryback)	65,000
Net loss	<u>\$(435,000)</u>

ILLUSTRATION 19B.2 Recognition of the Benefit of the Loss Carryback in the Loss Year

Since the \$500,000 net operating loss for 2022 exceeds the \$300,000 total taxable income from the two preceding years, Groh carries forward the remaining \$200,000 loss.

Loss Carryback with Carryforward

If a carryback fails to fully absorb a net operating loss (as in the Groh example) or if the company decides not to carry the loss back, then it can carry forward the loss. To illustrate, return to the Groh example from the preceding section. In 2022, the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$50,000 ($\$200,000 \times .25$), assuming that the enacted future tax rate is 25 percent. Groh records the benefits of the carryback and the carryforward in 2022 as follows.

To recognize benefit of loss carryback		
Income Tax Refund Receivable	65,000	
Income Tax Expense (Loss Carryback)		65,000
To recognize benefit of loss carryforward		
Deferred Tax Asset	50,000	
Income Tax Expense (Loss Carryforward)		50,000

Groh realizes the income tax refund receivable of \$65,000 immediately as a refund of taxes paid in the past. It establishes a Deferred Tax Asset account for the benefits of future tax savings. The two accounts credited are contra income tax expense items, which Groh presents on the 2022 income statement shown in **Illustration 19B.3**.

Groh Inc. Income Statement (partial) for 2022		
Operating loss before income taxes		\$(500,000)
Income tax benefit		
Income tax expense (loss carryback)	\$65,000	
Income tax expense (loss carryforward)	50,000	115,000
Net loss		<u>\$(385,000)</u>

ILLUSTRATION 19B.3 Recognition of the Benefit of the Loss Carryback and Carryforward in the Loss Year

The **current tax benefit** of \$65,000 is the income tax refundable for the year. As shown earlier, Groh determines this amount by applying the carryback provisions of the tax law to the taxable loss for 2022. The \$50,000 is the **deferred tax benefit** for the year, which results from an increase in the deferred tax asset, as discussed in the chapter.

Learning Objectives Review

1 Describe the fundamentals of accounting for income taxes.

Differences between pretax financial income and taxable income.

Companies compute pretax financial income (or income for book purposes) in accordance with IFRS. They compute taxable income (or income for tax purposes) in accordance with prescribed tax regulations. Because tax regulations and IFRS differ in many ways, so frequently do pretax financial income and taxable income. Differences may exist, for example, in the timing of revenue recognition and the timing of expense recognition.

Temporary differences and future taxable amounts. Revenue recognized for book purposes in the period when the performance obligation is satisfied but deferred and reported as revenue for tax purposes when collected results in future taxable amounts. The future taxable amounts will occur in the periods the company recovers the

receivables and reports the collections as revenue for tax purposes. This results in a deferred tax liability.

Temporary differences and future deductible amounts. An accrued warranty expense that a company pays for and deducts for tax purposes, in a period later than the period in which it incurs and recognizes it for book purposes, results in future deductible amounts. The future deductible amounts will occur in the periods during which the company settles the related liabilities for book purposes. This results in a deferred tax asset.

Non-recognition of a deferred tax asset. A deferred tax asset should be reduced if it is probable that the company will not realize some portion or all of the deferred tax asset. The company should carefully consider possible sources of taxable income and related factors to assess the probability that taxable income will be available, against which the unused tax losses or unused tax credits can be utilized. To the extent that it is not probable that taxable profit will be available, against which the unused tax losses or unused tax credits can be utilized, the deferred tax asset is not recognized.

2 Identify additional issues in accounting for income taxes.

Presentation of income tax expense. Significant components of income tax expense should be disclosed in the income statement or in the notes to the financial statements. The most commonly encountered components are the current expense (or benefit) and the deferred expense (or benefit).

Temporary and permanent differences. Examples of temporary differences are (1) revenue or gains that are taxable after recognition in financial income, (2) expenses or losses that are deductible after recognition in financial income, (3) revenues or gains that are taxable before recognition in financial income, and (4) expenses or losses that are deductible before recognition in financial income. Examples of permanent differences are (1) items recognized for financial reporting purposes but not for tax purposes, and (2) items recognized for tax purposes but not for financial reporting purposes.

Tax rates and tax rate changes. Companies may use tax rates other than the current rate only after enactment or substantial enactment of the future tax rates. When a change in the tax rate is enacted, a company

should immediately recognize its effect on the deferred income tax accounts. The company reports the effects as an adjustment to income tax expense in the period of the change.

3 Explain the accounting for loss carryforwards.

A company may carry a net operating loss forward to offset future taxable income and reduce taxes payable in future years. A valuation allowance may be established for the deferred tax asset that arises from the carryforward, depending on uncertainty about future taxable income.

4 Describe the presentation of deferred income taxes in financial statements.

Presentation. Companies report deferred tax accounts on the statement of financial position as assets and liabilities. Companies classify taxes receivable or payable as current assets or current liabilities, and these items may be offset in the statement of financial position. Deferred tax assets and deferred tax liabilities are also separately recognized and measured, and may be offset in the statement of financial position. The net deferred tax asset or net deferred tax liability is reported in the non-current section of the statement of financial position. In the income statement, companies allocate income tax expense (or benefit) to continuing operations, discontinued operations, other comprehensive income, and prior period adjustments (intraproduct tax allocation), and indicate current tax expense (benefit) and deferred tax expense (benefit). An important disclosure is the reconciliation between actual tax expense and the applicable tax rate.

Basic principles. Companies apply the following basic principles in accounting for income taxes at the date of the financial statements. (1) Recognize a current tax liability or asset for the estimated taxes payable or refundable on the tax return for the current year. (2) Recognize a deferred tax liability or asset for the estimated future tax effects attributable to temporary differences and carryforwards using the enacted tax rate. (3) Base the measurement of current and deferred tax liabilities and assets on provisions of the enacted (or substantially enacted) tax law. (4) Reduce the measurement of deferred tax assets, if necessary, by the amount of any tax

benefits that, based on available evidence, companies do not expect to realize.

***5 Apply the concepts and procedures of interperiod tax allocation.**

Accounting for deferred taxes involves the following steps. (1) Calculate taxable income and income taxes payable for the year. (2) Compute deferred income taxes at the end of the year. (3) Determine deferred tax expense (benefit) and make the journal entry to record income taxes. (4) Classify deferred tax assets and liabilities and report a net deferred tax asset or liability.

***6 Explain the accounting for loss carrybacks.**

When permitted by law, a company may carry back a net operating loss; the length of the period varies by country. Any loss remaining after the carryback may be carried forward to offset future taxable income.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Johnny Bravo Ltd. began operations in 2022 and has provided the following information.

1. Pretax financial income for 2022 is £100,000.
2. The tax rate enacted for 2022 and future years is 40%.
3. Differences between the 2022 income statement and tax return are listed below.
 - a. Warranty expense accrued for financial reporting purposes amounts to £5,000. Warranty deductions per the tax return amount to £2,000.

- b. Gross profit on construction contracts using the percentage-of-completion method for books amounts to £92,000. Gross profit on construction contracts for tax purposes amounts to £62,000.
 - c. Depreciation of property, plant, and equipment for financial reporting purposes amounts to £60,000. Depreciation of these assets amounts to £80,000 for the tax return.
 - d. A £3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - e. Interest revenue earned on an investment in tax-exempt government bonds amounts to £1,400.
4. Taxable income is expected for the next few years.

Instructions

- a. Compute taxable income for 2022.
- b. Compute the deferred taxes at December 31, 2022, that relate to the temporary differences described above.
- c. Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2022.
- d. Draft the income tax expense section of the income statement, beginning with “Income before income taxes.”
- e. Assume that in 2023 Johnny Bravo reported a pretax operating loss of £100,000. There were no other temporary or permanent differences in tax and book income for 2023. Prepare the journal entry to record income tax expense for 2023. It is probable that Johnny Bravo will return to profitability in 2024.

Solution

a. Pretax financial income	£100,000
Permanent differences	
Fine for pollution	3,500
Tax-exempt interest	(1,400)
Originating temporary differences	

Excess warranty expense per books (£5,000 – £2,000)	3,000
Excess construction profits per books (£92,000 – £62,000)	(30,000)
Excess depreciation per tax (£80,000 – £60,000)	(20,000)
Taxable income	<u>£ 55,100</u>

b. Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Warranty costs	£(3,000)	40%	£(1,200)	
Construction contracts	30,000	40%		£12,000
Depreciation	20,000	40%		8,000
Totals	<u>£47,000</u>		<u>£(1,200)</u>	<u>£20,000</u>

c. Income Tax Expense	40,840	
Deferred Tax Asset	1,200***	
Deferred Tax Liability		20,000**
Income Taxes Payable		22,040*
*Taxable income for 2022 [from part (a)]		£55,100
Tax rate		× .40
Income taxes payable for 2022		<u>£22,040</u>
**Deferred tax liability at the end of 2022 [from part (b)]		£20,000
Deferred tax liability at the beginning of 2022		–0–
Deferred tax expense for 2022		<u>£20,000</u>
***Deferred tax asset at the end of 2022 [from part (b)]		£ 1,200
Deferred tax asset at the beginning of 2022		–0–
Deferred tax benefit for 2022		<u>£ (1,200)</u>

d.	Income before income taxes		£100,000
	Income tax expense		
	Current	£22,040	

Deferred	18,800	40,840
Net income		<u>£ 59,160</u>

e.

2023		
Deferred Tax Asset*	40,000	
Income Tax Expense (Loss Carryforward)		40,000
*Carryforward ($£100,000 \times .40 = £40,000$ deferred tax asset)		

The full amount of the deferred tax asset is recognized in 2023, since it is probable that Johnny Bravo will return to profitability in 2024.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

1. Explain the difference between pretax financial income and taxable income.
2. What are the two objectives of accounting for income taxes?
3. Explain the meaning of a temporary difference as it relates to deferred tax computations, and give three examples.
4. Differentiate between an originating temporary difference and a reversing difference.
5. The book basis of depreciable assets for Erwin SA is €900,000 and the tax basis is €700,000 at the end of 2022. The enacted tax rate is 34% for all periods. Determine the amount of deferred taxes to be reported on the statement of financial position at the end of 2022.
6. Roth AG has a deferred tax liability of €68,000 at the beginning of 2022. At the end of 2022, it reports accounts receivable on the books at €90,000 and the tax basis at zero (its only temporary difference). If the enacted tax rate is 34% for all periods and income taxes payable for the period is €230,000, determine the amount of total income tax expense to report for 2022.

- 7.** What is the difference between a future taxable amount and a future deductible amount? When is it not appropriate to recognize a portion or all of a deferred tax asset?
- 8.** Pretax financial income for Lake plc is £300,000, and its taxable income is £100,000 for 2022. Its only temporary difference at the end of the period relates to a £70,000 difference due to excess depreciation for tax purposes. If the tax rate is 40% for all periods, compute the amount of income tax expense to report in 2022. No deferred income taxes existed at the beginning of the year.
- 9.** Feagler plc's current income taxes payable related to its taxable income for 2022 is €460,000. In addition, Feagler's deferred tax asset decreased €20,000 during 2022. What is Feagler's income tax expense for 2022?
- 10.** Lee Ltd.'s current income taxes payable related to its taxable income for 2022 is £320,000. In addition, Lee's deferred tax liability increased £40,000, and its deferred tax asset increased £10,000 during 2022. What is Lee's income tax expense for 2022?
- 11.** How are deferred tax assets and deferred tax liabilities reported on the statement of financial position?
- 12.** Interest on governmental bonds is often referred to as a permanent difference when determining the proper amount to report for deferred taxes. Explain the meaning of permanent differences, and give two other examples.
- 13.** At the end of the year, Falabella Co. has pretax financial income of \$550,000. Included in the \$550,000 is \$70,000 interest income on governmental bonds, a \$25,000 fine for dumping hazardous waste, and depreciation of \$60,000. Depreciation for tax purposes is \$45,000. Compute income taxes payable, assuming the tax rate is 30% for all periods.
- 14.** Addison Ltd. has one temporary difference at the beginning of 2021 of £500,000. The deferred tax liability established for this amount is £150,000, based on a tax rate of 30%. The temporary difference will provide the following taxable amounts: £100,000 in 2022, £200,000 in 2023, and £200,000 in 2024. If a new tax rate for 2021 of 20% is enacted into law at the end of 2021, what is the journal entry necessary in 2021 (if any) to adjust deferred taxes?

- 15.** What are some of the reasons that the components of income tax expense should be disclosed and a reconciliation between the statutory tax rate and the effective rate be provided?
- 16.** Describe a “loss carryforward.” Discuss the uncertainty when it arises.
- 17.** What are the possible treatments for tax purposes of a net operating loss? What are the circumstances that determine the option to be applied? What is the proper treatment of a net operating loss for financial reporting purposes?
- 18.** What controversy relates to the accounting for net operating loss carryforwards?
- 19.** What is an uncertain tax position, and what are the general guidelines for accounting for uncertain positions?

Brief Exercises

BE19.1 (LO 1) In 2022, Amirante Corporation had pretax financial income of \$168,000 and taxable income of \$120,000. The difference is due to the use of different depreciation methods for tax and accounting purposes. The effective tax rate is 40%. Compute the amount to be reported as income taxes payable at December 31, 2022.

BE19.2 (LO 1) Oxford SA began operations in 2022 and reported pretax financial income of €225,000 for the year. Oxford’s tax depreciation exceeded its book depreciation by €40,000. Oxford’s tax rate for 2022 and years thereafter is 30%. In its December 31, 2022, statement of financial position, what amount of deferred tax liability should be reported?

BE19.3 (LO 2) Using the information from BE19.2, assume this is the only difference between Oxford’s pretax financial income and taxable income. Prepare the journal entry to record the income tax expense, deferred income taxes, and income taxes payable, and show how the deferred tax liability will be classified on the December 31, 2022, statement of financial position.

BE19.4 (LO 1, 2) At December 31, 2021, Appaloosa plc had a deferred tax liability of \$25,000. At December 31, 2022, the deferred tax liability is \$42,000. The company’s 2022 current tax expense is \$48,000. What amount should Appaloosa report as total 2022 tax expense?

BE19.5 (LO 1) At December 31, 2022, Suffolk plc had an estimated warranty liability of £105,000 for accounting purposes and £0 for tax purposes. (The warranty costs are not deductible until paid.) The effective tax rate is 40%. Compute the amount Suffolk should report as a deferred tax asset at December 31, 2022, assuming sufficient taxable income in future years.

BE19.6 (LO 1, 2) At December 31, 2021, Percheron Inc. had a deferred tax asset of \$30,000. At December 31, 2022, the deferred tax asset is \$59,000. The company's 2022 current tax expense is \$61,000. What amount should Percheron report as total 2022 tax expense?

BE19.7 (LO 1) At December 31, 2022, Hillyard Ltd. has a deferred tax asset of £200,000. After a careful review of all available evidence, it is determined that it is probable that £60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.

BE19.8 (LO 2) Mitchell Corporation had income before income taxes of \$195,000 in 2022. Mitchell's current income tax expense is \$48,000, and deferred income tax expense is \$30,000. Prepare Mitchell's 2022 income statement, beginning with income before income taxes.

BE19.9 (LO 1) Shetland Inc. had pretax financial income of \$154,000 in 2022 in its first year of operations. Included in the computation of that amount is insurance expense of \$4,000, which is not deductible for tax purposes. In addition, depreciation for tax purposes exceeds accounting depreciation by \$10,000. Prepare Shetland's journal entry to record 2022 taxes, assuming a tax rate of 45%.

BE19.10 (LO 1, 2) Clydesdale Corporation has a cumulative temporary difference related to depreciation of \$580,000 at December 31, 2021. This difference will reverse as follows: 2022, \$42,000; 2023, \$244,000; and 2024, \$294,000. Enacted tax rates are 34% for 2022 and 2023, and 40% for 2024. Compute the amount Clydesdale should report as a deferred tax liability at December 31, 2021.

BE19.11 (LO 2) At December 31, 2022, Takeshi Group had a deferred tax liability of ¥680,000,000 resulting from future taxable amounts of ¥2,000,000,000 and an enacted tax rate of 34%. In May 2023, a new income tax act is signed into law that raises the tax rate to 40% for 2023 and future years. Prepare the journal entry for Takeshi to adjust the deferred tax liability.

BE19.12 (LO 3) Rode Inc. incurred a net operating loss of \$500,000 in 2022. The tax rate for all years is 20%. Prepare the journal entries to record the benefits of the loss carryforward. Rode has evidence that it is probable that the company will return to profitability in 2023.

BE19.13 (LO 3) Use the information for Rode Inc. given in BE19.12. Assume that it is not probable that the entire net operating loss carryforward will be realized in future years. Prepare all the journal entries necessary at the end of 2022.

BE19.14 (LO 4) Youngman Corporation has temporary differences at December 31, 2022, that result in the following deferred taxes. All of these items are associated with the same taxing authority.

Deferred tax liability related to depreciation difference	\$38,000
Deferred tax asset related to warranty liability	62,000
Deferred tax liability related to revenue recognition	96,000
Deferred tax asset related to litigation accruals	27,000

Indicate how these balances would be presented in Youngman's December 31, 2022, statement of financial position.

***BE19.15 (LO 6)** Conlin AG had the following tax information.

Year	Taxable Income	Tax Rate	Taxes Paid
2019	€300,000	35%	€105,000
2020	€325,000	30%	€ 97,500
2021	€400,000	30%	€120,000

In 2022, Conlin suffered a net operating loss of €480,000, which it elected to carry back. The 2022 enacted tax rate is 29%. Prepare Conlin's entry to record the effect of the loss carryback.

***BE19.16 (LO 6)** Rode SA incurred a net operating loss of €500,000 in 2022. Combined income for 2020 and 2021 was €350,000. The tax rate for all years is 40%. Rode elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward, assuming sufficient taxable income in the future.

Exercises

E19.1 (LO 1, 2) (One Temporary Difference, Future Taxable Amounts, One Rate, No Beginning Deferred Taxes) Starfleet Corporation has one temporary difference at the end of 2021 that will reverse and cause taxable amounts of \$55,000 in 2022, \$60,000 in 2023, and \$75,000 in 2024. Starfleet's pretax financial income for 2021 is \$400,000, and the tax rate is 30% for all years. There are no other deferred taxes at the beginning of 2021.

Instructions

- a. Compute taxable income and income taxes payable for 2021.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2021.
- c. Prepare the income tax expense section of the income statement for 2021, beginning with the line "Income before income taxes."

E19.2 (LO 1) (Two Differences, No Beginning Deferred Taxes, Tracked through 2 Years) The following information is available for McKee plc for 2022.

1. Excess of tax depreciation over book depreciation, £40,000. This £40,000 difference will reverse equally over the years 2023–2026.
2. Deferral, for book purposes, of £25,000 of rent received in advance. The rent will be recorded as revenue in 2023.
3. Pretax financial income, £350,000. There are no deferred taxes at the beginning of 2022.
4. Tax rate for all years, 40%.

Instructions

- a. Compute taxable income for 2022.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- c. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2023, assuming taxable income of £325,000.

E19.3 (LO 1, 2) (One Temporary Difference, Future Taxable Amounts, One Rate, Beginning Deferred Taxes) Brennan Corporation began 2022 with a \$90,000 balance in the Deferred Tax Liability account. At the end of 2022, the related cumulative temporary difference amounts to \$350,000, and it will reverse evenly over the next 2 years. Pretax accounting income for 2022 is \$525,000, the tax rate for all years is 40%, and taxable income for 2022 is \$400,000.

Instructions

- a. Compute income taxes payable for 2022.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- c. Prepare the income tax expense section of the income statement for 2022, beginning with the line “Income before income taxes.”

E19.4 (LO 1, 2) (Three Differences, Compute Taxable Income, Entry for Taxes) Havaci SpA reports pretax financial income of €80,000 for 2022. The following items cause taxable income to be different than pretax financial income.

1. Depreciation on the tax return is greater than depreciation on the income statement by €16,000.
2. Rent collected on the tax return is greater than rent revenue reported on the income statement by €27,000.
3. Fines for pollution appear as an expense of €11,000 on the income statement.

Havaci’s tax rate is 30% for all years, and the company expects to report taxable income in all future years. There are no deferred taxes at the beginning of 2022.

Instructions

- a. Compute taxable income and income taxes payable for 2022.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- c. Prepare the income tax expense section of the income statement for 2022, beginning with the line “Income before income taxes.”

- d. Compute the effective income tax rate for 2022.

E19.5 (LO 1, 2) (Two Temporary Differences, One Rate, Beginning Deferred Taxes) The following facts relate to Alschuler plc.

1. Deferred tax liability, January 1, 2022, £40,000.
2. Deferred tax asset, January 1, 2022, £0.
3. Taxable income for 2022, £115,000.
4. Pretax financial income for 2022, £200,000.
5. Cumulative temporary difference at December 31, 2022, giving rise to future taxable amounts, £220,000.
6. Cumulative temporary difference at December 31, 2022, giving rise to future deductible amounts, £35,000.
7. Tax rate for all years, 40%.
8. The company is expected to operate profitably in the future.

Instructions

- a. Compute income taxes payable for 2022.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- c. Prepare the income tax expense section of the income statement for 2022, beginning with the line "Income before income taxes."

E19.6 (LO 1, 2) (Identify Temporary or Permanent Differences)

The following items are commonly accounted for differently for financial reporting purposes, than they are for tax purposes.

Instructions

For each item below, indicate whether it involves:

1. A temporary difference that will result in future deductible amounts and therefore will usually give rise to a deferred income tax asset.
2. A temporary difference that will result in future taxable amounts and therefore will usually give rise to a deferred income tax liability.
3. A permanent difference.

Use the appropriate number to indicate your answer for each.

- a. _____ An accelerated depreciation system is used for tax purposes, and the straight-line depreciation method is used for financial reporting purposes for some plant assets.
- b. _____ A landlord collects some rents in advance. Rents received are taxable in the period when they are received.
- c. _____ Expenses are incurred in obtaining tax-exempt income.
- d. _____ Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.
- e. _____ Installment sales of investments are accounted for by the accrual method for financial reporting purposes and the installment method for tax purposes.
- f. _____ Interest is received on an investment in tax-exempt governmental obligations.
- g. _____ For some assets, straight-line depreciation is used for both financial reporting purposes and tax purposes, but the assets' lives are shorter for tax purposes.
- h. _____ The tax return reports a deduction for 80% of the dividends received from various corporations. The cost method is used in accounting for the related investments for financial reporting purposes.
- i. _____ Estimated losses on pending lawsuits and claims are accrued for books. These losses are tax-deductible in the period(s) when the related liabilities are settled.
- j. _____ Expenses on share options are accrued for financial reporting purposes.

E19.7 (LO 1, 2, 4) (Terminology, Relationships, Computations, Entries)

Instructions

Complete the following statements by filling in the blanks.

- a. In a period in which a taxable temporary difference reverses, the reversal will cause taxable income to be _____ (less than, greater

than) pretax financial income.

- b. If a \$68,000 balance in Deferred Tax Asset was computed by use of a 40% rate, the underlying cumulative temporary difference amounts to \$_____.
- c. Deferred taxes _____ (are, are not) recorded to account for permanent differences.
- d. If a taxable temporary difference originates in 2022, it will cause taxable income for 2022 to be _____ (less than, greater than) pretax financial income for 2022.
- e. If total tax expense is \$50,000 and deferred tax expense is \$65,000, then the current portion of the expense computation is referred to as a current tax _____ (expense, benefit) of \$_____.
- f. If a company's tax return shows taxable income of \$105,000 for Year 2 and a tax rate of 40%, how much will appear on the December 31, Year 2, statement of financial position for "Income taxes payable" if the company has made estimated tax payments of \$36,500 for Year 2? \$_____.
- g. An increase in the Deferred Tax Liability account on the statement of financial position is recorded by a _____ (debit, credit) to the Income Tax Expense account.
- h. An income statement that reports current tax expense of \$82,000 and deferred tax benefit of \$23,000 will report total income tax expense of \$_____.
- i. A reduction in a deferred tax asset is needed whenever it is judged to be _____ that a portion of a deferred tax asset _____ (will be, will not be) realized.
- j. If the tax return shows total taxes due for the period of \$75,000 but the income statement shows total income tax expense of \$55,000, the difference of \$20,000 is referred to as a deferred tax _____ (expense, benefit).

E19.8 (LO 1, 2, 4) (Two Temporary Differences, One Rate, 3 Years) Jeonbuk Ltd. has two temporary differences between its income tax expense and income taxes payable. The information is shown below.

	2021	2022	2023

Pretax financial income	₩840,000,000	₩910,000,000	₩945,000,000
Excess depreciation expense on tax return	(30,000,000)	(40,000,000)	(20,000,000)
Excess warranty expense in financial income	20,000,000	10,000,000	8,000,000
Taxable income	<u>₩830,000,000</u>	<u>₩880,000,000</u>	<u>₩933,000,000</u>

The income tax rate for all years is 40%.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2021, 2022, and 2023.
- Assuming there were no temporary differences prior to 2021, indicate how deferred taxes will be reported on the 2023 statement of financial position. Jeonbuk's product warranty is for 12 months.
- Prepare the income tax expense section of the income statement for 2023, beginning with the line "Pretax financial income."

E19.9 (LO 1, 4) (Three Differences, Classify Deferred Taxes) At December 31, 2021, Cascade AG had the following deferred tax items.

Temporary Differences	Resulting Balances in Deferred Taxes
1. Excess of tax depreciation over book depreciation.	€200,000
2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2022. The loss will be deducted on the tax return when paid.	(50,000)
3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment.	300,000

In analyzing the temporary differences, you find that €30,000 of the depreciation temporary difference will reverse in 2022, and €120,000 of the temporary difference due to the installment sale will reverse in 2022. The tax rate for all years is 40%.

Instructions

Indicate the manner in which deferred taxes should be presented on Cascade's December 31, 2021, statement of financial position.

E19.10 (LO 1, 2) (Two Temporary Differences, One Rate, Beginning Deferred Taxes, Compute Pretax Financial Income)

The following facts relate to McKane Corporation.

1. Deferred tax liability, January 1, 2022, \$60,000.
2. Deferred tax asset, January 1, 2022, \$20,000.
3. Taxable income for 2022, \$115,000.
4. Cumulative temporary difference at December 31, 2022, giving rise to future taxable amounts, \$210,000.
5. Cumulative temporary difference at December 31, 2022, giving rise to future deductible amounts, \$95,000.
6. Tax rate for all years, 40%. No permanent differences exist.
7. The company is expected to operate profitably in the future.

Instructions

- a. Compute the amount of pretax financial income for 2022.
- b. Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- c. Prepare the income tax expense section of the income statement for 2022, beginning with the line "Income before income taxes."
- d. Compute the effective tax rate for 2022.

E19.11 (LO 1, 2) (One Difference, Multiple Rates, Effect of Beginning Balance versus No Beginning Deferred Taxes) At the end of 2022, Wasicsko AG has €180,000 of cumulative temporary differences that will result in reporting future taxable amounts as follows.

2023	€ 70,000
2024	50,000
2025	40,000
2026	20,000
	<u>€180,000</u>

Tax rates enacted as of the beginning of 2021 are:

2021 and 2022	40%
2023 and 2024	30%
2025 and later	25%

Wasicsko's taxable income for 2022 is €340,000. Taxable income is expected in all future years.

Instructions

- Prepare the journal entry for Wasicsko to record income taxes payable, deferred income taxes, and income tax expense for 2022, assuming that there were no deferred taxes at the end of 2021.
- Prepare the journal entry for Wasicsko to record income taxes payable, deferred income taxes, and income tax expense for 2022, assuming that there was a balance of €22,000 in a Deferred Tax Liability account at the end of 2021.

E19.12 (LO 1) (Deferred Tax Asset) Callaway SA has a deferred tax asset account with a balance of €150,000 at the end of 2021 due to a single cumulative temporary difference of €375,000. At the end of 2022, this same temporary difference has increased to a cumulative amount of €500,000. Taxable income for 2022 is €850,000. The tax rate is 40% for all years.

Instructions

- Record income tax expense, deferred income taxes, and income taxes payable for 2022, assuming that it is probable that the deferred tax asset will be realized.
- Assuming that it is probable that €30,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2022 to

recognize this probability.

E19.13 (LO 1, 2) (Deferred Tax Asset) Assume the same information as in E19.12 for Callaway SA.

Instructions

- a. Record income tax expense, deferred income taxes, and income taxes payable for 2022, assuming that it is probable that €20,000 of the deferred tax asset will be realized in full.
- b. Record income tax expense, deferred income taxes, and income taxes payable for 2022, assuming that it is probable that none of the deferred tax asset will be realized.

E19.14 (LO 1, 2, 4) (Deferred Tax Liability, Change in Tax Rate, Prepare Section of Income Statement) Sharrer Inc.'s only temporary difference at the beginning and end of 2022 is caused by a \$2 million deferred gain for tax purposes for an installment sale of a plant asset, and the related receivable is due in equal installments in 2023 and 2024. The related deferred tax liability at the beginning of the year is \$800,000. In the third quarter of 2022, a new tax rate of 34% is enacted into law and is scheduled to become effective for 2024. Taxable income for 2022 is \$5,000,000, and taxable income is expected in all future years.

Instructions

- a. Determine the amount reported as a deferred tax liability at the end of 2022. Indicate proper classification(s).
- b. Prepare the journal entry (if any) necessary to adjust the deferred tax liability when the new tax rate is enacted into law.
- c. Draft the income tax expense portion of the income statement for 2022. Begin with the line "Income before income taxes." Assume no permanent differences exist.

E19.15 (LO 1, 2) (Two Temporary Differences, Tracked through 3 Years, Multiple Rates) Taxable income and pretax financial income would be identical for Jiang Group except for its treatments of gross profit on installment sales and estimated costs of warranties. The following income computations have been prepared (amounts in thousands).

--	--	--	--

Taxable income	2021	2022	2023
Excess of revenues over expenses (excluding two temporary differences)	¥160,000	¥210,000	¥90,000
Installment income collected	8,000	8,000	8,000
Expenditures for warranties	(5,000)	(5,000)	(5,000)
Taxable income	¥163,000	¥213,000	¥93,000
Pretax financial income	2021	2022	2023
Excess of revenues over expenses (excluding two temporary differences)	¥160,000	¥210,000	¥90,000
Installment gross profit earned	24,000	—0—	—0—
Estimated cost of warranties	(15,000)	—0—	—0—
Income before taxes	¥169,000	¥210,000	¥90,000

The tax rates in effect are 2021, 45%; 2022 and 2023, 40%. All tax rates were enacted into law on January 1, 2021. No deferred income taxes existed at the beginning of 2021. Taxable income is expected in all future years.

Instructions

Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2021, 2022, and 2023.

E19.16 (LO 1, 2) (Three Differences, Multiple Rates, Future Taxable Income) During 2022, Graham plc's first year of operations, the company reports pretax financial income of £250,000. Graham's enacted tax rate is 40% for 2022 and 35% for all later years. Graham expects to have taxable income in each of the next 5 years. The effect on future tax returns of temporary differences existing at December 31, 2022, are summarized below.

	Future Years					
	2023	2024	2025	2026	2027	Total
Future taxable (deductible)						
amounts:						
Installment sales	£32,000	£32,000	£32,000			£ 96,000

Depreciation	6,000	6,000	6,000	£6,000	£6,000	30,000
Unearned rent	(50,000)	(50,000)				(100,000)

Instructions

- Complete the schedule below to compute deferred taxes at December 31, 2022.
- Compute taxable income for 2022.
- Prepare the journal entry to record income taxes payable, deferred taxes, and income tax expense for 2022.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	December 31, 2022	
			Deferred Tax	
			(Asset)	Liability
Installment sales	£ 96,000			
Depreciation	30,000			
Unearned rent	(100,000)			
Totals	£			

E19.17 (LO 1, 2, 4) (Two Differences, One Rate, Beginning Deferred Balance, Compute Pretax Financial Income) Luo Ltd. establishes a ¥90 million liability at the end of 2022 for the estimated litigation settlement for manufacturing defects. All related costs will be paid and deducted on the tax return in 2023. Also, at the end of 2022, the company has ¥50 million of temporary differences due to excess depreciation for tax purposes, ¥7 million of which will reverse in 2023.

The enacted tax rate for all years is 40%, and the company pays taxes of ¥64 million on ¥160 million of taxable income in 2022. Luo expects to have taxable income in 2023.

Instructions

- Determine the deferred taxes to be reported at the end of 2022.
- Indicate how the deferred taxes computed in (a) are to be reported on the statement of financial position.

- c. Assuming that the only deferred tax account at the beginning of 2022 was a deferred tax liability of ¥10,000,000, draft the income tax expense portion of the income statement for 2022, beginning with the line “Income before income taxes.” (*Hint: You must first compute (1) the amount of temporary difference underlying the beginning ¥10,000,000 deferred tax liability, then (2) the amount of temporary differences originating or reversing during the year, and then (3) the amount of pretax financial income.*)

E19.18 (LO 1, 4) (Two Differences, No Beginning Deferred Taxes, Multiple Rates) Macinski Inc., in its first year of operations, has the following differences between the book basis and tax basis of its assets and liabilities at the end of 2022.

	Book Basis	Tax Basis
Equipment (net)	\$400,000	\$340,000
Estimated warranty liability	150,000	—0—

It is estimated that the warranty liability will be settled in 2023. The difference in equipment (net) will result in taxable amounts of \$20,000 in 2023, \$30,000 in 2024, and \$10,000 in 2025. The company has taxable income of \$550,000 in 2022. As of the beginning of 2022, the enacted tax rate is 34% for 2022–2024, and 30% for 2025. Macinski expects to report taxable income through 2027.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- Indicate how deferred income taxes will be reported on the statement of financial position at the end of 2022.

E19.19 (LO 1, 2, 4) (Two Temporary Differences, Multiple Rates, Future Taxable Income) Flynn Inc. has two temporary differences at the end of 2022. The first difference stems from installment sales, and the second one results from the accrual of a loss contingency. Flynn’s accounting department has developed a schedule of future taxable and deductible amounts related to these temporary differences as follows.

	2023	2024	2025	2026

Taxable amounts	\$40,000	\$50,000	\$60,000	\$90,000
Deductible amounts		(15,000)	(19,000)	
	<u>\$40,000</u>	<u>\$35,000</u>	<u>\$41,000</u>	<u>\$90,000</u>

As of the beginning of 2022, the enacted tax rate is 34% for 2022 and 2023, and 38% for 2024–2027. At the beginning of 2022, the company had no deferred income taxes on its statement of financial position. Taxable income for 2022 is \$400,000. Taxable income is expected in all future years.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- Indicate how deferred income taxes would be classified on the statement of financial position at the end of 2022.

E19.20 (LO 1, 4) (Two Differences, One Rate, First Year) The differences between the book basis and tax basis of the assets and liabilities of Morgan Corporation at the end of 2022 are presented below.

	Book Basis	Tax Basis
Accounts receivable	\$50,000	\$—0—
Litigation liability	20,000	—0—

It is estimated that the litigation liability will be settled in 2023. The difference in accounts receivable will result in taxable amounts of \$30,000 in 2023 and \$20,000 in 2024. The company has taxable income of \$300,000 in 2022 and is expected to have taxable income in each of the following 2 years. Its enacted tax rate is 34% for all years. This is the company's first year of operations.

Instructions

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2022.
- Indicate how deferred income taxes will be reported on the statement of financial position at the end of 2022.

E19.21 (LO 3) (Carryforward of NOL, No Temporary Differences)

The pretax financial income (or loss) figures for Synergetics Company are as follows.

2019	\$ 80,000
2020	(160,000)
2021	(380,000)
2022	120,000
2023	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved.

Assume a 45% tax rate for 2019 and 2020, and a 40% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2019–2023 to record income tax expense and the effects of the net operating loss carryforwards. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that it is probable the loss carryforward will be realized.)

E19.22 (LO 3) (Two NOLs, No Temporary Differences, Entries and Income Statement) Lanier SA has pretax financial income (or loss) equal to taxable income (or loss) from 2017–2023 as follows.

	Income (Loss)	Tax Rate
2017	€ 48,000	50%
2018	(150,000)	40%
2019	90,000	40%
2020	30,000	40%
2021	105,000	40%
2022	(60,000)	50%
2023	130,000	50%

Pretax financial income (loss) and taxable income (loss) have been the same for all years since Lanier has been in business. In recording the

benefits of a loss carryforward, assume that it is probable that the related benefits will be realized.

Instructions

- What entry or entries for income taxes should be recorded for 2018?
- Indicate what the income tax expense portion of the income statement for 2018 should look like. Assume all income (loss) relates to continuing operations.
- What entry for income taxes should be recorded in 2019?
- How should the income tax expense section of the income statement for 2019 appear?
- What entry for income taxes should be recorded in 2022?
- How should the income tax expense section of the income statement for 2022 appear?

E19.23 (LO 3, 4) (NOL Carryforward, Recognition versus Non-Recognition) Sondgeroth Ltd. reports the following pretax income (loss) for both financial reporting purposes and tax purposes.

Year	Pretax Income (Loss)	Tax Rate
2020	£120,000	34%
2021	90,000	34%
2022	(280,000)	38%
2023	300,000	38%

The tax rates listed were all enacted by the beginning of 2020.

Instructions

- Prepare the journal entries for the years 2020–2023 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryforward, assuming that at the end of 2022 it is probable that the benefits of the loss carryforward will be realized in the future.
- Using the assumption in (a), prepare the income tax section of the 2022 income statement, beginning with the line “Operating loss before income taxes.”

- c. Prepare the journal entries for 2022 and 2023, assuming that based on the weight of available evidence at 12/31/22, it is probable that one-fourth of the benefits of the loss carryforward will not be realized.
- d. Using the assumption in (c), prepare the income tax section of the 2022 income statement, beginning with the line “Operating loss before income taxes.”

E19.24 (LO 3, 4) (NOL Carryforward, Non-Recognition) Nielson AG reports the following pretax income (loss) for both book and tax purposes.

Year	Pretax Income (Loss)	Tax Rate
2020	€120,000	40%
2021	90,000	40%
2022	(280,000)	45%
2023	120,000	45%

The tax rates listed were all enacted by the beginning of 2020.

Instructions

- a. Prepare the journal entries for years 2020–2023 to record income tax expense (benefit) and income taxes payable (refundable) and the tax effects of the loss carryforward, assuming that based on the weight of available evidence it is probable that one-half of the benefits of the loss carryforward will not be realized.
- b. Prepare the income tax section of the 2022 income statement, beginning with the line “Operating loss before income taxes.”
- c. Prepare the income tax section of the 2023 income statement, beginning with the line “Income before income taxes.”

E19.25 (LO 3) (NOL Carryforward) Zhou Ltd. reported the following pretax financial income (loss) for the years 2022–2024.

2022	HK\$120,000
2023	(150,000)
2024	180,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 40% for 2022–2024.

Instructions

- Prepare the journal entries for the years 2022–2024 to record income tax expense, income taxes payable, and the tax effects of the loss carryforward, assuming that it is probable that only four-fifths (80%) of the benefits of the loss carryforward will be realized.
- Prepare the income tax section of the 2023 income statement beginning with the line “Income (loss) before income taxes.”

***E19.26 (LO 6) (Carryback and Carryforward of NOL, No Temporary Differences)** The pretax financial income (or loss) figures for Lynchburg Company are as follows.

2017	€ 160,000
2018	250,000
2019	€ 80,000
2020	(160,000)
2021	(380,000)
2022	120,000
2023	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 45% tax rate for 2017 and 2018, and a 40% tax rate for the remaining years.

Instructions

Prepare the journal entries for the years 2019–2023 to record income tax expense and the effects of the net operating loss carrybacks and carryforwards, assuming Lynchburg Company uses the carryback provision. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that it is probable that the full amount will be realized.)

***E19.27 (LO 6) (NOL Carryback and Carryforward, Non-Recognition)** Hayes Co. reported the following pretax financial income (loss) for the years 2020–2024.

2020	\$240,000
2021	350,000
2022	120,000
2023	(570,000)
2024	180,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 34% for 2020 and 2021, and 40% for 2022–2024. Assume the carryback provision is used first for net operating losses.

Instructions

- Prepare the journal entries for the years 2022–2024 to record income tax expense, income taxes payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence it is probable that all of the benefits of the loss carry-forward will be realized.
- Prepare the income tax section of the 2023 income statement, beginning with the line “Income (loss) before income taxes.”

Problems

P19.1 (LO 1, 2, 4) (Three Differences, No Beginning Deferred Taxes, Multiple Rates) The following information is available for Remmers Corporation for 2022.

- Depreciation reported on the tax return exceeded depreciation reported on the income statement by \$120,000. This difference will reverse in equal amounts of \$30,000 over the years 2023–2026.
- Interest received on governmental bonds was \$10,000.
- Rent collected in advance on January 1, 2022, totaled \$60,000 for a 3-year period. Of this amount, \$40,000 was reported as unearned at December 31 for book purposes.
- The tax rates are 40% for 2022 and 35% for 2023 and subsequent years.
- Income taxes of \$320,000 are due per the tax return for 2022.

6. No deferred taxes existed at the beginning of 2022.

Instructions

- Compute taxable income for 2022.
- Compute pretax financial income for 2022.
- Prepare the journal entries to record income tax expense, deferred income taxes, and income taxes payable for 2022 and 2023. Assume taxable income was \$980,000 in 2023.
- Prepare the income tax expense section of the income statement for 2022, beginning with “Income before income taxes.”

P19.2 (LO 1, 2) (One Temporary Difference, Tracked for 4 Years, One Permanent Difference, Change in Rate) The pretax financial income of Truttman AG differs from its taxable income throughout each of 4 years as follows.

Year	Pretax Financial Income	Taxable Income	Tax Rate
2022	€290,000	€180,000	35%
2023	320,000	225,000	40%
2024	350,000	260,000	40%
2025	420,000	560,000	40%

Pretax financial income for each year includes a non-deductible expense of €30,000 (never deductible for tax purposes). The remainder of the difference between pretax financial income and taxable income in each period is due to one depreciation temporary difference. No deferred income taxes existed at the beginning of 2022.

Instructions

- Prepare journal entries to record income taxes in all 4 years. Assume that the change in the tax rate to 40% was not enacted until the beginning of 2023.
- Prepare the income statement for 2023, beginning with income before income taxes.

P19.3 (LO 1, 2, 4) (Second Year of Depreciation Difference, Two Differences, Single Rate, Discontinued Operation) The following information has been obtained for the Gocker SA.

1. Prior to 2022, taxable income and pretax financial income were identical.
2. Pretax financial income is €1,700,000 in 2022 and €1,400,000 in 2023.
3. On January 1, 2022, equipment costing €1,200,000 is purchased. It is to be depreciated on a straight-line basis over 5 years for tax purposes and over 8 years for financial reporting purposes. (Under applicable tax law, a half-year of tax depreciation is recorded in 2022 and 2027.)
4. Interest of €60,000 was earned on tax-exempt governmental obligations in 2023.
5. Included in 2023 pretax financial income is a gain on discontinued operations of €200,000, which is fully taxable.
6. The tax rate is 35% for all periods.
7. Taxable income is expected in all future years.

Instructions

- a. Compute taxable income and income taxes payable for 2023.
- b. Prepare the journal entry to record 2023 income tax expense, income taxes payable, and deferred taxes.
- c. Prepare the bottom portion of Gocker's 2023 income statement, beginning with "Income before income taxes."
- d. Indicate how deferred income taxes should be presented on the December 31, 2023, statement of financial position.

P19.4 (LO 1, 2) (Permanent and Temporary Differences, One Rate) The accounting records of Shinault Inc. show the following data for 2022.

1. Equipment was acquired in early January for \$300,000. Straight-line depreciation over a 5-year life is used, with no residual value. For tax purposes, Shinault used a 30% rate to calculate depreciation.

2. Interest revenue on governmental bonds totaled \$4,000.
3. Product warranties were estimated to be \$50,000 in 2022. Actual repair and labor costs related to the warranties in 2022 were \$10,000. The remainder is estimated to be paid evenly in 2023 and 2024.
4. Sales on an accrual basis were \$100,000. For tax purposes, \$75,000 was recorded on the installment-sales method.
5. Fines incurred for pollution violations were \$4,200.
6. Pretax financial income was \$750,000. The tax rate is 30%.

Instructions

- a. Prepare a schedule starting with pretax financial income in 2022 and ending with taxable income in 2022.
- b. Prepare the journal entry for 2022 to record income taxes payable, income tax expense, and deferred income taxes.

P19.5 (LO 3) Groupwork (Recognition of NOL) Jennings plc reported the following pretax income (loss) and related tax rates during the years 2021–2024.

	Pretax Income (loss)	Tax Rate
2021	80,000	40%
2022	(180,000)	45%
2023	200,000	40%
2024	100,000	40%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Jennings began business. The tax rates from 2021–2024 were enacted in 2021.

Instructions

- a. Prepare the journal entries for the years 2022–2024 to record income taxes payable (refundable), income tax expense (benefit), and the tax effects of the loss carryforward. Assume that it is probable that it will realize the benefits of any loss carryforward in the year that immediately follows the loss year.

- b. Indicate the effect the 2022 entry or entries has on the December 31, 2022, statement of financial position.
- c. Prepare the portion of the income statement starting with “Operating loss before income taxes” for 2022.
- d. Prepare the portion of the income statement starting with “Income before income taxes” for 2023.

P19.6 (LO 1, 4) (Two Differences, Two Rates, Future Income Expected) Presented below are two independent situations related to future taxable and deductible amounts resulting from temporary differences existing at December 31, 2022.

1. Mooney Co. has developed the following schedule of future taxable and deductible amounts.

	2023	2024	2025	2026	2027
Taxable amounts	\$300	\$300	\$300	\$ 300	\$300
Deductible amount	—	—	—	(1,600)	—

2. Roesch Co. has the following schedule of future taxable and deductible amounts.

	2023	2024	2025	2026
Taxable amounts	\$300	\$300	\$ 300	\$300
Deductible amount	—	—	(2,300)	—

Both Mooney Co. and Roesch Co. have taxable income of \$4,000 in 2022 and expect to have taxable income in all future years. The tax rates enacted as of the beginning of 2022 are 30% for 2022–2025 and 35% for years thereafter.

Instructions

For each of these two situations, compute the net amount of deferred income taxes to be reported at the end of 2022, and indicate how it should be classified on the statement of financial position.

P19.7 (LO 1, 2, 4) Groupwork (One Temporary Difference, Tracked 3 Years, Change in Rates, Income Statement Presentation) Crosley Ltd. sold an investment on an installment basis. The total gain of £60,000 was reported for financial reporting purposes in the period of sale. The

company qualifies to use the installment-sales method for tax purposes. The installment period is 3 years; one-third of the sale price is collected in the period of sale. The tax rate was 40% in 2022, and 35% in 2023 and 2024. The 35% tax rate was not enacted in law until 2023. The accounting and tax data for the 3 years is shown below.

	Financial Accounting	Tax Return
2022 (40% tax rate)		
Income before temporary difference	£ 70,000	£70,000
Temporary difference	60,000	20,000
Income	<u>£130,000</u>	<u>£90,000</u>
2023 (35% tax rate)		
Income before temporary difference	£ 70,000	£70,000
Temporary difference	–0–	20,000
Income	<u>£ 70,000</u>	<u>£90,000</u>
2024 (35% tax rate)		
Income before temporary difference	£ 70,000	£70,000
Temporary difference	–0–	20,000
Income	<u>£ 70,000</u>	<u>£90,000</u>

Instructions

- Prepare the journal entries to record the income tax expense, deferred income taxes, and income taxes payable at the end of each year. No deferred income taxes existed at the beginning of 2022.
- Explain how the deferred taxes will appear on the statement of financial position at the end of each year.
- Draft the income tax expense section of the income statement for each year, beginning with “Income before income taxes.”

P19.8 (LO 1, 2, 4) (Two Differences, 2 Years, Compute Taxable Income and Pretax Financial Income) The following information was disclosed during the audit of Zheng Group.

Year	Amount Due
------	------------

1.

	per Tax Return
2022	¥130,000,000
2023	104,000,000
2. On January 1, 2022, equipment costing ¥600,000,000 is purchased. For financial reporting purposes, the company uses straight-line depreciation over a 5-year life. For tax purposes, the company uses the double-declining balance method over 5 years.
3. In January 2023, ¥225,000,000 is collected in advance rental of a building for a 3-year period. The entire ¥225,000,000 is reported as taxable income in 2023, but ¥150,000,000 of the ¥225,000,000 is reported as unearned revenue in 2023 for financial reporting purposes. The remaining amount of unearned revenue is to be recognized equally in 2024 and 2025.
4. The tax rate is 40% in 2022 and all subsequent periods. (*Hint: To find taxable income in 2022 and 2023, the related income taxes payable amounts will have to be “grossed up.”*)
5. No temporary differences existed at the end of 2021. Zheng expects to report taxable income in each of the next 5 years.

Instructions

- a. Determine the amount to report for deferred income taxes at the end of 2022, and indicate how it should be classified on the statement of financial position.
- b. Prepare the journal entry to record income taxes for 2022.
- c. Draft the income tax section of the income statement for 2022, beginning with “Income before income taxes.” (*Hint: You must compute taxable income and then combine that with changes in cumulative temporary differences to arrive at pretax financial income.*)
- d. Determine the deferred income taxes at the end of 2023, and indicate how they should be classified on the statement of financial position.
- e. Prepare the journal entry to record income taxes for 2023.
- f. Draft the income tax section of the income statement for 2023, beginning with “Income before income taxes.”

P19.9 (LO 1, 2, 4) Groupwork (Five Differences, Compute Taxable Income and Deferred Taxes, Draft Income Statement) Wise AG began operations at the beginning of 2022. The following information pertains to this company.

1. Pretax financial income for 2022 is €100,000.
2. The tax rate enacted for 2022 and future years is 40%.
3. Differences between the 2022 income statement and tax return are listed below:
 - a. Warranty expense accrued for financial reporting purposes amounts to €7,000. Warranty deductions per the tax return amount to €2,000.
 - b. Income on construction contracts using the percentage-of-completion method per books amounts to €92,000. Income on construction contracts for tax purposes amounts to €67,000.
 - c. Depreciation of property, plant, and equipment for financial reporting purposes amounts to €60,000. Depreciation of these assets amounts to €80,000 for the tax return.
 - d. A €3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
 - e. Interest revenue recognized on an investment in tax-exempt bonds amounts to €1,500.
4. Taxable income is expected for the next few years.

Instructions

- a. Compute taxable income for 2022.
- b. Compute the deferred taxes at December 31, 2022, that relate to the temporary differences described above. Clearly label them as deferred tax asset or liability.
- c. Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2022.
- d. Draft the income tax expense section of the income statement for 2022, beginning with “Income before income taxes.”

Concepts for Analysis

CA19.1 (LO 1) Writing (Objectives and Principles for Accounting for Income Taxes) The amount of income taxes due to the government for a period of time is rarely the amount reported on the income statement for that period as income tax expense.

Instructions

- Explain the objectives of accounting for income taxes in general-purpose financial statements.
- Explain the basic principles that are applied in accounting for income taxes at the date of the financial statements to meet the objectives discussed in (a).
- List the steps in the annual computation of deferred tax liabilities and assets.

CA19.2 (LO 1) Writing (Basic Accounting for Temporary Differences) Dexter Manufacturing reports depreciation expense for certain machinery purchased this year using an accelerated method for income tax purposes and the straight-line basis for financial reporting purposes. The tax deduction is the larger amount this year.

Dexter received rent revenues in advance this year. These revenues are included in this year's taxable income. However, for financial reporting purposes, these revenues are reported as unearned revenues, a current liability.

Instructions

- What are the principles of the asset-liability approach?
- How would Dexter account for the temporary differences?
- How should Dexter classify the deferred tax consequences of the temporary differences on its statement of financial position?

CA19.3 (LO 1, 2) (Identify Temporary Differences and Classification Criteria) The asset-liability approach for recording deferred income taxes is an integral part of IFRS.

Instructions

- a. Indicate whether each of the following independent situations should be treated as a temporary difference or as a permanent difference, and explain why.
1. Estimated warranty costs (covering a 3-year warranty) are expensed for financial reporting purposes at the time of sale but deducted for income tax purposes when paid.
 2. Depreciation for book and income tax purposes differs because of different bases of carrying the related property, which was acquired in a trade-in. The different bases are a result of different rules used for book and tax purposes to compute the basis of property acquired in a trade-in.
 3. A company properly uses the equity method to account for its 30% investment in another company. The investee pays dividends that are about 10% of its annual earnings.
 4. A company reports a gain on an involuntary conversion of a non-monetary asset to a monetary asset. The company elects to replace the property within the statutory period using the total proceeds so the gain is not reported on the current year's tax return.
- b. Discuss the nature of the deferred income tax accounts and possible classifications in a company's statement of financial position. Indicate the manner in which these accounts are to be reported.

CA19.4 (LO 1, 2) (Accounting for Deferred Income Taxes)

This year, Gumowski SA has each of the following items in its income statement.

1. Income on installment sales.
2. Revenues on long-term construction contracts.
3. Estimated costs of product warranty contracts.
4. Interest on tax-exempt bonds.

Instructions

- a. Under what conditions do deferred income taxes need to be reported in the financial statements?

- b. Specify when deferred income taxes need to be recognized for each of the items above, and indicate the rationale for such recognition.

CA19.5 (LO 1, 2) (Explain Computation of Deferred Tax Liability for Multiple Tax Rates) At December 31, 2022, Higley Corporation has one temporary difference which will reverse and cause taxable amounts in 2023. In 2022, a new tax act set taxes equal to 45% for 2023, 40% for 2022, and 34% for 2024 and years thereafter.

Instructions

Explain what circumstances would call for Higley to compute its deferred tax liability at the end of 2022 by multiplying the cumulative temporary difference by:

- a. 45%.
- b. 40%.
- c. 34%.

CA19.6 (LO 1, 2, 3) (Explain Future Taxable and Deductible Amounts, How Carryforward Affects Deferred Taxes) Maria Rodriquez and Lynette Kingston are discussing accounting for income taxes. They are currently studying a schedule of taxable and deductible amounts that will arise in the future as a result of existing temporary differences. The schedule is as follows.

	Current Year	Future Years			
	2022	2023	2024	2025	2026
Taxable income	<u>€850,000</u>				
Taxable amounts		€375,000	€375,000	€ 375,000	€375,000
Deductible amounts				(2,400,000)	
Enacted tax rate	50%	45%	40%	35%	30%

Instructions

- a. Explain the concept of future taxable amounts and future deductible amounts as illustrated in the schedule.

- b. How do the carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

CA19.7 (LO 1, 2) Ethics (Deferred Taxes, Income Effects) Stephanie Delaney, a public accountant, is the newly hired director of company taxation for Acme Incorporated, which is a publicly traded company. Ms. Delaney's first job with Acme is the review of the company's accounting practices on deferred income taxes. In doing her review, she notes differences between tax and book depreciation methods that permitted Acme to realize a sizable deferred tax liability on its statement of financial position. As a result, Acme paid very little in income taxes at that time.

Delaney also discovers that Acme has an explicit policy of selling off plant assets before they reversed in the deferred tax liability account. This policy, coupled with the rapid expansion of its plant asset base, has allowed Acme to "defer" all income taxes payable for several years, even though it always has reported positive earnings and an increasing EPS. Delaney confirms with the legal department that the policy is legal, but she is uncomfortable with the ethics of it.

Instructions

Answer the following questions.

- Why would Acme have an explicit policy of selling plant assets before the temporary differences reversed in the deferred tax liability account?
- What are the ethical implications of Acme's "deferral" of income taxes?
- Who could be harmed by Acme's ability to "defer" income taxes payable for several years, despite positive earnings?
- In a situation such as this, what are Ms. Delaney's professional responsibilities as a public accountant?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What amounts relative to income taxes does M&S report in its:
 1. 2019 income statement?
 2. 30 March 2019 statement of financial position?
 3. 2019 statement of cash flows?
- b. M&S's provision for income taxes in 2018 and 2019 was computed at what effective tax rates? (See the notes to the financial statements.)
- c. How much of M&S's 2019 total provision for income taxes was current tax expense, and how much was deferred tax expense?
- d. What did M&S report as the significant components (the details) of its 30 March 2019 deferred tax assets and liabilities?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What are the amounts of adidas's and Puma's provision for income taxes for the year 2018? Of each company's 2018 provision for income taxes, what portion is current expense and what portion is deferred expense?
- b. What amount of cash was paid in 2018 for income taxes by adidas and by Puma?

- c. What was the effective tax rate in 2018 for adidas and for Puma? Why might their effective tax rates differ?
- d. For year-end 2018, what amounts were reported by adidas and by Puma as (1) gross deferred tax assets and (2) gross deferred tax liabilities?
- e. Does either adidas or Puma disclose any net operating loss carrybacks and/or carryforwards at year-end 2018? What are the amounts, and when do the carryforwards expire?

Financial Statement Analysis Case

Homestake Mining Company

Homestake Mining Company (USA) is a 120-year-old international gold mining company with substantial gold mining operations and exploration in the United States, Canada, and Australia. At year-end, Homestake reported the following items related to income taxes (thousands of dollars).

Total current taxes	\$ 26,349
Total deferred taxes	(39,436)
Total income and mining taxes (the provision for taxes per its income statement)	<u>(13,087)</u>
Deferred tax liabilities	\$303,050
Deferred tax assets, net of an unrecognized amount of \$207,175	<u>95,275</u>
Net deferred tax liability	<u>\$207,775</u>
Note 6 (partial):	
Tax loss carryforwards (U.S., Canada, Australia, and Chile)	\$71,151
Tax credit carryforwards	\$12,007

Instructions

- a. What is the significance of Homestake's disclosure of "Current taxes" of \$26,349 and "Deferred taxes" of \$(39,436)?
- b. Explain the concept behind Homestake's disclosure of deferred tax liabilities (future taxable amounts) and deferred tax assets (future deductible amounts).

- c. Homestake reported tax loss carryforwards of \$71,151 and tax credit carryforwards of \$12,007. How does the carryforward provision affect the reporting of deferred tax assets and deferred tax liabilities?

Accounting, Analysis, and Principles

Adler AG, which began operations at the beginning of 2020, produces various products on a contract basis. Each contract generates income of €80,000. Some of Adler's contracts provide for the customer to pay on an installment basis. Under these contracts, Adler collects one-fifth of the contract revenue in each of the following 4 years. For financial reporting purposes, the company recognizes income on an accrual basis; for tax purposes, Adler recognizes income in the year cash is collected (installment basis).

Presented below is information related to Adler's operations for 2022.

1. In 2022, the company completed seven contracts that allow for the customer to pay on an installment basis. Adler recognized the related income of €560,000 for financial reporting purposes. It reported only €112,000 of income on installment sales on the 2022 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of €112,000 in each of the next 4 years.
2. Non-taxable government bond interest revenue was €28,000.
3. Non-deductible fines and penalties of €26,000 were paid.
4. Pretax financial income amounts to €500,000.
5. Tax rates (enacted before the end of 2022) are 50% for 2022 and 40% for 2023 and later.
6. The accounting period is the calendar year.
7. The company is expected to have taxable income in all future years.
8. The company had a deferred tax liability balance of €40,000 related to prior year installment sales at the end of 2021. None of this temporary difference reversed in 2022.

Accounting

Prepare the journal entry to record income taxes for 2022.

Analysis

Classify deferred income taxes on the statement of financial position at December 31, 2022, and indicate, starting with income before income taxes, how income taxes are reported on the income statement. What is Adler's effective tax rate?

Principles

Explain how the IASB Conceptual Framework is used as a basis for determining the proper accounting for deferred income taxes.

Research Case

Kleckner Company started operations in 2018. Although it has grown steadily, the company reported accumulated operating losses of \$450,000

in its first four years in business. In the most recent year (2022), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation.

Given its past operating results, Kleckner has determined that it is not probable that it will realize any of the deferred tax assets. However, given its improved performance, Kleckner management wonders whether there are any accounting consequences for its deferred tax assets. They would like you to conduct some research on the accounting for recognition of its deferred tax asset.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Briefly explain to Kleckner management the importance of future taxable income as it relates to the recognition of deferred tax assets.
- b. What are the sources of income that may be relied upon in assessing realization of a deferred tax asset?
- c. What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy in evaluating its deferred tax asset?

Global Accounting Insights

LEARNING OBJECTIVE 7

Compare the accounting for income taxes under IFRS and U.S. GAAP.

Similar to IFRS, U.S. GAAP uses the asset and liability approach for recording deferred taxes. The differences between IFRS and U.S. GAAP involve a few exceptions to the asset-liability approach; some minor differences in the recognition, measurement, and disclosure criteria; and differences in implementation guidance.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to accounting for taxes.

Similarities

- As indicated above, U.S. GAAP and IFRS both use the asset and liability approach for recording deferred taxes.
- After a recent FASB standard, the classification of deferred taxes under U.S. GAAP is always non-current, and not based on the classification of the asset or liability to which it relates. This accounting has now converged with IFRS.

Differences

- U.S. GAAP uses an impairment approach to assess the need for a valuation allowance. In this approach, the deferred tax asset is recognized in full. It is then reduced by a valuation account if it is likely that all or a portion of the deferred tax asset will not be realized. Under IFRS, an affirmative judgment approach is used, by which a deferred tax asset is recognized up to the amount that is probable to be realized.
- Under U.S. GAAP, the enacted tax rate must be used in measuring deferred tax assets and liabilities. IFRS uses the enacted tax rate or substantially enacted tax rate (“substantially enacted” means virtually certain).
- Under U.S. GAAP, charges or credits for all tax items are recorded in income. That is not the case under IFRS, in which the charges or credits related to certain items are reported in equity.
- U.S. GAAP requires companies to assess the likelihood of uncertain tax positions being sustainable upon audit. Potential liabilities must be accrued and disclosed if the position is more likely than not to be disallowed. Under IFRS, all potential liabilities must be recognized. With respect to measurement, IFRS uses an expected-value approach to measure the tax liability, which differs from U.S. GAAP.

About the Numbers

U.S. GAAP/IFRS Differences

The following schedule taken from an annual report of **GlaxoSmithKline plc** (GBR) indicates the impact of differences in IFRS and U.S. GAAP for deferred taxes.

Reconciliation to U.S. accounting principles (e) Deferred taxation (in part):	
Total tax expense (in millions of British pounds)	
IFRS:	
Current tax expense	2,710
Deferred tax (credit)/expense	(409)
Total tax expense	2,301
U.S. GAAP:	
Current tax expense	2,735
Deferred tax credit	(685)
Total tax expense	2,050
Total tax expense difference	(251)

Due to the differences highlighted above, Glaxo's income tax expense under IFRS is £251 million higher than that reported under U.S. GAAP.

GAAP Self-Test Questions

1. Which of the following is **false**?

- Under U.S. GAAP, deferred taxes are reported based on the classification of the related asset or liability.
- Under IFRS, all potential liabilities must be recognized.
- Under U.S. GAAP, the enacted tax rate is used to measure deferred tax assets and liabilities.
- Under IFRS, all deferred tax assets and liabilities are classified as non-current.

2. Which of the following statements is **correct** with regard to IFRS and GAAP?

- a. Under U.S. GAAP, all potential liabilities related to uncertain tax positions must be recognized.
- b. The tax effects related to certain items are reported in equity under U.S. GAAP; under IFRS, the tax effects are charged or credited to income.
- c. IFRS uses an affirmative judgment approach for deferred tax assets, whereas U.S. GAAP uses an impairment approach for deferred tax assets.
- d. IFRS classifies deferred taxes based on the classification of the related asset or liability.

3. Under GAAP:

- a. “probable” is defined as a level of likelihood of at least slightly more than 60%.
- b. a company should reduce a deferred tax asset when it is likely that some or all of it will not be realized by using a valuation allowance.
- c. a company considers only positive evidence when determining whether to recognize a deferred tax asset.
- d. deferred tax assets must be evaluated every 5 years.

4. Stephens Company has a deductible temporary difference of \$2,000,000 at the end of its first year of operations. Its tax rate is 40 percent. Stephens has \$1,800,000 of income taxes payable. After a careful review of all available evidence, Stephens determines that it is probable that it will not realize \$200,000 of this deferred tax asset. On Stephens Company’s balance sheet (statement of financial position) at the end of its first year of operations, what is the amount of deferred tax asset recorded under U. S. GAAP?

- a. \$2,000,000.
- b. \$1,800,000.
- c. \$800,000.
- d. \$600,000.

5. Lincoln Company has the following four deferred tax items at December 31, 2022. The deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority.

Temporary Difference	Deferred Tax Asset	Deferred Tax Liability
Rent collected in advance: recognized when a performance obligation is satisfied for accounting purposes and when received for tax purposes.	\$652,000	
Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$330,000
Recognition of income on installment sales at the time of sale for accounting purposes and during period of collection for tax purposes.		64,000
Warranty liabilities: recognized for accounting purposes at time of sale and for tax purposes at time paid.	37,000	

On Lincoln's December 31, 2022, balance sheet, it will report:

- \$394,000 non-current deferred tax liability and \$689,000 non-current deferred tax asset.
- \$330,000 non-current liability and \$625,000 current deferred tax asset.
- \$295,000 non-current deferred tax asset.
- \$295,000 current tax receivable.

GAAP Concepts and Application

GAAP19.1 Briefly describe some of the similarities and differences between IFRS and U.S. GAAP with respect to income tax accounting.

Answers to GAAP Self-Test Questions

1. a **2.** c **3.** b **4.** c **5.** c

Notes

- 1 Determining the amount of tax to pay the tax authority is a costly exercise for both individuals and companies in most countries. Individuals and businesses must pay not only the taxes owed but also incur the costs of their own time spent filing and complying with tax laws, including the tax compliance outlays that individuals and businesses pay to help them file their taxes. One study estimated this cost to be 30 cents on every dollar sent to the government. Another study noted how big the tax-compliance industry has become. See A. Laffer, “The 30-Cent Tax Premium,” *Wall Street Journal* (April 18, 2011) and Michael Tasselmyer, “A Complex Problem: The Compliance Burdens of the Tax Code,” National Taxpayers Union Foundation (April 8, 2015).
- 2 Substantially enacted generally means “virtually certain.” The IASB provides guidelines as to how to interpret substantially enacted. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) *For purposes of discussion and homework, assume that the term “enacted” is interchangeable with “substantially enacted.”*
- 3 Tax rate changes nearly always will substantially impact income numbers and the reporting of deferred income taxes on the statement of financial position. As a result, you can expect to hear an economic consequences argument every time a government decides to change the tax rates. For example, when one country raised the corporate rate from 34 percent to 35 percent, companies took an additional “hit” to earnings if they were in a deferred tax liability position.
- 4 The length of carryforward periods varies by country. For example, tax losses can be carried forward indefinitely in some countries but only 10 years in others. The same is true for loss carrybacks (discussed in [Appendix 19B](#)).
- 5 This requirement is controversial because many believe it is inappropriate to recognize deferred tax assets except when assured beyond a reasonable doubt. Others argue that companies should never recognize deferred tax assets for loss carryforwards until realizing the income in the future.
- 6 Companies implement a tax-planning strategy to realize a tax benefit for an operating loss or tax carryforward before it expires. Companies

consider tax-planning strategies when assessing the need for a deferred tax asset to recognize.

- 7 **Sony Corp.** (JPN) announced a \$3.2 billion net loss, blaming a \$4.4 billion write-off on a certain portion of deferred tax assets in Japan, in what would be the company's third straight year of red ink. The write-off is an admission that the March 2011 earthquake and tsunami had shattered its expectations for a robust current fiscal year. In the wake of the disaster, Sony temporarily shut 10 plants in and around the quake-hit region. Like other Japanese auto and electronics makers, Sony faced uncertainties because its recovery prospects are partially dependent on parts and materials suppliers, many of which have also been affected by the quake. Thus, the post-quake outlook put Sony in a position where it had to set aside reserves of approximately \$3 billion on certain deferred tax assets in its fiscal fourth quarter. See J. Osawa, "Sony Expects Hefty Loss: Electronics Giant Reverses Prediction for Full-Year Profit, Blaming Earthquake," *Wall Street Journal* (May 24, 2011).
- 8 Companies are permitted to offset deferred tax assets and deferred tax liabilities if, and only if: (1) the company has a legally enforceable right to set off current tax assets against current tax liabilities, and (2) the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same tax authority and for the same company. [6]
- 9 Deferred tax amounts should not be discounted. The IASB apparently considers discounting to be an unnecessary complication even if the effects are material. [7]
- 10 Other components that should be reported are the deferred tax expense arising from the write-down, or reversal of a previous write-down, of a deferred tax asset, as well as the amount of tax expense (benefit) relating to those changes in accounting policies and errors that are included in profit or loss in accordance with IAS 8. [8]
- 11 Often, the most meaningful rate is the domestic rate of tax in the country in which the company is located, aggregating the tax rate applied for national taxes, with the rates applied for any local taxes, which are computed on a substantially similar level of taxable profit (tax loss). However, for a company operating in several jurisdictions, it may be more meaningful to aggregate separate reconciliations prepared using the domestic rate in each individual jurisdiction.

- [12](#) P. McConnell, J. Pegg, C. Senyak, and D. Mott, “The ABCs of NOLs,” *Accounting Issues*, Bear Stearns Equity Research. Regulators frown on acquisitions done solely to obtain operating loss carryforwards. If they determine that the merger is solely tax-motivated, the regulators generally disallow the deductions. But, because it is very difficult to determine whether a merger is tax-motivated, the “purchase of operating loss carryforwards” continues.
- [13](#) Countries differ as to the years that operating losses can be carried back and forward. In our discussion, and when carrybacks are allowed, we assume that companies can carry back their operating losses two years and can carry them forward 20 years. *For homework purposes, use these periods as the basis for carrybacks and carryforwards.*

CHAPTER 20

Accounting for Pensions and Postretirement Benefits

LEARNING OBJECTIVES

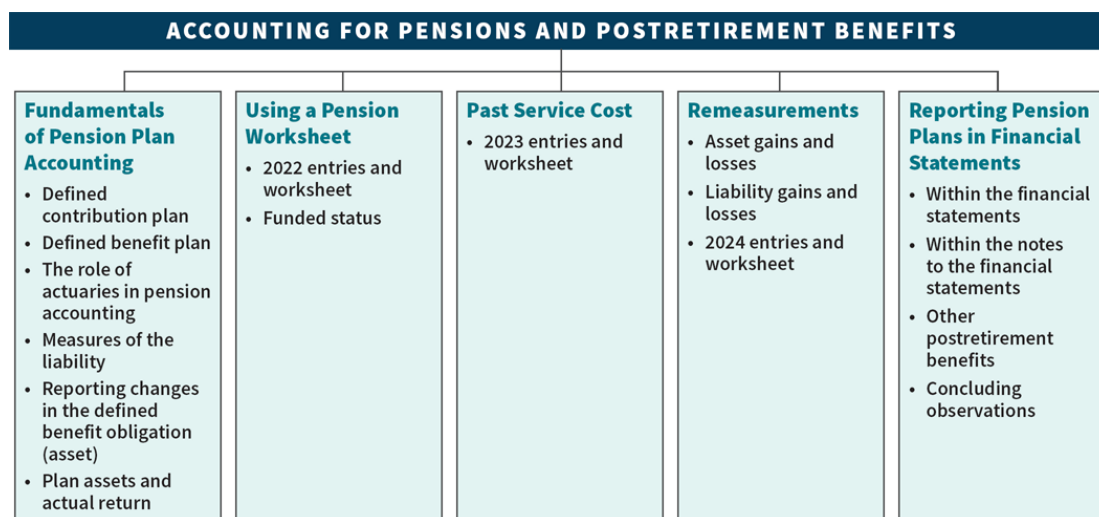

After studying this chapter, you should be able to:

1. Discuss the fundamentals of pension plan accounting.
2. Use a worksheet for employer's pension plan entries.
3. Explain the accounting for past service costs.
4. Explain the accounting for remeasurements.
5. Describe the requirements for reporting pension plans in financial statements.
6. Explain the accounting for other postretirement benefits.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 20

As the opening story indicates, the market effects reverberating from the financial crisis of 2008 continue to be felt, putting pension plans in peril and increasing the cost of retirement benefits. For example, **British Airways**' (GBR) pension and healthcare costs for retirees in a recent year totaled £149 million, or approximately £4 per passenger carried. Many other companies have substantial pension and other postretirement expenses and obligations as well. The content and organization of the chapter are as follows.

Pension Peril

The effects of the financial crisis of 2008 and the resultant economic downturn rippled through global markets. Pension plans, both those sponsored by governments and by private companies, still feel the effects. Consider the following actions by private companies to deal with the continuing repercussions of the financial crisis.

- In the last three years, **General Electric** (USA) has faced major challenges. The company's share price has declined by over 75

percent, primarily due to a series of financially disastrous decisions by the former management that has led to a severe cash crunch. In response, the company's pension plan is being adjusted. First, the plan was closed to new entrants. More recently, the company announced that the plan was freezing salaried benefits for 20,000 employees. Because of the freeze, these employees would earn no additional new pension benefits over the remainder of their employment.

- **United Utilities** (GBR) **made its defined benefit pension schemes less generous** to employees as the United Kingdom's biggest listed water company cut costs in the face of a harsher regulatory regime. The company amended the terms of its defined benefit schemes to increase contributions made by members, while also increasing the retirement age and capping increases in pensionable salaries.
- **Marks and Spencer plc** (GBR) **increased contributions to its pension plan** (£800 million) to address a deficit in the plan (assets relative to its pension obligations). However, the clothing and food chain, which has 20,000 current members in its defined benefits scheme, said it would not be following the growing band of companies—such as **BP** (GBR) and **Vodafone** (GBR)—which are closing their final salary schemes to existing members.

Just as market declines create challenges for companies and their pension plans, market recoveries can quickly reverse the negative consequences of market downturns for pension plans. For example, a recent review of 100 large pension funds revealed that 16 of the funds have a funding ratio (which is defined as pension assets divided by pension liabilities) greater than 100 percent and that the average funding ratio is up 87 percent relative to the prior year. A good example is **Marks and Spencer**. It reported a net pension liability or deficit of £283.3 million at the height of the financial crisis in 2008. In 2019, the company reported a pension *surplus* of £914.3 million—quite a swing in an 11-year period.

Why are pension plans so vulnerable to the effects of swings in financial markets? As you will learn in this chapter, pensions are a

form of deferred compensation. When a pension is included in a salary and benefit package, employees may accept lower pay while working in exchange for pension benefits that will be paid in the future at retirement. Companies and governments must set aside assets to meet these future obligations. However, when economic times are tough, assets in the funds (shares and bonds) lose value, and companies and governments may not have the resources to contribute to the funds. As a result, a pension deficit arises, and employees' pensions may be in peril. Given the need for good information about the impact of these continuing pension perils on companies, the IASB has developed comprehensive rules on the accounting for pensions and other postretirement benefit plans.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Fundamentals of Pension Plan Accounting

LEARNING OBJECTIVE 1

Discuss the fundamentals of pension plan accounting.

A **pension plan** is an arrangement whereby an employer provides benefits (payments) to retired employees for services they performed in their working years. Pension accounting may be divided and separately treated as **accounting for the employer** and **accounting for the pension fund**. The *company* or *employer* is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The *fund* or *plan* is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the retired

employees (pension recipients). [Illustration 20.1](#) shows the three entities involved in a pension plan and indicates the flow of cash among them.

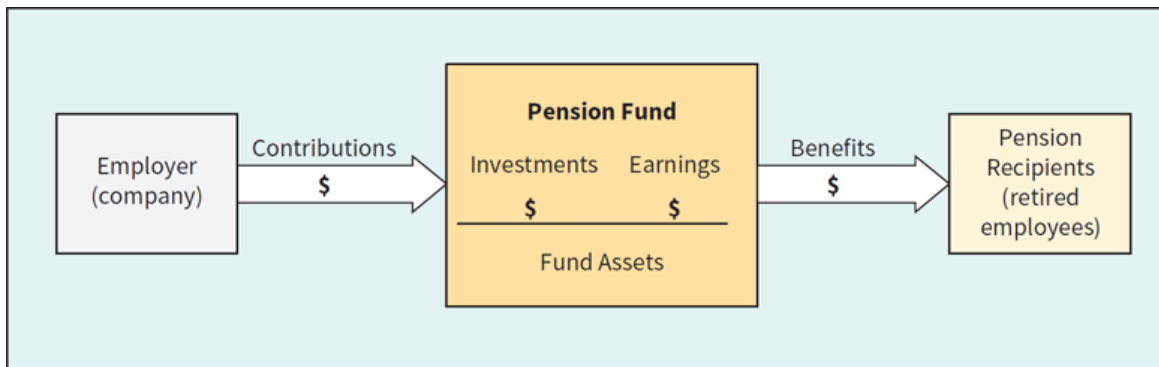

ILLUSTRATION 20.1 Flow of Cash Among Pension Plan Participants

A pension plan is **funded** when the employer makes payments to a funding agency.¹ That agency accumulates the assets of the pension fund and makes payments to the recipients as the benefits come due.

Some pension plans are **contributory**. In these, the employees bear part of the cost of the stated benefits or voluntarily make payments to increase their benefits. Other plans are **non-contributory**. In these plans, the employer bears the entire cost. In some countries, companies design their pension plans so as to take advantage of certain income tax benefits. Plans that offer tax benefits are often called **qualified pension plans**. They permit **deductibility of the employer's contributions to the pension fund and tax-free status of earnings from pension fund assets**.

The pension fund should be a separate legal and accounting entity. The pension fund, as a separate entity, maintains a set of books and prepares financial statements. Maintaining records and preparing financial statements for the fund, an activity known as “accounting for employee benefit plans,” is not the subject of this chapter.² Instead, this chapter explains the pension accounting and reporting problems **of the employer** as the sponsor of a pension plan.

The need to properly administer and account for pension funds becomes apparent when you understand the size of these funds. [Illustration 20.2](#) lists the pension fund assets and pension expenses of six major companies in a recent year. The two most common types of pension plans are **defined contribution plans** and **defined benefit plans**. We look at each of them in the following sections.

Company	Size of Pension Fund*	2018 Pension Expense*	Pension Expense as % of Pretax Income (Loss)
Siemens (DEU)	€31,307	€692	9.20%
AB InBev (BEL)	€ 5,059	€193	2.26%
BASF (DEU)	€19,280	€730	13.80%
Cathay Pacific (HKG)	\$7,074	\$293	9.03%
Dairy Farm International (CHN)	\$ 169	\$ 23	12.79%
Unilever (GBR)	€20,867	€464	3.75%
*Amounts in millions.			

[ILLUSTRATION 20.2](#) Pension Funds and Pension Expense

Defined Contribution Plan

In a **defined contribution plan**, the employer agrees to contribute to a pension trust a certain sum each period, based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. **The plan defines only the employer's contribution.** It makes no promise regarding the ultimate benefits paid out to the employees.

The size of the pension benefits that the employee finally collects under the plan depends on several factors: the amounts originally contributed to the pension trust, the income accumulated in the trust, and the treatment of forfeitures of funds caused by early terminations

of other employees. A company usually turns over to an **independent third-party trustee** the amounts originally contributed. The trustee, acting on behalf of the beneficiaries (the participating employees), assumes ownership of the pension assets and is accountable for their investment and distribution. The trust is separate and distinct from the employer.

The accounting for a defined contribution plan is straightforward. The employee gets the benefit of gain (or the risk of loss) from the assets contributed to the pension plan. The employer simply contributes each year based on the formula established in the plan. As a result, the employer's annual cost (pension expense) is simply the amount that it is obligated to contribute to the pension trust. The employer reports a liability on its statement of financial position only if it does not make the contribution in full. The employer reports an asset only if it contributes more than the required amount and must disclose the amount of expense recorded for the defined contribution plan. [2]

Defined Benefit Plan

A **defined benefit plan** outlines the benefits that employees will receive when they retire. These benefits typically are a function of an employee's years of service and of the compensation level in the years approaching retirement.

To meet the defined benefit commitments that will arise at retirement, a company must determine what the contribution should be today (a time value of money computation). Companies may use many different contribution approaches. However, the funding method should provide enough money at retirement to meet the benefits defined by the plan.

The **employees** are the beneficiaries of a defined **contribution** trust, but the **employer** is the beneficiary of a defined **benefit** trust. Under a defined benefit plan, the trust's primary purpose is to safeguard and invest assets so that there will be enough to pay the employer's obligation to the employees. **In form**, the trust is a separate entity. **In substance**, the trust assets and liabilities belong

to the employer. That is, **as long as the plan continues, the employer is responsible for the payment of the defined benefits (without regard to what happens in the trust)**. The employer must make up any shortfall in the accumulated assets held by the trust. On the other hand, the employer can recapture any excess accumulated in the trust, either through reduced future funding or through a reversion of funds.

Because a defined benefit plan specifies benefits in terms of uncertain future variables, a company must establish an appropriate funding pattern to ensure the availability of funds at retirement in order to provide the benefits promised. This funding level depends on a number of factors such as turnover, mortality, length of employee service, compensation levels, and interest earnings.

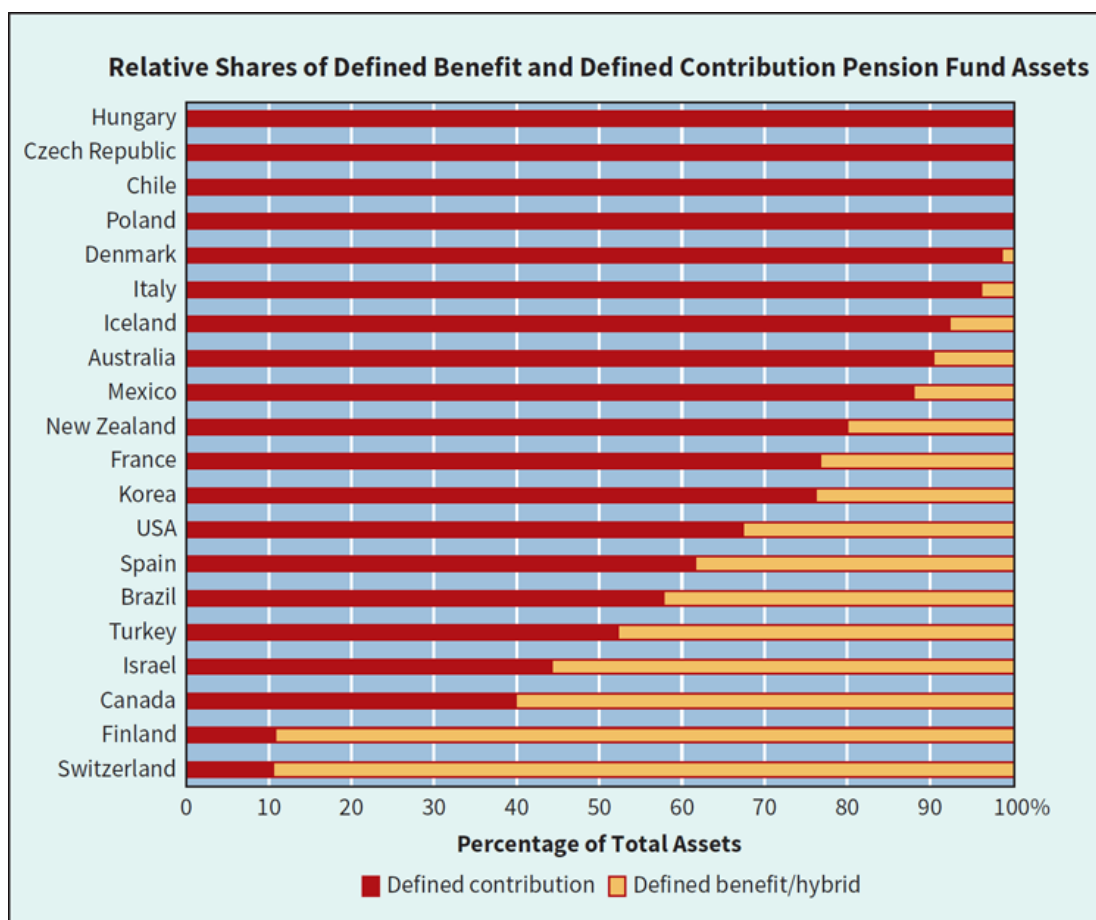

Employers are at risk with defined benefit plans because they must contribute enough to meet the cost of benefits that the plan defines. The expense recognized each period is not necessarily equal to the cash contribution. Similarly, the liability is controversial because its measurement and recognition relate to unknown future variables. Thus, the accounting issues related to this type of plan are complex. **Our discussion in the following sections deals primarily with defined benefit plans.**³

What Do the Numbers Mean?

Which Plan Is Right for You?

Defined contribution plans are more popular with employers than defined benefit plans. One reason is that they are cheaper. Defined contribution plans often cost no more than 3 percent of payroll, whereas defined benefit plans can cost 5 to 6 percent of payroll.

In some countries, employees are required to explicitly opt out of an employer-sponsored defined contribution plan. This should help employees build their own nest eggs and will contribute to further growth in defined contribution plans. However, note the following three warnings: (1) low-income workers will still not be able to save enough, (2) it leaves each participant alone to manage risk, and (3) companies establish a minimum contribution, which too many participants choose to use, instead of a large contribution.

Although many companies are changing to defined contribution plans, the number of existing defined benefit plans and benefits paid from these plans are substantial. Further, while the balance between defined benefit and defined contribution plans has been shifting over time, there is also significant variation in the types of plans across countries, as shown in the chart.

For 16 of the 20 countries shown in the chart, assets in defined contribution plans outweighed those in defined benefit plans. In four countries, including the Czech Republic and Poland, defined benefit plans did not exist at all. Defined benefit funds dominate pension markets in four countries, including Canada and Switzerland.

The Role of Actuaries in Pension Accounting

The problems associated with pension plans involve complicated mathematical considerations. Therefore, companies engage **actuaries** to ensure that a pension plan is appropriate for the employee group covered.⁴ Actuaries are individuals trained through a long and rigorous certification program to assign probabilities to future events and their financial effects. The insurance industry employs actuaries to assess risks and to advise on the setting of premiums and other aspects of insurance policies. Employers rely heavily on actuaries for assistance in developing, implementing, and funding pension funds.

Actuaries make predictions (called *actuarial assumptions*) of mortality rates, employee turnover, interest and earnings rates, early retirement frequency, future salaries, and any other factors necessary to operate a pension plan. They also compute the various pension measures that affect the financial statements, such as the pension obligation, the annual cost of servicing the plan, and the cost of amendments to the plan. In summary, accounting for defined benefit pension plans relies heavily upon information and measurements provided by actuaries.

Measures of the Liability

In accounting for a company's pension plan, two questions arise. (1) What is the pension obligation that a company should report in the financial statements? (2) What is the pension expense for the period? Attempting to answer the first question has produced much controversy.

Alternative Approaches

Most agree that an employer's **pension obligation** is the deferred compensation obligation it has to its employees for their service under the terms of the pension plan. Measuring that obligation is not so simple, though, because there are alternative ways of measuring it.

One measure of the pension obligation is to base it only on the benefits vested to the employees. **Vested benefits** are those that the employee is entitled to receive even if he or she renders no additional services to the company. Most pension plans require a certain minimum number of years of service to the employer before an employee achieves vested benefits status. Companies compute the **vested benefit obligation** using only vested benefits at current salary levels.

Another way to measure the obligation uses both vested and non-vested years of service. On this basis, the company computes the deferred compensation amount on all years of employees' service—**both vested and non-vested**—using current salary levels. This measurement of the pension obligation is called the **accumulated benefit obligation**.

A third measure bases the deferred compensation amount on both vested and non-vested service **using future salaries**. This measurement of the pension obligation is called the **defined benefit obligation**. Because future salaries are expected to be higher than current salaries, this approach results in the largest measurement of the pension obligation.

The choice between these measures is critical. The choice affects the amount of a company's pension liability and the annual pension expense reported. The diagram in **Illustration 20.3** presents the differences in these three measurements.

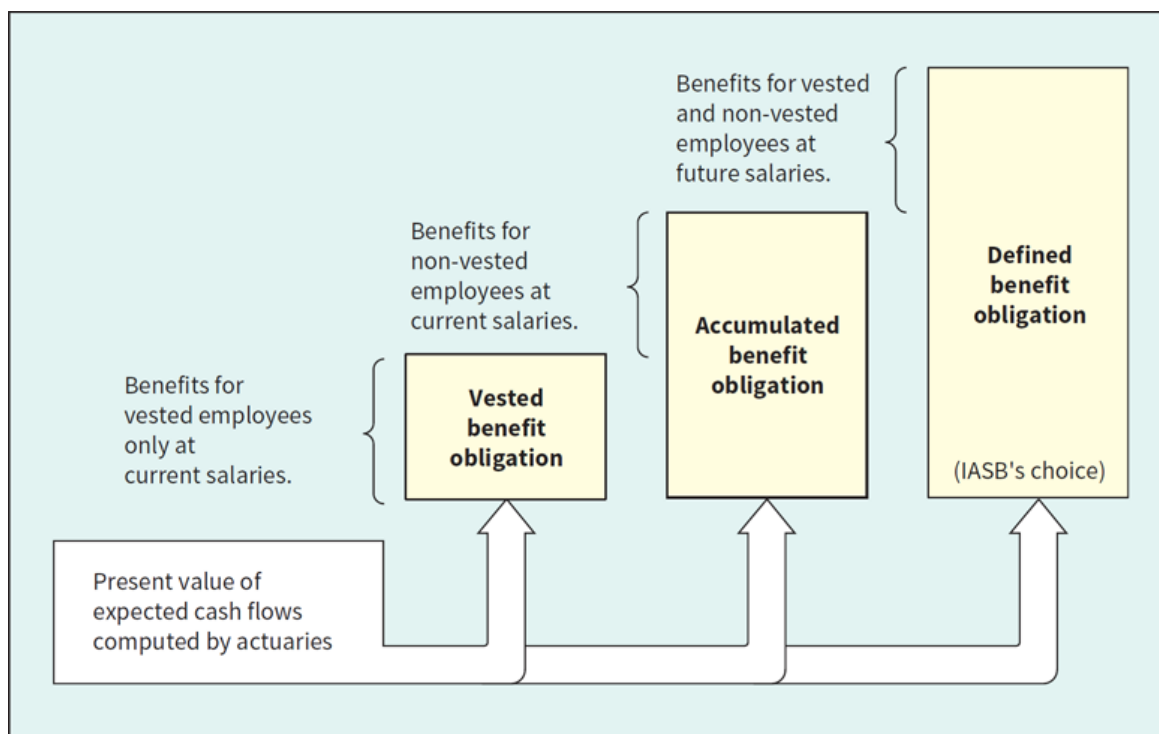

ILLUSTRATION 20.3 Different Measures of the Pension Obligation

Which of these alternative measures of the pension liability does the accounting profession favor? **The profession adopted the defined benefit obligation—the present value (without deducting any plan assets) of the expected future payments required to settle the obligation resulting from employee service in current and prior periods.**⁵ [4] Those in favor of the defined benefit obligation contend that a promise by an employer to pay benefits based on a percentage of the employees' future salaries is far greater than a promise to pay a percentage of their current salary, and such a difference should be reflected in the pension liability and pension expense.

Moreover, companies discount to present value the estimated future benefits to be paid. Minor changes in the interest rate used to discount pension benefits can dramatically affect the measurement of the employer's obligation. For example, a one percent decrease in the discount rate can increase pension liabilities 15 percent. Accounting rules require that, at each measurement date, a company must

determine the appropriate discount rate used to measure the pension liability, based on current interest rates. [5]

Net Defined Benefit Obligation (Asset)

The **net defined benefit obligation (asset)** (also referred to as the **funded status**) is the deficit or surplus related to a defined pension plan. The deficit or surplus is measured as follows.

Defined Benefit Obligation – Fair Value of Plan Assets (if any)

The deficit or surplus is often referred to as the funded status of the plan.

If the defined benefit obligation is greater than the plan assets, the pension plan has a deficit. Conversely, if the defined benefit obligation is less than the plan assets, the pension plan has a surplus.

Illustration 20.4 shows these relationships.

Deficit		Surplus	
Defined benefit obligation	€(1,000,000)	Defined benefit obligation	€(150,000)
Plan assets	900,000	Plan assets	200,000
Net defined benefit obligation	€ (100,000)	Net defined benefit asset	€ 50,000

ILLUSTRATION 20.4 Presentation of Funded Status

The net defined benefit obligation (asset) is often referred to simply as the pension liability or the pension asset on the statement of financial position.

As indicated, companies should report either a pension asset or pension liability related to a pension plan on the statement of financial position (often referred to as the **net approach**). To illustrate, assume that at year-end Acer SpA has a defined benefit obligation of €4,000,000 and plan assets of €3,700,000. In this case,

Acer reports €300,000 (€4,000,000 – €3,700,000) as a pension liability on its statement of financial position.

Some believe that companies should report separately both the defined benefit obligation and the plan assets on the statement of financial position. This approach (often referred to as the **gross approach**) would report Acer's defined benefit obligation of €4,000,000 and its plan assets of €3,700,000 on the statement of financial position. The IASB disagrees, indicating that offsetting these amounts is consistent with its standard on when assets and liabilities should be netted.⁶

Reporting Changes in the Defined Benefit Obligation (Asset)

The IASB requires that all changes in the defined benefit obligation and plan assets in the current period be recognized in comprehensive income. This approach reflects application of accrual-based accounting for pensions (expense recognition principle). That is, companies report pension expense as employees work and earn benefits rather than when employees are paid benefits after retirement (referred to as cash basis or pay as you go). The Board believes that immediate recognition of the effects of these changes in the statement of comprehensive income provides the most understandable and useful information to financial statement users. The IASB requires that companies report changes arising from different elements of pension liabilities and assets in different sections of the statement of comprehensive income, depending on their nature.

In the past, companies often reported only a single pension expense number in the comprehensive income statement. Disclosing additional segmentation of changes in the pension liability (including the **components of pension cost**) provides additional transparency about the nature of these costs. ^[7] The three components are as follows.

- **Service cost.** **Service cost** is either current service cost or past service cost. Current service cost is the increase in the present value of the defined benefit obligation from employee service in the current period. Past service cost is the change in the present value of the defined benefit obligation for employee service for prior periods—generally resulting from a plan amendment (e.g., changes to the plan). This component is reported in the statement of comprehensive income in the operating section of the income statement and affects net income.
- **Net interest.** Net interest is computed by multiplying the discount rate by the defined benefit obligation and the plan assets. If the plan has a net defined benefit obligation at the end of the period, the company reports interest expense. Conversely, if it has a net defined benefit asset, it reports interest revenue. This approach is justified because of its simplicity, and because any financing costs should be based on the funded status of the plan. This amount is often shown below the operating section of the income statement in the financing section and affects net income.
- **Remeasurements.** Remeasurements are gains and losses related to the defined benefit obligation (changes in discount rate or other actuarial assumptions) and gains or losses on the fair value of the plan assets (actual rate of return less interest revenue included in the finance component). This component is reported in other comprehensive income (OCI), net of tax. **These remeasurement gains or losses therefore affect comprehensive income but not net income.**

Illustration 20.5 shows the components of changes in the pension liability (asset) and their placement on the statement of comprehensive income.

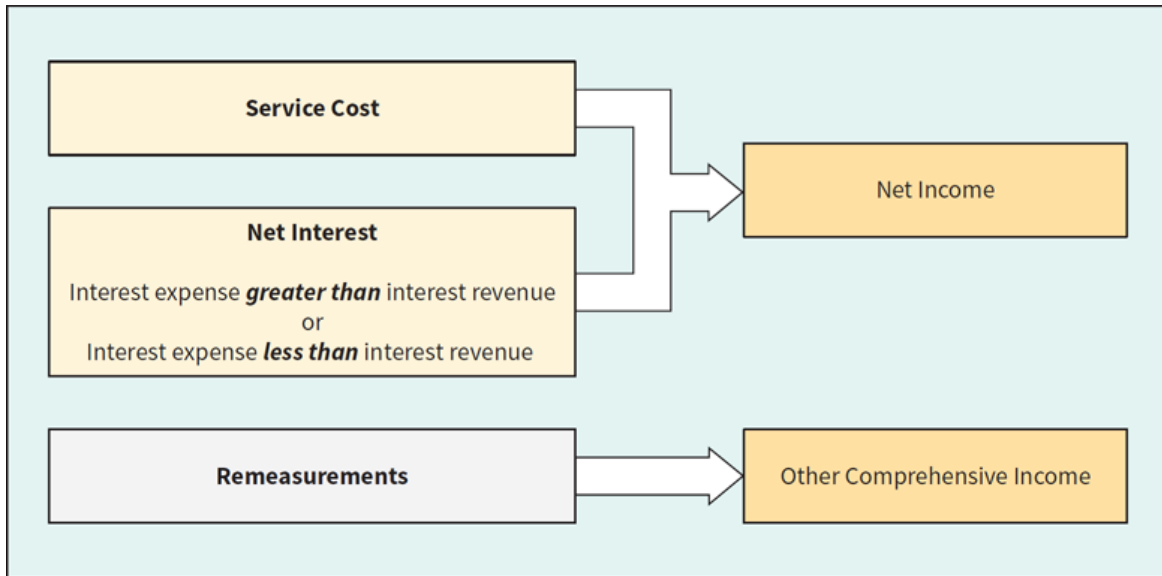

ILLUSTRATION 20.5 Reporting Changes in the Pension Obligation (Assets)

As indicated in [Illustration 20.5](#), service cost and net interest are reported in net income. We discuss determination of each of these components in the following section. Remeasurements, which are reported in other comprehensive income, are discussed in a later section.

Service Cost

To determine current service cost and the related increase in the defined benefit obligation, companies must:

1. Apply an actuarial valuation method.
2. Assign benefits to period of service.
3. Make actuarial assumptions.⁷

In applying an actuarial valuation method, the IASB concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan's benefit formula incorporates them.** In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's **final pay** differs from the

promise to pay 1 percent of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the Board adopts the **projected unit credit method** (often referred to as **the benefits/years-of-service method**), which determines pension expense based on future salary levels.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the IASB indicates that the defined benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis. Therefore, companies should use it as the basis for determining service cost.**

The assignment of benefits to periods of service is based on the actuarial valuation method. The actuary then allocates the cost of the pension benefits over the expected service life of the company's employees. In determining the proper service cost for a period, the actuary makes assumptions related to such factors as mortality; rates of employee turnover, disability, and early retirement; discount rate; benefit levels; and future salary levels. While *IAS 19* does not require use of an actuary, given the complexity of these estimates, just about all companies rely on an actuary to determine service cost and related other defined benefit measures.

Net Interest

In computing net interest, companies assume that the discount rate, the net defined benefit obligation, and the pension asset are determined at the beginning of the year.⁸ The **discount rate** is based on the yields of high-quality bonds with terms consistent with the company's pension obligation. Net interest is then computed as indicated in the following equation.

$$\text{Net Interest} = (\text{Defined Benefit Obligation} \times \text{Discount Rate}) - (\text{Plan Assets} \times \text{Discount Rate})$$

That is, net interest is determined by multiplying the net defined benefit obligation (asset) by the discount rate. [9]

Because payment of the pension obligation is deferred, companies record the pension liability on a discounted basis. As a result, the liability accrues interest over the service life of the employee (passage of time), which is essentially interest expense (**interest on the liability**). Similarly, companies earn a return on their plan assets. That is, a company assumes that it earns interest based on multiplying the discount rate by the plan assets. While the IASB recognizes that the actual return on plan assets may differ from the assumed interest revenue computed, it believes that the change in plan assets can be divided into an amount that arises from the passage of time and amounts that arise from other changes. As we discuss in the next section, changes not related to the passage of time are reported in other comprehensive income as remeasurements. Thus, the growth in the plan assets should mirror the growth in the defined benefit obligation. In other words, the assumed interest revenue on the plan assets based on the passage of time offsets the interest expense on the defined benefit obligation.

In summary, pension expense is comprised of two components: (1) service cost and (2) net interest. Companies report each of these components in the income statement. In some cases, companies may choose to report these components in one section as a single amount of total pension expense. Other companies may choose to report the service cost component in operating income and the net interest in a separate section related to financing.⁹

Plan Assets and Actual Return

Pension **plan assets** are usually investments in shares, bonds, other securities, and real estate that a company holds to earn a reasonable rate of return. Plan assets are reported at fair value. Companies generally hold these assets in a separate legal entity (a pension fund) that exists only to administer the employee benefit plan. These assets held by the pension fund are therefore not available to the company's own creditors (even in bankruptcy). Employer contributions and the

actual return on plan assets increase pension plan assets. **Actual return on plan assets** is the increase in the pension fund assets arising from interest, dividends, and realized and unrealized changes in the fair value of the plan. Benefits paid to retired employees decrease plan assets.

To illustrate, assume that Hasbro SA has pension plan assets of €4,200,000 on January 1, 2022. During 2022, Hasbro contributed €300,000 to the plan and paid out retirement benefits of €250,000. Its actual return on plan assets was €210,000 for the year. Hasbro's plan assets at December 31, 2022, are €4,460,000, computed as shown in **Illustration 20.6**.

Plan assets, January 1, 2022	€4,200,000
Contributions by Hasbro to plan	300,000
Actual return	210,000
Benefits paid to employees	(250,000)
Plan assets, December 31, 2022	<u>€4,460,000</u>

ILLUSTRATION 20.6 Determination of Pension Assets

In some cases, companies compute that actual return by adjusting the change in plan assets for the effect of contributions during the year and benefits paid during the year. The equation in **Illustration 20.7**, or a variation thereof, can be used to compute the actual return.

Actual Return	=	(Plan Assets Ending Balance – Plan Assets Beginning Balance)	–	(Contributions – Benefits Paid)
--------------------------	---	-------------------------------------------------------------------------	---	------------------------------------------------

ILLUSTRATION 20.7 Equation for Computing Actual Return

Stated another way, the actual return on plan assets is the difference between the fair value of the plan assets at the beginning of the period and the end of the period, adjusted for contributions and benefit payments. **Illustration 20.8** uses the equation above to compute actual return, using the information provided in **Illustration 20.6**.

Plan assets, December 31, 2022		€4,460,000
Plan assets, January 1, 2022		(4,200,000)
Increase in fair value of plan assets		260,000
Deduct: Contributions to plan	€300,000	
Add: Benefit payments to employees	250,000	(50,000)
Actual return		<u>€ 210,000</u>

ILLUSTRATION 20.8 Computation of Actual Return on Plan Assets

In this case, Hasbro has a positive actual return on plan assets. Recently, some pension plans have experienced negative actual returns due to the increased volatility in global securities markets.

Using a Pension Worksheet

LEARNING OBJECTIVE 2

Use a worksheet for employer's pension plan entries.

We will now illustrate the basic computation of pension expense using the first two components: (1) service cost and (2) net interest. We discuss remeasurements in later sections.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record. It is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.¹⁰ **Illustration 20.9** shows the format of the **pension worksheet**.

Pension Worksheet

4						
5						
6						
7						
8						
9						

ILLUSTRATION 20.9 Basic Format of Pension Worksheet

The “General Journal Entries” columns of the worksheet (in the center) determine the entries to record in the formal general ledger accounts. The “Memo Record” columns (on the right side) maintain balances in the defined benefit obligation and the plan assets. The difference between the defined benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is shown in the statement of financial position. If the defined benefit obligation is greater than the plan assets, a pension liability occurs. If the defined benefit obligation is less than the plan assets, a pension asset occurs.

On the first line of the worksheet, a company enters the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

2022 Entries and Worksheet

To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that Zarle AG provides the following information related to its pension plan for the year 2022.

- Plan assets, January 1, 2022, are €100,000.
- Defined benefit obligation, January 1, 2022, is €100,000.

- Annual service cost is €9,000.
- Discount rate is 10 percent.
- Funding contributions are €8,000.
- Benefits paid to retirees during the year are €7,000.

Using these data, the worksheet in [Illustration 20.10](#) presents the beginning balances and all of the pension entries recorded by Zarle in 2022. Zarle records the beginning balances for the defined benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the defined benefit obligation and the plan assets are the same at January 1, 2022, the Pension Asset/Liability account has a zero balance at January 1, 2022.

16						
17	*€9,000 – €8,000 = €1,000					
18	**€112,000 – €111,000 = €1,000					

ILLUSTRATION 20.10 Pension Worksheet—2022

Entry (a) in [Illustration 20.10](#) records the service cost component, which increases pension expense by €9,000 and increases the liability (defined benefit obligation) by €9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by €10,000 (the beginning defined benefit obligation

multiplied by the discount rate of 10 percent). Entry (c) records the interest revenue component, which increases plan assets and decreases pension expense by €10,000. This is computed by multiplying the beginning plan assets by the discount rate of 10 percent. As a result, interest expense (income) is zero in 2022. Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by €8,000 and increasing plan assets by €8,000. Entry (e) records the benefit payments made to retirees, which results in equal €7,000 decreases to the plan assets and the defined benefit obligation.

Zarle makes the "formal journal entry" on December 31, which records the pension expense in 2022 as follows.

2022		
Pension Expense	9,000	
Cash		8,000
Pension Asset/Liability		1,000

Funded Status

The credit to Pension Asset/Liability for €1,000 represents the difference between the 2022 pension expense of €9,000 and the amount funded of €8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by €1,000. The Pension Asset/Liability account balance of €1,000 also equals the net of the balances in the memo accounts. [**Illustration 20.11**](#) shows that the defined benefit obligation exceeds the plan assets by €1,000, which reconciles to the pension liability reported in the statement of financial position.

Defined benefit obligation (Credit)	€(112,000)
Plan assets at fair value (Debit)	111,000
Pension asset/liability (Credit)	€ (1,000)

ILLUSTRATION 20.11 Pension Reconciliation Schedule—December 31, 2022

If the net of the memo record balances is a credit, the reconciling amount in the Pension Asset/Liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the Pension Asset/Liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2022), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.¹¹

Past Service Cost

LEARNING OBJECTIVE 3

Explain the accounting for past service costs.

Past service cost (PSC) is the change in the present value of the defined benefit obligation resulting from a plan amendment or a curtailment.¹² For example, a plan amendment arises when a company decides to provide additional benefits to existing employees for past service. Conversely, the company may decide that it is necessary to reduce its benefit package retroactively for existing employees, thereby reducing their pension benefit. A **curtailment** occurs when the company has a significant reduction in the number of employees covered by the plan. Because a curtailment has the same effect as a reduction in benefits due to an amendment to the plan, these situations are accounted for in the same way. **Illustration 20.12** summarizes the nature of past service costs.

Past Service Costs (Expense in Current Period)	
Plan Amendments	Curtailments
<ul style="list-style-type: none"> • Introduction of a plan. • Withdrawal of a plan. • Changes to a plan. 	<ul style="list-style-type: none"> • Significant reduction in the number of employees covered by the plan.

ILLUSTRATION 20.12 Types of Past Service Costs

The accounting for past service cost is straightforward—expense past service cost in the period of the amendment or curtailment. As a result, a substantial increase (decrease) in pension expense and the defined benefit obligation often results when a plan amendment or curtailment occurs. Because current and past service costs relate directly to employment, they are reported in the operating section of the statement of comprehensive income.

Some disagree with the IASB position of expensing these costs in the year a plan is amended or curtailed. They argue that a company would not provide these additional benefits for past years of service unless it expects to receive benefits in the future. According to this reasoning, a company should not recognize the full past service cost in the year of the amendment. Instead, the past service cost should be spread out over the remaining service life of employees who are expected to benefit from the changes in the plan. Others believe that if they are truly past service costs, they should be treated retroactively as an adjustment made to prior periods.

However, the IASB decided that any changes in the defined benefit obligation or plan assets should be recognized in the current period.

To do otherwise is not informative and leads to delayed recognition of costs or reduced benefits that are neither assets nor liabilities. **[13]**

It is also possible to decrease past service costs by decreasing the defined benefit obligation (referred to as negative past service cost). Negative past service cost arises when an entity changes the benefits attributable to past service cost so that the present value of the defined benefit obligation decreases. In that case, pension expense is decreased. Both positive (increased pension expense) and negative (decreased pension expense) past service cost adjustments are handled in the same manner; that is, pension expense should be adjusted immediately.

2023 Entries and Worksheet

Continuing the Zarle AG illustration into 2023, we note that the company amends the pension plan on January 1, 2023, to grant employees past service benefits with a present value of €81,600. The following additional facts apply to the pension plan for the year 2023.

- Annual service cost is €9,500.
- Discount rate is 10 percent.
- Annual funding contributions are €20,000.
- Benefits paid to retirees during the year are €8,000.

Illustration 20.13 presents a worksheet of all the pension entries and information recorded by Zarle in 2023.

15						
16	Balance, Dec. 31, 2023			80,360 Cr.	214,460 Cr.	134,100 Dr.
17						

ILLUSTRATION 20.13 Pension Worksheet—2023

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle's granting of past service cost, by adding €81,600 to the defined benefit obligation and to Pension Expense. Entry (g) records the current service cost; entry (h) records interest expense for the period. Because the past service cost occurred at the beginning of the year, interest is computed on the January 1, 2023, balance of the defined benefit obligation, adjusted for the past service cost. Interest expense is therefore €19,360 ($€193,600 \times .10$). Entry (i) records interest revenue for the period of €11,100 ($€111,000 \times .10$). Entries (j) and (k) are similar to the corresponding entries in 2022.

Zarle makes the following journal entry on December 31 to formally record the 2023 pension expense—the sum of the annual pension expense column.

2023		
Pension Expense	99,360	
Cash		20,000
Pension Asset/Liability		79,360

Because the expense exceeds the funding, Zarle credits the Pension Asset/Liability account for the €79,360 difference. That account is a liability. In 2023, as in 2022, the balance of the Pension Asset/Liability account (€80,360) is equal to the net of the balances in the memo accounts, as shown in [Illustration 20.14](#).

Defined benefit obligation (Credit)	€(214,460)
Plan assets at fair value (Debit)	134,100
Pension asset/liability (Credit)	€ (80,360)

[ILLUSTRATION 20.14](#) Pension Reconciliation Schedule—December 31, 2023

The **reconciliation** is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

Remeasurements

LEARNING OBJECTIVE 4

Explain the accounting for remeasurements.

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings that can result from (1) sudden and large changes in the fair value of plan assets and (2) changes in actuarial assumptions that affect the amount of the defined benefit obligation. How should these changes (referred to as **remeasurements**) affect the financial statements, most notably pension expense? The IASB believes that the most informative way is to recognize the remeasurement in other comprehensive income. The rationale for this reporting is that the predictive nature of remeasurements is much different than the other two components of pension benefit cost—service cost and net interest. [\[14\]](#)

Remeasurements are generally of two types:

1. Gains and losses on plan assets.
2. Gains and losses on the defined benefit obligation.

Asset Gains and Losses

The gains and losses on plan assets (referred to as **asset gains and losses**) represent the difference between the actual return and the interest revenue computed in determining net interest. Asset gains occur when actual returns exceed the interest revenue. Asset losses occur when the actual returns are less than interest revenue. To illustrate, assume that Shopbob SE has plan assets at January 1, 2022, of €100,000. The discount rate for the year is 6 percent, and the actual return on the plan assets for 2022 is €8,000. In 2022, Shopbob should record an asset gain of €2,000, computed as shown in [Illustration 20.15](#).

Actual return	€8,000
Less: Interest revenue (€100,000 × .06)	6,000
Asset gain	€2,000

[ILLUSTRATION 20.15](#) Computation of Asset Gain

Shopbob therefore debits plan assets for the asset gain of €2,000 and credits Other Comprehensive Income (G/L) for the same amount. If interest revenue exceeds the actual return, Shopbob debits Other Comprehensive Income (G/L) for the asset loss and credits plan assets.

Liability Gains and Losses

In estimating the defined benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the defined benefit obligation. Seldom does actual experience coincide exactly with actuarial predictions. These gains or losses from changes in the defined benefit obligation are called **liability gains and losses**.

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases in the liability balance) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year in Accumulated Other Comprehensive Income.¹³ This amount is reported on the statement of financial position in the equity section.

2024 Entries and Worksheet

Continuing the Zarle illustration, the following facts apply to the pension plan for 2024.

- Annual service cost is €13,000.
- Discount rate is 10 percent.
- Actual return on plan assets is €12,000.
- Annual funding contributions are €24,000.
- Benefits paid to retirees during the year are €10,500.
- Changes in actuarial assumptions establish the end-of-year defined benefit obligation at €265,000.

The worksheet in [**Illustration 20.16**](#) presents all of Zarle's 2024 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2023 pension worksheet in [**Illustration 20.13**](#).

Pension Worksheet—2024							
P18 fx							
	A	B	C	D	E	F	G

10	Accumulated OCI, Dec. 31, 2023			0			
11	Balance, Dec. 31, 2024			28,004 Dr.	105,400 Cr.	265,000 Cr.	159,600 Dr.

ILLUSTRATION 20.16 Pension Worksheet—2024

Entries (l), (m), (n), (o), and (p) are similar to the corresponding entries in 2022 or 2023. Entries (m) and (n) are related. Entry (m) records the interest expense of €21,446 ($€214,460 \times .10$). Entry (n) records interest revenue of €13,410 ($€134,100 \times .10$). Therefore, net interest expense is €8,036 ($€21,446 - €13,410$.) In 2024, entries (o) and (p) are recorded similarly to those in 2022 and 2023.

Entries (q) and (r) need additional explanation. As indicated, the actual return on plan assets for 2024 was €12,000. However, as indicated in entry (n), pension expense was decreased €13,410 as a result of multiplying the beginning plan assets by the discount rate to arrive at an assumed interest revenue of €13,410. As a result, Zarle has an asset loss of €1,410 ($€13,410 - €12,000$) because the assumed interest revenue is greater than the actual return. This asset loss is debited to Other Comprehensive Income (G/L) and credited to plan assets. Pension plan assets are then properly stated at their fair value.

Entry (r) records the change in the defined benefit obligation resulting from the changes in the actuarial assumptions related to this obligation. As indicated in the facts above, the actuary has determined that the ending balance in the defined benefit obligation should be €265,000 at December 31, 2024. However, the balance at December

31, 2024, before any adjustment for actuarial gains and losses related to the defined benefit obligation is €238,406, as shown in

Illustration 20.17.

December 31, 2023, DBO balance	€214,460
Service cost [entry (l)]	13,000
Interest expense [entry (m)]	21,446
Benefits paid	(10,500)
December 31, 2024, DBO balance (before liability increases)	238,406
Liability Loss	26,594
December 31, 2024, DBO balance	<u>€265,000</u>

ILLUSTRATION 20.17 Defined Benefit Obligation Balance

The difference between the ending balance of €265,000 as determined by the actuary and the present balance of €238,406 is €26,594 (a liability loss on the defined benefit liability). As shown on the worksheet, this liability loss is debited to Other Comprehensive Income (G/L) and credited to the defined benefit obligation. After this worksheet adjustment, the defined benefit obligation is stated at its actuarial value of €265,000. The journal entry to record the information related to the pension plan at December 31, 2024, based on the pension worksheet in [Illustration 20.16](#), is as follows.

Pension Expense	21,036	
Other Comprehensive Income (G/L)	28,004	
Cash		24,000
Pension Asset/Liability		25,040

As the 2024 worksheet indicates, the €105,400 balance in the Pension Asset/Liability account at December 31, 2024, is equal to the net of the balances in the memo accounts. [Illustration 20.18](#) shows this computation.

Defined benefit obligation (Credit)	€(265,000)
Plan assets at fair value (Debit)	159,600
Pension asset/liability	€(105,400)

ILLUSTRATION 20.18 Pension Reconciliation Schedule—December 31, 2024

Zarle carries the 2024 ending balances for Pension Asset/Liability and Accumulated Other Comprehensive Income forward as the beginning balances for pension plan accounting in 2025. These balances will be adjusted by changes in the defined benefit obligation and plan assets as shown in the prior examples. For example, assume that Zarle's pension plan had the following activity in 2025:

Pension expense	€17,450
Contributions	32,000
Asset gain	13,150
Decrease in Pension Asset/Liability	27,700

The ending balances for the defined benefit obligation and plan assets are €303,560 and €225,860, respectively. These elements are summarized in the partial 2025 pension worksheet shown in **Illustration 20.19**.

13							

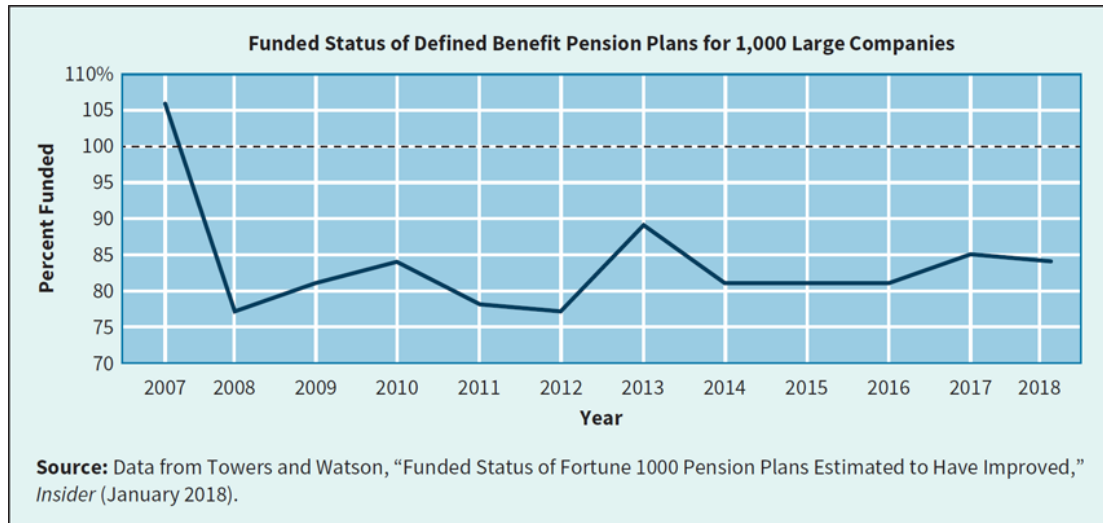

ILLUSTRATION 20.19 Partial Pension Worksheet—2025

Focusing on the “Journal entry” row, in 2025 Zarle records pension expense of €17,450 and a decrease in Pension Asset/Liability of €27,700. The reduction in Pension Asset/Liability is due in part to the asset gain of €13,150 recorded in 2025. As a result, Zarle’s 2025 ending balances (which become the 2026 beginning balances) are Pension Asset/Liability €77,700 and Accumulated Other Comprehensive Income €14,854 (beginning Accumulated OCI of €28,004 – gain of €13,150).

What Do the Numbers Mean?

Roller Coaster

The following chart shows what has happened to the financial health of pension plans over the last few years. It is a real roller coaster.

As discussed in the opening story, the funded status of pension plans took a dramatic fall from an over-funded status in 2007 to persistent under-funded status in the years since the financial crisis. The future is highly uncertain, with continued stagnant bond returns and the yet-to-be-determined market effects of Brexit and the Covid-19 pandemic.

A number of factors cause a fund to change from being overfunded to underfunded. First, low interest rates decimate returns on pension plan assets. As a result, pension fund assets have not grown; in some cases, they have declined in value. Second, using low interest rates to discount the projected benefit payments leads to a higher pension liability. Finally, more individuals are retiring, which leads to a depletion of the pension plan assets.

Street Journal (February 3, 2015); and T.W. Martin, V. Monda, and H. Gillers, “Brexite Adds to Pension Funds’ Pain,” *Wall Street Journal* (July 10, 2016).

Reporting Pension Plans in Financial Statements

LEARNING OBJECTIVE 5

Describe the requirements for reporting pension plans in financial statements.

As you might suspect, a phenomenon as significant and complex as pensions involves extensive reporting and disclosure requirements. We will cover these requirements in two categories: (1) those within the financial statements and (2) those within the notes to the financial statements.

Within the Financial Statements

Pension Expense

As indicated earlier, pension expense (service cost and net interest) affects net income and is reported in the statement of comprehensive income. Companies may choose to report these components in one section of the statement of comprehensive income and report total pension expense. Other companies may choose to report the service cost component in operating income and the net interest in a separate section related to financing.¹⁴

Gains and Losses (Remeasurements)

Asset and liability gains and losses are recognized in other comprehensive income. By recognizing these gains and losses as part of other comprehensive income but not net income, the Board believes that the usefulness of financial statements is enhanced.

To illustrate the presentation of other comprehensive income and related accumulated OCI, assume that Obey ASA provides the following information for the year 2022.

Net income for 2022	€100,000
Liability loss for 2022	60,000
Asset loss for 2022	15,000
Accumulated OCI, January 1, 2022	40,000

Both the liability loss and the asset loss decrease the funded status of the plan on the statement of financial position. This results because the defined benefit obligation increases and the plan assets decrease. However, neither the liability loss nor the asset loss affects pension expense in 2022.

For Obey, the computation of “Other comprehensive loss” for 2022 is as shown in [Illustration 20.20](#).

Liability loss	€60,000
Asset loss	15,000
Other comprehensive loss	€75,000

ILLUSTRATION 20.20 Computation of Other Comprehensive Income

[Illustration 20.21](#) shows the computation of “Comprehensive income” for 2022.

Net income	€100,000
Other comprehensive loss	75,000
Comprehensive income	€ 25,000

ILLUSTRATION 20.21 Computation of Comprehensive Income

The components of other comprehensive income must be reported using one of two formats: (1) a two statement approach or (2) a one statement approach (a combined statement of comprehensive

income). Regardless of the format used, net income must be added to other comprehensive income to arrive at comprehensive income. *For homework purposes, use the two statement approach unless stated otherwise.* Earnings per share information related to comprehensive income is not required.

To illustrate the two statement approach, assume that Obey has reported a traditional income statement. The comprehensive income statement is shown in [**Illustration 20.22**](#).

Obey ASA Comprehensive Income Statement For the Year Ended December 31, 2022		
Net income		€100,000
Other comprehensive loss		
Liability loss	€60,000	
Asset loss	15,000	75,000
Comprehensive income		€ 25,000

[**ILLUSTRATION 20.22**](#) Comprehensive Income Reporting

The computation of “Accumulated other comprehensive income” as reported in equity at December 31, 2022, is shown in [**Illustration 20.23**](#).

Accumulated other comprehensive income, January 1, 2022	€40,000
Other comprehensive loss	75,000
Accumulated other comprehensive loss, December 31, 2022	€35,000

[**ILLUSTRATION 20.23**](#) Computation of Accumulated Other Comprehensive Income

Regardless of the display format for the income statement, the accumulated other comprehensive loss is reported in the equity section of the statement of financial position of Obey ASA as shown in [**Illustration 20.24**](#), which uses assumed data for the share capital—ordinary and retained earnings information.)

Obey ASA Statement of Financial Position As of December 31, 2022 (Equity Section)	
Equity	
Share capital—ordinary	€100,000
Retained earnings	60,000
Accumulated other comprehensive loss	35,000
Total equity	€125,000

ILLUSTRATION 20.24 Reporting of Accumulated OCI

By providing information on the components of comprehensive income as well as total accumulated other comprehensive income, the company reports all changes in net assets.

The IASB prohibits recycling of pension-related other comprehensive income items. Recycling means that other comprehensive income items are reclassified (through amortization) to net income over a period of time. Recycling, for example, is used under U.S. GAAP. The IASB notes that it is difficult to establish a reasonable basis for making these transfers. [16] In addition, not adjusting these amounts over time into net income signals that these items have characteristics different than normal revenues and expenses.

Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their statement of financial position the overfunded (pension asset) or underfunded (pension liability) status of their defined benefit pension plan. The overfunded or underfunded status is measured as the difference between the fair value of the plan assets and the defined benefit obligation.

When a pension plan is overfunded (when there is a pension asset), the amount reported in the statement of financial position is constrained. The IASB decided that the amount reported should be either the lower of the pension asset (plan assets less the defined benefit obligation), or the asset ceiling. The **asset ceiling** is the

portion of the pension asset that the employer is eligible to receive back from the plan in the form of refunds or reductions in future contributions. *For homework purposes, assume that the pension plan asset reported in the statement of financial position is not constrained by the asset ceiling.*

Classification of Pension Asset or Pension Liability

The IASB does not indicate whether a company should distinguish current and non-current portions of assets and liabilities arising from pension benefits. *For homework purposes, assume that no portion of a pension asset is reported as a current asset.* The excess of the fair value of the plan assets over the defined benefit obligation is classified as a non-current asset. The rationale for non-current classification is that the pension plan assets are restricted. That is, these assets are used to fund the defined benefit obligation, and therefore non-current classification is appropriate.

The current portion of a net pension liability represents the amount of benefit payments to be paid in the next 12 months (or operating cycle, if longer) if that amount cannot be funded from existing plan assets. Otherwise, the pension liability is classified as a non-current liability.

Aggregation of Pension Plans

Some companies have two or more pension plans. In such instances, a question arises as to whether these multiple plans should be combined and shown as one amount on the statement of financial position. The Board takes the position that in general pension plans should not be combined. The only situation in which offsetting is permitted is when a company:

- a. Has a legally enforceable right to use a surplus in one plan to settle obligations in the other plan, and
- b. Intends either to settle the obligation on a net basis, or to realize the surplus in one plan and settle its obligations under the other plan simultaneously.

Within the Notes to the Financial Statements

Information on pension plans is important in understanding a company's financial position, results of operations, and cash flows. To better understand a pension plan, a company is required to disclose information that: [\[17\]](#)

- a. Explains characteristics of its defined benefit plans and risks associated with them.
- b. Identifies and explains the amounts in its financial statements arising from its defined benefit plans.
- c. Describes how its defined benefit plans may affect the amount, timing, and uncertainty of the company's future cash flows.

To meet these requirements, companies provide extensive disclosures related to their defined benefit plans (see [Underlying Concepts](#)). We focus our discussion on the second objective, which requires identifying and explaining the amounts in financial statements arising from defined pension plans. These requirements are summarized in [Illustration 20.25](#).

Underlying Concepts

This represents another compromise between relevance and faithful representation. Disclosure is used to balance these objectives.

Amounts reported in the financial statements:

Companies should provide reconciliation from the beginning balance to the ending balance for each of the following:

1. Plan assets.
2. Defined benefit obligation.
3. Funded status of the plan.

This reconciliation should report the following, where appropriate.

- Current service cost.
- Interest revenue or expense.
- Remeasurements of the net defined benefit liability (asset) showing separately (a) the return on plan assets, excluding amounts of interest revenue computed in (2); and (b) actuarial gains and losses arising from changes in the defined benefit obligation.
- Past service cost and curtailments.
- Contributions and payments to the plan.

Information on how the defined benefit plan may affect the amount, timing, and uncertainty of future cash flows:

1. Sensitivity analysis for each significant actuarial assumption, showing how the defined benefit obligation would have been affected by changes in the relevant actuarial assumption that were reasonably possible at the reporting date.
2. Methods and assumptions used in preparing the sensitivity analyses required by (1) and the limitations of those methods.
3. Changes from the previous period in the methods and assumptions used in preparing the sensitivity analyses and the reasons for such changes.

4. Description of any funding arrangements and funding policy that affect future contributions.
5. Expected contributions to the plan for the next annual reporting period.
6. Information about the maturity profile of the defined benefit obligation, including information about the distribution of the timing of benefit payments, such as a maturity analysis of the benefit payments.

ILLUSTRATION 20.25 Pension Disclosure Requirements

The reconciliation is a key element of the pension disclosure package. By having a reconciliation of the changes in the assets and liabilities from the beginning of the year to the end of the year, statement readers can better understand the underlying economics of the plan. In essence, this disclosure contains the information in the pension worksheet for the defined benefit obligation and plan asset columns in accordance with *IAS 19* requirements. Using the information for Zarle presented earlier in the chapter, the schedule in **Illustration 20.26** provides an example of the reconciliation.

Zarle AG Pension Disclosure			
	2022	2023	2024
Change in benefit obligation			
Benefit obligation at beginning of year	€100,000	€112,000	€ 214,460
Service cost	9,000	9,500	13,000
Interest expense	10,000	19,360	21,446
Amendments (Past service cost)	0	81,600	0
Benefits paid	(7,000)	(8,000)	(10,500)
Actuarial loss	0	0	26,594
Benefit obligation at end of year	(112,000)	(214,460)	(265,000)
Change in plan assets			
Fair value of plan assets at beginning of year	100,000	111,000	134,100
Interest revenue	10,000	11,100	13,410
Contributions	8,000	20,000	24,000
Benefits paid	(7,000)	(8,000)	(10,500)
Asset loss	0	0	(1,410)
Fair value of plan assets at end of year	111,000	134,100	159,600
Funded status (Pension asset/liability)	€ (1,000)	€ (80,360)	€(105,400)

**ILLUSTRATION 20.26 Pension Disclosure for Zarle AG—
2022, 2023, 2024**

The 2022 column reveals that Zarle underfunds the defined benefit obligation by €1,000. The 2023 column reveals that Zarle reports the underfunded liability of €80,360 in the statement of financial position. Finally, the 2024 column indicates that Zarle recognizes the

underfunded liability of €105,400 in the statement of financial position.

Other Postretirement Benefits

LEARNING OBJECTIVE 6

Explain the accounting for other postretirement benefits.

In addition to pensions, companies often promise other types of postretirement benefits. The benefits include life insurance outside a pension plan; medical, dental, and eye care; legal and tax services; and so on. Because healthcare benefits are the largest of other postretirement benefits, we provide a general description of how they differ from traditional pension plans in [Illustration 20.27](#).

Item	Pensions	Healthcare Benefits
Funding	Generally funded.	Generally not funded.
Benefit	Well-defined and level dollar amount.	Generally uncapped and great variability.
Beneficiary	Retiree (maybe some benefit to surviving spouse).	Retiree, spouse, and other dependents.
Benefit payable	Monthly.	As needed and used.
Predictability	Variables are reasonably predictable.	Utilization difficult to predict. Level of cost varies geographically and fluctuates over time.

ILLUSTRATION 20.27 Differences between Pensions and Postretirement Healthcare Benefits

Two of the differences in [Illustration 20.27](#) highlight why measuring the future payments is so much more difficult for healthcare benefit plans than for pension plans.

1. **Many postretirement plans do not set a limit on healthcare benefits.** No matter how serious the illness or how long it lasts, the benefits continue to flow. (Even if the employer uses an insurance company plan, the premiums will escalate according to the increased benefits provided.)
2. **The levels of healthcare benefit use and healthcare costs are difficult to predict.** Increased longevity, unexpected illnesses (e.g., AIDS, H1N1 flu, and COVID-19), along with new medical technologies and cures, cause changes in healthcare utilization and costs.

Additionally, although the fiduciary and reporting standards for employee benefit funds under government regulations generally cover healthcare benefits, the stringent minimum vesting, participation, and funding standards that apply to pensions do not apply to healthcare benefits. Nevertheless, the basic concepts of pension accounting apply to other postretirement benefits. As a result, the IASB indicates that the accounting and reporting of these other types of postretirement benefits should be the same as that used for pension plan reporting (except for substituting “Postretirement” for “Pension” in related account titles). However, companies with both pension and other postretirement benefit plans must separately disclose the plan details when the plans are subject to materially different risks. [\[18\]](#)

Concluding Observations

Hardly a day goes by without the financial press analyzing in depth some issue related to pension plans around the world. This is not surprising, since pension funds now hold trillions of dollars, euros, pounds, and yen in assets. As you have seen, the accounting issues related to pension plans are complex. Recent amendments to *IAS 19*, as discussed in this chapter, have clarified many of these issues and should help users understand the financial implications of a company’s pension plans on its financial position, results of operations, and cash flows.

What Do the Numbers Mean?

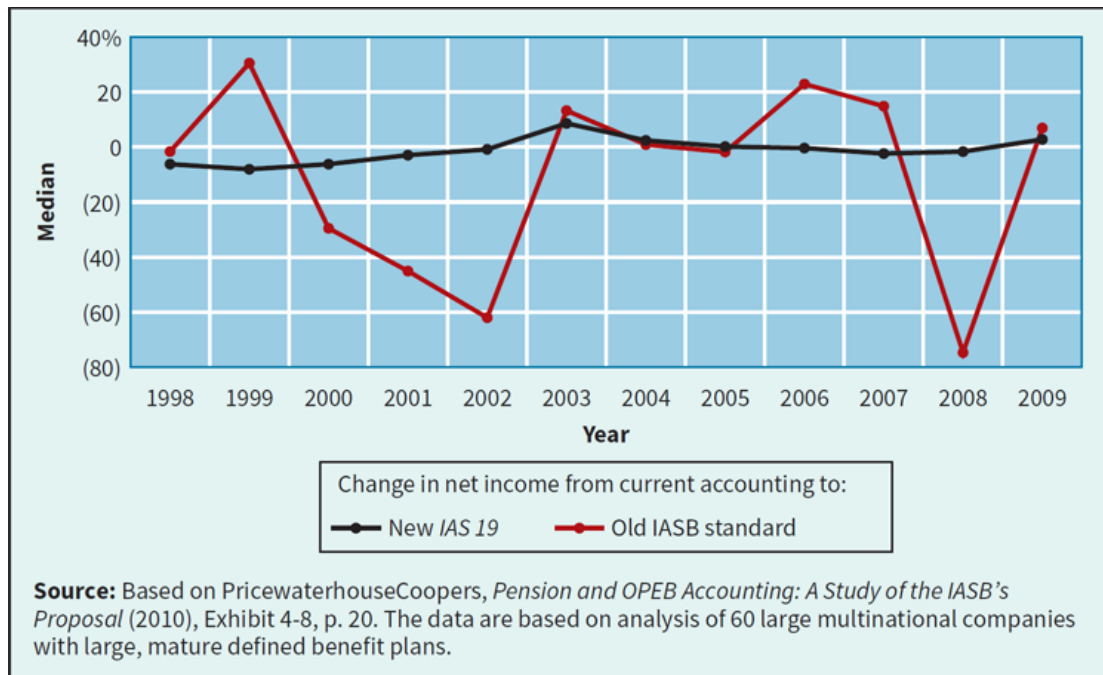

How's Your Volatility?

Companies were not required to adopt the changes arising from the amendments to *IAS 19* until 2013. In the period leading up to adoption, many were analyzing the impact on financial statements and the implications for users of financial statements. The following table summarizes some of the key accounting impacts and their consequences—some good, some bad.

Accounting/Financial Reporting Impact	Consequences of the Changes
Potentially higher pension expense due to use of a single (usually lower) discount rate to determine return on assets (interest revenue) and recognition of all past service costs in net income.	Could lead to violation of loan covenants or decreased bonus payments for performance plans based on net income.
Increased volatility in statement of financial position and shareholders' equity due to recognition of all remeasurements in other comprehensive income.	Could lead to violation of loan covenants based on shareholders' equity and affect regulatory oversight based on share capital.
Reduced net income volatility for companies that previously recognized all gains and losses in net income.	Companies may realize lower cost of capital because less volatility is associated with lower risk.

The reduced net income volatility could be a significant benefit when companies adopt the new rules. For example, the following chart indicates that if the new rules had been applied in the years 1998–2009 (black line), changes in net income would have been less volatile, compared to net income changes reported under the

prior rules (red line). Change can be painful. However, in this case the modification in the new rules will likely result in less net income volatility.

Not surprisingly, the biggest differences in income under the new and old rules emerge in periods of market decline (e.g., 2000–2002 and 2007–2008). In more stable market periods, there is expected to be minimal difference in reported pension expense. For example, in 2012 **Roche Group** (CHE) indicated that the effect on income would be CHF164 million, or just 1 percent of operating profits. The company expected the ongoing impact for 2013 and beyond to be of a similar magnitude.

Learning Objectives Review

1 Discuss the fundamentals of pension plan accounting.

The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.

Types of pension plans. The two most common types of pension arrangements are as follows. (1) *Defined contribution plans*: The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. (2) *Defined benefit plans*: These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of years of service and the compensation level when the employee nears retirement.

Valuing the pension obligation. One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the *vested benefits pension obligation* using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the *accumulated benefit obligation*, computes

the deferred compensation amount based on all years of service performed by employees under the plan—both vested and non-vested—using current salary levels. A third measure, called the *defined benefit obligation*, bases the computation of the deferred compensation amount on both vested and non-vested service using future salaries.

Identify amounts reported. In the statement of financial position, companies report the net defined benefit obligation/asset (funded status), which is the defined benefit obligation less the fair value of plan assets (if any). Changes in the net defined benefit obligation (asset) are reported in comprehensive income. Service cost (current and past) and net interest (computed by multiplying the discount rate by the funded status of the plan) are reported in the operating section of the income statement. Remeasurements are gains and losses related to the defined benefit obligation (changes in discount rate or other actuarial assumptions) and gains or losses on the fair value of the plan assets. Remeasurements are reported in other comprehensive income.

2 Use a worksheet for employer's pension plan entries.

Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.

3 Explain the accounting for past service costs.

Past service cost is the change in the value of the defined benefit obligation resulting from a plan amendment or a curtailment. Past service costs are expensed in the period of the amendment or curtailment. As a result, a substantial increase (decrease) in pension expense and the defined benefit obligation often results when a plan amendment or curtailment occurs.

4 Explain the accounting for remeasurements.

Remeasurements arise from (1) gains and losses on plan assets and (2) gains and losses on the defined benefit obligation. The gains and losses on plan assets (asset gain or loss) represent the difference between the actual return and the interest revenue computed in determining net interest. Asset gains occur when actual returns exceed the interest revenue. Asset losses occur when the actual returns are less than interest revenue. The gains or losses on the defined benefit obligation (liability gain/loss) are due to changes in actuarial assumptions that affect the amount of the defined benefit obligation. All remeasurements are reported in other comprehensive income. These amounts are not recycled into income in subsequent periods.

5 Describe the requirements for reporting pension plans in financial statements.

A company reports the pension asset/liability as an asset or a liability in the statement of financial position at the end of a reporting period. The classification as non-current or current follows the general guidelines used for classification of other assets or liabilities. On the income statement (or related notes), the company must report the amount of pension expense for the period. In addition, any actuarial gains or losses charged or credited to other comprehensive income should be reported in the statement of comprehensive income.

In the notes, a company is required to disclose information that: (a) explains characteristics of its defined benefit plans and risks associated with them, (b) identifies and explains the amounts in its financial statements arising from its defined benefit plans, and (c) describes how its defined benefit plans may affect the amount, timing, and uncertainty of the company's future cash flows. Important note disclosures are summarized in [Illustration 20.25](#). The reconciliation of the changes in the pension assets and liabilities is a key element of the pension disclosure package.

6 Explain the accounting for other postretirement benefits.

Companies often provide other types of non-pension postretirement benefits, such as life insurance outside a pension plan, medical care, and legal and tax services. The accounting for these other types of postretirement benefits is the same as that used for pension plan reporting. Companies with both pension and other postretirement benefit plans must separately disclose the plan details when the plans are subject to materially different risks.

Enhanced Review and Practice

Practice Problem

Jablonski plc sponsors a defined benefit pension plan for its employees. On January 1, 2022, the following balances related to this plan.

Plan assets	£170,000	
Projected benefit obligation	240,000	
Pension asset/liability	70,000	Cr.
OCI—Loss	11,000	

As a result of the operation of the plan during 2022, the actuary provided the following additional data at December 31, 2022.

Service cost for 2022	£45,000
Actual return on plan assets in 2022	17,000
Contribution in 2022	85,000
Benefits paid retirees in 2022	10,500

Discount rate

7%

Changes in actuarial assumptions result in a defined benefit obligation end-of-year balance of \$335,000.

Instructions

- Compute pension expense for Jablonski for the year 2022 by preparing a pension worksheet that shows the journal entry for pension expense.
- Indicate the pension amounts reported in the financial statements.

Questions

1. What is a pension plan? How does a contributory pension plan differ from a non-contributory plan?
2. Differentiate between a defined contribution pension plan and a defined benefit pension plan. Explain how the employer’s obligation differs between the two types of plans.
3. Differentiate between “accounting for the employer” and “accounting for the pension fund.”

- 4.** The meaning of the term “fund” depends on the context in which it is used. Explain its meaning when used as a noun. Explain its meaning when used as a verb.
- 5.** What is the role of an actuary relative to pension plans? What are actuarial assumptions?
- 6.** What factors must be considered by the actuary in measuring the amount of pension benefits under a defined benefit plan?
- 7.** Name three approaches to measuring benefits from a pension plan and explain how they differ.
- 8.** Explain how cash-basis accounting for pension plans differs from accrual-basis accounting for pension plans. Why is cash-basis accounting generally considered unacceptable for pension plan accounting?
- 9.** What is the net benefit obligation (asset)? How is the net benefit obligation (asset) reported in the financial statements?
- 10.** What elements comprise changes in the net benefit obligation (asset)? How are these changes reported in the financial statements?
- 11.** Identify the components of pension expense. Briefly explain the nature of each component.
- 12.** What is service cost, and what is the basis of its measurement?
- 13.** What is net interest? Identify the elements of net interest and explain how they are computed.
- 14.** Given the following items and amounts, compute the actual return on plan assets: fair value of plan assets at the beginning of the period \$9,200,000; benefits paid during the period \$1,400,000; contributions made during the period \$1,000,000; and fair value of the plan assets at the end of the period \$10,150,000.
- 15.** Explain the difference between service cost and past service cost.
- 16.** What is meant by “past service cost”? When is past service cost recognized as pension expense?

- 17.** What is a pension plan curtailment? Explain the accounting for pension plan curtailments.
- 18.** Sarah is a finance major who has taken only one accounting course. She asserts that pension remeasurements, like many other accounting adjustments, are recorded in net income. Is Sarah correct? Explain.
- 19.** How does an “asset gain or loss” develop in pension accounting?
- 20.** What are “liability gains and losses,” and how are they accounted for?
- 21.** If pension expense recognized in a period exceeds the current amount funded by the employer, what kind of account arises, and how should it be reported in the financial statements? If the reverse occurs—that is, current funding by the employer exceeds the amount recognized as pension expense—what kind of account arises, and how should it be reported?
- 22.** Bill Haley is learning about pension accounting. He is convinced that in years when companies record liability gains and losses, total comprehensive income will not be affected. Is Bill correct? Explain.
- 23.** At the end of the current period, Jacob AG has a defined benefit obligation of €125,000 and pension plan assets with a fair value of €98,000. The amount of the vested benefits for the plan is €95,000. What amount and account(s) related to its pension plan will be reported on the company’s statement of financial position?
- 24.** At the end of the current year, Joshua plc has a defined benefit obligation of £335,000 and pension plan assets with a fair value of £345,000. The amount of the vested benefits for the plan is £225,000. Joshua has a liability gain of £8,300. What amount and account(s) related to its pension plan will be reported on the company’s statement of financial position?
- 25.** Explain the meaning of the following terms.
- Contributory plan.
 - Vested benefits.

c. Retroactive benefits.

26. Of what value to the financial statement reader is the schedule reconciling the funded status of the plan with amounts reported in the employer's statement of financial position?

27. What are postretirement benefits other than pensions?

28. What are the major differences between postretirement healthcare benefits and pension benefits?

Brief Exercises

BE20.1 (LO 2) Assume that **Cathay Pacific Airlines** (HKG) reported the following in a recent annual report (in millions).

Service cost	HK\$316
Interest on defined benefit obligation	342
Interest revenue on plan assets	371

Compute Cathay Pacific's pension expense.

BE20.2 (LO 2) For Becker AG, year-end plan assets were €2,000,000. At the beginning of the year, plan assets were €1,680,000. During the year, contributions to the pension fund were €120,000, and benefits paid were €200,000. Compute Becker's actual return on plan assets.

BE20.3 (LO 2) At January 1, 2022, Uddin Company had plan assets of \$250,000 and a defined benefit obligation of the same amount. During 2022, service cost was \$27,500, the discount rate was 10%, actual return on plan assets was \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Prepare a pension worksheet for Uddin Company for 2022.

BE20.4 (LO 2) For 2022, assume that **Wm Morrison Supermarkets plc** (GBR) had pension expense of £61 million and contributed £52 million to the pension fund. Prepare Morrison's journal entry to record pension income and funding.

BE20.5 (LO 2) Duesbury Corporation amended its pension plan on January 1, 2022, and granted \$120,000 of past service costs to its employees. The employees have an average time to vesting of 4 years. Current service cost for 2022 is \$23,000, and net interest expense is \$8,000. Compute pension expense for Duesbury in 2022.

BE20.6 (LO 2, 4) Villa SpA has experienced tough competition, leading it to seek concessions from its employees in the company's pension plan. In exchange for promises to avoid layoffs and wage cuts, the employees agreed to receive lower pension benefits in the future. As a result, Villa amended its pension plan on January 1, 2022, and recorded negative past service cost of €125,000. The average period to vesting for the benefits affected by this plan is 5 years. Current service cost for 2022 is €26,000. Interest expense is €9,000, and interest revenue is €2,500. Actual return on assets in 2022 is €1,500. Compute pension expense for Villa in 2022.

BE20.7 (LO 4) Refer to the information for Villa SpA in BE20.6. Compute the gain or loss on pension plan assets for Villa SpA and indicate the accounting and reporting for the asset gains or losses.

BE20.8 (LO 2, 4, 5) Hemera SA had a defined benefit obligation of R\$3,100,000 and plan assets of R\$2,900,000 at January 1, 2022. Hemera's discount rate is 6%. In 2022, actual return on plan assets is R\$160,000. Hemera contributed R\$200,000 to the pension fund and paid benefits of R\$150,000. Service cost for 2022 is R\$50,000; Hemera reports that the defined benefit obligation at December 31, 2022, is R\$3,600,000. Determine (a) pension expense for 2022; (b) pension assets at December 31, 2022; and (c) pension asset and liability gains and losses. Indicate how pension gains and losses will be reported by Hemera in the statement of comprehensive income and the statement of financial position.

BE20.9 (LO 5) Tevez AG experienced an actuarial loss of €750 in its defined benefit plan in 2022. For 2022, Tevez's revenues are €125,000, and expenses (excluding pension expense of €14,000) are €85,000. Prepare Tevez's statement of comprehensive income for 2022.

BE20.10 (LO 5) At December 31, 2022, Conway SA had a defined benefit obligation of €510,000 and plan assets of €322,000. Prepare a pension reconciliation schedule for Conway.

BE20.11 (LO 6) Caleb Corporation has the following information available concerning its postretirement medical benefit plan for 2022.

Service cost	\$40,000
Interest expense	52,400
Interest revenue	26,900

Compute Caleb's 2022 postretirement expense.

BE20.12 (LO 6) For 2022, Benjamin plc computed its annual postretirement expense as £240,900. Benjamin's contribution to the plan during 2022 was £160,000. Prepare Benjamin's 2022 entry to record postretirement expense.

Exercises

E20.1 (LO 1) (Pension Expense, Journal Entry) The following information is available for the pension plan of Radcliffe Company for the year 2022.

Interest revenue on plan assets	\$ 15,000
Benefits paid to retirees	40,000
Contributions (funding)	90,000
Discount (interest) rate	10%
Defined benefit obligation, January 1, 2022	500,000
Service cost	60,000

Instructions

- Compute pension expense for the year 2022.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2022.

E20.2 (LO 1) (Computation of Pension Expense) Veldre SpA provides the following information about its defined benefit pension plan for the year 2022.

Service cost	€ 90,000
Contribution to the plan	105,000
Benefits paid	40,000
Plan assets at January 1, 2022	640,000
Defined benefit obligation at January 1, 2022	700,000
Discount (interest) rate	10%

Instructions

Compute the pension expense for the year 2022.

E20.3 (LO 2) (Preparation of Pension Worksheet) Using the information in E20.2, prepare a pension worksheet inserting the January 1, 2022 and December 31, 2022, balances, and the journal entry recording pension expense.

E20.4 (LO 2) (Basic Pension Worksheet) The following facts apply to the pension plan of Boudreau plc for the year 2022.

Plan assets, January 1, 2022	£490,000
Defined benefit obligation, January 1, 2022	490,000
Discount (interest) rate	8%
Service cost	40,000
Contributions (funding)	25,000
Actual return on plan assets	39,200
Benefits paid to retirees	33,400

Instructions

Using the preceding data, compute pension expense for the year 2022. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2022 and the year-end balances in the related pension accounts.

E20.5 (LO 1) (Computation of Actual Return, Asset Gain and Loss) Gingrich Importers provides the following pension plan information.

Fair value of pension plan assets, January 1, 2022	₺2,400,000
Fair value of pension plan assets, December 31, 2022	2,725,000
Contributions to the plan in 2022	280,000
Benefits paid retirees in 2022	350,000
Discount (interest) rate	7%

Instructions

- From the data above, compute the actual return on the plan assets for 2022.
- Compute asset gain or loss, and indicate how the gain or loss will be reported.

E20.6 (LO 2, 3) (Basic Pension Worksheet, Past Service Costs) The following defined pension data of Yang Ltd. apply to the year 2022 (amounts in thousands).

Defined benefit obligation, 1/1/22 (before amendment)	¥560,000
Plan assets, 1/1/22	546,200
Pension liability	13,800
On January 1, 2022, Yang Ltd., through plan amendment, grants past service benefits having a present value of	120,000
Discount (interest) rate	9%
Service cost	58,000
Contributions (funding)	65,000
Actual return on plan assets	49,158
Benefits paid to retirees	40,000

Instructions

For 2022, prepare a pension worksheet for Yang Ltd. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

E20.7 (LO 2, 4, 5) (Pension Worksheet, Gains and Losses)

Kennedy Company had a defined benefit obligation of \$6,300,000 and plan assets of \$4,900,000 at January 1, 2022. Kennedy has the following data related to the plan during 2022.

Discount (interest) rate	7%
Service cost	\$120,000
Actual return on plan assets	295,000
Contributions	400,000
Benefits paid	300,000

Defined benefit obligation at December 31, 2022, is \$6,650,000. There are no accumulated gains or losses at December 31, 2021.

Instructions

- Prepare a pension worksheet for Kennedy Company for 2022.
- Prepare the journal entry to record 2022 pension expense.
- Indicate how pension gains and losses (if any) will be reported by Kennedy in the statement of comprehensive income and the statement of financial position.

E20.8 (LO 2, 4, 5) (Disclosures: Pension Expense and Other Comprehensive Income) Taveras Enterprises provides the following information related to its defined benefit pension plan.

Balances or Values at December 31, 2022	
Defined benefit obligation	€2,729,907
Fair value of plan assets	2,278,329
Accumulated OCI—Net loss (1/1/22 balance, –0–)	1,700
Other pension plan data:	

Service cost for 2022	94,000
Actual return on plan assets in 2022	130,000
Interest on January 1, 2022, defined benefit obligation	157,127
Contributions to plan in 2022	93,329
Benefits paid	140,000
Discount (interest) rate	6%

Instructions

- Prepare the note disclosing the components of pension expense for the year 2022.
- Determine the amounts of other comprehensive income and comprehensive income for 2022. Net income for 2022 is €35,000.
- Compute the amount of accumulated other comprehensive income reported at December 31, 2022.

E20.9 (LO 2, 4) (Pension Worksheet and Remeasurement)

Webb Corp. sponsors a defined benefit pension plan for its employees. On January 1, 2022, the following balances relate to this plan.

Plan assets	\$480,000
Defined benefit obligation	600,000
Pension asset/liability	120,000
Accumulated OCI	—0—

As a result of the operation of the plan during 2022, the following additional data are provided by the actuary.

Service cost for 2022	\$90,000
Discount (interest) rate	6%
Actual return on plan assets in 2022	55,000
Unexpected loss from change in defined benefit obligation, due to change in actuarial predictions	76,000
Contributions in 2022	99,000

Benefits paid retirees in 2022	85,000
--------------------------------	--------

Instructions

- Using the data above, compute pension expense for Webb Corp. for the year 2022 by preparing a pension worksheet.
- Prepare the journal entry for pension expense for 2022.

E20.10 (LO 1, 4, 5) (Pension Expense, Journal Entries, Statement Presentation) Henning plc sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the year 2022.

- The actuarial present value of future benefits earned by employees for services rendered in 2022 amounted to £56,000.
- The company's funding policy requires a contribution to the pension trustee amounting to £145,000 for 2022.
- As of January 1, 2022, the company had a defined benefit obligation of £900,000, an accumulated benefit obligation of £800,000, and a balance of £40,000 in accumulated OCI (Loss). The fair value of pension plan assets amounted to £600,000 at the beginning of the year. The discount rate was 9%. Actual return on plan assets was £60,000, and no benefits were paid.

Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2022.
- Prepare the journal entry or entries to record pension expense and the employer's contribution to the pension trustee in 2022.
- Indicate the amounts that would be reported on the income statement and the statement of financial position for the year 2022.

E20.11 (LO 1, 2, 4, 5) (Pension Expense, Journal Entries, Statement Presentation) Ferreri SpA received the following

selected information from its pension plan trustee concerning the operation of the company's defined benefit pension plan for the year ended December 31, 2022.

	January 1, 2022	December 31, 2022
Defined benefit obligation	€1,500,000	€1,527,000
Fair value of plan assets	800,000	1,130,000
Accumulated benefit obligation	1,600,000	1,720,000
Accumulated OCI (G/L)—Net gain	—0—	200,000

The service cost component of pension expense for employee services rendered in the current year amounted to €77,000. The company's actual funding of the plan (contributions) in 2022 amounted to €250,000. The discount (interest) rate was 10%. Assume no benefits paid in 2022.

Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2022.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2022.
- Indicate the pension-related amounts that would be reported on the income statement and the statement of financial position for Ferreri SpA for the year 2022.

E20.12 (LO 1, 4, 5) (Computation of Actual Return, Gains and Losses, and Pension Expense) Erickson plc sponsors a defined benefit pension plan. The company's actuary provides the following information about the plan.

	January 1, 2022	December 31, 2022
Vested benefit obligation	£1,500	£1,900
Accumulated benefit obligation	1,900	2,730

Defined benefit obligation	2,500	3,300
Plan assets (fair value)	1,700	2,620
Discount (interest) rate		10%
Pension liability	800	?
Service cost for the year 2022		400
Contributions (funding in 2022)		700
Benefits paid in 2022		200

Instructions

- Compute the actual return on the plan assets in 2022.
- Compute the amount of net gain or loss for 2022.
- Compute the amount of the other comprehensive income (G/L) as of December 31, 2022. (Assume the January 1, 2022, balance was zero.)

E20.13 (LO 2, 4, 5) (Worksheet for E20.12) Using the information in E20.12 about Erickson plc's defined benefit pension plan, prepare a 2022 pension worksheet with supplementary schedules of computations. Prepare the journal entries at December 31, 2022, to record pension expense and related pension transactions. Also, indicate the pension amounts reported in the statement of financial position.

E20.14 (LO 2, 5) (Pension Expense, Journal Entries) Latoya Company provides the following selected information related to its defined benefit pension plan for 2022.

Pension asset/liability (January 1)	\$ 25,000	Cr.
Accumulated benefit obligation (December 31)	400,000	
Actual return on plan assets	67,500	
Contributions (funding) in 2022	50,000	
Discount (interest) rate	10%	
Defined benefit obligation (January 1)	700,000	

Service cost	80,000	
--------------	--------	--

Instructions

- Compute pension expense and prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2022. Preparation of a pension worksheet is not required. Benefits paid in 2022 were \$35,000.
- Indicate the pension-related amounts that would be reported in the company's statement of comprehensive income and statement of financial position for 2022.

E20.15 (LO 2, 5) (Pension Worksheet—Missing Amounts) The accounting staff of Usher Inc. has prepared the following pension worksheet (amounts in \$). Unfortunately, several entries in the worksheet are not decipherable. The company has asked for your assistance in completing the worksheet and the accounting tasks related to the pension plan for 2022.

Instructions

- Determine the missing amounts in the 2022 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2022 pension expense for Usher Inc.

E20.16 (LO 6) (Postretirement Benefit Expense Computation) Kreter Concepts provides the following information about its postretirement benefit plan for the year 2022.

Service cost	₱ 45,000
Contribution to the plan	10,000
Actual return on plan assets (at 8%)	8,800
Benefits paid	20,000
Plan assets at January 1, 2022	110,000
Defined postretirement benefit obligation at January 1, 2022	330,000
Discount (interest) rate	8%

Instructions

Compute the postretirement benefit expense for 2022.

E20.17 (LO 6) (Postretirement Benefit Worksheet) Using the information in E20.16, prepare a worksheet inserting January 1, 2022, balances, and showing December 31, 2022, balances. Prepare the journal entry recording postretirement benefit expense.

E20.18 (LO 6) (Postretirement Benefit Expense Computation) Garner Inc. provides the following information related to its postretirement benefits for the year 2022.

Defined postretirement benefit obligation at January 1, 2022	\$710,000
Actual return on plan assets (at 10%)	34,000
Discount (interest) rate	10%
Service cost	83,000

Instructions

Compute postretirement benefit expense for 2022.

E20.19 (LO 6) (Postretirement Benefit Expense Computation) Englehart AG provides the following information about its postretirement benefit plan for the year 2022.

Service cost	€ 90,000	
Contribution to the plan	56,000	
Actual return on plan assets	62,000	
Benefits paid	40,000	
Plan assets at January 1, 2022	710,000	
Defined postretirement benefit obligation at January 1, 2022	760,000	
Accumulated OCI (Loss) at January 1, 2022	100	Dr.
Discount (interest) rate	9%	

Instructions

Compute the postretirement benefit expense for 2022.

E20.20 (LO 6) (Postretirement Benefit Worksheet) Using the information in E20.19, prepare a worksheet inserting the January 1, 2022, and December 31, 2022, balances, and the journal entry recording postretirement benefit expense.

E20.21 (LO 6) (Postretirement Benefit Worksheet—Missing Amounts) The accounting staff of Holder Inc. has prepared the following postretirement benefit worksheet (amounts in €). Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2022.

Instructions

- Determine the missing amounts in the 2022 postretirement worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2022 postretirement expense for Holder Inc.
- What discount rate is Holder using in accounting for the interest on its other postretirement benefit plan? Explain.

Problems

P20.1 (LO 2, 4, 5) (2-Year Worksheet) On January 1, 2022, Harrington SA has the following defined benefit pension plan balances.

--	--

Defined benefit obligation	€4,500,000
Fair value of plan assets	4,200,000

The interest rate applicable to the plan is 10%. On January 1, 2023, the company amends its pension agreement so that past service costs of €500,000 are created. Other data related to the pension plan are as follows.

	2022	2023
Service cost	€150,000	€180,000
Contributions (funding) to the plan	240,000	285,000
Benefits paid	200,000	280,000
Actual return on plan assets	420,000	260,000

Instructions

- Prepare a pension worksheet for the pension plan for 2022 and 2023.
- For 2023, prepare the journal entry to record pension-related amounts.

P20.2 (LO 2, 3, 4, 5) Groupwork (3-Year Worksheet, Journal Entries, and Reporting) Jackson Company adopts acceptable accounting for its defined benefit pension plan on January 1, 2021, with the following beginning balances: plan assets \$200,000 and defined benefit obligation \$250,000. Other data relating to 3 years' operation of the plan are shown below.

	2021	2022	2023
Annual service cost	\$16,000	\$19,000	\$26,000
Discount (interest) rate	10%	10%	10%
Actual return on plan assets	20,000	22,000	24,000
Annual funding (contributions)	16,000	40,000	48,000
Benefits paid	14,000	16,400	21,000
Past service cost (plan amended, 1/1/22)		160,000	

Change in actuarial assumptions establishes a December 31, 2023, defined benefit obligation of:			520,000
-------------------------------------------------------------------------------------------------	--	--	---------

Instructions

- Prepare a pension worksheet presenting all 3 years' pension balances and activities.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- Indicate the pension-related amounts reported in the financial statements for 2023.

P20.3 (LO 3, 4, 5) (Pension Expense, Journal Entries)

Gottschalk plc sponsors a defined benefit plan for its 100 employees. On January 1, 2022, the company's actuary provided the following information.

Pension plan assets (fair value)	£200,000
Accumulated benefit obligation	260,000
Defined benefit obligation	380,000

The average remaining service period for the participating employees is 10 years. All employees are expected to receive benefits under the plan. On December 31, 2022, the actuary calculated that the present value of future benefits earned for employee services rendered in the current year amounted to £52,000; the defined benefit obligation was £490,000, the fair value of pension assets was £276,000, and the accumulated benefit obligation amounted to £365,000. The discount (interest) rate is 10%. The actual return on plan assets is £11,000. The company's current year's contribution to the pension plan amounted to £65,000. No benefits were paid during the year.

Instructions

- Determine the components of pension expense that the company would recognize in 2022. (With only one year involved, you need not prepare a worksheet.)
- Prepare the journal entry to record the pension expense and the company's funding of the pension plan in 2022.
- Compute the amount of the 2022 increase/decrease in gains or losses.
- Indicate the pension amounts reported in the financial statements for 2022.

P20.4 (LO 2, 4) (Pension Expense, Journal Entries for 2 Years) Gordon Company sponsors a defined benefit pension plan. The following information related to the pension plan is available for 2022 and 2023 (no benefits were paid in either year).

	2022		2023
Plan assets (fair value), December 31	\$699,000		\$849,000
Defined benefit obligation, January 1	700,000		800,000
Pension asset/liability, January 1	140,000	Cr.	?
Service cost	60,000		90,000
Actual return on plan assets	24,000		30,000
Contributions (funding)	115,000		120,000
Accumulated benefit obligation, December 31	500,000		550,000
Discount (interest) rate	9%		9%

Instructions

- Compute pension expense for 2022 and 2023.
- Prepare the journal entries to record the pension expense and the company's funding of the pension plan for both years.

P20.5 (LO 4) (Computation of Pension Expense, Journal Entries for 3 Years) Hiatt Toothpaste SA initiates a defined benefit

pension plan for its 50 employees on January 1, 2022. The insurance company which administers the pension plan provided the following selected information for the years 2022, 2023, and 2024.

	For Year Ended December 31,		
	2022	2023	2024
Plan assets (fair value)	€50,000	€ 85,000	€180,000
Vested benefit obligation	45,000	165,000	292,000
Defined benefit obligation	60,000	200,000	324,000
Net (gain) loss	–0–	78,900	5,800
Employer's funding contribution (made at end of year)	50,000	60,000	105,000

There were no balances as of January 1, 2022, when the plan was initiated. The actual return on plan assets was 10% over the 3-year period, but the discount (interest) rate was 13% in 2022, 11% in 2023, and 8% in 2024. The service cost component of net periodic pension expense amounted to the following: 2022, €60,000; 2023, €85,000; and 2024, €119,000. No benefits were paid in 2022, €30,000 of benefits were paid in 2023, and €18,500 of benefits were paid in 2024 (all benefits paid at end of year).

Instructions

(Round to the nearest euro.)

- Calculate the amount of net periodic pension expense that the company would recognize in 2022, 2023, and 2024.
- Prepare the journal entries to record net periodic pension expense, employer's funding contribution, and related pension amounts for the years 2022, 2023, and 2024.

P20.6 (LO 1, 4) (Pension Expense, Journal Entries, and Net Gain or Loss) Aykroyd Inc. has sponsored a non-contributory, defined benefit pension plan for its employees since 1992. Relevant information about the pension plan on January 1, 2022, is as follows.

1. The company has 200 employees. All these employees are expected to receive benefits under the plan.
2. The defined benefit obligation amounted to \$5,000,000, and the fair value of pension plan assets was \$3,000,000. There is a zero balance in Accumulated Other Compensatory Income related to the pension.

On December 31, 2022, the defined benefit obligation and the vested benefit obligation were \$4,850,000 and \$4,025,000, respectively. The fair value of the pension plan assets amounted to \$4,100,000 at the end of the year. A 10% discount rate was used in the actuarial present value computations in the pension plan. The present value of benefits attributed by the pension benefit formula to employee service in 2022 amounted to \$200,000. The employer's contribution to the plan assets amounted to \$775,000 in 2022. This problem assumes no payment of pension benefits.

Instructions

(Round all amounts to the nearest dollar.)

- a. Compute pension expense for the year 2022.
- b. Prepare the journal entries required to report the accounting for the company's pension plan for 2022.
- c. Compute the amount of the increase/decrease in net gains or losses in 2022.

P20.7 (LO 2, 4) (Pension Worksheet) Hanson Ltd. sponsors a defined benefit pension plan for its employees. On January 1, 2022, the following balances related to this plan.

Plan assets (fair value)	£520,000	
Defined benefit obligation	700,000	
Pension asset/liability	180,000	Cr.
Accumulated net loss	91,000	

As a result of the operation of the plan during 2022, the actuary provided the following additional data on December 31, 2022.

Service cost for 2022	£108,000
Discount (interest) rate	9%
Actual return on plan assets in 2022	48,000
Contributions in 2022	133,000
Benefits paid retirees in 2022	85,000

Instructions

Using the preceding data, compute pension expense for Hanson Ltd. for the year 2022 by preparing a pension worksheet that shows the journal entry for pension expense.

P20.8 (LO 2, 4, 5) Groupwork (Comprehensive 2-Year Worksheet) Lemke SA sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the years 2022 and 2023.

	2022		2023
Defined benefit obligation, January 1	R600,000		
Plan assets (fair value), January 1	410,000		
Pension asset/liability, January 1	190,000	Cr.	
Service cost	40,000		R 59,000
Discount (interest) rate	10%		10%
Actual return on plan assets	36,000		61,000
Annual contributions	97,000		81,000
Benefits paid retirees	31,500		54,000
Increase in defined benefit obligation due to changes in actuarial assumptions	87,000		—0—
Accumulated benefit obligation at December 31	721,800		789,000

Vested benefit obligation at December 31		464,000
------------------------------------------	--	---------

Instructions

- Prepare a pension worksheet for both 2022 and 2023.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- For 2023, indicate the pension amounts reported in the financial statements.

P20.9 (LO 2, 3, 4) Groupwork (Comprehensive 2-Year Worksheet) Hobbs AG has the following defined benefit pension plan balances on January 1, 2022.

Defined benefit obligation	€4,600,000
Fair value of plan assets	4,600,000

The discount (interest) rate applicable to the plan is 10%. On January 1, 2023, the company amends its pension agreement so that past service costs of €600,000 are created. Other data related to the pension plan are as follows.

	2022	2023
Service cost	€150,000	€170,000
Contributions (funding) to the plan	200,000	184,658
Benefits paid	220,000	280,000
Actual return on plan assets	252,000	350,000

Instructions

- Prepare a pension worksheet for the pension plan in 2022.
- Prepare any journal entries related to the pension plan that would be needed at December 31, 2022.
- Prepare a pension worksheet for 2023 and any journal entries related to the pension plan as of December 31, 2023.

- d. Indicate the pension-related amounts reported in the 2023 financial statements.

P20.10 (LO 2, 4) (Pension Worksheet—Missing Amounts)

Kramer Co. has prepared the following pension worksheet (amounts in \$). Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing both the worksheet and the accounting tasks related to the pension plan for 2022.

Instructions

- Determine the missing amounts in Kramer's 2022 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2022 pension expense.
- Determine for 2022 the discount rate used to determine interest expense/revenue.

Pension Worksheet—Kramer Co.

P20.11 (LO 2, 4, 5) (Pension Worksheet) The following data relate to the operation of Kramer Co.'s pension plan in 2023. The pension worksheet for 2022 is provided in P20.10.

--	--

Service cost	\$59,000
Actual return on plan assets	32,000
Annual contributions	51,000
Benefits paid retirees	27,000

For 2023, Kramer will use a discount rate of 8%.

Instructions

- Prepare a pension worksheet for 2023.
- Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31.
- Indicate the pension amounts reported in the financial statements.

P20.12 (LO 2, 4, 5) (Pension Worksheet) Chen Group sponsors a defined benefit pension plan for its employees. On January 1, 2022, the following balances related to this plan (amounts in thousands).

Plan assets (fair value)	¥270,000	
Defined benefit obligation	340,000	
Pension asset/liability	70,000	Cr.
OCI—Loss	39,000	

As a result of the operation of the plan during 2022, the actuary provided the following additional data at December 31, 2022.

Service cost for 2022	¥45,000
Actual return on plan assets in 2022	27,000
Contributions in 2022	65,000
Benefits paid retirees in 2022	41,000
Discount (interest) rate	7%

Instructions

- a. Compute pension expense for Chen Group for the year 2022 by preparing a pension worksheet that shows the journal entry for pension expense.
- b. Indicate the pension amounts reported in the financial statements.

P20.13 (LO 6) Groupwork (Postretirement Benefit Worksheet)

Hollenbeck Foods Inc. sponsors a postretirement medical and dental benefit plan for its employees. The following balances relate to this plan on January 1, 2022.

Plan assets	\$200,000
Defined postretirement benefit obligation	200,000

As a result of the plan's operation during 2022, the following additional data are provided by the actuary.

Service cost for 2022 is \$70,000
Discount (interest) rate is 10%
Contributions to plan in 2022 are \$65,000
Actual return on plan assets is \$15,000
Benefits paid to employees are \$44,000

Instructions

- a. Using the preceding data, compute the net periodic postretirement benefit cost for 2022 by preparing a worksheet that shows the journal entry for postretirement expense and the year-end balances in the related postretirement benefit memo accounts. (Assume that contributions and benefits are paid at the end of the year.)
- b. Prepare any journal entries related to the postretirement plan for 2022 and indicate the postretirement amounts reported in the financial statements for 2022.

P20.14 (LO 6) (Postretirement Benefit Worksheet—2 Years)

Elton AG has the following postretirement benefit plan balances on January 1, 2022.

Defined postretirement benefit obligation	€2,250,000
Fair value of plan assets	2,250,000

The discount (interest) rate applicable to the plan is 10%. On January 1, 2023, the company amends the plan so that past service costs of €175,000 are created. Other data related to the plan are as follows.

	2022	2023
Service costs	€ 75,000	€ 85,000
Contributions (funding) to the plan	45,000	35,000
Benefits paid	40,000	45,000
Actual return on plan assets	140,000	120,000

Instructions

- Prepare a worksheet for the postretirement plan in 2022.
- Prepare any journal entries related to the postretirement plan that would be needed at December 31, 2022.
- Prepare a worksheet for 2023 and any journal entries related to the postretirement plan as of December 31, 2023.
- Indicate the postretirement-benefit–related amounts reported in the 2023 financial statements.

Concepts for Analysis

CA20.1 (LO 1) (Pension Terminology and Theory) Since the late 1800s, many business organizations have been concerned with providing for the retirement of their employees. During recent decades, a marked increase in this concern has resulted in the establishment of pension plans in most large companies and in many medium- and small-sized ones.

The substantial growth of these plans, both in numbers of employees covered and in amounts of retirement benefits, has increased the significance of pension cost in relation to the financial position, results of operations, and cash flows of many companies. In examining the costs of pension plans, a public accountant encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if IFRS is to be reflected in the financial statements of entities with pension plans.

Instructions

- a. Define a pension plan. How does a contributory pension plan differ from a non-contributory plan?
- b. Differentiate between “accounting for the employer” and “accounting for the pension fund.”
- c. Explain the terms “funded” and “pension liability” as they relate to:
 1. The pension fund.
 2. The employer.
- d.
 1. Discuss the theoretical justification for accrual recognition of pension costs.
 2. Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- e. Distinguish among the following as they relate to pension plans.
 1. Service cost.
 2. Past service costs.
 3. Vested benefits.

CA20.2 (LO 1) Writing (Pension Terminology) The following items commonly appear in a company’s financial statements.

1. Under the caption Assets:

- Pension asset/liability.
2. Under the caption Liabilities:
Pension asset/liability.
 3. Under the caption Equity:
Asset loss as a component of Accumulated Other Comprehensive Income.
 4. On the income statement:
Pension expense.

Instructions

Explain the significance of each of the items above on company financial statements. (*Note:* Not all the items listed above are necessarily found on the statements of a single company.)

CA20.3 (LO 1) (Basic Terminology) In examining the costs of pension plans, Leah Hutcherson, public accountant, encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if IFRS is to be reflected in the financial statements of entities with pension plans.

Instructions

- a.
 1. Explain the application of accrual concepts to recognition of pension costs.
 2. Discuss the relative verifiability and neutrality of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- b. Explain the following terms as they apply to accounting for pension plans.
 1. Defined benefit obligation.
 2. Net interest.
- c. What information should be disclosed about a company's pension plans in its financial statements and its notes?

CA20.4 (LO 1) Writing (Major Pension Concepts) Lyons plc is a medium-sized manufacturer of paperboard containers and boxes. The company sponsors a non-contributory, defined benefit pension plan that covers its 250 employees. Tim Shea has recently been hired as president of Lyons plc. While reviewing last year's financial statements with Anita Kroll, controller, Shea expressed confusion about several of the items in the footnote to the financial statements relating to the pension plan. In part, the footnote reads as follows.

Note J. The company has a defined benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last four years of employment. The company's funding policy is to contribute annually the maximum amount allowed under the tax law. Contributions are intended to provide for benefits expected to be earned in the future as well as those earned to date.

The net periodic pension expense on Lyons plc's comparative income statement was £72,000 in 2023 and £57,680 in 2022.

The following are selected figures from the plan's funded status and amounts recognized in the Lyons plc's statement of financial position at December 31, 2023 (amounts in thousands).

Defined benefit obligation	£(1,200)
Plan assets at fair value	1,050
Defined benefit obligation in excess of plan assets	<u>£ (150)</u>

Given that Lyons plc's workforce has been stable for the last 6 years, Shea could not understand the increase in the net periodic pension expense. Kroll explained that the net periodic pension expense consists of several elements, some of which may increase or decrease the net expense.

Instructions

- The determination of the net periodic pension expense is a function of two elements. List and briefly describe each of the elements.

- b. Describe the major difference and the major similarity between the vested benefit obligation and the defined benefit obligation.
- c.
 - 1. Explain why pension gains and losses are not recognized in net income in the period in which they arise.
 - 2. Briefly describe how pension gains and losses are recognized.

CA20.5 (LO 1) Writing (Implications of *International Accounting Standard No. 19*) Ruth Moore and Carl Nies have to do a class presentation on the pension pronouncement “Employee Benefits.” In developing the class presentation, they decided to provide the class with a series of questions related to pensions and then discuss the answers in class. Given that the class has read *IAS 19*, they felt this approach would provide a lively discussion. Here are the situations:

- 1. In an article prior to the recent amendments to *IAS 19*, it was reported that the discount rates used by the largest 200 companies for pension reporting ranged from 5% to 11%. How can such a situation exist, and does the pension pronouncement alleviate this problem?
- 2. An article indicated that when *IAS 19* was issued, it caused an increase in the liability for pensions for a significant number of companies. Why might this situation occur?
- 3. A recent article noted that most gains and losses are recognized in net income. However, pension accounting has long been recognized as an exception—an area of accounting in which at least some dampening of market swings is appropriate. This is because pension funds are managed so that their performance is insulated from the extremes of short-term market swings. A pension expense that reflects the volatility of market swings might, for that reason, convey information of little relevance. Are these statements true?
- 4. Many companies held assets twice as large as they needed to fund their pension plans at one time. Are these assets reported on the

statement of financial position of these companies per the pension pronouncement? If not, where are they reported?

5. Understanding the impact of the changes required in pension reporting requires detailed information about a company's pension plan(s) and an analysis of the relationship of many factors, particularly:
 - a. The type of plan(s) and any significant amendments.
 - b. The plan participants.
 - c. The funding status.
 - d. The actuarial funding method and assumptions currently used.

What impact does each of these items have on financial statement presentation?

Instructions

What answers do you believe Ruth and Carl gave to each of these questions?

CA20.6 (LO 1, 3, 4) Ethics (Non-Vested Employees—An Ethical Dilemma) Cardinal Technology recently merged with College Electronix (CE), a computer graphics manufacturing firm. In performing a comprehensive audit of CE's accounting system, Richard Nye, internal audit manager for Cardinal Technology, discovered that the new subsidiary did not capitalize pension assets and liabilities, subject to the requirements of IFRS.

The fair value of CE's pension assets was \$15.5 million, the vested benefit obligation was \$12.9 million, and the defined benefit obligation was \$17.4 million. Nye reported this audit finding to Renée Selma, the newly appointed controller of CE. A few days later, Selma called Nye for his advice on what to do. Selma started her conversation by asking, "Can't we eliminate the negative income effect of our pension dilemma simply by terminating the employment of non-vested employees before the end of our fiscal year?"

Instructions

How should Nye respond to Selma's remark about firing non-vested employees?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What kind of pension plan does M&S provide its employees?
- b. What was M&S's pension expense for 2019 and 2018?
- c. What is the impact of M&S's pension plans for 2019 on its financial statements?
- d. What information does M&S provide on the target allocation of its pension assets? How do the allocations relate to the expected returns on these assets?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions related to **adidas** and **Puma**.

- What kind of pension plans do adidas and Puma provide their employees?
- What net periodic pension expense (cost) did adidas and Puma report in 2018?
- What is the year-end 2018 funded status of adidas's and Puma's plans?
- What relevant rates were used by adidas and Puma in computing their pension amounts?
- Compare the benefit payments and contributions for adidas and Puma.

Accounting, Analysis, and Principles

PENCOMP AG's statement of financial position at December 31, 2021, is as follows.

PENCOMP AG Statement of Financial Position As of December 31, 2021					
<i>Assets</i>			<i>Equity</i>		
Plant and equipment		€2,000	Share capital		€2,000
Accumulated depreciation		(240)	Retained earnings		896
		1,760	Total equity		2,896
Inventory	€ 1,800		<i>Liabilities</i>		
Cash	438		Notes payable	€ 1,000	
Total current assets		2,238	Pension liability	102	

PENCOMP AG Statement of Financial Position As of December 31, 2021					
Total assets		<u>€3,998</u>	Total liabilities		1,102
			Total equity and liabilities		<u>€3,998</u>

Additional information concerning PENCOMP's defined benefit pension plan follows.

Defined benefit obligation at 12/31/21	€ 820.5
Plan assets (fair value) at 12/31/21	718.5
Service cost for 2022	42.0
Discount (interest) rate	10%
Actual return on plan assets in 2022	60.6
Contributions to pension fund in 2022	70.0
Benefits paid during 2022	40.0
Accumulated OCI (net loss due to changes in actuarial assumptions and deferred net losses on plan assets) at 12/31/21; included in retained earnings balance	92.0

Other information about PENCOMP is as follows.

Salary expense, all paid with cash during 2022	€ 700.0
Sales, all for cash	3,000.0
Purchases, all for cash	2,000.0
Inventory at 12/31/2022	1,800.0

Property originally cost €2,000 and is depreciated on a straight-line basis over 25 years with no residual value.

Interest on the note payable is 10% annually and is paid in cash on 12/31 of each year.

Dividends declared and paid are €200 in 2022.

Accounting

Prepare an income statement for 2022 and a statement of financial position as of December 31, 2022. Also, prepare the pension expense journal entry for the year ended December 31, 2022. (Round to two decimal places.)

Analysis

Compute return on equity for PENCOMP for 2022 (assume average equity is equal to year-end equity). Do you think an argument can be made for including some or even all of the asset/liability gains and losses in the numerator of return on equity? Illustrate that calculation.

Principles

Explain a rationale for why the IASB has (so far) decided to exclude from the current-period income statement the effects of gains and losses due to changes in actuarial assumptions.

Research Case

Jack Kelly Company has grown rapidly since its founding in 2006. To instill loyalty in its employees, Kelly is contemplating establishment of a defined benefit plan. Kelly knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly any gains or losses that develop in the plan. Kelly has asked you to conduct some research on the accounting for gains and losses in a defined benefit plan.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Briefly describe how pension gains and losses are accounted for.
- b. Explain the rationale behind the accounting method described in part (a).
- c. What is the related pension asset or liability that may show up on the statement of financial position? When will each of these

situations occur?

Global Accounting Insights

LEARNING OBJECTIVE 7

Compare the accounting for pensions under IFRS and U.S. GAAP.

The underlying concepts for the accounting for postretirement benefits are similar in U.S. GAAP and IFRS—both U.S. GAAP and IFRS view pensions and other postretirement benefits as forms of deferred compensation. At present, there are significant differences in the specific accounting provisions applied to these plans.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to pensions.

Similarities

- U.S. GAAP and IFRS separate pension plans into defined contribution plans and defined benefit plans. The accounting for defined contribution plans is similar.
- Both U.S. GAAP and IFRS recognize the merit of reporting the primary components of pension expense (service cost and net interest) in different sections of the income statement.
- U.S. GAAP and IFRS recognize a pension asset or liability as the funded status of the plan (i.e., defined benefit obligation minus the fair value of plan assets). (Note that defined benefit obligation is referred to as the projected benefit obligation in U.S. GAAP.)
- U.S. GAAP and IFRS compute unrecognized past service cost (PSC) (referred to as prior service cost in U.S. GAAP) in the same manner.

Differences

- While both U.S. GAAP and IFRS include interest expense on the liability in pension expense, GAAP subtracts an asset return component based on expected return. Under IFRS for asset returns, pension expense is reduced by the amount of interest revenue. Other changes in asset value remeasurements are recorded in other comprehensive income.
- U.S. GAAP amortizes PSC over the remaining service lives of employees, while IFRS recognizes PSC as a component of pension expense in income immediately.
- While IFRS permits the primary components of pension expense (service cost and net interest) to be reported in different sections of the income statement, U.S. GAAP requires this method of reporting.
- U.S. GAAP recognizes liability and asset gains and losses in “Accumulated other comprehensive income” and amortizes these amounts to income over remaining service lives (generally using the “corridor approach”). Under IFRS, companies recognize both liability and asset gains and losses (referred to as remeasurements) in other comprehensive income. These gains and losses are not “recycled” into income in subsequent periods.
- U.S. GAAP has separate standards for pensions and postretirement benefits, and significant differences exist in the accounting. The accounting for pensions and other postretirement benefit plans is the same under IFRS.

About the Numbers

As indicated, U.S. GAAP and IFRS differ in the amounts included in pension expense. Consider the following pension expense elements for Altidore SA, as measured under U.S. GAAP and IFRS.

	U.S. GAAP	IFRS
Current service cost	€28,000	€28,000
Past service cost	—	30,000

Interest expense	21,000	21,000
Interest revenue	—	(18,000)
Expected return on plan assets	(28,800)	—
Amortization of past service cost (10-year service lives)	3,000	—
Amortization of liability and asset gain/loss	500	—
Pension expense	<u>€23,700</u>	<u>€61,000</u>

Under U.S. GAAP, in determining pension expense, Altidore includes only current service cost and expected return on plan assets (which excludes unexpected gains and losses). Unexpected gains and losses and past service costs are amortized to income over the service lives of employees. Under IFRS, Altidore includes all service costs and net interest elements in pension expense. Thus, depending on the features of the pension plan (e.g., in a year when past service costs are granted), pension expense can be significantly different between U.S. GAAP and IFRS.

On the Horizon

The IASB and the FASB have been working collaboratively over the years on a postretirement benefit project and, as a result, their accounting in this area is similar. However, as the “About the Numbers” section above illustrates, significant differences remain in the components of pension expense. If the FASB restarts a project to reexamine expense measurement of postretirement benefit plans, it likely will consider the recent IASB amendments in this area.

GAAP Self-Test Questions

1. At the end of the current period, Oxford Ltd. has a projected benefit obligation of \$195,000 and pension plan assets with a fair value of \$110,000. The amount of the vested benefits for the plan is \$105,000. What amount related to its pension plan will be reported on the company’s statement of financial position (balance sheet) under U.S. GAAP?

- a. \$5,000.
- b. \$90,000.
- c. \$85,000.
- d. \$20,000.

2. Which of the following is **false**?

- a. U.S. GAAP amortizes PSC over the remaining service lives of employees.
- b. IFRS recognizes PSC as a component of pension expense in income immediately.
- c. U.S. GAAP recognizes liability and asset gains and losses in “Accumulated other comprehensive income” and amortizes these amounts to income over remaining service live (generally using the “corridor approach”).
- d. U.S. GAAP has a single standard for the accounting for pensions and other post-employment benefits.

3. For 2022, Carson Majors Inc. had pension expense of \$77 million and contributed \$55 million to the pension fund. Which of the following is the journal entry that Carson Majors would make to record pension expense and funding under U.S. GAAP?

a. Pension Expense	77,000,000	
Pension Asset/Liability		22,000,000
Cash		55,000,000

b. Pension Expense	77,000,000	
Pension Asset/Liability	22,000,000	
Cash		99,000,000

--	--	--

c. Pension Expense	55,000,000	
Pension Asset/Liability	22,000,000	
Cash		77,000,000

d. Pension Expense	22,000,000	
Pension Asset/Liability	55,000,000	
Cash		77,000,000

4. Which of the following is **true**?
- IFRS does not permit defined contribution plans.
 - U.S. GAAP and IFRS accounts for defined contribution plans similarly.
 - U.S. GAAP and IFRS amortize past service costs over the remaining service lives of employees.
 - Like IFRS, U.S. GAAP recognizes both liability and asset gains and losses in other comprehensive income and does not “recycle” the losses into income in subsequent periods.
5. Towson Company has experienced tough competition for its talented workforce, leading it to enhance the pension benefits provided to employees. As a result, Towson amended its pension plan on January 1, 2022, and granted past service costs of \$250,000. The average remaining service lives of its employees is 5 years. Under U.S. GAAP, what effect will the granting of the PSC have in 2022?
- Increase pension expense by \$250,000.
 - Have no effect on pension expense.
 - Decrease pension expense by \$50,000.
 - Increase pension expense by \$50,000.

GAAP Concepts and Application

GAAP20.1 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for pensions and other postretirement benefits.

GAAP20.2 Briefly discuss the convergence efforts that are underway with respect to the accounting for pensions and other postretirement benefits.

GAAP20.3 The pension disclosure for Zarle, prepared under U.S. GAAP, is as follows.

Zarle Company		
Notes to the Financial Statements		
Note D. The company has a pension plan covering substantially all of its employees. The plan is non-contributory and provides pension benefits that are based on the employee's compensation during the three years immediately preceding retirement. The pension plan's assets consist of cash, stocks shares, and bonds. The company's funding policy is consistent with the relevant government (ERISA) and tax regulations.		
Pension expense for 2023 is comprised of the following components of pension cost.		
Service cost	\$16,000	
Interest on projected benefit obligation	26,500	
Expected return on plan assets	(15,960)	
Amortization of prior service cost	17,600	
Amortization of net loss	172	
Pension expense		\$44,312
Other changes in plan assets and benefit obligations recognized in other comprehensive income		
Net actuarial gain	\$ 6,212	
Amortization of prior service cost	17,600	

Zarle Company
Notes to the Financial Statements

Total recognized in other comprehensive income		(23,812)
Total recognized in pension expense and other comprehensive income		<u>\$20,500</u>

The estimated net actuarial loss and prior service cost for the defined benefit pension plan that will be amortized from accumulated other comprehensive into pension expense over the next year are estimated to be the same as this year.

The amount recognized as a non-current liability in the statement of financial position is as follows:

Non-current liability

Pension liability	<u>\$98,900</u>	
-------------------	-----------------	--

The amounts recognized in accumulated other comprehensive income related to pensions consist of:

Net actuarial loss	\$23,728	
Prior service cost	<u>14,400</u>	
Total	<u>\$38,128</u>	

Change in benefit obligation

Benefit obligation at beginning of year	\$265,000
Service cost	16,000
Interest cost	26,500
Amendments (Prior service cost)	—0—
Actuarial gain	—0—
Benefits paid	<u>(18,000)</u>
Benefit obligation at end of year	289,500

Change in plan assets

Fair value of plan assets at beginning of year	159,600
Actual return on plan assets	22,000

Zarle Company Notes to the Financial Statements	
Contributions	27,000
Benefits paid	(18,000)
Fair value of plan assets at end of year	<u>190,600</u>
Funded status (liability)	<u>\$ 98,900</u>
The weighted-average discount rate used in determining the 2023 projected benefit obligation was 10 percent. The rate of increase in future compensation levels used in computing the 2023 projected benefit obligation was 4.5 percent. The weighted-average expected long-term rate of return on the plan's assets was 10 percent.	

Instructions

Use the information on Zarle to respond to the following requirements.

- What are the key differences in accounting for pensions under U.S. GAAP and IFRS?
- Briefly explain how differences in U.S. GAAP and IFRS for pensions would affect the amounts reported in the financial statements.
- In light of the differences identified in (b), would Zarle's income and equity be higher or lower under U.S. GAAP compared to IFRS standards? Explain.

Answers to GAAP Self-Test Questions

1. c 2. d 3. a 4. b 5. d

Notes

- When used as a verb, fund means to pay to a funding agency (as to fund future pension benefits or to fund pension cost). Used as a noun, it refers to assets accumulated in the hands of a funding

agency (trustee) for the purpose of meeting pension benefits when they become due.

- [2](#) The IASB issued a separate standard covering the accounting and reporting for employee benefit plans. [\[1\]](#) (See the [Authoritative Literature References](#) section near the end of the chapter.)
- [3](#) In many cases, companies offer a defined contribution plan in combination with a defined benefit plan.
- [4](#) An actuary's primary purpose is to ensure that the company has established an appropriate funding pattern to meet its pension obligations. This computation involves developing a set of assumptions and continued monitoring of these assumptions to ensure that they are realistic. IFRS encourages, but does not require, companies to use actuaries in the measurement of the pension amounts. [\[3\]](#) That the general public has little understanding of what an actuary does is illustrated by the following excerpt from the *Wall Street Journal*: "A polling organization once asked the general public what an actuary was, and received among its more coherent responses the opinion that it was a place where you put dead actors."
- [5](#) When we use the term "present value of benefits" throughout this chapter, we really mean the *actuarial* present value of benefits. **Actuarial present value** is the amount payable adjusted to reflect the time value of money *and* the probability of payment (by means of decrements for events such as death, disability, withdrawals, or retirement) between the present date and the expected date of payment. For simplicity, though, we use the term "present value" instead of "actuarial present value" in our discussion.
- [6](#) IAS 32 states that a financial asset and a financial liability should be offset and the net amount reported in the statement of financial position when a company (a) has a legally enforceable right to set off the recognized amounts and (b) intends either to settle on a net basis, or to realize the asset and settle it simultaneously. [\[6\]](#)

- 7 As indicated earlier, service cost is comprised of current and past service cost. Determination of past service cost is based on the same actuarial valuation model as that used for current service cost. We discuss recognition of past service cost in a later section.
- 8 The IASB indicates that if the beginning of the year amount changes materially (due to contributions to or payments out of the plan), an adjustment to the beginning balances should be made. [8] *For homework purposes, unless information indicates that balances have changed materially, use the beginning of the year balances.*
- 9 The IASB does not provide guidance on which of these two approaches is preferred. [10] *For homework purposes, report the service cost and net interest components of pension expense separately in the operating and financing sections of the income statement.*
- 10 The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, “The New Pension Accounting (Part 2),” *Journal of Accountancy* (February 1987), pp. 86–94.
- 11 The IASB in *IAS 19* limits the amount of a pension asset that is recognized. The limit is called the *asset ceiling* and is based on a recoverability test. This test, which has been further clarified in *IFRIC 14*, limits the amount of the pension asset to the sum of unrecognized actuarial gains and losses (discussed later in this chapter). The test also restricts the amounts that will be received by the company in the form of refunds or reduction of future contributions. [11]
- 12 The IASB also indicates that gains and losses on non-routine settlements are considered past service costs. [12] A **settlement** is a payment of benefits that is not set out in the terms of the plan.
- 13 The IASB is silent as to whether the Accumulated Other Comprehensive Income account should be used instead of another equity account, like Retained Earnings. *For homework purposes, use the Accumulated Other Comprehensive Income account.* The IASB also permits the transfer of the balance in the Accumulated

Other Comprehensive Income account to other equity accounts at a later date.

14. *For homework purposes, report the service cost and net interest components of pension expense separately in the operating and financing sections of the statement of comprehensive income.* Note that other IFRSs require inclusion of some employee benefit costs within the costs of assets, such as inventories and property, plant, and equipment. Any postemployment benefit costs included in the cost of such assets will include an appropriate proportion of service cost and net interest. **[15]**

CHAPTER 21

Accounting for Leases

LEARNING OBJECTIVES

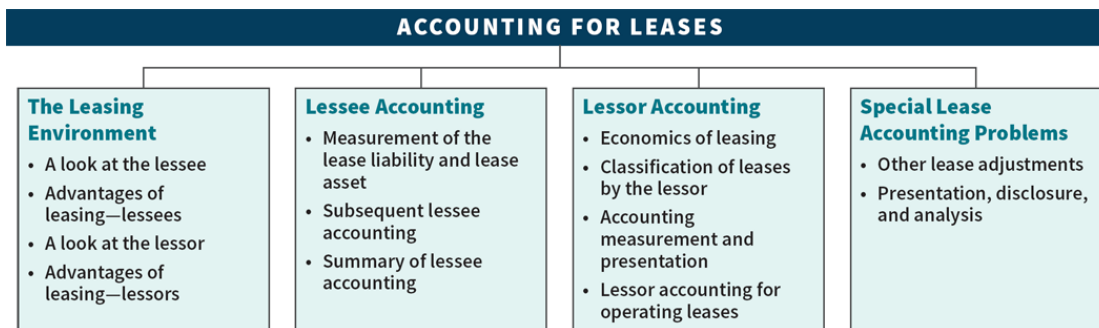

After studying this chapter, you should be able to:

1. Describe the environment related to leasing transactions.
2. Explain the accounting for leases by lessees.
3. Explain the accounting for leases by lessors.
4. Discuss the accounting and reporting for special features of lease arrangements.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 21

The following opening story highlights the substantial impact the new leasing standard will have on companies' statements of financial position. In this chapter, we discuss the accounting and reporting issues related to leases under this new standard. The content and organization of the chapter are as follows.

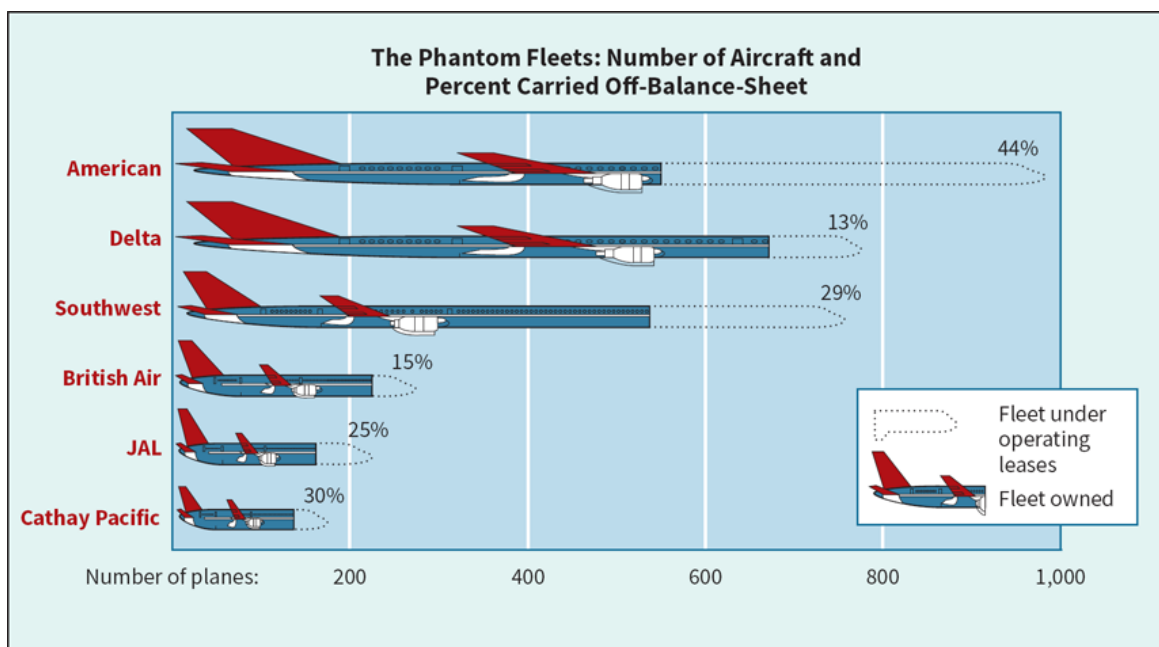

Times Are A-Changing

Leasing has grown tremendously in popularity. Today, it is the fastest growing form of capital investment. Instead of borrowing money to buy an airplane, computer, nuclear core, or satellite, a company makes periodic payments to lease these assets. Even gambling casinos lease their slot machines. Companies that

lease tend to be smaller and high growth, and are in technology-oriented industries.

A classic example is the airline industry. Many travelers on airlines such as **British Airways** (GRB), **Cathay Pacific** (CHN), and **Japan Airlines** (JPN) believe these airlines own the planes on which they are flying. Often, this is not the case. Airlines have leased many of their airplanes due to the favorable accounting treatment they received if they leased rather than purchased. The following chart shows the off-balance-sheet lease percentages for a number of major international airlines, just before the issuance of a new lease accounting standard in 2016.

The same has held true for many other industries as well. What was this favorable accounting treatment? The previous IASB standard on leasing depended on whether a lease qualified as an operating lease or a finance lease. In an operating lease, companies did not report an asset on their statement of financial position for the item they leased, nor did they report a related liability for their lease obligation. Only if the company had a finance lease would companies have to report an asset and a related liability on the statement of financial position. However, in 2016 the IASB issued a new standard on leasing that mandates that all companies will have to report both assets and related liabilities for practically all lease arrangements.

Companies have implemented the new rules in 2019 and 2020. Some airlines are seeing a silver lining to the new rules, as a number of their leases involve variable payments, which under the new rules are not subject to capitalization. Nonetheless, most companies will see a significant effect on their reported assets and liabilities. For example, retailers such as **Marks and Spencer plc** (GBR) and

Carrefour SA (FRA) are experiencing substantial increases in their debt ratios, such as debt to equity and debt to operating income, as a result of the new standard. Overall, a significant number of retailers are seeing an increase of over 25 percent in their reported debt. Sir David Tweedie, the IASB's previous chairman, is known for saying that one day he would like to fly on an airplane that actually appears on that company's statement of financial position. Well, Sir David, get ready because your wish is coming true.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

The Leasing Environment

LEARNING OBJECTIVE 1

Describe the environment related to leasing transactions.

A lease is a contractual agreement between a lessor and a lessee. This arrangement gives the **lessee** the right to use specific property, which is owned by the **lessor**, for a specified period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor.

A Look at the Lessee

Aristotle once said, "Wealth does not lie in ownership but in the use of things!" Clearly, many global companies have decided that Aristotle is right, as they have become heavily involved in leasing assets rather than owning them. For example, according to a recent *Global Leasing Report* (Brendan Gleeson, White Clarke Group, 2019), the top 50 companies reported leasing volume exceeding \$1.3 trillion. Three regions, North America, Europe, and Asia, account for more than 90 percent of total lease volume. Remember that these statistics are just for equipment leasing. Add in real estate leasing, which is probably larger, and we are talking about a very large and growing business, one that was at least in part driven by accounting.

What types of assets are being leased? As the opening story indicated, any type of equipment can be leased, such as railcars, helicopters, bulldozers, barges, CT scanners and computers. [Illustration 21.1](#) summarizes what several major companies are leasing.

Company	Description
Carrefour (FRA)	“Stores not fully owned are rented under leasing agreements. The Group also owns shopping centers, mainly anchored by its hypermarkets and supermarkets, that are rented out.”
Ahold Delhaize Group (NLD/BEL)	“Delhaize Group operates a significant number of its stores under finance lease arrangements. Various properties leased are (partially or in full) subleased to third parties, where the Group is therefore acting as a lessor. Lease terms (including reasonably certain renewal options) generally range from 1 to 36 years with renewal options ranging from 3 to 30 years.”
Diageo (GBR)	“The company owns or leases land and buildings throughout the world. Diageo’s largest individual facility, in terms of net book value of property, is St James’s Gate brewery in Dublin. Approximately 96% by value of the group’s properties are owned and approximately 3% are held under leases running for 50 years or longer.”
Marks and Spencer plc (GBR)	“The Group leases various stores, offices, warehouses and equipment under non-cancellable lease agreements. The leases have varying terms, escalation clauses and renewal rights.”
McDonald’s Corp. (USA)	“The Company was the lessee at 15,235 restaurant locations through ground leases (the Company leases the land and the Company or franchisee owns the building) and through improved leases (the Company leases land and buildings).”
RELX (GBR/NLD)	“The company leases various properties, principally offices and warehouses, which have varying terms and renewal rights that are typical to the territory in which they are located.”

ILLUSTRATION 21.1 What Do Companies Lease?

The largest group of leased equipment involves information technology equipment, followed by assets in the transportation area (trucks, aircraft, rail), and then construction and agriculture.

Advantages of Leasing—Lessees

From the perspective of the lessee, leasing can provide significant advantages, such as the following:

1. **100% financing at fixed rates.** Leases are often signed without requiring any money down from the lessee. This helps the lessee conserve scarce cash—an especially desirable feature for new and developing companies. In addition, lease payments often remain fixed, which protects the lessee against

inflation and increases in the cost of money. The following comment explains why companies choose a lease instead of a conventional loan: “Our local bank finally came up to 80 percent of the purchase price but wouldn’t go any higher, and they wanted a floating interest rate. We just couldn’t afford the down payment, and we needed to lock in a final payment rate we knew we could live with.”

2. **Protection against obsolescence.** Leasing equipment reduces risk of obsolescence to the lessee and in many cases passes the risk of residual value to the lessor. For example, **Perrigo Company** (IRL) (a pharmaceutical maker) leases computers. Under the lease agreement, Perrigo may turn in an old computer for a new model at any time, canceling the old lease and writing a new one. The lessor adds the cost of the new lease to the balance due on the old lease, less the old computer’s trade-in value. As one treasurer remarked, “Our instinct is to purchase.” But if a new computer is likely to come along in a short time, “then leasing is just a heck of a lot more convenient than purchasing.” Naturally, the lessor also protects itself by requiring the lessee to pay higher rental payments or provide additional payments if the lessee does not maintain the asset.
3. **Flexibility.** Lease agreements may contain less restrictive provisions than other debt agreements. Innovative lessors can tailor a lease agreement to the lessee’s special needs. For instance, the duration of the lease—the **lease term**—may be anything from a short period of time to the entire expected economic life of the asset. The rental payments may be level from year to year, or they may increase or decrease in amount. The payment amount may be predetermined or may vary with sales, the prime interest rate, or some other factor. In most cases, the rent is set to enable the lessor to recover the cost of the asset plus a fair return over the life of the lease.
4. **Less costly financing.** Some companies find leasing cheaper than other forms of financing. For example, start-up companies in depressed industries or companies in low tax brackets may lease to claim tax benefits that they might otherwise lose. Depreciation deductions offer no benefit to companies that have little if any taxable income. Through leasing, the leasing companies or financial institutions use these tax benefits. They can then pass some of these tax benefits back to the user of the asset in the form of lower rental payments.

A Look at the Lessor

Who are the lessors that own the property being leased? They generally fall into one of three categories:

1. Banks.

2. Captive leasing companies.
3. Independents.

According to recent data from the 2019 *Equipment Leasing & Finance Industry Horizon Report* on new business volume by lessor type, banks hold about 43 percent of the market, followed by captives at 33 percent. Independents and others had the remaining 24 percent of new business.

Banks

Banks are the largest players in the leasing business. They have low-cost funds, which give them the advantage of being able to purchase assets at less cost than their competitors. Banks have been aggressive in the leasing markets. Deciding that there is money to be made in leasing, banks have expanded their product lines in this area. Finally, leasing transactions are now quite standardized, which gives banks an advantage because they do not have to be as innovative in structuring lease arrangements. Thus, banks like **Credit Suisse** (CHE), **Chase** (USA), **Barclays** (GBR), and **Deutsche Bank** (DEU) have substantial leasing subsidiaries.

Captive Leasing Companies

Captive leasing companies are subsidiaries whose primary business is to perform leasing operations for the parent company. Companies like **CNH Capital** (NLD) (for CNH Global), **BMW Financial Services** (DEU) (for BMW), and **IBM Global Financing** (USA) (for IBM) facilitate the sale of products to consumers. For example, suppose that **Ivanhoe Mines Ltd.** (CAN) wants to acquire a number of earthmovers from CNH Global. In this case, CNH Capital will offer to structure the transaction as a lease rather than as a purchase. Thus, CNH Capital provides the financing rather than an outside financial institution.

Captive leasing companies have the point-of-sale advantage in finding leasing customers. That is, as soon as CNH Global receives a possible equipment order, its leasing subsidiary can quickly develop a lease-financing arrangement. Furthermore, the captive lessor has product knowledge that gives it an advantage when financing the parent's product. The current trend is for captives to focus primarily on their companies' products rather than do general lease financing. For example, **Boeing Capital** (USA) and **UPS Capital** (USA) are two captives that have left the general finance business to focus exclusively on their parent companies' products.

Independents

Independents are the final category of lessors. Their market share has dropped fairly dramatically as banks and captive leasing companies have become more

aggressive in the lease-financing area. Independents do not have point-of-sale access, nor do they have a low cost of funds advantage. What they are often good at is developing innovative contracts for lessees. In addition, they are starting to act as captive finance companies for some companies that do not have leasing subsidiaries. For example, **AerCap** (IRL) is one of the world's largest independent lessors.

Advantages of Leasing—Lessors

Lessors find leasing attractive because:

1. It often provides **profitable interest margins**.
2. It can **stimulate sales** of a lessor's product whether it be from a dealer (lessor) or a manufacturer (lessor).
3. It often provides **tax benefits** to various parties in the lease, which enhances the return to all the parties involved, including the lessor. To illustrate, **Airbus** (FRA) might sell one of its A320 planes to a wealthy investor who does not need a plane but could use the tax benefit. The investor (the lessor) then leases the plane to a foreign airline, to which the tax benefit is of no use. Everyone gains. Airbus sells its airplane, the investor receives the tax benefit, and the foreign airline receives a lower rental rate because the lessor is able to use the tax benefit.
4. It can provide a **high residual value to the lessor** upon the return of the property at the end of the lease term. Residual values can sometimes provide large profits. **Citigroup** (USA) at one time estimated that the commercial aircraft it was leasing to the airline industry would have a residual value of five percent of the purchase price. It turned out that the aircraft were worth 150 percent of their cost—a handsome profit. At the same time, if residual values decline, lessors can suffer losses when less-valuable leased assets are returned at the conclusion of the lease. At one time, automaker **Ford** (USA) took a \$2.1 billion write-down on its lease portfolio, when rising gas prices spurred dramatic declines in the resale values of leased trucks and SUVs. Such residual value losses led **Chrysler** (USA) to get out of the leasing business altogether.

What Do the Numbers Mean?

Residual Value Regret

As discussed, residual value profits are an important driver for the popularity of leasing for lessors, especially for leases of equipment and vehicles. However, the profitability of equipment leasing hinges on the lessors' ability to accurately estimate the residual value of the leased asset at the end of the lease so as to resell the asset at a profit when returned by the lessee. **General Motors (GM)** (USA) has learned that residual value profits are *not* guaranteed. Here is what happened.

GM took advantage of a government subsidy of \$7,500 per electric vehicle to help drive down the cost of a lease for its electric car, the Chevy Volt. The taxpayer subsidies along with other GM incentives provided for low monthly lease payments, given the estimated residual value, and led to a full two-thirds of all Volt "sales" being attributed to leases. That's about three times the lease rate for the overall industry. The problems for GM started when the Volts came back at the end of the lease. Unfortunately for GM and other electric car enthusiasts, demand for electric cars without the incentives (which expired) has not been sustained, and resale values for Volts plummeted.

The rollback of electric car subsidies has spread around the globe. In the United Kingdom, the British car industry has blamed the government downgrade of subsidies for the decline in sales of electrified vehicles (down 11.8 percent). Notable players in the electric car market, **Tesla** (USA) and **Daimler** (DEU), have felt the effects.

As a result, rather than reaping residual value profits, these carmakers will sustain losses when an electric vehicle, like the Volt, is returned but must be sold for less than the original expected residual values. It's a double whammy for GM, as the already low sales numbers for new Volts will be further hurt by the supply of low-priced Volts on the used car lot. Although it appears that GM made a bad bet on residual value profits on the Volt, there may be beneficiaries, as those looking for a good deal on a Volt now have a supply of low-priced, used models from which to choose.

Sources: M. Modica, "Chevy Volt Resale Values Plunge as Lease Returns," *National Legal and Policy Center* (August 7, 2014); and J. Jolly, "Subsidy Cuts Blamed for Fall in UK Sales of Electrified Vehicles," *The Guardian* (July 4, 2019).

Lessee Accounting

LEARNING OBJECTIVE 2

Explain the accounting for leases by lessees.

A **lease** is defined as a “contract, or part of a contract, that conveys the right to control the use of identified property, plant or equipment (an identified asset) for a period of time in exchange for consideration.” **[1]** (See the [Authoritative Literature References](#) section near the end of the chapter.) A lease therefore conveys the use of an asset from one party (the lessor) to another (the lessee) without transferring ownership. Accounting for lease transactions is controversial, as the following example illustrates.

If **Air France** (FRA) borrows \$47 million on a 10-year note from **Barclays** (GBR) to purchase a Boeing 737 jet plane, Air France should report an asset and related liability at that amount on its statement of financial position. Similarly, if Air France purchases the 737 for \$47 million directly from Boeing through an installment purchase over 10 years, it should report an asset and related liability (i.e., it should “capitalize” the installment transaction).

However, what would happen if Air France **leases** the Boeing 737 for 10 years from **International Lease Finance Corp. (ILFC)** (USA) (a subsidiary of the Irish company **AerCap**) through a non-cancelable lease transaction with payments of the same amount as the installment purchase transaction? In that case, opinion differs over how to report this transaction. The various views on **capitalization of leases** are summarized in [Illustration 21.2](#). In short, the viewpoints range from no capitalization to capitalization of all long-term leases.

The IASB now requires lessees to capitalize all leases. The only exceptions to the capitalization requirement are for leases covering a term of less than one year or for a lease of property with a value less than \$5,000. The IASB indicates that the right to use property under the terms of the lease is an asset, and the lessee’s obligation to make payments under the lease is a liability. As a result, Air France records the right-of-use of the airplane as an asset on its statement of financial position. It also records a liability for its obligation to make payments under the lease.¹

1. **Do not capitalize any leased assets.** This view considers capitalization inappropriate because Air France does not own the property. Furthermore, a lease is an “**executory**” **contract** requiring continuing performance by both parties. Because companies do not currently capitalize other executory contracts (such as purchase commitments and employment contracts), they should not capitalize leases either.
2. **Capitalize leases that are similar to installment purchases.** This view holds that companies should report transactions in accordance with their economic substance. Therefore, if companies capitalize installment purchases, they should also capitalize leases that have similar characteristics. For example, Air France makes the same payments over a 10-year period for either a lease or an installment purchase. Lessees make rental payments, whereas owners make mortgage payments.
3. **Capitalize all long-term leases.** This approach requires only the long-term right to use the property in order to capitalize. This property-rights approach capitalizes all long-term leases.
4. **Capitalize firm leases where the penalty for non-performance is substantial.** A final approach advocates capitalizing only “firm” (non-cancelable) contractual rights and obligations. “Firm” means that it is unlikely to avoid performance under the lease without a severe penalty.

ILLUSTRATION 21.2 Views on Lease Capitalization

Once the lease is recorded, the lessee (e.g., Air France) recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records depreciation expense on the right-of-use asset. This accounting, referred to as the **finance lease method**, is applied whether the lease arrangement is effectively a purchase of the underlying asset (Air France’s lease with ILFC above) or when the lessee **obtains control of only the use of the underlying asset** but not the underlying asset itself. For example, a lease may convey use of one floor of an office building for five years. At the end of the lease, the lessee vacates the floor and the lessor can then lease the floor to another tenant. In this situation, the lease conveys right-of-use but not ownership. However, lessee accounting for leases that transfer ownership or transfer control is the same.²

Measurement of the Lease Liability and Lease Asset

As indicated, at commencement of the lease, lessees record a right-of-use asset and lease liability. The lease liability is computed as the present value of the lease payments. The asset representing the right-of-use of the underlying asset (i.e., the

right-of-use asset) is equal to the lease liability.³ Measurement of the lease liability is based on the lease term, lease payments, and discount rate.

Lease Term

The lease term is generally considered to be the fixed, non-cancelable term of the lease. Some leases include a **bargain renewal option**, which gives the lessee an option to renew the lease for a rental that is lower than the expected fair rental at the time the option becomes exercisable. The lease term should include the bargain renewal periods if, at the commencement of the lease, the difference between the renewal rental and the expected fair rental is great enough to make exercise of the option to renew reasonably certain.⁴

For example, assume that **Carrefour** (FRA) leases PCs from **Lenovo** (CHN) for two years at a rental of \$100 per month per computer. In addition, Carrefour can lease these computers for \$10 per month per computer for another two years. The lease clearly offers a bargain renewal option, and Carrefour should consider the lease term for these computers to be four years, not two.

Lease Payments

The lease payments generally include the following:

1. **Fixed payments.** These are the rental payments that are specified in the lease agreement and fixed over the lease term.
2. **Variable payments that are based on an index or a rate.** The lessee should include variable lease payments in the value of the lease liability at the level of the index/rate at the commencement date. When valuing the lease liability, no increases or decreases to future lease payments should be assumed based on increases or decreases in the index or rate. Instead, any difference in the payments due to changes in the index or rate is expensed in the period incurred. [Illustrations 21.3](#) and [21.4](#) provide an analysis of variable lease payments.

Including Variable Lease Payments

Facts: On January 1, 2022, Jose Shipping leases an airplane for 6 years. The annual lease payments are R\$1,000,000 per year, payable at the beginning of each year (annuity-due basis). In addition, the lease agreement specifies that the lease payment increases by R\$30,000 every year.

Question: What are the lease payments in 2023?

Solution: On January 1, 2023, the lease payment is R\$1,030,000 (R\$1,000,000 + R\$30,000), which is considered a variable payment. Given that the amount of the variable payment is known from year to year (the rate is set at commencement of the lease and in substance fixed), such variable payments are included in calculating the present value of the lease liability.

ILLUSTRATION 21.3 Variable Lease Payments

Expensing Variable Lease Payments

Facts: Assume the same information as in [Illustration 21.3](#), except that the lease payments are adjusted each year by a change in a price index.

Question: If the price index is 100 at January 1, 2022, and increases to 104 on January 1, 2023, what is the payment on January 1, 2023?

Solution: The variable payment on January 1, 2023, is R\$1,040,000 (R\$1,000,000 \times 1.04). Because the amount of the variable payment from year to year is not known at the lease commencement date, this payment is not included in determining the present value of the lease liability. This additional payment (R\$40,000) is recognized as an expense in the period it is incurred. Similarly, when lease payments vary with a performance measure (e.g., sales at a store location, asset usage), the variable amounts will be expensed in the period incurred.

ILLUSTRATION 21.4 Variable Lease Payments

3. **Amounts guaranteed by a lessee under a residual value guarantee.** **Residual value** is the expected value of the leased asset at the end of the lease term. A residual value can be guaranteed or unguaranteed. In a

guaranteed residual value, the lessee has an obligation not only to return the leased asset at the end of the lease term but also to guarantee that the residual value will be a certain amount. If the lease involves an **unguaranteed residual value**, the lessee does not have any obligation to the lessor at the end of the lease, except to return the leased asset to the lessor. As a result, an unguaranteed residual value is not included in the lease payments. [5]

A guaranteed residual value is included in the lease payments, only to the extent that the guaranteed amount exceeds the expected residual value of the underlying asset at the end of the lease. That is, for measurement of the lease liability, the lessee includes **only the expected residual value probable of being owed by the lessee under the residual value guarantee**.

4. **Payments related to purchase or termination options that the lessee is reasonably certain to exercise.** If the lease contains a bargain purchase option that is reasonably certain to be exercised, the cost of that option should be considered part of the lease payments. Analysis of a termination option is indicated in [Illustration 21.5](#).

Analyzing a Termination Option

Facts: Cabrera Company leases a building and land from Worldwide Leasing for 6 years with monthly payments of \$10,000. The lease contract allows Cabrera to terminate the lease after 2 years for a total payment of \$140,000. At the commencement of the lease, it is reasonably certain that Cabrera will not continue the lease beyond 2 years.

Question: What are Cabrera's lease payments?

Solution: In this case, Cabrera should include the cost of the termination option in its calculation of the present value of its lease liability. The total lease payments are therefore \$380,000 $[(\$10,000 \times 24) + \$140,000]$.

ILLUSTRATION 21.5 Termination Option

Discount Rate

To determine the lease liability, a lessee (i.e., the **Air France** example discussed earlier) should compute the present value of the lease payments using the **implicit interest rate**. [6] This rate is defined as the discount rate that, at commencement of the lease, causes the aggregate present value of the lease

payments and unguaranteed residual value to be equal to the fair value of the leased asset. [7]

Air France may find that it is impracticable to determine the implicit rate of the lessor. In the event that it is impracticable to determine the implicit rate, Air France uses its incremental borrowing rate. The **incremental borrowing rate** is the rate of interest the lessee would have to pay on a similar lease, or the rate that, at commencement of the lease, the lessee would incur to borrow over a similar term the funds necessary to purchase the asset. The implicit rate of the lessor is generally a more realistic rate to use in determining the amount to report as the asset and related liability for Air France. However, given the difficulty the lessee may have in determining the implicit rate, it is likely that the lessee will use the incremental borrowing rate.⁵

Subsequent Lessee Accounting

Throughout the term of the lease, a lessee like Air France uses the **effective-interest method** to allocate each lease payment between principal and interest on the lease liability. This method produces a periodic interest expense equal to a constant percentage of the carrying value of the lease obligation. When applying the effective-interest method, a lessee such as Air France should use the implicit rate (if known) or its incremental borrowing rate. Depreciation of the right-of-use asset is accounted for similarly to other non-financial assets. That is, the lessee should depreciate the right-of-use asset using an approach that reflects the consumption of the economic benefits of the leased asset. Generally, companies use the straight-line method for recording the consumption of a right-of-use asset.

If the lease agreement transfers ownership of the asset to Air France at the end of the lease, it depreciates the aircraft consistent with its normal depreciation policy for other aircraft, **using the economic life of the asset**. On the other hand, if the lease does not transfer ownership, then Air France depreciates it over the **term of the lease**.⁶ In this case, the aircraft reverts to ILFC after a certain period of time. Recognizing the interest on the lease liability coupled with the depreciation of the right-of-use asset will **generally result in higher total expense in the earlier years and lower total expense in the later years of the lease**.

Lessee Accounting: Example 1

To illustrate the accounting for a lease using the finance lease method, assume that **CNH Capital** (NLD) (a subsidiary of **CNH Global**) and **Ivanhoe Mines Ltd.** (CAN) sign a lease agreement dated January 1, 2022, that calls for CNH to lease a backhoe to Ivanhoe beginning January 1, 2022. The terms and provisions of the lease agreement and other pertinent data are as follows.

- The term of the lease is five years. The lease agreement is non-cancelable, requiring equal rental payments of €20,711.11 at the beginning of each year (annuity-due basis).
- The backhoe has a fair value at the commencement of the lease of €100,000, an estimated economic life of five years, and a guaranteed residual value of €5,000. (Ivanhoe expects that it is probable that the expected residual value at the end of the lease will be greater than the guaranteed amount of €5,000.)
- The lease contains no renewal options. The backhoe reverts to CNH Capital at the termination of the lease.
- Ivanhoe's incremental borrowing rate is 5 percent per year.
- Ivanhoe depreciates its equipment on a straight-line basis.
- CNH sets the annual rental rate to earn a rate of return of 4 percent per year; Ivanhoe is aware of this rate.

Ivanhoe computes the lease liability and the amount capitalized as a right-of-use asset as the present value of the lease payments, as shown in [Illustration 21.6](#).⁷

Capitalized amount	= €20,711.11 × Present value of an annuity due of 1 for 5 periods at 4%
	= €20,711.11 × 4.62990 ($PVF-AD_{5,4\%}$)
	= €95,890.35*
*Rounded by €0.02.	

ILLUSTRATION 21.6 Present Value of Lease Payments

Note that the present value measurement does not include the residual value guarantee. That is, Ivanhoe includes only the expected residual value probable of being owed under **the residual value guarantee**. Because Ivanhoe believes that it is probable that the expected residual value will be greater than the guaranteed residual value, the guaranteed residual value is not included in the measurement of the lease liability.⁸

Ivanhoe uses CNH's implicit interest rate of 4 percent instead of its incremental borrowing rate of 5 percent because the implicit rate is known to Ivanhoe.⁹ Ivanhoe records the lease on its books as follows.

January 1, 2022		
Right-of-Use Asset	95,890.35	
Lease Liability		95,890.35

Note that Ivanhoe records the obligation at the net amount of €95,890.35 (the present value of the lease payments) rather than at the gross amount of €103,555.55 (€20,711.11 × 5).¹⁰ Ivanhoe then records the **first lease payment** as follows.

January 1, 2022		
Lease Liability	20,711.11	
Cash		20,711.11

The annual interest expense, applying the effective-interest method, is a function of the outstanding liability as shown in the lease amortization schedule in [Illustration 21.7](#).

Ivanhoe Mines Lease Amortization Schedule Annuity-Due Basis				
Date	Annual Lease Payment	Interest (4%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)
1/1/22				€95,890.35
1/1/22	€ 20,711.11	€ –0–	€ 20,711.11	75,179.24
1/1/23	20,711.11	3,007.17	17,703.94	57,475.30
1/1/24	20,711.11	2,299.01	18,412.10	39,063.20
1/1/25	20,711.11	1,562.53	19,148.58	19,914.62
1/1/26	20,711.11	796.49*	19,914.62	0.00
	<u>€103,555.55</u>	<u>€7,665.20</u>	<u>€95,890.35</u>	
<p>a. Lease payment as required by lease.</p> <p>b. Four percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.</p> <p>c. (a) minus (b).</p> <p>d. Preceding balance minus (c).</p> <p>*Rounded by €0.09.</p>				

ILLUSTRATION 21.7 Lease Amortization Schedule—Lessee

Each lease payment of €20,711.11 consists of two elements: (1) a reduction of the lease liability and (2) a financing cost (interest expense).¹¹ The total financing cost (interest expense) over the term of the lease is €7,665.20. This amount is the difference between the present value of the lease payments (€95,890.35) and the actual cash disbursed (€103,555.55). Ivanhoe records **interest expense** for the first year of the lease as follows.

December 31, 2022		
Interest Expense	3,007.17	
Lease Liability		3,007.17

Depreciation of the right-of-use asset over the five-year lease term, applying Ivanhoe's normal depreciation policy (straight-line method), results in the following entry at December 31, 2022.

December 31, 2022		
Depreciation Expense	19,178.07	
Right-of-Use Asset (€95,890.35 ÷ 5 years)		19,178.07

At December 31, 2022, Ivanhoe reports right-of-use assets and related lease liabilities separately from other assets and liabilities on its statement of financial position, or discloses these assets and liabilities in the notes to its financial statements.

Ivanhoe classifies the portion of the liability due within one year or the operating cycle, whichever is longer, with current liabilities, and the rest with non-current liabilities. For example, the current portion of the December 31, 2022, total obligation of €75,179.24 in Ivanhoe's amortization schedule is the amount payable in 2023, or €20,711.11. Note that this current portion is composed of two components: (1) accrued interest on the liability outstanding throughout the year (€3,007.17) and (2) reduction of the initial lease liability (€17,703.94).

Illustration 21.8 shows the presentation of the lease assets and liabilities sections as they relate to lease transactions at December 31, 2022, assuming Ivanhoe chose to present right-of-use assets and lease liabilities separately from other assets and liabilities on the statement of financial position.

Non-current assets	
Right-of-use assets (€95,890.35 – €19,178.07)	€76,712.28
Current liabilities	
Lease liability (€3,007.17 + €17,703.94)	€20,711.11
Non-current liabilities	
Lease liability	57,475.30

ILLUSTRATION 21.8 Statement of Financial Position Presentation

On its December 31, 2022, income statement, Ivanhoe reports interest expense on the liability and depreciation expense related to right-of-use assets, as shown in [**Illustration 21.9**](#).

Expenses	
Interest expense (lease liabilities)	€ 3,007.17
Depreciation expense (right-of-use assets)	19,178.07

ILLUSTRATION 21.9 Income Statement Presentation

Ivanhoe records the second lease payment as follows.

January 1, 2023		
Lease Liability (€3,007.17 + €17,703.94)	20,711.11	
Cash		20,711.11

Entries through 2026 follow the pattern above. **Upon expiration of the lease**, Ivanhoe has fully depreciated the amount capitalized as a right-of-use asset. It also has fully discharged its lease obligation. At the date the lease expires, both the right-of-use asset account and lease liability account related to Ivanhoe's lease of the backhoe have zero balances. If Ivanhoe does not purchase the backhoe, it returns the equipment to CNH.¹²

If Ivanhoe purchases the equipment from CNH at the termination of the lease at a price of €5,000 and the estimated remaining life of the equipment is two years, it makes the following entry.

January 1, 2027		
Equipment	5,000	
Cash		5,000

Lessee Accounting: Example 2

In the CNH/Ivanhoe lease just discussed, the residual value was guaranteed by the lessee. This guaranteed residual value did not affect the computation of the lease liability, however, because it was probable that the expected residual value was greater than the guaranteed residual value. If the expected residual value is **greater** than the guaranteed residual value, then Ivanhoe simply returns the equipment to CNH. However, if the expected residual value is **less** than the guaranteed residual value, Ivanhoe must record a loss on the lease to cover this deficiency.

To illustrate a situation where the expected residual value is below the guaranteed residual value, assume in the earlier CNH/Ivanhoe example that it is probable that the residual value will be €3,000 instead of the guaranteed amount of €5,000. If Ivanhoe estimates the residual value of the backhoe at the end of the lease to be €3,000, Ivanhoe includes €2,000 (€5,000 – €3,000) as an additional lease payment in determining the lease liability and right-of-use asset.

Illustration 21.10 shows the computation of the lease liability/right-of-use asset for Ivanhoe in this situation.

Ivanhoe's Capitalized Amount (4% Rate) Annuity-Due Basis, Including Guaranteed Residual Value	
Present value of five annual rental payments ($€20,711.11 \times 4.62990$ ($PVF-AD_{5,4\%}$))	€95,890.35*
Present value of probable residual value payment of €2,000 due 5 years after date of commencement ($€2,000 \times .82193$ ($PVF_{5,4\%}$))	1,643.86
Lessee's lease liability/right-of-use asset	€ 97,534.21

*Rounded by €0.02.

ILLUSTRATION 21.10 Computation of Lessee's Capitalized Amount—Guaranteed Residual Value

Ivanhoe makes the following entries to record the lease and the first payment.

January 1, 2022		
Right-of-Use Asset	97,534.21	
Lease Liability		97,534.21
Lease Liability	20,711.11	
Cash		20,711.11

Ivanhoe prepares a lease amortization schedule to show interest expense and related amortization of the lease liability over the five-year period. The schedule, shown in **Illustration 21.11**, is based on an expected residual value payment of €2,000 (€5,000 – €3,000) at the end of five years.

Ivanhoe Mines
Lease Amortization Schedule
Annuity-Due Basis

Date	Annual Lease Payment	Interest (4%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)
1/1/22				€97,534.21
1/1/22	€ 20,711.11	€ -0-	€20,711.11	76,823.10
1/1/23	20,711.11	3,072.92	17,638.19	59,184.91
1/1/24	20,711.11	2,367.40	18,343.71	40,841.20
1/1/25	20,711.11	1,633.65	19,077.46	21,763.74
1/1/26	20,711.11	870.55	19,840.56	1,923.18
1/1/27	2,000.00	76.82*	1,923.18	0.00
	<u>€105,555.55</u>	<u>€8,021.34</u>	<u>€97,534.21</u>	

a. Lease payment as required by lease.

b. Four percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.

c. (a) minus (b).

d. Preceding balance minus (c).

*Rounded by €0.11.

ILLUSTRATION 21.11 Lease Amortization Schedule—Lessee

Illustration 21.12 shows, in comparative form, Ivanhoe's entries for the first two years of the lease when:

1. Ivanhoe expects to pay €2,000 at the end of the lease related to the guaranteed residual value (see [Illustration 21.11](#)).
2. Ivanhoe does not expect to owe an additional payment for the guaranteed residual value (see [Illustration 21.7](#)).

Guaranteed Residual Value (€2,000 expected payment)			Guaranteed Residual Value (no expected payment)		
Capitalization of lease (January 1, 2022):					
Right-of-Use Asset	97,534.21		Right-of-Use Asset	95,890.35	
Lease Liability		97,534.21	Lease Liability		95,890.35
First payment (January 1, 2022):					
Lease Liability	20,711.11		Lease Liability	20,711.11	
Cash		20,711.11	Cash		20,711.11
Adjusting entry for accrued interest (December 31, 2022):					
Interest Expense	3,072.92		Interest Expense	3,007.17	
Lease Liability		3,072.92	Lease Liability		3,007.17
Entry to record depreciation of the ROU asset (December 31, 2022):					
Depreciation Expense	19,506.84		Depreciation Expense	19,178.07	
Right-of-Use Asset (€97,534.21 ÷ 5 years)		19,506.84	Right-of-Use Asset (€95,890.35 ÷ 5 years)		19,178.07
Second payment (January 1, 2023):					
Lease Liability (€3,072.92 + €17,638.19)	20,711.11		Lease Liability (€3,007.17 + €17,703.94)	20,711.11	
Cash		20,711.11	Cash		20,711.11

ILLUSTRATION 21.12 Journal Entries—Guaranteed Residual Value

Following similar entries in subsequent years of the lease and using the amounts in [Illustration 21.11](#), at the end of the lease term (January 1, 2027), Ivanhoe returns the asset to CNH and makes the entries shown in [Illustration 21.13](#) under the two situations.

Guaranteed Residual Value (€2,000 expected payment)			Guaranteed Residual Value (no expected payment)		
Final payment (January 1, 2027):					
Lease Liability	2,000.00		No entry		
Cash		2,000.00			

ILLUSTRATION 21.13 Final Payments—Guaranteed and Unguaranteed Residual Value

Following the entries summarized in [Illustrations 21.12](#) and [21.13](#), the Right-of-Use Asset and the Lease Liability accounts have been fully amortized and have zero balances. If at the end of the lease (January 1, 2027) Ivanhoe has no additional obligations under the residual value guarantee, no further entries are needed.

Residual Value Loss

What if the fair value of the underlying asset is less than the expected residual value, such that Ivanhoe will have to further compensate CNH under the residual value guarantee? In this situation, Ivanhoe will record a loss. For example, assume that due to poor maintenance of the backhoe, Ivanhoe and CNH agree that the fair value of the asset is zero upon returning the backhoe to CNH on

January 1, 2027. In this case, Ivanhoe reports a loss of €3,000. Under the expected payment scenario, Ivanhoe makes the following entry.

January 1, 2027		
Loss on Lease (€5,000 – €2,000)	3,000	
Cash		3,000

Under the *no expected* payment scenario, Ivanhoe makes the following entry.

Loss on Lease (€5,000 – €0)	5,000	
Cash		5,000

Bargain Purchase Option

As stated earlier, a **bargain purchase option** allows the lessee to purchase the leased property for a future price that is substantially lower than the asset's expected future fair value. That is, the price is so favorable at the lease's commencement that the future exercise of the option appears to be reasonably certain. If a bargain purchase option exists, the lessee must increase the present value of the lease payments by the present value of the option price. For example, assume that Ivanhoe Mines (see [Illustration 21.11](#)) had an option to buy the leased equipment for €2,000 at the end of the five-year lease term. At that point, Ivanhoe and CNH expect the fair value to be €10,000. The significant difference between the option price and the fair value creates a bargain purchase option, as the exercise of that option is reasonably certain.

A bargain purchase option affects the accounting for leases in the same way as a guaranteed residual value with a probable amount to be owed. In other words, with a guaranteed residual value, the lessee is expected to make an additional payment related to the residual value at the end of the lease. Similarly, the cost of a bargain purchase option is expected to be paid by the lessee. Therefore, the computations, amortization schedule, and entries prepared for this €2,000 bargain purchase option are identical to those shown for the €2,000 probable amount to be owed under the guaranteed residual value (see [Illustrations 21.11](#), [21.12](#), and [21.13](#)).

The only difference between the accounting treatment for a bargain purchase option and a guaranteed residual value of identical amounts and circumstances is in the computation of the annual depreciation. In the case of a guaranteed residual value, Ivanhoe depreciates the right-of-use asset over the lease term. **In the case of a bargain purchase option, it uses the economic life of the underlying asset, given that the lessee takes ownership of the asset.**

Lessee Accounting: Example 3

The first two lessee examples illustrate leases with guaranteed residual values. To illustrate lessee accounting with an unguaranteed residual value, assume that Hathaway Disposal (lessor) and **Marks and Spencer plc (M&S)** (GBR) (the lessee) sign a lease agreement dated January 1, 2022. The lease agreement specifies that Hathaway will grant right-of-use of one of its standard cardboard compactors for use at one of M&S's stores. Information relevant to the lease is as follows.

- The term of the lease is three years. The lease agreement is non-cancelable, requiring equal rental payments of £17,620.08 at the beginning of each year of the lease (annuity-due basis).
- The compactor has a cost and fair value at commencement of the lease of £60,000, an estimated economic life of seven years, and an expected residual value of £12,000, which is unguaranteed.
- The lease contains no renewal options, and the compactor reverts to Hathaway at the termination of the lease.
- The implicit rate of the lessor is not known by M&S. M&S's incremental borrowing rate is six percent.

Under this lease arrangement, M&S has right of use of the compactor for three years and will return the asset to Hathaway at the end of the lease; Hathaway retains ownership of the compactor. The present value of the lease payments for M&S in this situation is £49,924.56 ($£17,620.08 \times 2.83339$ ($PVF-AD_{3,6\%}$)). Note that the lease liability of £49,924.56 does not include any payments related to the unguaranteed residual value. M&S makes the following entries to record the lease and the first payment.

January 1, 2022		
Right-of-Use Asset	49,924.56	
Lease Liability		49,924.56
Lease Liability	17,620.08	
Cash		17,620.08

M&S prepares a lease amortization schedule to show interest expense and related amortization of the lease liability over the three-year period, as shown in [**Illustration 21.14**](#).

Marks and Spencer plc
Lease Amortization Schedule
Annuity-Due Basis

Date	Lease Payment	Interest (6%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)
1/1/22				£49,924.56
1/1/22	£17,620.08	£ –0–	£17,620.08	32,304.48
1/1/23	17,620.08	1,938.27	15,681.81	16,622.67
1/1/24	17,620.08	997.41*	16,622.67	0.00
	<u>£52,860.24</u>	<u>£2,935.68</u>	<u>£49,924.56</u>	

a. Lease payment as required by lease.

b. Six percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.

c. (a) minus (b).

d. Preceding balance minus (c).

*Rounded by £0.05.

ILLUSTRATION 21.14 Lease Amortization Schedule—Lessee

The journal entries to be prepared by M&S throughout the lease to record lease expense and amortization of the lease liability and depreciation of the right-of-use asset are as shown in **Illustration 21.15**, using the amounts presented in **Illustration 21.14**.

Marks and Spencer plc (Lessee)		
Recognize lease expense, record depreciation (December 31, 2022):		
Interest Expense	1,938.27	
Lease Liability		1,938.27
Depreciation Expense	16,641.52	
Right-of-Use Asset (£49,924.56 ÷ 3)		16,641.52
Record second lease payment (January 1, 2023):		
Lease Liability (£1,938.27 + £15,681.81)	17,620.08	
Cash		17,620.08
Recognize lease expense, record depreciation (December 31, 2023):		
Interest Expense	997.41	
Lease Liability		997.41
Depreciation Expense	16,641.52	
Right-of-Use Asset (£49,924.56 ÷ 3)		16,641.52
Record third lease payment (January 1, 2024):		
Lease Liability (£997.41 + £16,622.67)	17,620.08	
Cash		17,620.08
Record depreciation (December 31, 2024):		
Depreciation Expense	16,641.52	
Right-of-Use Asset (£49,924.56 ÷ 3)		16,641.52

ILLUSTRATION 21.15 Journal Entries by Lessee

Following these entries, as indicated in [Illustration 21.14](#), the lease liability and the right-of-use asset have zero balances. M&S returns the asset to Hathaway.

Low-Value and Short-Term Leases

As indicated, the IASB provided an exception to the required capitalization of all leases for (1) leases of underlying assets with low value and (2) short-term leases with a term of 12 months or less. [\[8\]](#)

Low-Value Leases

For **low-value leases** (of underlying assets with values of \$5,000 or less), rather than recording a right-of-use asset and lease liability, a lessee may elect to expense the lease payments as incurred. This election can be made on a lease-by-lease basis, and if chosen, the lessee assesses the value of an underlying asset based on the value of the asset when it is new, regardless of the age of the asset being leased. Examples of low-value assets include desktop and laptop computers, small items of office furniture, telephones, and other low-value equipment.

Short-Term Leases

A **short-term lease** is a **lease** that, at the **commencement date**, has a **lease term** of 12 months or less. Rather than recording a right-of-use asset and lease liability, lessees may elect to expense the lease payments as incurred. Leases may include options to either extend the term of the lease (a renewal option) or to terminate the lease prior to the contractually defined lease expiration date (a termination option). In these situations, renewal or termination options that are reasonably certain of exercise by the lessee are included in the lease term. Therefore, a one-year lease with a renewal option that the lessee is reasonably certain to exercise is not a short-term lease. **Illustration 21.16** provides an example of two short-term lease situations.¹³

Short-Term Leases

Facts: (a) Thomas Company (lessee) enters into an arrangement to lease a crane for a 6-month period, with the option to extend the term for up to 9 additional months (in 3-month increments). After considering the nature of the project, Thomas determines that it expects to use the crane for only 9 months and is therefore reasonably certain that it will exercise only one of the 3-month renewal options.

(b) Thomas Company enters into the same arrangement as in part (a), but the project for which the crane is being used is now expected to take 15 months to complete. After considering the nature of the project, Thomas determines that it expects to use the crane for 15 months and is therefore reasonably certain that it will exercise all three renewal options.

Question: How would Thomas report these two situations?

Solution:

(a) Since the lease term is not more than 12 months, Thomas is able to elect the short-term lease exception, as it does not expect to exercise the renewal option.

(b) The expected lease term is greater than 12 months because Thomas expects to exercise all three renewal options. Thus, Thomas is not able to apply the short-term lease exception and must record a right-of-use asset and related lease liability.

ILLUSTRATION 21.16 Short-Term Lease Examples

Summary of Lessee Accounting

As shown in three finance lease examples, lessees capitalize all leases. The only exceptions to the capitalization requirement are for leases covering a term of less than one year, and leases of property with a value less than \$5,000. Once the lease is recorded, the lessee recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records depreciation expense on the right-of-use asset. A key source of variation relates to the treatment of residual values.

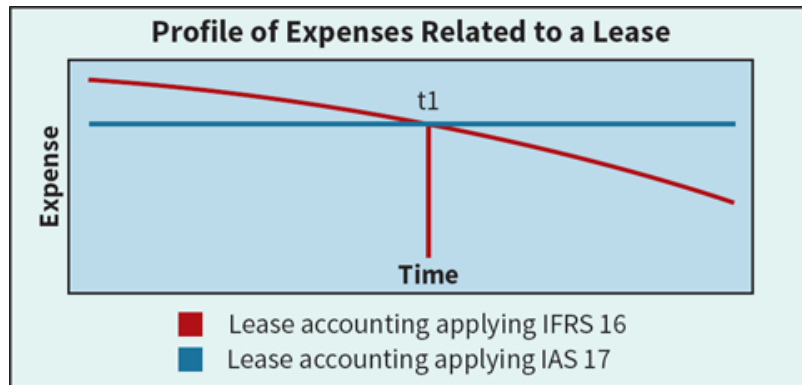

The guidelines for residual values, as shown in three lessee examples, are as follows. [9]

1. If it is probable that the expected residual value is equal to or greater than the guaranteed residual value, the lessee should not include the guaranteed residual value in the computation of the lease liability.
2. If it is probable that the expected residual value is less than the guaranteed residual value, the present value of the difference between the expected and guaranteed residual value should be included in computation of the lease liability.
3. The lessee does not include the unguaranteed residual value in the computation of the lease liability.

What Do the Numbers Mean?

Your Lease Is Killing My Income

As indicated, applying the new guidance in *IFRS 16* can result in “front-loading” of expenses, compared to the prior standard (*IAS 17*). *IAS 17* allowed companies to expense payments as incurred on some leases (hereafter referred to as the operating method). The operating method leads to a constant expense from period to period. Under the new lease standard, lease expense is generally higher than the operating method in the earlier years of the lease because depreciation plus interest expense exceeds the constant expense charge under the operating method. The expense profiles from application of *IFRS 16* and prior IFRS (*IAS 17*) are shown in the following chart for an individual lease (assuming lease payments are even throughout the lease term).

The chart shows that (a) the sum of interest and depreciation on a lease applying *IFRS 16* is higher than straight-line expense for an operating lease at the beginning of the lease term and lower at the end of the lease term, and (b) the point at which interest plus depreciation is equal to expense under the operating lease method expense (t_1 in the chart) occurs somewhere after the midpoint of the lease.

However, earnings before interest, taxes, depreciation, and amortization (EBITDA)—a metric closely watched by market analysts to assess profitability and financial leverage—is expected to **increase** under the new rules. This is because, under the new rules, EBITDA does not include lease expenses (interest, depreciation and amortization), while the prior rules included the entire expense for operating leases in EBITDA. One analysis, based on 3,199 IFRS reporters worldwide, estimates the increases in EBITDA will range from 6 percent to 11 percent, depending on industry and geographic region.

Lessor Accounting

LEARNING OBJECTIVE 3

Explain the accounting for leases by lessors.

Economics of Leasing

In our examples with CNH/Ivanhoe (Examples 1 and 2), the rental payment was given at €20,711.11. It is important to understand that CNH (the lessor) determines the amount of the rental payment, not the lessee. CNH determines this payment using the rate of return—the implicit rate—needed to justify leasing the backhoe. In establishing the implicit rate, CNH considers the credit standing of Ivanhoe, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed).

In Examples 1 and 2, CNH determined the implicit rate to be 4 percent, the fair value of the equipment to be €100,000, and the residual value to be €5,000. CNH then computed the lease payment as shown in [Illustration 21.17](#).

Fair value of leased equipment	€100,000.00
Less: Present value of the residual value ($€5,000 \times .82193$ ($PVF_{5,4\%}$))	4,109.65
Amount to be recovered by lessor through lease payments	€ 95,890.35
Five beginning-of-year lease payments to earn a 4% return ($€95,890.35 \div 4.62990$ ($PVF-AD_{5,4\%}$))	€ 20,711.11

[ILLUSTRATION 21.17](#) Lease Payment Calculation

As indicated, when a residual value is involved (whether guaranteed or not), CNH would not have to recover as much from the lease payments. Therefore, the periodic lease payments would be less.

Classification of Leases by the Lessor

For accounting purposes, the **lessor** classifies leases as a finance lease or an operating lease. For a lease to be a **finance lease**, it must be non-cancelable and **meet at least one of five tests** (see [Illustration 21.18](#)). **[10] To meet one of these five tests, the lessor must transfer control of a substantial portion of the**

underlying asset to the lessee or provide ownership of the underlying asset to the lessee.¹⁴

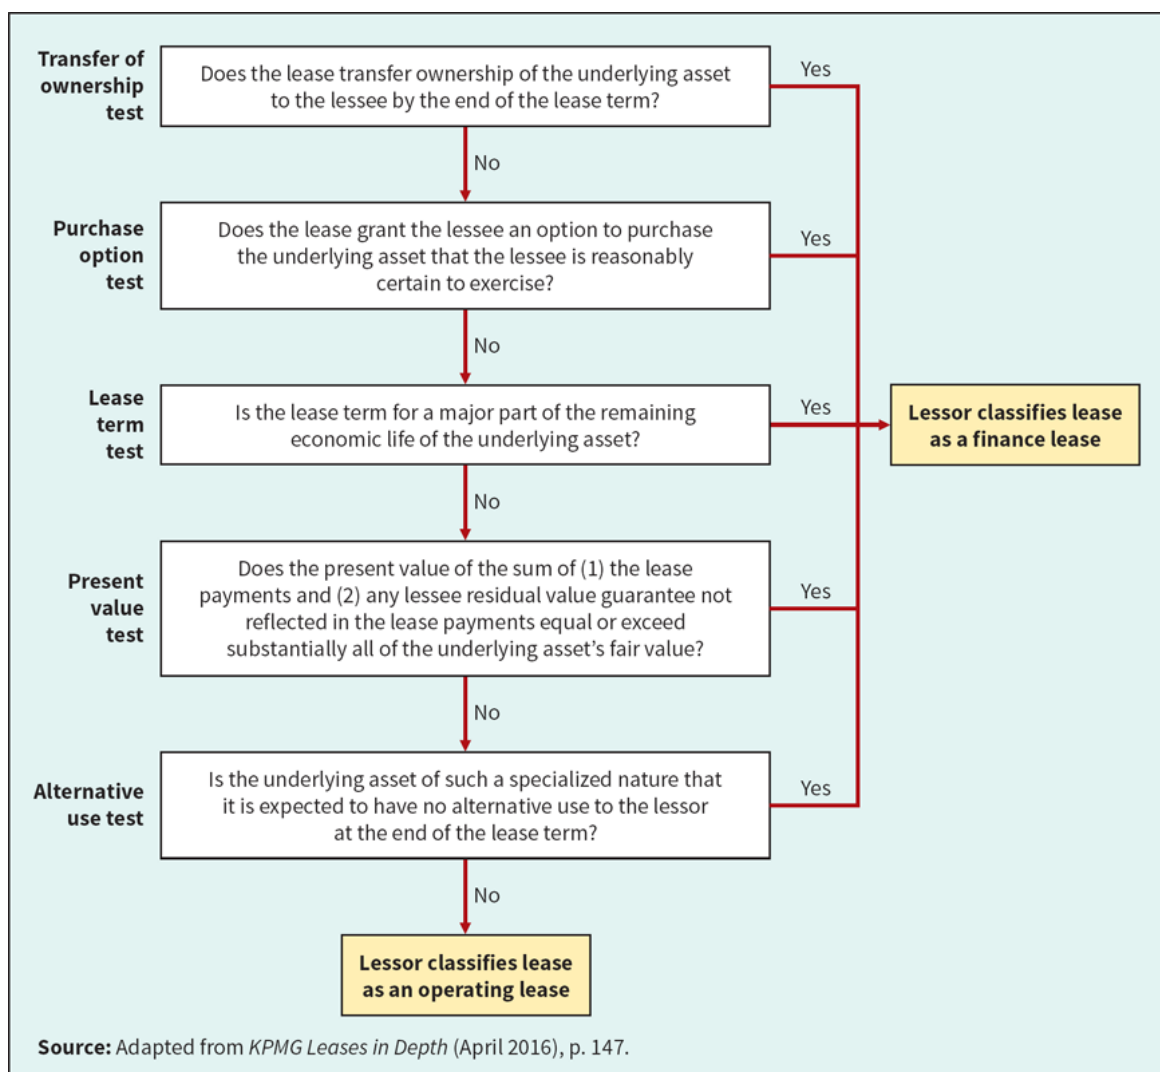

ILLUSTRATION 21.18 Lessor Classification Tests

All leases that do not meet one of the tests are classified as **operating leases**. In an operating lease, the lessor conveys the right to use the underlying asset for the term of the lease but not ownership (or control of a substantial portion) of the underlying asset itself. [Illustration 21.18](#) presents the **lease classification tests**, which are used to determine whether a lessor should classify the lease as a finance lease or as an operating lease.

We discuss in detail each of the five tests on the following pages.

Transfer of Ownership Test

If the lease transfers ownership of the asset to the lessee, the lessor classifies the lease as a finance lease. This test is not controversial and is easily implemented in

practice.

Purchase Option Test

As indicated earlier, a purchase option test is met if it is reasonably certain that the lessee will exercise the option. The lease purchase option allows the lessee to purchase the property for a price that is significantly lower than the underlying asset's expected fair value at the date the option becomes exercisable (a **bargain purchase option**). That is, the lessor transfers control (ownership) of the asset to the lessee.

Lease Term Test

When the lease term is a major part of the remaining economic life of the leased asset, lessors should use the finance method in accounting for the lease transaction. The question is, what is a major part of the economic life of a leased asset? The IASB indicates that lessees should use judgment and offers additional factors to consider in its application guidance for *IFRS 16* to assist in these decisions. *For purposes of your homework, if the lease term is 75 percent or greater of the economic life of the lease asset, assume that the lease meets the lease term test, and finance lease treatment is appropriate.*¹⁵

Present Value Test

If the present value of the lease payments is reasonably close to the fair value of the asset, the lessor is effectively transferring control (ownership) of the asset to the lessee. Again, the IASB recognizes that determining what is reasonably close often involves significant judgment and therefore provides additional application guidance related to this test. *For purposes of your homework, if the present value of the lease payments equals or exceeds 90 percent of the fair value of the asset, assume that the lease meets the **present value test**, and finance lease treatment is appropriate.*

Lease Payments

As discussed earlier, the lease payments generally include the following: (1) Fixed payments, which are the rental payments that are specified in the lease agreement and fixed over the lease term; (2) Variable payments, which are based on an index or a rate. The lessor should include variable lease payments at the level of the index/rate at the commencement date; (3) Residual values (whether guaranteed or not), which are included because a lessor, does not have to recover as much from the rental payments and therefore the rental payments are less; and (4) Payments related to purchase or termination options that the lessee is reasonably certain to exercise. As indicated earlier, if the lease contains a bargain purchase option, the cost of that option should be considered part of the lease payments.

Discount Rate

The lessor should use the implicit rate to determine the present value of the payments. This rate is defined as the discount rate that, at commencement of the lease, causes the aggregate present value of the lease payments and unguaranteed residual value to be equal to the fair value of the leased asset.

Alternative Use Test

If at the end of the lease term the lessor does not have an alternative use for the asset, it is assumed that the lessor has transferred control (ownership) of the asset to the lessee. Therefore, the lessor uses the finance lease method. For example, an equipment manufacturer might build hydraulic lifts to meet unique loading dock configurations of a lessee, like [Amazon.com](https://www.amazon.com) (USA). Given the specialty nature of the equipment, only Amazon can use the lifts and it receives substantially all of the benefits of the leased asset, such that the alternative use test is met for the lessor.¹⁶

What Do the Numbers Mean?

Not So Fast

As an illustration of the importance of the control criteria, consider the case of computer leasing companies, which at one time bought **IBM** (USA) equipment, leased the equipment to their customers, and removed the leased assets from their statements of financial position. In leasing the assets, the computer lessors stated that they would substitute new IBM equipment if obsolescence occurred (a sales return provision). However, when IBM introduced a new computer line, IBM refused to sell it to the computer leasing companies. As a result, a number of the lessors could not meet their contracts with their customers and had to take back the old equipment. Thus, control had not been fully transferred, and the computer leasing companies had to reinstate the assets they had taken off the books. Such a case demonstrates one reason why the lessor classification tests must be aligned with those for revenue recognition.

Accounting Measurement and Presentation

Lessors account for finance leases similarly to the accounting for the sale of an asset with a loan, by eliminating the asset and recording a **Lease Receivable** equal to the present value of the lease payments. Lessors then recognize interest revenue on the lease receivable over the life of the lease using the effective-

interest method. The Lease Receivable is computed as shown in [Illustration 21.19](#).¹⁷

Lease Receivable	=	Present Value of Rental Payments	+	Present Value of Guaranteed and Unguaranteed Residual Values
-------------------------	---	-----------------------------------------	---	---------------------------------------------------------------------

ILLUSTRATION 21.19 Lease Receivable

Under the operating method, lessors continue to recognize the asset on the statement of financial position and record equal amounts of lease revenue (straight-line basis) in each period. Lessors generally depreciate the leased asset on a straight-line basis.¹⁸

Accounting for Finance Lease (Lessor)

Finance leases are often subdivided into **sales-type leases** and direct financing leases. Normally, sales-type leases arise when manufacturers or dealers use leasing as a means of marketing their products. For example, a computer manufacturer will lease its computer equipment (possibly through a captive) to businesses and institutions. Direct financing leases generally result from arrangements with lessors that are primarily engaged in financing operations (e.g., banks and insurance companies). Sales-type leases are covered extensively in this chapter because these type of transactions involve the recording of sales revenue, cost of goods sold, and interest revenue. Direct financing leases generally record only interest revenue. Both of these approaches follow the revenue recognition guidelines in *IFRS 15*.

Finance (Sales-Type) Lease Example

To illustrate lessor accounting for a finance (sales-type) lease, refer to the preceding CNH Global/Ivanhoe Mines example. We repeat here the information relevant to CNH in accounting for this lease transaction.

- The term of the lease is five years. The lease agreement is non-cancelable, requiring equal rental payments at the beginning of each year (annuity-due basis).
- The backhoe has a fair value at the commencement of the lease of €100,000, an estimated economic life of five years, and a guaranteed residual value of €5,000 (which is less than the expected fair value of the backhoe at the end of the lease). Further, assume the underlying asset (the backhoe) has an €85,000 cost to the dealer, CNH.
- The lease contains no renewal options. The backhoe reverts to CNH at the termination of the lease.

- Collectibility of payments by CNH is probable.
- CNH sets the annual rental payment to earn a rate of return of 4 percent per year (implicit rate) on its investment as shown in [Illustration 21.20](#).

Fair value of leased equipment	€100,000.00
Less: Present value of the residual value ($€5,000 \times .82193$ ($PVF_{5,4\%}$))	4,109.65
Amount to be recovered by lessor through lease payments	€ 95,890.35
Five beginning-of-year lease payments to earn a 4% return ($€95,890.35 \div 4.62990$ ($PVF-AD_{5,4\%}$))	€ 20,711.11

ILLUSTRATION 21.20 Lease Payment Calculation

CNH determines the lease payments based on the implicit rate (rate of return) needed to justify leasing the asset. In establishing this rate of return, CNH considers the credit standing of Ivanhoe, the term of the lease, and whether the residual value is guaranteed or unguaranteed. In the CNH/Ivanhoe example, when a residual value is involved (whether guaranteed or not), CNH does not have to recover as much from the rental payments and therefore the rental payments are less.

CNH evaluates the lease classification tests as indicated in [Illustration 21.21](#).

Test	Assessment
1. Transfer of ownership test	Transfer of ownership does not occur; the asset reverts to CNH at the end of the lease.
2. Purchase option test	There is no purchase option in the lease.
3. Lease term test	The lease term is equal to the economic life of the asset (100%). Therefore, the lease meets the lease term test.
4. Present value test	The present value of the lease payments is €100,000*, which is 100% (greater than or equal to 90%) of the fair value of the backhoe. Therefore, the lease meets the present value test.
5. Alternative use test	Since the asset is returned to CNH with some residual value, the alternative use test is not met.
*Present value of payments (€20,711.11 × 4.62990 (PVF-AD _{5,4%}))	€ 95,890.35
Present value of the residual value (€5,000 × .82193 (PVF _{5,4%}))	4,109.65
	<u>€100,000.00</u>

ILLUSTRATION 21.21 Lease Classification Tests—Sales-Type Lease

The lease meets the criteria for classification as a finance (sales-type) lease because (1) the present value of the lease payments is equal to the fair value of the asset, and (2) the lease term is equal to the economic life of the asset. That is, Ivanhoe will consume substantially the entire underlying asset over the lease term. CNH computes the lease receivable as shown in **Illustration 21.22**.

Lease receivable	=	Present value of the rental payment + Present value of the guaranteed residual value
	=	€95,890.35 (€20,711.11 × 4.62990 ($PVF-AD_{5,4\%}$)) + €4,109.65 (€5,000.00 × .82193 ($PVF_{5,4\%}$))
	=	€100,000.00

ILLUSTRATION 21.22 Lease Receivable Calculation

CNH then records the lease receivable, cost of goods sold, and sales revenue and removes the leased asset (which prior to the lease was included in CNH's inventory). The journal entry to record this transaction on January 1, 2022, is as follows.

January 1, 2022		
Lease Receivable	100,000	
Cost of Goods Sold	85,000	
Sales Revenue		100,000
Inventory		85,000

As a result, CNH reports a gross profit of €15,000 (€100,000 – €85,000) on its income statement. CNH then prepares a lease amortization schedule, as shown in **Illustration 21.23**, applying the effective-interest method and recognizing interest revenue as a function of the lease receivable balance.¹⁹

CNH Capital Lease Amortization Schedule Annuity-Due Basis				
Date	Annual Lease Payment	Interest (4%) on Lease Receivable	Reduction of Lease Receivable	Lease Receivable
	(a)	(b)	(c)	(d)
1/1/22				€100,000.00
1/1/22	€ 20,711.11	€ –0–	€ 20,711.11	79,288.89
1/1/23	20,711.11	3,171.56	17,539.55	61,749.34
1/1/24	20,711.11	2,469.97	18,241.14	43,508.20
1/1/25	20,711.11	1,740.33	18,970.78	24,537.42
1/1/26	20,711.11	981.50	19,729.61	4,807.81
1/1/27	5,000.00	192.19*	4,807.81	0.00
	<u>€108,555.55</u>	<u>€8,555.55</u>	<u>€100,000.00</u>	
<p>a. Lease payment as required by lease.</p> <p>b. Four percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.</p> <p>c. (a) minus (b).</p> <p>d. Preceding balance minus (c).</p> <p>*Rounded by €0.12.</p>				

ILLUSTRATION 21.23 Lease Amortization Schedule—Lessor

On January 1, 2022, CNH records receipt of the first year's lease payment as follows.

January 1, 2022		
Cash	20,711.11	
Lease Receivable		20,711.11

On December 31, 2022, CNH recognizes the interest revenue on the lease receivable during the first year through the following entry (see **Underlying Concepts**).

Underlying Concepts

Interest revenue for the lessor may differ from interest expense for the lessee because the lease receivable amount is different than that for the lease liability.

December 31, 2022		
Lease Receivable	3,171.56	
Interest Revenue		3,171.56

At December 31, 2022, CNH reports the lease receivable in its statement of financial position among current assets and non-current assets. It classifies the portion due within one year or the operating cycle, whichever is longer, as a current asset, and the rest with non-current assets.

[**Illustration 21.24**](#) shows CNH's assets section as it relates to the Ivanhoe lease transactions at December 31, 2022.

Current assets	
Lease receivable (€3,171.56 + €17,539.55)	€20,711.11
Non-current assets (investments)	
Lease receivable	61,749.34

[**ILLUSTRATION 21.24**](#) Statement of Financial Position Presentation

In its income statement for 2022, CNH presents the revenue and expense items shown in [**Illustration 21.25**](#).

Sales	
Sales revenue	€100,000.00
Less: Cost of goods sold	85,000.00
Other revenue	
Interest revenue	3,171.56

[**ILLUSTRATION 21.25**](#) Income Statement Presentation

The following entries record receipt of the second year's lease payment and recognition of the interest revenue in 2023.

January 1, 2023		
Cash	20,711.11	
Lease Receivable		20,711.11

December 31, 2023		
Lease Receivable	2,469.97	
Interest Revenue		2,469.97

Journal entries through 2026 follow the same pattern, except for the year 2026. In 2026, the final lease payment is made on January 1, 2026, but the asset is not returned to CNH until January 1, 2027.

CNH makes the following entry on December 31, 2026.

December 31, 2026		
Lease Receivable	192.19	
Interest Revenue		192.19

As a result, interest revenue of €192.19 is recognized for the year 2026 as the residual value accretes up to €5,000 at the end of the lease. At January 1, 2027, when the leased asset is returned to CNH, the Lease Receivable account is reduced to zero and the asset returned is recorded in inventory, as follows.

January 1, 2027		
Inventory	5,000	
Lease Receivable		5,000

Lessor Accounting for Residual Values

Lessor Perspective—Guaranteed Residual Value

In the Ivanhoe/CNH example, Ivanhoe guaranteed a residual value of €5,000. In computing the amount to be recovered from the rental payments, the present value of the residual value was subtracted from the fair value of the backhoe to arrive at the amount to be recovered by the lessor. [Illustration 21.26](#) (which is the same as [Illustration 21.17](#)) shows this computation.

Fair value of leased equipment	€100,000.00
Less: Present value of the residual value ($€5,000 \times .82193$ ($PVF_{5,4\%}$))	4,109.65
Amount to be recovered by lessor through lease payments	€ 95,890.35
Five beginning-of-year lease payments to earn a 4% return ($€95,890.35 \div 4.62990$ ($PVF-AD_{5,4\%}$))	€ 20,711.11

ILLUSTRATION 21.26 Lease Payment Calculation

The computation in [Illustration 21.26](#) is the same whether the residual value is guaranteed or unguaranteed.

The lease agreement between CNH and Ivanhoe is accounted for as a sales-type lease. CNH therefore recorded sales revenue and related cost of goods sold at lease commencement. CNH accounts for the guaranteed residual value as part of sales revenue because the lessor receives this amount at the end of the lease either in cash or in the residual value returned.

Lessor Perspective—Unguaranteed Residual Value

What happens if the residual value for CNH is unguaranteed? In this case, there is less certainty that the unguaranteed residual portion of the asset has been “sold.” Therefore, the lessor recognizes sales revenue and cost of goods sold only for the portion of the asset for which recovery is assured. To account for this uncertainty, both sales revenue and cost of goods sold are reduced by the present value of the unguaranteed residual value. [\[12\]](#) Given that the amounts subtracted from sales revenue and cost of goods sold are the same, the gross profit computed will still be the same amount as when a guaranteed residual value exists.

To compare a sales-type lease with a guaranteed residual value to one with an unguaranteed residual value, assume the same facts as in the previous CNH/Ivanhoe lease situation. That is:

1. The sales price is €100,000.
2. The residual value is €5,000 (the present value of which is €4,109.65).
3. The leased equipment has an €85,000 cost to the dealer, CNH.

[Illustration 21.27](#) shows the computation of the amounts relevant to a sales-type lease, under both a guaranteed and unguaranteed residual value situation.

	Guaranteed Residual Value	Unguaranteed Residual Value
Lease receivable	$\text{€}100,000$ $[\text{€}20,711.11 \times 4.62990 (PVF_{5,4\%})$ $+ \text{€}5,000 \times .82193 (PVF_{5,4\%})]$	Same
Sales price of the asset	€100,000	€95,890.35 (€100,000 – €4,109.65)
Cost of goods sold	€85,000	€80,890.35 (€85,000.00 – €4,109.65)
Gross profit	€15,000 (€100,000 – €85,000)	€15,000 (€95,890.35 – €80,890.35)

ILLUSTRATION 21.27 Computation of Lease Amounts by CNH—Sales-Type Lease

CNH makes the entries with respect to the lease arrangement under guaranteed and unguaranteed residual value situations, as shown in [Illustration 21.28](#).

Guaranteed Residual Value				Unguaranteed Residual Value				
To record sales-type lease at commencement (January 1, 2022):								
Cost of Goods Sold	85,000.00			Cost of Goods Sold	80,890.35			Sales and cost of goods sold differ, gross profit the same
Lease Receivable	100,000.00			Lease Receivable	100,000.00			
Sales Revenue		100,000.00		Sales Revenue		95,890.35		
Inventory		85,000.00		Inventory		85,000.00		
To record receipt of the first lease payment (January 1, 2022):								
Cash	20,711.11			Cash	20,711.11			Lease receipt the same
Lease Receivable		20,711.11		Lease Receivable		20,711.11		
To recognize interest revenue during the first year (December 31, 2022):								
Lease Receivable	3,171.56			Lease Receivable	3,171.56			Accrual of interest the same
Interest Revenue		3,171.56		Interest Revenue		3,171.56		
To record receipt of the second lease payment (January 1, 2023):								
Cash	20,711.11			Cash	20,711.11			Lease receipt the same
Lease Receivable (€3,171.56 + €17,539.55)		20,711.11		Lease Receivable (€3,171.56 + €17,539.55)		20,711.11		
To recognize interest revenue during the second year (December 31, 2023):								
Lease Receivable	2,469.97			Lease Receivable	2,469.97			Accrual of interest the same
Interest Revenue		2,469.97		Interest Revenue		2,469.97		
To record receipt of residual value at £3,000 end of lease term (January 1, 2027):								
Inventory	3,000.00			Inventory	3,000.00			Guaranteed does not result in loss; unguaranteed does
Cash	2,000.00			Loss on Lease	2,000.00			
Lease Receivable		5,000.00		Lease Receivable		5,000.00		

ILLUSTRATION 21.28 Entries for Guaranteed and Unguaranteed Residual Values—Sales-Type Lease

CNH records the same gross profit (€15,000) at the point of sale whether the residual value is guaranteed or unguaranteed. However, the amounts recorded for sales revenue and the cost of goods sold are different between the guaranteed and unguaranteed situations. The reason for the difference is the uncertainty surrounding the realization of the unguaranteed residual value. Unlike the guaranteed residual value situation, where the lessor knows that it will receive the full amount of the guarantee at the end of the lease, in an unguaranteed residual value situation the lessor is not sure what it will receive at the end of the lease regarding the residual value. That is, due to the uncertainty surrounding the realization of the unguaranteed residual value, sales revenue and related cost of goods sold are reduced by the present value of the residual value. This results in **sales revenue and cost of goods sold being reported at different amounts under an unguaranteed residual value situation.**

Lessor Accounting for Operating Leases

To illustrate lessor accounting for an operating lease, we use the previously discussed lease agreement between Hathaway Disposal Ltd. and **M&S** for the use of one of Hathaway's standard cardboard compactors. Information relevant to the lease is as follows.

- The term of the lease is three years. The lease agreement is non-cancelable, requiring three annual rental payments of £17,620.08, with the first payment on January 1, 2022 (annuity-due basis).
- The compactor has a cost and fair value at commencement of the lease of £60,000, an estimated economic life of five years, and a residual value at the end of the lease of £12,000 (unguaranteed).
- The lease contains no renewal options. The compactor reverts to Hathaway at the termination of the lease.
- The implicit rate of the lessor is known by M&S. M&S's incremental borrowing rate is six percent. Hathaway sets the annual rental rate to earn a rate of return of six percent per year (implicit rate) on its investment, as shown in [Illustration 21.29](#).

Fair value of leased equipment	£60,000.00
Less: Present value of the residual value ($£12,000 \times .83962$ ($PVF_{3,6\%}$))	10,075.44
Amount to be recovered by lessor through lease payments	£49,924.56
Three beginning-of-year lease payments to earn a 6% return ($£49,924.56 \div 2.83339$ ($PVF-AD_{3,6\%}$))	<u>£17,620.08</u>

ILLUSTRATION 21.29 Computation of Lease Payments

Hathaway classifies the lease as an operating lease because none of the finance lease tests are met, as shown in **Illustration 21.30**.

Test	Assessment
1. Transfer of ownership test	Transfer of ownership does not occur; the asset reverts to Hathaway at the end of the lease.
2. Purchase option test	There is no purchase option in the lease.
3. Lease term test	The lease term is 60% ($3 \div 5$) of the economic life of the asset, which is less than a major part of the life of the asset (75%).
4. Present value test	The present value of the lease payments is £49,924.56*, which is 83.2% ($£49,924.56 \div £60,000$) of the fair value of the compactor. Therefore, the lease does not meet the present value test.
5. Alternative use test	As indicated, the equipment is not of a specialized nature and is expected to have use to Hathaway when returned at the end of the lease.
*£17,620.08 \times 2.83339 ($PVF-AD_{3,6\%}$)	

ILLUSTRATION 21.30 Lease Classification Tests—Operating Lease

Under the operating method, Hathaway (the lessor) continues to recognize the asset on its statement of financial position and recognizes lease revenue (generally on a straight-line basis) in each period. Hathaway continues to **depreciate the leased asset** (see **Underlying Concepts**).

Underlying Concepts

Since the lessor owns the underlying asset, the lessor depreciates the compactor over its entire useful life.

To illustrate the operating method for the Hathaway/M&S lease, Hathaway records the lease payment on a straight-line basis on January 1, 2022, 2023, and 2024, as follows.

January 1, 2022, 2023, and 2024		
Cash	17,620.08	
Unearned Lease Revenue		17,620.08

On December 31, 2022, 2023, and 2024, Hathaway records the recognition of the revenue each period as follows.

Unearned Lease Revenue	17,620.08	
Lease Revenue		17,620.08

Hathaway also records depreciation expense on the leased equipment (assuming the double-declining-balance method, given a cost basis of £60,000 and a five-year economic life), as follows.

Depreciation Expense (£60,000 × .40)	24,000.00	
Accumulated Depreciation—Equipment		24,000.00

In addition to depreciation expense, Hathaway records other costs related to the lease arrangement, such as insurance, maintenance, and taxes, in the period incurred. Hathaway classifies the leased equipment and accompanying accumulated depreciation as Leased Assets.

Special Lease Accounting Problems

LEARNING OBJECTIVE 4

Discuss the accounting and reporting for special features of lease arrangements.

The features of lease arrangements that cause unique accounting problems are:

1. Other lease adjustments.
2. Presentation, disclosure, and analysis.

Other Lease Adjustments

Additional lease adjustments that affect the measurement of lease assets and liabilities relate to the following:

- Executory costs.
- Lease prepayments and incentives.
- Initial direct costs.

Executory Costs

Executory costs are normal expenses associated with owning a leased asset, such as property insurance and property taxes. The accounting for executory costs depends on how the lease is structured, that is, whether the lease is a gross lease or a net lease. In a gross lease, the payments to the lessor are fixed as part of the rental payments in the contract. In a net lease, the lessee makes variable payments to a third party or to the lessor directly for the executory costs.

Illustration 21.31 provides examples of these two situations.

Gross versus Net Leases

Facts: Ortiz SpA enters into a lease arrangement to lease a retail space in a shopping mall from Bryant Group. The lease term is 2 years with monthly payments of €15,000 per month. Ortiz does not have any obligation to pay any of the property taxes or property insurance on the retail space. Ortiz estimates that Bryant is paying approximately €1,500 per month related to these executory costs.

Question: How should Ortiz account for the executory costs in this situation?

Solution: Ortiz and Bryant have a gross lease arrangement in that the property taxes and property insurance are included in the rental payments made by Ortiz. In this arrangement, the payment for the executory costs are fixed (per the rental agreement) and should be included in the computation of the lease liability.

Now assume that Ortiz agrees to a lease arrangement in which it must reimburse the lessor for the property taxes and property insurance, or pay a relevant third party directly. In this case, Ortiz and Bryant have a net lease arrangement because the lessee makes variable payments to a third party or to the lessor for the executory costs. In this case, Ortiz is responsible for paying directly the executory costs and therefore it is a variable payment which is expensed in the period incurred (not included in the lease liability and right-of-use assets).

ILLUSTRATION 21.31 Executory Cost Example

Note that including executory costs in the measurement of the lease liability and related right-of-use asset may lead to inflated values on the statement of financial position in comparison to lessees who do not capitalize these costs. Thus, the way parties structure the payment of executory costs (i.e., variable or fixed) can have potentially material implications with regard to the values that appear on the statement of financial position.

In summary, executory costs included in the fixed payments required by the lessor should be included in lease payments for purposes of measuring the lease liability. Payments by the lessee made directly to the taxing authority or insurance provider are considered variable payments and are expensed as incurred. [13]

Lease Prepayments and Incentives

For all leases at the commencement date, the lease liability is the starting point to determine the amount to record for the right-of-use asset. Companies adjust the right-of-use asset for any lease prepayments, lease incentives, and initial direct costs made prior to or at the commencement date. These adjustments determine the amount to report as the right-of-use asset at the lease commencement date as follows.

1. Lease prepayments made by the lessee **increase** the right-of-use asset.
2. Lease incentive payments made by the lessor to the lessee **reduce** the right-of-use asset.
3. Initial direct costs incurred by the lessee (discussed in the next section) **increase** the right-of-use asset.

Illustration 21.32 identifies the adjustments made to the lease liability balance to determine the proper amount to report for the right-of-use asset.

Initial Measurement of Lease Liability	+	Prepaid Lease Payments	–	Lease Incentives Received	+	Initial Direct Costs	=	Right- of- Use Asset
-----------------------------------------------------------	---	---------------------------------------	---	------------------------------------------	---	-------------------------------------	---	-----------------------------------------

ILLUSTRATION 21.32 Right-of-Use Asset Adjustments

Initial Direct Costs

Initial direct costs are incremental costs of a lease that would not have been incurred had the lease not been executed. **[14]** Costs directly or indirectly attributable to negotiating and arranging the lease (e.g., external legal costs to draft or negotiate a lease or an allocation of internal legal costs) are not considered initial direct costs. **Illustration 21.33** provides examples of costs included and excluded from initial direct costs from the lessee and lessor side.²⁰

Included	Excluded
<ul style="list-style-type: none"> • Commissions (including payments to employees acting as selling agents) • Legal fees resulting from the execution of the lease • Lease document preparation costs incurred after the execution of the lease • Consideration paid for a guarantee of residual value by an unrelated third party 	<ul style="list-style-type: none"> • Employee salaries • Internal engineering costs • Legal fees for services rendered before the execution of the lease • Negotiating lease term and conditions • Advertising • Depreciation • Costs related to an idle asset

ILLUSTRATION 21.33 Initial Direct Costs

Initial direct costs incurred by the lessee are included in the cost of the right-of-use asset but are not recorded as part of the lease liability.

Illustration 21.34 provides an example of the computation of the right-of-use asset with initial direct costs.

Right-of-Use Cost Analysis

Facts: Mangan Company leases from DeMallie Ltd. solar equipment for 8 years starting on January 1, 2022. The lease is a finance/sales-type lease. The terms of the lease are as follows.

1. DeMallie will pay Mangan €30,000 as a cash incentive for entering the lease by January 1, 2022.
2. DeMallie pays initial direct costs of €5,000 for legal fees related to the execution of the lease.
3. Mangan incurred €1,500 of initial direct costs (commission paid to lease negotiator) which are payable by January 1, 2022.
4. Mangan must pay not only the first rental payment of €10,000 on January 1, 2023, but also must prepay the last month's rental payment on December 31, 2021.
5. The initial measurement of the liability is €400,000.

Question: What is the amount to be reported for Mangan's right-of-use asset at the commencement date?

Solution: The measurement of the right-of-use asset for Mangan is as follows.

Initial measurement of the lease liability	€400,000
Cash incentive received from DeMallie (lessor)	(30,000)
Initial direct costs (commission paid to lease negotiator)	1,500
Prepayments made by Mangan to DeMallie before the lease commencement	10,000
Measurement of right-of-use asset at January 1, 2022	<u>€381,500</u>

Mangan therefore reports the right-of-use asset at €381,500.

DeMaille (the lessor) expenses its initial direct costs in the period incurred, given that DeMaille reported a gross profit related to its sales-type lease.

ILLUSTRATION 21.34 Computation of Right-of-Use Asset

For lessors, initial direct costs often are more significant because they usually solicit lessees as part of their sales activities. As a result, lessors often engage attorneys to prepare the legal documents, as well as pay commissions incurred in connection with the execution of a lease.

Lessor accounting for initial direct costs depends on the type of lease. [15]

- For **operating leases**, a lessor defers the initial direct costs and amortizes them as expenses over the term of the lease.
- For **finance leases**, the lessor expenses initial direct costs at lease commencement (in **the period** in which it recognizes the profit on the sale). An exception is when there is no selling profit or loss on the transaction. If there is no selling profit or loss, the initial direct costs are deferred and recognized over the lease term.

Lessors commonly also incur **internal costs** related to leasing activities, such as advertising, servicing existing leases, and establishing and monitoring credit policies, as well as the costs for supervision and administration or for expenses such as rent and depreciation. Internal direct costs should not be included in initial direct costs. Such costs would have been incurred regardless of whether a lease was executed. As a result, internal direct costs are generally expensed as incurred.

Presentation, Disclosure, and Analysis

Presentation

Illustration 21.35 is a summary of how the **lessee** reports the information related to leases in the financial statements.

	Statement of Financial Position	Income Statement
All Leases*	Right-of-use asset	Depreciation expense
	Lease liability	Interest expense
*Except low-value and short-term leases.		

ILLUSTRATION 21.35 Presentation in Financial Statements—Lessee

Illustration 21.36 is a summary of **lessor** presentation of lease information in the financial statements.

	Statement of Financial Position	Income Statement
Finance Lease	Lease receivable presented separate from other assets	Interest revenue
	Derecognize the leased asset	Selling profit or loss for a sales-type lease
Operating Lease	Continue to recognize assets subject to operating leases as property, plant, and equipment	Revenue generally recognized on a straight-line basis
		Depreciation expense on the leased asset

ILLUSTRATION 21.36 Presentation in Financial Statements—Lessor

Disclosure

Lessees and lessors must also provide additional qualitative and quantitative disclosures to help financial statement users assess the amount, timing, and uncertainty of future cash flows. These disclosures are intended to supplement the amounts provided in the financial statements. Qualitative disclosures to be provided by both lessees and lessors are summarized in [Illustration 21.37](#). [16]

- Nature of the leases, including a general description.
- How variable lease payments are determined.
- Existence and terms and conditions for options to extend or terminate the lease, and for residual value guarantees.
- Information about significant assumptions and judgments (e.g., discount rates).

ILLUSTRATION 21.37 Qualitative Lease Disclosures

[Illustration 21.38](#) presents the type of quantitative information that should be disclosed for **the lessee**.

- Total lease cost.
- Finance lease cost, segregated between the depreciation of the right-of-use assets and interest on the lease liabilities.
- Low-value and short-term lease cost.
- Weighted-average remaining lease term and weighted-average discount rate.
- Maturity analysis of finance lease liabilities, on an annual basis for a minimum of each of the next five years, the sum of the undiscounted cash flows for all years thereafter.

ILLUSTRATION 21.38 Lessee Quantitative Disclosures

Illustration 21.39 presents financial statement excerpts from the 2018 annual report of **Air France** (FRA). These excerpts represent the statement and note disclosures typical of a lessee.

 Air France (partial) (€ in millions)	
	<u>2018</u>
Non-Current Assets	
Right-of-use assets	€5,243
Liabilities	
Lease debt	€4,535

Note 4.15. Lease contracts
Types of capitalized lease contracts
Aircraft lease contracts
For the aircraft lease contracts fulfilling the capitalization criteria defined by IFRS 16, the lease term corresponds to the duration of the contracts signed except in cases where the Group is reasonably certain of exercising the renewal options contractually foreseen. The discount rate used to calculate the lease debt corresponds, for each aircraft, to the implicit interest rate induced by the contractual elements and residual market values. The present value should be equal to the sum of the fair value of the leased asset and any initial direct costs of the lessor.
Real-estate lease contracts
Based on its analysis, the Group has identified lease contracts according to the standard concerning surface areas rented in its hubs, lease contracts on building dedicated to the maintenance business, customized lounges in airports other than hubs and lease contracts on office buildings. The lease term corresponds to the non-terminable period. Most of the contracts do not provide renewal options. The discount rate used to calculate the lease debt is determined, for each asset, according to the incremental borrowing rate at the signature debt.

Note 20. Right-of-use assets
The table below presents the right-of-use assets per category:

	Aircraft	Maintenance	Land & Real Estate	Others	Total
As of December 31, 2017	3,792	1,213	473	246	5,724
New contract	27	118	249	34	428
Change in contract	99	71	2	-	172
Disposals	(1)	(4)	-	1	(4)
Reclassification	(3)	169	6	35	207
Amortization	(795)	(289)	(122)	(60)	(1,266)
Others	18	(9)	(23)	(4)	(18)
As of December 31, 2018	<u>3,137</u>	<u>1,269</u>	<u>585</u>	<u>252</u>	<u>5,243</u>

Note 32. Lease Debt
As of December 31, 2018

	Non-current	Current	Total
Lease debt-aircraft	2,657	821	3,478
Lease debt-real estate	654	119	773
Lease debt-other	234	30	264
Accrued interest	1	19	20
Total-Lease debt	<u>3,546</u>	<u>989</u>	<u>4,535</u>

The lease debt maturity breaks down as follows as of December 31, 2018:

Y+1	1,236
Y+2	1,090
Y+3	921
Y+4	744
Y+5	490
Over 5 years	1,124
Total	<u>5,605</u>

Including:

— Principal	4,535
— Interest	1,070

Types of non-capitalized lease contracts
The Group uses the two exemptions foreseen by the standard allowing for non-recognition in the balance sheet: short-term lease contracts and lease contracts for which the underlying assets have a low value.
Short duration lease contracts
There are contracts whose duration is equal to or less than 12 months. Within the Group, they mainly relate to leases of:
— Surface areas in our hubs with a reciprocal notice-period equal to or less than 12 months;
— Accommodations for expatriates with a notice period equal to or less than 12 months;
— Spare engines for a duration equal to or less than 12 months.
Low value lease contracts
Low-value lease contracts concern assets with a value equal to or less than US\$5,000. Within the Group, these include, notably, lease contracts on printers, tablets, laptops and mobile phones.

Additional information

ILLUSTRATION 21.39 Disclosure of Leases by Lessee

Illustration 21.40 shows the type of quantitative information that should be disclosed for **the lessor**.

- Lease-related income, including profit and loss recognized at lease commencement for sales-type and direct financing leases, and interest income.
- Income from variable lease payments not included in the lease receivable.
- The components of the net investment in sales-type and other financing leases, including the carrying amount of the lease receivable, the unguaranteed residual asset, and any deferred profit on direct financing leases.
- A maturity analysis for operating lease payments and a separate maturity analysis for the lease receivable (sales-type and direct financing leases).
- Management approaches for risk associated with residual value of leased assets (e.g., buyback agreements or third-party insurance).

ILLUSTRATION 21.40 Lessor Quantitative Disclosures

ILLUSTRATION 21.41 Disclosure of Leases by Lessor

Analysis

Many companies that lease are likely to see the amounts reported in their statements of financial position grow substantially over the next few years as a result of implementing the new standard on leasing. Estimates as to its impact on the assets and liabilities of companies vary, but it will be in the trillions of dollars.

As shown in the opening story, airlines use lease arrangements extensively, which results in a great deal of off-balance-sheet financing. However, airlines have not been the only ones playing the off-balance-sheet leasing game. As indicated in [Illustration 21.1](#), retailers like **Marks and Spencer plc** and **Carrefour**, and publisher **RELX** employ leases in their businesses. Thus, analysts must adjust reported debt levels for the effects of non-capitalized leases. A PwC survey of 3,000 international companies indicated the impacts of leasing for several industries as shown in [Illustration 21.42](#).

	Average Increase in Interest-Bearing Debt	Companies with over 25% Increase	Average Increase in Leverage
Retail and trade	213%	71%	64%
Other services	51	35	34
Transportation and warehousing	95	38	31
Professional services	158	52	19
Accommodation	101	41	18
All companies	58%	4%	13%

[ILLUSTRATION 21.42](#) Leasing Impacts

Some contend that “grossing up” the assets and liabilities on companies’ statements of financial position will not have any significant impact on analysis, based on information in the financial statements. Their rationale is that equity does not change substantially, nor will net income. In addition, it is argued that users could have determined the obligations that lessees were incurring by examining the notes to the financial statements.

These assertions are debatable. With the increase in the assets and liabilities as a result of the new standard, a number of financial metrics used to measure the profitability and solvency of companies will change, which could create challenges when performing financial analysis. On the profitability side, return on assets will decrease because a company’s assets will increase, but net income will often be the same. Furthermore, analysts commonly focus on income subtotals, such as earnings before interest, taxes, and depreciation and amortization (EBITDA), which likely will require some adjustments as companies depreciate right-of-use

assets and record interest expense. On the solvency side, the debt to equity ratio will increase, and the interest coverage ratio will decrease. In addition, recent studies indicate that using only note disclosures to determine lease obligations has understated their numerical impact.²¹

One thing is certain—the grossing up of the assets and liabilities related to lease arrangements will have significant consequences on the organizational, operational, and contractual side. Examples are:

1. Jurisdictions often levy taxes based on property amounts, which will now be higher.
2. Performance metrics to evaluate management may have to change for companies, particularly when growth rates in assets are used or returns on assets are used to measure performance.
3. Companies may have contracts with governments for which reimbursement is based on rent expense, which may change the compensation agreement.
4. Debt covenants may require revisions.

Given the pervasiveness and magnitude of the changes, it is not surprising that the IASB has allowed an extended implementation window to allow companies and users of financial statements to adapt to the new standard.

Evolving Issue

Bring It On!

As discussed in the opening story, the lease accounting rules will bring a significant amount of lease-related assets and liabilities onto lessee statements of financial position. For example, recent estimates for the largest 100 U.S. companies put the number at over \$539 billion. Most agree this is a good result—applying the “right-of-use” model will result in reporting more relevant and representationally faithful information about leasing arrangements, which is a big win for investors and creditors. As the chairperson of the IASB remarked, “. . . a financing, in the form of a loan to purchase an asset . . . then is recorded. Call it a lease and miraculously it does not show up in your books. In my book, if it looks like a duck, swims like a duck, and quacks like a duck, then it probably is a duck. So is the case with debt—leasing or otherwise.”

At the same time, as the following table demonstrates, an analysis of the new rules and how they might impact the advantages of leasing suggests that many of the advantages of leases will remain after implementation of the new rules.

Reason for Leasing	Details	Status after Proposed New Rules Implemented
Funding source	Additional capital source, 100% financing, fixed rate, level payments, longer terms.	Still a major benefit versus a purchase—fixed rate, level payments—especially for smaller companies with limited sources of capital.
Low-cost capital	Low payments/rate due to tax benefits, residual and lessor’s comparatively low cost of funds.	Still a benefit versus a loan.
Tax benefits	Lessee cannot use tax benefits and lease versus buy shows lease option offers lowest after tax cost.	Still a benefit.
Manage need for	Lessee has flexibility to return asset.	Still a benefit.

assets/residual risk transfer		
Convenience	Quick and convenient financing process often available at point-of-sale.	Still a benefit.
Regulatory	Can help in meeting capital requirements.	Still a partial benefit if the capitalized amount is less than the cost of the asset, as it is in many leases due to residuals assumed and tax benefits.
Accounting	Asset and liability off-balance-sheet.	Still a partial benefit if the capitalized amount is less than the cost of the asset, as it is in many leases due to residuals assumed and tax benefits.

APPENDIX 21A

Sale-Leasebacks

LEARNING OBJECTIVE *5

Describe the lessee’s accounting for sale-leaseback transactions.

In a **sale-leaseback** arrangement, a company (the seller-lessee) transfers an asset to another company (the buyer-lessor) and then leases that asset back from the buyer-lessor. For example, **Darden Restaurants** (USA) sold off its Red Lobster division to **Golden Gate Capital** (USA) (a private equity firm) for \$2.1 billion recently and then leased these restaurants back from Golden Gate Capital. This transaction is shown in [Illustration 21A.1](#).

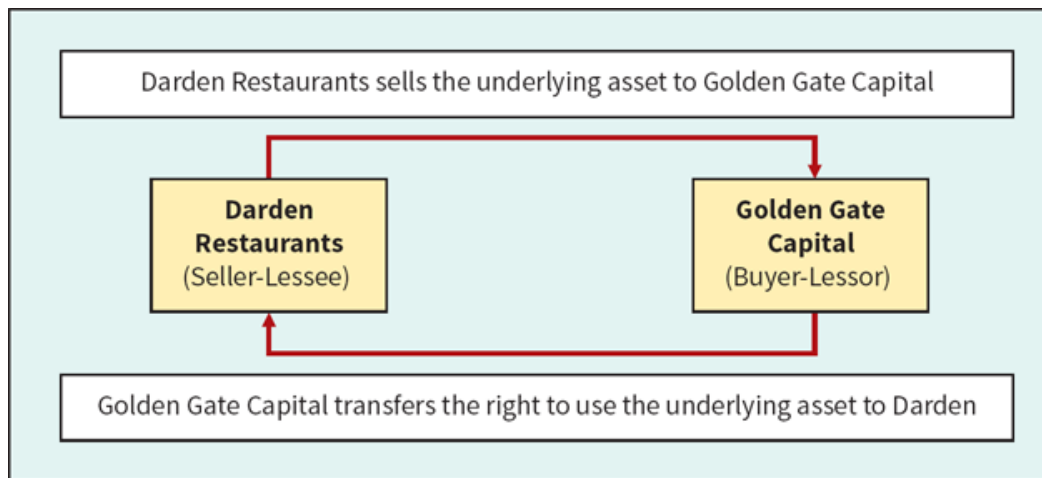

ILLUSTRATION 21A.1 Sale-Leaseback

Why do companies like Darden Restaurants engage in sale-leaseback transactions? Some major reasons are:

1. Darden can use the cash that otherwise would be tied up in property to expand its operations. At the same time, it continues to use the property through the lease term.
2. Darden can structure the lease arrangement so issues such as repurchase provisions, refinancing issues, and conventional financing costs are minimized.
3. Darden may receive a tax advantage in that entire rental payments are tax-deductible, whereas under a conventional financing, only interest and depreciation can be deducted. If the lease has a significant land component (land is not depreciable) or if the fair value of the property is much greater than the carrying value of the property (depreciation limited to cost of property), then the sale lease-back arrangement generally reduces tax payments.

The advantages to Golden Gate Capital (buyer-lessor) are that it generally can earn a higher rate of return under a sale-leaseback than under traditional financing. In addition, during the lease term, Golden Gate is protected from a downturn in the real estate market and may have an inflation hedge, provided the property appreciates in value.

Sale-leasebacks are common. Financial institutions (e.g., **HSBC** (GBR) and **BBVA** (ESP)) have used this technique for their administrative offices, retailers (**Liberty** (GBR)) for their stores, and hospitals (**Healthscope** (AUS)) for their facilities.

Accounting Issues in Sale-Leaseback Transactions

When Darden transfers ownership of the Red Lobster restaurants to Golden Gate Capital and then leases them back, the accounting issue is whether the transaction is a sale or a financing. To determine whether it is a sale, revenue recognition guidelines are used. That is, if control passes from seller to buyer, then a sale has occurred. Conversely, if control does not pass from seller to buyer, the transaction is recorded as a financing (often referred to as a failed sale). [17] [Illustration 21A.2](#) highlights these two approaches.

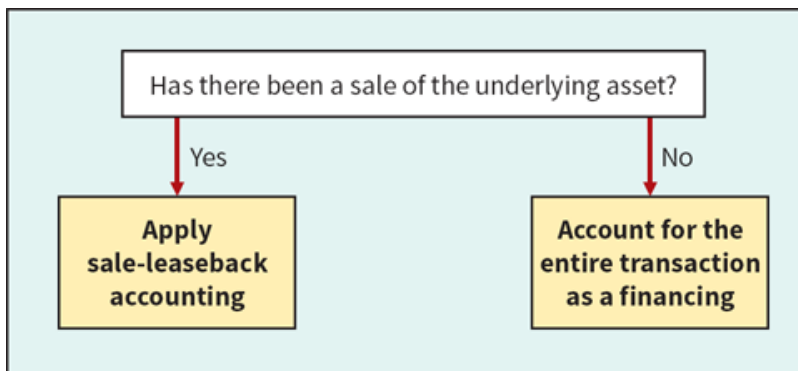

ILLUSTRATION 21A.2 Sale-Leaseback Accounting

Sale Transaction

As indicated, if Darden (seller-lessee) **gives up control** of the Red Lobster restaurants, the transaction is a sale. In a sale, **gain or loss recognition** is appropriate. Darden then records the transaction as follows.

1. Increases cash and reduces the carrying value of the asset to zero (referred to as derecognizing the asset).
2. Recognizes a gain or loss as appropriate.
3. Accounts for the leaseback in accordance with lease accounting guidance covered in this chapter.

For example, assume that **Stora Enso** (FIN) sells one of its buildings having a carrying value of €580,000 (building €800,000 less accumulated depreciation €220,000) to **Deutsche Bank** (DEU) for €623,110. It then leases the building back from Deutsche Bank for €50,000 a year, for eight of the building's 15 years of remaining economic life. Assume that the present value of these lease payments is equal to €310,000, such that the lease is classified as an operating lease by Deutsche Bank. Stora Enso makes the following entries to record the sale-leaseback.

Cash	623,110	
------	---------	--

Accumulated Depreciation—Buildings	220,000	
Buildings		800,000
Gain on Disposal of Plant Assets		43,110
(€623,110 – €580,000)		

In addition, Stora Enso makes an entry to record the operating lease from Deutsche Bank as follows.

Right-of-Use Asset	310,000	
Lease Liability		310,000

Financing Transaction (Failed Sale)

Stora Enso does not record a sale in the above transaction if the lease from Deutsche Bank is classified as a finance lease (see [Underlying Concepts](#)). The reason: if any of the lease classification tests are met, Stora Enso, not Deutsche Bank, controls the asset. If Stora Enso **continues to control the building, it should not record a sale nor recognize a gain or loss** on the transaction. In essence, Stora Enso is borrowing money from Deutsche Bank (often referred to as a financing or a **failed sale**). In a financing (failed sale), Stora Enso:

Underlying Concepts

A sale-leaseback under a financing transaction is similar in substance to the parking of inventories (discussed in [Chapter 8](#)). The ultimate economic benefits remain under the control of the “seller-lessee,” so revenue (gain) should not be recognized.

- Does not reduce the carrying value of the building.
- Continues to depreciate the building as if it was the legal owner.
- Recognizes the sale proceeds from Deutsche Bank as a financial liability.

The entry to record the financing is as follows.

Cash	623,110	
Notes Payable		623,110

Sale-Leaseback Example

To illustrate the accounting treatment accorded a sale-leaseback transaction over the lease term, assume that **Japan Airlines (JAL)** (JPN) on January 1, 2022, sells a used, standard-design Boeing 757 having a carrying amount on its books of

\$30,000,000 to **CitiCapital** (USA) for \$33,000,000. JAL immediately leases the aircraft back under the following conditions.

- The term of the lease is seven years. The lease agreement is non-cancelable, requiring equal rental payments of \$4,881,448 at the end of each year (ordinary annuity basis), beginning December 31, 2022.
- The lease contains no renewal or purchase options. The plane reverts to CitiCapital at the termination of the lease.
- The aircraft has a fair value of \$33,000,000 on January 1, 2022, and an estimated remaining economic life of 10 years. The residual value (unguaranteed) at the end of the lease is \$13,000,000.
- The annual payments assure the lessor an eight percent return (which is the same as JAL's incremental borrowing rate).

Applying the classification tests, the lease-back of the airplane is classified as an operating lease because none of the sales-type lease criteria are met, as indicated in [Illustration 21A.3](#).

Test	Assessment
1. Transfer of ownership test	Transfer of ownership does not occur; the asset reverts to CitiCapital at the end of the lease.
2. Purchase option test	There is no purchase option in the lease.
3. Lease term test	The lease term is 70% ($7 \div 10$) of the remaining economic life of the asset, which is less than the major part of the life of the asset (75%).
4. Present value test	The present value of the lease payments is \$25,414,624 _* , which is 77% ($\$25,414,624 \div \$33,000,000$) of the fair value of the aircraft, or less than 90%. Therefore, the lease does not meet the present value test.
5. Alternative use test	As indicated, the equipment is not of a specialized nature and is expected to have use to CitiCapital when returned at the end of the lease.
* $\$4,881,448 \times 5.20637$ ($PVF-OA_{7,8\%}$)	

ILLUSTRATION 21A.3 Lease Classification Tests

Thus, this arrangement is accounted for as a sale, rather than a failed sale, because the leaseback does not transfer control of the asset back to JAL; that is, only the right-of-use for seven years is granted through the lease. **Illustration 21A.4** presents the typical journal entries to record the sale-leaseback transactions for JAL and CitiCapital for the first two years of the lease.

JAL (Lessee)		CitiCapital (Lessor)		
Sale of aircraft by JAL to CitiCapital (January 1, 2022):				
Cash	33,000,000	Aircraft	33,000,000	
Gain on Disposal of Plant Assets	3,000,000	Cash	33,000,000	
Aircraft	30,000,000			
Right-of-Use Asset	25,414,624			
Lease Liability	25,414,624			
First lease payment (December 31, 2022):				
Interest Expense	2,033,170*	Cash	4,881,448	
Lease Liability	2,848,278	Lease Revenue	4,881,448	
Cash	4,881,448			
Depreciation expense on the aircraft (December 31, 2022):				
Depreciation Expense	3,630,661	Depreciation Expense		
Right-of-Use Asset (\$25,414,624 ÷ 7 years)	3,630,661	(\$33,000,000 ÷ 10)	3,300,000	
		Accumulated Depreciation		
		– Leased Equipment	3,300,000	
Second lease payment (December 31, 2023):				
Interest Expense	1,805,308*	Cash	4,881,448	
Lease Liability	3,076,140	Lease Revenue	4,881,448	
Cash	4,881,448			
Depreciation expense on the aircraft (December 31, 2023):				
Depreciation Expense	3,630,661	Depreciation Expense	3,300,000	
Right-of-Use Asset (\$25,414,624 ÷ 7 years)	3,630,661	(\$33,000,000 ÷ 10)		
		Accumulated Depreciation—		
		Leased Equipment	3,300,000	
*Partial Lease Amortization Schedule				
Date	Annual Lease Payment	Interest (8%) on Liability	Reduction of Lease Liability	Lease Liability
Jan. 2022				\$25,414,624
Dec. 2022	\$4,881,448	\$2,033,170	\$2,848,278	22,566,346
Dec. 2023	4,881,448	1,805,308	3,076,140	19,490,206

ILLUSTRATION 21A.4 Comparative Entries for Sale-Leaseback for Lessee and Lessor

As indicated, JAL amortizes the lease liability and depreciates the right-of-use asset, resulting in interest and depreciation expense. CitiCapital (the buyer-lessor) continues to recognize the asset on its statement of financial position and recognizes equal amounts of rental revenue (straight-line basis) in each period. It **depreciates the leased asset generally on a straight-line basis.**

APPENDIX 21B **Comprehensive Examples**

LEARNING OBJECTIVE *6

Apply lessee and lessor accounting to finance and operating leases.

This appendix presents a comprehensive illustration of lessee and lessor accounting for a lease arrangement when classified as a finance/sales-type or

operating lease.

Lease Terms: Scenario 1

Parker Shipping Ltd. (lessee) leases a standard hydraulic lift from Stoughton Trailers AG (the lessor) that will be installed at one of Parker's loading docks. The lease, signed on January 1, 2022, specifies that Stoughton grants right-of-use of the lift to Parker under the following terms:

- The lease agreement is non-cancelable with a term of four years, requiring equal rental payments of €11,182.24 at the beginning of each year of the lease (annuity-due basis).
- The lift has a fair value at commencement of the lease of €40,000, an **estimated economic life of four years, and no residual value**. The cost of the lift on Stoughton's books is €30,000.
- The lease contains no renewal options. The lift reverts to Stoughton at the termination of the lease.
- The implicit rate of the lessor is 8 percent and is known by Parker. Stoughton sets the annual rental as shown in [**Illustration 21B.1**](#).

Fair value of leased equipment	€40,000.00
Less—present value of the residual value	0.00
Amount to be recovered by lessor through lease payments	€40,000.00
Four beginning-of-year lease payments to earn an 8% return ($€40,000 \div 3.57710$ ($PVF-AD_{4,8\%}$))	<u>€ 11,182.24</u>

[**ILLUSTRATION 21B.1**](#) Lease Payment Calculation

Lease Classification

Stoughton (lessor) evaluates the lease classification tests as indicated in [**Illustration 21B.2**](#).

Test	Assessment
1. Transfer of ownership test	Transfer of ownership does not occur; the asset reverts to Stoughton at the end of the lease.
2. Purchase option test	There is no bargain purchase option in the lease.
3. Lease term test	The lease term is equal to the economic life of the asset (100%). Therefore, the lease meets the lease term test.
4. Present value test	The present value of the lease payments is €40,000*, which is 100% (greater than or equal to 90%) of the fair value of the hydraulic lift. Therefore, the lease meets the present value test.
5. Alternative use test	As indicated, the hydraulic lift will be completely used up at the end of the lease, and of no benefit to Stoughton.
*€11,182.24 × 3.57710 (PVF-AD _{4,8%}) = €40,000.00	

ILLUSTRATION 21B.2 Lease Classification Tests

Thus, the lease is classified as a finance (sales-type) lease due to meeting the lease term and present value tests (either is sufficient).

Lessee/Lessor Accounting

The accounting for the lease liability (Parker) and lease receivable (Stoughton) is based on the amounts reported in the amortization schedule presented in

Illustration 21B.3.²²

**Parker Shipping/Stoughton Trailers
Lease Amortization Schedule**
Annuity-Due Basis

Date	Annual Lease Payment	Interest (8%) on Liability/Receivable	Reduction of Lease Liability/Receivable	Lease Liability/Receivable
	(a)	(b)	(c)	(d)
1/1/22				€40,000.00
1/1/22	€11,182.24	€ –	€11,182.24	28,817.76
1/1/23	11,182.24	2,305.42	8,876.82	19,940.94
1/1/24	11,182.24	1,595.28	9,586.96	10,353.98
1/1/25	11,182.24	828.26*	10,353.98	0.00
	<u>€44,728.96</u>	<u>€4,728.96</u>	<u>€40,000.00</u>	

a. Lease payment as required by lease.

b. Eight percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.

c. (a) minus (b).

d. Preceding balance minus (c).

*Rounded by €0.06.

ILLUSTRATION 21B.3 Lease Liability Amortization Schedule

Entries for Parker (lessee) and Stoughton (lessor) over the life of the lease are presented in [Illustration 21B.4](#), based on the amounts reported in the amortization schedule in [Illustration 21B.3](#).

Parker Shipping (Lessee)				Stoughton Trailers (Lessor)

ILLUSTRATION 21B.4 Lessee/Lessor Entries for Finance/Sales-Type Lease

Lease Terms: Scenario 2

Now consider the following revised terms of the lease between Parker Shipping Ltd. and Stoughton Trailers AG for the right-of-use of a hydraulic lift. The lease, signed on January 1, 2022, specifies that Stoughton grants right-of-use of the lift to Parker under the following terms.

- The lease agreement is non-cancelable with a term of four years, requiring equal rental payments of €9,538.39 with the first payment on January 1, 2022 (annuity-due basis).
- The lift has a fair value at commencement of the lease of €40,000, an estimated **economic life of six years**. The lift has a **residual value at the end of the lease of €8,000 (unguaranteed)**. The cost of the lift on Stoughton's books is €30,000.
- The lease contains no renewal options. The lift reverts to Stoughton at the termination of the lease.
- The implicit rate of Stoughton (the lessor) is eight percent and is known by Parker.

Stoughton determines the rental payments such that it earns a rate of return of eight percent per year (implicit rate) on its investment, as shown in [**Illustration 21B.5**](#).

Fair value of leased equipment	€40,000.00
Less: Present value of the residual value ($€8,000 \times .73503$ ($PV_{4,8\%}$))	5,880.24
Amount to be recovered by lessor through lease payments	€ 34,119.76
Four beginning-of-year lease payments to earn an 8% return ($€34,119.76 \div 3.57710$ ($PVF-AD_{4,8\%}$))	€ 9,538.39

ILLUSTRATION 21B.5 Computation of Lease Payments

Lease Classification

Stoughton evaluates the lease classification tests as indicated in [**Illustration 21B.6**](#).

Test	Assessment
1. Transfer of ownership test	Transfer of ownership does not occur; the asset reverts to Stoughton at the end of the lease.
2. Purchase option test	There is no bargain purchase option in the lease.
3. Lease term test	The lease term is 66.67% ($4 \div 6$) of the economic life of the asset, which is less than the major part of the life of the asset (75%).
4. Present value test	The present value of the lease payments is €34,119.76*, which is 85.3% ($€34,119.76 \div €40,000$) of the fair value of the lift. Therefore, it does not meet the present value test.
5. Alternative use test	The equipment is not of a specialized nature and is expected to have use to Stoughton when returned at the end of the lease.
*€9,538.39 \times 3.57710 (PVF-AD ₄ , 8%)	

ILLUSTRATION 21B.6 Lease Classification Tests

Thus, the lease is classified as an operating lease by Stoughton (the lessor), as none of the classification tests are met.

Lessee Accounting

Parker makes the following entry to record this lease and the first payment.

January 1, 2022		
Right-of-Use Asset	34,119.76	
Lease Liability		34,119.76
Lease Liability	9,538.39	
Cash		9,538.39

Illustration 21B.7 shows the interest expense and amortization of the lease liability, applying the effective-interest method.

Parker Shipping Ltd.
Lease Amortization Schedule
Annuity-Due Basis

Date	Annual Lease Payment	Interest (8%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)
1/1/22				€34,119.76
1/1/22	€ 9,538.39	€ -0-	€ 9,538.39	24,581.37
1/1/23	9,538.39	1,966.51	7,571.88	17,009.49
1/1/24	9,538.39	1,360.76	8,177.63	8,831.86
1/1/25	9,538.39	706.53*	8,831.86	0.00
	<u>€38,153.56</u>	<u>€4,033.80</u>	<u>€34,119.76</u>	

a. Lease payment as required by lease.

b. Eight percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.

c. (a) minus (b).

d. Preceding balance minus (c).

*Rounded by €0.02.

ILLUSTRATION 21B.7 Lease Amortization Schedule—Lessee

The journal entries by Parker over the remaining life of the lease are presented in **Illustration 21B.8**.

Depreciation Expense	8,529.94		
Right-of-Use Asset (€34,119.76 ÷ 4 years)		8,529.94	

ILLUSTRATION 21B.8 Lessee Entries for Finance Lease

After the entry for the final payment on December 31, 2025, the lease liability and right-of-use asset are fully amortized and depreciated. The lease expense for the four years (€38,153.56) is comprised of depreciation of the right-of-use asset of €34,119.76, plus interest associated with the amortization of the lease liability of €4,033.80.

Lessor Accounting—Operating Lease

As shown in the evaluation of the classification tests in [Illustration 21B.6](#), Stoughton classifies the lease as an operating lease because none of the sales-type lease criteria are met. Stoughton's entries throughout the lease are presented in [Illustration 21B.9](#).

Stoughton Trailers (Lessor)		
Lease payments (January 1, 2022, 2023, 2024, 2025):		
Cash	9,538.39	
Unearned Lease Revenue		9,538.39
Recognize lease revenue, record depreciation (December 31, 2022, 2023, 2024, 2025):		
Unearned Lease Revenue	9,538.39	
Lease Revenue		9,538.39
Depreciation Expense ($\text{€}30,000.00 \div 6$)	5,000.00	
Accumulated Depreciation—Equipment		5,000.00

ILLUSTRATION 21B.9 Lessor Entries for Operating Lease

Under the operating method, Stoughton (the lessor) continues to recognize the asset on its statement of financial position and recognizes equal amounts of lease revenue (straight-line basis) in each period. It depreciates the leased asset generally on a straight-line basis over the asset's remaining economic life. In addition to the depreciation charge, Stoughton reports lease revenue separately from other revenues in its income statement or notes to its financial statements. A lessor should classify the leased equipment and accompanying accumulated depreciation separately from plant assets it owns as Equipment Leased to Others or Investment in Leased Property.

Learning Objectives Review

1 Describe the environment related to leasing transactions.

A lease is a contract, or part of a contract, that conveys the right to control the use of identified property, plant, or equipment (an identified asset) for a period of time in exchange for consideration. The advantages of lease transactions for lessees are: (1) 100 percent financing, (2) protection against obsolescence, (3) flexibility, and (4) less costly financing. The benefits for lessors are: (1) profitable interest margins, (2) stimulation of product sales, (3) tax benefits and efficient tax sharing, and (4) residual value profits.

2 Explain the accounting for leases by lessees.

For all leases, the lessee records a right-of-use asset and related liability at the commencement of the lease. The lease liability is computed as the present value

of the lease payments. The asset representing the right-of-use of the underlying asset (i.e., the right-of-use asset) is equal to the lease liability. The lessee recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records depreciation expense on the right-of-use asset (generally on a straight-line basis).

Low-Value Leases. For leases of underlying assets with values of \$5,000 or less, rather than recording a right-of-use asset and lease liability, a lessee may elect to expense the lease payments as incurred.

Short-Term Leases. A short-term lease is a lease that, at the commencement date, has a lease term of 12 months or less. Rather than recording a right-of-use asset and lease liability, lessees may elect to forego recognition of a right-of-use asset and lease liability and expense the lease payments as incurred.

Whether the estimated **residual value is guaranteed or unguaranteed** is of both economic and accounting consequence to the lessee: (1) If it is probable that the expected residual value is equal to or greater than the guaranteed residual value, the lessee should not include the guaranteed residual value in the computation of the lease liability. (2) If it is probable that the expected residual value is less than the guaranteed residual value, the present value of the difference between the expected and guaranteed residual values should be included in computation of the lease liability. (3) The lessee does not include the unguaranteed residual value in the computation of the lease liability.

Bargain Purchase Option. A bargain purchase option increases the present value of the lease payments by the present value of the option price for the lessee. In computing annual depreciation of the right-of-use asset with this type of option, the lessee uses the economic life of the underlying asset.

3 Explain the accounting for leases by lessors.

The lessor determines the lease payments based on the rate of return—the implicit rate—needed to justify leasing the asset, taking into account the credit standing of the lessee, the lease term, and the status of the residual value (guaranteed versus unguaranteed). Lessors use one of two methods to account for lease arrangements: (1) the finance lease method or (2) the operating lease method. Refer to [Illustration 21.18](#) for the tests lessors use to determine whether to use the finance method or the operating method. Leases that fail to meet any of the five classification tests are classified as operating leases.

For a finance lease, the lessor accounts for the lease in a manner similar to the sale of an asset. At lease commencement, the lessor takes the asset off the books and records a receivable equal to the present value of the lease payments. Any dealer or manufacturer selling profit on the transfer of the leased asset (in a sales-type lease) is recognized in income at commencement of the lease. The lessor

recognizes interest revenue on the lease receivable over the life of the lease using the effective-interest method. In an operating lease, a lessee obtains control of only the use of the underlying asset but not ownership of the underlying asset itself. **Under the operating method**, lessors continue to recognize the asset on the statement of financial position and record equal amounts of lease revenue (straight-line basis) in each period. The lessor depreciates the leased asset generally on a straight-line basis.

4 Discuss the accounting and reporting for special features of lease arrangements.

Other Lease Adjustments. The lease liability is the starting point to determine the amount to record for the right-of-use asset. Lessees adjust the measurement of the right-of-use asset as follows: (1) lease prepayments made by the lessee increase the right-of-use asset, (2) lease incentive payments made by the lessor to the lessee reduce the right-of-use asset, and (3) initial direct costs incurred by the lessee increase the right-of-use asset.

Presentation, Disclosure, and Analysis. Presentation and disclosure by lessors and lessees of amounts related to leases vary, depending on whether leases are classified as finance/sales-type or operating. See [Illustrations 21.37](#) and [21.38](#) (presentation in the statement of financial position and income statement) and [Illustrations 21.39](#), [21.40](#), and [21.41](#) (disclosures in the notes to the financial statements) for summaries of presentation and disclosure requirements. Expanded recognition of lease assets and liabilities under the new lease accounting rules have the potential to result in significant impacts on analysis, based on information in the financial statements. A number of financial metrics used to measure the profitability and solvency of companies will change, which could create challenges when performing financial analysis.

***5 Describe the lessee's accounting for sale-leaseback transactions.**

In a sale-leaseback arrangement, a company (the seller-lessee) transfers an asset to another company (the buyer-lessor) and then leases that asset back from the buyer-lessor. If the leaseback is classified as a finance/sales-type lease, the sale is not recognized (and is referred to as a failed sale) because the seller-lessee continues to control the asset—the transaction is accounted for as a financing arrangement. If the leaseback is classified as an operating lease, sale-leaseback accounting is appropriate. Under sale-leaseback accounting, gross profit on the sale is recognized and the leaseback is accounted for as a lease with recognition of a right-of-use asset, lease liability, and subsequent amortization and depreciation using the finance lease method. The buyer-lessor continues to recognize the asset on its statement of financial position and recognizes equal amounts of lease

revenue (straight-line basis) in each period. It depreciates the leased asset generally on a straight-line basis.

***6 Apply lessee and lessor accounting to finance and operating leases.**

Companies must understand and correctly apply the procedures for classifying and accounting for lease arrangements.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Morgan Bakeries is involved in four different lease situations. Each of these leases is non-cancelable, and in no case does Morgan receive title to the properties leased during or at the end of the lease term. All leases start on January 1, 2022, with the first rental due at the beginning of the year. For each lease, assume that the lessors have alternative use for the assets at the end of the lease unless ownership transfers to the lessee. Additional information is shown in the following table.

	(a) Harmon AG	(b) Arden's Oven plc	(c) Mendota Truck SA	(d) Appleland Computer
Type of property	Cabinets	Oven	Truck	Computer
Yearly rental	€6,000	£12,000	€5,189.31	€2,640.35
Lease term (years)	20	10	3	3
Estimated economic life	30	25	4	5
Purchase option	None	£75,000 at end of 10 years £4,000 at end of 15 years	None	€3,000 at end of 3 years, which approximates fair value

Renewal option	None	5-year renewal at £12,000 per year after 10 years, reasonably certain to be exercised if the purchase option is not	None	1 year at €1,500; no penalty for non-renewal; standard renewal clause
Fair value at commencement of lease	€75,000	£120,000	€20,000	€10,000
Cost of asset to lessor	€60,000	£100,000	€15,000	€10,000
Residual value				
1. Guaranteed	–0–	–0–	€7,000 (the amount expected to be paid)	–0–
2. Unguaranteed	€35,000	–0–	–0–	€3,000
Incremental borrowing rate of lessee	8%	8%	8%	8%
Present value of rental payments				
Using incremental borrowing rate of lessee	€63,621.60	£112,191.84	€20,000	€7,618.51
Using implicit rate of lessor	Not known	Not known	Not known	Known by lessee (6%), €7,481.14
Estimated fair value at end of lease term	€35,000	£80,000 at end of 10 years	Not available	€3,000
		£60,000 at end of 15 years		

Instructions

For each lease arrangement, determine the correct classification of the lease and prepare the journal entries for both the lessee and the lessor at its commencement.

Solution

a. Analysis of the Harmon AG lease:

1. **Transfer of title?** No.
2. **Bargain purchase option?** No.
3. **Economic life test:** The lease term is 20 years and the estimated economic life is 30 years. Thus, it **does not** meet the 75% test.
4. **Present value test:** No; the present value of the rental payments of \$63,621.60 is less than 90% of the fair value of the underlying asset as shown below.

Fair value	€75,000	Rental payments	€ 6,000
Rate	× .90	PV of annuity due for 20 years at 8%	× 10.60360
90% of fair value	<u>€67,500</u>	PV of rental payments	<u>€63,621.60</u>

Harmon should account for this lease as an operating lease. Morgan and Harmon make the following January 1, 2022, entries.

Morgan Bakeries (Lessee)			Harmon AG (Lessor)		
Right-of-Use Asset	63,621.60		Cash	6,000	
Lease Liability		63,621.60	Unearned Lease Revenue		6,000
Lease Liability	6,000.00				
Cash		6,000.00			

b. Analysis of the Arden's Oven PLC lease:

1. **Transfer of title?** No.
2. **Bargain purchase option?** The £75,000 option at the end of 10 years does not appear to be sufficiently lower than the expected fair value of £80,000 to make it reasonably assured that it will be exercised. However, given that the renewal option is reasonably certain to be exercised, the

parties also consider the £4,000 purchase option at the end of 15 years. Since the fair value is expected to be £60,000 at the end of 15 years, the £4,000 option appears to be a bargain and test 2 (bargain purchase option) is therefore met. Note that both the guaranteed and the unguaranteed residual values are assigned zero values because the lessor does not expect to repossess the leased asset.

3. **Economic life test:** Given that the renewal option exists, the lease term is the initial lease period of 10 years plus the 5-year renewal option. Even though the lease term is now considered to be 15 years, the lease term test is still not met because 75% of the economic life of 25 years is 18.75 years.

4. **Present value test:**

Fair value	£120,000	Rental payments	€ 12,000
Rate	× .90	PV of annuity due for 15 years at 8%	× 9.24424
90% of fair value	<u>£108,000</u>	PV of rental payments	<u>£110,930.88</u>

PV of bargain purchase option: = £4,000 × (PVF_{15,8%}) = £4,000 × .31524 = £1,260.96

PV of rental payments	£110,930.88
PV of bargain purchase option	<u>1,260.96</u>
PV of lease payments	<u>£112,191.84</u>

The present value of the lease payments is greater than 90% of the fair value. Therefore, the lease does meet the 90% test.

Arden should account for the lease as a sales-type lease, because the lease meets both tests 2 and 4. The following entries are made on January 1, 2022.

Morgan Bakeries (Lessee)			Arden's Oven plc (Lessor)		
Right-of-Use Asset (oven)	112,191.84		Lease Receivable	120,000	
Lease Liability		112,191.84	Cost of Goods Sold	100,000	
Lease Liability	12,000.00		Inventory		100,000
Cash		12,000.00	Sales Revenue		120,000
			Cash	12,000	

			Lease Receivable		12,000
--	--	--	------------------	--	--------

Morgan would depreciate the right-of-use asset over its economic life of 25 years, given the bargain purchase option. The Lease Receivable amount of £120,000 recorded by Arden is different than the Lease Liability amount of £112,191.84 recorded by Morgan. The reason for this difference is that the implicit rate used by Arden is lower than the incremental borrowing rate of 8% used by Morgan.

c. Analysis of the Mendota Truck SA lease:

1. **Transfer of title?** No.

2. **Bargain purchase option?** No.

3. **Economic life test:** The lease term is 3 years and the estimated economic life is 4 years. Thus, it **does** meet the 75% test ($3 \div 4 = 75\%$).

4. **Present value test:**

Fair value	€20,000	Rental payments	€ 5,189.31
Rate	× .90	PV of annuity due for 3 years at 8%	× 2.78326
90% of fair value	<u>€18,000</u>	PV of rental payments	<u>€14,443.19*</u>
		*Adjusted for €0.01 due to rounding.	

PV of guaranteed residual value = $€7,000 \times (PVF_{3, 8\%}) = €7,000 \times .79383 = €5,556.81$	
PV of rental payments	€14,443.19
PV of guaranteed residual value	<u>5,556.81</u>
PV of lease payments	<u>€20,000.00</u>

The present value of the lease payments is greater than 90% of the fair value. Therefore, the lease meets the 90% test.

The following entries are made on January 1, 2022.

Morgan Bakeries (Lessee)			Mendota Truck SA (Lessor)		
Right-of-Use Asset (truck)	20,000.00		Lease Receivable	20,000	
Lease Liability		20,000.00	Cost of Goods Sold	15,000	

Lease Liability	5,189.31		Trucks		15,000
Cash		5,189.31	Sales Revenue		20,000
			Cash	5,189.31	
			Lease Receivable		5,189.31

This is a sales-type lease for Mendota. Morgan depreciates the right-of-use asset over 3 years.

d. Analysis of the Appleland Computer lease:

1. **Transfer of title?** No.

2. **Bargain purchase option?** No. The option to purchase at the end of 3 years at approximate fair value is clearly not a bargain.

3. **Economic life test:** The lease term is 3 years, and no bargain renewal period exists, as it is simply a standard renewal clause which is not reasonably certain to be exercised. Therefore, the 75% test is not met ($3 \div 5 = 60\%$).

4. **Present value:**

Fair value	€10,000	Rental payments	€2,640.35
Rate	× .90	PV of annuity-due factor for 3 years at 6%	× 2.83339
90% of fair value	<u>€ 9,000</u>	PV of lease payments using implicit borrowing rate	<u>€7,481.14</u>

The present value of the lease payments using the implicit borrowing rate is €7,481.14. Because the present value of the lease payments is lower than 90% of the fair value, the lease does not meet the present value test.

Thus, this is an operating lease for Appleland. The entries made for the lease on January 1, 2022, are as follows.

Morgan Bakeries (Lessee)			Appleland Computer (Lessor)		
Right-of-Use Asset (truck)	7,481.14		Cash	2,640.35	
Lease Liability		7,481.14	Unearned Lease		
Lease Liability	2,640.35		Revenue		2,640.35
Cash		2,640.35			

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- 1.** What are the major lessor groups? What advantage does a captive leasing subsidiary have in a leasing arrangement?
- 2.** Bradley plc is expanding its operations and is in the process of selecting the method of financing this program. After some investigation, the company determines that it could (1) issue bonds and with the proceeds purchase the needed assets, or (2) lease the assets on a long-term basis. Without knowing the comparative costs involved, answer these questions:
 - a. What are the possible advantages of leasing the assets instead of owning them?
 - b. How would the statement of financial position be different if Bradley leases the assets rather than purchasing them?
- 3.** What are the major advantages to a lessor for becoming involved in a leasing arrangement?
- 4.** Morgan Handley and Tricia Holbrook are discussing the new leasing standard. Morgan believes the standard requires that the lessee use the implicit rate of the lessor in computing the present value of its lease liability. Tricia is not sure if Morgan is correct. Explain the discount rate that the lessee should use to compute its lease liability.
- 5.** Paul Singer indicated that "all leases must now be capitalized on the statement of financial position." Is this statement correct? Explain.
- 6.** Describe the following terms: (a) residual value, (b) guaranteed residual value, and (c) initial direct costs.
- 7.** Explain the following concepts: (a) bargain purchase option and (b) bargain renewal option.
- 8.** What payments are included in the lease liability?
- 9.** Wonda Stone read somewhere that a residual value guarantee is used for computing the present value of lease payments. Is Wonda correct in her interpretation? Explain.

- 10.** Identify the amounts included in the measurement of the right-of-use asset.
- 11.** Harcourt Company enters into a lease agreement with Brunsell Inc. to lease office space for a term of 72 months. Lease payments during the first year are \$5,000 per month. Each year thereafter, the lease payments increase by an amount equivalent to the percentage increase in a price index. For example, if the price index increases 2% in the second year, the monthly payment increases to \$5,100. In the second year, the price index increases by 3%. What are the lease payment amounts used to record this lease in the second year?
- 12.** Describe the accounting procedures involved in applying the finance lease method by a lessee.
- 13.** What is a low-value lease? Describe lessee accounting for low-value leases.
- 14.** What is a short-term lease? Describe lessee accounting for a short-term lease.
- 15.** Describe the effect on the lessee of a “bargain purchase option” in accounting for a finance lease transaction.
- 16.** Identify the lease classifications for lessors and the criteria that must be met for each classification. What is the relevance of revenue recognition criteria for lessor accounting for leases?
- 17.** Explain which of the following would result in the lessor classifying the lease as a finance lease.
- a. The lease is for a major part of the economic life of the asset.
 - b. The lease term is 12 months or less.
 - c. The lease transfers ownership of the asset at the end of the lease.
- 18.** What is the difference between a lease receivable and a net investment in the lease?
- 19.** Explain the accounting involved in applying the operating lease method by a lessor.
- 20.** Explain the difference in lessor income statement presentation for a sales-type versus an operating lease.
- 21.** Walker Company is a manufacturer and lessor of computer equipment. What should be the nature of its lease arrangements with lessees if the company wishes to account for its lease transactions as finance (sales-type) leases?
- 22.** Metheny Group’s lease arrangements qualify as finance (sales-type) leases at the time of entering into the transactions. How should the company recognize sales revenue and cost of goods sold in these situations?

23. Packer plc (the lessor) concludes that its lease meets one of the tests to be classified as a sales-type lease. However, collection of lease payments is not probable. In this case, how should Packer account for any lease payments received?

24. The residual value is the estimated fair value of the leased property at the end of the lease term. Of what significance is (a) an unguaranteed and (b) a guaranteed residual value in the lessee's accounting under the finance lease method?

25. Of what significance is (a) an unguaranteed and (b) a guaranteed residual value in the lessor's accounting for a finance (sales-type) lease transaction?

26. What are "initial direct costs" and how are they accounted for by lessees and lessors?

27. What disclosures should be made by lessees and lessors related to future lease payments?

***28.** What is the nature of a "sale-leaseback" transaction?

***29.** Sanchez SA (seller-lessee) enters into a sale-leaseback to sell its company headquarters for R\$18 million to Harper Bank. The carrying value of the headquarters at the date of sale is R\$14 million. Sanchez then leases back the headquarters in exchange for R\$180,000 per year in rental payments. The leaseback is considered an operating lease. How should Sanchez account for this sale?

Brief Exercises

BE21.1 (LO 2) Samson AG leases a building and land. The lease term is 6 years and the annual fixed payments are €800,000. The lease arrangement gives Samson the right to purchase the building and land for €11,000,000 at the end of the lease. Based on an economic analysis of the lease at the commencement date, Samson is reasonably certain that the fair value of the leased assets at the end of lease term will be much higher than €11,000,000. What are the total lease payments in this lease arrangement?

BE21.2 (LO 2, 4) Fieger Company leases equipment for 8 years with an annual rental of \$2,000 per year or \$16,000 in total. General Leasing (the lessor) agrees to provide Fieger with \$300 for the first 2 years of the lease to defray needed repairs to the equipment. Determine the undiscounted lease payments that Fieger will pay for the first 3 years of the lease agreement.

BE21.3 (LO 2) Sanders Fashion enters into a lease arrangement with Highpoint Leasing for 5 years. Sanders agrees to pay 4% of its net sales as a variable lease payment. Sanders does not pay any fixed payments. Sanders is a highly successful company that has achieved over £1,000,000 in net sales over the last 7 years. Both

Sanders and Highpoint forecast that net sales will be a much greater amount than £1,000,000 in subsequent years. As a result, it is highly certain that Sanders will make payments of at least £40,000 ($£1,000,000 \times .04$) each year. What is the undiscounted lease payment amount Sanders should use to record its right-of-use asset?

BE21.4 (LO 2) Waterworld Company leased equipment from Costner Company, beginning on December 31, 2021. The lease term is 4 years and requires equal rental payments of \$41,933 at the beginning of each year of the lease, starting on the commencement date (December 31, 2021). The equipment has a fair value at the commencement date of the lease of \$150,000, an estimated useful life of 4 years, and no estimated residual value. The appropriate interest rate is 8%. Prepare Waterworld's 2021 and 2022 journal entries, assuming Waterworld depreciates similar equipment it owns on a straight-line basis.

BE21.5 (LO 2) Rick Kleckner NV recorded a right-of-use asset for €300,000 as a result of a lease on December 31, 2021. Kleckner's incremental borrowing rate is 8%, and the implicit rate of the lessor was not known at the commencement of the lease. Kleckner made the first lease payment of €48,337 on December 31, 2021. The lease requires 8 annual payments. The equipment has a useful life of 8 years with no residual value. Prepare Kleckner's December 31, 2022, entries.

BE21.6 (LO 2) Debbink plc leased machinery from Young Ltd. on January 1, 2022. The lease term was for 8 years, with equal annual rental payments of £5,300 at the beginning of each year. In addition, the lease provides an option to purchase the machinery at the end of the lease term for £2,000, which Debbink is reasonably certain it will exercise, as it believes the fair value of the machinery will be at least £6,000. The machinery has a useful life of 10 years and a fair value of £36,000. The implicit rate of the lease is not known to Debbink. Debbink's incremental borrowing rate is 8%. Prepare Debbink's 2022 journal entries.

BE21.7 (LO 3) Cardinal Ltd. is negotiating to lease a piece of equipment to MTBA plc. MTBA requests that the lease be for 9 years. The equipment has a useful life of 10 years. Cardinal wants a guarantee that the residual value of the equipment at the end of the lease is at least £5,000. MTBA agrees to guarantee a residual value of this amount though it expects the residual value of the equipment to be only £2,500 at the end of the lease term. If the fair value of the equipment at lease commencement is £70,000, what would be the amount of the annual rental payments Cardinal demands of MTBA, assuming payments will be made at the beginning of each year and Cardinal wishes to earn a rate of return on the lease of 8%?

BE21.8 (LO 3) Mequon Inc. wishes to lease machinery to Thiensville Company. Thiensville wants the machinery for 4 years, although it has a useful life of 10 years. The machinery has a fair value at the commencement of the lease of \$47,000, and Mequon expects the machinery to have a residual value at the end of

the lease term of \$30,000. However, Thiensville does not guarantee any part of the residual value. Thiensville does expect that the residual value will be \$45,000 instead of \$30,000. What would be the amount of the annual rental payments Mequon demands of Thiensville, assuming payments will be made at the end of each year and Mequon wishes to earn a rate of return on the lease of 6%?

BE21.9 (LO 3) Assume that **IBM** (USA) leased equipment that was carried at a cost of £120,000 to Swander plc. The term of the lease is 6 years beginning December 31, 2021, with equal rental payments of £30,044 beginning December 31, 2021. The fair value of the equipment at commencement of the lease is £150,001. The equipment has a useful life of 6 years with no residual value. The lease has an implicit interest rate of 8%, no bargain purchase option, and no transfer of title. Collectibility of lease payments for IBM is probable. Prepare IBM's December 31, 2021, journal entries at commencement of the lease.

BE21.10 (LO 3) Use the information for **IBM** (USA) from BE21.9. Assume the sales-type lease was recorded at a present value of £150,001. Prepare IBM's December 31, 2022, entry to record the lease transaction with Swander plc.

BE21.11 (LO 3) Geiberger AG manufactures drones. On December 31, 2021, it leased to Althaus SA a drone that had cost €120,000 to manufacture. The lease agreement covers the 5-year useful life of the drone and requires 5 equal annual rentals of €40,800 payable each December 31, beginning December 31, 2021. An interest rate of 8% is implicit in the lease agreement. Collectibility of the rentals is probable. Prepare Geiberger's December 31, 2021, journal entries.

BE21.12 (LO 3) Use the information for Geiberger AG from BE21.11, except assume the collectibility of the rentals is not probable. Prepare any journal entries for Geiberger on December 31, 2021.

BE21.13 (LO 3) Kubby NV specializes in leasing large storage units to other businesses. Kubby entered a contract to lease a storage unit to Risky Ltd. for 4 years when that particular storage unit had a remaining useful life of 5 years. The fair value of the unit was €10,000 at the commencement of the lease on January 1, 2022. The present value of the 5 equal rental payments of €2,507 at the start of each year, plus the present value of a guaranteed residual value of €1,000, equals the fair value of €10,000, Kubby's implicit rate of return on the lease of 6%. The following is a correct, complete amortization schedule created by Kubby.

Date	Lease Payment	Interest (6%) on Outstanding Lease Receivable	Reduction of Lease Receivable	Balance of Lease Receivable
1/1/22				€10,000
1/1/22	€ 2,507		€ 2,507	7,493

1/1/23	2,507	€ 450	2,057	5,436
1/1/24	2,507	326	2,181	3,255
1/1/25	2,507	195	2,312	943
12/31/25	1,000	57	943	0
	<u>€11,028</u>	<u>€1,028</u>	<u>€10,000</u>	

Given the above schedule, make the appropriate entries at December 31, 2025, for Kubby to record the accrual of interest and the return of the storage unit to Kubby (assuming the unit is returned on December 31, 2025, at the expected and guaranteed residual value of €1,000).

BE21.14 (LO 2) Kingston plc leases equipment from Falls Ltd. on January 1, 2022. The lease agreement does not transfer ownership or contain a bargain purchase option, and it is not a specialized asset. It covers 3 years of the equipment's 8-year useful life, and the present value of the lease payments is less than 90% of the fair value of the asset leased. Prepare Kingston's journal entries on January 1, 2022, and December 31, 2022. Assume the annual lease payment is £35,000 at the beginning of each year, and Kingston's incremental borrowing rate is 6%, which is the same as the lessor's implicit rate.

BE21.15 (LO 3) Use the information for Kingston plc from BE21.14. Prepare all the necessary journal entries for Falls Ltd. (the lessor) for 2022, assuming the equipment is carried at a cost of £200,000.

BE21.16 (LO 2) Rodgers Corporation agrees on January 1, 2022, to lease equipment from Packers, Inc. for 3 years. The lease calls for annual lease payments of \$12,000 at the beginning of each year. The lease does not transfer ownership or contain a bargain purchase option, and it is not a specialized asset. In addition, the economic life of the equipment is 10 years, and the present value of the lease payments is less than 90% of the fair value of the equipment. Prepare Rodgers' journal entries on January 1, 2022 (commencement of the operating lease), and on December 31, 2022. Assume the implicit rate used by the lessor is 8%, which is known to Rodgers.

BE21.17 (LO 3) Use the information for Rodgers Corporation and Packers, Inc. from BE21.16. Assume that for Packers, Inc., the lessor, the collectibility of the lease payments is probable, and the fair value and cost of the equipment are \$60,000. Prepare Packers' 2022 journal entries, assuming the company uses straight-line depreciation and no residual value.

BE21.18 (LO 2) On December 31, 2021, Escapee plc leased machinery from Terminator Group for an agreed-upon lease term of 3 years. Escapee agreed to make annual lease payments of £17,000, beginning on December 31, 2021. The expected residual value of the machinery at the end of the lease term is £9,000, though Escapee does not guarantee any residual value to Terminator. What

amount will Escapee record as its lease liability on December 31, 2021, if its incremental borrowing rate is 6% and the implicit rate of the lease is unknown?

BE21.19 (LO 2) Use the information for Escapee plc from BE21.18. Assume the same facts, except Escapee guarantees a residual value of £9,000 at the end of the lease term, which equals the expected residual value of the machinery. (a) Does this change your answer from BE21.17 ? (b) Does your answer change if the expected residual value at the end of the lease term is £5,000 and Escapee guarantees a residual of £9,000?

BE21.20 (LO 2) Indiana Jones NV enters into a 6-year lease of equipment on December 31, 2021, which requires 6 annual payments of €40,000 each, beginning December 31, 2021. In addition, Indiana Jones guarantees the lessor a residual value of €20,000 at the end of the lease. However, Indiana Jones believes it is probable that the expected residual value at the end of the lease term will be €10,000. The equipment has a useful life of 6 years. Prepare Indiana Jones' December 31, 2021, journal entries, assuming the implicit rate of the lease is 6% and this is known to Indiana Jones.

BE21.21 (LO 3) Use the information for Indiana Jones NV from BE21.20. Assume that for Lost Ark AG, the lessor, collectibility of lease payments is probable and the carrying amount of the equipment is €180,000. Prepare Lost Ark's 2021 and 2022 journal entries.

BE21.22 (LO 4) Forrest, Inc. has entered an agreement to lease an old warehouse with a useful life of 5 years and a fair value of \$20,000 from United Corporation. The agreement stipulates the following.

- Rental payments of \$4,638 are to be made at the start of each year of the 5-year lease. No residual value is expected at the end of the lease.
- Forrest must reimburse United each year for any real estate taxes incurred for the year. Last year, the cost of real estate taxes was \$700, though these costs vary from year to year.
- Forrest must make a payment of \$500 with the rental payment each period to cover the insurance United has on the warehouse.
- Forrest paid legal fees of \$1,000 in executing the lease.

Assuming Forrest's incremental borrowing rate is 8% and the rate implicit in the lease is unknown, prepare the journal entry to record the initial lease liability and right-of-use asset for Forrest.

BE21.23 (LO 4) Bucky Corporation entered into a lease agreement to lease equipment from Badger, Inc. on January 1, 2022. The lease calls for annual lease payments of \$30,000, beginning on January 1, for each of the 3 years of the lease. In addition, Badger will pay Bucky \$5,000 as a cash incentive for entering the

lease by January 1, 2022. In relation to the lease agreement, Bucky incurred the following costs.

Salaries of employees involved in the investigation of the lease	\$2,000
Lease document preparation costs incurred after execution of the lease	500

Bucky's incremental borrowing rate is 8%. If the lease liability is \$83,498, what amount will Bucky record as the value of the right-of-use asset on January 1, 2022, at commencement of the lease?

BE21.24 (LO 4) Homestead AG entered into a lease to lease equipment from Highlander SA on January 1, 2022. The lease calls for annual lease payments of €10,000, beginning on December 31, for each of the 5 years of the lease. In addition, Highlander will pay Homestead €2,000 as a cash incentive for entering the lease by December 31. In relation to the lease agreement, Homestead incurred the following costs.

Commissions for selling agents	€ 900
Internal engineering costs	500
Legal fees resulting from the execution of the lease	3,000

Homestead's incremental borrowing rate is 6%. If the value of the lease liability is €44,651, what amount will Homestead record as the value of the right-of-use asset on January 1, 2022, at commencement of the operating lease?

BE21.25 (LO 4) Brent SA owns equipment that cost €80,000 and has a useful life of 8 years with no residual value. On January 1, 2022, Brent leases the equipment to Havaci ASA for 1 year for one rental payment of €15,000 on January 1. Assuming Havaci (lessee) elects to use the short-term lease exception, prepare Havaci's 2022 journal entries.

***BE21.26 (LO 5)** On January 1, 2022, Irwin Animation sold a truck to Peete Finance for €35,000 and immediately leased it back. The truck was carried on Irwin's books at €28,000. The term of the lease is 3 years, there is no bargain purchase option, and title does not transfer to Irwin at lease-end. The lease requires 3 equal rental payments of €8,696 at the end of each year (first payment on January 1, 2023). The appropriate rate of interest is 6%, the truck has a useful life of 5 years, and the residual value at the end of the lease term is expected to be €14,000, none of which is guaranteed. Prepare Irwin's 2022 journal entries.

***BE21.27 (LO 5)** Assume the same facts as BE21.26, except the lease term is now 5 years and the 5 annual rental payments are €8,309, with no expected residual value at the end of the lease term. Prepare Irwin's 2022 journal entries assuming these new facts.

Exercises

E21.1 (LO 2) (Lessee Entries, No Residual Value) DU Journeys enters into an agreement with Traveler plc to lease a car on December 31, 2021. The following information relates to this agreement.

1. The term of the non-cancelable lease is 3 years with no renewal or bargain purchase option. The remaining economic life of the car is 3 years, and it is expected to have no residual value at the end of the lease term.
2. The fair value of the car was £15,000 at commencement of the lease.
3. Annual payments are made on December 31 at the end of each year of the lease, beginning December 31, 2022. The first payment is £5,552.82, with each payment increasing by a constant rate of 5% from the previous payment (i.e., the second payment will be £5,830.46, and the third and final payment will be £6,121.98).
4. DU Journeys' incremental borrowing rate is 8%. The rate implicit in the lease is unknown.
5. DU Journeys uses straight-line depreciation for all similar cars.

Instructions

- a. Prepare DU Journeys' journal entries for 2021, 2022, and 2023.
- b. Assume that, instead of a constant rate of increase, the annual lease payments will increase according to a price index. At its current level, the price index stipulates that the first rental payment should be £5,820. What would be the impact on the journal entries made by DU Journeys at commencement of the lease, as well as for subsequent years?

E21.2 (LO 2) (Lessee Entries, Lease with Unguaranteed Residual Value) On December 31, 2021, Burke Corporation signed a 5-year, non-cancelable lease for a machine. The terms of the lease called for Burke to make annual payments of \$8,668 at the beginning of each year, starting December 31, 2021. The machine has an estimated useful life of 6 years and a \$5,000 unguaranteed residual value. The machine reverts back to the lessor at the end of the lease term. Burke uses the straight-line method of depreciation for all of its plant assets. Burke's incremental borrowing rate is 5%, and the lessor's implicit rate is unknown.

Instructions

- a. Compute the present value of the lease payments.
- b. Prepare all necessary journal entries for Burke for this lease through December 31, 2022.

E21.3 (LO 2) (Lessee Computations and Entries, Lease with Guaranteed Residual Value) Delaney AG leases an automobile with a fair value of €10,000 from Simon Motors, on the following terms.

1. Non-cancelable term of 50 months.
2. Rental of €200 per month (at the beginning of each month). (The present value at 0.5% per month is €8,873.)
3. Delaney guarantees a residual value of €1,180 (the present value at 0.5% per month is €920). Delaney expects the probable residual value to be €1,180 at the end of the lease term.
4. Estimated economic life of the automobile is 60 months.
5. Delaney's incremental borrowing rate is 6% a year (0.5% a month). Simon's implicit rate is unknown.

Instructions

- a. What is the present value of the lease payments to determine the lease liability?
- b. Record the lease on Delaney's books at the date of commencement.
- c. Record the first month's lease payment (at commencement of the lease).
- d. Record the second month's lease payment.
- e. Record the first month's depreciation on Delaney's books (assume straight-line).
- f. Suppose that instead of €1,180, Delaney expects the residual value to be only €500 (the guaranteed amount is still €1,180). How does the calculation of the present value of the lease payments change from part (b)?

E21.4 (LO 2, 4) (Lessee Entries, Unguaranteed Residual Value) Assume that on December 31, 2021, Stora Enso (FIN) signs a 10-year, non-cancelable lease agreement to lease a storage building from Sheffield Storage. The following information pertains to this lease agreement.

1. The agreement requires equal rental payments of €71,830 beginning on December 31, 2021.
2. The fair value of the building on December 31, 2021, is €525,176.
3. The building has an estimated economic life of 12 years, a guaranteed residual value of €10,000, and an expected residual value of €7,000. Stora Enso depreciates similar buildings using the straight-line method.

4. The lease is non-renewable. At the termination of the lease, the building reverts to the lessor.
5. Stora Enso's incremental borrowing rate is 8% per year. The lessor's implicit rate is not known by Stora Enso.

Instructions

- a. Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2021, 2022, and 2023. Stora Enso's fiscal year-end is December 31.
- b. Use the same facts as above, except that Stora Enso incurred legal fees of €5,000 resulting from the execution of the lease, and received a lease incentive of €1,000 from Sheffield to enter the lease. How would the initial measurement of the lease liability and right-of-use asset be affected under this situation?
- c. Suppose that in addition to the €71,830 annual rental payments, Stora Enso is also required to pay €5,000 annually for insurance costs on the building directly to the lessor, Sheffield Storage. How would this executory cost affect the initial measurement of the lease liability and right-of-use asset?
- d. Return to the original facts in the problem. Now suppose that, at the end of the lease term, Stora Enso has taken good care of the asset and Sheffield agrees that the fair value of the asset is actually €10,000. Record the entry for Stora Enso at the end of the lease to return the storage building to Sheffield (assuming the accrual of interest on the lease liability has already been made).

E21.5 (LO 3) (Computation of Rental, Journal Entries for Lessor)

Morgan Leasing Group signs an agreement on January 1, 2022, to lease equipment to Cole plc. The following information relates to this agreement.

1. The term of the non-cancelable lease is 6 years with no renewal option. The equipment has an estimated economic life of 6 years.
2. The cost of the asset to the lessor is £245,000. The fair value of the asset at January 1, 2022, is £245,000.
3. The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of £24,335, none of which is guaranteed.
4. The agreement requires equal annual rental payments, beginning on January 1, 2022.

5. Collectibility of the lease payments by Morgan is probable.

Instructions

(Round all numbers to the nearest pound.)

- a. Assuming the lessor desires an 8% rate of return on its investment, calculate the amount of the annual rental payment required. (Round to the nearest pound.)
- b. Prepare an amortization schedule that is suitable for the lessor for the lease term.
- c. Prepare all of the journal entries for the lessor for 2022 and 2023 to record the lease agreement, the receipt of lease payments, and the recognition of revenue. Assume the lessor's annual accounting period ends on December 31, and it does not use reversing entries.

E21.6 (LO 3) (Lessor Entries, Sales-Type Lease with Option to Purchase)

Castle Leasing Company signs a lease agreement on January 1, 2022, to lease electronic equipment to Jan Way Company. The term of the non-cancelable lease is 2 years, and payments are required at the end of each year. The following information relates to this agreement.

1. Jan Way has the option to purchase the equipment for \$16,000 upon termination of the lease. It is not reasonably certain that Jan Way will exercise this option.
2. The equipment has a cost of \$120,000 and fair value of \$160,000 to Castle Leasing. The useful economic life is 2 years, with a residual value of \$16,000.
3. Castle Leasing desires to earn a return of 5% on its investment.
4. Collectibility of the payments by Castle Leasing is probable.

Instructions

- a. Prepare the journal entries on the books of Castle Leasing to reflect the payments received under the lease and to recognize income for the years 2022 and 2023.
- b. Assuming that Jan Way exercises its option to purchase the equipment on December 31, 2023, prepare the journal entry to record the sale on Castle Leasing's books.

E21.7 (LO 2, 3) (Type of Lease, Amortization Schedule) Macinski Leasing leases a new machine to Sharrer SA. The machine has a cost of €70,000 and fair value of €95,000. Under the 3-year, non-cancelable contract, Sharrer will receive

title to the machine at the end of the lease. The machine has a 3-year useful life and no residual value. The lease was signed on January 1, 2022. Macinski expects to earn an 8% return on its investment, and this implicit rate is known by Sharrer. The annual rentals are payable on each December 31, beginning December 31, 2022.

Instructions

- a. Discuss the nature of the lease arrangement and the accounting method that each party to the lease should apply.
- b. Prepare an amortization schedule that would be suitable for both the lessor and the lessee, and which covers all the years involved.
- c. Prepare the journal entry at commencement of the lease for Macinski.
- d. Prepare the journal entry at commencement of the lease for Sharrer.
- e. Prepare the journal entry at commencement of the lease for Sharrer, assuming that (1) Sharrer does not know Macinski's implicit rate (Sharrer's incremental borrowing rate is 9%), and that (2) Sharrer incurs initial direct costs of €10,000.

E21.8 (LO 3) (Lessor Entries, Sales-Type Lease) Crosley Company, a machinery dealer, leased a machine to Dexter Corporation on January 1, 2022. The lease is for an 8-year period and requires equal annual payments of \$35,004 at the beginning of each year. The first payment is received on January 1, 2022. Crosley had purchased the machine during 2021 for \$160,000. Collectibility of lease payments by Crosley is probable. Crosley set the annual rental to ensure a 6% rate of return. The machine has an economic life of 10 years with no residual value and reverts to Crosley at the termination of the lease.

Instructions

- a. Compute the amount of the lease receivable.
- b. Prepare all necessary journal entries for Crosley for 2022.
- c. Suppose the collectibility of the lease payments was not probable for Crosley. Prepare all necessary journal entries for the company in 2022.
- d. Suppose at the end of the lease term, Crosley receives the asset and determines that it actually has a fair value of \$1,000 instead of the anticipated residual value of \$0. Record the entry to recognize the receipt of the asset for Crosley at the end of the lease term.

E21.9 (LO 2, 4) (Lessee Entries, Initial Direct Costs) Use the information for Crosley Company in E21.8. Assume that Dexter Corporation does not know the

rate implicit in the lease used by Crosley, and Dexter's incremental borrowing rate is 8%. In addition, assume that Dexter incurs initial direct costs of \$15,000.

Instructions

- Compute the amount of the lease liability and right-of-use asset for Dexter.
- Prepare all necessary journal entries for Dexter for 2022.

E21.10 (LO 2) (Lessee Entries with Bargain Purchase Option) The following facts pertain to a non-cancelable lease agreement between Mooney Leasing and Choi Group, a lessee (amounts in thousands).

Commencement date	May 1, 2022
Annual lease payment due at the beginning of each year, beginning with May 1, 2022	¥20,471.94
Bargain purchase option price at end of lease term	¥4,000.00
Lease term	5 years
Economic life of leased equipment	10 years
Lessor's cost	¥65,000.00
Fair value of asset at May 1, 2022	¥91,000.00
Lessor's implicit rate	8%
Lessee's incremental borrowing rate	8%

The collectibility of the lease payments by Mooney is probable.

Instructions

(Round all numbers to the nearest yen.)

- Prepare a lease amortization schedule for Choi for the 5-year lease term.
- Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2022 and 2023. Choi's annual accounting period ends on December 31. Reversing entries are used by Choi.

E21.11 (LO 3) (Lessor Entries with Bargain Purchase Option) A lease agreement between Mooney Leasing and Choi Group is described in E21.10.

Instructions

Refer to the data in E21.10 and do the following for the lessor. (Round all numbers to the nearest yen).

- a. Discuss the nature of this lease for Mooney and compute the amount of the lease receivable at commencement of the lease.
- b. Prepare a lease amortization schedule for Mooney for the 5-year lease term.
- c. Prepare the journal entries to reflect the signing of the lease agreement and to record the receipts and income related to this lease for the years 2022 and 2023. The lessor's accounting period ends on December 31. Reversing entries are not used by Mooney.
- d. Suppose the collectibility of the lease payments was not probable for Mooney. Prepare all necessary journal entries for the company in 2022.

E21.12 (LO 2, 3, 4) (Lessee-Lessor Entries, Sales-Type Lease with Bargain Purchase Option) On January 1, 2022, Bensen Company leased equipment to Flynn Corporation. The following information pertains to this lease.

1. The term of the non-cancelable lease is 6 years. At the end of the lease term, Flynn has the option to purchase the equipment for \$1,000, while the expected residual value at the end of the lease is \$5,000.
2. Equal rental payments are due on January 1 of each year, beginning in 2022.
3. The fair value of the equipment on January 1, 2022, is \$150,000, and its cost is \$120,000.
4. The equipment has an economic life of 8 years. Flynn depreciates all of its equipment on a straight-line basis.
5. Bensen set the annual rental to ensure a 5% rate of return. Flynn's incremental borrowing rate is 6%, and the implicit rate of the lessor is unknown.
6. Collectibility of lease payments by the lessor is probable.

Instructions

(Both the lessor and the lessee's accounting periods end on December 31.)

- a. Discuss the nature of this lease for Bensen.
- b. Calculate the amount of the annual rental payment.
- c. Prepare all the necessary journal entries for Bensen for 2022.
- d. Suppose the collectibility of the lease payments was not probable for Bensen. Prepare all necessary journal entries for the company in 2022.
- e. Prepare all the necessary journal entries for Flynn for 2022.
- f. Discuss the effect on the journal entry for Flynn at lease commencement, assuming initial direct costs of \$2,000 are incurred by Flynn to negotiate the

lease.

E21.13 (LO 2, 3) (Lessee-Lessor Entries, Sales-Type Lease; Guaranteed Residual Value) Phelps plc leases a building to Walsh Ltd. on January 1, 2022. The following facts pertain to the lease agreement.

1. The lease term is 5 years, with equal annual rental payments of £4,703 at the beginning of each year.
2. Ownership does not transfer at the end of the lease term, there is no bargain purchase option, and the asset is not of a specialized nature.
3. The building has a fair value of £23,000, a book value to Phelps of £16,000, and a useful life of 6 years.
4. At the end of the lease term, Phelps and Walsh expect there to be an unguaranteed residual value of £4,000.
5. Phelps wants to earn a return of 8% on the lease, and collectibility of the payments is probable. This rate is known by Walsh.

Instructions

- a. How would Phelps (lessor) classify this lease? How would Phelps initially measure the lease receivable, and how would Walsh initially measure the lease liability and right-of-use asset?
- b. Using the original facts of the lease, show the journal entries to be made by both Phelps and Walsh in 2022.
- c. Suppose the entire expected residual value of £4,000 is guaranteed by Walsh. How will this change your answer to part (a)?
- d. Assume the same facts as in part (c), except the expected residual value is £3,000. Does your answer change?

E21.14 (LO 2) (Lessee Entries) Use the information for the Phelps/Walsh lease in E21.13. In this instance, however, Walsh is unaware of the implicit rate used in the lease by Phelps and has an incremental borrowing rate of 9%.

Instructions

How would your answer to E21.13(a) change?

E21.15 (LO 2) (Amortization Schedule and Journal Entries for Lessee) Laura Leasing SA signs an agreement on January 1, 2022, to lease equipment to Plote AG. The following information relates to this agreement.

1. The term of the non-cancelable lease is 3 years with no renewal option. The equipment has an estimated economic life of 5 years.
2. The fair value of the asset at January 1, 2022, is €80,000.
3. The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of €7,000, none of which is guaranteed.
4. The agreement requires equal annual rental payments of €25,562.96 to the lessor, beginning on January 1, 2022.
5. The lessee's incremental borrowing rate is 5%. The lessor's implicit rate is 4% and is unknown to the lessee.
6. Plote uses the straight-line depreciation method for all equipment.

Instructions

(Round all numbers to the nearest cent.)

- a. Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- b. Prepare all of the journal entries for the lessee for 2022 and 2023 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31, and the lessee prepares reversing entries.

E21.16 (LO 2, 4) (Lessee Accounting, Initial Direct Costs) Rauch AG leases a piece of equipment to Donahue SA on January 1, 2022. The lease agreement called for annual rental payments of €4,892 at the beginning of each year of the 4-year lease. The equipment has an economic useful life of 6 years, a fair value of €25,000, and a book value of €20,000. Both parties expect a residual value of €8,250 at the end of the lease term, though this amount is not guaranteed. Rauch set the lease payments with the intent of earning a 5% return, and Donahue is aware of this rate. There is no bargain purchase option, ownership of the lease does not transfer at the end of the lease term, and the asset is not of a specialized nature.

Instructions

- a. Prepare the lease amortization schedule(s) for Donahue for all 4 years of the lease.
- b. Prepare the journal entries for Donahue for 2022 and 2023.
- c. Suppose Donahue incurs initial direct costs of €750 related to the lease. Prepare the journal entries for 2022.

- d. Explain how a fully guaranteed residual value by Donahue would change the accounting for the company. The expected residual value is €8,250.
- e. Explain how a bargain renewal option for one extra year at the end of the lease term would change the accounting of the lease for Donahue.

E21.17 (LO 3, 4) (Lessor Accounting) Use the information for Rauch AG and Donahue SA from E21.16.

Instructions

- a. Explain how Rauch arrived at the amount of the rental payments used in the lease agreement, and show calculations.
- b. Prepare the entries for Rauch for 2022.
- c. Suppose that instead of €8,250, Rauch expects the residual value at the end of the lease to be €5,000, but Donahue agrees to guarantee a residual value of €8,250. All other facts being equal, how would Rauch change the amount of the annual rental payments, if at all?
- d. Explain how a fully guaranteed residual value by Donahue would change the accounting for Rauch, the lessor.
- e. Explain how a bargain renewal option for one extra year at the end of the lease term would change the accounting of the lease for Rauch, the lessor.

***E21.18 (LO 5) (Sale-Leaseback)** Assume that on January 1, 2022, Humphrey's Restaurants NV sells a computer system to Liquidity Finance for €680,000 and immediately leases back the computer system. The relevant information is as follows.

1. The computer was carried on Humphrey's books at a value of €600,000.
2. The term of the non-cancelable lease is 3 years; title will not transfer to Humphrey's, and the expected residual value at the end of the lease is €450,000, all of which is unguaranteed.
3. The lease agreement requires equal rental payments of €115,970 at the beginning of each year.
4. The incremental borrowing rate for Humphrey's is 8%. Humphrey's is aware that Liquidity Finance set the annual rental to ensure a rate of return of 8%.
5. The computer has a fair value of €680,000 on January 1, 2022, and an estimated economic life of 10 years.

Instructions

Prepare the journal entries for both the lessee and the lessor for 2022 to reflect the sale and leaseback agreement.

***E21.19 (LO 5) (Lessee-Lessor, Sale-Leaseback)** Respond to the requirements in each situation.

Instructions

- On January 1, 2022, Zarle Inc. sold computer equipment to Daniell Co. The sales price of the equipment was \$520,000 and its carrying amount is \$400,000. Record any journal entries necessary for Zarle from the sale of the computer equipment in 2022.
- Use the information from part (a). Assume that on the same day the sale occurred, Zarle enters into an agreement to lease the equipment from Daniell for 10 years with annual lease payments of \$67,342.42 at the end of each year, beginning on December 31, 2022. If Zarle has an incremental borrowing rate of 5% and the equipment has an economic useful life of 10 years, record any journal entries necessary for Zarle from the sale and leaseback of computer equipment in 2022.
- Use the information from part (b). Now, instead of 10 years, the lease term is only 3 years with annual lease payments of \$67,342.42 at the beginning of each year. Record any journal entries necessary for Zarle from the sale and leaseback of computer equipment in 2022.

Problems

P21.1 (LO 2, 4) (Lessee Entries) The following facts pertain to a non-cancelable lease agreement between Faldo Leasing and Vance plc, a lessee.

Commencement date	January 1, 2022
Annual lease payment due at the beginning of each year, beginning with January 1, 2022	£113,864
Residual value of equipment at end of lease term, guaranteed by the lessee	£50,000
Expected residual value of equipment at end of lease term	£45,000
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at January 1, 2022	£600,000
Lessor's implicit rate	8%
Lessee's incremental borrowing rate	8%

The asset will revert to the lessor at the end of the lease term. The lessee uses the straight-line depreciation for all leased equipment.

Instructions

- a. Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- b. Prepare all of the journal entries for the lessee for 2022 and 2023 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31, and the lessee prepares reversing entries.
- c. Suppose Vance received a lease incentive of £5,000 from Faldo Leasing to enter the lease. How would the initial measurement of the lease liability and right-of-use asset be affected? What if Vance prepaid rent of £5,000 to Faldo?

P21.2 (LO 2, 4) (Lessee Entries and Statement of Financial Position Presentation) On January 1, 2022, Cage Company contracts to lease equipment for 5 years, agreeing to make a payment of \$120,987 at the beginning of each year, starting January 1, 2022. The leased equipment is to be capitalized at \$550,000. The asset is to be amortized on a double-declining-balance basis, and the obligation is to be reduced on an effective-interest basis. Cage's incremental borrowing rate is 6%, and the company knows that the implicit rate in the lease is 5%. Title to the equipment transfers to Cage at the end of the lease. The asset has an estimated useful life of 5 years and no residual value.

Instructions

- a. Explain the probable relationship of the \$550,000 amount to the lease arrangement.
- b. Prepare the journal entry or entries that Cage should record on January 1, 2022.
- c. Prepare the journal entries to record depreciation of the leased asset and interest expense for the year 2022.
- d. Prepare the journal entry to record the lease payment of January 1, 2023, assuming reversing entries are not made.
- e. What amounts will appear on the lessee's December 31, 2022, statement of financial position relative to the lease contract?
- f. How would the value of the lease liability in (b) change if Cage also agreed to pay the fixed annual insurance on the equipment of \$2,000 at the same time as the rental payments?

P21.3 (LO 2) Groupwork (Lessee Entries and Statement of Financial

Position Presentation) Ludwick Steel SA, as lessee, signed a lease agreement for equipment for 5 years, beginning December 31, 2022. Annual rental payments of €40,000 are to be made at the beginning of each lease year (December 31). The interest rate used by the lessor in setting the payment schedule is 6%; Ludwick's incremental borrowing rate is 8%. Ludwick is unaware of the rate being used by the lessor. At the end of the lease, Ludwick has the option to buy the equipment for €5,000, considerably below its estimated fair value at that time. The equipment has an estimated useful life of 7 years, with no residual value. Ludwick uses the straight-line method of depreciation on similar owned equipment.

Instructions

- Prepare the journal entry or entries, with explanations, that Ludwick should record on December 31, 2022.
- Prepare the journal entry or entries, with explanations, that Ludwick should record on December 31, 2023. (Prepare the lease amortization schedule for all five payments.)
- Prepare the journal entry or entries, with explanations, that Ludwick should record on December 31, 2024.
- What amounts would appear on Ludwick's December 31, 2024, statement of financial position relative to the lease arrangement?

P21.4 (LO 2) (Lessee Entries, Lease with Monthly Payments) Shapiro Inc. began operations in 2021 as a computer software service firm, with an accounting fiscal year ending August 31. Shapiro's primary product is a sophisticated online inventory-control system; its customers pay a fixed fee plus a usage charge for using the system.

Shapiro has leased a large, Alpha-3 computer system from the manufacturer. The lease calls for a monthly rental of \$40,000 for the 144 months (12 years) of the lease term. The estimated useful life of the computer is 15 years.

All rentals are payable on the first day of the month beginning August 1, 2022, the date the computer was installed and the lease agreement was signed. The lease is non-cancelable for its 12-year term, and it is secured only by the manufacturer's chattel lien on the Alpha-3 system.

This leased asset will be depreciated by the straight-line method. Borrowed funds for this type of transaction would cost Shapiro 6% per year (0.5% per month). Following is a schedule of the present value of an annuity due for selected periods discounted at 0.5% per period when payments are made at the beginning of each period.

Periods	Present Value of an Annuity Due
---------	---------------------------------

(months)	Discounted at 0.5% per Period
1	1.000
2	1.995
3	2.985
143	102.497
144	102.987

Instructions

Prepare all entries Shapiro should make in its accounting records during August 2022 relating to this lease. Give full explanations and show supporting computations for each entry. Remember, August 31, 2022, is the end of Shapiro's fiscal accounting period, and it will be preparing financial statements on that date. Do not prepare closing entries.

P21.5 (LO 2) (Basic Lessee Accounting with Difficult PV Calculation) In 2021, Grishell Trucking negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were erected to the company's specifications on land owned by the company. On January 1, 2022, Grishell Trucking took possession of the lease properties.

Although the terminals have a composite useful life of 40 years, the non-cancelable lease runs for 20 years from January 1, 2022, with a bargain purchase option available upon expiration of the lease.

The 20-year lease is effective for the period January 1, 2022, through December 31, 2041. Rental payments of \$800,000 are payable to the lessor on January 1 of each of the first 10 years of the lease term. Advance rental payments of \$320,000 are due on January 1 for each of the last 10 years of the lease. The company has an option to purchase all of these leased facilities for \$1 on December 31, 2041. The lease was negotiated to assure the lessor a 6% rate of return.

Instructions

- Prepare a schedule to compute for Grishell Trucking the present value of the terminal facilities and related obligation at January 1, 2022.
- Assuming that the present value of terminal facilities and related obligation at January 1, 2022, was \$7,635,410, prepare journal entries for Grishell Trucking to record the:
 - Cash payment to the lessor on January 1, 2024.
 - Depreciation of the cost of the leased properties for 2024, using the straight-line method and assuming a zero residual value.
 - Accrual of interest expense at December 31, 2024.

Selected present value factors are as follows.

Periods	For an Ordinary Annuity of \$1 at 6%	For \$1 at 6%
1	.943396	.943396
2	1.833393	.889996
8	6.209794	.627412
9	6.801692	.591898
10	7.360087	.558395
19	11.158117	.330513
20	11.469921	.311805

P21.6 (LO 2, 3) (Lessee-Lessor Entries, Lease with a Guaranteed Residual Value) Glaus Leasing AG agrees to lease equipment to Jensen Furniture on January 1, 2022. The following information relates to the lease agreement.

1. The term of the lease is 7 years with no renewal option, and the machinery has an estimated economic life of 9 years.
2. The cost of the machinery is €525,000, and the fair value of the asset on January 1, 2022, is €700,000.
3. At the end of the lease term, the asset reverts to the lessor and has a guaranteed residual value of €50,000. Jensen estimates that the expected residual value at the end of the lease term will be €50,000. Jensen depreciates all of its leased equipment on a straight-line basis.
4. The lease agreement requires equal annual rental payments, beginning on January 1, 2022.
5. The collectibility of the lease payments is probable.
6. Glaus desires a 5% rate of return on its investments. Jensen's incremental borrowing rate is 6%, and the lessor's implicit rate is unknown.

Instructions

(Assume the accounting period ends on December 31.)

- a. Discuss the nature of this lease for the lessor.
- b. Calculate the amount of the annual rental payment required.
- c. Compute the value of the lease liability to the lessee.

- d. Prepare the journal entries Jensen would make in 2022 and 2023 related to the lease arrangement.
- e. Prepare the journal entries Glaus would make in 2022 and 2023 related to the lease arrangement.
- f. Suppose Jensen expects the residual value at the end of the lease term to be €40,000 but still guarantees a residual of €50,000. Compute the value of the lease liability at lease commencement.

P21.7 (LO 3) (Lessor Computations and Entries, Sales-Type Lease with Guaranteed Residual Value) Amirante SA manufactures an X-ray machine with an estimated life of 12 years and leases it to Chambers Medical Center for a period of 10 years. The normal selling price of the machine is R\$495,678, and its guaranteed residual value at the end of the non-cancelable lease term is estimated to be R\$15,000. The hospital will pay rents of R\$60,000 at the beginning of each year. Amirante incurred R\$300,000 in manufacturing costs and R\$14,000 in legal fees directly related to the signing of the lease. Amirante has determined that the collectibility of the lease payments is probable and that the implicit interest rate is 5%.

Instructions

- a. Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 1. Lease receivable at commencement of the lease.
 2. Sales price.
 3. Cost of sales.
- b. Prepare a 10-year lease amortization schedule for Amirante, the lessor.
- c. Prepare all of Amirante's journal entries for the first year.

P21.8 (LO 2, 4) (Lessee Computations and Entries, Lease with Guaranteed Residual Value) Assume the same data as in P21.7 and that Chambers Medical Center has an incremental borrowing rate of 5% and an expected residual value at the end of the lease of R\$10,000.

Instructions

- a. Compute the amount of the initial lease liability.
- b. Prepare a 10-year lease amortization schedule.
- c. Prepare all of the lessee's journal entries for the first year.

- d. Suppose Chambers Medical Center incurred R\$7,000 of document preparation costs after the execution of the lease. How would the initial measurement of the lease liability and right-of-use asset be affected?

P21.9 (LO 3, 4) Groupwork (Lessor Computations and Entries, Sales-Type Lease with Unguaranteed Residual Value) Kobayashi Group manufactures a check-in kiosk with an estimated economic life of 12 years and leases it to **Japan Airlines (JAL)** (JPN) for a period of 10 years. The normal selling price (amounts in thousands) of the equipment is ¥299,140, and its unguaranteed residual value at the end of the lease term is estimated to be ¥20,000. JAL will pay annual payments of ¥40,000 at the beginning of each year. Kobayashi incurred costs of ¥180,000 in manufacturing the equipment and ¥4,000 in sales commissions in closing the lease. Kobayashi has determined that the collectibility of the lease payments is probable and that the implicit interest rate is 8%.

Instructions

- a. Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
 1. Lease receivable.
 2. Sales price.
 3. Cost of goods sold.
- b. Prepare a 10-year lease amortization schedule for Kobayashi, the lessor.
- c. Prepare all of the lessor's journal entries for the first year.

P21.10 (LO 2) (Lessee Computations and Entries, Lease with Unguaranteed Residual Value) Assume the same data as in P21.9, with **JAL** (JPN) having an incremental borrowing rate of 8%.

Instructions

- a. Compute the amount of the initial lease liability.
- b. Prepare a 10-year lease amortization schedule.
- c. Prepare all of the lessee's journal entries for the first year. Assume straight-line depreciation.

P21.11 (LO 2, 3) Groupwork (Lessee-Lessor Accounting for Residual Values) Goring Dairy leases its milking equipment from King Finance Company under the following lease terms.

1. The lease term is 10 years, non-cancelable, and requires equal rental payments of \$30,300 due at the beginning of each year starting January 1,

2022.

2. The equipment has a fair value at the commencement of the lease (January 1, 2022) of \$242,741 and a cost of \$180,000 on King Finance's books. It also has an estimated economic life of 15 years and an expected residual value of \$45,000, though Goring Dairy has guaranteed a residual value of \$50,000 to King Finance.
3. The lease contains no renewal options, and the equipment reverts to King Finance upon termination of the lease. The equipment is not of a specialized nature.
4. Goring Dairy's incremental borrowing rate is 8% per year. The implicit rate is also 8%.
5. Goring Dairy depreciates similar equipment that it owns on a straight-line basis.
6. Collectibility of the payments is probable.

Instructions

- a. Evaluate the criteria for classification of the lease by the lessor, and describe the nature of the lease. In general, discuss how the lessee and lessor should account for the lease transaction.
- b. Prepare the journal entries for the lessee and lessor at January 1, 2022, and December 31, 2022 (the lessee's and lessor's year-end). Assume no reversing entries.
- c. What would have been the amount of the initial lease liability recorded by the lessee upon the commencement of the lease if:
 1. The residual value of \$50,000 had been guaranteed by a third party, not the lessee?
 2. The residual value of \$50,000 had not been guaranteed at all?
- d. On the lessor's books, what would be the amount recorded as the lease receivable at the commencement of the lease, assuming the residual value of \$50,000 had not been guaranteed at all?

P21.12 (LO 2, 3, 4) (Lessee-Lessor Entries, Statement of Financial Position Presentation, Finance and Sales-Type Lease) Winston Industries and Ewing SA enter into an agreement that requires Ewing to build three diesel-electric engines to Winston's specifications. Upon completion of the engines, Winston has agreed to lease them for a period of 10 years and to assume all costs and risks of ownership. The lease is non-cancelable, becomes effective on January

1, 2022, and requires annual rental payments of €384,532 each January 1, starting January 1, 2022.

Winston's incremental borrowing rate is 8%. The implicit interest rate used by Ewing and known to Winston is 6%. The total cost of building the three engines is €2,600,000. The economic life of the engines is estimated to be 10 years, with residual value set at zero. Winston depreciates similar equipment on a straight-line basis. At the end of the lease, Winston assumes title to the engines. Collectibility of the lease payments is probable.

Instructions

- Discuss the nature of this lease transaction from the viewpoint of the lessor.
- Prepare the journal entry or entries to record the transaction on January 1, 2022, on the books of Winston (the lessee).
- Prepare the journal entry or entries to record the transaction on January 1, 2022, on the books of Ewing (the lessor).
- Prepare the journal entries for both the lessee and lessor to record the first rental payment on January 1, 2022.
- Prepare the journal entries for both the lessee and lessor to record any entries needed in connection with the lease at December 31, 2022. (Prepare a lease amortization schedule for 2 years.)
- Show the items and amounts that would be reported on the statement of financial position (not notes) at December 31, 2022, for both the lessee and the lessor.
- Assume that Winston incurs legal fees related to the execution of the lease of €30,000. In addition, assume Winston receives a lease incentive from Ewing of €50,000 to enter the lease. How will this affect your answer to part (b)?

P21.13 (LO 2, 4) (Statement of Financial Position and Income

Statement Disclosure—Lessee) The following facts pertain to a non-cancelable lease agreement between Alschuler Leasing and McKee Electronics, a lessee, for a computer system.

Commencement date	October 1, 2022
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at October 1, 2022	£313,043
Book value of asset at October 1, 2022	£280,000
Residual value at end of lease term	—0—

Lessor's implicit rate	8%
Lessee's incremental borrowing rate	8%
Annual lease payment due at the beginning of each year, beginning with October 1, 2022	£62,700

The collectibility of the lease payments is probable by the lessor. The asset will revert to the lessor at the end of the lease term. The straight-line depreciation method is used for all equipment.

The following amortization schedule has been prepared correctly for use by both the lessor and the lessee in accounting for this lease. The lease is to be accounted for properly as a sales-type lease.

Date	Lease Payment/Receipt	Interest (8%) on Unpaid Liability/Receivable	Reduction of Lease Liability/Receivable	Balance of Lease Liability/Receivable
10/01/22				£313,043
10/01/22	£62,700		£ 62,700	250,343
10/01/23	62,700	£20,027	42,673	207,670
10/01/24	62,700	16,614	46,086	161,584
10/01/25	62,700	12,927	49,773	111,811
10/01/26	62,700	8,945	53,755	58,056
10/01/27	62,700	4,644	58,056	—0—
	<u>£376,200</u>	<u>£63,157</u>	<u>£313,043</u>	

Instructions

- a. Assuming the lessee's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
 1. What items and amounts will appear on the lessee's income statement for the year ending September 30, 2023?
 2. What items and amounts will appear on the lessee's statement of financial position at September 30, 2023?
 3. What items and amounts will appear on the lessee's income statement for the year ending September 30, 2024?
 4. What items and amounts will appear on the lessee's statement of financial position at September 30, 2024?
- b. Assuming the lessee's accounting period ends on December 31, answer the following questions with respect to this lease agreement.

1. What items and amounts will appear on the lessee's income statement for the year ending December 31, 2022?
2. What items and amounts will appear on the lessee's statement of financial position at December 31, 2022?
3. What items and amounts will appear on the lessee's income statement for the year ending December 31, 2023?
4. What items and amounts will appear on the lessee's statement of financial position at December 31, 2023?

P21.14 (LO 2, 3, 4) (Lessor Operating Lease) Lewis Machinery Works entered into a lease agreement on January 1, 2022, to provide Garcia SA with a piece of machinery. The terms of the lease agreement were as follows.

1. The lease is to be for 3 years with rental payments of R\$10,521 to be made at the beginning of each year.
2. The machinery has a fair value of R\$55,000, a book value of R\$40,000, and an economic life of 8 years.
3. At the end of the lease term, both parties expect the machinery to have a residual value of R\$30,000, none of which is guaranteed.
4. The lease does not transfer ownership at the end of the lease term, and does not have a bargain purchase option, and the asset is not of a specialized nature.
5. Garcia knows that the implicit rate is 6%.
6. Collectibility of the payments is probable.

Instructions

- a. Evaluate the criteria for classification of the lease, and describe the nature of the lease.
- b. Prepare the amortization schedule Garcia will use over the lease term.
- c. Prepare the 2022 journal entries for Garcia.
- d. Prepare the 2022 journal entries for Lewis.
- e. Suppose the lease were only for 1 year instead of 3 years, with just one lease payment at the beginning of the lease term. Prepare any journal entries Garcia would need, assuming it elects to use the short-term lease option.

P21.15 (LO 2, 3) Groupwork (Lessee-Lessor Entries, Lease with an Unguaranteed Residual Value) Cleveland Group leased a new crane to Abriendo Construction under a 5-year, non-cancelable contract starting January 1,

2022. Terms of the lease require payments of R\$48,555 each January 1, starting January 1, 2022. The crane has an estimated life of 7 years, a fair value of R\$240,000, and a cost to Cleveland of R\$240,000. The estimated fair value of the crane is expected to be R\$45,000 (unguaranteed) at the end of the lease term. No bargain purchase or renewal options are included in the contract, and the crane is not a specialized asset. Both Cleveland and Abriendo adjust and close books annually at December 31. Collectibility of the lease payments is probable. Abriendo's incremental borrowing rate is 8%, and Cleveland's implicit interest rate of 8% is known to Abriendo.

Instructions

- Identify the type of lease involved and give reasons for your classification. Discuss the accounting treatment that should be applied by the lessor.
- Prepare all the entries related to the lease contract and leased asset for the year 2022 for the lessee and lessor, assuming Abriendo uses straight-line depreciation for all similar leased assets, and Cleveland depreciates the asset on a straight-line basis with a residual value of R\$15,000.
- Discuss what should be presented in the statement of financial position, the income statement, and the related notes of both the lessee and the lessor at December 31, 2022.

Concepts for Analysis

CA21.1 (LO 2) Writing (Lessee Accounting and Reporting) On January 1, 2022, Evans Company entered into a non-cancelable lease for a machine to be used in its manufacturing operations. The lease transfers control of the machine to Evans by the end of the lease term. The term of the lease is 8 years, which equals the useful life of the asset. The lease payment made by Evans on January 1, 2022, was one of 8 equal annual payments.

Instructions

- What is the theoretical basis for the accounting standard that requires long-term leases to be capitalized by the lessee?
- How should Evans account for this lease at its commencement?
- What expenses directly related to lease liability and right-of-use asset will Evans incur during the first year of the lease, and how will these expenses be determined?
- How should Evans report the lease transaction on its December 31, 2022, statement of financial position?

CA21.2 (LO 2, 3, 4) (Lessor and Lessee Accounting and Disclosure)

Sylvan SA entered into a non-cancelable lease arrangement with Breton Leasing for a certain machine. Breton's primary business is leasing. Sylvan will lease the machine for a period of 3 years, which is 50% of the machine's economic life. Breton will take possession of the machine at the end of the initial 3-year lease and lease it to another, smaller company that does not need the most current version of the machine. Sylvan does not guarantee any residual value for the machine and will not purchase the machine at the end of the lease term. Sylvan's incremental borrowing rate is 10%, and the implicit rate in the lease is 9%. Sylvan has no way of knowing the implicit rate used by Breton. Using either rate, the present value of the lease payments is between 90% and 100% of the fair value of the machine at the date of the lease agreement. Breton is reasonably certain that Sylvan will pay all lease payments.

Instructions

- a. With respect to Sylvan (the lessee), answer the following.
 1. How should Sylvan compute the appropriate amount to be recorded for the lease or asset acquired?
 2. What accounts will be created or affected by this transaction, and how will the lease or asset and other costs related to the transaction be recorded in earnings?
 3. What disclosures must Sylvan make regarding this leased asset?
- b. With respect to Breton (the lessor), answer the following.
 1. What type of leasing arrangement has been entered into? Explain the reason for your answer.
 2. How should this lease be recorded by Breton, and how are the appropriate amounts determined?
 3. How should Breton determine the appropriate amount of revenue to be recognized from each lease payment?
 4. What disclosures must Breton make regarding this lease?

CA21.3 (LO 2) (Lessee Accounting) On January 1, Santiago SA, a lessee, entered into three non-cancelable leases for new equipment, Lease L, Lease M, and Lease N. None of the three leases transfers ownership of the equipment to Santiago at the end of the lease term. The following information is specific to each lease.

1. Lease L does not contain a bargain purchase option.

2. Lease M contains a bargain purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.
3. Lease N does not contain a bargain purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.

Instructions

- a. What amount, if any, should Santiago record as a liability at commencement of the lease for each of the three leases above?
- b. Assuming that the lease payments are made on a straight-line basis, how should Santiago record each lease payment for each of the three leases above?

CA21.4 (LO 2, 4) **Ethics** (Lease Capitalization, Bargain Purchase Option)

Bader Corporation entered into a lease agreement for 100 photocopy machines for its company headquarters. The lease has a bargain purchase option because after the 5-year lease term, the company can purchase each copier for \$1,000, when the anticipated fair value is \$2,500.

Jerry Suffolk, the financial vice president, thinks the financial statements must recognize the lease agreement for a higher amount because of the bargain purchase option. The controller, Diane Buchanan, disagrees: "Although I don't know much about the copiers themselves, there is a way to avoid recording the higher lease liability." She argues that the company could claim that copier technology advances rapidly and that by the end of the lease term, the machines will most likely not be worth the \$1,000 bargain price.

Instructions

- a. What ethical issue is at stake?
- b. Should the controller's argument be accepted if she does not really know much about copier technology? Would it make a difference if the controller were knowledgeable about the rate of change in copier technology?
- c. What should Suffolk do?

CA21.5 (LO 2, 4) **Writing (Short-Term Lease vs. Finance Lease)** You are auditing the December 31, 2022, financial statements of Hockney plc, manufacturer of novelties and party favors. During your inspection of the company garage, you discovered that a used automobile not listed in the equipment subsidiary ledger is parked there. You ask Stacy Reeder, plant manager, about the vehicle, and she tells you that the company did not list the automobile because the company was only leasing it and elected to use the short-term lease accounting option for the lease. The lease agreement was entered into on January 1, 2022, with Crown New and Used Cars.

You decide to review the lease agreement to ensure that the lease should be afforded short-term lease treatment, and you discover the following lease terms.

1. Non-cancelable term of 2 years.
2. Rental of £3,240 per year (at the end of each year). (The present value at 8% per year is £5,778.)
3. Expected residual value after 2 years is £500. (The present value at 8% per year is £429.) Hockney guarantees the residual value of £500.
4. Estimated economic life of the automobile is 2.5 years.
5. Hockney's incremental borrowing rate is 8% per year.

Instructions

You are a senior auditor writing a memo to your supervisor, the audit partner in charge of this audit, to discuss the above situation. Be sure to include (a) why you inspected the lease agreement, (b) what you determined about the lease, and (c) how you advised your client to account for this lease. Explain every journal entry that you believe is necessary to record this lease properly on the client's books. (It is also necessary to include the fact that you communicated this information to your client.)

***CA21.6 (LO 5) (Sale-Leaseback)** On January 1, 2022, Perriman Company transferred equipment for cash and leased it back. As seller-lessee, Perriman retained the right to substantially all of the remaining use of the equipment. The term of the lease is 8 years.

Instructions

- a. What is the major issue related to sale-leaseback accounting?
- b.
 1. How should Perriman account for the sale portion of the sale-leaseback transaction at January 1, 2022?
 2. How should Perriman account for the leaseback portion of the sale-leaseback transaction at January 1, 2022?

Using Your Judgment

Note that M&S and British Airways have not yet adopted the new lease accounting rules. As a result, in the financial statements referred to below, finance leases are referred to as "capital," and assets and liabilities related to operating leases are not recognized on the statement of financial position.

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What types of leases are used by M&S?
- b. What amount of finance leases was reported by M&S in total and for less than one year?
- c. What minimum annual rental commitments under all non-cancelable leases at year-end 2019 did M&S disclose?

Comparative Analysis Case

British Airways and Air France

Instructions

Go to the **British Airways** (GBR) and **Air France** (FRA) company websites and use information found there to answer the following questions related to these airlines.

- a. What types of leases are used by Air France and on what assets are these leases primarily used?
- b. How long-term are some of Air France's leases? What are some of the characteristics or provisions of Air France's (the lessee) leases?
- c. What did Air France report in 2018 as its lease debt?
- d. How does British Airways' use of leases compare with Air France's?

Financial Statement Analysis Case

Air France

Presented in [Illustration 21.39](#) are the financial statement disclosures from the 2018 annual report of **Air France** (FRA).

Instructions

Answer the following questions related to these disclosures.

- a. What is the total obligation disclosed in the Lease Debt note at year-end 2018 for Air France?
- b. What is the total of right-of-use assets for the year ended December 31, 2018, for Air France?
- c. Describe the nature of any lease arrangements not capitalized by Air France at fiscal year-end 2018.

Accounting, Analysis, and Principles

Salaur SpA, a risky start-up, is evaluating a lease arrangement being offered by TSP AG for use of a standard computer system. The lease is non-cancelable, and in no case does Salaur receive title to the computers during or at the end of the lease term. TSP will lease the returned computers to other customers. The lease starts on January 1, 2022, with the first rental payment due on January 1, 2022. Additional information related to the lease and the underlying leased asset is as follows.

Yearly rental	€3,057.25
Lease term	3 years
Estimated economic life	5 years
Purchase option	€3,000 at end of 3 years, which approximates fair value
Renewal option	1 year at €1,500; no penalty for non-renewal; standard renewal clause
Fair value at commencement	€10,000
Cost of asset to lessor	€8,000
Residual value:	
Guaranteed	—0—
Unguaranteed	€3,000
Lessor's implicit rate (known by the lessee)	12%
Estimated fair value at end of lease	€3,000

Accounting

- a. Prepare the journal entries for Salaur for 2022.
- b. Repeat the requirements in part (a), assuming Salaur has the option to purchase the system at the end of the lease for €100.

Analysis

Briefly discuss the impact of capitalizing this lease on two common ratios: return on assets and debt to total assets.

Principles

What fundamental quality of useful information is being addressed when a company like Salaur capitalizes all leases with terms of one year or longer?

Bridge to the Profession

Research Case

Daniel Hardware is considering alternative financing arrangements for equipment used in its warehouses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases. The staff is aware of some general lease rules related to “right-of-use,” but they are unsure how the accounting rules apply to their situation. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

Instructions

Access the IFRS authoritative literature at the IFRS website. When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is included in the measurement of (1) the lease liability and (2) the right-of-use asset?
- b. Besides the non-cancelable term of the lease, what are other considerations in determining the “lease term”?
- c. When should a lessee account for a lease modification? What procedures are followed?

Global Accounting Insights

LEARNING OBJECTIVE 7

Compare the accounting procedures for leases under IFRS and U.S. GAAP.

Leasing is a global business. Lessors and lessees enter into arrangements with one another without regard to national boundaries. Although U.S. GAAP and IFRS accounting guidance for leasing is not identical, both the FASB and the IASB

decided that prior lease accounting did not provide the most useful, transparent, and complete information about leasing transactions. In response, the FASB and IASB worked together on a lease accounting project. The FASB issued an update to its Codification, adding section 842, *Leases (ASC 842)*, in February 2016. Many of the requirements in the new FASB standard are the same as those in *IFRS 16*. The main differences between U.S. GAAP and IFRS under the new rules are in relation to the lessee accounting model. Specifically, U.S. GAAP still maintains a distinction between finance leases and operating leases in the financial statements for lessees. As a result, lessees account for some leases using the finance lease method, while accounting for operating leases (leases that convey right of use but not ownership) is based on a straight-line lease expense approach.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the accounting for leases.

Similarities

- Both U.S. GAAP and IFRS share the same objective of recording leases by lessees and lessors according to their economic substance—that is, according to the definitions of assets and liabilities.
- Much of the terminology for lease accounting in IFRS and U.S. GAAP is the same.
- Both U.S. GAAP and IFRS require lessees to recognize a right-of-use asset and related lease liability for leases with terms longer than one year.
- Under both IFRS and U.S. GAAP, lessors use the same general criteria (consistent with the recent standard on revenue) to determine if there is transfer of control of the underlying asset and if lessors classify leases as sales-type or operating.
- U.S. GAAP and IFRS use the same lessor accounting model for leases classified as sales-type or operating.
- U.S. GAAP and IFRS have similar qualitative and quantitative disclosure requirements for lessees and lessors.

Differences

- U.S. GAAP continues to use a classification test for lessees under *ASC 842*. Thus, lessees account for some leases using the finance lease method. Leases classified as operating leases under U.S. GAAP will be accounted for differently than under IFRS (see example in [About the Numbers](#) section below).

- IFRS allows alternative measurement bases for the right-of-use asset (e.g., the revaluation model, in accordance with *IAS 16, Property, Plant and Equipment*).
- While both U.S. GAAP and IFRS have a short-term lease exception, U.S. GAAP does not have the additional lessee recognition and measurement exemption for leases of assets of low value (e.g., personal computers, small office furniture).
- *IFRS 16* includes explicit guidance on collectibility of the lease payments by lessors and amounts necessary to satisfy a residual value guarantee.
- U.S. GAAP distinguishes between sales-type and direct financing leases for lessors (which defers gross profit on direct financing leases). Therefore, *IFRS 16* permits recognition of selling profit on direct financing leases at lease commencement.

About the Numbers

Finance and Operating Leases (Lessee)

Under U.S. GAAP, both lessees and lessors classify lease arrangements as either finance or operating. In either case, lessees **capitalize all leased assets and liabilities**. Therefore, the statement of financial position (balance sheet) for a lessee that uses either a finance lease or an operating lease will be the same. Income effects for lessees depends on the type of lease. For a **finance lease**, the lessee recognizes interest expense on the lease liability over the life of the lease using the effective-interest method and records amortization expense on the right-of-use asset generally on a straight-line basis. A lessee therefore reports both interest expense and amortization of the right-of-use asset on the income statement. As a result, the total expense for the lease transaction is generally higher in the earlier years of the lease arrangement under a finance lease arrangement.

In an **operating lease**, the lessee also measures interest on the liability using the effective-interest method. However, the lessee amortizes the right-of-use asset such that the total lease expense is the same from period to period. In other words, for operating leases, only a single lease expense (comprised of interest on the liability and amortization of the right-of-use asset) is recognized on the income statement, typically on a straight-line basis. Illustrations of both these approaches are shown in the following sections.

Lease Classification

Under U.S. GAAP, lessees and lessors use the same tests to determine whether to use the finance method or the operating method. That is, the objective is to classify a lease based on whether the arrangement is effectively a purchase of the underlying asset. If the lease transfers control (or ownership) of the underlying

asset to a lessee, then the lease is classified as a **finance lease**. All leases that do not meet any of the finance lease tests are classified as operating leases. In an **operating lease**, a lessee **obtains the right to use the underlying asset** but not ownership of the asset itself. Specifically, for a lease to be a finance lease, it must be non-cancelable and **meet at least one of the five tests** listed in [Illustration 21.18](#). Otherwise, the lease is an operating lease.

Lessee Accounting for Operating Leases

If a lease does not meet any of the lease classification tests for a finance lease, a lessee should classify it as an operating lease. For leases classified as operating, the lessee records a right-of-use asset and lease liability at commencement of the lease. This is similar to the finance lease approach. However, the lessee records the same amount for lease expense each period over the lease term (often referred to as the straight-line method for expense measurement).

Companies continue to use the effective-interest method for amortizing the lease liability. However, instead of reporting interest expense, a lessee records interest on the lease liability as part of Lease Expense. In addition, the lessee no longer reports amortization expense related to the right-of-use asset. Instead, it “plugs” in an amount that increases the Lease Expense account so that it is the same amount from period to period. This plugged amount then reduces the right-of-use asset, such that both the right-of-use asset and the lease liability are amortized to zero at the end of the lease.²³

Operating Lease Example

To illustrate lessee accounting for an operating lease, consider the following terms of a lease between Parker Shipping Co. and Stoughton Trailers Inc. for the right-of-use of Stoughton’s standard hydraulic lifts. The lease, signed on January 1, 2022, specifies that Stoughton grants right-of-use of the lift to Parker under the following standard terms.

- The lease agreement is non-cancelable with a term of four years, requiring equal rental payments of \$9,538.39 with the first payment on January 1, 2022 (annuity-due basis).
- The lift has a fair value at commencement of the lease of \$40,000 and an estimated **economic life of six years**. The lift has a **residual value** at the end of the lease of **\$8,000 (unguaranteed)**. The cost of the lift on Stoughton’s books is \$30,000.
- The lease contains no renewal options. The lift reverts to Stoughton at the termination of the lease.
- The implicit rate of Stoughton (the lessor) is 8 percent and is known by Parker.

Stoughton (the lessor) determines the rental payments such that it earns a rate of return of 8 percent per year (implicit rate) on its investment, as shown in [Illustration GAAP21.1](#).

Fair value of leased equipment	\$40,000.00
Less: Present value of the residual value ($\$8,000 \times .73503$ ($PV_{4,8\%}$))	5,880.24
Amount to be recovered by lessor through lease payments	<u>\$34,119.76</u>
Four beginning-of-year lease payments to earn an 8% return ($\$34,119.76 \div 3.57710$ ($PVF-AD_{4,8\%}$))	<u><u>\$ 9,538.39</u></u>

[ILLUSTRATION GAAP21.1](#) Computation of Lease Payments

The lease is classified as an operating lease by Parker and Stoughton, as indicated by the analysis in [Illustration GAAP21.2](#).

Test	Assessment
1. Transfer of ownership test	Transfer of ownership does not occur; the asset reverts to Stoughton at the end of the lease.
2. Purchase option test	There is no bargain purchase option in the lease.
3. Lease term test	The lease term is 66.67% ($4 \div 6$) of the economic life of the asset, which is less than the major part of the life of the asset (75%).
4. Present value test	The present value of the lease payments is \$34,119.76*, which is 85.3% ($\$34,119.76 \div \$40,000$) of the fair value of the lift. Therefore, it does not meet the present value test.
5. Alternative use test	The equipment is not of a specialized nature and is expected to have use to Stoughton when returned at the end of the lease.

* $\$9,538.39 \times 3.57710$ ($PVF-AD_{4,8\%}$)

[ILLUSTRATION GAAP21.2](#) Lease Classification Tests

Thus, the lease is classified as an operating lease by both the lessee and lessor, as none of the classification tests are met. Parker makes the following entry to record this operating lease and the first payment.

January 1, 2022		
Right-of-Use Asset	34,119.76	
Lease Liability		34,119.76
Lease Liability	9,538.39	
Cash		9,538.39

Illustration GAAP21.3 shows the interest expense and amortization of the lease liability, applying the effective-interest method.

Parker Shipping Co. Lease Amortization Schedule Annuity-Due Basis				
Date	Annual Lease Payment	Interest (8%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)
1/1/22				\$34,119.76
1/1/22	\$ 9,538.39	\$ -0-	\$ 9,538.39	24,581.37
1/1/23	9,538.39	1,966.51	7,571.88	17,009.49
1/1/24	9,538.39	1,360.76	8,177.63	8,831.86
1/1/25	9,538.39	706.53*	8,831.86	0.00
	<u>\$38,153.56</u>	<u>\$4,033.80</u>	<u>\$34,119.76</u>	
<p>a. Lease payment as required by lease.</p> <p>b. Eight percent of the preceding balance of (d) except for 1/1/22; since this is an annuity due, no time has elapsed at the date of the first payment and therefore no interest has accrued.</p> <p>c. (a) minus (b).</p> <p>d. Preceding balance minus (c).</p> <p>*Rounded by \$0.02.</p>				

ILLUSTRATION GAAP21.3 Lease Amortization Schedule

Parker computes straight-line expense and amortization on its right-of-use asset for each year of the lease, as presented in **Illustration GAAP21.4**.

Parker Shipping Co. Lease Expense Schedule				
Date	(A) Lease Expense (Straight-Line)	(B) Interest (8%) on Liability	(C) Amortization of ROU Asset (A – B)	(D) Carrying Value of ROU Asset (D – C)
12/31/21				\$34,119.76
12/31/22	\$ 9,538.39	\$1,966.51	\$ 7,571.88	26,547.88
12/31/23	9,538.39	1,360.76	8,177.63	18,370.25
12/31/24	9,538.39	706.53	8,831.86	9,538.39
12/31/25	9,538.39		9,538.39	0.00
	<u>\$38,153.56</u>	<u>\$4,033.80</u>	<u>\$34,119.76</u>	

ILLUSTRATION GAAP21.4 Lease Expense Schedule

As indicated, the annual lease expense equals interest related to amortizing its lease liability plus amortization of the right-of-use asset. Parker decreases the right-of-use asset's book value each year by an amount (a plug) such that total annual lease expense is \$9,538.39. The journal entries by Parker over the first 2 years of the lease are presented in **Illustration GAAP21.5**.

Parker Shipping (Lessee)			
Recognize lease expense, record amortization (December 31, 2022):			
Lease Expense	9,538.39		
Right-of-Use Asset		7,571.88	
Lease Liability		1,966.51	
Balance Sheet		Income Statement	
<u>Noncurrent assets</u>		Lease expense	\$9,538.39
Right-of-use assets	\$26,547.88		
<u>Current liabilities</u>			
Lease liability	\$9,538.39		
<u>Noncurrent liabilities</u>			
Lease liability	17,009.49		
Record second lease payment (January 1, 2023):			
Lease Liability	9,538.39		
Cash		9,538.39	
Recognize lease expense, record amortization (December 31, 2023):			
Lease Expense	9,538.39		
Right-of-Use Asset		8,177.63	
Lease Liability		1,360.76	
Balance Sheet		Income Statement	
<u>Noncurrent assets</u>		Lease expense	\$9,538.39
Right-of-use assets	\$18,370.25		
<u>Current liabilities</u>			
Lease liability	\$9,538.39		
<u>Noncurrent liabilities</u>			
Lease liability	8,831.86		
Record third lease payment (January 1, 2024):			
Lease Liability	9,538.39		
Cash		9,538.39	

ILLUSTRATION GAAP21.5 Lessee Operating Lease Entries

After the entry for the final payment on December 31, 2025, the lease liability and right-of-use asset are fully amortized. The lease expense for the 4 years (\$38,153.56) is comprised of amortization of the right-of-use asset of \$34,119.76 plus interest associated with the amortization of the lease liability of \$4,033.80. Parker combines interest on the liability and amortization of the right-of-use asset to report lease expense on the income statement over the life of the lease.

GAAP Self-Test Questions

1. Which of the following is **not** true with respect to lease accounting under U.S. GAAP?

- a. U.S. GAAP requires lessees to recognize a right-of-use asset and related lease liability for leases with terms longer than one year.
- b. U.S. GAAP has similar lease disclosure requirements as IFRS.
- c. U.S. GAAP permits recognition of selling profit on direct financing leases at lease commencement.
- d. IFRS uses essentially the same lessor accounting model as U.S. GAAP for leases classified as sales-type or operating.

2. Under U.S. GAAP:

- a. lessees and lessors recognize right-of-use assets.
- b. lessees always use the operating method.
- c. lessees always recognize a right-of-use asset and lease liability for leases with terms less than one year.
- d. lessors distinguish between sales-type and direct financing leases.

3. All of the following are similarities with respect to the accounting for leases under IFRS and U.S. GAAP **except**:

- a. lessees recognize a right-of-use asset and related lease liability for leases with terms longer than one year.
- b. lessees use the same general lease classification criteria to determine whether lessees classify leases as finance or operating.
- c. lessors use the same model to account for sales-type leases.
- d. U.S. GAAP and IFRS have similar qualitative and quantitative disclosure requirements for lessees and lessors.

4. Under U.S. GAAP:

- a. lessees may not use alternative measurement bases (e.g., revaluation accounting) for the right-of-use asset.
- b. different measurement bases may be used for the right-of-use asset but only for leases with terms less than one year.
- c. the same guidance on collectibility of the lease payments is used by lessors as in IFRS.
- d. lessors are required to defer gross profit on sales-type leases.

5. All of the following are differences with respect to the accounting for leases under IFRS and U.S. GAAP **except**:

- a. IFRS has an additional lessee recognition and measurement exemption for leases of assets of low value (U.S. GAAP does not).
- b. IFRS allows alternative measurement bases for the right-of-use asset (e.g., the revaluation model).
- c. under IFRS, lessees use the same tests to determine whether a lease should be classified as finance or operating.
- d. IFRS permits recognition of selling profit on direct financing leases at lease commencement.

GAAP Concepts and Application

GAAP21.1 Where can authoritative U.S. GAAP related to the accounting for leases be found?

GAAP21.2 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for leases.

GAAP21.3 LeBron James (LBJ) Corporation agrees on January 1, 2022, to lease equipment from Cavaliers, Inc. for 3 years. The lease calls for annual lease payments of \$23,000 at the beginning of each year. The lease does not transfer ownership nor does it contain a bargain purchase option, and it is not a specialized asset. In addition, the useful life of the equipment is 10 years, and the present value of the lease payments is less than 90% of the fair value of the equipment. Prepare LBJ's journal entries on January 1, 2022 (commencement of the operating lease), and on December 31, 2022. Assume the implicit rate used by the lessor is unknown, and LBJ's incremental borrowing rate is 6%.

Answers to GAAP Self-Test Questions

1. c 2. d 3. b 4. a 5. c

Notes

- 1** The IASB believes that the reporting of an asset and liability for a lease arrangement is consistent with its conceptual framework's definition of assets and liabilities. That is, assets are resources controlled by the entity as a result of past events and from which future economic benefits are expected to flow to the entity. Liabilities are present obligations of the entity arising from past events, the settlement of which is expected to result in an outflow of assets from the entity. **[2]**

- 2 In contrast to the single finance lease method under IFRS, the FASB adopted a dual-lease model, under which some leases—those which convey right-of-use but not ownership—would have a straight-line expense pattern, while others would be accounted for as a financing. The IASB adopted the single lease approach, reasoning that most users of financial statements believe that all leases create assets and “debt-like” liabilities for a lessee. Consequently, they benefit from lessees recognizing interest on those liabilities, which enables them to perform meaningful ratio analyses. In addition, the finance lease model is easy to understand, which reduces cost and complexity by removing the need for systems that can deal with two lessee accounting approaches. [3]
- 3 As discussed more fully in a later section of the chapter, the amount of the right-of-use asset is adjusted for prepaid rent, lease incentives received from the lessor, and any initial direct costs.
- 4 Reasonably certain is a high threshold of probability. The IASB intended that parties to a lease should account for options only when the lessee has a compelling economic reason to exercise a purchase, renewal, or termination option. [4]
- 5 This difficulty arises because, for example, the lessee may not know the residual value used by the lessor, nor the initial direct costs that the lessor incurs.
- 6 As discussed in more detail later in the chapter, if the lease contains a bargain purchase option, such that it is reasonably certain that the lessee will purchase the asset at the end of the lease, the lessee depreciates the right-of-use asset over the economic life of the asset.
- 7 The computation of the present value is rounded by €0.02. The rounding occurs because the tables from [Chapter 6](#) are used to determine the amounts shown. *For homework and other computations in the text, we use the tables, which may lead to small rounding differences.* In practice, a financial calculator is often used to avoid these rounding differences.
- 8 Later in the chapter, we provide an expanded discussion of the relationship between the expected residual value and the guaranteed residual value, and its effect on the measurement of the lease liability. Also, note that the term of the lease is equal to the useful life of the asset, and the present value of the lease payments is nearly 96 percent of the fair value of the underlying asset, such that Ivanhoe (the lessee) takes ownership or consumes the substantial portion of the underlying asset over the lease term.
- 9 If Ivanhoe had not known CNH’s implicit rate, it would have used its incremental borrowing rate of 5 percent to compute the present value of the lease liability.

- 10 As discussed, in measuring the liability and right-of-use asset, Ivanhoe does not include the present value of the residual value because the guaranteed amount is not greater than the expected amount.
- 11 Because it occurs at the lease commencement date, the first payment does not contain an interest component.
- 12 If Ivanhoe purchases the backhoe during the term of the lease, it accounts for the transaction as a termination of the lease and a purchase of an asset. Thus, it would record any difference between the purchase price and the carrying amount of the lease liability as an adjustment of the carrying amount of the asset.
- 13 Adapted from PricewaterhouseCoopers, *Leases—2016* (www.pwc.com), Chapter 4.
- 14 The IASB concluded that by meeting any of the lease classification tests in [Illustration 21.18](#), the lessor transfers control (ownership) of the leased asset and therefore satisfies a performance obligation, which is required for revenue recognition under the IASB's recent standard on revenue. Although not part of the classification tests, the lessor must also determine whether the collectibility of payments from the lessee is probable. If payments are not probable, the lessor does not record a receivable and does not derecognize the leased asset. Instead, receipt of any lease payments is recorded as a deposit liability. [11]
- 15 As discussed earlier, if a lease contains a renewal option that is a bargain (i.e., difference between the renewal rental and the expected fair rental is great enough to make exercise of the option to renew reasonably certain), the lessor should include bargain renewal periods in the lease term.
- 16 The transfer of ownership, the bargain purchase option, and the alternative use test essentially give ownership of the leased asset to the lessee. The other two tests give control of a substantial portion of the underlying asset to the lessee, and in some cases, essentially ownership.
- 17 Lease Receivable is often defined as only the present value of the rental payments plus the present value of the guaranteed residual value. In the case in which the lessor has an unguaranteed residual value, the total amount is often referred to as the net investment in the lease. Another approach is to report the unguaranteed residual value separately when making the journal entry. We use the definition in [Illustration 21.19](#) for pedagogical reasons; *this definition (including both guaranteed and unguaranteed residual values) should be used in the homework.*

- 18** For a lease classified as operating, if collectibility is not probable, recognition of lease income is limited to cash received.
- 19** If the CNH/Ivanhoe lease were a lease with no selling profit (the cost of the backhoe is equal to the fair value), the entry at commencement would be as follows.

Lease Receivable	100,000	
Equipment		100,000

That is, the backhoe is not part of inventory, and the lease is a financing arrangement (a direct financing lease).

- 20** Adapted from PricewaterhouseCoopers, *Leases—2016* (www.pwc.com), p. 4-4.
- 21** Pepa Kraft, “Rating Agency Adjustment to GAAP Financial Statements and Their Effect on Ratings and Credit Spreads,” *The Accounting Review* (March 2015), Vol. 90, No. 2, pp 641–674. In addition, a study by J.P. Morgan showed significant variation in the range of analysts’ estimates of the underlying lease obligations under the new rules. See P. Elwin and S. C. Fernandes, “Leases on B/S from 2017? Retailers and Transport Will Be Hit Hard in Leverage Terms,” *Global Equity Research*, J.P. Morgan Securities (May 17, 2013). See also M. Maurer, “New Lease Accounting Standard May Mislead Investors, Credit Suisse Says,” *Wall Street Journal* (July 10, 2019).
- 22** The same amortization schedule can be used for the lessee and lessor because there is no residual value and Parker knows the implicit rate used by the lessor is setting the payments (lessee and lessor use the same discount rate).
- 23** The FASB indicates that reporting a single operating cost in the income statement more appropriately reflects the economics of an operating lease than the separate recognition of interest and amortization used in the finance lease approach. The rationale for this approach is that an operating lease grants different rights to the lessee. The different rights are that in an operating lease, the lessee is neither exposed to, nor benefits from, any value changes in the right-of-use asset over the term of the lease.

CHAPTER 22

Accounting Changes and Error Analysis

LEARNING OBJECTIVES

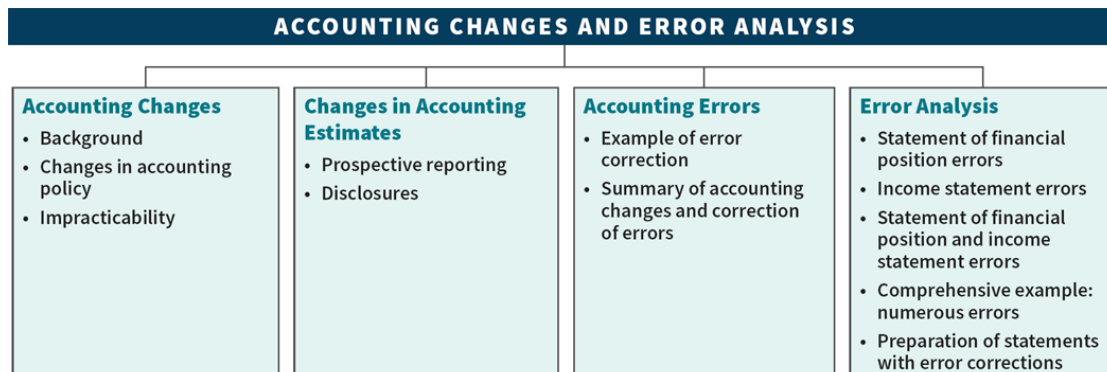

After studying this chapter, you should be able to:

1. Discuss the types of accounting changes and the accounting for changes in accounting policies.
2. Describe the accounting and reporting for changes in estimates.
3. Describe the accounting for correction of errors.
4. Analyze the effect of errors.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 22

As the following opening story indicates, changes in accounting policies and errors in financial information are significant. When these changes occur, companies must follow specific accounting and reporting requirements. To ensure comparability among companies, the IASB has standardized reporting of accounting changes, changes in accounting estimates, error corrections, and related earnings per share information. In this chapter, we discuss these reporting standards, which help investors better understand a company's financial condition. The content and organization of the chapter are as follows.

Needed: Valid Comparisons

The IASB's Conceptual Framework describes comparability (including consistency) as one of the qualitative characteristics that contribute to the usefulness of accounting information. Unfortunately, companies are finding it difficult to maintain comparability and consistency due to the numerous changes in accounting policies mandated by the IASB.

Presented below is a condensed version of the change in accounting policy note of **United Business Media (UBM)** (IRL) in a recent annual report.

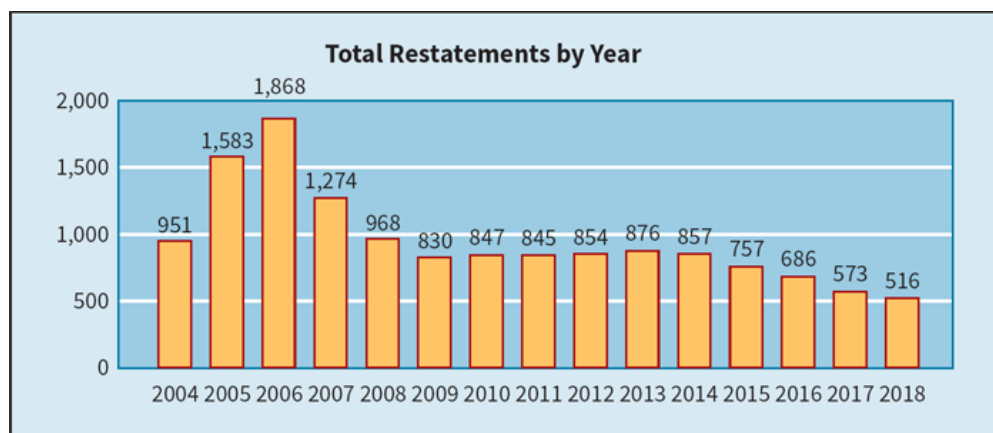

New and amended IFRSs (in part)

The following new and amended IFRSs may have an impact on the Group's consolidated financial statements:

IFRS 9 Financial Instruments—Financial assets will be measured at amortised cost or fair value. Liabilities will be measured in accordance with the existing requirements of *IAS 39*, but the portion of the change in fair value of a liability arising from changes in the entity's own credit risk will be presented in other comprehensive income, rather than in the income statement.

IFRS 15 Revenue Recognition and IFRS 15 (amendment)—*IFRS 15* applies to all contracts with customers excluding those covered by other IFRSs such as lease contracts, insurance contracts, and financial instruments. Core principle of the standard: Recognise revenue to depict the transfer of goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.

IFRS 16 Leases—*IFRS 16* specifies how an IFRS reporter will recognise, measure, present and disclose leases. The standard provides a single lessee accounting model, requiring lessees to recognise assets and liabilities for all leases unless the lease term is 12 months or less or the underlying asset has a low value. Lessors continue to classify leases as operating or finance, with *IFRS 16*'s approach to lessor accounting substantially unchanged from its predecessor, *IAS 17*.

What these excerpts indicate is that the IASB is constantly attempting to improve financial reporting as conditions change in the financial world. And as you have learned in our study of impairment of financial assets, revenue, and leases in [Chapters 17](#), [18](#) and [21](#), we are experiencing a period of significant accounting change and related implementation challenges.

Beyond accounting changes, a number of companies have faced restatements due to errors in their financial statements. This accompanying chart shows the total restatements per year since 2004. There is much good news in the chart. In 2007, restatements declined by 32 percent (from 1,868 to 1,274). In 2008, restatements declined another 24 percent (from 1,274 to 968). Although the declining trend continued in 2009, restatements stabilized from 2010–2014 but then saw additional declines from 2015–2018. The overall decline is attributed to improved reliability of internal controls, but some observers suspect that the drop may also be due to relaxed enforcement by market regulators.

The trend in restatements is a positive development. However, when restatements and accounting changes arise, financial statement users still need high-quality accounting information to make valid comparisons of financial performance to performance in periods before the accounting change or restatement.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Accounting Changes

LEARNING OBJECTIVE 1

Discuss the types of accounting changes and the accounting for changes in accounting policies.

Background

Accounting alternatives diminish the comparability of financial information between periods and between companies; they also obscure useful historical trend data. For example, if **Toyota** (JPN) revises its estimates for equipment useful lives, depreciation expense for the current year will not be comparable to depreciation expense reported by Toyota in prior years. Similarly, if **Tesco** (GBR) changes to FIFO inventory pricing while **Marks and Spencer plc** (GBR) uses the retail method, it will be difficult to compare these companies' reported results. A reporting framework helps preserve comparability when there is an accounting change.

The IASB has established a reporting framework that involves two types of accounting changes. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) The two types of accounting changes are:

1. **Change in accounting policy.** A change from one accepted accounting policy to another one. For example, **Alcatel Lucent Enterprise** (FRA) changed its method of accounting for actuarial gains and losses from using the corridor approach to immediate recognition.
2. **Change in accounting estimate.** A change that occurs as the result of new information or additional experience. As an example, **Daimler AG** (DEU) recently revised its estimates of the useful lives of its depreciable property due to modifications in its productive processes.

A third category necessitates changes in accounting, though it is not classified as an accounting change.

3. **Errors in financial statements.** Errors result from mathematical mistakes, mistakes in applying accounting policies, or oversight or misuse of facts that existed when preparing the financial statements. For example, a company may incorrectly apply the retail inventory method for determining its final inventory value.

The IASB classifies changes in these categories because each category involves different methods of recognizing changes in the financial statements. In this chapter, we discuss these classifications. We also explain how to report each item in the accounts and how to disclose the information in comparative statements.

Changes in Accounting Policy

By definition, a **change in accounting policy** involves a change from one accepted accounting policy to another. For example, a company might change the basis of inventory pricing from average-cost to FIFO. Or it might change its method of revenue recognition for long-term construction contracts from the cost-recovery to the percentage-of-completion method.

Companies must carefully examine each circumstance to ensure that a change in policy has actually occurred. **Adoption of a new policy** in recognition of events that have occurred for the first time, or that were previously immaterial, is not a change in accounting policy. For example, a change in accounting policy has not occurred when a company adopts an inventory method (e.g., FIFO) for **newly** acquired items of inventory, even if FIFO differs from that used for **previously recorded** inventory. Another example: certain marketing expenditures that were previously immaterial and expensed in the period incurred. It is not considered a change in accounting policy if they become material and should properly be deferred and amortized.

Finally, what if a company previously followed an accounting policy that was not acceptable? Or what if the company applied a policy incorrectly? In such cases, this type of change is a **correction of an error**. For example, a switch from the cash (income tax) basis of accounting to the accrual basis is a correction of an error. Or if a company deducted residual value when computing double-declining depreciation on plant assets and later recomputed depreciation without deducting estimated residual value, it has corrected an error.

There are three possible approaches for reporting changes in accounting policies:

1. **Report changes currently.** In this approach, companies report the cumulative effect of the change in the current year's income statement. The **cumulative effect** represents the difference in prior years' income between the newly adopted and prior accounting policy. Under this approach, the effect of the change on prior years' income appears only in the current-year income statement. The company does not alter **prior-year financial statements**.

Advocates of this position argue that changing prior years' financial statements results in a loss of confidence in financial reports. How do investors react when told that the earnings computed three years ago are now entirely different? Changing prior periods, if permitted, also might upset contractual arrangements based on the old figures. For example, profit-sharing arrangements computed on the old basis might have to be recomputed and completely new distributions made, creating numerous legal problems. Many practical difficulties also exist: The cost of changing prior period financial statements may be excessive, or determining the amount of the prior period effect may be impossible on the basis of available data.

2. **Report changes retrospectively.** **Retrospective application** refers to the application of a different accounting policy to recast previously issued financial statements—**as if the new policy had always been used**. In other words, the company “goes back” and adjusts **prior years' statements** on a basis consistent with the newly adopted policy. The company shows any cumulative effect of the change as an adjustment to beginning retained earnings of the earliest year presented.

Advocates of this position argue that retrospective application ensures comparability. Think for a moment what happens if this approach is not used: The year *previous* to the change will be on the old method; the year *of the change* will report the entire cumulative adjustment; and the *following* year will present financial statements on the new basis without the cumulative effect of the change. Such lack of consistency fails to provide meaningful earnings-trend data and other financial relationships necessary to evaluate the business.

3. **Report changes prospectively (in the future).** In this approach, previously reported results remain. As a result, companies do not adjust opening balances to reflect the change in policy. Advocates of this position argue that once management presents financial statements based on acceptable accounting policies, they are final; management cannot change prior periods by adopting a new policy. According to this line of reasoning, the current-period cumulative adjustment is not appropriate because that approach includes amounts that have little or no relationship to the current year's income or economic events.

Given these three possible approaches, which does the accounting profession prefer? The IASB **requires that companies use the retrospective approach**. Why? Because it provides financial statement users with more useful information than the cumulative-effect or prospective approaches. [2] The rationale is that changing the prior statements so that they are on the same basis as the newly adopted policy results in greater consistency across accounting periods. Users can then better compare results from one period to the next.

What Do the Numbers Mean?

Comparison Challenges—Squared

As discussed in the opening story, accounting changes create comparability (consistency) challenges when evaluating a company over time. This explains the importance of accounting rules that ensure investors have the information to understand accounting reports prepared under different sets of rules. However, the comparability challenges can be compounded by both the number of required accounting changes as well as the variation in implementation dates. The following table provides a summary of recent accounting standards and their effective dates.

Effective Date, Year Beginning	Standards
January 1, 2019	<i>IFRS 16 Leases</i>
January 1, 2019	<i>IAS 12 Income Taxes</i> —Income tax consequences of payments on financial instruments classified as equity
January 1, 2020	<i>Definition of Material</i> (Amendments to <i>IAS 1</i> and <i>IAS 8</i>)
January 1, 2020	<i>The Conceptual Framework for Financial Reporting</i>
January 1, 2021	<i>IFRS 17 Insurance Contracts</i>

Given the range of new standards coming online (the list in the table is a sampling of new standards that became or will become effective from 2019–2021), it is easy to understand why financial statement users would find it difficult to compare accounting results, to the extent that companies are differentially affected by these new standards. Furthermore, implementation guidance for some standards allows companies to adopt early if they wish. This is the case for the changes in rules for leases in the table above. This early-adoption option further magnifies the comparability challenges in the wake of new standards.

Source: Adapted from Ernst & Young, “IFRS Update of Standards and Interpretations,” *EY Core Tools* (March 31, 2019).

Retrospective Accounting Change Approach

A presumption exists that once a company adopts an accounting policy, it should not change. That presumption is understandable, given the idea that consistent use of an accounting policy enhances the usefulness of financial statements. [3] However, the environment continually changes, and companies change in response. Recent changes in standards, such as those for borrowing costs, operating segments, revenue recognition, and financial instruments, indicate that changes in accounting policies will continue to occur.

As a consequence, the IASB permits companies to change an accounting policy if:

1. It is required by IFRS (e.g., the IFRS on financial instruments is subject to the proper accounting for changes in accounting policy); or
2. It results in the financial statements providing more representationally faithful and relevant information about a company’s financial position, financial performance, and cash flows. For example, a company may determine that changing from the average-cost method of inventory valuation to the FIFO method provides more representationally faithful and relevant information on the current value of its inventory.¹

When a company changes an accounting policy, it should report the change using retrospective application. In general terms, here is what the company must do:

1. Adjust (recast) its financial statements for each prior period presented. Thus, financial statement information about prior periods is consistent with the new accounting policy.
2. Adjust the carrying amounts of assets and liabilities as of the beginning of the first year presented. These accounts reflect the cumulative effect of the change to new accounting policy on periods prior to those presented. The company also makes an offsetting adjustment to the opening balance of retained earnings or other appropriate component of equity or net assets as of the beginning of the first year presented.

For example, assume that **Carrefour** (FRA) decides to change its inventory valuation method in 2022 from FIFO to average-cost. It provides comparative information for 2020 and 2021 based on the new method (see [Underlying Concepts](#)). Carrefour would adjust its assets, liabilities, and retained earnings for periods prior to 2020 and report these amounts in the 2020 financial statements, when it prepares comparative financial statements.

Underlying Concepts

Retrospective application contributes to comparability (consistency).

Retrospective Accounting Change: Long-Term Contracts

To illustrate the retrospective approach, assume that Denson SA has accounted for its income from long-term construction contracts using the cost-recovery (zero-profit) method. In 2022, as a result of adopting the new revenue standard, the company changed to recognizing revenue over time (percentage-of-completion). For tax purposes, the company uses the cost-recovery method and plans to continue doing so in the future. (We assume a 40 percent enacted tax rate.)

[Illustration 22.1](#) shows portions of three income statements for 2020–2022—for both the cost-recovery and percentage-of-completion methods. (There were no differences in income between the old and new accounting methods before 2020.)

Cost-Recovery Method Denson SA Income Statement (partial) For the Year Ended December 31			
	2020	2021	2022
Income before income tax	€400,000	€160,000	€190,000
Income tax (40%)	160,000	64,000	76,000
Net income	€240,000	€ 96,000	€114,000
Percentage-of-Completion Method Denson SA Income Statement (partial) For the Year Ended December 31			
	2020	2021	2022
Income before income tax	€600,000	€180,000	€200,000
Income tax (40%)	240,000	72,000	80,000
Net income	€360,000	€108,000	€120,000

ILLUSTRATION 22.1 Comparative Income Statements for Cost-Recovery versus Percentage-of-Completion Methods

To record a change from the cost-recovery to the percentage-of-completion method, we analyze the various effects, as [Illustration 22.2](#) shows.

Year	Pretax Income from		Difference in Income		
	Percentage-of-Completion	Cost-Recovery	Difference	Tax Effect 40%	Income Effect (net of tax)
Prior to 2021	€600,000	€400,000	€200,000	€80,000	€120,000
In 2021	180,000	160,000	20,000	8,000	12,000
Total at beginning of 2022	€780,000	€560,000	€220,000	€88,000	€132,000
Total in 2022	€200,000	€190,000	€ 10,000	€ 4,000	€ 6,000

ILLUSTRATION 22.2 Data for Retrospective Change Example

The entry to record the change at the beginning of 2022 would be:

Construction in Process	220,000	
Deferred Tax Liability		88,000
Retained Earnings		132,000

The Construction in Process account increases by €220,000 (as indicated in the first column under “Difference in Income” in [Illustration 22.2](#)). The credit to Retained Earnings of €132,000 reflects the cumulative income effects prior to 2022 (third column under “Difference in Income” in [Illustration 22.2](#)). The company credits Retained Earnings because prior years’ income is closed to this account each year. The credit to Deferred Tax Liability represents the adjustment to prior years’ tax expense. The company now recognizes that amount, €88,000, as a tax liability for future taxable amounts. That is, in future periods, taxable income will be higher than book income as a result of current temporary differences. Therefore, Denson must report a deferred tax liability in the current year.

Reporting a Change in Policy

The disclosure of changes in accounting policies is particularly important. Financial statement users want consistent information from one period to the next. Such consistency ensures the usefulness of financial statements. The major disclosure requirements are as follows.

1. The nature of the change in accounting policy;
2. The reasons why applying the new accounting policy provides representationally faithful and more relevant information;
3. For the current period and each prior period presented, to the extent practicable, the amount of the adjustment:
 - a. For each financial statement line item affected; and
 - b. Basic and diluted earnings per share.
4. The amount of the adjustment relating to periods before those presented, to the extent practicable.²

The disclosure here relates to a voluntary change in accounting policy, such as a change from the average-cost to FIFO method of inventory measurement. The requirements for disclosure are slightly different if the change is mandated by the issuance of a new IFRS. In that case, transitional adjustments are also considered, as required by the standard.

To illustrate, Denson will prepare comparative financial statements for 2021 and 2022 using the percentage-of-completion method (the new-construction accounting method). [Illustration 22.3](#) indicates how Denson presents this information.

Denson SA Income Statement (partial) For the Year Ended		
	2022	2021
		As adjusted (Note A)
Income before income tax	€200,000	€180,000
Income tax (40%)	80,000	72,000
Net income	€120,000	€108,000

Note A: Change in Method of Accounting for Long-Term Contracts. The company has accounted for revenue and costs for long-term construction contracts by the percentage-of-completion (over time) method in 2022, whereas in all prior years revenue and costs were determined by the cost-recovery method (point in time). The new method of accounting for long-term contracts was adopted to recognize ... [state justification for change in accounting policy] ..., and financial statements of prior years have been restated to apply the new method retrospectively. For income tax purposes, the cost-recovery method has been continued. The effect of the accounting change on 2022 income was an increase of €6,000 net of related taxes, and, as previously reported, the effect on 2021 income was an increase of €12,000 net of related taxes. The balances of retained earnings for 2021 and 2022 have been adjusted for the effect of applying retrospectively the new method of accounting. As a result of the accounting change, retained earnings as of January 1, 2021, increased by €120,000 compared to that reported using the cost-recovery method.

ILLUSTRATION 22.3 Comparative Information Related to Accounting Change (Percentage-of-Completion)

As [Illustration 22.3](#) shows, Denson SA reports net income under the newly adopted percentage-of-completion method for both 2021 and 2022. The company retrospectively adjusted the 2021 income statement to report the information on a percentage-of-completion basis. Also, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected.

In addition, companies are required to provide data on important differences between the amounts reported under percentage-of-completion versus cost-recovery. When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between the two methods. However, most companies will show only line-by-line differences. For example, Denson would show the differences in construction in process, retained earnings, gross profit, and net income for 2021 and 2022 under the cost-recovery and percentage-of-completion methods.

Retained Earnings Adjustment

As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings, beginning with the earliest period presented. For Denson SA, that date is January 1, 2021. Denson disclosed that information by means of a narrative description (see Note A in [Illustration 22.3](#)). Denson also would disclose this information in its retained earnings statement. Assuming a retained earnings balance of €1,360,000 at the beginning of 2020, [Illustration 22.4](#) shows Denson's retained earnings statement under the cost-recovery method—that is, before giving effect to the change in accounting policy. (The income information comes from [Illustration 22.1](#).)

Denson SA Retained Earnings Statement For the Year Ended			
	2022	2021	2020
Retained earnings, January 1	€1,696,000	€1,600,000	€1,360,000
Net income	114,000	96,000	240,000
Retained earnings, December 31	€1,810,000	€1,696,000	€1,600,000

ILLUSTRATION 22.4 Retained Earnings Statement before Retrospective Change

If Denson presents comparative statements for 2021 and 2022 under percentage-of-completion, then it must change the beginning balance of retained earnings at January 1, 2021. The difference between the retained earnings balances under cost-recovery and percentage-of-completion is computed as follows.

Retained earnings, January 1, 2021 (percentage-of-completion)	€1,720,000
Retained earnings, January 1, 2021 (cost-recovery)	<u>1,600,000</u>
Cumulative-effect difference	<u>€ 120,000</u>

The €120,000 difference is the cumulative effect. [Illustration 22.5](#) shows a comparative retained earnings statement for 2021 and 2022, giving effect to the change in accounting policy to percentage-of-completion.

Denson SA Retained Earnings Statement For the Year Ended		
	2022	2021
Retained earnings, January 1, as reported	—	€1,600,000
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for construction contracts		<u>120,000</u>
Retained earnings, January 1, as adjusted	€1,828,000	1,720,000
Net income	120,000	108,000
Retained earnings, December 31	<u>€1,948,000</u>	<u>€1,828,000</u>

ILLUSTRATION 22.5 Retained Earnings Statement after Retrospective Application

Denson adjusted the beginning balance of retained earnings on January 1, 2021, for the excess of percentage-of-completion net income over cost-recovery net income in 2020. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that this adjustment would be much larger if a number of prior periods were involved.

Retrospective Accounting Change: Inventory Methods

As a second illustration of the retrospective approach, assume that Lancer Company has accounted for its inventory using the average-cost method. In 2022, the company changes to the FIFO method because management believes this approach provides a more appropriate measure

of its inventory costs. [Illustration 22.6](#) provides additional information related to Lancer Company.

1. Lancer Company started its operations on January 1, 2020. At that time, shareholders invested \$100,000 in the business in exchange for ordinary shares.			
2. All sales, purchases, and operating expenses for the period 2020–2022 are cash transactions. Lancer’s cash flows over this period are as follows.			
	2020	2021	2022
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	100,000	100,000	100,000
Cash flow from operations	<u>\$110,000</u>	<u>\$ 90,000</u>	<u>\$ 75,000</u>
3. Lancer has used the average-cost method for financial reporting since its inception.			
4. Inventory determined under average-cost and FIFO for the period 2020–2022 is as follows.			
	Average-Cost Method	FIFO Method	Difference
January 1, 2020	\$ 0	\$ 0	\$ 0
December 31, 2020	10,000	12,000	2,000
December 31, 2021	20,000	25,000	5,000
December 31, 2022	32,000	39,000	7,000
5. Cost of goods sold under average-cost and FIFO for the period 2020–2022 is as follows.			
	Cost of Goods Sold		
	Average-Cost	FIFO	Difference
2020	\$ 80,000	\$ 78,000	\$2,000
2021	100,000	97,000	3,000
2022	113,000	111,000	2,000
6. Earnings per share information is not required on the income statement.			
7. All tax effects for this illustration should be ignored.			

ILLUSTRATION 22.6 Lancer Company Information

Illustration 22.7 shows Lancer Company's income statement, retained earnings statement, statement of financial position, and statement of cash flows for 2020–2022 under average-cost.

Lancer Company Income Statement For the Year Ended December 31			
	2020	2021	2022
Sales	\$300,000	\$300,000	\$300,000
Cost of goods sold (average-cost)	80,000	100,000	113,000
Operating expenses	100,000	100,000	100,000
Net income	<u>\$120,000</u>	<u>\$100,000</u>	<u>\$ 87,000</u>
Lancer Company Retained Earnings Statement For the Year Ended December 31			
	2020	2021	2022
Retained earnings (beginning)	\$ 0	\$120,000	\$220,000
Add: Net income	120,000	100,000	87,000
Retained earnings (ending)	<u>\$120,000</u>	<u>\$220,000</u>	<u>\$307,000</u>
Lancer Company Statement of Financial Position At December 31			
	2020	2021	2022
Inventory (average-cost)	\$ 10,000	\$ 20,000	\$ 32,000
Cash	210,000	300,000	375,000
Total assets	<u>\$220,000</u>	<u>\$320,000</u>	<u>\$407,000</u>
Share capital	\$100,000	\$100,000	\$100,000
Retained earnings	120,000	220,000	307,000
Total equity	<u>\$220,000</u>	<u>\$320,000</u>	<u>\$407,000</u>
Lancer Company Statement of Cash Flows For the Year Ended December 31			
	2020	2021	2022
Cash flows from operating activities			
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	100,000	100,000	100,000
Net cash provided by operating activities	110,000	90,000	75,000
Cash flows from financing activities Issuance of ordinary shares	100,000	—	—
Net increase in cash	210,000	90,000	75,000
Cash at beginning of year	0	210,000	300,000
Cash at end of year	<u>\$210,000</u>	<u>\$300,000</u>	<u>\$375,000</u>

ILLUSTRATION 22.7 Lancer Financial Statements (Average-Cost)

As [Illustration 22.7](#) indicates, under average-cost Lancer Company reports \$120,000 net income in 2020, \$100,000 net income in 2021, and \$87,000 net income in 2022. The amount of inventory reported on Lancer's statement of financial position reflects average-cost inventory accounting.

[Illustration 22.8](#) shows Lancer's income statement, retained earnings statement, statement of financial position, and statement of cash flows for 2020–2022 under **FIFO**. You can see that **the cash flow statement under FIFO is the same as under average-cost**. Although the net incomes are different in each period, there is no cash flow effect from these differences in net income. (If we considered income taxes, a cash flow effect would result.)

Lancer Company Income Statement For the Year Ended December 31			
	2020	2021	2022
Sales	\$300,000	\$300,000	\$300,000
Cost of goods sold (FIFO)	78,000	97,000	111,000
Operating expenses	100,000	100,000	100,000
Net income	<u>\$122,000</u>	<u>\$103,000</u>	<u>\$ 89,000</u>
Lancer Company Retained Earnings Statement For the Year Ended December 31			
	2020	2021	2022
Retained earnings (beginning)	\$ 0	\$122,000	\$225,000
Add: Net income	122,000	103,000	89,000
Retained earnings (ending)	<u>\$122,000</u>	<u>\$225,000</u>	<u>\$314,000</u>
Lancer Company Statement of Financial Position At December 31			
	2020	2021	2022
Inventory (FIFO)	\$ 12,000	\$ 25,000	\$ 39,000
Cash	210,000	300,000	375,000
Total assets	<u>\$222,000</u>	<u>\$325,000</u>	<u>\$414,000</u>
Share capital	\$100,000	\$100,000	\$100,000
Retained earnings	122,000	225,000	314,000
Total equity	<u>\$222,000</u>	<u>\$325,000</u>	<u>\$414,000</u>
Lancer Company Statement of Cash Flows For the Year Ended December 31			
	2020	2021	2022
Cash flows from operating activities			
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	100,000	100,000	100,000
Net cash provided by operating activities	110,000	90,000	75,000
Cash flows from financing activities Issuance of ordinary shares	<u>100,000</u>	<u>—</u>	<u>—</u>
Net increase in cash	210,000	90,000	75,000
Cash at beginning of year	0	210,000	300,000
Cash at end of year	<u>\$210,000</u>	<u>\$300,000</u>	<u>\$375,000</u>

ILLUSTRATION 22.8 Lancer Financial Statements (FIFO)

Compare the financial statements reported in [Illustration 22.7](#) and [Illustration 22.8](#). You can see that, under retrospective application, the change to FIFO inventory valuation affects reported inventories, cost of goods sold, net income, and retained earnings. In the following sections, we discuss the accounting and reporting of Lancer's accounting change from average-cost to FIFO.

Given the information provided in [Illustrations 22.6](#), [22.7](#), and [22.8](#), we now are ready to account for and report on the accounting change.

Our first step is to adjust the financial records for the change from average-cost to FIFO. To do so, we perform the analysis in [Illustration 22.9](#).

Year	Net Income		Difference in Income
	Average-Cost	FIFO	
2020	\$120,000	\$122,000	\$2,000
2021	100,000	103,000	3,000
Total at beginning of 2022	\$220,000	\$225,000	\$5,000
Total in 2022	\$ 87,000	\$ 89,000	\$2,000

ILLUSTRATION 22.9 Data for Recording Change in Accounting Policy

The entry to record the change to the FIFO method at the beginning of 2022 is as follows.

Inventory	5,000	
Retained Earnings		5,000

The change increases the inventory account by \$5,000. This amount represents the difference between the ending inventory at December 31, 2021, under average-cost (\$20,000) and the ending inventory under FIFO (\$25,000). The credit to Retained Earnings indicates the amount needed to change the income from prior years, assuming that Lancer had used FIFO in previous periods.

Reporting a Change in Policy

Lancer Company will prepare comparative financial statements for 2021 and 2022 using FIFO (the new inventory method). [Illustration 22.10](#) indicates how Lancer might present this information.

		Lancer Company Income Statement For the Year Ended December 31					
		2022			2021		
					As adjusted (Note A)		
	Sales	\$300,000			\$300,000		
	Cost of goods sold	111,000			97,000		
	Operating expenses	100,000			100,000		
	Net income	<u>\$ 89,000</u>			<u>\$103,000</u>		
Nature and reason for change and description of prior period information adjusted	Note A: <i>Change in Method of Accounting for Inventory Valuation.</i> On January 1, 2022, Lancer Company elected to change its method of valuing its inventory to the FIFO method; in all prior years, inventory was valued using the average-cost method. The Company adopted the new method of accounting for inventory to better report cost of goods sold in the year incurred. Comparative financial statements of prior years have been adjusted to apply the new method retrospectively. The following financial statement line items for years 2022 and 2021 were affected by the change in accounting policy.						
		2022			2021		
Effect of change on each financial statement affected	Statement of Financial Position	Average-Cost	FIFO	Difference	Average-Cost	FIFO	Difference
	Inventory	\$ 32,000	\$ 39,000	\$7,000	\$ 20,000	\$ 25,000	\$5,000
	Retained earnings	307,000	314,000	7,000	220,000	225,000	5,000
	Income Statement						
	Cost of goods sold	\$113,000	\$111,000	\$2,000	\$100,000	\$ 97,000	\$3,000
	Net income	87,000	89,000	2,000	100,000	103,000	3,000
Cumulative effect on retained earnings	Statement of Cash Flows						
	(no effect)						
	As a result of the accounting change, retained earnings as of January 1, 2021, increased from \$120,000, as originally reported using the average-cost method, to \$122,000 using the FIFO method.						

ILLUSTRATION 22.10 Comparative Information Related to Accounting Change (FIFO)

As [Illustration 22.10](#) shows, Lancer Company reports net income under the newly adopted FIFO method for both 2021 and 2022. The company retrospectively adjusted the 2021 income statement to report the information on a FIFO basis. In addition, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected. The note also provides data on important differences between the amounts reported under average-cost versus FIFO. (When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between average-cost and FIFO.)

Retained Earnings Adjustment

As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Lancer Company, that date is January 1, 2021. Lancer disclosed that information by means of a narrative description (see Note A in [Illustration 22.10](#)). Lancer also would disclose this information in its retained earnings statement. [Illustration 22.11](#) shows Lancer's retained earnings statement under average-cost—that is, before giving effect to the change in accounting policy. (This information comes from [Illustration 22.7](#).)

	2022	2021	2020
Retained earnings, January 1	\$220,000	\$120,000	\$ 0
Net income	87,000	100,000	120,000
Retained earnings, December 31	<u>\$307,000</u>	<u>\$220,000</u>	<u>\$120,000</u>

ILLUSTRATION 22.11 Retained Earnings Statements (Average-Cost)

If Lancer presents comparative statements for 2021 and 2022 under FIFO, then it must change the beginning balance of retained earnings at January 1, 2021. The difference between the retained earnings balances under average-cost and FIFO is computed as follows.

Retained earnings, January 1, 2021 (FIFO)	\$122,000
Retained earnings, January 1, 2021 (average-cost)	120,000
Cumulative effect difference	<u>\$ 2,000</u>

The \$2,000 difference is the cumulative effect. [Illustration 22.12](#) shows a comparative retained earnings statement for 2021 and 2022, demonstrating the effect of the change in accounting policy to FIFO.

	2022	2021
Retained earnings, January 1, as reported		\$120,000
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for inventory		2,000
Retained earnings, January 1, as adjusted	\$225,000	122,000
Net income	89,000	103,000
Retained earnings, December 31	<u>\$314,000</u>	<u>\$225,000</u>

ILLUSTRATION 22.12 Retained Earnings Statements after Retrospective Application

Lancer adjusted the beginning balance of retained earnings on January 1, 2021, for the excess of FIFO net income over average-cost net income in 2020. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that the amount of this adjustment would be much larger if a number of prior periods were involved.

Direct and Indirect Effects of Changes

Are there other effects that a company should report when it makes a change in accounting policy? For example, when a company like Lancer has a bonus plan based on net income and the prior year's net income changes, what happens when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? What happens if we do not ignore income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under average-cost and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

Direct Effects

The IASB takes the position that companies should retrospectively apply the **direct effects of a change in accounting policy**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example,

Lancer Company should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-net realizable value test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

Indirect Effects

In addition to direct effects, companies can have **indirect effects related to a change in accounting policy**. An **indirect effect** is any change to current or future cash flows of a company that result from making a change in accounting policy that is applied retrospectively. An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. The IASB is silent on what to do in this situation. U.S. GAAP (likely because its standard in this area was issued after *IAS 8*) states that indirect effects do not change prior period amounts.

For example, let's assume that Lancer has an employee profit-sharing plan based on net income. As [Illustration 22.9](#) showed, Lancer would report higher income in 2021 and 2022 under the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense.³

If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting policy, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

Impracticability

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting policy change. Retrospective application is considered **impracticable** if a company cannot determine the prior period effects using every reasonable effort to do so.

Companies should not use retrospective application if one of the following conditions exists:

1. The company cannot determine the effects of the retrospective application.
2. Retrospective application requires assumptions about management's intent in a prior period.
3. Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company **prospectively applies** the new accounting policy at the earliest feasible date. [\[6\]](#)

For example, assume that Williams Company changed its accounting policy for depreciable assets to more fully apply component depreciation under revaluation accounting. Unfortunately, the company does not have detailed accounting records to establish a basis for the components of these assets. As a result, Williams determines it is not practicable to account for the change to full component depreciation using the retrospective application approach. It therefore applies the policy prospectively, starting at the beginning of the current year.

Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to component depreciation. [7]

Changes in Accounting Estimates

LEARNING OBJECTIVE 2

Describe the accounting and reporting for changes in estimates.

To prepare financial statements, companies must estimate the effects of future conditions and events. For example, the following items require estimates.

1. Bad debts.
2. Inventory obsolescence.
3. Useful lives and residual values of assets.
4. Periods benefited by deferred costs.
5. Liabilities for warranty costs and income taxes.
6. Recoverable mineral reserves.
7. Change in depreciation estimates.
8. Fair value of financial assets or financial liabilities.

A company cannot perceive future conditions and events and their effects with certainty. Therefore, estimating requires the exercise of judgment. Accounting estimates will change as new events occur, as a company acquires more experience, or as it obtains additional information.

Prospective Reporting

Companies report prospectively changes in accounting estimates. That is, companies should not adjust previously reported results for changes in estimates. Instead, they account for the effects of all changes in estimates in (1) the period of change if the change affects that period only (e.g., a change in the estimate of the amount of bad debts affects only the current period's income), or (2) the period of change and future periods if the change affects both (e.g., a change in the estimated useful life of a depreciable asset affects depreciation expense in the current and future periods). [8] The IASB views changes in estimates as **normal recurring corrections and adjustments**, the natural result of the accounting process. It prohibits retrospective treatment.

The circumstances related to a change in estimate differ from those for a change in accounting policy. If companies reported changes in estimates retrospectively, continual adjustments of

prior years' income would occur. It seems proper to accept the view that, because new conditions or circumstances exist, the revision fits the new situation (not the old one). Companies should therefore handle such a revision in the current and future periods.

To illustrate, Lao Labs purchased for ¥3,000,000 a building that it originally estimated to have a useful life of 15 years and no residual value. It recorded depreciation for five years on a straight-line basis. On January 1, 2022, Lao Labs revises the estimate of the useful life. It now considers the asset to have a total life of 25 years. (Assume that the useful life for financial reporting and tax purposes and depreciation method are the same.) [Illustration 22.13](#) shows the accounts at the beginning of the sixth year.

Buildings	¥3,000,000
Less: Accumulated depreciation—buildings (5 × ¥200,000)	1,000,000
Book value of building	<u>¥2,000,000</u>

[ILLUSTRATION 22.13](#) Book Value After Five Years' Depreciation

Lao Labs records depreciation for the year 2022 as follows.

Depreciation Expense	100,000	
Accumulated Depreciation—Building		100,000

The company computes the ¥100,000 depreciation charge as shown in [Illustration 22.14](#).

$$\text{Depreciation Charge} = \frac{\text{Book Value of Asset}}{\text{Remaining Service Life}} = \frac{¥2,000,000}{25 \text{ years} - 5 \text{ years}} = ¥100,000$$

[ILLUSTRATION 22.14](#) Depreciation After Change in Estimate

Companies sometimes find it difficult to differentiate between a change in estimate and a change in accounting policy. Is it a change in policy or a change in estimate when a company changes from deferring and amortizing marketing costs to expensing them as incurred because future benefits of these costs have become doubtful? **If it is impossible to determine whether a change in policy or a change in estimate has occurred, the rule is this: Consider the change as a change in estimate.**

Another example is a change in depreciation (as well as amortization or depletion) methods. Because companies change depreciation methods based on changes in estimates about future benefits from long-lived assets, it is not possible to separate the effect of the accounting policy change from that of the estimates. **As a result, companies account for a change in depreciation methods as a change in estimate.**

A similar problem occurs in differentiating between a change in estimate and a correction of an error, although here the answer is more clear-cut. How does a company determine whether it overlooked the information in earlier periods (an error) or whether it obtained new information (a change in estimate)? Proper classification is important because the accounting treatment differs for corrections of errors versus changes in estimates. The general rule is this: **Companies should consider careful estimates that later prove to be incorrect as changes in estimates.** Only when a company obviously computed the estimate incorrectly because of lack of expertise or in bad faith should it consider the adjustment an error. There is no clear demarcation line here. Companies must use good judgment in light of all the circumstances.

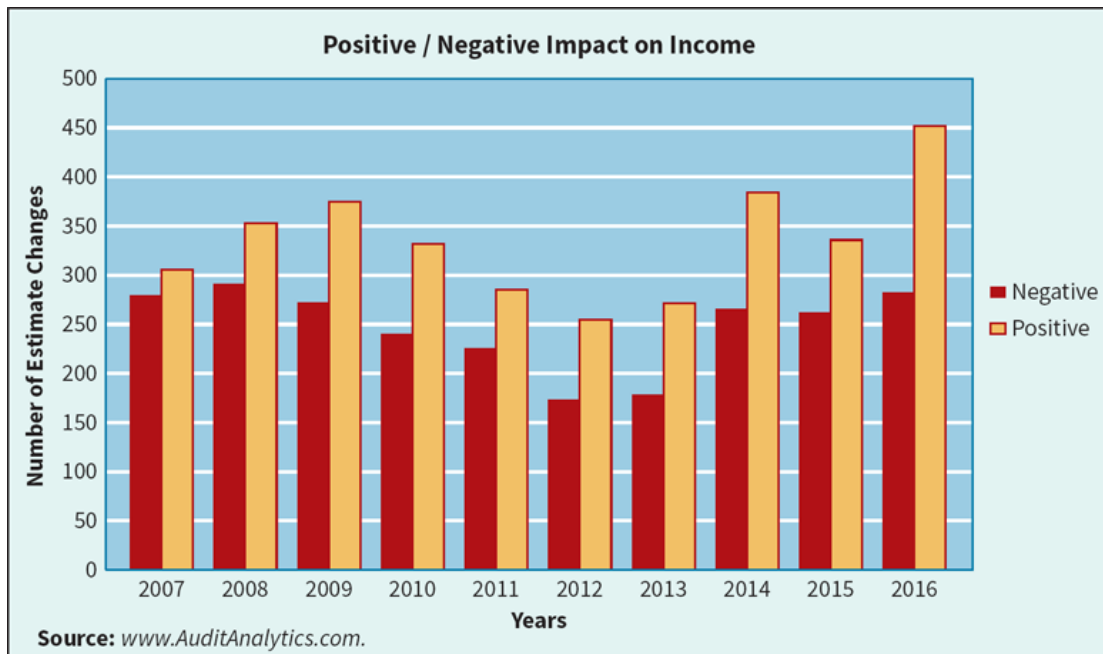

What Do the Numbers Mean?

A Change for the Better?

As we have discussed, changes in accounting estimates are expected in any given year, as conditions change. The following table indicates the 10 most common changes in accounting estimates for a sampling of 10,000 accounting changes from 2000 to 2017 for large companies.

Top 10 Categories of Changes in Accounting Estimates	
Estimate Category	% of Total
Depreciation, amortization, and depletion	22%
Percentage-of-completion and contract revenue recognition	12
Restructuring reserves	10
Income taxes, including valuation allowance	7
Contingencies and commitments, including litigation	6
Share-based compensation	5
Revenue recognition	5
Pension and other post-retirement benefits	4
Insurance loss reserves	4
Asset retirement obligations	3

The hope is that management changes accounting estimates in order to make the financial statements more useful. However, the following chart indicates that in each of the past eight years, the result of the accounting estimate change was an increase in income.

It appears that management may be making changes in estimates in order to make financial results look better, not more useful. If so, this violates the concept of neutrality.

Source: Adapted from Accounting change and restatement data from J. Pakaluka, “Overview of 17 Years of Changes in Accounting Estimates,” *Audit Analytics* (October 24, 2017).

Disclosures

A company should disclose the nature and amount of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in future periods (unless it is impracticable to estimate that effect). [9] [Illustration 22.15](#) shows disclosure of a change in estimated useful lives, which appeared in a recent annual report of **Portugal Telecom, SGPS, S.A.** (PRT).

Portugal Telecom, SGPS, S.A.

Note 4 (in Part): Changes in Accounting Policies and Estimates

The change in estimate of the useful life of the UMTS license was effective as at June 30. According to IAS 8 this change should be applicable on a prospective basis and, on an annual basis, the impact of this change will be a reduction in depreciation and amortization costs by €26 million.

ILLUSTRATION 22.15 Disclosure of Change in Estimated Useful Lives

For the most part, companies need not disclose changes in accounting estimates made as part of normal operations, such as bad debt allowances or inventory obsolescence, unless such changes are material.

Accounting Errors

LEARNING OBJECTIVE 3

Describe the accounting for correction of errors.

No business, large or small, is immune from errors. As the opening story discussed, the number of accounting errors that lead to restatement has declined. However, without accounting and disclosure guidelines for the reporting of errors, investors can be left in the dark about the effects of errors.

Certain errors, such as misclassifications of balances within a financial statement, are not as significant to investors as other errors. For example, significant errors include those resulting in overstating assets or income. However, investors should know the potential impact of all errors. Even “harmless” misclassifications can affect important ratios. Also, some errors could signal important weaknesses in internal controls that could lead to more significant errors.

In general, accounting errors include the following types:

1. A change from an accounting policy that is **not** generally accepted to an accounting policy that is acceptable. The rationale is that the company incorrectly presented prior periods

because of the application of an improper accounting policy. For example, a company may change from the cash (income tax) basis of accounting to the accrual basis.

2. Mathematical mistakes, such as incorrectly totaling the inventory count sheets when computing the inventory value.
3. Changes in estimates that occur because a company did not prepare the estimates in good faith. For example, a company may have adopted a clearly unrealistic depreciation rate.
4. An oversight, such as the failure to accrue or defer certain expenses and revenues at the end of the period.
5. A misuse of facts, such as the failure to use residual value in computing the depreciation base for the straight-line approach.
6. The incorrect classification of a cost as an expense instead of an asset, and vice versa.

Accounting errors occur for a variety of reasons. [Illustration 22.16](#) indicates 11 major categories of accounting errors that drive restatements.

Accounting Category	Type of Restatement
Expense recognition	Recording expenses in the incorrect period or for an incorrect amount.
Revenue recognition	Improper revenue accounting, including instances in which revenue was improperly recognized, questionable revenues were recognized, or any other number of related errors occurred that led to misreported revenue.
Misclassification	Misclassifying significant accounting items on the statement of financial position, income statement, or statement of cash flows. These include restatements due to misclassification of current or non-current accounts or those that impact cash flows from operations.
Equity—other	Improper accounting for EPS, restricted shares, warrants, and other equity instruments.
Reserves/Contingencies	Errors involving accounts receivables' bad debts, inventory reserves, income tax allowances, and loss contingencies.
Long-lived assets	Asset impairments of property, plant, and equipment; goodwill; or other related items.
Taxes	Errors involving correction of tax provision, improper treatment of tax liabilities, and other tax-related items.
Equity—other comprehensive income	Improper accounting for comprehensive income equity transactions, including foreign currency items, revaluations of plant assets, unrealized gains and losses on certain investments in debt, equity securities, and derivatives.
Inventory	Inventory costing valuations, quantity issues, and cost of sales adjustments.
Equity—share options	Improper accounting for employee share options.
Other	Any restatement not covered by the listed categories, including those related to improper accounting for acquisitions or mergers.

ILLUSTRATION 22.16 Accounting-Error Types

As soon as a company discovers an error, it must correct it. Companies record **corrections of errors** from prior periods as an adjustment to the beginning balance of retained earnings in the current period. Such corrections are called **prior period adjustments**.

If it presents comparative statements, a company should restate the prior statements affected to correct for the error.⁴ The company need not repeat the disclosures in the financial statements of subsequent periods.

Example of Error Correction

To illustrate, in 2023 the bookkeeper for Selectro plc discovered an error: In 2022, the company failed to record £20,000 of depreciation expense on a newly constructed building. This building is the only depreciable asset Selectro owns. The company correctly included the depreciation expense in its tax return and correctly reported its income taxes payable. **Illustration 22.17**

presents Selectro's income statement for 2022 (starting with income before depreciation expense) with and without the error.

Selectro plc Income Statement For the Year Ended December 31, 2022				
		Without Error		With Error
Income before depreciation expense		£100,000		£100,000
Depreciation expense		20,000		0
Income before income tax		80,000		100,000
Current	£32,000		£32,000	
Deferred	—0—	32,000	8,000	40,000
Net income		<u>£ 48,000</u>		<u>£ 60,000</u>

ILLUSTRATION 22.17 Error Correction Comparison

Illustration 22.18 shows the entries that Selectro should have made and did make for recording depreciation expense and income taxes.

Entries Company Should Have Made (Without Error)			Entries Company Did Make (With Error)		
Depreciation Expense	20,000		No entry made for depreciation		
Accumulated Depreciation—Buildings		20,000			
Income Tax Expense	32,000		Income Tax Expense	40,000	
Income Taxes Payable		32,000	Deferred Tax Liability		8,000
			Income Taxes Payable		32,000

ILLUSTRATION 22.18 Error Entries

As **Illustration 22.18** indicates, the £20,000 omission error in 2022 results in the following effects.

Income Statement Effects
Depreciation expense (2022) is understated £20,000.
Income tax expense (2022) is overstated £8,000 ($£20,000 \times .40$).
Net income (2022) is overstated £12,000 ($£20,000 - £8,000$).
Statement of Financial Position Effects
Accumulated depreciation—buildings is understated £20,000.
Deferred tax liability is overstated £8,000 ($£20,000 \times .40$).

To make the proper correcting entry in 2023, Selectro should recognize that net income in 2022 is overstated by £12,000, the Deferred Tax Liability is overstated by £8,000, and Accumulated Depreciation—Buildings is understated by £20,000. The entry to correct this error in 2023 is as follows.

Retained Earnings	12,000	
-------------------	--------	--

Deferred Tax Liability	8,000	
Accumulated Depreciation—Buildings		20,000

The debit to Retained Earnings results because net income for 2022 is overstated. The debit to the Deferred Tax Liability is made to remove this account, which was caused by the error. The credit to Accumulated Depreciation—Buildings reduces the book value of the building to its proper amount.

Financial Statement Presentation

To demonstrate how to show this information, assume that Selectro has a beginning retained earnings balance at January 1, 2023, of £350,000. The company reports net income of £400,000 in 2023. [Illustration 22.19](#) shows Selectro's retained earnings statement for 2023.

Selectro plc Retained Earnings Statement For the Year Ended December 31, 2023		
Retained earnings, January 1, as reported		£350,000
Correction of an error (depreciation)	£20,000	
Less: Applicable income tax reduction	8,000	(12,000)
Retained earnings, January 1, as adjusted		338,000
Add: Net income		400,000
Retained earnings, December 31		<u>£738,000</u>

[ILLUSTRATION 22.19](#) Reporting an Error—Retained Earnings Statement

The statement of financial position in 2023 will not have any deferred tax liability related to the building, and Accumulated Depreciation—Buildings is now restated at a higher amount. The income statement would not be affected.

Comparative Statements

If preparing comparative financial statements, a company should make adjustments to correct the amounts for all affected accounts reported in the statements for **all periods** reported. The company should restate the data to the correct basis for each year presented. It should **show any catch-up adjustment as a prior period adjustment to retained earnings for the earliest period it reported**. These requirements are essentially the same as those for reporting a change in accounting policy.

For example, in the case of Selectro, the error of omitting the depreciation of £20,000 in 2022, discovered in 2023, results in the restatement of the 2022 financial statements. [Illustration 22.20](#) shows the accounts that Selectro restates in the 2022 financial statements.

In the statement of financial position:	
Accumulated depreciation—buildings	£20,000 increase
Deferred tax liability	8,000 decrease
Retained earnings, ending balance	12,000 decrease
In the income statement:	
Depreciation expense—buildings	£20,000 increase
Income tax expense	8,000 decrease
Net income	12,000 decrease
In the retained earnings statement:	
Retained earnings, ending balance (due to lower net income for the period)	£12,000 decrease

ILLUSTRATION 22.20 Reporting an Error—Comparative Financial Statements

Selectro prepares the 2023 financial statements in comparative form with those of 2022 **as if the error had not occurred**. In addition, Selectro must disclose that it has restated its previously issued financial statements, and it must describe the nature of the error. Selectro also must disclose the following:

1. The effect of the correction on each financial statement line item and any per share amounts affected for each prior period presented.
2. The cumulative effect of the change on retained earnings or other appropriate components of equity or net assets in the statement of financial position, as of the beginning of the earliest period presented.

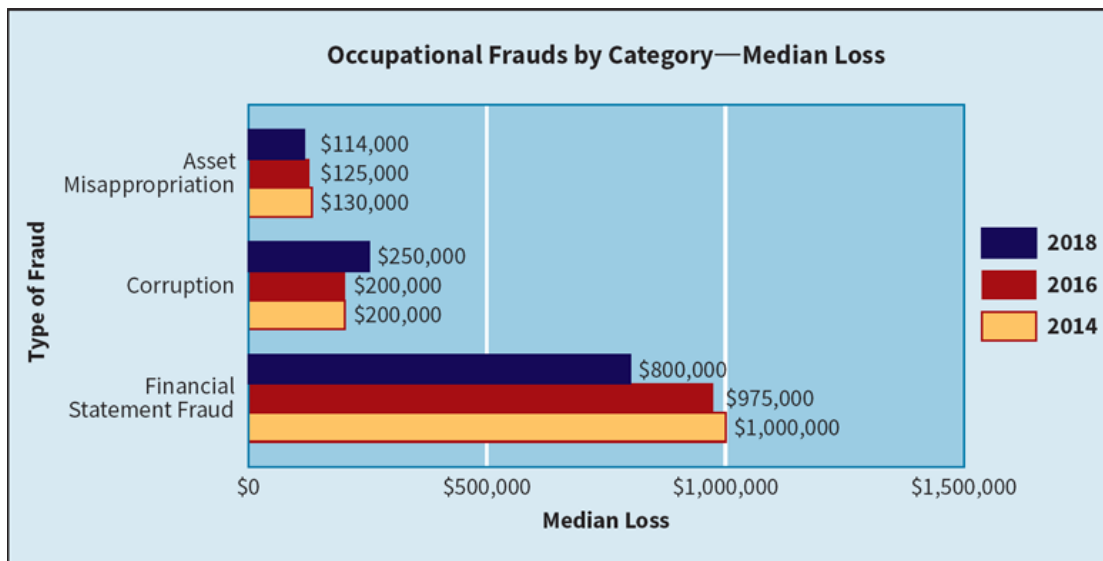

As indicated earlier, it is sometimes impracticable to adjust comparative information for one or more prior periods for changes in accounting policies. It is also sometimes impracticable to correct a prior period error through retrospective restatement. For example, the company may have made errors in computing fringe-benefit amounts in prior years but is unable to now reconstruct this information fully. As a result, any adjustment is made at the beginning of the earliest period for which retrospective application is applicable.

What Do the Numbers Mean?

Guard the Financial Statements!

Restatements sometimes occur because of financial fraud. Financial frauds involve the intentional misstatement or omission of material information in the organization's financial reports. Common methods of financial fraud manipulation include recording fictitious revenues, concealing liabilities or expenses, and artificially inflating reported assets. Financial malfeasance made up around 8 percent of the frauds in a recent study on occupational fraud but caused a median loss of just under \$1 million—by far the most costly category of fraud. The following chart compares loss amounts for 2018, 2016 and 2014 for financial statement fraud, corruption, and asset misappropriation.

While the trend in the dollar amount of losses is going in the right direction, another recent study indicates that the number of fraud reports at 1,400 companies in the “Quarterly Corporate Fraud Index” has climbed—from 2,348 reported frauds 10 years ago to over 7,800 in a recent quarter. While there is some debate about whether the reporting of fraud has increased because of regulation that provides whistleblower protections (i.e., the incidence of fraud is not increasing as much as the reporting of fraud), companies must increase their efforts to protect their statements from the negative effects of fraud.

Summary of Accounting Changes and Correction of Errors

Having guidelines for reporting accounting changes and corrections has helped resolve several significant and long-standing accounting problems. Yet, because of diversity in situations and characteristics of the items encountered in practice, use of professional judgment is of paramount importance. In applying these guidelines, the primary objective is to serve the users of the financial statements. Achieving this objective requires accuracy and full disclosure, which guard against users making incorrect inferences based on the accounting reports.

Illustration 22.21 summarizes the main distinctions and treatments presented in the discussion in this chapter.

Changes in accounting policy
Employ the retrospective approach by: <ul style="list-style-type: none">a. Changing the financial statements of all prior periods presented.b. Disclosing in the year of the change the effect on net income and earnings per share for all prior periods presented.c. Reporting an adjustment to the beginning retained earnings balance in the statement of retained earnings in the earliest year presented. If impracticable to determine the prior period effect: <ul style="list-style-type: none">a. Do not change prior years' income.b. Use opening asset balance in the year the method is adopted as the base-year balance for all subsequent computations.c. Disclose the effect of the change on the current year, and the reasons for omitting the computation of the cumulative effect and amounts for prior years.
Changes in accounting estimate
Employ the current and prospective approach by: <ul style="list-style-type: none">a. Reporting current and future financial statements on the new basis.b. Presenting prior period financial statements as previously reported.c. Making no adjustments to current-period opening balances for the effects in prior periods.
Changes due to error
Employ the restatement approach by: <ul style="list-style-type: none">a. Correcting all prior period statements presented.b. Restating the beginning balance of retained earnings for the first period presented when the error effects occur in a period prior to the first period presented.

ILLUSTRATION 22.21 Summary of Guidelines for Accounting Changes and Errors

Changes in accounting policy are appropriate **only** when a company demonstrates that the newly adopted generally accepted accounting policy is more representationally faithful and relevant than the existing one. Companies and accountants determine usefulness on the basis of whether the new policy constitutes an **improvement in financial reporting**, not on the basis of the income tax effect alone.

But it is not always easy to determine an improvement in financial reporting. **How does one measure preferability or improvement?** For example, a change from average-cost to FIFO because the accounting system is now computerized and has scanning capabilities seems justifiable. However, determining an improved method requires some “standard” or “objective.” Because no universal standard or objective is generally accepted, the problem of determining improvement continues to be difficult and requires good judgment.

What Do the Numbers Mean?

What's Your Motivation?

Difficult as it is to determine which accounting standards have the strongest conceptual support, other complications make the process even more complex. These complications stem from the fact that managers naturally wish to show their company's financial performance in the best light. Research provides insights into why companies may prefer certain accounting methods. Some of these reasons are as follows.

1. **Political costs.** As companies become larger and more politically visible, politicians and regulators devote more attention to them. The larger the firm, the more likely it is to become subject to antitrust regulation, and the more likely it is to be required to pay higher taxes. Therefore, companies that are politically visible may seek to report low income numbers to avoid the scrutiny of regulators. In addition, other constituents, such as labor unions, may be less willing to ask for wage increases if reported income is low. Researchers have found that the larger the company, the more likely it is to adopt income-decreasing approaches in selecting accounting methods.
2. **Capital structure.** A number of studies have indicated that the capital structure of the company can affect the selection of accounting methods. For example, a company with a high debt to equity ratio is more likely to be constrained by debt covenants. The debt covenant may indicate that the company cannot pay dividends if retained earnings fall below a certain level. As a result, such a company is more likely to select accounting methods that will increase net income.
3. **Bonus payments.** Studies have found that if compensation plans tie managers' bonus payments to income, management will select accounting methods that maximize their bonus payments.
4. **Smooth earnings.** Substantial earnings increases attract the attention of politicians, regulators, and competitors. In addition, large increases in income are difficult to achieve in subsequent years. Further, executive compensation plans would use these higher numbers as a baseline and make it difficult for managers to earn bonuses in subsequent years. Conversely, investors and competitors might view large decreases in earnings as a signal that the company is in financial trouble. Also, substantial decreases in income raise concerns on the part of shareholders, lenders, and other interested parties about the competency of management. For all these reasons, companies have an incentive to "manage" or "smooth" earnings. In general, management tends to believe that a steady 10 percent annual growth is much better than a 30 percent growth one year and a 10 percent decline the next. In other words, managers usually prefer a gradually increasing income report and sometimes change accounting methods to ensure such a result.

Management pays careful attention to the accounting it follows and often changes accounting methods for economic, not conceptual, reasons. As indicated throughout this text, such rationales have become known as **economic consequences** arguments, which focus on the alleged impact of an accounting method on the behavior of investors, creditors, competitors, governments, or managers of the reporting companies themselves. To counter these pressures, standard-setters such as the IASB have declared, as part of their conceptual framework, that they will assess the merits of proposed standards from a position of **neutrality**. They evaluate the soundness of standards on the basis of

conceptual soundness, not on the grounds of possible impact on behavior. It is not the IASB's place to choose standards according to the kinds of behavior it wishes to promote and the kinds it wishes to discourage.

Error Analysis

LEARNING OBJECTIVE 4

Analyze the effect of errors.

In this section, we show some additional types of accounting errors. Companies generally do not correct for errors that do not have a significant effect on the presentation of the financial statements. For example, should a company with a total annual payroll of \$1,750,000 and net income of \$940,000 correct its financial statements if it finds it failed to record accrued wages of \$500? No—it would not consider this error significant (material).

Obviously, defining materiality is difficult, and managers and auditors must use experience and judgment to determine whether adjustment is necessary for a given error. We assume **all errors discussed in this section to be material and to require adjustment**. (Also, we ignore all tax effects in this section.)

Companies must answer three questions in error analysis:

1. What type of error is involved?
2. What entries are needed to correct for the error?
3. After discovery of the error, should financial statements be restated? If so, how?

As indicated earlier, companies treat errors **as prior period adjustments and report them in the current year as adjustments to the beginning balance of Retained Earnings**. When a company presents comparative statements, it restates the prior affected statements to correct for the error.

Statement of Financial Position Errors

Statement of financial position errors affect only the presentation of asset, liability, or equity accounts. Examples are the classification of a short-term receivable as part of the investment section, the classification of a note payable as an account payable, and the classification of plant assets as inventory.

When the error is discovered, the company reclassifies the item to its proper position. If the company prepares comparative statements that include the error year, it should correctly restate the statement of financial position for the error year.

Income Statement Errors

Income statement errors involve the improper classification of revenues or expenses. Examples include recording interest revenue as part of sales, purchases as bad debt expense, and

depreciation expense as interest expense. An income statement classification error has no effect on the statement of financial position and **no effect on net income**.

A company must make a reclassification entry when it discovers the error if it makes the discovery in the same year in which the error occurs. If the error occurred in prior periods, the company does not need to make a reclassification entry at the date of discovery because the accounts for the current year are correctly stated. (Remember that the company has closed the income statement accounts from the prior period to retained earnings.) If the company prepares comparative statements that include the error year, it restates the income statement for the error year.

Statement of Financial Position and Income Statement Errors

The third type of error involves both the statement of financial position and the income statement. For example, assume that the bookkeeper overlooked accrued wages payable at the end of the accounting period. The effect of this error is to understate expenses, understate liabilities, and overstate net income for that period of time. This type of error affects both the statement of financial position and the income statement. We classify this type of error in one of two ways—counterbalancing or non-counterbalancing.

Counterbalancing errors are those that will be offset or corrected over two periods. For example, the failure to record accrued wages is a counterbalancing error, because over a two-year period the error will no longer be present. In other words, the failure to record accrued wages in the previous period means (1) net income for the first period is overstated, (2) accrued wages payable (a liability) is understated, and (3) wages expense is understated. In the next period, net income is understated, accrued wages payable (a liability) is correctly stated, and wages expense is overstated. For the two **years combined** (1) net income is correct, (2) wages expense is correct, and (3) accrued wages payable at the end of the second year is correct. Most errors in accounting that affect both the statement of financial position and income statement are counterbalancing errors.

Non-counterbalancing errors are those that are not offset in the next accounting period. An example is the failure to capitalize equipment that has a useful life of five years. If we expense this asset immediately, expenses will be overstated in the first period but understated in the next four periods. At the end of the second period, the effect of the error is not fully offset. Net income is correct in the aggregate only at the end of five years because the asset is fully depreciated at this point. Thus, **non-counterbalancing errors are those that take longer than two periods to correct themselves**.

Only in rare instances is an error never reversed. An example is if a company initially expenses land. Because land is not depreciable, theoretically the error is never offset, unless the land is sold.

Counterbalancing Errors

We illustrate the usual types of counterbalancing errors on the following pages. In studying these illustrations, keep in mind a couple of points, discussed below.

First, determine whether the company has closed the books for the period in which the error is found:

- 1. If the company has closed the books in the current year:**

- a. If the error is already counterbalanced, no entry is necessary.

- b. If the error is not yet counterbalanced, make an entry to adjust the present balance of retained earnings.

2. If the company has not closed the books in the current year:

- a. If the error is already counterbalanced, make an entry to correct the error in the current period and to adjust the beginning balance of Retained Earnings.
- b. If the error is not yet counterbalanced, make an entry to adjust the beginning balance of Retained Earnings.

Second, if the company presents comparative statements, it must restate the amounts for comparative purposes. **Restatement is necessary even if a correcting journal entry is not required.**

To illustrate, assume that Sanford's Cement failed to accrue revenue in 2020 when it fulfilled its performance obligation but recorded the revenue in 2021 when it received payment. The company discovered the error in 2023. It does not need to make an entry to correct for this error because the effects have been counterbalanced by the time Sanford discovered the error in 2023. However, if Sanford presents comparative financial statements for 2020 through 2023, it must **restate the accounts and related amounts for the years 2020 and 2021 for financial reporting purposes.**

The examples that follow in [Illustrations 22.22](#) through [22.28](#) demonstrate the accounting for the usual types of counterbalancing errors.

Failure to Record Accrued Wages

Facts: On December 31, 2022, Hurley Enterprises did not accrue wages in the amount of \$1,500.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books?

Solution: The entry to correct this error is as follows.

Retained Earnings	1,500	
Salaries and Wages Expense		1,500

The rationale for this entry is:

1. When Hurley pays the 2022 accrued wages in 2023, it makes an additional debit of \$1,500 to 2023 Salaries and Wages Expense.
2. Salaries and Wages Expense in 2023 is overstated by \$1,500.
3. Because the company did not record 2022 accrued wages as Salaries and Wages Expense in 2022, the net income for 2022 is overstated by \$1,500.
4. Because 2022 net income is overstated by \$1,500, the Retained Earnings account is overstated by \$1,500 (because net income is closed to Retained Earnings).

ILLUSTRATION 22.22 Errors—Accrued Wages

If Hurley has closed the books for 2023, it makes no entry, because the error is counterbalanced.

Failure to Record Prepaid Expenses

Facts: In January 2022, Hurley Enterprises purchased a 2-year insurance policy costing \$1,000. It debited Insurance Expense and credited Cash. The company made no adjusting entries at the end of 2022.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books for 2023?

Solution: The entry to correct this error on December 31, 2023, is as follows.

Insurance Expense	500	
Retained Earnings		500

ILLUSTRATION 22.23 Errors—Prepaid Expenses

If Hurley has closed the books for 2023, it makes no entry, because the error is counterbalanced.

Understatement of Unearned Revenue

Facts: On December 31, 2022, Hurley Enterprises received \$50,000 as a prepayment for renting certain office space for the following year. At the time of receipt of the rent payment, the company recorded a debit to Cash and a credit to Rent Revenue. It made no adjusting entry as of December 31, 2022.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books for 2023?

Solution: The entry to correct this error on December 31, 2023, is as follows.

Retained Earnings	50,000	
Rent Revenue		50,000

ILLUSTRATION 22.24 Errors—Unearned Revenues

If Hurley has closed the books for 2023, it makes no entry, because the error is counterbalanced.

Overstatement of Accrued Revenue

Facts: On December 31, 2022, Hurley Enterprises accrued as interest revenue \$8,000 that applied to 2023. On that date, the company recorded a debit to Interest Receivable and a credit to Interest Revenue.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books for 2023?

Solution: The entry to correct this error on December 31, 2023, is as follows.

Retained Earnings	8,000	
Interest Revenue		8,000

ILLUSTRATION 22.25 Errors—Accrued Revenue

If Hurley has closed the books for 2023, it makes no entry, because the error is counterbalanced.

Overstatement of Purchases

Facts: Hurley's accountant recorded a purchase of merchandise for \$9,000 in 2022 that applied to 2023. The physical inventory for 2022 was correctly stated. The company uses the periodic inventory method.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books for 2023?

Solution: The entry to correct this error on December 31, 2023, is as follows.

Purchases	9,000	
Retained Earnings		9,000

ILLUSTRATION 22.26 Errors—Purchases

If Hurley has closed the books for 2023, it makes no entry, because the error is counterbalanced

Non-Counterbalancing Errors

The entries for non-counterbalancing errors are more complex. Companies must make correcting entries, even if they have closed the books.

Failure to Record Depreciation

Facts: Assume that on January 1, 2022, Hurley Enterprises purchased a machine for \$10,000 that had an estimated useful life of 5 years. The accountant incorrectly expensed this machine in 2022 but discovered the error in 2023.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books for 2023?

Solution: If we assume that Hurley uses straight-line depreciation on this asset, the entry to correct this error on December 31, 2023, is as follows.

Equipment	10,000	
Depreciation Expense	2,000	
Retained Earnings		8,000*
Accumulated Depreciation—Equipment ($.20 \times \$10,000 \times 2$)		4,000
*Computations:		
Retained Earnings		
Overstatement of expense in 2022	\$10,000	
Proper depreciation for 2022 ($.20 \times \$10,000$)	(2,000)	
Retained earnings understated as of Dec. 31, 2022	<u>\$ 8,000</u>	

ILLUSTRATION 22.27 Non-Counterbalancing Errors—Depreciation

If Hurley has closed the books for 2023, the entry is:

Equipment	10,000	
Retained Earnings		6,000*
Accumulated Depreciation—Equipment		4,000
*Computations:		
Retained Earnings		
Retained earnings understated as of Dec. 31, 2022	\$ 8,000	
Proper depreciation for 2023 ($.20 \times \$10,000$)	(2,000)	
Retained earnings understated as of Dec. 31, 2023	<u>\$ 6,000</u>	

Failure to Adjust for Bad Debts

Facts: Companies sometimes use a specific charge-off method in accounting for bad debt expense when a percentage-of-receivables method is more appropriate. They then make adjustments to change from the specific write-off to some type of allowance method. For example, assume that Hurley Enterprises has recognized bad debt expense when it has the following uncollectible debts.

	2022	2023
From 2022 sales	\$550	\$690
From 2023 sales		700

Hurley estimates that it will charge off an additional \$1,400 in 2024, of which \$300 is applicable to 2022 sales and \$1,100 to 2023 sales.

Question: What is the entry on December 31, 2023, to correct this error, assuming Hurley has not closed the books for 2023?

Solution: The entry to correct this error on December 31, 2023, is as follows.

Bad Debt Expense	410	
Retained Earnings	990	
Allowance for Doubtful Accounts		1,400

Allowance for doubtful accounts: Additional \$300 for 2022 sales and \$1,100 for 2023 sales.

Bad debts and retained earnings balance:

	2022	2023
Bad debts charged for	\$1,240*	\$ 700
Additional bad debts anticipated in 2024	300	1,100
Proper bad debt expense	1,540	1,800
Charges currently made to each period	(550)	(1,390)
Bad debt adjustment	\$ 990	\$ 410
* \$550 + \$690 = \$1,240		

ILLUSTRATION 22.28 Non-Counterbalancing Errors—Bad Debts

If Hurley has closed the books for 2023, the entry is:

Retained Earnings	1,400	
Allowance for Doubtful Accounts		1,400

Comprehensive Example: Numerous Errors

In some circumstances, a combination of errors occurs. The company therefore prepares a worksheet to facilitate the analysis. The following problem demonstrates use of the worksheet.

The mechanics of its preparation should be obvious from the solution format. The income statements of Hudson Haulers indicate the following net incomes for the years ended December 31, 2021, 2022, and 2023.

2021	€17,400
2022	20,200
2023	11,300

An examination of the accounting records for these years indicates that Hudson made several errors in arriving at the net income amounts reported:

1. The company consistently omitted from the records wages earned by workers but not paid at December 31. The amounts omitted were:

December 31, 2021	€1,000
December 31, 2022	1,400
December 31, 2023	1,600

When the wages were paid in the year following that in which they were earned, Hudson recorded the amounts as expenses.

2. The company overstated merchandise inventory on December 31, 2021, by €1,900, as the result of errors made in the footings and extensions on the inventory sheets.
3. On December 31, 2022, Hudson expensed unexpired insurance of €1,200, applicable to 2023.
4. The company did not record on December 31, 2022, interest receivable in the amount of €240.
5. On January 2, 2022, Hudson sold for €1,800 a piece of equipment costing €3,900. At the date of sale, the equipment had accumulated depreciation of €2,400. The company recorded the cash received as Miscellaneous Income in 2022. In addition, the company continued to record depreciation for this equipment in both 2022 and 2023 at the rate of 10 percent of cost.

The first step in preparing the worksheet is to prepare a schedule showing the corrected net income amounts for the years ended December 31, 2021, 2022, and 2023. Each correction of the amount originally reported is clearly labeled. The next step is to indicate the statement of financial position accounts affected as of December 31, 2023. [Illustration 22.29](#) shows the completed worksheet for Hudson Haulers.

Assuming that Hudson **has not closed the books**, correcting entries on December 31, 2023, are as follows.

To correct improper charge to Salaries and Wages Expense for 2023		
--------------------------------------------------------------------------	--	--

Retained Earnings	1,400	
Salaries and Wages Expense		1,400

To record proper wages expense for 2023		
------------------------------------------------	--	--

Salaries and Wages Expense	1,600	
Salaries and Wages Payable		1,600

To record proper insurance expense for 2023		
----------------------------------------------------	--	--

Insurance Expense	1,200	
Retained Earnings		1,200

To correct improper credit to Interest Revenue in 2023		
---------------------------------------------------------------	--	--

Interest Revenue	240	
Retained Earnings		240

To record write-off of equipment in 2022 and adjustment of Retained Earnings		
-------------------------------------------------------------------------------------	--	--

Retained Earnings	1,500	
Accumulated Depreciation—Equipment	2,400	
Equipment		3,900

To correct improper charge for depreciation expense in 2022 and 2023		
-----------------------------------------------------------------------------	--	--

Accumulated Depreciation—Equipment	780	
Depreciation Expense		390
Retained Earnings		390

Hudson Haulers							
Worksheet to Correct Income and Statement of Financial Position Errors							
	Worksheet Analysis of Changes in Net Income				Statement of Financial Position Correction at December 31, 2023		
	2021	2022	2023	Totals	Debit	Credit	Account
Net income as reported	€17,400	€20,200	€11,300	€48,900			
Wages unpaid, 12/31/21	(1,000)	1,000		–0–			
Wages unpaid, 12/31/22		(1,400)	1,400	–0–			
Wages unpaid, 12/31/23			(1,600)	(1,600)		€1,600	Salaries and Wages Payable
Inventory overstatement, 12/31/21	(1,900)	1,900		–0–

Book value	1,500						
Proceeds from sale	1,800						
Gain on sale	300						
Income reported	(1,800)						
Adjustment	€(1,500)						

ILLUSTRATION 22.29 Worksheet to Correct Income and Statement of Financial Position Errors

If Hudson Haulers **has closed the books** for 2023, the correcting entries are:

To record proper wages expense for 2023		
Retained Earnings	1,600	
Salaries and Wages Payable		1,600
To record write-off of equipment in 2022 and adjustment of Retained Earnings		
Retained Earnings	1,500	
Accumulated Depreciation—Equipment	2,400	
Equipment		3,900
To correct improper charge for depreciation expense in 2022 and 2023		
Accumulated Depreciation—Equipment	780	
Retained Earnings		780

Preparation of Financial Statements with Error Corrections

Until now, our discussion of error analysis has focused on identifying the type of error involved and accounting for its correction in the records. We have noted that companies must present the correction of the error on comparative financial statements.

The following example illustrates how a company would restate a typical year's financial statements, given many different errors.

Dick & Wally's Outlet is a small retail outlet in the town of Holiday. Lacking expertise in accounting, the company does not keep adequate records, and numerous errors have occurred in recording accounting information.

1. The bookkeeper inadvertently failed to record a cash receipt of \$1,000 on the sale of merchandise in 2023.
2. Accrued wages expense at the end of 2022 was \$2,500; at the end of 2023, \$3,200. The company does not accrue for wages; all wages are charged to Administrative Expenses.
3. The company had not provided an allowance for estimated uncollectible receivables. Dick and Wally decided to set up such an allowance for the estimated probable losses, as of December 31, 2023, for 2022 accounts of \$700, and for 2023 accounts of \$1,500. They also decided to correct the charge against each year so that it showed the losses (actual and estimated) relating to that year's sales. The company has written off accounts to bad debt expense (selling expense) as follows.

	In 2022	In 2023
2022 accounts	\$400	\$2,000
2023 accounts		1,600

4. Unexpired insurance not recorded at the end of 2022 was \$600, and at the end of 2023, \$400. All insurance is charged to Administrative Expenses.
5. An account payable of \$6,000 should have been a note payable.
6. During 2022, the company sold for \$7,000 an asset that cost \$10,000 and had a book value of \$4,000. At the time of sale, Cash was debited and Miscellaneous Income was credited for \$7,000.
7. As a result of the last transaction, the company overstated depreciation expense (an administrative expense) in 2022 by \$800 and in 2023 by \$1,200.

Illustration 22.30 presents a worksheet that begins with the unadjusted trial balance of Dick & Wally's Outlet. You can determine the correcting entries and their effect on the financial statements by examining the worksheet.

[retrospective restatement \(n\)](#)

Learning Objectives Review

1 Discuss the types of accounting changes and the accounting for changes in accounting policies.

The two different types of accounting changes are as follows. (1) *Change in accounting policy*: a change from one accepted accounting policy to another accepted accounting policy. (2) *Change in accounting estimate*: a change that occurs as the result of new information or as additional experience is acquired.

A **change in accounting policy** involves a change from one accepted accounting policy to another. A change in accounting policy is not considered to result from the adoption of a new policy in recognition of events that have occurred for the first time or that were previously immaterial. If the accounting policy previously followed was not acceptable or if the policy was applied incorrectly, a change to an accepted accounting policy is considered a correction of an error.

The general requirement for changes in accounting policy is **retrospective application**. Under retrospective application, companies change prior years' financial statements on a basis consistent with the newly adopted policy. They treat any part of the effect attributable to years prior to those presented as an adjustment of the earliest retained earnings presented.

Retrospective application is **impracticable** if the prior period effect cannot be determined using every reasonable effort to do so. For example, in changing to average-cost, the base-year inventory for all subsequent average-cost calculations may be the opening inventory in the year the company adopts the method. There is no restatement of prior years' income because it is often too impractical.

2 Describe the accounting and reporting for changes in estimates.

Companies report changes in estimates prospectively. That is, companies should make no changes in previously reported results. They do not adjust opening balances nor change financial statements of prior periods.

3 Describe the accounting for correction of errors.

Companies must correct errors as soon as they discover them, by proper entries in the accounts, and report them in the financial statements. The profession requires that a company treat

corrections of errors as **prior period adjustments**, record them in the year in which it discovered the errors, and report them in the financial statements in the proper periods. If presenting comparative statements, a company should restate the prior statements affected to correct for the errors. The company need not repeat the disclosures in the financial statements of subsequent periods.

4 Analyze the effect of errors.

Three types of errors can occur. (1) *Statement of financial position errors*, which affect only the presentation of asset, liability, or equity accounts. (2) *Income statement errors*, which affect only the presentation of revenue, expense, gain, or loss accounts in the income statement. (3) *Statement of financial position and income statement errors*, which involve both the statement of financial position and income statement. The third type of error is further classified into two types. (1) *Counterbalancing errors* are offset or corrected over two periods. (2) *Non-counterbalancing errors* are not offset in the next accounting period and take longer than two periods to correct themselves.

As an aid to understanding accounting changes, we provide the following glossary. [\[10\]](#)

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Key Terms Related to Accounting Changes

Accounting Policies. The specific principles, bases, conventions, rules, and practices applied by an entity in preparing and presenting financial statements.

Change in Accounting Estimate. An adjustment of the carrying amount of an asset or a liability, or the amount of the periodic consumption of an asset, that results from the assessment of the present status of, and expected future benefits and obligations associated with, assets and liabilities. Changes in accounting estimates result from new information or new developments and, accordingly, are not corrections of errors.

Direct Effects of a Change in Accounting Policy. Those recognized changes in assets or liabilities necessary to effect a change in accounting policy.

Errors. Omissions from, and misstatements in, the entity's financial statements for one or more prior periods arising from the failure to use, or misuse of, representationally faithful information that: (1) was available when financial statements for those periods were authorized for issue; and (2) could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements. Such errors include the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and fraud.

Impracticable. Applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so. For a particular prior period, it is impracticable to apply a change in an accounting policy retrospectively or to make a retrospective restatement to correct an error when (1) the effects of the retrospective application or retrospective restatement are not determinable; (2) the retrospective application or retrospective restatement requires assumptions about what management's intent would have been in that period; or (3) the retrospective application or retrospective restatement requires significant estimates of amounts, and it is impossible to report objectively based on those estimates.

Indirect Effects of a Change in Accounting Policy. Any changes to current or future cash flows of an entity that result from making a change in accounting policy that is applied retrospectively.

Prospective Application. Change in accounting policy that requires (1) applying the new accounting policy to transactions, other events, and conditions occurring after the date at which the policy is changed; and (2) recognizing the effect of the change in the accounting estimate in the current and future periods affected by the change.

Retrospective Application. Applying a new accounting policy to transactions, other events, and conditions, as if that policy had always been applied.

Retrospective Restatement. Correcting the recognition, measurement, and disclosure of amounts of elements of financial statements, as if a prior period error had never occurred.

Practice Problem

Wangerin Company is in the process of adjusting and correcting its books at the end of 2022. In reviewing its records, the following information is compiled.

1. At December 31, 2022, Wangerin decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of \$200,000 when purchased on January 1, 2020. It has a 10-year useful life and no residual value. Depreciation expense recorded prior to 2022 under the double-declining-balance method was \$72,000. Wangerin has already recorded 2022 depreciation expense of \$25,600 using the double-declining-balance method.
2. Before 2022, Wangerin accounted for its income from long-term construction contracts using the zero-profit method. Early in 2022, Wangerin changed to the percentage-of-completion basis for accounting purposes. It continues to use the zero-profit method for tax purposes. Income for 2022 has been recorded using the percentage-of-completion method. The following information is available.

	Pretax Income	
	Percentage-of-Completion	Completed-Contract
Prior to 2022	\$450,000	\$315,000
2022	180,000	60,000

3. Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of \$3,300 because “the amount of the check is about the same every year.”
4. Reported sales revenue for the year is \$1,908,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that “the sales tax is a selling expense.” At the end of the current year, the balance in the Sales Tax Expense account is \$103,400.

Instructions

Prepare the journal entries necessary at December 31, 2022, to record the above corrections and changes. The books are still open for 2022. The income tax rate is 40%. Wangerin has not yet recorded its 2022 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 2.

Solution

1.	Accumulated Depreciation—Equipment	9,600	
	Depreciation Expense		9,600*
	*Equipment cost	\$200,000	
	Depreciation before 2022	(72,000)	
	Book value	<u>\$128,000</u>	
	Depreciation recorded	<u>\$ 25,600</u>	
	Depreciation to be taken ($\$128,000 \div 8$)	<u>(16,000)</u>	
	Difference	<u>\$ 9,600</u>	
2.	Construction in Process	135,000	
	Deferred Tax Liability		54,000*
	Retained Earnings		81,000
	* $(\$450,000 - \$315,000) \times .40$		

3.	Prepaid Insurance ($\$3,300 \times 10/12$)	2,750	
	Insurance Expense		2,750
4.	Sales Revenue [$\$1,908,000 \div (1.00 + .06) \times .06$]	108,000	
	Sales Taxes Payable		108,000
	Sales Taxes Payable	103,400	
	Sales Tax Expense		103,400

Questions

- In recent years, the financial press has indicated that many companies have changed their accounting policies. What are the major reasons why companies change accounting policies?
- State how each of the following items is reflected in the financial statements.
 - Change from FIFO to average-cost method for inventory valuation purposes.
 - Charge for failure to record depreciation in a previous period.
 - Litigation won in current year, related to prior period.
 - Change in the realizability of certain receivables.
 - Impairment of receivables.
 - Change from the percentage-of-completion to the cost-recovery method for reporting net income.
- Discuss briefly the three approaches that have been suggested for reporting changes in accounting policies.
- Identify and describe the approach the IASB requires for reporting changes in accounting policies.
- What is an indirect effect of a change in accounting policy? Briefly describe the approach to reporting the indirect effects of a change in accounting policy.
- Define a change in estimate and provide an illustration.
- Lenexa State Bank has followed the practice of capitalizing certain marketing costs and amortizing these costs over their expected life. In the current year, the bank determined that the future benefits from these costs were doubtful. Consequently, the bank adopted the policy of expensing these costs as incurred. How should the bank report this accounting change in the comparative financial statements?
- Indicate how the following items are recorded in the accounting records in the current year of Coronet Co.
 - Impairment of goodwill.
 - A change in depreciating plant assets from the accelerated to the straight-line method.
 - Large write-off of inventories because of obsolescence.

- d. Change from the cash basis to the accrual basis of accounting.
- e. Change from average-cost to FIFO method for inventory valuation purposes.
- f. Change in the estimate of service lives for plant assets.

9. Whittier Construction had followed the practice of expensing all materials assigned to a construction job without recognizing any residual inventory. On December 31, 2022, it was determined that residual inventory should be valued at CHF52,000. Of this amount, CHF29,000 arose during the current year. How does this information affect the financial statements to be prepared at the end of 2022?

10. Parsons Inc. wishes to change from the cost-recovery to the percentage-of-completion method for financial reporting purposes. The auditor indicates that a change would be permitted only if it is to a preferable method. What difficulties develop in assessing preferability?

11. Discuss how a change in accounting policy is handled when it is impracticable to determine previous amounts.

12. What relevance do political costs have to accounting changes?

13. What are some of the key motivations that managers might have to change accounting policies?

14. Distinguish between counterbalancing and non-counterbalancing errors. Give an example of each.

15. Discuss and illustrate how a correction of an error in previously issued financial statements should be handled.

16. Prior to 2022, Heberling Inc. excluded manufacturing overhead costs from work in process and finished goods inventory. These costs were expensed as incurred. In 2022, the company decided to change its accounting methods for manufacturing inventories to full costing by including these costs as product costs. Assuming that these costs are material, how should this change be reflected in the financial statements for 2021 and 2022?

17. Elliott AG failed to record accrued salaries for 2020, €2,000; 2021, €2,100; and 2022, €3,900. What is the amount of the overstatement or understatement of Retained Earnings at December 31, 2023?

18. In January 2021, installation costs of £6,000 on new equipment were charged to Maintenance and Repairs Expense. Other costs of this equipment of £30,000 were correctly recorded and have been depreciated using the straight-line method with an estimated life of 10 years and no residual value. At December 31, 2022, it is decided that all of the equipment has a remaining useful life of 20 years, starting with January 1, 2022. What entry or entries should be made in 2022 to correctly record transactions related to equipment, assuming the equipment has no residual value? The books have not been closed for 2022, and depreciation expense has not yet been recorded for 2022.

19. An entry to record Purchases and related Accounts Payable of ¥130,000 for merchandise purchased on December 23, 2022, was recorded in January 2023. This merchandise was not included in inventory at December 31, 2022. What effect does this error have on reported net income for 2022? What entry should be made to correct for this error, assuming that the books are not closed for 2022?

20. Equipment was purchased on January 2, 2022, for \$24,000, but no portion of the cost has been charged to depreciation. The company wishes to use the straight-line method for these assets, which have been estimated to have a life of 10 years and no residual value. What effect

does this error have on net income in 2022? What entry is necessary to correct for this error, assuming that the books are not closed for 2022?

Brief Exercises

BE22.1 (LO 1) Wertz Construction decided at the beginning of 2022 to change from the cost-recovery method to the percentage-of-completion method for financial reporting purposes. The company will continue to use the cost-recovery method for tax purposes. For years prior to 2022, pretax income under the two methods was as follows: percentage-of-completion \$120,000, and cost-recovery \$80,000. The tax rate is 35%. Prepare Wertz's 2022 journal entry to record the change in accounting policy.

BE22.2 (LO 1) Refer to the accounting change by Wertz Construction in BE22.1. Wertz has a profit-sharing plan, which pays all employees a bonus at year-end based on 1% of pretax income. Compute the indirect effect of Wertz's change in accounting policy that will be reported in the 2022 income statement, assuming that the profit-sharing contract explicitly requires adjustment for changes in income numbers.

BE22.3 (LO 1) Shannon AG, changed from the average-cost to the FIFO cost flow assumption in 2022. The increase in the prior year's income before taxes is €1,200,000. The tax rate is 40%. Prepare Shannon's 2022 journal entry to record the change in accounting policy.

BE22.4 (LO 2) Tedesco Company changed depreciation methods in 2022 from double-declining-balance to straight-line. Depreciation prior to 2022 under double-declining-balance was \$90,000, whereas straight-line depreciation prior to 2022 would have been \$50,000. Tedesco's depreciable assets had a cost of \$250,000, with a \$40,000 residual value and an 8-year remaining useful life at the beginning of 2022. Prepare the 2022 journal entry, if necessary, related to Tedesco's depreciable assets.

BE22.5 (LO 2) Sesame plc purchased a computer system for £74,000 on January 1, 2020. It was depreciated based on a 7-year life and an £18,000 residual value, using straight-line depreciation. On January 1, 2022, Sesame revised these estimates to a total useful life of 4 years and a residual value of £10,000. Prepare Sesame's entry to record 2022 depreciation expense.

BE22.6 (LO 3) In 2022, Bailey SA discovered that equipment purchased on January 1, 2020, for €50,000 was expensed at that time. The equipment should have been depreciated over 5 years, with no residual value, using straight-line depreciation. The effective tax rate is 30%. Prepare Bailey's 2022 journal entry to correct the error.

BE22.7 (LO 3) At January 1, 2022, Cheng Ltd. reported retained earnings of ¥20,000,000. In 2022, Cheng discovered that 2021 depreciation expense was understated by ¥4,000,000. In 2022, net income was ¥9,000,000 and dividends declared were ¥2,500,000. The tax rate is 40%. Prepare a 2022 retained earnings statement for Cheng Ltd.

BE22.8 (LO 3, 4) Indicate the effect—Understate, Overstate, No Effect—that each of the following errors has on 2021 net income and 2022 net income.

	2021	2022
a. Equipment purchased in 2020 was expensed.	_____	_____
b. Wages payable were not recorded at 12/31/21.	_____	_____
	_____	_____

c. Equipment purchased in 2021 was expensed.		
d. 2021 ending inventory was overstated.	_____	_____
e. Patent amortization was not recorded in 2022.	_____	_____

BE22.9 (LO 1, 2) Roundtree Manufacturing is preparing its year-end financial statements and is considering the accounting for the following items.

1. The vice president of sales has indicated that one product line has lost its customer appeal and will be phased out over the next 3 years. Therefore, a decision has been made to lower the estimated lives on related production equipment from the remaining 5 years to 3 years.
2. The Hightone Building was converted from a sales office to offices for the Accounting Department at the beginning of this year. Therefore, the expense related to this building will now appear as an administrative expense rather than a selling expense on the current year's income statement.
3. Estimating the lives of new products in the Leisure Products Division has become very difficult because of the highly competitive conditions in this market. Therefore, the practice of deferring and amortizing preproduction costs has been abandoned in favor of expensing such costs as they are incurred.

Identify and explain whether each of the above items is a change in policy, a change in estimate, or an error.

BE22.10 (LO 1, 3) Palmer Co. is evaluating the appropriate accounting for the following items.

1. Management has decided to switch from the FIFO inventory valuation method to the average-cost inventory valuation method for all inventories.
2. When the year-end physical inventory adjustment was made for the current year, the controller discovered that the prior year's physical-inventory sheets for an entire warehouse had been mislaid and excluded from last year's count.
3. Palmer's Custom Division manufactures large-scale, custom-designed machinery on a contract basis. Management decided to switch from the cost-recovery method to the percentage-of-completion method of accounting for long-term contracts.

Identify and explain whether each of the above items is a change in accounting policy, a change in estimate, or an error.

Exercises

E22.1 (LO 1) (Change in Policy—Long-Term Contracts) Cherokee Construction Company changed from the cost-recovery to the percentage-of-completion method of accounting for long-term construction contracts during 2022. For tax purposes, the company employs the cost-recovery method and will continue this approach in the future. (*Hint: Adjust all tax consequences through the Deferred Tax Liability account.*) The appropriate information related to this change is as follows.

	Pretax Income from	
--	--------------------	--

	Percentage-of-Completion	Cost-Recovery	Difference
Prior Years	\$780,000	\$610,000	\$170,000
2022	700,000	480,000	220,000

Instructions

- Assuming that the tax rate is 35%, what is the amount of net income that would be reported in 2022?
- What entry or entries is/are necessary to adjust the accounting records for the change in accounting policy?

E22.2 (LO 1) (Change in Policy—Inventory Methods) Whitman SA began operations on January 1, 2019, and uses the average-cost method of pricing inventory. Management is contemplating a change in inventory methods for 2022. The following information is available for the years 2019–2021.

	Net Income Computed Using	
	Average-Cost Method	FIFO Method
2019	€16,000	€19,000
2020	18,000	21,000
2021	20,000	25,000

Instructions

(Ignore all tax effects.)

- Prepare the journal entry necessary to record a change from the average-cost method to the FIFO method in 2022.
- Determine net income to be reported for 2019, 2020, and 2021, after giving effect to the change in accounting policy.

E22.3 (LO 1) (Accounting Policy Change) Ramirez Co. decides at the beginning of 2022 to adopt the FIFO method of inventory valuation. Ramirez has used the average-cost method for financial reporting since its inception on January 1, 2020, and has maintained records adequate to apply the FIFO method retrospectively. Ramirez concluded that FIFO is the preferable inventory method because it reflects the current cost of inventory on the statement of financial position. The following table presents the effects of the change in accounting policy on inventory and cost of goods sold.

Date	Inventory Determined by		Cost of Goods Sold Determined by	
	Average-Cost Method	FIFO Method	Average-Cost Method	FIFO Method
January 1, 2020	\$ 0	\$ 0	\$ 0	\$ 0
December 31, 2020	100	80	800	820
December 31, 2021	200	240	1,000	940
December 31, 2022	320	390	1,130	1,100

Retained earnings reported under average-cost are as follows.

	Retained Earnings Balance

December 31, 2020	\$2,200
December 31, 2021	4,200
December 31, 2022	6,070

Other information:

1. For each year presented, sales are \$4,000 and operating expenses are \$1,000.
2. Ramirez provides two years of financial statements.

Instructions

- a. Prepare income statements under average-cost and FIFO for 2020, 2021, and 2022. Omit earnings per share.
- b. Prepare income statements reflecting the retrospective application of the accounting change from the average-cost method to the FIFO method for 2022 and 2021.
- c. Prepare the note to the financial statements describing the change in method of inventory valuation. In the note, indicate the income statement line items for 2022 and 2021 that were affected by the change in accounting policy.
- d. Prepare comparative retained earnings statements for 2021 and 2022 under FIFO.

E22.4 (LO 1) (Accounting Policy Change) Linden plc started operations on January 1, 2017, and has used the FIFO method of inventory valuation since its inception. In 2022, it decides to switch to the average-cost method. You are provided with the following information.

	Net Income		Retained Earnings (ending balance)
	Under FIFO	Under Average-Cost	Under FIFO
2017	£100,000	£ 92,000	£100,000
2018	70,000	65,000	160,000
2019	90,000	80,000	235,000
2020	120,000	130,000	340,000
2021	300,000	293,000	590,000
2022	305,000	310,000	780,000

Instructions

- a. What is the beginning retained earnings balance at January 1, 2019, if Linden presents 2-year comparative financial statements starting in 2019?
- b. What is the beginning retained earnings balance at January 1, 2022, if Linden presents 2-year comparative financial statements starting in 2022?
- c. What is the beginning retained earnings balance at January 1, 2023, if Linden presents 2-year single-period financial statements for 2023?
- d. What is the net income reported by Linden in the 2022 income statement if it presents 2-year comparative financial statements starting with 2020?

E22.5 (LO 1) (Accounting Change) Presented below are income statements prepared on an average-cost and FIFO basis for Carlton SA, which started operations on January 1, 2021. The company presently uses the average-cost method of pricing its inventory and has decided to

switch to the FIFO method in 2022. The FIFO income statement is computed in accordance with IFRS. Carlton's profit-sharing agreement with its employees indicates that the company will pay employees 5% of income before profit sharing. Income taxes are ignored.

	Average-Cost Basis		FIFO Basis	
	2022	2021	2022	2021
Sales	€3,000	€3,000	€3,000	€3,000
Cost of goods sold	1,130	1,000	1,100	940
Operating expenses	1,000	1,000	1,000	1,000
Income before profit sharing	870	1,000	900	1,060
Profit-sharing expense	44	50	45	53
Net income	€ 826	€ 950	€ 855	€1,007

Instructions

Answer the following questions.

- If comparative income statements are prepared, what net income should Carlton report in 2021 and 2022?
- Explain why, under the FIFO basis, Carlton reports €50 in 2021 and €48 in 2022 for its profit-sharing expense.
- Assume that Carlton has a beginning balance of retained earnings of €8,000 at January 1, 2022, using the average-cost method. The company declared and paid dividends of €2,500 in 2022. Prepare the retained earnings statement for 2022, assuming that Carlton has switched to the FIFO method.

E22.6 (LO 2) (Accounting Changes—Depreciation) Robillard SA acquired the following assets in January 2019.

Equipment, estimated service life, 5 years; residual value, €15,000	€465,000
Building, estimated service life, 30 years; no residual value	€780,000

The equipment has been depreciated using the sum-of-the-years'-digits method for the first 3 years for financial reporting purposes. In 2022, the company decided to change the method of computing depreciation to the straight-line method for the equipment, but no change was made in the estimated service life or residual value. It was also decided to change the total estimated service life of the building from 30 years to 40 years, with no change in the estimated residual value. The building is depreciated on the straight-line method.

Instructions

- Prepare the journal entry to record depreciation expense for the equipment in 2022.
- Prepare the journal entry to record depreciation expense for the building in 2022. (Round to nearest euro.)

E22.7 (LO 2, 3) (Change in Estimate and Error; Financial Statements) The following are the comparative income statements for Pannebecker Inc. for the years 2021 and 2022.

	2022	2021
Sales	\$340,000	\$270,000

Cost of sales	200,000	142,000
Gross profit	140,000	128,000
Expenses	88,000	50,000
Net income	\$ 52,000	\$ 78,000
Retained earnings (Jan. 1)	\$125,000	\$ 72,000
Net income	52,000	78,000
Dividends	(30,000)	(25,000)
Retained earnings (Dec. 31)	\$147,000	\$125,000

The following additional information is provided.

1. In 2022, Pannebecker Inc. decided to switch its depreciation method from sum-of-the-years'-digits to the straight-line method. The assets were purchased at the beginning of 2021 for \$90,000 with an estimated useful life of 4 years and no residual value. (The 2022 income statement contains depreciation expense of \$27,000 on the assets purchased at the beginning of 2021.)
2. In 2022, the company discovered that the ending inventory for 2021 was overstated by \$20,000; ending inventory for 2022 is correctly stated.

Instructions

Prepare the revised retained earnings statement for 2021 and 2022, assuming comparative statements. (Ignore income taxes.)

E22.8 (LO 1, 2, 3) (Accounting for Accounting Changes and Errors) Listed below are various types of accounting changes and errors.

_____	1. Change from FIFO to average-cost inventory method.
_____	2. Change due to overstatement of inventory.
_____	3. Change from an accelerated to straight-line method of depreciation.
_____	4. Change from average-cost to FIFO inventory method.
_____	5. Change in the rate used to compute warranty costs.
_____	6. Change from an unacceptable accounting policy to an acceptable accounting policy.
_____	7. Change in a patent's amortization period.

	8. Change from cost-recovery to percentage-of-completion method on construction contracts.
	9. Change in a plant asset's residual value.

Instructions

For each change or error, indicate how it would be accounted for using the following code letters:

- a. Accounted for prospectively.
- b. Accounted for retrospectively.
- c. Neither of the above.

E22.9 (LO 2, 3) (Error and Change in Estimate—Depreciation) Yoon Ltd. purchased a machine on January 1, 2019, for ₩44,000,000. At that time, it was estimated that the machine would have a 10-year life and no residual value. On December 31, 2022, the firm's accountant found that the entry for depreciation expense had been omitted in 2020. In addition, management has informed the accountant that the company plans to switch to straight-line depreciation, starting with the year 2022. At present, the company uses the sum-of-the-years'-digits method for depreciating equipment.

Instructions

Prepare the general journal entries that should be made at December 31, 2022, to record these events. (Ignore tax effects.)

E22.10 (LO 2) (Depreciation Changes) On January 1, 2018, McElroy plc purchased a building and equipment that have the following useful lives, residual values, and costs.

Building, 40-year estimated useful life, £50,000 residual value, £1,200,000 cost

Equipment, 12-year estimated useful life, £10,000 residual value, £130,000 cost

The building was depreciated under the double-declining-balance method through 2021. In 2022, the company decided to switch to the straight-line method of depreciation. McElroy also decided to change the total useful life of the equipment to 9 years, with a residual value of £5,000 at the end of that time. The equipment is depreciated using the straight-line method.

Instructions

- a. Prepare the journal entry or entries necessary to record the depreciation expense on the building in 2022.
- b. Compute depreciation expense on the equipment for 2022.

E22.11 (LO 2) (Change in Estimate—Depreciation) Thurber Co. purchased for \$710,000 equipment which was estimated to have a useful life of 10 years with a residual value of \$10,000 at the end of that time. Depreciation has been entered for 7 years on a straight-line basis. In 2022, it is determined that the total estimated life should be 15 years with a residual value of \$4,000 at the end of that time.

Instructions

- a. Prepare the entry (if any) to correct the prior years' depreciation.
- b. Prepare the entry to record depreciation for 2022.

E22.12 (LO 2) (Change in Estimate—Depreciation) Frederick Industries changed from the double-declining-balance to the straight-line method in 2022 on all its plant assets. There was no change in the assets' residual values or useful lives. Plant assets acquired on January 2, 2019 had an original cost of €2,400,000, with a €100,000 residual value and an 8-year estimated useful life. Income before depreciation expense was €370,000 in 2021 and €300,000 in 2022.

Instructions

- a. Prepare the journal entry or entries to reflect the change in depreciation method in 2022.
- b. Starting with income before depreciation expense, prepare the remaining portion of the income statement for 2021 and 2022.

E22.13 (LO 1) (Change in Policy—Long-Term Contracts) Bryant Construction Company changed from the cost-recovery to the percentage-of-completion method of accounting for long-term construction contracts during 2022. For tax purposes, the company employs the cost-recovery method and will continue this approach in the future. The information related to this change is as follows.

	Pretax Income from		
	Percentage-of-Completion	Cost-Recovery	Difference
Prior Years	\$980,000	\$730,000	\$250,000
2022	900,000	480,000	420,000

Instructions

- a. Assuming that the tax rate is 40%, what is the amount of net income that would be reported in 2022?
- b. What entry or entries is/are necessary to adjust the accounting records for the change in accounting policy?

E22.14 (LO 1) (Various Changes in Policy—Inventory Methods) Following is the net income of Benchley Instrument AG, a private company, computed under the two inventory methods using a periodic system.

	FIFO	Average-Cost
2019	€26,000	€23,000
2020	30,000	25,000
2021	29,000	27,000
2022	34,000	30,000

Instructions

(Ignore tax considerations.)

- a. Assume that in 2022 Benchley decided to change from the FIFO method to the average-cost method of pricing inventories. Prepare the journal entry necessary for the change that took

place during 2022, and show net income reported for 2019, 2020, 2021, and 2022.

- b. Assume that in 2022 Benchley, which had been using the average-cost method since beginning operations in 2019, changed to the FIFO method of pricing inventories. Prepare the journal entry necessary to record the change in 2022, and show net income reported for 2019, 2020, 2021, and 2022.

E22.15 (LO 3, 4) (Error Correction Entries) The first audit of the books of Fenimore Company was conducted for the year ended December 31, 2022. In examining the books, the auditor found that certain items had been overlooked or incorrectly handled in the last 3 years. These items were:

1. At the beginning of 2020, the company purchased a machine for \$510,000 (residual value of \$51,000) that had a useful life of 5 years. The bookkeeper used straight-line depreciation but failed to deduct the residual value in computing the depreciation base for the 3 years.
2. At the end of 2021, the company failed to accrue sales salaries of \$45,000.
3. A tax lawsuit that involved the year 2020 was settled late in 2022. It was determined that the company owed an additional \$85,000 in taxes related to 2020. The company did not record a liability in 2020 or 2021 because the possibility of loss was considered remote. Fenimore debited the \$85,000 to a loss account in 2022 and credited Cash for the same amount.
4. Fenimore Company purchased a copyright from another company early in 2020 for \$50,000. Fenimore had not amortized the copyright because its value had not diminished. The copyright has a useful life at purchase of 20 years.
5. In 2022, the company wrote off \$87,000 of inventory considered to be obsolete; this loss was charged directly to Retained Earnings and credited to Inventory.

Instructions

Prepare the journal entries necessary in 2022 to correct the books, assuming that the books have not been closed. Disregard effects of corrections on income tax.

E22.16 (LO 3, 4) (Error Analysis and Correcting Entry) You have been engaged to review the financial statements of Longfellow Lumber. In the course of your examination, you conclude that the bookkeeper hired during the current year is not doing a good job. You notice a number of irregularities.

1. Year-end salaries and wages payable of €3,400 were not recorded because the bookkeeper thought that “they were immaterial.”
2. Accrued vacation pay for the year of €31,100 was not recorded because the bookkeeper “never heard that you had to do that.”
3. Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of €3,300 because “the amount of the check is about the same every year.”
4. Reported sales revenue for the year is €1,908,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that “the sales tax is a selling expense.” At the end of the current year, the balance in the Sales Tax Expense account is €103,400.

Instructions

Prepare the necessary correcting entries, assuming that Longfellow uses a calendar-year basis.

E22.17 (LO 3, 4) (Error Analysis and Correcting Entry) The reported net incomes for the first 2 years of Sinclair Products, Inc., were as follows: 2021, \$147,000; 2022, \$185,000. Early in 2023, the following errors were discovered.

1. Depreciation of equipment for 2021 was overstated \$19,000.
2. Depreciation of equipment for 2022 was understated \$38,500.
3. December 31, 2021, inventory was understated \$50,000.
4. December 31, 2022, inventory was overstated \$14,200.

Instructions

Prepare the correcting entry necessary when these errors are discovered. Assume that the books for 2022 are closed. (Ignore income tax considerations.)

E22.18 (LO 3, 4) (Error Analysis) Emerson Tool plc's December 31 year-end financial statements contained the following errors.

	December 31, 2021	December 31, 2022
Ending inventory	£9,600 understated	£7,100 overstated
Depreciation expense	£2,300 understated	—

An insurance premium of £60,000 was prepaid in 2021 covering the years 2021, 2022, and 2023. The entire amount was charged to expense in 2021. In addition, on December 31, 2022, fully depreciated machinery was sold for £15,000 cash, but the entry was not recorded until 2023. There were no other errors during 2021 or 2022, and no corrections have been made for any of the errors. (Ignore income tax considerations.)

Instructions

- a. Compute the total effect of the errors on 2022 net income.
- b. Compute the total effect of the errors on the amount of Emerson's working capital at December 31, 2022.
- c. Compute the total effect of the errors on the balance of Emerson's retained earnings at December 31, 2022.

E22.19 (LO 3, 4) (Error Analysis and Correcting Entries) A partial trial balance of Dickinson Ltd. is as follows on December 31, 2022.

	Dr.	Cr.
Supplies	R 2,500	
Salaries and wages payable		R 1,500
Interest receivable	5,100	
Prepaid insurance	90,000	
Unearned rent		—0—
Accrued interest payable		15,000

Additional adjusting data:

1. A physical count of supplies on hand on December 31, 2022, totaled R1,100.
2. Through oversight, the Salaries and Wages Payable account was not changed during 2022. Accrued salaries and wages on December 31, 2022, amounted to R4,400.
3. The Interest Receivable account was also left unchanged during 2022. Accrued interest on investments amounts to R4,350 on December 31, 2022.
4. The unexpired portions of the insurance policies totaled R65,000 as of December 31, 2022.
5. R24,000 was received on January 1, 2022, for the rent of a building for both 2022 and 2023. The entire amount was credited to rental income.
6. Depreciation for the year on equipment was erroneously recorded as R5,000 rather than the correct figure of R50,000.
7. A further review of depreciation calculations of prior years revealed that depreciation of R7,200 was not recorded. It was decided that this oversight should be corrected by a prior period adjustment.

Instructions

- a. Assuming that the books have not been closed, what are the adjusting entries necessary at December 31, 2022? (Ignore income tax considerations.)
- b. Assuming that the books have been closed, what are the adjusting entries necessary at December 31, 2022? (Ignore income tax considerations.)

E22.20 (LO 3, 4) (Error Analysis) The before-tax income for Fitzgerald Co. for 2021 was \$101,000, and for 2022 was \$77,400. However, the accountant noted that the following errors had been made.

1. Sales and revenue for 2021 included \$38,200 which had been received in cash during 2021, but for which the related products were delivered in 2022. Title did not pass to the purchaser until 2022.
2. The inventory on December 31, 2021, was understated by \$8,640.
3. In recording interest expense for both 2021 and 2022 on bonds payable, the bookkeeper made the following entry on an annual basis.

Interest Expense	15,000	
Cash		15,000

The bonds have a face value of \$250,000 and pay a stated interest rate of 6%. They were issued at a discount of \$10,000 on January 1, 2021 to yield an effective-interest rate of 7%. (Assume that the effective-interest method should be used.)

4. Ordinary repairs to equipment were erroneously charged to the Equipment account during 2021 and 2022. Repairs in the amount of \$8,000 in 2021 and \$9,400 in 2022 were so charged. The company applies a rate of 10% to the balance in the Equipment account at the end of the year in its determination of depreciation charges.

Instructions

Prepare a schedule showing the determination of corrected income before taxes for 2021 and 2022.

E22.21 (LO 3, 4) (Error Analysis) When the records of Aoki Ltd. were reviewed at the close of 2022, the errors listed as follows were discovered. For each item, indicate by a check mark in the appropriate column whether the error resulted in an overstatement, an understatement, or had no effect on net income for the years 2021 and 2022.

Item	2021			2022		
	Over-statement	Under-statement	No Effect	Over-statement	Under-statement	No Effect
1. Failure to reflect supplies on hand on statement of financial position at end of 2021.						
2. Failure to record the correct amount of ending 2021 inventory. The amount was understated because of an error in calculation.						
3. Failure to record, until 2022, merchandise purchased in 2021. Merchandise was also omitted from ending inventory in 2021 but was not yet sold.						
4. Failure to record accrued interest on notes payable in 2021; that amount was recorded when paid in 2022.						
5. Failure to record amortization of patent in 2022.						

Problems

P22.1 (LO 2, 3) Groupwork (Change in Estimate and Error Correction) Holtzman Company is in the process of preparing its financial statements for 2022. Assume that no entries for depreciation have been recorded in 2022. The following information related to depreciation of fixed assets is provided to you.

- Holtzman purchased equipment on January 2, 2019, for \$85,000. At that time, the equipment had an estimated useful life of 10 years with a \$5,000 residual value. The equipment is depreciated on a straight-line basis. On January 2, 2022, as a result of

additional information, the company determined that the equipment has a remaining useful life of 4 years with a \$3,000 residual value.

- During 2022, Holtzman changed from the double-declining-balance method for its building to the straight-line method. The building originally cost \$300,000. It had a useful life of 10 years and a residual value of \$30,000. The following computations present depreciation on both bases for 2020 and 2021.

	2021	2020
Straight-line	\$27,000	\$27,000
Declining-balance	48,000	60,000

- Holtzman purchased a machine on July 1, 2020, at a cost of \$120,000. The machine has a residual value of \$16,000 and a useful life of 8 years. Holtzman's bookkeeper recorded straight-line depreciation in 2020 and 2021 but failed to consider the residual value.

Instructions

- Prepare the journal entries to record depreciation expense for 2022 and correct any errors made to date related to the information provided.
- Show comparative net income for 2021 and 2022. Income before depreciation expense was \$300,000 in 2022, and was \$310,000 in 2021. (Ignore taxes.)

P22.2 (LO 1, 2, 3, 4) (Comprehensive Accounting Changes and Error Analysis

Problem) Botticelli SpA was organized in late 2019 to manufacture and sell hosiery. At the end of its fourth year of operation, the company has been fairly successful, as indicated by the following reported net incomes.

2019	€140,000 ^a	2021	€205,000
2020	160,000	2022	276,000

^aIncludes a €10,000 increase because of change in bad debt expense rate.

The company has decided to expand operations and has applied for a sizable bank loan. The bank officer has indicated that the records should be audited and presented in comparative statements to facilitate analysis by the bank. Botticelli hired the auditing firm of Check & Doublecheck Co. and has provided the following additional information.

- In early 2020, Botticelli changed its estimate from 2% to 1% of receivables on the amount of bad debt expense to be charged to operations. Bad debt expense for 2019, if a 1% rate had been used, would have been €10,000. The company therefore restated its net income for 2019.
- The auditor discovered that in 2022, the company had changed its method of inventory pricing from average-cost to FIFO. The effect on the income statements for the previous years is as follows.

	2019	2020	2021	2022
Net income unadjusted—average-cost basis	€140,000	€160,000	€205,000	€276,000
Net income unadjusted—FIFO basis	155,000	165,000	215,000	260,000
	<u>€ 15,000</u>	<u>€ 5,000</u>	<u>€ 10,000</u>	<u>(€ 16,000)</u>

- In 2022, the auditor discovered that:

- a. The company incorrectly overstated the ending inventory by €14,000 in 2021.
- b. A dispute developed in 2020 with the tax authorities over the deductibility of entertainment expenses. In 2019, the company was not permitted these deductions, but a tax settlement was reached in 2022 that allowed these expenses. As a result of the court's finding, tax expenses in 2022 were reduced by €60,000.

Instructions

- a. Indicate how each of these changes or corrections should be handled in the accounting records. (Ignore income tax considerations.)
- b. Present comparative net income numbers for the years 2019 to 2022. (Ignore income tax considerations.)

P22.3 (LO 1, 2, 3, 4) (Error Corrections and Accounting Changes) Chen Group is in the process of adjusting and correcting its books at the end of 2022. In reviewing its records, the following information is compiled.

1. Chen has failed to accrue sales commissions payable at the end of each of the last 2 years, as follows.

December 31, 2021	¥3,500,000
December 31, 2022	¥2,500,000

2. In reviewing the December 31, 2022, inventory, Chen discovered errors in its inventory-taking procedures that have caused inventories for the last 3 years to be incorrect, as follows.

December 31, 2020	Understated	¥16,000,000
December 31, 2021	Understated	¥19,000,000
December 31, 2022	Overstated	¥ 6,700,000

Chen has already made an entry that established the incorrect December 31, 2022, inventory amount.

3. At December 31, 2022, Chen decided to change the depreciation method on its office equipment from double-declining-balance to straight-line. The equipment had an original cost of ¥100,000,000 when purchased on January 1, 2020. It has a 10-year useful life and no residual value. Depreciation expense recorded prior to 2022 under the double-declining-balance method was ¥36,000,000. Chen has already recorded 2022 depreciation expense of ¥12,800,000 using the double-declining-balance method.
4. Before 2022, Chen accounted for its income from long-term construction contracts on the cost-recovery basis. Early in 2022, Chen changed to the percentage-of-completion basis for accounting purposes. It continues to use the cost-recovery method for tax purposes. Income for 2022 has been recorded using the percentage-of-completion method. The information follows.

	Pretax Income from	
	Percentage-of-Completion	Cost-Recovery
Prior to 2022	¥150,000,000	¥105,000,000
2022	60,000,000	20,000,000

Instructions

Prepare the journal entries necessary at December 31, 2022, to record the above corrections and changes. The books are still open for 2022. The income tax rate is 40%. Chen has not yet recorded its 2022 income tax expense and payable amounts, so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 4.

P22.4 (LO 2) Groupwork Ethics (Accounting Changes) Aston plc performs year-end planning in November of each year before its calendar year ends in December. The preliminary estimated net income is £3 million. The CFO, Rita Warren, meets with the company president, J. B. Aston, to review the projected numbers. She presents the following projected information.

Aston plc Projected Income Statement For the Year Ended December 31, 2022		
Sales		£29,000,000
Cost of goods sold	£14,000,000	
Depreciation	2,600,000	
Operating expenses	6,400,000	23,000,000
Income before income tax		6,000,000
Income tax		3,000,000
Net income		<u>£ 3,000,000</u>

Aston plc Selected Statement of Financial Position Information At December 31, 2022	
Estimated cash balance	£ 5,000,000
Debt investments (held-for-collection)	10,000,000
Security fair value adjustment account (1/1/22)	200,000

Estimated fair value at December 31, 2022:

Investment	Cost	Estimated Fair Value
A	£ 2,000,000	£ 2,200,000
B	4,000,000	3,900,000
C	3,000,000	3,000,000
D	1,000,000	1,800,000
Total	£10,000,000	£10,900,000

Other information at December 31, 2022:

Equipment	£3,000,000
Accumulated depreciation (5-year SL)	1,200,000
New robotic equipment (purchased 1/1/22)	5,000,000
Accumulated depreciation (5-year DDB)	2,000,000

The company has never used robotic equipment before, and Warren assumed an accelerated method because of the rapidly changing technology in robotic equipment. The company normally uses straight-line depreciation for production equipment.

Aston explains to Warren that it is important for the company to show a £7,000,000 income before taxes because Aston receives a £1,000,000 bonus if the income before taxes and bonus reaches £7,000,000. Aston also does not want the company to pay more than £3,000,000 in income taxes to the government.

Instructions

- What can Warren do within IFRS to accommodate the president's wishes to achieve £7,000,000 in income before taxes and bonus? Present the revised income statement based on your decision.
- Are the actions ethical? Who are the stakeholders in this decision, and what effect do Warren's actions have on their interests?

P22.5 (LO 1) (Change in Policy—Inventory—Periodic) The management of Utrillo Instrument Ltd. had concluded, with the concurrence of its independent auditors, that results of operations would be more fairly presented if Utrillo changed its method of pricing inventory from FIFO to average-cost in 2022. Given below is the 5-year summary of income under FIFO and a schedule of what the inventories would be if recorded according to the average-cost method (amounts in millions, except earnings per share).

Utrillo Instrument Ltd. Statement of Income and Retained Earnings For the Years Ended May 31					
	2018	2019	2020	2021	2022
Sales—net	¥13,964	¥15,506	¥16,673	¥18,221	¥18,898
Cost of goods sold Beginning inventory	1,000	1,100	1,000	1,115	1,237
Purchases	13,000	13,900	15,000	15,900	17,100
Ending inventory	(1,100)	(1,000)	(1,115)	(1,237)	(1,369)
Total	12,900	14,000	14,885	15,778	16,968
Gross profit	1,064	1,506	1,788	2,443	1,930
Administrative expenses	700	763	832	907	989
Income before taxes	364	743	956	1,536	941
Income taxes (50%)	182	372	478	768	471
Net income	182	371	478	768	470
Retained earnings—beginning	1,206	1,388	1,759	2,237	3,005
Retained earnings—ending	¥ 1,388	¥ 1,759	¥ 2,237	¥ 3,005	¥ 3,475
Earnings per share	¥1.82	¥3.71	¥4.78	¥7.68	¥4.70

Schedule of Inventory Balances Using Average-Cost Method For the Year Ended May 31					
2017	2018	2019	2020	2021	2022
¥1,010	¥1,124	¥1,101	¥1,270	¥1,500	¥1,720

Instructions

Prepare comparative statements for the 5 years, assuming that Utrillo changed its method of inventory costing to average-cost. Indicate the effects on net income and earnings per share for

the years involved. Utrillo Instruments started business in 2017. (All amounts except EPS are rounded up to the nearest yen.)

P22.6 (LO 2, 3, 4) (Accounting Changes and Error Analysis) On December 31, 2022, before the books were closed, the management and accountants of Madrasa SA made the following determinations about three depreciable assets.

1. Depreciable asset A was purchased January 2, 2019. It originally cost €540,000 and, for depreciation purposes, the straight-line method was originally chosen. The asset was originally expected to be useful for 10 years and have a zero residual value. In 2022, the decision was made to change the depreciation method from straight-line to sum-of-the-years'-digits, and the estimates relating to useful life and residual value remained unchanged.
2. Depreciable asset B was purchased January 3, 2018. It originally cost €180,000 and, for depreciation purposes, the straight-line method was chosen. The asset was originally expected to be useful for 15 years and have a zero residual value. In 2022, the decision was made to shorten the total life of this asset to 9 years and to estimate the residual value at €3,000.
3. Depreciable asset C was purchased January 5, 2018. The asset's original cost was €160,000, and this amount was entirely expensed in 2018. This particular asset has a 10-year useful life and no residual value. The straight-line method was chosen for depreciation purposes.

Additional data:

1. Income in 2022 before depreciation expense amounted to €400,000.
2. Depreciation expense on assets other than A, B, and C totaled €55,000 in 2022.
3. Income in 2021 was reported at €370,000.
4. Ignore all income tax effects.
5. 100,000 ordinary shares were outstanding in 2021 and 2022.

Instructions

- a. Prepare all necessary entries in 2022 to record these determinations.
- b. Prepare comparative retained earnings statements for Madrasa SA for 2021 and 2022. The company had retained earnings of €200,000 at December 31, 2020.

P22.7 (LO 3, 4) Groupwork (Error Corrections) You have been assigned to examine the financial statements of Zarle Company for the year ended December 31, 2022. You discover the following situations.

1. Depreciation of \$3,200 for 2022 on delivery vehicles was not recorded.
2. The physical inventory count on December 31, 2021, improperly excluded merchandise costing \$19,000 that had been temporarily stored in a public warehouse. Zarle uses a periodic inventory system.
3. A collection of \$5,600 on account from a customer received on December 31, 2022, was not recorded until January 2, 2023.

4. In 2022, the company sold for \$3,700 fully depreciated equipment that originally cost \$25,000. The company credited the proceeds from the sale to the Equipment account.
5. During November 2022, a competitor company filed a patent-infringement suit against Zarle claiming damages of \$220,000. The company's legal counsel has indicated that an unfavorable verdict is probable and a reasonable estimate of the court's award to the competitor is \$125,000. The company has not reflected or disclosed this situation in the financial statements.
6. Zarle has a portfolio of investments that it manages to profit from short-term price changes. No entry has been made to adjust to fair value. Information on cost and fair value is as follows.

	Cost	Fair Value
December 31, 2021	\$95,000	\$95,000
December 31, 2022	\$84,000	\$82,000

7. At December 31, 2022, an analysis of payroll information shows salaries and wages payable of \$12,200. The Salaries and Wages Payable account has a balance of \$16,000 at December 31, 2022, which was unchanged from its balance at December 31, 2021.
8. A large piece of equipment was purchased on January 3, 2022, for \$40,000 and was charged to Maintenance and Repairs Expense. The equipment is estimated to have a service life of 8 years and no residual value. Zarle normally uses the straight-line depreciation method for this type of equipment.
9. A \$12,000 insurance premium paid on July 1, 2021, for a policy that expires on June 30, 2024, was charged to insurance expense.
10. A trademark was acquired at the beginning of 2021 for \$50,000. No amortization has been recorded since its acquisition. The maximum allowable amortization period is 10 years.

Instructions

Assume the trial balance has been prepared but the books have not been closed for 2022. Assuming all amounts are material, prepare journal entries showing the adjustments that are required. (Ignore income tax considerations.)

P22.8 (LO 3, 4) Groupwork (Comprehensive Error Analysis) On March 5, 2023, you were hired by Hemingway plc, a closely held company, as a staff member of its newly created internal auditing department. While reviewing the company's records for 2021 and 2022, you discover that no adjustments have yet been made for the items listed below.

Items

1. Interest income of £14,100 was not accrued at the end of 2021. It was recorded when received in February 2022.
2. A computer costing £4,000 was expensed when purchased on July 1, 2021. It is expected to have a 4-year life with no residual value. The company typically uses straight-line depreciation for all fixed assets.
3. Research costs of £33,000 were incurred early in 2021. They were capitalized and were to be amortized over a 3-year period. Amortization of £11,000 was recorded for 2021 and £11,000 for 2022.

4. On January 2, 2021, Hemingway leased a building for 5 years at a monthly rental of £8,000. On that date, the company paid the following amounts, which were expensed when paid.

Security deposit	£20,000
First month's rent	8,000
Last month's rent	8,000
	<u>£36,000</u>

5. The company received £36,000 from a customer at the beginning of 2021 for services that it is to perform regularly over a 3-year period beginning in 2021. None of the amount received was reported as unearned revenue at the end of 2021.
6. Merchandise inventory costing £18,200 was in the warehouse at December 31, 2021, but was incorrectly omitted from the physical count at that date. The company uses the periodic inventory method.

Instructions

Indicate the effect of any errors on the net income figure reported on the income statement for the year ending December 31, 2021, and the retained earnings figure reported on the statement of financial position at December 31, 2022. Assume all amounts are material and ignore income tax effects. Using the following format, enter the appropriate dollar amounts in the appropriate columns. Consider each item independent of the other items. It is not necessary to total the columns on the grid.

	Net Income for 2021		Retained Earnings at 12/31/22	
Item	Understated	Overstated	Understated	Overstated

P22.9 (LO 3, 4) (Error Analysis) Lowell AG has used the accrual basis of accounting for several years. A review of the records, however, indicates that some expenses and revenues have been handled on a cash basis because of errors made by an inexperienced bookkeeper. Income statements prepared by the bookkeeper reported €29,000 net income for 2021 and €37,000 net income for 2022. Further examination of the records reveals that the following items were handled improperly.

- Rent was received from a tenant in December 2021. The amount, €1,000, was recorded as income at that time even though the rental pertained to 2022.
- Salaries and wages payable on December 31 have been consistently omitted from the records of that date and have been entered as expenses when paid in the following year. The amounts of the accruals recorded in this manner were:

December 31, 2020	€1,100
December 31, 2021	1,200
December 31, 2022	940

- Invoices for office supplies purchased have been charged to expense accounts when received. Inventories of supplies on hand at the end of each year have been ignored, and no entry has been made for them.

December 31, 2020	€1,300
December 31, 2021	940

December 31, 2022	1,420
-------------------	-------

Instructions

Prepare a schedule that will show the corrected net income for the years 2021 and 2022. All items listed should be labeled clearly. (Ignore income tax considerations.)

P22.10 (LO 3, 4) (Error Analysis and Correcting Entries) You have been asked by a client to review the records of Roberts Company, a small manufacturer of precision tools and machines. Your client is interested in buying the business, and arrangements have been made for you to review the accounting records. Your examination reveals the following information.

1. Roberts Company commenced business on April 1, 2019, and has been reporting on a fiscal year ending March 31. The company has never been audited, but the annual statements prepared by the bookkeeper reflect the following income before closing and before deducting income taxes.

Year Ended March 31	Income Before Taxes
2020	\$ 71,600
2021	111,400
2022	103,580

2. A relatively small number of machines have been shipped on consignment. These transactions have been recorded as ordinary sales and billed as such. On March 31 of each year, machines billed and in the hands of consignees amounted to:

2020	\$6,500
2021	none
2022	5,590

The sales prices above were determined by adding 25% to cost. Assume that the consigned machines are sold the following year.

3. On March 30, 2021, two machines were shipped to a customer on a C.O.D. basis. The sale was not entered until April 5, 2021, when cash was received for \$6,100. The machines were not included in the inventory at March 31, 2021. (Title passed on March 30, 2021.)
4. All machines are sold subject to a 5-year warranty. It is estimated that the expense ultimately to be incurred in connection with the warranty will amount to $\frac{1}{2}$ of 1% of sales. The company has charged an expense account for warranty costs incurred.

Sales per books and warranty costs were as follows.

Year Ended March 31	Sales	Warranty Expense for Sales Made in			Total
		2020	2021	2022	
2020	\$ 940,000	\$760			\$ 760
2021	1,010,000	360	\$1,310		1,670
2022	1,795,000	320	1,620	\$1,910	3,850

5. Bad debts have been recorded on a direct write-off basis. Experience of similar enterprises indicates that losses will approximate $\frac{1}{4}$ of 1% of receivables. Bad debts written off were:

Bad Debts Incurred on Sales Made in	Total
-------------------------------------	-------

	2020	2021	2022	
2020	\$750			\$ 750
2021	800	\$ 520		1,320
2022	350	1,800	\$1,700	3,850

6. The bank deducts 6% on all contracts financed. Of this amount, $\frac{1}{2}\%$ is placed in a reserve to the credit of Roberts Company, which is refunded to Roberts as finance contracts are paid in full. The reserve established by the bank has not been reflected in the books of Roberts. The excess of credits over debits (net increase) to the Dealer Fund Reserve account with Roberts on the books of the bank for each fiscal year were as follows.

2020	\$ 3,000
2021	3,900
2022	5,100
	<u>\$12,000</u>

7. Commissions on sales have been entered when paid. Commissions payable on March 31 of each year were as follows.

2020	\$1,400
2021	900
2022	1,120

8. A review of the company minutes reveals the manager is entitled to a bonus of 1% of the income before deducting income taxes and the bonus. The bonuses have never been recorded or paid. (Use Salaries and Wages accounts.)

Instructions

- Present a schedule showing the revised income before income taxes for each of the years ended March 31, 2020, 2021, and 2022. (Make computations to the nearest whole dollar.)
- Prepare the journal entry or entries you would give the bookkeeper to correct the books. Assume the books have not yet been closed for the fiscal year ended March 31, 2022. Disregard correction of income taxes.

Concepts for Analysis

CA22.1 (LO 1, 2, 3, 4) Groupwork (Analysis of Various Accounting Changes and Errors) Joblonsky Jewelry has recently hired a new independent auditor, Karen Ogleby, who says she wants “to get everything straightened out.” Consequently, she has proposed the following accounting changes in connection with Joblonsky’s 2022 financial statements.

- At December 31, 2021, the client had a receivable of €820,000 from Hendricks SA on its statement of financial position. Hendricks SA has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.
- The client proposes the following changes in depreciation policies.
 - For office furniture and fixtures, it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2021, would have been €250,000 less. The effect of the change on 2022 income alone is a reduction of €60,000.

- b. For its equipment in the leasing division, the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2022. If straight-line depreciation were used, 2022 income would be €110,000 greater.
3. In preparing its 2021 statements, one of the client's bookkeepers overstated ending inventory by €235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.
4. In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the "fad" type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a per-unit basis, which will result in expensing most of such costs during the first 2 years after the furniture's introduction. If the new accounting method had been used prior to 2022, retained earnings at December 31, 2021, would have been €375,000 less.
5. For the nursery division, the client proposes to switch from FIFO to average-cost inventories because it believes that average-cost will provide a better matching of current costs with revenues. The effect of making this change on 2022 earnings will be an increase of €320,000. The client says that the effect of the change on December 31, 2021, retained earnings cannot be determined.
6. To achieve a better measure of income in its building construction division, the client proposes to switch from the cost-recovery method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2021, would have been €1,075,000 greater.

Instructions

- a. For each of the changes described above, decide whether:
1. The change involves an accounting policy, accounting estimate, or correction of an error.
 2. Restatement of opening retained earnings is required.
- b. What is the proper adjustment to the December 31, 2021, retained earnings?

CA22.2 (LO 1, 2, 3, 4) (Analysis of Various Accounting Changes and Errors) Various types of accounting changes can affect the financial statements of a business differently. Assume that the following list describes changes that have a material effect on the financial statements for the current year of your business.

1. A change from the cost-recovery method to the percentage-of-completion method of accounting for long-term construction-type contracts.
2. A change in the estimated useful life of previously recorded fixed assets as a result of newly acquired information.
3. A change from deferring and amortizing preproduction costs to recording such costs as an expense when incurred because future benefits of the costs have become doubtful. The new accounting method was adopted in recognition of the change in estimated future benefits.
4. A change from including the employer share of taxes with payroll tax expenses to including it with "Retirement benefits" on the income statement.

5. Correction of a mathematical error in inventory pricing made in a prior period.
6. A change in the method of accounting for leases for tax purposes to conform with the financial accounting method. As a result, both deferred and current taxes payable changed substantially.
7. A change from the FIFO method of inventory pricing to the average-cost method of inventory pricing.

Instructions

Identify the type of change that is described in each item above and indicate whether the prior year's financial statements should be retrospectively adjusted or restated when presented in comparative form with the current year's financial statements.

CA22.3 (LO 1, 2, 3) (Analysis of Three Accounting Changes and Errors) The following are three independent, unrelated sets of facts relating to accounting changes.

Situation 1: Sanford Company is in the process of having its first audit. The company has used the cash basis of accounting for revenue recognition. Sanford president, B. J. Jimenez, is willing to change to the accrual method of revenue recognition.

Situation 2: Hopkins plc decides in January 2022 to change from FIFO to weighted-average pricing for its inventories.

Situation 3: Marshall SE determined that the depreciable lives of its fixed assets are too long at present to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by 5 years.

Instructions

For each of the situations described, provide the information indicated below.

- a. Type of accounting change.
- b. Manner of reporting the change under IFRS, including a discussion, where applicable, of how amounts are computed.
- c. Effect of the change on the statement of financial position and income statement.

CA22.4 (LO 1, 2, 3, 4) Writing (Analysis of Various Accounting Changes and Errors)

Katherine Irving, controller of Lotan Corp., is aware that IFRS has issued a pronouncement on accounting changes. After reading the pronouncement, she is confused about what action should be taken on the following items related to Lotan Corp. for the year 2022.

1. In 2022, Lotan decided to change its policy on accounting for certain marketing costs. Previously, the company had chosen to defer and amortize all marketing costs over at least 5 years because Lotan believed that a return on these expenditures did not occur immediately. Recently, however, the time differential has considerably shortened, and Lotan is now expensing the marketing costs as incurred.
2. In 2022, the company examined its entire policy relating to the depreciation of plant equipment. Plant equipment had normally been depreciated over a 15-year period, but recent experience has indicated that the company was using too short a period in its estimates and that the assets should be depreciated over a 20-year period.

3. One division of Lotan Corp., Hawthorne Co., has consistently shown an increasing net income from period to period. On closer examination of its operating statement, it is noted that bad debt expense and inventory obsolescence charges are much lower than in other divisions. In discussing the situation with the controller of this division, information emerges that the controller has increased his net income each period by knowingly making low estimates related to the write-off of receivables and inventory.
4. In 2022, the company purchased new machinery that should increase production dramatically. The company has decided to depreciate this machinery on an accelerated basis even though other machinery is depreciated on a straight-line basis.
5. All equipment sold by Lotan is subject to a 3-year warranty. It has been estimated that the expense ultimately to be incurred on these machines is 1% of sales. In 2022, because of a production breakthrough, it is now estimated that $\frac{1}{2}$ of 1% of sales is sufficient. In 2020 and 2021, warranty expense was computed as \$64,000 and \$70,000, respectively. The company now believes that these warranty costs should be reduced by 50%.
6. In 2022, the company decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2020 income by \$65,000 and increase 2021 income by \$20,000.

Instructions

Katherine Irving has come to you, as her accountant, for advice about the situations above. Prepare a report, indicating the appropriate accounting treatment that should be given each of these situations.

CA22.5 (LO 2) Writing (Changes in Estimate) As a public accountant, you have been contacted by Joe Davison, CEO of Sports-Pro Athletics, a manufacturer of a variety of athletic equipment. He has asked you how to account for the following changes.

1. Sports-Pro appropriately changed its depreciation method for its production machinery from the double-declining-balance method to the production method effective January 1, 2022.
2. Effective January 1, 2022, Sports-Pro appropriately changed the residual values used in computing depreciation for its office equipment.

Instructions

Write a 1–1.5 page letter to Joe Davison, explaining how each of the above changes should be presented in the December 31, 2022, financial statements.

CA22.6 (LO 2) Ethics (Change in Estimate, Ethics) Mike Crane, audit senior of a large public accounting firm, has just been assigned to the Frost Corporation's annual audit engagement. Frost has been a client of Crane's firm for many years. Frost is a fast-growing business in the commercial construction industry. In reviewing the fixed asset ledger, Crane discovered a series of unusual accounting changes, in which the useful lives of assets, depreciated using the straight-line method, were substantially lowered near the midpoint of the original estimate. For example, the useful life of one dump truck was changed from 10 to 6 years during its fifth year of service. Kevin James, Frost's accounting manager tells Mike, "I don't really see your problem. After all, it's perfectly legal to change an accounting estimate. Besides, our CEO likes to see big earnings!"

Instructions

Answer the following questions.

- a. What are the ethical issues concerning Frost's practice of changing the useful lives of fixed assets?
- b. Who could be harmed by Frost's unusual accounting changes?
- c. What should Crane do in this situation?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Were there changes in accounting policies reported by M&S during the two years covered by its income statements (2018–2019)? If so, describe the nature of the change and the year of change.
- b. What types of estimates did M&S discuss in 2019?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. Identify the changes in accounting policies reported by Puma during the 2 years covered by its income statements (2017–2018). Describe the nature of the change and the year of change.
- b. Identify the changes in accounting policies reported by adidas during the 2 years covered by its income statements (2017–2018). Describe the nature of the change and the year of change.
- c. For each change in accounting policy by adidas and Puma, identify, if possible, the cumulative effect of each change on prior years and the effect on operating results in the year of change.

Accounting, Analysis, and Principles

In preparation for significant international operations, ABC Co. has adopted a plan to gradually shift to the same accounting policies as used by its international competitors. Part of this plan includes a switch from average-cost inventory accounting to FIFO. ABC decides to make the

switch to FIFO at January 1, 2022. The following data pertains to ABC's 2022 financial statements.

Sales	\$550
Inventory purchases	350
12/31/22 inventory (using FIFO)	580
Compensation expense	17

All sales and purchases were with cash as were all of 2022's compensation expense (ignore taxes). ABC's plant, property, and equipment cost \$400 and has an estimated useful life of 10 years with no residual value.

ABC Co. reported the following for fiscal 2021 (amounts are in millions).

ABC Co. Statement of Financial Position At December 31, 2021					
	2021	2020		2021	2020
Plant, property, and equipment	\$ 400	\$ 400	Retained earnings	\$ 685	\$ 540
Accumulated depreciation	(80)	(40)	Share capital	500	500
Inventory	500	480			
Cash	365	200			
Total assets	<u>\$1,185</u>	<u>\$1,040</u>	Total equity	<u>\$1,185</u>	<u>\$1,040</u>
ABC Co. Income Statement For the Year Ended December 31, 2021					
	Sales		\$ 500		
	Cost of goods sold		(300)		
	Depreciation expense		(40)		
	Compensation expense		<u>(15)</u>		
	Net income		<u>\$145</u>		

Summary of Significant Accounting Policies

Inventory: The company accounts for inventory by the average-cost method. The current cost of the company's inventory, which approximates FIFO, was \$60 and \$50 higher at the end of fiscal 2021 and 2020, respectively, than those reported in the statement of financial position.

Accounting

Prepare ABC's December 31, 2022, statement of financial position and an income statement for the year ended December 31, 2022. In columns beside 2022's numbers, include 2021's numbers *as they would appear in the 2022 financial statements* for comparative purposes.

Analysis

Compute ABC's inventory turnover for 2021 under both average-cost and FIFO. Assume averages are equal to year-end balances. What causes the differences in this ratio between average-cost and FIFO?

Principles

Briefly explain, in terms of the policies discussed in Chapter 22, why IFRS requires that companies that change accounting policies restate the prior year's financial statement data.

Research Case

As part of the year-end accounting process and review of operating policies, Cullen Group is considering changing from the straight-line method to an accelerated method when accounting for its equipment. Your supervisor wonders how the company will report this change. It has been a few years since he took intermediate accounting, and he cannot remember whether this change would be treated in a retrospective or prospective manner. Your supervisor wants you to research the authoritative guidance on a change in accounting policy related to depreciation methods.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What are the accounting and reporting guidelines for a change in accounting related to depreciation methods?
- b. What conditions justify a change in depreciation method, as contemplated by Cullen Group?

Global Accounting Insights

LEARNING OBJECTIVE 5

Compare the procedures for accounting changes and error analysis under IFRS and U.S. GAAP.

The FASB has issued guidance on changes in accounting policies, changes in estimates, and corrections of errors. These changes essentially converge U.S. GAAP with *IAS 8*.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the accounting for accounting changes.

Similarities

- The accounting for changes in estimates is similar between U.S. GAAP and IFRS.
- Both U.S. GAAP and IFRS use the retrospective approach for accounting for a change in accounting policy (principle).
- Under U.S. GAAP and IFRS, if determining the effect of a change in accounting policy is considered impracticable, then a company should report the effect of the change in the period in which it believes it practicable to do so, which may be the current period.

Differences

- One area in which U.S. GAAP and IFRS differ is the reporting of error corrections in previously issued financial statements. While both sets of standards require restatement, U.S. GAAP is an absolute standard—there is no exception to this rule.
- Under U.S. GAAP, the impracticability exception applies only to changes in accounting principle (policy). Under IFRS, this exception applies both to changes in accounting principles (policies) and to the correction of errors.
- U.S. GAAP has detailed guidance on the accounting and reporting of indirect effects. As indicated in the chapter, IFRS (*IAS 8*) does not specifically address the accounting and reporting for indirect effects of changes in accounting principles.

About the Numbers

A tangential discussion of accounting changes concerns how companies that follow IFRS report financial information related to the equity method of accounting. Under the equity method, the

investor increases its investment for the pro-rata share of the net income of the investee (often referred to as an associated company under IFRS). On the other hand, the investor reduces its investment for any dividends received from the investee. Both IFRS and U.S. GAAP follow this accounting approach.

However, there is a subtle difference between IFRS and U.S. GAAP in how the investor evaluates the accounting policies of the investee. To illustrate, assume that Kirkland Company (the investor company) uses the FIFO inventory method, and Margo Company (the investee company) uses average-cost for its inventory valuation. If Kirkland follows IFRS, Kirkland must conform the accounting policies of Margo to its own accounting policies. Therefore, Kirkland adjusts the net income of Margo so its net income is reported on the FIFO basis.

This procedure is not used under U.S. GAAP. Under U.S. GAAP, Kirkland ignores the fact that Margo uses a different method of inventory valuation. Kirkland records its pro-rata share of the net income of Margo without adjusting for the fact that Margo uses a different inventory valuation method. As a result, under U.S. GAAP there is a lack of comparability in the inventory methods used to report net income for Kirkland Company.

On the Horizon

Because U.S. GAAP and IFRS are, for the most part, similar in the area of accounting changes and reporting the effects of errors, there is no active project in this area. A related development involves the presentation of comparative data. U.S. GAAP (SEC) requires comparative information for a three-year period. Under IFRS, when a company prepares financial statements on a new basis, two years of comparative data are reported. Use of the shorter comparative data period must be addressed before U.S. companies can adopt IFRS. The IASB has a project related to materiality and accounting changes, which could lead to additional differences in the accounting for this area relative to U.S. GAAP. See the IFRS website for more information.

GAAP Self-Test Questions

1. Which of the following is **false**?
 - a. U.S. GAAP and IFRS have the same absolute standard regarding the reporting of error corrections in previously issued financial statements.
 - b. The accounting for changes in estimates is similar between U.S. GAAP and IFRS.
 - c. Under IFRS, the impracticability exception applies both to changes in accounting principles and to the correction of errors.
 - d. U.S. GAAP has detailed guidance on the accounting and reporting of indirect effects; IFRS does not.
2. Which of the following is **not** classified as an accounting change by U.S. GAAP?
 - a. Change in accounting policy.
 - b. Change in accounting estimate.
 - c. Errors in financial statements.
 - d. None of the above.
3. U.S. GAAP requires companies to use which of the following methods for reporting changes in accounting policies?

- a. Cumulative effect approach.
- b. Retrospective approach.
- c. Prospective approach.
- d. Averaging approach.

4. Under U.S. GAAP, the retrospective approach should **not** be used if:

- a. retrospective application requires assumptions about management's intent in a prior period.
- b. the company does not have trained staff to perform the analysis.
- c. the effects of the change have counterbalanced.
- d. the effects of the change have not counterbalanced.

5. Which of the following is **true** regarding whether U.S. GAAP specifically addresses the accounting and reporting for effects of changes in accounting policies?

	Direct effects	Indirect effects
a.	Yes	Yes
b.	No	No
c.	No	Yes
d.	Yes	No

GAAP Concepts and Application

GAAP22.1 What is the major difference in accounting for errors under IFRS versus U.S. GAAP?

GAAP22.2 How are direct and indirect changes in accounting policy reported under U.S. GAAP?

GAAP22.3 What is the difference in approach between U.S. GAAP and IFRS regarding the equity method of accounting for the investor?

Answers to GAAP Self-Test Questions

1. a 2. c 3. b 4. a 5. a

Notes

1 In some cases, a particular transaction is not specifically addressed by IFRS. In this situation, IAS 8 sets out a hierarchy of guidance to be considered in the selection of an accounting policy. The primary requirement is that management must use judgment to develop information that is relevant and representationally faithful. In making that judgment, it should use the following sources in descending order: (1) the requirements and guidance in IFRS dealing with similar and related issues; (2) the definitions, recognition criteria, and measurement concepts for the elements in the Conceptual Framework; and (3) other materials, such as standards from other countries, that use a similar conceptual framework. [4]

2 Financial statements of subsequent periods need not repeat these disclosures. [5]

- 3 The rationale for this approach is that companies should recognize, in the period the adoption of the new accounting policy occurs (not the prior period), the effect on cash flows. That is, the accounting change is a necessary “past event” in the definition of an asset or liability that gives rise to the accounting recognition of the indirect effect in the current period.
- 4 The term **retrospective restatement** is used for the process of revising previously issued financial statements to reflect a correction of an error. This term distinguishes an error correction from a change in accounting policy, referred to as retrospective application.

CHAPTER 23

Statement of Cash Flows

LEARNING OBJECTIVES

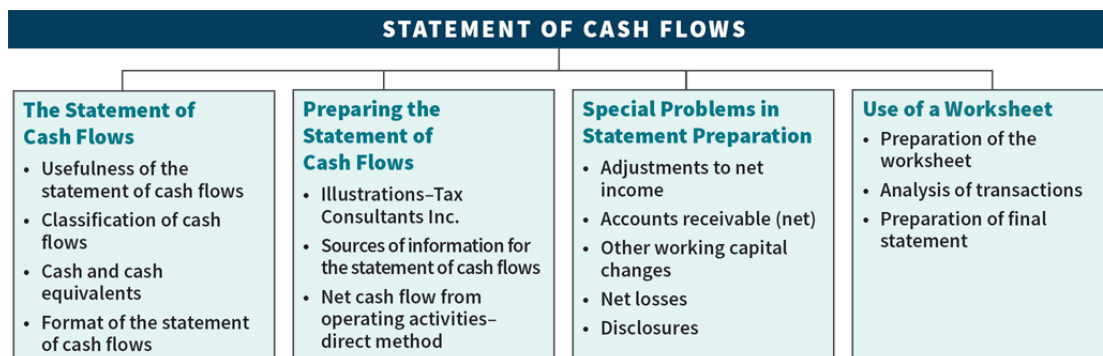

After studying this chapter, you should be able to:

1. Describe the usefulness and format of the statement of cash flows.
2. Prepare a statement of cash flows.
3. Contrast the direct and indirect methods of calculating net cash flow from operating activities.
4. Discuss special problems in preparing a statement of cash flows.
5. Explain the use of a worksheet in preparing a statement of cash flows.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 23

As the following opening story indicates, information on cash flows from operations could show financial inflexibility that sometimes leads to a company's bankruptcy. This chapter explains the main components of a statement of cash flows and the types of information it provides. The content and organization of the chapter are as follows.

Show Me the Money!

Investors usually look to net income as a key indicator of a company's financial health and future prospects. The following graph shows the net income of one company over a seven-year period.

The company showed a pattern of consistent profitability and even some periods of income growth. Between years 1 and 4, net income for this company grew by 32 percent, from \$31 million to \$41 million. Would you expect its profitability to continue? The company had consistently paid dividends and interest. Would you expect it to continue to do so? Investors answered these questions by buying the company's shares. Eighteen months later, this company—**W. T. Grant** (USA)—filed for bankruptcy, in what was then the largest bankruptcy filing in the United States.

How did this happen? As indicated by the bottom line in the graph, the company had experienced several years of declining cash flows from its operations even though it reported profits. How can a company have negative cash flows while reporting profits? The answer lies partly in the fact that W. T. Grant was having trouble collecting the receivables from its credit sales, causing cash flow to be less than net income. Investors who analyzed the cash flows would have likely found an early warning signal of W. T. Grant's operating problems.

Investors can also look to cash flow information to sniff out companies that can be good buys. As one analyst stated when it comes to valuing shares: "Show me the money!" Here's the thinking behind that statement. Start with the "cash flows from operations" reported in the statement of cash flows, which (as you will learn in this chapter) consists of net income with non-cash charges (like depreciation and deferred taxes) added back and cash-draining events (like an inventory pile-up) taken out. Now subtract capital expenditures and dividends. What you're left with is free cash flow (as discussed in [Chapter 5](#)).

Many analysts like companies trading at low multiples of their free cash flow—low, that is, in relation to rivals today or the same company in past years. Why? They know that reported earnings can be misleading. Case in point: Computer-game maker **Activision Blizzard** (USA) reported net income of \$113 million in a recent year. But it did better than that. It took in an additional \$300 million, mostly for subscriptions to online multiplayer games. It gets the cash now but records the revenue only over time, as the subscriptions run out. A couple of investment houses put these shares on their buy list on the strength of its cash flows. In contrast, **Moody's Investors Service** downgraded the debt issued by **Tesla** (USA), citing persistently negative cash flow and continued production issues with the Model 3 mass-market sedan. Moody's continues to view the company's credit skeptically, due to "the likelihood that Tesla will have to undertake a large, near-term capital raise in order to refund maturing obligations and avoid a liquidity shortfall." So watch cash flow—to get an indicator of companies headed for trouble, as well as companies that may be undervalued.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

The Statement of Cash Flows

LEARNING OBJECTIVE 1

Describe the usefulness and format of the statement of cash flows.

The primary purpose of the **statement of cash flows** is to provide information about a company's cash receipts and cash payments during a period. A secondary objective is to provide cash-basis information about the company's operating, investing, and financing activities. **[1]** (See the [Authoritative Literature References](#) section near the end of the chapter.) The statement of cash flows therefore reports cash receipts, cash payments, and net change in cash resulting from a company's operating, investing, and financing activities during a period. Its format reconciles the beginning and ending cash balances for the period.

Usefulness of the Statement of Cash Flows

The statement of cash flows provides information to help investors, creditors, and others assess the following (see [Underlying Concepts](#)):

- 1. The entity's ability to generate future cash flows.** A primary objective of financial reporting is to provide information which helps to predict the amounts, timing, and uncertainty of future cash flows. By examining relationships between items such as sales and net cash flow from operating activities, or net cash flow from operating activities and increases or decreases in cash, it is possible to better predict the future cash flows than is possible using accrual-basis data alone.
- 2. The entity's ability to pay dividends and meet obligations.** Simply put, cash is essential. Without adequate cash, a company cannot pay employees, settle debts, pay out dividends, or acquire equipment. A statement of cash flows indicates where the company's cash comes from and how the company uses its cash. Employees, creditors, shareholders, and customers should be particularly interested in this statement because it alone shows the flows of cash in a business.
- 3. The reasons for the difference between net income and net cash flow from operating activities.** The net income number is important: It provides information on the performance of a company from one period to another. But some people are critical of accrual-basis net income because companies must make estimates to arrive at it. Such is not the case with cash. Thus, as the opening story showed, financial statement readers can benefit from knowing why a company's net income and net cash flow from operating activities differ and can assess for themselves the reliability of the income number.
- 4. The cash and non-cash investing and financing transactions during the period.** Besides operating activities, companies undertake investing and financing transactions. *Investing* activities include the purchase and sale of assets other than a company's products or services. *Financing* activities include borrowings and repayments of borrowings, investments by owners, and distributions to owners. By examining a company's investing and financing activities, a financial statement reader can better understand why assets and liabilities increased or decreased during the period. For example, by reading the statement of cash flows, the reader might find answers to following questions:
 - Why did cash decrease for **Aixtron Aktiengesellschaft** (DEU) when it reported net income for the year?
 - How much did **Telefónica, S.A.** (ESP) spend on property, plant, and equipment, and intangible assets last year?
 - Did dividends paid by **BP plc** (GBR) increase last year?
 - How much money did **Coca-Cola** (USA) borrow last year?
 - How much cash did **Ahold Delhaize Group** (NLD/BEL) use to repurchase ordinary shares?

Underlying Concepts

Reporting information in the statement of cash flows contributes to meeting the objective of financial reporting.

Classification of Cash Flows

The statement of cash flows classifies cash receipts and cash payments by operating, investing, and financing activities. Transactions and other events characteristic of each kind of activity are as follows.

[2]

1. **Operating activities** involve the cash effects of transactions that enter into the determination of net income, such as cash receipts from sales of goods and services, and cash payments to suppliers and employees for acquisitions of inventory and expenses. The amount of cash flows arising from operating activities is a key indicator of the extent to which the operations of the entity have generated sufficient cash flows to repay loans, maintain the operating capability of the entity, pay dividends, and make new investments without recourse to external sources of financing.
2. **Investing activities** generally involve non-current assets and include (a) making and collecting loans, and (b) acquiring and disposing of investments and productive long-lived assets. The separate disclosure of cash flows arising from investing activities is important because the cash flows represent the extent to which expenditures have been made for resources intended to generate future income and cash flows.
3. **Financing activities** involve liability and equity items and include (a) obtaining cash from creditors and repaying the amounts borrowed, and (b) obtaining capital from owners and providing them with a return on, and a return of, their investment. The separate disclosure of cash flows arising from financing activities is important because it is useful in predicting claims on future cash flows by providers of capital to a company.

Illustration 23.1 classifies the typical cash receipts and payments of a company according to operating, investing, and financing activities.

Operating Cash inflows From sales of goods or services. From returns on loans (interest) and on equity securities (dividends). Cash outflows To suppliers for inventory. To employees for services. To government for taxes. To lenders for interest. To others for expenses.	Income Statement Items
Investing Cash inflows From sale of property, plant, and equipment. From sale of debt or equity securities of other entities. From collection of principal on loans to other entities. Cash outflows To purchase property, plant, and equipment. To purchase debt or equity securities of other entities. To make loans to other entities.	Generally Non-Current Asset Items
Financing Cash inflows From sale of equity securities. From issuance of debt (bonds and notes). Cash outflows To shareholders as dividends. To redeem long-term debt or reacquire share capital.	Generally Non-Current Liability and Equity Items

ILLUSTRATION 23.1 Classification of Typical Cash Inflows and Outflows

The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate enough cash to continue as a going concern.

Note the following general guidelines about the classification of cash flows.

1. Operating activities involve income statement items.
2. Investing activities involve cash flows resulting from changes in investments and other non-current asset items.
3. Financing activities involve cash flows resulting from changes in equity and non-current liability items.

IFRS allows some flexibility regarding the classification of certain items. Interest and dividends paid can be classified as either operating or financing, depending on what treatment the company thinks is most appropriate. Similarly, interest and dividends received can be classified as either operating or investing. Taxes paid are classified as operating except in circumstances where they can be identified with specific investing or financing activities. In order to limit the complexity of our presentation and to avoid ambiguity in assignment material, in [Illustration 23.1](#) we have identified specific treatment for each of these items rather than allowing choices. *All assignment material is based on this treatment.*¹

Also, companies classify some cash flows relating to operating activities as investing or financing activities. For example, a company classifies the total cash received from the sale of property, plant, and equipment as an investing activity. Therefore, sales of those assets are not considered operating activities. Because of this (as is discussed more fully later in the chapter), companies must eliminate any gains or losses arising from the disposal of these assets to arrive at net cash flow from operating activities. Likewise, the payment to extinguish debt is a financing cash flow and should be classified as

such. Any gain or loss related to the extinguishment is eliminated from net cash provided by operating activities.

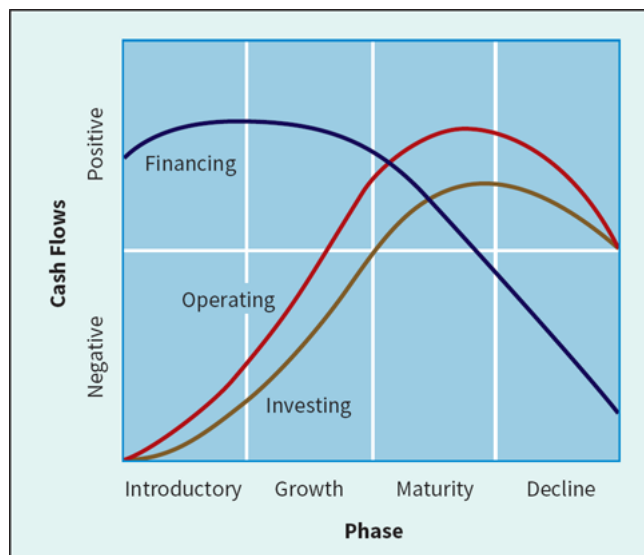

What Do the Numbers Mean?

How's My Cash Flow?

To evaluate overall cash flows, it is useful to understand where in the product life cycle a company is. Generally, companies move through several stages of development, which have implications for cash flows. As the graph shows, the pattern of cash flows from operating, financing, and investing activities will vary depending on the stage of the product life cycle.

In the introductory phase, the product is likely not generating much revenue (net operating cash flow is negative). Because the company is making heavy investments to get a product off the ground, cash flow from investing is negative, and financing cash flows are positive.

As the product moves to the growth and maturity phases, these cash flow relationships reverse. The product generates more cash flows from operations, which can be used to cover investments needed to support the product, and less cash is needed from financing. So are negative operating cash flows bad? Not always. It depends on the product life cycle.

Cash and Cash Equivalents

The basis recommended by the IASB for the statement of cash flows is actually “cash and cash equivalents.” IFRS requires that the components of cash and cash equivalents are reported each period.

[3] Cash equivalents are short-term, highly liquid investments that are both:

- Readily convertible to known amounts of cash, and
- So near their maturity that they present insignificant risk of changes in value (e.g., due to changes in interest rates).

Generally, only investments with original maturities of three months or less qualify under this definition. Examples of cash equivalents are Treasury bills, commercial paper, and money market funds purchased with cash that is in excess of immediate needs. Equity investments are excluded from cash equivalents unless they are, in substance, cash equivalents. Although we use the term “cash”

throughout our discussion and illustrations, we mean cash and cash equivalents when reporting the cash flows and the net increase or decrease in cash. [4]

Format of the Statement of Cash Flows

The three activities we discussed above constitute the general format of the statement of cash flows. The operating activities section always appears first. It is followed by the investing activities section and then the financing activities section.

A company reports the individual inflows and outflows from investing and financing activities separately. That is, a company reports them gross, not netted against one another. Thus, a cash outflow from the purchase of property is reported separately from the cash inflow from the sale of property. Similarly, a cash inflow from the issuance of debt is reported separately from the cash outflow from its retirement.

The net increase or decrease in cash reported during the period should reconcile the beginning and ending cash balances as reported in the comparative statements of financial position.² The general format of the statement of cash flows presents the results of the three activities discussed previously—operating, investing, and financing. [Illustration 23.2](#) shows a widely used form of the statement of cash flows.

Company Name Statement of Cash Flows Period Covered		
Cash flows from operating activities		
Net income		XXX
Adjustments to reconcile net income to net cash provided (used) by operating activities: (List of individual items)	XX	XX
Net cash provided (used) by operating activities		XXX

Cash flows from financing activities (List of individual inflows and outflows)	XX	
Net cash provided (used) by financing activities		XXX
Net increase (decrease) in cash		XXX
Cash at beginning of period		XXX
Cash at end of period		XXX

[ILLUSTRATION 23.2](#) Format of the Statement of Cash Flows

Preparing the Statement of Cash Flows

LEARNING OBJECTIVE 2

Prepare a statement of cash flows.

Companies prepare the statement of cash flows differently from the three other basic financial statements. For one thing, it is not prepared from an adjusted trial balance. The cash flow statement requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash receipts and payments. As a result, the company must adjust the effects of the use of accrual accounting to determine cash flows. The information to prepare this statement usually comes from three sources:

1. **Comparative statements of financial position** provide the amount of the changes in assets, liabilities, and equities from the beginning to the end of the period.
2. **Current income statement** data help determine the amount of net cash provided by or used by operations during the period.
3. **Selected transaction data** from the general ledger provide additional detailed information needed to determine how the company provided or used cash during the period.

Preparing the statement of cash flows from the data sources above involves three major steps:

Step 1. Determine the change in cash. This procedure is straightforward. A company can easily compute the difference between the beginning and the ending cash balance from examining its comparative statements of financial position.

Step 2. Determine the net cash flow from operating activities. This procedure is complex. It involves analyzing not only the current year's income statement but also comparative statements of financial position as well as selected transaction data.

Step 3. Determine net cash flows from investing and financing activities. A company must analyze all other changes in the statement of financial position accounts to determine their effects on cash.

On the following pages, we work through these three steps in the process of preparing the statement of cash flows for Tax Consultants Inc. over several years.

Illustrations—Tax Consultants Inc.

We show the steps in preparing the statement of cash flows using data for Tax Consultants Inc. To begin, we use the **first year of operations** for Tax Consultants Inc. The company started on January 1, 2022, when it issued 60,000 ordinary shares of \$1 par value for \$60,000 cash. The company rented its office space, furniture, and equipment, and performed tax consulting services throughout the first year. The comparative statements of financial position at the beginning and end of the year 2022 appear in [Illustration 23.3](#).

Tax Consultants Inc. Comparative Statements of Financial Position			
Assets	Dec. 31, 2022	Jan. 1, 2022	Change Increase/Decrease
Accounts receivable	\$36,000	\$—0—	\$36,000 Increase
Cash	49,000	—0—	49,000 Increase
Total	<u>\$85,000</u>	<u>\$—0—</u>	
Equity and Liabilities			
Ordinary shares (\$1 par)	\$60,000	\$—0—	\$60,000 Increase
Retained earnings	20,000	—0—	20,000 Increase
Accounts payable	5,000	—0—	5,000 Increase
Total	<u>\$85,000</u>	<u>\$—0—</u>	

ILLUSTRATION 23.3 Comparative Statements of Financial Position, Tax Consultants Inc., Year 1

[Illustration 23.4](#) shows the income statement and additional information for Tax Consultants.

Tax Consultants Inc. Income Statement For the Year Ended December 31, 2022	
Revenues	\$125,000
Operating expenses	85,000
Income before income taxes	40,000
Income tax expense	6,000
Net income	<u>\$ 34,000</u>
Additional Information:	
Examination of selected data indicates that a dividend of \$14,000 was declared and paid during the year.	

ILLUSTRATION 23.4 Income Statement, Tax Consultants Inc., Year 1

Step 1: Determine the Change in Cash

To prepare a statement of cash flows, the first step is to **determine the change in cash**. This is a simple computation. Tax Consultants had no cash on hand at the beginning of the year 2022. It had \$49,000 on hand at the end of 2022. Thus, cash changed (increased) in 2022 by \$49,000.

Step 2: Determine Net Cash Flow from Operating Activities

To determine net cash flow from operating activities,³ companies adjust net income in numerous ways. A useful starting point is to understand why net income must be converted to net cash provided by operating activities.

Under IFRS, companies use the accrual basis of accounting. As you have learned, this basis requires that companies record revenue when they satisfy performance obligations and record expenses when incurred. Revenues may include credit sales for which the company has not yet collected cash. Expenses incurred may include some items that the company has not yet paid in cash. Thus, under the accrual basis of accounting, net income is not the same as net cash flow from operating activities.

To arrive at net cash flow from operating activities, a company must determine revenues and expenses on a **cash basis**. **It does this by eliminating the effects of income statement transactions that do not result in an increase or decrease in cash.** **Illustration 23.5** shows the relationship between net income and net cash flow from operating activities.

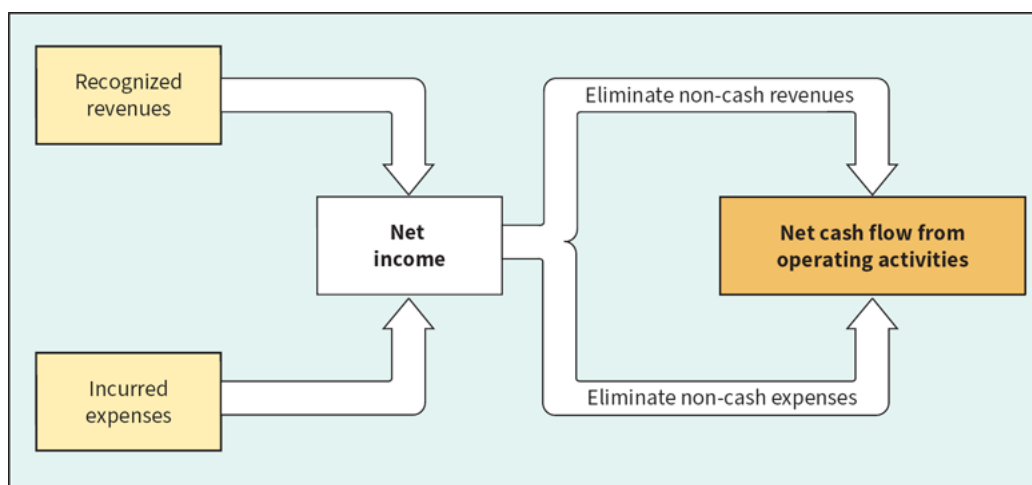

ILLUSTRATION 23.5 Net Income versus Net Cash Flow from Operating Activities

In this chapter, we use the term net income to refer to accrual-based net income. A company may convert net income to net cash flow from operating activities through either a direct method or an indirect method. Due to its widespread use in practice, in the following sections we illustrate use of the indirect method. Later in the chapter, we describe the direct method and discuss the advantages and disadvantages of the two methods.

The **indirect method** (or **reconciliation method**) starts with net income and converts it to net cash flow from operating activities. In other words, **the indirect method adjusts net income for items that affected reported net income but did not affect cash.** To compute net cash flow from operating activities, a company adds back non-cash charges in the income statement to net income and deducts non-cash credits. We explain the two adjustments to net income for Tax Consultants, namely, the increases in accounts receivable and accounts payable, as follows.

Increase in Accounts Receivable—Indirect Method

Tax Consultants' accounts receivable increased by \$36,000 (from \$0 to \$36,000) during the year. For Tax Consultants, this means that cash receipts were \$36,000 lower than revenues. The Accounts Receivable account in [Illustration 23.6](#) shows that Tax Consultants had \$125,000 in revenues (as reported on the income statement), but it collected only \$89,000 in cash.

Accounts Receivable				
1/1/22	Balance	—0—	Receipts from customers	89,000
	Revenues	125,000		
12/31/22	Balance	36,000		

[ILLUSTRATION 23.6](#) Analysis of Accounts Receivable

As shown in [Illustration 23.7](#), to adjust net income to net cash provided by operating activities, Tax Consultants must deduct the increase of \$36,000 in accounts receivable from net income. When the Accounts Receivable balance *decreases*, cash receipts are higher than revenue recognized under the accrual basis. Therefore, the company adds to net income the amount of the decrease in accounts receivable to arrive at net cash provided by operating activities.

Increase in Accounts Payable—Indirect Method

When accounts payable increase during the year, expenses on an accrual basis exceed those on a cash basis. Why? Because Tax Consultants incurred expenses, but some of the expenses are not yet paid. To convert net income to net cash flow from operating activities, Tax Consultants must add back the increase of \$5,000 in accounts payable to net income.

As a result of the accounts receivable and accounts payable adjustments, Tax Consultants determines that the net cash provided by operating activities is \$3,000 for the year 2022. [Illustration 23.7](#) shows this computation.

Net income		\$ 34,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(36,000)	
Increase in accounts payable	5,000	(31,000)
Net cash provided by operating activities		\$ 3,000

[ILLUSTRATION 23.7](#) Computation of Net Cash Flow from Operating Activities, Year 1—Indirect Method

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After Tax Consultants has computed the net cash provided by operating activities, the next step is to determine whether any other changes in the statement of financial position accounts caused an increase or decrease in cash.

For example, an examination of the remaining statement of financial position accounts for Tax Consultants shows increases in both ordinary shares and retained earnings. The Share Capital—Ordinary increase of \$60,000 resulted from the issuance of ordinary shares for cash. The issuance of ordinary shares is reported in the statement of cash flows as a receipt of cash from a financing activity.

Two items caused the retained earnings increase of \$20,000:

1. Net income of \$34,000 increased retained earnings.
2. Declaration of \$14,000 of dividends decreased retained earnings.

Tax Consultants has converted net income into net cash flow from operating activities, as explained earlier. The additional data indicate that it paid the dividend. Thus, the company reports the dividend payment as a cash outflow, classified as a financing activity.

Statement of Cash Flows—2022

We are now ready to prepare the statement of cash flows. The statement starts with the operating activities section. Tax Consultants may use either the direct or indirect method to report net cash flow from operating activities.

The IASB **encourages** the use of the direct method over the indirect method. [6] If a company uses the indirect method, it can either report the reconciliation within the statement of cash flows or can provide it in a separate schedule, with the statement of cash flows reporting only the **net** cash flow from operating activities. Throughout this chapter, we use the indirect method, which is also used more extensively in practice.⁴

Illustration 23.8 shows the statement of cash flows for Tax Consultants Inc., for year 1 (2022).

Tax Consultants Inc. Statement of Cash Flows For the Year Ended December 31, 2022 Increase (Decrease) in Cash		
Cash flows from operating activities		
Net income		\$ 34,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(36,000)	
Increase in accounts payable	5,000	(31,000)
Net cash provided by operating activities		3,000
Cash flows from financing activities		
Issuance of ordinary shares	60,000	
Payment of cash dividends	(14,000)	
Net cash provided by financing activities		46,000
Net increase in cash		49,000
Cash, January 1, 2022		—0—
Cash, December 31, 2022		\$ 49,000

ILLUSTRATION 23.8 Statement of Cash Flows, Tax Consultants Inc., Year 1

As indicated, the \$60,000 increase in ordinary shares results in a financing-activity cash inflow. The payment of \$14,000 in cash dividends is a financing-activity outflow of cash. The \$49,000 increase in cash reported in the statement of cash flows agrees with the increase of \$49,000 shown in the comparative statements of financial position (in [Illustration 23.3](#)) as the change in the Cash account.

Illustration—2023

Tax Consultants Inc. continued to grow and prosper in its second year of operations. The company purchased land, building, and equipment, and revenues and net income increased substantially from the first year. [Illustrations 23.9](#) and [23.10](#) present information related to the second year of operations for Tax Consultants Inc.

Tax Consultants Inc.			
Comparative Statements of Financial Position as of December 31			
Assets	2023	2022	Change Increase/Decrease
Land	\$ 70,000	\$ –0–	\$ 70,000 Increase
Buildings	200,000	–0–	200,000 Increase
Accumulated depreciation—buildings	(11,000)	–0–	11,000 Increase
Equipment	68,000	–0–	68,000 Increase
Accumulated depreciation—equipment	(10,000)	–0–	10,000 Increase
Accounts receivable	26,000	36,000	10,000 Decrease
Prepaid expenses	6,000	–0–	6,000 Increase
Cash	37,000	49,000	12,000 Decrease
Total	<u>\$386,000</u>	<u>\$ 85,000</u>	
Equity and Liabilities			
Share capital—ordinary (\$1 par)	\$ 60,000	\$ 60,000	\$ –0–
Retained earnings	136,000	20,000	116,000 Increase
Bonds payable	150,000	–0–	150,000 Increase
Accounts payable	40,000	5,000	35,000 Increase
Total	<u>\$386,000</u>	<u>\$ 85,000</u>	

ILLUSTRATION 23.9 Comparative Statements of Financial Position, Tax Consultants Inc., Year 2

Tax Consultants Inc. Income Statement For the Year Ended December 31, 2023		
Revenues		\$492,000
Operating expenses (excluding depreciation)	\$269,000	
Depreciation expense	21,000	290,000
Income from operations		202,000
Income tax expense		68,000
Net income		<u>\$134,000</u>
Additional Information		
a. The company declared and paid an \$18,000 cash dividend.		
b. The company obtained \$150,000 cash through the issuance of long-term bonds.		
c. Land, building, and equipment were acquired for cash.		

ILLUSTRATION 23.10 Income Statement, Tax Consultants Inc., Year 2

Step 1: Determine the Change in Cash

To prepare a statement of cash flows from the available information, the first step is to determine the change in cash. As indicated from the information presented, cash decreased \$12,000 (\$49,000 – \$37,000).

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method

Using the indirect method, we adjust net income of \$134,000 on an accrual basis to arrive at net cash flow from operating activities. Explanations for the adjustments to net income follow.

- **Decrease in Accounts Receivable.** Accounts receivable decreased during the period because cash receipts (cash-basis revenues) are higher than revenues reported on an accrual basis. To convert net income to net cash flow from operating activities, the decrease of \$10,000 in accounts receivable must be added to net income.
- **Increase in Prepaid Expenses.** When prepaid expenses (assets) increase during a period, expenses on an accrual-basis income statement are lower than they are on a cash-basis income statement. The reason: Tax Consultants has made cash payments in the current period, but expenses (as charges to the income statement) have been deferred to future periods. To convert net income to net cash flow from operating activities, the company must deduct from net income the increase of \$6,000 in prepaid expenses. An increase in prepaid expenses results in a decrease in cash during the period.
- **Increase in Accounts Payable.** Like the increase in 2022, Tax Consultants must add the 2023 increase of \$35,000 in accounts payable to net income, to convert to net cash flow from operating activities. The company incurred a greater amount of expense than the amount of cash it disbursed.
- **Depreciation Expense (Increase in Accumulated Depreciation).** The purchase of depreciable assets is a use of cash, shown in the investing section in the year of acquisition. Tax Consultants' depreciation expense of \$21,000 (also represented by the increase in accumulated depreciation) is a non-cash charge; the company adds it back to net income, to arrive at net cash

flow from operating activities. The \$21,000 is the sum of the \$11,000 depreciation on the building plus the \$10,000 depreciation on the equipment.

Certain other periodic charges to expense do not require the use of cash. Examples are the amortization of intangible assets and depletion expense. Such charges are treated in the same manner as depreciation. Companies frequently list depreciation and similar non-cash charges as the first adjustments to net income in the statement of cash flows.

As a result of the foregoing items, net cash provided by operating activities is \$194,000, as shown in [Illustration 23.11](#).

Step 3: Determine Net Cash Flows from Investing and Financing Activities

After you have determined the items affecting net cash provided by operating activities, the next step involves analyzing the remaining changes in the statement of financial position accounts. Tax Consultants Inc. analyzed the following accounts.

- **Increase in Land.** As indicated from the change in the Land account, the company purchased land of \$70,000 during the period. This transaction is an investing activity, reported as a use of cash.
- **Increase in Buildings and Related Accumulated Depreciation.** As indicated in the additional data, and from the change in the Buildings account, Tax Consultants acquired an office building using \$200,000 cash. This transaction is a cash outflow, reported in the investing section. The \$11,000 increase in accumulated depreciation results from recording depreciation expense on the building. As indicated earlier, the reported depreciation expense has no effect on the amount of cash.
- **Increase in Equipment and Related Accumulated Depreciation.** An increase in equipment of \$68,000 resulted because the company used cash to purchase equipment. This transaction is an outflow of cash from an investing activity. The depreciation expense entry for the period explains the increase in Accumulated Depreciation—Equipment.
- **Increase in Bonds Payable.** The Bonds Payable account increased \$150,000. Cash received from the issuance of these bonds represents an inflow of cash from a financing activity.
- **Increase in Retained Earnings.** Retained earnings increased \$116,000 during the year. Two factors explain this increase: (1) net income of \$134,000 increased retained earnings, and (2) dividends of \$18,000 decreased retained earnings. As indicated earlier, the company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends is a financing activity that involves a cash outflow.

Net income		\$134,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$21,000	
Decrease in accounts receivable	10,000	
Increase in prepaid expenses	(6,000)	
Increase in accounts payable	35,000	60,000
Net cash provided by operating activities		\$194,000

[ILLUSTRATION 23.11](#) Computation of Net Cash Flow from Operating Activities, Year 2—Indirect Method

Statement of Cash Flows—2023

Combining the previous items, we get a statement of cash flows for Year 2 (2023) for Tax Consultants Inc., as shown in [Illustration 23.12](#), using the indirect method to compute net cash flow from operating activities.

Tax Consultants Inc. Statement of Cash Flows For the Year Ended December 31, 2023 Increase (Decrease) in Cash		
Cash flows from operating activities		
Net income		\$ 134,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 21,000	
Decrease in accounts receivable	10,000	
Increase in prepaid expenses	(6,000)	
Increase in accounts payable	35,000	60,000
Net cash provided by operating activities		194,000
Cash flows from investing activities		
Purchase of land	(70,000)	
Purchase of building	(200,000)	
Purchase of equipment	(68,000)	
Net cash used by investing activities		(338,000)
Cash flows from financing activities		
Issuance of bonds	150,000	
Payment of cash dividends	(18,000)	
Net cash provided by financing activities		132,000
Net decrease in cash		(12,000)
Cash, January 1, 2023		49,000
Cash, December 31, 2023		<u>\$ 37,000</u>

[ILLUSTRATION 23.12](#) Statement of Cash Flows, Tax Consultants Inc., Year 2

Illustration—2024

Our third example, covering the 2024 operations of Tax Consultants Inc., is more complex. It again uses the indirect method to compute and present net cash flow from operating activities.

Tax Consultants Inc. experienced continued success in 2024 (its third year) and expanded its operations to include the sale of computer software used in tax-return preparation and tax planning. Thus, inventory is a new asset appearing in the company's December 31, 2024, statement of financial position. [Illustrations 23.13](#) and [23.14](#) show the comparative statements of financial position, income statements, and selected data for 2024.

Tax Consultants Inc. Comparative Statements of Financial Position as of December 31			
Assets	2024	2023	Change Increase/Decrease
Land	\$ 45,000	\$ 70,000	\$ 25,000 Decrease
Buildings	200,000	200,000	—0—
Accumulated depreciation—buildings	(21,000)	(11,000)	10,000 Increase
Equipment	193,000	68,000	125,000 Increase
Accumulated depreciation—equipment	(28,000)	(10,000)	18,000 Increase
Inventory	54,000	—0—	54,000 Increase
Accounts receivable	68,000	26,000	42,000 Increase
Prepaid expenses	4,000	6,000	2,000 Decrease
Cash	54,000	37,000	17,000 Increase
Totals	<u>\$569,000</u>	<u>\$386,000</u>	
Equity and Liabilities			
Share capital—ordinary (\$1 par)	\$220,000	\$ 60,000	\$160,000 Increase
Retained earnings	206,000	136,000	70,000 Increase
Bonds payable	110,000	150,000	40,000 Decrease
Accounts payable	33,000	40,000	7,000 Decrease
Totals	<u>\$569,000</u>	<u>\$386,000</u>	

ILLUSTRATION 23.13 Comparative Statements of Financial Position, Tax Consultants Inc., Year 3

Tax Consultants Inc. Income Statement For the Year Ended December 31, 2024		
Revenues		\$890,000
Cost of goods sold	\$465,000	
Operating expenses	221,000	
Interest expense	12,000	
Loss on sale of equipment	2,000	700,000
Income from operations		190,000
Income tax expense		65,000
Net income		<u>\$125,000</u>
Additional Information		
a. Operating expenses include depreciation expense of \$33,000 and expiration of prepaid expenses of \$2,000. b. Land was sold at its book value for cash. c. Cash dividends of \$55,000 were declared and paid. d. Interest expense of \$12,000 was paid in cash. e. Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$41,000 and a book value of \$36,000 was sold for \$34,000 cash. f. Bonds were redeemed at their book value for cash. g. Ordinary shares (\$1 par) were issued for cash.		

ILLUSTRATION 23.14 Income Statement, Tax Consultants Inc., Year 3

Step 1: Determine the Change in Cash

The first step in the preparation of the statement of cash flows is to determine the change in cash. As the comparative statements of financial position show, cash increased \$17,000 in 2024.

Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method

We explain the adjustments to net income of \$125,000 as follows.

- **Increase in Accounts Receivable.** The increase in accounts receivable of \$42,000 represents recorded accrual-basis revenues in excess of cash collections in 2024. The company deducts this increase from net income to convert from the accrual basis to the cash basis.
- **Increase in Inventories.** The \$54,000 increase in inventories represents an operating use of cash, not an expense. Tax Consultants therefore deducts this amount from net income, to arrive at net cash flow from operations. In other words, when inventory purchased exceeds inventory sold during a period, cost of goods sold on an accrual basis is lower than on a cash basis.
- **Decrease in Prepaid Expenses.** The \$2,000 decrease in prepaid expenses represents a charge to the income statement for which Tax Consultants made no cash payment in the current period. The company adds back the decrease to net income, to arrive at net cash flow from operating activities.

- **Decrease in Accounts Payable.** When accounts payable decrease during the year, cost of goods sold and expenses on a cash basis are higher than they are on an accrual basis. To convert net income to net cash flow from operating activities, the company must deduct the \$7,000 in accounts payable from net income.
- **Depreciation Expense (Increase in Accumulated Depreciation).** Accumulated Depreciation—Buildings increased \$10,000 (\$21,000 – \$11,000). The Buildings account did not change during the period, which means that Tax Consultants recorded depreciation expense of \$10,000 in 2024.

Accumulated Depreciation—Equipment increased by \$18,000 (\$28,000 – \$10,000) during the year. But Accumulated Depreciation—Equipment decreased by \$5,000 as a result of the sale during the year. Thus, depreciation for the year was \$23,000. The company reconciled Accumulated Depreciation—Equipment as follows.

Beginning balance	\$10,000
Add: Depreciation for 2024	23,000
	33,000
Deduct: Sale of equipment	5,000
Ending balance	\$28,000

The company must add back to net income the total depreciation expense (buildings and equipment) of \$33,000 (\$10,000 + \$23,000) charged to the income statement, to determine net cash flow from operating activities.

- **Loss on Sale of Equipment.** Tax Consultants sold for \$34,000 equipment that cost \$41,000 and had a book value of \$36,000. As a result, the company reported a loss of \$2,000 on its sale. To arrive at net cash flow from operating activities, it must add back to net income the loss on the sale of the equipment. The reason is that the loss is a non-cash charge to the income statement. The loss did not reduce cash, but it did reduce net income.

From the foregoing items, the company prepares the operating activities section of the statement of cash flows, as shown in [Illustration 23.15](#).

Cash flows from operating activities		
Net income		\$125,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 33,000	
Loss on sale of equipment	2,000	
Increase in accounts receivable	(42,000)	
Increase in inventory	(54,000)	
Decrease in prepaid expenses	2,000	
Decrease in accounts payable	(7,000)	(66,000)
Net cash provided by operating activities		59,000

ILLUSTRATION 23.15 Operating Activities Section of Cash Flow Statement

Step 3: Determine Net Cash Flows from Investing and Financing Activities

By analyzing the remaining changes in the statement of financial position accounts, Tax Consultants identifies cash flows from investing and financing activities.

- **Land.** Land decreased \$25,000 during the period. As indicated from the information presented, the company sold land for cash at its book value. This transaction is an investing activity, reported as a \$25,000 source of cash.
- **Equipment.** An analysis of the Equipment account indicates the following.

Beginning balance	\$ 68,000
Purchase of equipment	166,000
	<u>234,000</u>
Sale of equipment	41,000
Ending balance	<u>\$193,000</u>

The company used cash to purchase equipment with a fair value of \$166,000—an investing transaction reported as a cash outflow. The sale of the equipment for \$34,000 is also an investing activity, but one that generates a cash inflow.

- **Bonds Payable.** Bonds payable decreased \$40,000 during the year. As indicated from the additional information, the company redeemed the bonds at their book value. This financing transaction used \$40,000 of cash.
- **Share Capital—Ordinary.** The Share Capital—Ordinary account increased \$160,000 during the year. As indicated from the additional information, Tax Consultants issued ordinary shares of \$160,000 at par. This financing transaction provided cash of \$160,000.
- **Retained Earnings.** Retained earnings changed \$70,000 (\$206,000 – \$136,000) during the year. The \$70,000 change in retained earnings results from net income of \$125,000 from operations and the financing activity of paying cash dividends of \$55,000.

Statement of Cash Flows—2024

Tax Consultants Inc. combines the previous items to prepare the statement of cash flows shown in [Illustration 23.16](#).

Tax Consultants Inc. Statement of Cash Flows For the Year Ended December 31, 2024 Increase (Decrease) in Cash		
Cash flows from operating activities		
Net income		\$ 125,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 33,000	
Loss on sale of equipment	2,000	
Increase in accounts receivable	(42,000)	
Increase in inventory	(54,000)	
Decrease in prepaid expenses	2,000	
Decrease in accounts payable	(7,000)	(66,000)
Net cash provided by operating activities		59,000
Cash flows from investing activities		
Sale of land	25,000	
Sale of equipment	34,000	
Purchase of equipment	(166,000)

Net increase in cash		17,000
Cash, January 1, 2024		37,000
Cash, December 31, 2024		<u>\$ 54,000</u>

ILLUSTRATION 23.16 Statement of Cash Flows, Tax Consultants Inc., Year 3

Sources of Information for the Statement of Cash Flows

Important points to remember in the preparation of the statement of cash flows are these:

1. Comparative statements of financial position provide the basic information from which to prepare the report. Additional information obtained from analyses of specific accounts is also included.
2. An analysis of the Retained Earnings account is necessary. Including the net increase or decrease in Retained Earnings without any explanation is meaningless. Without explanation, it might represent the effect of net income, dividends declared, or prior period adjustments.
3. The statement includes all changes that have passed through cash or have resulted in an increase or decrease in cash.
4. Write-downs, amortization charges, and similar “book” entries, such as depreciation of plant assets, represent neither inflows nor outflows of cash because they have no effect on cash. To the extent that they have entered into the determination of net income, however, the company must

add them back to or subtract them from net income, to arrive at net cash provided (used) by operating activities.

Indirect Method—Additional Adjustments

For consistency and comparability and because it is the most widely used method in practice, we used the indirect method in the Tax Consultants' illustrations. We determined net cash flow from operating activities by adding back to or deducting from net income those items that had no effect on cash.

[Illustration 23.17](#) presents a more complete set of common types of adjustments that companies make to net income to arrive at net cash flow from operating activities.

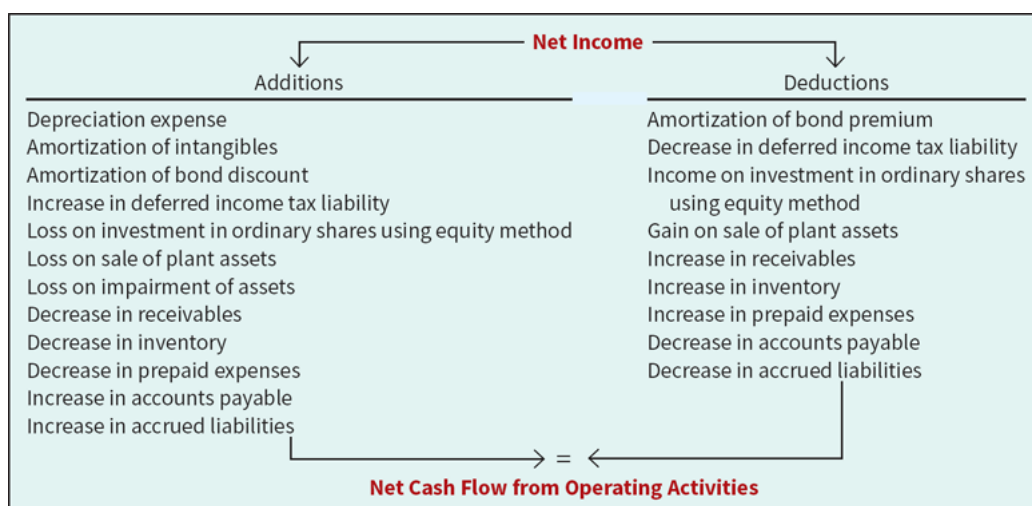

ILLUSTRATION 23.17 Adjustments Needed to Determine Net Cash Flow from Operating Activities—Indirect Method

The additions and deductions in [Illustration 23.17](#) reconcile net income to net cash flow from operating activities, illustrating why the indirect method is also called the reconciliation method.

Net Cash Flow from Operating Activities—Direct Method

LEARNING OBJECTIVE 3

Contrast the direct and indirect methods of calculating net cash flow from operating activities.

As discussed, two different methods are available to adjust income from operations on an accrual basis to net cash flow from operating activities. We showed the indirect method in the Tax Consultants' illustrations in the prior sections.

The **direct method** reports cash receipts and cash disbursements from operating activities. The difference between these two amounts is the net cash flow from operating activities. In other words, the direct method deducts operating cash disbursements from operating cash receipts. The direct method results in the presentation of a condensed cash receipts and cash disbursements statement.

As indicated from the accrual-based income statement (see [Illustration 23.4](#)), Tax Consultants reported revenues of \$125,000. However, because the company's accounts receivable increased by \$36,000 during 2022, the company collected only \$89,000 (\$125,000 – \$36,000) in cash from these revenues. Similarly, Tax Consultants reported operating expenses of \$85,000. However, accounts payable increased during the period by \$5,000. Assuming that these payables relate to operating expenses, cash operating expenses were \$80,000 (\$85,000 – \$5,000). Because no taxes payable exist at the end of the year, the company must have paid \$6,000 income tax expense for 2022 in cash during the year. Tax Consultants computes net cash flow from operating activities as shown in [Illustration 23.18](#).

Cash collected from revenues	\$89,000
Cash payments for expenses	80,000
Income before income taxes	9,000
Cash payments for income taxes	6,000
Net cash provided by operating activities	\$ 3,000

ILLUSTRATION 23.18 Computation of Net Cash Flow from Operating Activities, Year 1—Direct Method

“Net cash provided by operating activities” is the equivalent of cash basis net income. (“Net cash used by operating activities” is equivalent to cash basis net loss.)

The IASB encourages use of the direct method and permits use of the indirect method. Yet, if the direct method is used, the Board requires that companies provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. Therefore, under either method, companies must prepare and report information from the indirect (reconciliation) method.

Direct Method—An Example

Under the direct method, the statement of cash flows reports net cash flow from operating activities as major classes of *operating cash receipts* (e.g., cash collected from customers and cash received from interest and dividends) and *cash disbursements* (e.g., cash paid to suppliers for goods, to employees for services, to creditors for interest, and to government authorities for taxes).

We illustrate the direct method here in more detail to help you understand the difference between accrual-based income and net cash flow from operating activities. This example also illustrates the data needed to apply the direct method. Drogba SA, which began business on January 1, 2022, has the selected statement of financial position information as shown in [Illustration 23.19](#).

	December 31, 2022	January 1, 2022
Property, plant, and equipment (net)	€ 90,000	€—0—
Inventory	160,000	—0—
Accounts payable	60,000	—0—
Accrued expenses payable	20,000	—0—
Accounts receivable	15,000	—0—
Prepaid expenses	8,000	—0—
Cash	159,000	—0—

ILLUSTRATION 23.19 Statement of Financial Position Accounts, Drogba SA

[Illustration 23.20](#) shows Drogba’s December 31, 2022, income statement and additional information.

Sales revenue		€780,000
Cost of goods sold		450,000
Gross profit		330,000
Operating expenses	€160,000	
Depreciation	10,000	170,000
Income before income taxes		160,000
Income tax expense		48,000
Net income		€112,000

Additional Information

- a. Dividends of €70,000 were declared and paid in cash.
- b. The accounts payable increase resulted from the purchase of merchandise.
- c. Prepaid expenses and accrued expenses payable relate to operating expenses.

ILLUSTRATION 23.20 Income Statement, Drogba SA

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, only major classes of operating cash receipts and cash payments are reported. As **Illustration 23.21** shows, the difference between these major classes of cash receipts and cash payments is the net cash provided by operating activities.

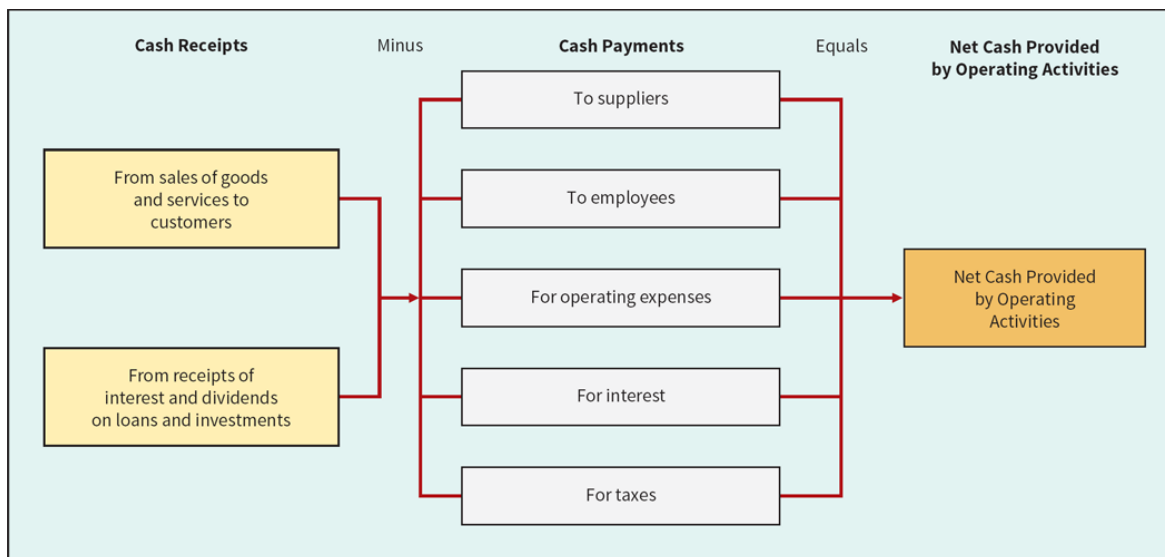

ILLUSTRATION 23.21 Major Classes of Cash Receipts and Payments

An efficient way to apply the direct method is to analyze the revenues and expenses reported in the income statement in the order in which they are listed. The company then determines cash receipts and cash payments related to these revenues and expenses. In the following sections, we present the direct method adjustments for Drogba SA in 2022, to determine net cash provided by operating activities.

Cash Receipts from Customers

The income statement for Drogba SA reported revenues from customers of €780,000. To determine cash receipts from customers, the company considers the change in accounts receivable during the year.

When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. In other words, operations led to increased revenues, but not all of these revenues resulted in cash receipts. To determine the amount of cash receipts, deduct the amount of the increase in accounts receivable from the total sales revenues. Conversely, a decrease in accounts receivable is added to sales revenues because cash receipts from customers then exceed sales revenues.

For Drogba, accounts receivable increased €15,000. Thus, cash receipts from customers were €765,000, computed as follows.

Sales revenue	€780,000
Deduct: Increase in accounts receivable	15,000
Cash receipts from customers	€765,000

Drogba could also determine cash receipts from customers by analyzing the Accounts Receivable account, as shown below.

Accounts Receivable				
1/1/22	Balance	—0—	Receipts from customers	765,000
	Sales revenue	780,000		
12/31/22	Balance	15,000		

Illustration 23.22 shows the relationships between cash receipts from customers, revenues from sales, and changes in accounts receivable.

<p>Cash Receipts from Customers</p>	=	<p>Sales Revenue</p>	$\left\{ \begin{array}{l} + \text{ Decrease in Accounts Receivable} \\ \text{or} \\ - \text{ Increase in Accounts Receivable} \end{array} \right.$
--------------------------------------------	---	-----------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------

ILLUSTRATION 23.22 Formula to Compute Cash Receipts from Customers

Cash Payments to Suppliers

Drogba reported cost of goods sold on its income statement of €450,000. To determine cash payments to suppliers, the company first finds purchases for the year, by adjusting cost of goods sold for the change in inventory. When inventory increases during the year, purchases this year exceed cost of goods sold. As a result, the company adds the increase in inventory to cost of goods sold, to arrive at purchases.

In 2022, Drogba's inventory increased €160,000. The company computes purchases as follows.

Cost of goods sold	€450,000
Add: Increase in inventory	160,000
Purchases	€610,000

After computing purchases, Drogba determines cash payments to suppliers by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, it deducts from purchases the increase in accounts payable to arrive at cash payments to suppliers. Conversely, if cash payments to suppliers exceed purchases, Drogba adds to purchases the decrease in accounts payable. Cash payments to suppliers were €550,000, computed as follows.

Purchases	€610,000
Deduct: Increase in accounts payable	60,000
Cash payments to suppliers	€550,000

Drogba also can determine cash payments to suppliers by analyzing Accounts Payable, as shown below.

Accounts Payable				
Payments to suppliers	550,000	1/1/22	Balance	—0—
			Purchases	610,000
		12/31/22	Balance	60,000

Illustration 23.23 shows the relationships between cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

$$\text{Cash Payments to Suppliers} = \text{Cost of Goods Sold} \left\{ \begin{array}{l} + \text{ Increase in Inventory} \\ \text{or} \\ - \text{ Decrease in Inventory} \end{array} \right\} \left\{ \begin{array}{l} + \text{ Decrease in Accounts Payable} \\ \text{or} \\ - \text{ Increase in Accounts Payable} \end{array} \right.$$

ILLUSTRATION 23.23 Formula to Compute Cash Payments to Suppliers

Cash Payments for Operating Expenses

Drogba reported operating expenses of €160,000 on its income statement. To determine the cash paid for operating expenses, it must adjust this amount for any changes in prepaid expenses and accrued expenses payable.

For example, when prepaid expenses increased €8,000 during the year, cash paid for operating expenses was €8,000 higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, the company adds to operating expenses the increase of €8,000. Conversely, if prepaid expenses decrease during the year, Drogba deducts from operating expenses the amount of the decrease.

Drogba also must adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from operating expenses an increase in accrued expenses payable, to arrive at cash payments for operating expenses. Conversely, it adds to operating expenses a decrease in accrued expenses payable because cash payments exceed operating expenses.

Drogba's cash payments for operating expenses were €148,000, computed as follows.

Operating expenses	€160,000
Add: Increase in prepaid expenses	8,000
Deduct: Increase in accrued expenses payable	20,000
Cash payments for operating expenses	€148,000

The relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable are shown in **Illustration 23.24**.

$$\begin{array}{lcl}
 \text{Cash Payments} & & \\
 \text{for Operating} & = & \text{Operating} \\
 \text{Expenses} & & \left\{ \begin{array}{l} + \text{ Increase in} \\ \text{Prepaid Expenses} \\ \text{or} \\ - \text{ Decrease in} \\ \text{Prepaid Expenses} \end{array} \right\} \left\{ \begin{array}{l} + \text{ Decrease in Acc} \\ \text{Expenses Payab} \\ \text{or} \\ - \text{ Increase in Acci} \\ \text{Expenses Payab} \end{array} \right.
 \end{array}$$

ILLUSTRATION 23.24 Formula to Compute Cash Payments for Operating Expenses

Note that the company did not consider depreciation expense because it is a non-cash charge.

Cash Payments for Income Taxes

The income statement for Drogba shows income tax expense of €48,000. This amount equals the cash paid. How do we know that? Because the comparative statement of financial position indicated no income taxes payable at either the beginning or end of the year.

Summary of Net Cash Flow from Operating Activities—Direct Method

The schedule shown in [Illustration 23.25](#) summarizes the computations illustrated above.

Accrual Basis		Adjustment	Add (Subtract)	Cash Basis
Sales revenue	€780,000	– Increase in accounts receivable	€ (15,000)	€765,000
Cost of goods sold	450,000	+ Increase in inventory	160,000	
		– Increase in accounts payable	(60,000)	550,000
Operating expenses	160,000	+ Increase in prepaid expenses	8,000	
		– Increase in accrued expenses payable	(20,000)	148,000
Depreciation expense	10,000	– Depreciation expense	(10,000)	–0–
Income tax expense	48,000			48,000
Total expense	668,000			746,000
Net income	€112,000	Net cash provided by operating activities		€ 19,000

ILLUSTRATION 23.25 Accrual Basis to Cash Basis

[Illustration 23.26](#) shows the presentation of the direct method for reporting net cash flow from operating activities for the Drogba example.

Drogba SA Statement of Cash Flows (partial)		
Cash flows from operating activities		
Cash received from customers		€765,000
Cash payments:		
To suppliers	€550,000	
For operating expenses	148,000	
For income taxes	48,000	746,000
Net cash provided by operating activities		€ 19,000

ILLUSTRATION 23.26 Operating Activities Section—Direct Method, 2022

If Drogba uses the direct method to present the net cash flow from operating activities, it is required to provide in a separate schedule the reconciliation of net income to net cash provided by operating activities. The reconciliation assumes the identical form and content of the indirect method of presentation, as shown in [Illustration 23.27](#).

Drogba SA Reconciliation		
Net income		€112,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	€ 10,000	
Increase in accounts receivable	(15,000)	
Increase in inventory	(160,000)	
Increase in prepaid expenses	(8,000)	
Increase in accounts payable	60,000	
Increase in accrued expense payable	20,000	(93,000)
Net cash provided by operating activities		€ 19,000

[ILLUSTRATION 23.27](#) Reconciliation of Net Income to Net Cash Provided by Operating Activities, 2022

Evolving Issue

Direct versus Indirect

The IASB faced a contentious decision related to cash flow reporting when it had to choose between the direct method and the indirect method of determining net cash flow from operating activities. Companies lobbied *against* the direct method, urging adoption of the indirect method. However, commercial lending officers expressed to the IASB a strong preference in favor of the direct method. What are the arguments in favor of each of the methods?

In Favor of the Direct Method

The principal advantage of the direct method is that it shows operating cash receipts and payments. Thus, it is more consistent with the objective of a statement of cash flows—to provide information about cash receipts and cash payments—than the indirect method, which does not report operating cash receipts and payments.

Supporters of the direct method contend that knowledge of the specific sources of operating cash receipts and the purposes for which operating cash payments were made in past periods is useful in estimating future operating cash flows. Furthermore, information about amounts of major classes of operating cash receipts and payments is more useful than information only about their arithmetic sum (the net cash flow from operating activities). Such information is more revealing of a company's ability (1) to generate sufficient cash from operating activities to pay its debts, (2) to reinvest in its operations, and (3) to make distributions to its owners. Indeed a comprehensive review of academic research related to direct method cash flow presentation indicates that financial statement users prefer the direct method and that the direct method generally provides decision-useful information. That is, the direct method information is reflected in share prices indicating that users appear to utilize this information when available.

Many companies indicate that they do not currently collect information in a manner that allows them to determine amounts such as cash received from customers or cash paid to suppliers directly from their accounting systems. But supporters of the direct method contend that the incremental cost of determining operating cash receipts and payments is not significant.

In Favor of the Indirect Method

The principal advantage of the indirect method is that it focuses on the differences between net income and net cash flow from operating activities. That is, it provides a useful link between the statement of cash flows and the income statement and statement of financial position.

Many companies contend that it is less costly to adjust net income to net cash flow from operating activities (indirect) than it is to report gross operating cash receipts and payments (direct). Supporters of the indirect method also state that the direct method, which effectively reports income statement information on a cash rather than an accrual basis, may erroneously suggest that net cash flow from operating activities is as good as, or better than, net income as a measure of performance.

In their joint financial statement presentation project, the IASB and the FASB proposed to allow only the direct method. However, there has been significant pushback on this proposal, which suggests that the choice of either the direct or indirect method will continue to be available.

Whitehouse, "FASB Proposal May Foreshadow Changes to Cash Flow Rules," www.complianceweek.com (April 24, 2015).

Special Problems in Statement Preparation

LEARNING OBJECTIVE 4

Discuss special problems in preparing a statement of cash flows.

We discussed some of the special problems related to preparing the statement of cash flows in connection with the preceding illustrations. Other problems that arise with some frequency in the preparation of this statement include the following.

1. Adjustments to net income.
2. Accounts receivable (net).
3. Other working capital changes.
4. Net loss.
5. Disclosures.

Adjustments to Net Income

Depreciation and Amortization

Depreciation expense is the most common adjustment to net income that companies make to arrive at net cash flow from operating activities. But there are numerous other non-cash expense or revenue items. Examples of expense items that companies must add back to net income are the **amortization of limited-life intangible assets**, such as patents, and **depletion of mineral resources**. These charges to expense involve expenditures made in prior periods that a company amortizes currently. These charges reduce net income without affecting cash in the current period.

Also, **amortization of bond discount or premium** on long-term bonds payable affects the amount of interest expense. However, neither changes cash. As a result, a company should add back discount amortization and subtract premium amortization from net income to arrive at net cash flow from operating activities.

Postretirement Benefit Costs

If a company has postretirement costs such as an employee pension plan, chances are that the pension expense recorded during a period will either be higher or lower than the cash funded. It will be higher when there is an unfunded liability and will be lower when there is a prepaid pension cost. When the expense is higher or lower than the cash paid, **the company must adjust net income by the difference between cash paid and the expense reported** in computing net cash flow from operating activities.

Change in Deferred Income Taxes

Changes in deferred income taxes affect net income but have no effect on cash. For example, **Baytex Energy Corp.** (CAN) reported an increase in its liability for deferred taxes of approximately \$107,598,000. This change in the liability increased tax expense and decreased net income, but did not affect cash. Therefore, Baytex added back \$107,598,000 to net income on its statement of cash flows.

Equity Method of Accounting

Another common adjustment to net income is **a change related to an equity investment** when recording income or loss under the equity method. Recall that under the equity method, the investor (1) debits the investment account and credits revenue for its share of the investee's net income, and (2) credits dividends received to the investment account. Therefore, the net increase in the investment account does not affect cash flows. A company must deduct the net increase from net income to arrive at net cash flow from operating activities.

Assume that Victor Co. owns 40 percent of Milo Inc. During the year, Milo reports net income of \$100,000 and pays a cash dividend of \$30,000. Victor reports this in its statement of cash flows as a deduction from net income in the following manner—Equity in earnings of Milo, net of dividends, \$28,000 $[(\$100,000 - \$30,000) \times .40]$.

Losses and Gains

Realized Losses and Gains

In the illustration for Tax Consultants, the company experienced a loss of \$2,000 from the sale of equipment. The company added this loss to net income to compute net cash flow from operating activities because **the loss is a non-cash charge in the income statement**.

If Tax Consultants experiences a **gain** from a sale of equipment, it too requires an adjustment to net income. Because a company reports the gain in the statement of cash flows as part of the cash proceeds from the sale of equipment under investing activities, **it deducts the gain from net income to avoid double-counting**—once as part of net income and again as part of the cash proceeds from the sale.

To illustrate, assume that Tax Consultants had land with a carrying value of \$200,000, which was condemned by the provincial government for a highway project. The condemnation proceeds received were \$205,000, resulting in a gain of \$5,000. In the statement of cash flows (indirect method), the company would deduct the \$5,000 gain from net income in the operating activities section. It would report the \$205,000 cash inflow from the condemnation as an investing activity, as follows.

Cash flows from investing activities	
Condemnation of land	\$ 205,000

Unrealized Losses and Gains

Unrealized losses and gains generally occur for debt investments accounted for at fair value (trading and held-for-collection and selling) and for equity investments. For example, assume that **AB InBev** (BEL) purchases the following two security investments on January 10, 2022.

1. Debt investment for €1 million that is classified as trading. During 2022, the debt investment has an unrealized holding gain of €110,000 (recorded in net income).
2. Equity investment for €600,000 that is non-trading in nature. During 2022, the non-trading equity investment has an unrealized holding loss of €50,000 (recorded in other comprehensive income).

For AB InBev, the unrealized holding gain of €110,000 on the debt investment increases net income but does not increase net cash flow from operating activities. As a result, the unrealized holding gain of €110,000 is deducted from net income to compute net cash flow from operating activities.

On the other hand, the unrealized holding loss of €50,000 that AB InBev incurs on the non-trading equity investment does not affect net income or cash flows—this loss is reported in the other comprehensive income section. As a result, no adjustment to net income is necessary in computing net cash flow from operating activities.

Thus, the general rule is that unrealized holding gains or losses that affect net income must be adjusted to determine net cash flow from operating activities. Conversely, unrealized holding gains or losses that do not affect net income are not adjusted to determine net cash flow from operating activities.⁵

Share-Based Compensation

Recall that, for share-based compensation plans, companies are required to use the fair value method to determine total compensation cost. The compensation cost is then recognized as an expense in the periods in which the employee provides services. When Compensation Expense is debited, Share Premium—Options is often credited. Cash is not affected by recording the expense. **Therefore, the company must increase net income by the amount of compensation expense from share options in computing net cash flow from operating activities.**

To illustrate how this information should be reported on a statement of cash flows, assume that First Wave plc grants 5,000 options to its CEO, Ann Johnson. Each option entitles Johnson to purchase one share of First Wave's £1 par value ordinary shares at £50 per share at any time in the next two years (the service period). The fair value of the options is £200,000. First Wave records compensation expense in the first year as follows.

Compensation Expense (£200,000 ÷ 2)	100,000	
Share Premium—Options		100,000

In addition, if we assume that First Wave has a 35 percent tax rate, it would recognize a deferred tax asset of £35,000 (£100,000 × .35) in the first year, as follows.

Deferred Tax Asset	35,000	
Income Tax Expense		35,000

Therefore, on the statement of cash flows for the first year, First Wave reports the following (assuming a net income of £600,000).

Net income	£600,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Share-based compensation expense	100,000
Increase in deferred tax asset	(35,000)

As shown in First Wave's statement of cash flows, it adds the share-based compensation expense to net income because it is a non-cash expense. The increase in the deferred tax asset and the related reduction in income tax expense increase net income. Although the negative income tax expense increases net income, it does not increase cash. Therefore, it should be deducted. Subsequently, if Ann Johnson exercises her options, First Wave reports "Cash provided by exercise of share options" in the financing section of the statement of cash flows.⁶

Accounts Receivable (Net)

Up to this point, we assumed no allowance for doubtful accounts—a contra account—to offset accounts receivable. However, if a company needs an allowance for doubtful accounts, how does that allowance affect the company's determination of net cash flow from operating activities? For example, assume that Redmark AG reports net income of €40,000. It has the accounts receivable balances, as shown in [Illustration 23.28](#).

	2022	2021	Change Increase/Decrease
Accounts receivable	€105,000	€90,000	€15,000 Increase
Allowance for doubtful accounts	(10,000)	(4,000)	6,000 Increase
Accounts receivable (net)	€ 95,000	€86,000	9,000 Increase

ILLUSTRATION 23.28 Accounts Receivable Balances, Redmark AG

Indirect Method

Because an increase in Allowance for Doubtful Accounts results from a charge to bad debt expense, a company should add back an increase in Allowance for Doubtful Accounts to net income to arrive at net cash flow from operating activities. [Illustration 23.29](#) shows one method for presenting this information in a statement of cash flows.

Redmark AG Statement of Cash Flows (partial) For the Year 2022		
Cash flows from operating activities		
Net income		€40,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	€(15,000)	
Increase in allowance for doubtful accounts	6,000	(9,000)
		<u>€31,000</u>

ILLUSTRATION 23.29 Presentation of Allowance for Doubtful Accounts—Indirect Method

As we indicated, the increase in the Allowance for Doubtful Accounts balance results from a charge to bad debt expense for the year. Because bad debt expense is a non-cash charge, a company must add it back to net income in arriving at net cash flow from operating activities.

Instead of separately analyzing the allowance account, a short-cut approach is to net the allowance balance against the receivable balance and compare the change in accounts receivable on a net basis. [Illustration 23.30](#) shows this presentation.

Redmark AG Statement of Cash Flows (partial) For the Year 2022	
Cash flows from operating activities	
Net income	€40,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Increase in accounts receivable (net)	(9,000)
	<u>€31,000</u>

ILLUSTRATION 23.30 Net Approach to Allowance for Doubtful Accounts—Indirect Method

This short-cut procedure works also if the change in the allowance account results from a write-off of accounts receivable. This reduces both Accounts Receivable and Allowance for Doubtful Accounts. No effect on cash flows occurs. Because of its simplicity, *use the net approach for your homework assignments*.

Direct Method

If using the direct method, a company **should not net** Allowance for Doubtful Accounts against Accounts Receivable. To illustrate, assume that Redmark AG's net income of €40,000 consisted of the items shown in [Illustration 23.31](#).

Redmark AG Income Statement For the Year 2022		
Sales revenue		€100,000
Expenses		
Salaries	€46,000	
Utilities	8,000	
Bad debts	6,000	60,000
Net income		<u>€ 40,000</u>

ILLUSTRATION 23.31 Income Statement, Redmark AG

If Redmark deducts the €9,000 increase in accounts receivable (net) from sales for the year, it would report cash sales at €91,000 (€100,000 – €9,000) and cash payments for operating expenses at €60,000. Both items would be misstated: Cash sales should be reported at €85,000 (€100,000 – €15,000), and total cash payments for operating expenses should be reported at €54,000 (€60,000 – €6,000). **Illustration 23.32** shows the proper presentation.

Redmark AG Statement of Cash Flows (partial) For the Year 2022		
Cash flows from operating activities		
Cash received from customers		€85,000
Salaries paid	€46,000	
Utilities paid	8,000	54,000
Net cash provided by operating activities		<u>€31,000</u>

ILLUSTRATION 23.32 Bad Debts—Direct Method

An added complication develops when a company writes off accounts receivable. Simply adjusting sales for the change in accounts receivable will not provide the proper amount of cash sales. The reason is that the write-off of the accounts receivable is not a cash collection. Thus, an additional adjustment is necessary.

Other Working Capital Changes

Up to this point, we showed how companies handled all of the changes in working capital items (current asset and current liability items) as adjustments to net income in determining net cash flow from operating activities. You must be careful, however, because **some changes in working capital, although they affect cash, do not affect net income.** Generally, these are investing or financing activities of a current nature.

One activity is the purchase of **short-term non-trading equity investments**. For example, the purchase of short-term non-trading equity investments for ¥5,000,000 cash has no effect on net income, but it does cause a ¥5,000,000 decrease in cash. A company reports this transaction as a cash flow from investing activities as follows.

Cash flows from investing activities	
Purchase of short-term non-trading equity investments	¥5,000,000

Another example is the issuance of a **short-term non-trade note payable** for cash. This change in a working capital item has no effect on income from operations, but it increases cash by the amount of

the note payable. For example, a company reports the issuance of a ¥10,000,000 short-term, non-trade note payable for cash in the statement of cash flows as follows.

Cash flows from financing activities	
Issuance of short-term note	¥10,000,000

Another change in a working capital item that has no effect on income from operations or on cash is a **cash dividend payable**. Although a company will report the cash dividends when paid as a financing activity, it does not report the declared but unpaid dividend on the statement of cash flows.

Net Losses

If a company reports a net loss instead of a net income, it must adjust the net loss for those items that do not result in a cash inflow or outflow. The net loss, after adjusting for the charges or credits not affecting cash, may result in a negative or a positive cash flow from operating activities.

For example, if the net loss is £50,000 and the total amount of charges to add back is £60,000, then net cash provided by operating activities is £10,000. [Illustration 23.33](#) shows this computation.

Net income (loss)		£(50,000)
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation of plant assets	£55,000	
Amortization of patents	5,000	60,000
Net cash provided by operating activities		£ 10,000

[ILLUSTRATION 23.33](#) Computation of Net Cash Flow from Operating Activities—Cash Inflow

If the company experiences a net loss of £80,000 and the total amount of the charges to add back is £25,000, the presentation appears as shown in [Illustration 23.34](#).

Net income (loss)	£(80,000)
Adjustments to reconcile net income to net cash used by operating activities:	
Depreciation of plant assets	25,000
Net cash used by operating activities	£(55,000)

[ILLUSTRATION 23.34](#) Computation of Net Cash Flow from Operating Activities—Cash Outflow

Although not illustrated in this chapter, a negative cash flow may result even if the company reports a net income.

Disclosures

Significant Non-Cash Transactions

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant non-cash transactions** and other events that are investing or financing activities. Among the more common of these non-cash transactions that a company should report or disclose in some manner are the following.

1. Acquisition of assets by assuming liabilities (including lease obligations) or by issuing equity securities.
2. Exchanges of non-monetary assets.
3. Refinancing of long-term debt.

4. Conversion of debt or preference shares to ordinary shares.
5. Issuance of equity securities to retire debt.

Investing and financing transactions that do not require the use of cash are excluded from the statement of cash flows. [8] If material in amount, these disclosures may be either narrative or summarized in a separate schedule. This schedule may appear in a separate note or supplementary schedule to the financial statements.⁷ [Illustration 23.35](#) shows the presentation of these significant non-cash transactions or other events in a separate schedule in the notes to the financial statements.

Note G: Significant non-cash transactions. During the year, the company engaged in the following significant non-cash investing and financing transactions:

Issued 250,000 ordinary shares to purchase land and building	€1,750,000
Exchanged land in New York, New York, for land in Berlin, Germany	€2,000,000
Converted 12% bonds to 50,000 ordinary shares	€ 500,000

[ILLUSTRATION 23.35](#) Note Presentation of Non-Cash Investing and Financing Activities

Companies do not generally report certain other significant non-cash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **share dividends, share splits, and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of changes in equity or schedules and notes pertaining to changes in equity accounts.

Special Disclosures

IAS 7 indicates that cash flows related to interest received and paid, and dividends received and paid, should be separately disclosed in the statement of cash flows. [9] Each item should be classified in a consistent manner from period to period as operating, investing, or financing cash flows. As indicated earlier, *for homework purposes classify interest received and paid and dividends received as part of cash flows from operating activities and dividends paid as cash flows from financing activities*. The justification for reporting the first three items in cash flows from operating activities is that each item affects net income. Dividends paid, however, do not affect net income and are often considered a cost of financing.⁸

Companies should also disclose income taxes paid separately in the cash flows from operating activities unless they can be separately identified as part of investing or financing activities. While tax expense may be readily identifiable with investing or financing activities, the related tax cash flows are often impracticable to identify and may arise in a different period from the cash flows of the underlying transaction. Therefore, taxes paid are usually classified as cash flows from operating activities. IFRS requires that the cash paid for taxes, as well as cash flows from interest and dividends received and paid, be disclosed. The category (operating, investing, or financing) in which each item was included must be disclosed as well (see [Underlying Concepts](#)).

Underlying Concepts

Additional requirements for disclosures of interest, dividends, and taxes reflect application of the full disclosure principle.

An example of such a disclosure from the notes to **Daimler's** (DEU) financial statement is provided in [Illustration 23.36](#).

Daimler

Cash provided by operating activities includes the following cash flows:

(in millions of €)	2018	2017
Interest paid	(678)	(304)
Interest received	257	187
Dividends received	1,429	895

ILLUSTRATION 23.36 Note Disclosure of Interest, Taxes, and Dividends

Other companies choose to report these items directly in the statement of cash flows. In many cases, companies start with income before income taxes and then show income taxes paid as a separate item. In addition, they often add back interest expense on an accrual basis and then subtract interest paid. Reporting these items in the operating activities section is shown for Wáng Ltd. in **Illustration 23.37**.

Wáng Ltd. Statement of Cash Flows (in millions) (Operating Activities Section Only)		
Income before income tax		¥4,000
Adjustments to reconcile income before income tax to net cash provided by operating activities		
Depreciation expense	¥1,000	
Interest expense	500	
Investment revenue	(650)	
Decrease in inventory	1,050	
Increase in trade receivables	(310)	1,590
Cash generated from operations		5,590
Interest paid	(300)	
Income taxes paid	(760)	(1,060)
Net cash provided by operating activities		<u>¥4,530</u>

ILLUSTRATION 23.37 Reporting of Interest, Taxes, and Dividends in the Operating Section

Companies often provide a separate section to identify interest and income taxes paid.

What Do the Numbers Mean?

Better than ROA?

As you have learned in your study of accounting, both accounting income (measured under accrual-accounting principles) and cash flow from operations can provide useful information. However, both measures are sometimes criticized. Accounting income is sometimes faulted for the multitude of judgments required to determine revenues and expenses. In addition, many companies can boost return on equity, an earnings-based metric, by piling on debt, which also makes the company a riskier, not a better, investment. On the other hand, cash flow performance metrics are criticized because they do not follow the revenue and expense recognition principles.

So what's a better way to measure how profitable companies really are? Or, to adopt master investor Warren Buffett's view of investing: How do you find companies that consistently generate big returns on invested capital? Recently, a new measure of profitability, "COROA" (cash operating return on assets) has been introduced as a better performance metric. The idea is to measure management's ability to generate pure cash returns, not cash expected in the future, on every dollar invested in property, plant, and equipment; R&D centers; inventories; and all other assets.

Specifically, COROA is computed by starting with the cash flow from operations amount and then adding back cash taxes and cash interest to calculate pure operating cash flows. That's the dollar amount that the company actually puts in its coffers during the year—and which could be used to pay dividends, make "investments" by purchasing companies or divisions, and fund capital expenditures, especially those that propel growth. That's the numerator. Adjustments for taxes and interest are fundamental to this COROA measure. This is because falling taxes can create the illusion of ongoing progress. Interest is added back because it primarily reflects the level of leverage but has nothing to do with how well management is managing their assets.

The denominator consists of every dollar spent on the assets that produce those operating cash flows. To calculate that figure, take "total assets" from the statement of financial position and add "accumulated depreciation" to account for operating assets that are still being used to make cars, semiconductors, or other products that, for accounting purposes, are fully expensed.

Two recent examples make the point. First, consider **Apple** (USA): from late 2015 to late 2017, its stock price was in a funk. Why? From the start of fiscal 2016 through September 30, 2017, Apple's total assets, measured as a yearly average, jumped by \$104 billion to \$392 billion. Yet despite reinvesting that \$100-billion-plus, primarily by plowing retained earnings into low-yielding securities, Apple generated \$17 billion less in operating cash flows in 2017 than it posted in 2015. Its COROA dropped over that two-year span from 33.1 percent to 19.9 percent.

Looking next at **GE** (USA), its COROA chronicled a steep and ongoing decline. In 2013, it posted operating cash flow of \$35 billion; it has fallen in every one of the five succeeding years, hitting \$10.5 billion in 2018, a drop of 70 percent. This resulted mainly from a slide in the cash it reported from running its basic businesses. Its reported cash from operations (before adding back cash interest and taxes) dropped from \$30 billion in 2016 to \$4.2 billion in 2018. As a result, GE's COROA dropped from an already weak 4.8 percent to just 2.7 percent.

Thus, COROA—adjusted cash flow from operations as a percentage of total assets—is the ratio to keep an eye on. It's the best measure of pure profitability. If the number has been high for a while and is either staying high or improving, evidence is strong that the company is generating strong returns from its new investments. That's the quality that Buffett looks for. And according to accounting guru Jack Ciesielski, it's all about cash. "What's more important in the world than cash?" he asks. "Why, it's *more* cash, of course."

Tully, "Apple's Big Stock Selloff Is a Sign of Things to Come," *Fortune* (January 29, 2019); and S. Tully, "GE's Basic Businesses Are Badly Underperforming, by This Accounting Metric," *Fortune* (August 27, 2019).

Use of a Worksheet

LEARNING OBJECTIVE 5

Explain the use of a worksheet in preparing a statement of cash flows.

When numerous adjustments are necessary or other complicating factors are present, companies often use **a worksheet to assemble and classify the data that will appear on the statement of cash flows**. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional. [Illustration 23.38](#) shows the skeleton format of the worksheet for preparation of the statement of cash flows using the indirect method.

The following guidelines are important in using a worksheet.

1. In the statement of financial position accounts section, **list accounts with debit balances separately from those with credit balances**. This means, for example, that Accumulated Depreciation is listed under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the appropriate columns. Then, enter the transactions that caused the change in the account balance during the year as reconciling items in the two middle columns.

After all reconciling items have been entered, each line pertaining to a statement of financial position account should foot across. That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all statement of financial position accounts, all changes in account balances have been reconciled.
2. The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. Accordingly, it provides the information necessary to prepare the formal statement of cash flows. **Enter inflows of cash as debits in the reconciling columns, and outflows of cash as credits in the reconciling columns**. Thus, in this section, a company would enter the sale of equipment for cash at book value as a debit under inflows of cash from investing activities. Similarly, it would enter the purchase of land for cash as a credit under outflows of cash from investing activities.
3. **Do not enter in any journal, or post to any account, the reconciling items shown in the worksheet**. These items do not represent either adjustments or corrections to the statement of financial position accounts. They are used only to facilitate the preparation of the statement of cash flows.

ILLUSTRATION 23.38 Format of Worksheet for Preparation of Statement of Cash Flows

Preparation of the Worksheet

The preparation of a worksheet involves the following steps.

Step 1. Enter the statement of financial position accounts and their beginning and ending balances in the statement of financial position accounts section.

Step 2. Enter the data that explain the changes in the statement of financial position accounts (other than cash) and their effects on the statement of cash flows in the reconciling columns of the worksheet.

Step 3. Enter the increase or decrease in cash on the cash line and at the bottom of the worksheet. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation and use of a worksheet and to illustrate the reporting of some of the special problems discussed in the prior section, we present a comprehensive example for Satellite Ltd. Again, the indirect method serves as the basis for the computation of net cash provided by operating activities. [Illustrations 23.39](#) and [23.40](#) present the statement of financial position, combined statement of income and retained earnings, and additional information for Satellite Ltd. The discussion that follows these financial statements provides additional explanations related to the preparation of the worksheet.

Analysis of Transactions

The following discussion explains the individual adjustments that appear on the worksheet in [Illustration 23.41](#). Because cash is the basis for the analysis, Satellite reconciles the cash account last. Because income is the first item that appears on the statement of cash flows, it is handled first.

ILLUSTRATION 23.39 Comparative Statement of Financial Position, Satellite Ltd.

Change in Retained Earnings

Net income for the period is HK\$117,000. The entry for it on the worksheet is as follows.

(1)		
Operating—Net Income	117,000	
Retained Earnings		117,000

Satellite reports net income on the bottom section of the worksheet. **This is the starting point for preparation of the statement of cash flows (under the indirect method).**

A share dividend and a cash dividend also affected retained earnings. The retained earnings statement reports a share dividend of HK\$15,000. The worksheet entry for this transaction is as follows.

(2)		
Retained Earnings	15,000	
Share Capital—Ordinary		15,000

Satellite Ltd.
Combined Statement of Income and Retained Earnings
For the Year Ended December 31, 2023
(in thousands)

Net sales		HK\$526,500
Other revenue		3,500
Total revenues		<u>530,000</u>

Retained earnings, December 31		<u>HK\$592,000</u>
Per share:		
Net income		<u>HK\$2.13</u>

Additional Information

- a. Other income of HK\$3,500 represents Satellite's equity share in the net income of Porter Co., an equity investee. Satellite owns 22% of Porter Co.
- b. An analysis of the Equipment account and related Accumulated Depreciation—Equipment account indicates the following.

	Equipment Dr./ (Cr.)	Accum. Dep. Dr./ (Cr.)	Gain or (Loss)
Balance at end of 2022	HK\$142,000	HK\$(31,000)	
Purchases of equipment	53,000		
Sale of equipment	(8,000)	2,500	HK\$(1,500)
Depreciation for the period		(11,500)	
Major repair charged to equipment	<u>11,000</u>		
Balance at end of 2023	<u>HK\$198,000</u>	<u>HK\$(40,000)</u>	

Satellite Ltd.
Combined Statement of Income and Retained Earnings
For the Year Ended December 31, 2023
(in thousands)

- c. Land in the amount of HK\$60,000 was purchased through the issuance of a long-term note; in addition, certain parcels of land costing HK\$10,500 were condemned. The government paid Satellite HK\$18,500, resulting in an HK\$8,000 gain.
- d. The change in the Accumulated Depreciation—Buildings, Trademarks, and Bonds Payable accounts resulted from depreciation and amortization entries.
- e. An analysis of the share capital and premium accounts in equity discloses the following:

	Share Capital— Ordinary	Share Premium— Ordinary
Balance at end of 2022	HK\$50,000	HK\$ 38,000
Issuance of HK\$15,000 share dividend	15,000	
Sale of shares for cash	9,000	135,000
Balance at end of 2023	<u>HK\$74,000</u>	<u>HK\$173,000</u>

- f. Interest paid is HK\$9,000; income taxes paid is HK\$62,000.

ILLUSTRATION 23.40 Income and Retained Earnings Statements, Satellite Ltd.

The issuance of share dividends is not a cash operating, investing, or financing item. Therefore, **although the company enters this transaction on the worksheet for reconciling purposes, it does not report it in the statement of cash flows.**

Retained Earnings			
(2)	15,000	Bal.	496,000
(3)	6,000	(1)	117,000
		Bal.	592,000

The HK\$6,000 cash dividend paid represents a financing activity cash outflow. Satellite makes the following worksheet entry:

(3)		
Retained Earnings	6,000	
Financing—Cash Dividends		6,000

The company reconciles the beginning and ending balances of retained earnings by entry of the three items above.

Accounts Receivable (Net)

The increase in accounts receivable (net) of HK\$53,000 represents adjustments that did not result in cash inflows during 2023. As a result, the company would deduct from net income the increase of HK\$53,000. Satellite makes the following worksheet entry.

(4)		
Accounts Receivable (net)	53,000	
Operating—Increase in Accounts Receivable (net)		53,000

Inventory

The increase in inventory of HK\$152,000 represents an operating use of cash. The incremental investment in inventory during the year reduces cash without increasing the cost of goods sold. Satellite makes the following worksheet entry.

(5)		
Inventory	152,000	
Operating—Increase in Inventory		152,000

Prepaid Expenses

The decrease in prepaid expenses of HK\$500 represents a charge in the income statement for which there was no cash outflow in the current period. Satellite should add that amount back to net income through the following entry.

(6)		
Operating—Decrease in Prepaid Expenses	500	
Prepaid Expenses		500

Equity Investment in Porter Co. (Equity Method)

Satellite's investment in the shares of Porter Co. increased HK\$3,500. This amount reflects Satellite's share of net income earned by Porter (its equity investee) during the current year. Although Satellite's revenue, and therefore its net income, increased HK\$3,500 by recording Satellite's share of Porter Co.'s net income, no cash (dividend) was provided. Satellite makes the following worksheet entry.

(7)		
Equity Investment in Porter Co.	3,500	
Operating—Equity in Earnings of Porter Co.		3,500

Land

Satellite purchased land in the amount of HK\$60,000 through the issuance of a long-term note payable. This transaction did not affect cash. It is a significant non-cash investing/financing transaction that the company would disclose in the accompanying notes. Satellite makes the following entry to reconcile the worksheet.

(8)		
Land	60,000	
Notes Payable		60,000

In addition to the non-cash transaction involving the issuance of a note to purchase land, the Land account was decreased by the condemnation proceedings. The following worksheet entry records the receipt of HK\$18,500 for land having a book value of HK\$10,500.

(9)		
Investing—Proceeds from Condemnation of Land	18,500	
Land		10,500
Operating—Gain on Condemnation of Land		8,000

Land			
Bal.	82,000	(9)	10,500
(8)	60,000		

Bal.	131,500		
------	---------	--	--

In reconciling net income to net cash flow from operating activities, Satellite deducts from net income the gain of HK\$8,000. The reason is that the transaction that gave rise to the gain is an item whose cash effect is already classified as an investing cash inflow. The Land account is now reconciled.

Equipment and Accumulated Depreciation—Equipment

An analysis of Equipment and Accumulated Depreciation—Equipment shows that a number of transactions have affected these accounts. The company purchased equipment in the amount of HK\$53,000 during the year. Satellite records this transaction on the worksheet as follows.

(10)			
Equipment	53,000		
Investing—Purchase of Equipment		53,000	

In addition, Satellite sold, at a loss of HK\$1,500, equipment with a book value of HK\$5,500. It records this transaction as follows.

(11)			
Investing—Sale of Equipment	4,000		
Operating—Loss on Sale of Equipment	1,500		
Accumulated Depreciation—Equipment	2,500		
Equipment		8,000	

Equipment			
Bal.	142,000	(11)	8,000
(10)	53,000		
(13)	11,000		
Bal.	198,000		

The proceeds from the sale of the equipment provided cash of HK\$4,000. In addition, the loss on the sale of the equipment has reduced net income but did not affect cash. Therefore, the company adds back to net income the amount of the loss, in order to accurately report cash provided by operating activities.

Satellite reported depreciation on the equipment at HK\$11,500 and recorded it on the worksheet as follows.

(12)			
Operating—Depreciation Expense—Equipment	11,500		
Accumulated Depreciation—Equipment		11,500	

Accumulated Depreciation—Equipment			
(11)	2,500	Bal.	31,000
		(12)	11,500
		Bal.	40,000

The company adds depreciation expense back to net income because that expense reduced income but did not affect cash.

Finally, the company made a major repair to the equipment. It charged this expenditure, in the amount of HK\$11,000, to the Equipment account. This expenditure required cash, and so Satellite makes the

following worksheet entry.

(13)		
Equipment	11,000	
Investing—Major Repairs of Equipment		11,000

After adjusting for the foregoing items, Satellite has reconciled the balances in the Equipment and related Accumulated Depreciation—Equipment accounts.

Building Depreciation and Amortization of Trademarks

Depreciation expense on the buildings of HK\$3,100 and amortization of trademarks of HK\$2,400 are both expenses in the income statement that reduced net income but did not require cash outflows in the current period. Satellite makes the following worksheet entry.

(14)		
Operating—Depreciation Expense—Buildings	3,100	
Operating—Amortization of Trademarks	2,400	
Accumulated Depreciation—Buildings		3,100
Trademarks		2,400

Other Non-Cash Charges or Credits

Analysis of the remaining accounts indicates that changes in the Accounts Payable, Accrued Liabilities, Income Taxes Payable, Bonds Payable, and Deferred Tax Liability balances resulted from charges or credits to net income that did not affect cash. The company should individually analyze each of these items and enter them in the worksheet. The following compound entry summarizes these non-cash, income-related items.

(15)		
Income Taxes Payable	13,000	
Bonds Payable	1,000	
Operating—Increase in Accounts Payable	1,000	
Operating—Increase in Accrued Liabilities	4,000	
Operating—Increase in Deferred Tax Liability	3,000	
Operating—Decrease in Income Taxes Payable		13,000
Operating—Amortization of Bond Premium		1,000
Accounts Payable		1,000
Accrued Liabilities		4,000
Deferred Tax Liability		3,000

Share Capital—Ordinary and Related Accounts

Comparison of the Share Capital—Ordinary balance and the Share Premium—Ordinary balance shows that transactions during the year affected these accounts. First, Satellite issues a share dividend of two percent to shareholders. As the discussion of worksheet entry (2) indicated, no cash was provided or used by the share dividend transaction. In addition to the shares issued via the share dividend, Satellite sold ordinary shares at HK\$16 per share. The company records this transaction as follows.

Share Capital—Ordinary		
	Bal.	50,000
	(2)	15,000

	(16)	9,000
	Bal.	74,000

(16)		
Financing—Sale of Ordinary Shares	144,000	
Share Capital—Ordinary		9,000
Share Premium—Ordinary		135,000

Share Premium—Ordinary		
	Bal.	38,000
	(16)	135,000
	Bal.	173,000

Also, the company purchased its ordinary shares in the amount of HK\$17,000. It records this transaction on the worksheet as follows.

(17)		
Treasury Shares	17,000	
Financing—Purchase of Treasury Shares		17,000

Final Reconciling Entry

The final entry to reconcile the change in cash and to balance the worksheet is shown below. The HK\$7,000 amount is the difference between the beginning and ending cash balance.

(18)		
Decrease in Cash	7,000	
Cash		7,000

Once the company has determined that the differences between the beginning and ending balances per the worksheet columns have been accounted for, it can total the reconciling transactions columns, and they should balance. Satellite can prepare the statement of cash flows entirely from the items and amounts that appear at the bottom of the worksheet under “Statement of Cash Flows Effects,” as shown in [Illustration 23.41](#).

Satellite Ltd.

[statement of cash flows](#)

Learning Objectives Review

1 Describe the usefulness and format of the statement of cash flows.

The primary purpose of the statement of cash flows is to provide information about an entity's cash receipts and cash payments during a given period. A secondary objective is to report the entity's operating, investing, and financing activities during the period.

Companies classify cash flows as follows. (1) **Operating activities**—transactions that result in the revenues, expenses, gains, and losses that determine net income. (2) **Investing activities**—lending money and collecting on those loans, and acquiring and disposing of investments, plant assets, and intangible assets. (3) **Financing activities**—obtaining cash from creditors and repaying loans, issuing and reacquiring share capital, and paying cash dividends.

2 Prepare a statement of cash flows.

Preparing the statement involves three major steps. (1) *Determine the change in cash.* This is the difference between the beginning and the ending cash balance shown on the comparative statements of financial position. (2) *Determine the net cash flow from operating activities.* This procedure is complex; it involves analyzing not only the current year's income statement but also the comparative statements of financial position and the selected transaction data. (3) *Determine cash flows from investing and financing activities.* Analyze all other changes in the statement of financial position accounts to determine the effects on cash.

Companies must adjust net income on an accrual basis to determine net cash flow from operating activities because some expenses and losses do not cause cash outflows, and some revenues and gains do not provide cash inflows. Once a company has computed the net cash flow from operating activities, the next step is to determine whether any other changes in statement of financial position accounts caused an increase or decrease in cash. Net cash flows from investing and financing activities can be determined by examining the changes in non-current statement of financial position accounts.

The information to prepare the statement usually comes from three sources. (1) *Comparative statements of financial position.* Information in these statements indicates the amount of the changes in assets, liabilities, and equities during the period. (2) *Current income statement.* Information in this statement is used in determining the cash provided by operations during the period. (3) *Selected transaction data.* These data from the general ledger provide additional detailed information needed to determine how cash was provided or used during the period.

3 Contrast the direct and indirect methods of calculating net cash flow from operating activities.

Under the direct approach, companies calculate the major classes of operating cash receipts and cash disbursements. Presentation of the direct approach of reporting net cash flow from operating activities takes the form of a condensed cash-basis income statement. The indirect method adds back to net income the non-cash expenses and losses and subtracts the non-cash revenues and gains.

4 Discuss special problems in preparing a statement of cash flows.

These special problems are (1) adjustments to net income, (2) accounts receivable (net), (3) other working capital changes, (4) net loss, and (5) disclosures.

5 Explain the use of a worksheet in preparing a statement of cash flows.

When numerous adjustments are necessary or other complicating factors are present, companies often use a worksheet to assemble and classify the data that will appear on the statement of cash flows. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional.

Enhanced Review and Practice

Practice Problem

Data presented below are from the records of Antonio Brasileiro SA.

	December 31, 2022	December 31, 2021
Plant assets	R\$335,000	R\$215,000
Long-term investments	10,000	53,000
Current assets other than cash	85,000	60,000
Cash	15,000	8,000
	<u>R\$445,000</u>	<u>R\$336,000</u>
Retained earnings	R\$ 56,000	R\$ 20,000
Ordinary shares	254,000	254,000
Bonds payable	75,000	—0—
Current liabilities	40,000	22,000
Accumulated depreciation	20,000	40,000
	<u>R\$445,000</u>	<u>R\$336,000</u>

Additional information:

1. In 2022, the company sold for R\$34,000 held-for-collection and selling debt investments carried at a cost of R\$43,000 on December 31, 2022. No unrealized gains or losses were recorded on this investment in 2022.
2. In 2022, the company sold for R\$8,000 plant assets that cost R\$50,000 and were 80% depreciated. The loss was incorrectly charged directly to Retained Earnings.

3. Net income as reported on the income statement for the year was R\$48,000.
4. The company paid dividends totaling R\$10,000.
5. Depreciation charged for the year was R\$20,000.

Instructions

Prepare a statement of cash flows for the year 2022 using the indirect method.

Solution

Antonio Brasileiro SA Statement of Cash Flows For the Year Ended December 31, 2022 Indirect Method		
Cash flows from operating activities		
Net income (R\$48,000 – R\$2,000)		R\$ 46,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	R\$ 20,000	
Loss on sale of investments	9,000	
Loss on sale of plant assets	2,000	
Increase in current assets other than cash	(25,000)	
Increase in current liabilities	18,000	24,000
Net cash provided by operating activities		70,000
Cash flows from investing activities		
Sale of plant assets	8,000	
Sale of investments	34,000	
Purchase of plant assets*	(170,000)	
Net cash used by investing activities		(128,000)
Cash flows from financing activities		
Issuance of bonds payable	75,000	
Payment of dividends	(10,000)	
Net cash provided by financing activities		65,000
Net increase in cash		7,000
Cash balance, January 1, 2022		8,000
Cash balance, December 31, 2022		<u>R\$ 15,000</u>
*Supporting computation (purchase of plant assets):		
Plant assets, December 31, 2022	R\$335,000	
Less: Plant assets, December 31, 2021	215,000	
Net change	120,000	
Plant assets sold	50,000	
Plant assets purchased	<u>R\$170,000</u>

Questions

1. What is the purpose of the statement of cash flows? What information does it provide?
2. Of what use is the statement of cash flows?
3. Differentiate between investing activities, financing activities, and operating activities.
4. What are the major sources of cash (inflows) in a statement of cash flows? What are the major uses (outflows) of cash?
5. Identify and explain the major steps involved in preparing the statement of cash flows.
6. Identify the following items as (1) operating, (2) investing, or (3) financing activities: purchase of land, payment of dividends, cash sales, and purchase of treasury shares.
7. Unlike the other major financial statements, the statement of cash flows is not prepared from the adjusted trial balance. From what sources does the information to prepare this statement come, and what information does each source provide?
8. Why is it necessary to convert accrual-based net income to a cash basis when preparing a statement of cash flows?
9. Differentiate between the direct method and the indirect method by discussing each method.
10. Broussard Company reported net income of \$3.5 million in 2022. Depreciation for the year was \$520,000, accounts receivable increased \$500,000, and accounts payable increased \$300,000. Compute net cash flow from operating activities using the indirect method.
11. Collinsworth plc reported sales on an accrual basis of £100,000. If accounts receivable increased £30,000 and the allowance for doubtful accounts increased £9,000 after a write-off of £2,000, compute cash sales.
12. Your roommate is puzzled. During the last year, the company in which she is a shareholder reported a net loss of \$675,000, yet its cash increased \$321,000 during the same period of time. Explain to your roommate how this situation could occur.
13. The board of directors of Gifford plc declared cash dividends of £260,000 during the current year. If dividends payable was £85,000 at the beginning of the year and £90,000 at the end of the year, how much cash was paid in dividends during the year?
14. Explain how the amount of cash payments to suppliers is computed under the direct method.
15. The net income for Letterman AG for 2022 was €320,000. During 2022, depreciation on plant assets was €124,000, amortization of patent was €40,000, and the company incurred a loss on sale of plant assets of €21,000. Compute net cash flow from operating activities.
16. Each of the following items must be considered in preparing a statement of cash flows for Blackwell Inc. for the year ended December 31, 2022. Indicate how each item is to be shown in the statement, if at all.
 - a. Plant assets that had cost \$18,000 6½ years before and were being depreciated on a straight-line basis over 10 years with no estimated residual value were sold for \$4,000.
 - b. During the year, 10,000 ordinary shares with a stated value of \$20 a share were issued for \$41 a share.
 - c. Uncollectible accounts receivable in the amount of \$22,000 were written off against Allowance for Doubtful Accounts.

d. The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of non-trading equity investments for \$38,000 cash.

17. Classify the following items as (1) operating, (2) investing, (3) financing, or (4) significant non-cash investing and financing activities, using the direct method.

- a. Cash payments to employees.
- b. Redemption of bonds payable.
- c. Sale of building at book value.
- d. Cash payments to suppliers.
- e. Exchange of equipment for furniture.
- f. Issuance of preference shares.
- g. Cash received from customers.
- h. Purchase of treasury shares.
- i. Issuance of bonds for land.
- j. Payment of dividends.
- k. Purchase of equipment.
- l. Cash payments for operating expenses.

18. Silva Rojas and Hans Jensen were discussing the statement of cash flows of Liu Ltd. In the notes to the statement of cash flows was a schedule entitled “Non-cash investing and financing activities.” Give three examples of significant non-cash transactions that would be reported in this schedule.

19. During 2022, Simms Group redeemed ¥2,000,000 of bonds payable for ¥1,880,000 cash. Indicate how this transaction would be reported on a statement of cash flows, if at all.

20. What are some of the arguments in favor of using the indirect (reconciliation) method as opposed to the direct method for reporting a statement of cash flows?

21. Why is it desirable to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?

Brief Exercises

BE23.1 (LO 2) Wainwright Corporation had the following activities in 2022.

1. Sale of land \$180,000.
2. Purchase of inventory \$845,000.
3. Purchase of treasury shares \$72,000.
4. Purchase of equipment \$415,000.
5. Issuance of ordinary shares \$320,000.
6. Purchase of investments—equity \$59,000.

Compute the amount Wainwright should report as net cash provided (used) by investing activities in its statement of cash flows.

BE23.2 (LO 2) Stansfield AG had the following activities in 2022.

1. Payment of accounts payable €770,000.
2. Issuance of ordinary shares €250,000.

3. Payment of dividends €350,000.
4. Collection of note receivable €100,000.
5. Issuance of bonds payable €510,000.
6. Purchase of treasury shares €46,000.

Compute the amount Stansfield should report as net cash provided (used) by financing activities in its 2022 statement of cash flows.

BE23.3 (LO 1) Novak SpA is preparing its 2022 statement of cash flows, using the indirect method. The following is a list of items that may affect the statement. Using the code letters provided, indicate how each item will affect Novak's 2022 statement of cash flows.

Code Letter	Effect
A	Added to net income in the operating section
D	Deducted from net income in the operating section
R-I	Cash receipt in investing section
P-I	Cash payment in investing section
R-F	Cash receipt in financing section
P-F	Cash payment in financing section
N	Non-cash investing and/or financing activity in notes

Items

_____	a. Purchase of land and building.
_____	b. Decrease in accounts receivable.
_____	c. Issuance of shares.
_____	d. Depreciation expense.
_____	e. Sale of land at book value.
_____	f. Sale of land at a gain.
_____	g. Payment of dividends.
_____	h. Increase in accounts receivable.
_____	i. Purchase of an equity investment.
_____	j. Increase in accounts payable.

_____	k. Decrease in accounts payable.
_____	l. Loan from bank by signing note.
_____	m. Purchase of equipment using a note.
_____	n. Increase in inventory.
_____	o. Issuance of bonds.
_____	p. Retirement of bonds payable.
_____	q. Sale of equipment at a loss.
_____	r. Purchase of treasury shares.

BE23.4 (LO 2, 3) Bloom SA had the following 2022 income statement.

Sales revenue	€200,000
Cost of goods sold	120,000
Gross profit	80,000
Operating expenses (includes depreciation of €21,000)	50,000
Net income	€ 30,000

The following accounts increased during 2022: accounts receivable €12,000, inventory €11,000, and accounts payable €13,000. Prepare the cash flows from operating activities section of Bloom's 2022 statement of cash flows using the direct method.

BE23.5 (LO 2, 3) Use the information from BE23.4 for Bloom SA. Prepare the cash flows from operating activities section of Bloom's 2022 statement of cash flows using the indirect method.

BE23.6 (LO 3) At January 1, 2022, Eikenberry Inc. had accounts receivable of \$72,000. At December 31, 2022, accounts receivable is \$54,000. Sales for 2022 total \$420,000. Compute Eikenberry's 2022 cash receipts from customers.

BE23.7 (LO 3) Moxley AG had January 1 and December 31 balances as follows.

	1/1/22	12/31/22
Inventory	€95,000	€113,000
Accounts payable	61,000	69,000

For 2022, cost of goods sold was €500,000. Compute Moxley's 2022 cash payments to suppliers.

BE23.8 (LO 2) In 2022, Elbert plc had net cash provided by operating activities of £531,000, net cash used by investing activities of £963,000, and net cash provided by financing activities of £585,000. At January 1, 2022, the cash balance was £333,000. Compute December 31, 2022, cash.

BE23.9 (LO 2, 3) Loveless Corporation had the following 2022 income statement.

Revenues	\$100,000
----------	-----------

Expenses	60,000
	<u>\$ 40,000</u>

In 2022, Loveless had the following activity in selected accounts.

Accounts Receivable			
1/1/22	20,000		
Revenues	100,000	1,000	Write-offs
		90,000	Collections
12/31/22	29,000		

Allowance for Doubtful Accounts			
		1,200	1/1/22
Write-offs	1,000	1,840	Bad debt expense
		2,040	12/31/22

Prepare Loveless's cash flows from operating activities section of the statement of cash flows using (a) the direct method and (b) the indirect method.

BE23.10 (LO 2) Hendrickson Corporation reported net income of \$50,000 in 2022. Depreciation expense was \$17,000. The following working capital accounts changed.

Accounts receivable	\$11,000 increase
Non-trading equity investment	16,000 increase
Inventory	7,400 increase
Non-trade notes payable	15,000 decrease
Accounts payable	12,300 increase

Compute net cash provided by operating activities.

BE23.11 (LO 2) In 2022, Shaw AG reported a net loss of €70,000. Shaw's only net income adjustments were depreciation expense €81,000, and increase in accounts receivable €8,100. Compute Shaw's net cash provided (used) by operating activities.

BE23.12 (LO 4) In 2022, Leppard Inc. issued 1,000 ordinary shares of \$10 par value for land worth \$40,000.

- Prepare Leppard's journal entry to record the transaction.
- Indicate the effect the transaction has on cash.
- Indicate how the transaction is reported on the statement of cash flows.

BE23.13 (LO 5) Indicate in general journal form how the items below would be entered in a worksheet for the preparation of the statement of cash flows.

- Net income is ¥317,000,000.
- Cash dividends declared and paid totaled ¥120,000,000.
- Equipment was purchased for ¥114,000,000.
- Equipment that originally cost ¥40,000,000 and had accumulated depreciation of ¥32,000,000 was sold for ¥10,000,000.

Exercises

E23.1 (LO 1) (Classification of Transactions) Springsteen Co. had the following activity in its most recent year of operations.

- a. Pension expense exceeds amount funded.
- b. Redemption of bonds payable.
- c. Sale of building at book value.
- d. Depreciation.
- e. Exchange of equipment for furniture.
- f. Issuance of ordinary shares.
- g. Amortization of intangible assets.
- h. Purchase of treasury shares.
- i. Issuance of bonds for land.
- j. Payment of dividends.
- k. Increase in interest receivable on notes receivable.
- l. Purchase of equipment.

Instructions

Classify the items as (1) operating—add to net income, (2) operating—deduct from net income, (3) investing, (4) financing, or (5) significant non-cash investing and financing activities. Use the indirect method.

E23.2 (LO 1, 2) (Statement Presentation of Transactions—Indirect Method) Each of the following items must be considered in preparing a statement of cash flows (indirect method) for Granderson SA for the year ended December 31, 2022.

- a. Plant assets that had cost €25,000 6 years before and were being depreciated on a straight-line basis over 10 years with no estimated residual value were sold at the beginning of the year for €5,300.
- b. During the year, 10,000 ordinary shares with a stated value of €10 a share were issued for €33 a share.
- c. Uncollectible accounts receivable in the amount of €27,000 were written off against Allowance for Doubtful Accounts.
- d. The company sustained a net loss for the year of €50,000. Depreciation amounted to €22,000, and a gain of €9,000 was realized on the sale of land for €39,000 cash.
- e. A 3-month certificate of deposit was purchased for €100,000. The company uses a cash and cash-equivalent basis for its cash flow statement.
- f. Patent amortization for the year was €20,000.
- g. The company exchanged ordinary shares for a 70% interest in Plumlee Co. for €900,000.
- h. During the year, treasury shares costing €47,000 were purchased.
- i. The company recognized an unrealized holding gain on a debt investment not held for collection.

Instructions

State where each item is to be shown in the statement of cash flows, if at all.

E23.3 (LO 2) (Preparation of Operating Activities Section—Indirect Method, Periodic Inventory) The income statement of Rodriquez SA is shown below.

Rodriquez SA Income Statement For the Year Ended December 31, 2022		
Sales revenue		R\$6,900,000
Cost of goods sold		
Beginning inventory	R\$1,900,000	
Purchases	4,400,000	
Goods available for sale	6,300,000	
Ending inventory	1,600,000	
Cost of goods sold		4,700,000
Gross profit		2,200,000
Operating expenses		
Selling expenses	450,000	
Administrative expenses	700,000	1,150,000
Net income		<u>R\$1,050,000</u>

Additional information:

1. Accounts receivable decreased R\$310,000 during the year.
2. Prepaid expenses increased R\$170,000 during the year.
3. Accounts payable to suppliers of merchandise decreased R\$275,000 during the year.
4. Accrued expenses payable decreased R\$120,000 during the year.
5. Administrative expenses include depreciation expense of R\$60,000.

Instructions

Prepare the operating activities section of the statement of cash flows for the year ended December 31, 2022, for Rodriquez SA, using the indirect method.

E23.4 (LO 3) (Preparation of Operating Activities Section—Direct Method) Data for the Rodriquez SA are presented in E23.3.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23.5 (LO 3) (Preparation of Operating Activities Section—Direct Method) Norman NV's income statement for the year ended December 31, 2022, contained the following condensed information.

Service revenue		€840,000
Operating expenses (excluding depreciation)	€624,000	
Depreciation expense	60,000	
Loss on sale of equipment	26,000	710,000
Income before income taxes		130,000
Income tax expense		40,000
Net income		<u>€ 90,000</u>

Norman's statement of financial position contained the following comparative data at December 31.

	2022	2021
Accounts receivable	€37,000	€59,000
Accounts payable	46,000	31,000
Income taxes payable	4,000	8,500

(Accounts payable pertains to operating expenses.)

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

E23.6 (LO 2) (Preparation of Operating Activities Section—Indirect Method) Data for Norman NV are presented in E23.5.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

E23.7 (LO 3) (Computation of Operating Activities—Direct Method) Presented below are two independent situations.

Situation A: Chenoweth AG reports revenues of €200,000 and operating expenses of €110,000 in its first year of operations, 2022. Accounts receivable and accounts payable at year-end were €71,000 and €39,000, respectively. Assume that the accounts payable related to operating expenses. (Ignore income taxes.)

Instructions

Using the direct method, compute net cash provided (used) by operating activities.

Situation B: The income statement for Edgebrook SA shows cost of goods sold €310,000 and operating expenses (exclusive of depreciation) €230,000. The comparative statements of financial position for the year show that inventory increased €21,000, prepaid expenses decreased €8,000, accounts payable (related to merchandise) decreased €17,000, and accrued expenses payable increased €11,000.

Instructions

Compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

E23.8 (LO 2) (Schedule of Net Cash Flow from Operating Activities—Indirect Method)

Messner AG reported €145,000 of net income for 2022. The accountant, in preparing the statement of cash flows, noted several items occurring during 2022 that might affect cash flows from operating activities. These items are listed below.

1. Messner purchased 100 treasury shares at a cost of €20 per share. These shares were then resold at €25 per share.
2. Messner sold 100 ordinary shares of Nokia at €200 per share. The acquisition cost of these shares was €165 per share. This investment was shown on Messner's December 31, 2021, statement of financial position as a non-trading equity investment.
3. Messner revised its estimate for bad debts. Before 2022, Messner's bad debt expense was 1% of its receivables. In 2022, this percentage was increased, resulting in bad debt expense of \$3,500. Net accounts receivable decreased by €12,000 during 2022.
4. Messner issued 500 ordinary shares with a €10 par value for a patent. The fair value of the shares on the date of the transaction was €23 per share.
5. Depreciation expense is €39,000.

6. Messner holds 30% of the Sanchez Company's ordinary shares as a long-term investment. Sanchez Company reported €27,000 of net income for 2022.
7. Sanchez Company paid a total of €2,000 of cash dividends to all investees in 2022.
8. Messner declared a 10% share dividend. One thousand ordinary shares with a €10 par value were distributed. The market price at date of issuance was €20 per share.

Instructions

Prepare a schedule that shows the net cash flow from operating activities using the indirect method. Assume no items other than those listed above affected the computation of 2022 net cash flow from operating activities.

E23.9 (LO 3, 4) (SCF—Direct Method) Costa SA uses the direct method to prepare its statement of cash flows. Costa's trial balances at December 31, 2022 and 2021, are as follows.

	December 31	
	2022	2021
Debits		
Cash	R\$ 35,000	R\$ 32,000
Accounts receivable	33,000	30,000
Inventory	31,000	47,000
Property, plant, and equipment	100,000	95,000
Cost of goods sold	250,000	380,000
Selling expenses	141,500	172,000
General and administrative expenses	137,000	151,300
Interest expense	4,300	2,600
Income tax expense	20,400	61,200
	<u>R\$752,200</u>	<u>R\$971,100</u>
Credits		
Allowance for doubtful accounts	R\$ 1,300	R\$ 1,100
Accumulated depreciation	16,500	13,500
Accounts payable	25,000	17,000
Income taxes payable	21,000	29,100
Deferred income taxes	5,300	4,600
8% callable bonds payable	40,500	15,000
Share capital—ordinary	50,000	40,000
Share premium—ordinary	9,100	7,500
Retained earnings	44,700	64,600
Sales revenue	538,800	778,700
	<u>R\$752,200</u>	<u>R\$971,100</u>

Additional information:

1. Costa purchased R\$5,000 in equipment during 2022.
2. Costa allocated one-third of its depreciation expense to selling expenses and the remainder to general and administrative expenses.
3. Bad debt expense for 2022 was R\$5,000, and write-offs of uncollectible accounts totaled R\$4,800.

4. Interest expense includes R\$500 of discount amortization.

Instructions

Determine what amounts Costa should report in its statement of cash flows for the year ended December 31, 2022, for the following items.

- Cash collected from customers.
- Cash paid to suppliers.
- Cash paid for interest.
- Cash paid for income taxes.
- Cash paid for selling expenses.

E23.10 (LO 1, 4) (Classification of Transactions) Following are selected statement of financial position accounts of Sander Bros. Corp. at December 31, 2022 and 2021, and the increases or decreases in each account from 2021 to 2022. Also presented is selected income statement information for the year ended December 31, 2022, and additional information.

Selected statement of financial position accounts	2022	2021	Increase (Decrease)
Assets			
Property, plant, and equipment	\$ 277,000	\$247,000	\$ 30,000
Accumulated depreciation	(178,000)	(167,000)	(11,000)
Accounts receivable	34,000	24,000	10,000
Equity and liabilities			
Share capital—ordinary, \$1 par	\$ 22,000	\$ 19,000	\$ 3,000
Share premium—ordinary	9,000	3,000	6,000
Retained earnings	104,000	91,000	13,000
Bonds payable	49,000	46,000	3,000
Dividends payable	8,000	5,000	3,000

Selected income statement information for the year ended December 31, 2022	
Sales revenue	\$ 155,000
Depreciation	38,000
Gain on sale of equipment	14,500
Net income	31,000

Additional information:

- During 2022, equipment costing \$45,000 was sold for cash.
- Accounts receivable relate to sales of merchandise.
- During 2022, \$25,000 of bonds payable were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

Instructions

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

- Payments for purchase of property, plant, and equipment.

- b. Proceeds from the sale of equipment.
- c. Cash dividends paid.
- d. Redemption of bonds payable.

E23.11 (LO 2) (SCF—Indirect Method) Condensed financial data of Fairchild SA for 2022 and 2021 are presented below.

Fairchild SA Comparative Statements of Financial Position As of December 31, 2022 and 2021		
	2022	2021
Debt investments (held-for-collection)	€1,300	€1,470
Plant assets	1,900	1,700
Accumulated depreciation	(1,200)	(1,170)
Inventory	1,600	1,900
Accounts receivable	1,750	1,300
Cash	1,800	1,100
	<u>€7,150</u>	<u>€6,300</u>
Share capital—ordinary	€1,900	€1,700
Retained earnings	2,450	1,900
Bonds payable	1,400	1,650
Accounts payable	1,200	800
Accrued liabilities	200	250
	<u>€7,150</u>	<u>€6,300</u>

Fairchild SA Income Statement For the Year Ended December 31, 2022	
Sales revenue	€6,900
Cost of goods sold	<u>4,700</u>
Gross margin	2,200
Selling and administrative expense	<u>930</u>
Income from operations	1,270
Other income and expense Gain on sale of investments	<u>80</u>
Income before tax	1,350
Income tax expense	<u>540</u>
Net income	<u>€ 810</u>

Additional information:

During the year, €70 of ordinary shares were issued in exchange for plant assets. No plant assets were sold in 2022. Cash dividends were €260.

Instructions

Prepare a statement of cash flows using the indirect method.

E23.12 (LO 3) (SCF—Direct Method) Data for Fairchild SA are presented in E23.11.

Instructions

Prepare a statement of cash flows using the direct method.

E23.13 (LO 3) (SCF—Direct Method) Andrews AG, a greeting card company, had the following statements prepared as of December 31, 2022.

Andrews AG		
Comparative Statement of Financial Position		
As of December 31, 2022 and 2021		
	12/31/22	12/31/21
Equipment	€154,000	€130,000
Accum. depreciation—equipment	(35,000)	(25,000)
Copyrights	46,000	50,000
Inventory	40,000	60,000
Prepaid rent	5,000	4,000
Accounts receivable	62,000	49,000
Short-term investments (trading)	35,000	18,000
Cash	6,000	9,000
Total assets	<u>€313,000</u>	<u>€295,000</u>
Share capital—ordinary, €10 par	€100,000	€100,000
Share premium—ordinary	30,000	30,000
Retained earnings	57,000	36,000
Long-term loans payable	60,000	67,000
Accounts payable	46,000	42,000
Income taxes payable	4,000	6,000
Salaries and wages payable	8,000	4,000
Short-term loans payable	8,000	10,000
Total equity and liabilities	<u>€313,000</u>	<u>€295,000</u>

Andrews AG		
Income Statement		
For the Year Ending December 31, 2022		
Sales revenue		€338,150
Cost of goods sold		175,000
Gross margin		163,150
Operating expenses		120,000
Operating income		43,150
Interest expense	€11,400	
Gain on sale of equipment	2,000	9,400
Income before tax		33,750
Income tax expense		6,750
Net income		<u>€ 27,000</u>

Additional information:

1. Dividends in the amount of €6,000 were declared and paid during 2022.
2. Depreciation expense and amortization expense are included in operating expenses.

3. No unrealized gains or losses have occurred on the investments during the year.
4. Equipment that had a cost of €30,000 and was 70% depreciated was sold during 2022.

Instructions

Prepare a statement of cash flows using the direct method.

E23.14 (LO 2) (SCF—Indirect Method) Data for Andrews AG are presented in E23.13.

Instructions

Prepare a statement of cash flows using the indirect method.

E23.15 (LO 2) (SCF—Indirect Method) The following are data taken from the records of Durand SpA.

Debit Balances	December 31, 2022	December 31, 2021
Cash	€ 15,000	€ 10,000
Current assets other than cash	85,000	58,000
Long-term investments	10,000	53,000
Plant assets	335,000	215,000
	<u>€445,000</u>	<u>€336,000</u>
Credit Balances		
Accumulated depreciation	€ 20,000	€ 40,000
Current liabilities	40,000	22,000
Bonds payable	75,000	—0—
Share capital—ordinary	254,000	254,000
Retained earnings	<u>56,000</u>	<u>20,000</u>
	<u>€445,000</u>	<u>€336,000</u>

Additional information:

1. Held-for-collection investments carried at a cost of €43,000 on December 31, 2021, were sold in 2022 for €34,000. The loss was incorrectly charged directly to Retained Earnings.
2. Plant assets that cost €60,000 and were 80% depreciated were sold during 2022 for €8,000. The loss was incorrectly charged directly to Retained Earnings.
3. Net income as reported on the income statement for the year was €59,000.
4. Dividends paid amounted to €10,000.
5. Depreciation recorded for the year was €28,000.

Instructions

Prepare a statement of cash flows for the year 2022 using the indirect method.

E23.16 (LO 1, 2) (Cash Provided by Operating, Investing, and Financing Activities) The statement of financial position data of Yang Ltd. at the end of 2022 and 2021 follow (amounts in thousands).

	2022	2021
Equipment	¥ 90,000	¥ 75,000
Accumulated depreciation—equipment	(18,000)	(8,000)

Land	70,000	40,000
Inventory	65,000	45,000
Accounts receivable (net)	55,000	45,000
Prepaid expenses	15,000	25,000
Cash	30,000	35,000
	<u>¥307,000</u>	<u>¥257,000</u>
Share capital—ordinary, \$10 par	¥189,000	¥159,000
Retained earnings	8,000	5,000
Notes payable—bank, long-term	—0—	23,000
Bonds payable	30,000	—0—
Accounts payable	65,000	52,000
Accrued expenses	15,000	18,000
	<u>¥307,000</u>	<u>¥257,000</u>

Land was acquired for ¥30,000 in exchange for ordinary shares, par ¥30,000, during the year; all equipment purchased was for cash. Equipment costing ¥13,000 was sold for ¥3,000; book value of the equipment was ¥6,000. Cash dividends of ¥9,000 were declared and paid during the year.

Instructions

Compute net cash provided (used) by:

- Operating activities (indirect).
- Investing activities.
- Financing activities.

E23.17 (LO 2) (SCF—Indirect Method and Statement of Financial Position) Ochoa Group, had the following condensed statement of financial position at the end of operations for 2021 (¥ in thousands).

Ochoa Group Statement of Financial Position December 31, 2021			
Investments	¥ 20,000	Share capital—ordinary	¥ 75,000
Land	40,000	Retained earnings	24,500
Plant assets (net)	67,500	Long-term notes payable	25,500
Current assets other than cash	29,000	Bonds payable	25,000
Cash	8,500	Current liabilities	15,000
	<u>¥165,000</u>		<u>¥165,000</u>

During 2022, the following occurred.

- A tract of land was purchased for ¥11,000.
- Bonds payable in the amount of ¥20,000 were retired at par.
- An additional ¥10,000 in ordinary shares were issued at par.
- Dividends totaling ¥9,375 were paid to shareholders.
- Net income was ¥30,250 after deducting depreciation of ¥13,500.
- Land was purchased through the issuance of ¥22,500 in bonds.

7. Ochoa Group sold part of its investment portfolio for ¥12,875. This transaction resulted in a gain of ¥2,000 for the company. The company classifies them as non-trading equity investments.
8. Both current assets (other than cash) and current liabilities remained at the same amount.

Instructions

- a. Prepare a statement of cash flows for 2022 using the indirect method.
- b. Prepare the condensed statement of financial position for Ochoa Group as it would appear at December 31, 2022.

E23.18 (LO 2, 4) (Partial SCF—Indirect Method) The accounts below appear in the ledger of Popovich SA.

	Retained Earnings	Dr.	Cr.	Bal.
Jan. 1, 2022	Credit Balance			€ 42,000
Aug. 15	Dividends (cash)	€15,000		27,000
Dec. 31	Net Income for 2022		€50,000	77,000
	Equipment	Dr.	Cr.	Bal.
Jan. 1, 2022	Debit Balance			€140,000
Apr. 8	Major Repairs	€21,000		161,000
Aug. 3	Purchase of Equipment	62,000		223,000
Sept. 10	Cost of Equipment Constructed	48,000		271,000
Nov. 15	Equipment Sold		€66,000	205,000
	Accumulated Depreciation— Equipment	Dr.	Cr.	Bal.
Jan. 1, 2022	Credit Balance			€ 84,000
Nov. 15	Accum. Depreciation on Equipment Sold	€25,200		58,800
Dec. 31	Depreciation for 2022		€16,800	75,600

Instructions

From the postings in the accounts above, indicate how the information is reported on a statement of cash flows by preparing a partial statement of cash flows using the indirect method. The loss on sale of equipment (November 15) was €5,800.

E23.19 (LO 5) (Worksheet Analysis of Selected Accounts) Data for Popovich SA are presented in E23.18.

Instructions

Prepare entries in journal form for all adjustments that should be made on a worksheet for a statement of cash flows.

E23.20 (LO 5) (Worksheet Analysis of Selected Transactions) The transactions below took place during the year 2022.

1. Convertible bonds payable with a par value of \$300,000 were exchanged for unissued ordinary shares with a par value of \$300,000. The market price of both types of securities was par.
2. The net income for the year was \$360,000.
3. Depreciation expense for the building was \$90,000.

4. Some old equipment was traded in on the purchase of some newer equipment and the following entry was made. (The exchange has commercial substance.)

Equipment	45,000	
Accum. Depreciation—Equipment	30,000	
Equipment		40,000
Cash		34,000
Gain on Disposal of Plant Assets		1,000

The Gain on Disposal of Plant Assets was credited to current operations as ordinary income.

5. Dividends in the amount of \$123,000 were declared. They are payable in January of next year.

Instructions

Show by journal entries the adjustments that would be made on a worksheet for a statement of cash flows.

E23.21 (LO 5) (Worksheet Preparation) Below are the comparative statements of financial position for Lowenstein Corporation.

	Dec. 31, 2022	Dec. 31, 2021
Land	\$ 50,000	\$ 50,000
Buildings	125,000	78,500
Accumulated depreciation—buildings	(30,000)	(23,000)
Equipment	53,000	46,000
Accumulated depreciation—equipment	(19,000)	(15,500)
Delivery equipment	39,000	39,000
Accumulated depreciation—delivery equipment	(22,000)	(20,500)
Patents	15,000	—0—
Inventory	81,500	57,000
Prepaid expenses	4,200	2,500
Accounts receivable	43,000	45,000
Allowance for doubtful accounts	(1,800)	(2,000)
Equity investments	25,000	19,000
Cash	16,500	24,000
	<u>\$379,400</u>	<u>\$300,000</u>
Share capital—ordinary	\$140,000	\$102,000
Share premium—ordinary	10,000	4,000
Retained earnings	73,400	51,500
Mortgage payable	73,000	53,400
Bonds payable	50,000	62,500
Accounts payable	26,000	16,000
Short-term notes payable (trade)	4,000	6,000
Accrued payables	3,000	4,600
	<u>\$379,400</u>	<u>\$300,000</u>

Dividends in the amount of \$10,000 were declared and paid in 2022.

Instructions

From this information, prepare a worksheet for a statement of cash flows. Make reasonable assumptions as appropriate. The equity investments are considered trading, and no unrealized gains or losses have occurred on these securities.

Problems

P23.1 (LO 2, 4) (SCF—Indirect Method) The following is Sullivan Corp.'s comparative statement of financial position accounts at December 31, 2022 and 2021, with a column showing the increase (decrease) from 2021 to 2022.

Comparative Statements of Financial Position			
	2022	2021	Increase (Decrease)
Property, plant and equipment	\$3,307,000	\$2,967,000	\$340,000
Accumulated depreciation	(1,165,000)	(1,040,000)	(125,000)
Equity investment (Myers Co.)	310,000	275,000	35,000
Inventory	1,850,000	1,715,000	135,000
Accounts receivable	1,128,000	1,168,000	(40,000)
Debt investment	250,000	—	250,000
Cash	815,000	700,000	115,000
Total assets	<u>\$6,495,000</u>	<u>\$5,785,000</u>	<u>\$710,000</u>
Share capital—ordinary, \$1 par	\$ 500,000	\$ 500,000	—
Share premium—ordinary	1,500,000	1,500,000	—
Retained earnings	2,970,000	2,680,000	\$290,000
Finance lease obligation	400,000	—	400,000
Accounts payable	1,015,000	955,000	60,000
Income taxes payable	30,000	50,000	(20,000)
Dividends payable	80,000	100,000	(20,000)
Total equity and liabilities	<u>\$6,495,000</u>	<u>\$5,785,000</u>	<u>\$710,000</u>

Additional information:

1. On December 31, 2020, Sullivan acquired 25% of Myers Co.'s ordinary shares for \$275,000. On that date, the carrying value of Myers' assets and liabilities, which approximated their fair values, was \$1,100,000. Myers reported income of \$140,000 for the year ended December 31, 2022. No dividend was paid on Myers' ordinary shares during the year.
2. During 2022, Sullivan loaned \$300,000 to TLC Co., an unrelated company. TLC made the first semi-annual principal repayment of \$50,000, plus interest at 10%, on December 31, 2022.
3. On January 2, 2022, Sullivan sold equipment costing \$60,000, with a carrying amount of \$38,000, for \$40,000 cash.
4. On December 31, 2022, Sullivan entered into a finance lease for an office building. The present value of the annual rental payments is \$400,000, which equals the fair value of the building. Sullivan made the first rental payment of \$60,000 when due on January 2, 2023.
5. Net income for 2022 was \$370,000.
6. Sullivan declared and paid cash dividends for 2022 and 2021 as shown below.

--	--	--

	2022	2021
Declared	December 15, 2022	December 15, 2021
Paid	February 28, 2023	February 28, 2022
Amount	\$80,000	\$100,000

Instructions

Prepare a statement of cash flows for Sullivan Corp. for the year ended December 31, 2022, using the indirect method.

P23.2 (LO 2, 4) Groupwork (SCF—Indirect Method) The comparative statements of financial position for Hinckley SA include the following information.

	December 31	
	2022	2021
Debt Balances		
Investments	€ –0–	€ 3,000
Buildings	–0–	29,750

Shi Group Comparative Statement of Financial Position Accounts As of December 31 (in thousands)		
Allowance for Doubtful Accounts	HK\$ 10,000	HK\$ 8,000
Accumulated Depreciation—Equipment	21,000	14,000
Accumulated Depreciation—Buildings	37,000	28,000
Accounts Payable	66,000	60,000
Income Taxes Payable	12,000	10,000
Long-Term Notes Payable	62,000	70,000
Share Capital—Ordinary	310,000	260,000
Retained Earnings	92,000	95,000
Totals	<u>HK\$610,000</u>	<u>HK\$545,000</u>

Additional data:

1. Equipment that cost HK\$10,000 and was 60% depreciated was sold in 2022.
2. Cash dividends were declared and paid during the year.
3. Ordinary shares were issued in exchange for land.
4. Equity investments that cost HK\$35,000 were sold during the year.
5. There were no write-offs of uncollectible accounts during the year.

Shi's 2022 income statement is as follows.

Sales revenue		HK\$950,000
Less: Cost of goods sold		<u>600,000</u>
Gross profit		350,000
Less: Operating expenses (includes depreciation expense and bad debt expense)		<u>250,000</u>
Income from operations		100,000
Other income and expense		
Gain on sale of investments	HK\$15,000	
Loss on sale of equipment	<u>(3,000)</u>	<u>12,000</u>
Income before taxes		112,000
Income taxes		<u>45,000</u>
Net income		<u>HK\$ 67,000</u>

Instructions

- a. Compute net cash provided by operating activities under the direct method.
- b. Prepare a statement of cash flows using the indirect method.

P23.8 (LO 2, 4) Groupwork (Indirect SCF) Greco Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following trial balance information.

	December 31	
	2022	2021

Cash	\$ 38,500	\$13,000
Accounts receivable	12,250	10,000
Inventory	12,000	10,000
Equity investments (non-trading)	–0–	3,000
Buildings	–0–	29,750
Equipment	40,000	20,000
Copyright	5,000	5,250
Totals	<u>\$107,750</u>	<u>\$91,000</u>
Allowance for doubtful accounts	\$ 3,000	\$ 4,500
Accumulated depreciation—equipment	2,000	4,500
Accumulated depreciation—buildings	–0–	6,000
Accounts payable	5,000	4,000
Dividends payable	–0–	5,000
Notes payable, short-term (non-trade)	3,000	4,000
Long-term notes payable	36,000	25,000
Share capital—ordinary	38,000	33,000
Retained earnings	20,750	5,000
	<u>\$107,750</u>	<u>\$ 91,000</u>

Additional data related to 2022 are as follows.

1. Equipment that had cost \$11,000 and was 30% depreciated at time of disposal was sold for \$2,500.
2. \$5,000 of the long-term note payable was paid by issuing ordinary shares.
3. Cash dividends paid were \$5,000.
4. On January 1, 2022, the building was completely destroyed by a flood. Insurance proceeds on the building were \$33,000 (net of \$4,000 taxes).
5. Equity investments (non-trading) were sold at \$1,500 above their cost. The company has made similar sales and investments in the past.
6. Cash and a long-term note for \$16,000 were given for the acquisition of equipment.
7. Interest of \$2,000 and income taxes of \$5,000 were paid in cash.

Instructions

- a. Use the indirect method to analyze the above information and prepare a statement of cash flows for Greco.
- b. What would you expect to observe in the operating, investing, and financing sections of a statement of cash flows of:
 1. A severely financially troubled firm?
 2. A recently formed firm that is experiencing rapid growth?

Concepts for Analysis

CA23.1 (LO 1, 2, 4) Writing (Analysis of Improper SCF) The following statement was prepared by Maloney Corporation's accountant.

Maloney Corporation Statement of Sources and Uses of Cash For the Year Ended September 30, 2022	
Sources of cash	
Net income	\$111,000
Depreciation and depletion	70,000
Increase in long-term debt	179,000
Changes in current receivables and inventories, less current liabilities (excluding current maturities of long-term debt)	14,000
	<u>\$374,000</u>
Application of cash	
Cash dividends	\$ 60,000
Expenditure for property, plant, and equipment	214,000
Investments and other uses	20,000
Change in cash	80,000
	<u>\$374,000</u>

The following additional information relating to Maloney Corporation is available for the year ended September 30, 2022.

- Salaries and wages expense attributable to share-option plans was \$25,000 for the year.

2.	Expenditures for property, plant, and equipment	\$250,000
	Proceeds from retirements of property, plant, and equipment	36,000
	Net expenditures	<u>\$214,000</u>

- A share dividend of 10,000 Maloney Corporation ordinary shares was distributed to ordinary shareholders on April 1, 2022, when the per share market price was \$7 and par value was \$1.
- On July 1, 2022, when its market price was \$6 per share, 16,000 of Maloney Corporation ordinary shares were issued in exchange for 4,000 preference shares.

5.	Depreciation expense	\$ 65,000
	Depletion expense	5,000
		<u>\$ 70,000</u>

6.	Increase in long-term debt	\$620,000
	Retirement of debt	441,000
	Net increase	<u>\$179,000</u>

Instructions

- In general, what are the objectives of a statement of the type shown above for Maloney Corporation? Explain.
- Identify the weaknesses in the form and format of Maloney Corporation's statement of cash flows without reference to the additional information. (Assume adoption of the indirect method.)
- For each of the six items of additional information for the statement of cash flows, indicate the preferable treatment and explain why the suggested treatment is preferable.

CA23.2 (LO 1, 2, 4) Groupwork (SCF Theory and Analysis of Improper SCF) Teresa Ramirez and Lenny Traylor are examining the following statement of cash flows for Panaka Clothing Store's first year of operations.

Panaka Clothing Store Statement of Cash Flows For the Year Ended January 31, 2022	
Sources of cash	
From sales of merchandise	€ 382,000
From sale of ordinary shares	380,000
From sale of debt investment	120,000
From depreciation	80,000
From issuance of note for truck	30,000
From interest on investments	8,000
Total sources of cash	1,000,000
Uses of cash	
For purchase of fixtures and equipment	330,000
For merchandise purchased for resale	253,000
For operating expenses (including depreciation)	170,000
For purchase of debt investment	95,000
For purchase of truck by issuance of note	30,000
For purchase of treasury shares	10,000
For interest on note	3,000
Total uses of cash	891,000
Net increase in cash	€ 109,000

Teresa claims that Panaka's statement of cash flows shows a superb first year, with cash increasing €109,000. Lenny replies that it was not a superb first year: the year was an operating failure, the statement was incorrectly presented, and €109,000 is not the actual increase in cash.

Instructions

- With whom do you agree, Teresa or Lenny? Explain your position.
- Using the data provided, prepare a statement of cash flows in proper indirect method form. The only non-cash items in income are depreciation and the gain from the sale of the investment (purchase and sale are related).

CA23.3 (LO 2, 4) (SCF Theory and Analysis of Transactions) Ashley Company is a young and growing manufacturer of electronic measuring instruments and technical equipment. The company has retained you to advise it in the preparation of a statement of cash flows using the indirect method. For the fiscal year ended October 31, 2022, you have obtained the following information concerning certain events and transactions of Ashley.

- The amount of reported earnings for the fiscal year was \$700,000, which included a deduction for a loss of \$110,000 (see [item 5](#) below).
- Depreciation expense of \$315,000 was included in the income statement.
- Uncollectible accounts receivable of \$40,000 were written off against the allowance for doubtful accounts. Also, \$51,000 of bad debt expense was included in determining income for the fiscal year, and the same amount was added to the allowance for doubtful accounts.

4. A gain of \$6,000 was realized on the sale of a machine. It originally cost \$75,000, of which \$30,000 was undepreciated on the date of sale.
5. On April 1, 2022, lightning caused an uninsured building loss of \$110,000 (\$180,000 loss, less reduction in income taxes of \$70,000). This loss was included in determining income as indicated in item 1 above.
6. On July 3, 2022, building and land were purchased for \$700,000. Ashley gave in payment \$75,000 cash, \$200,000 fair value of its unissued ordinary shares, and signed a \$425,000 mortgage note payable.
7. On August 3, 2022, \$800,000 face value of Ashley's 10% convertible preference shares was converted into \$150,000 par value of its ordinary shares.

Instructions

Explain whether each of the 7 numbered items above is a source or use of cash, and explain how each should be disclosed in Ashley's statement of cash flows for the fiscal year ended October 31, 2022. If any item is neither a source nor a use of cash, explain why it is not, and indicate the disclosure, if any, that should be made of the item for the fiscal year ended October 31, 2022.

CA23.4 (LO 2, 4) Groupwork (Analysis of Transactions' Effect on SCF) Each of the following items must be considered in preparing a statement of cash flows for Boer Fashions for the year ended December 31, 2022.

1. Fixed assets that had cost R20,000 6½ years before and were being depreciated on a 10-year basis, with no estimated residual value, were sold for R4,750.
2. During the year, goodwill of R15,000 was considered impaired and was completely written off to expense.
3. During the year, 500 ordinary shares with a stated value of R25 a share were issued for R32 a share.
4. The company sustained a net loss for the year of R2,100. Depreciation amounted to R2,000 and patent amortization was R400.
5. Uncollectible accounts receivable in the amount of R2,000 were written off against Allowance for Doubtful Accounts.
6. Equity investments (non-trading) that cost R12,000 when purchased 4 years earlier were sold for R10,600.
7. Bonds payable with a par value of R24,000 on which there was an unamortized bond premium of R2,000 were redeemed at 101.

Instructions

For each item, state where it is to be shown in the statement and then how you would present the necessary information, including the amount. Consider each item to be independent of the others. Assume that correct entries were made for all transactions as they took place.

CA23.5 (LO 1, 2, 4) (Purpose and Elements of SCF) IFRS requires the statement of cash flows be presented when financial statements are prepared.

Instructions

- a. Explain the purposes of the statement of cash flows.
- b. List and describe the three categories of activities that must be reported in the statement of cash flows.
- c. Identify and describe the two methods that are allowed for reporting cash flows from operations.

- d. Describe the presentation of non-cash investing and financing transactions. Include in your description an example of a non-cash investing and financing transaction.

CA23.6 (LO 1, 2, 3) Ethics (Cash Flow Reporting) Brockman Guitar Company is in the business of manufacturing top-quality, steel-string folk guitars. In recent years, the company has experienced working capital problems resulting from the procurement of factory equipment, the unanticipated buildup of receivables and inventories, and the payoff of a balloon mortgage on a new manufacturing facility. The founder and president of the company, Barbara Brockman, has attempted to raise cash from various financial institutions, but to no avail because of the company's poor performance in recent years. In particular, the company's lead bank, First Financial, is especially concerned about Brockman's inability to maintain a positive cash position. The commercial loan officer from First Financial told Barbara, "I can't even consider your request for capital financing unless I see that your company is able to generate positive cash flows from operations."

Thinking about the banker's comment, Barbara came up with what she believes is a good plan: With a more attractive statement of cash flows, the bank might be willing to provide long-term financing. To "window dress" cash flows, the company can sell its accounts receivables to factors and liquidate its raw materials inventories. These rather costly transactions would generate lots of cash. As the chief accountant for Brockman Guitar, it is your job to tell Barbara what you think of her plan.

Instructions

Answer the following questions.

- What are the ethical issues related to Barbara Brockman's idea?
- What would you tell Barbara Brockman?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- Which method of computing net cash provided by operating activities does M&S use? What were the amounts of net cash provided by operating activities for the years 2018 and 2019? What were the two most significant items in the cash generated from operations in 2019?
- What was the most significant item in the cash flows used for investing activities section in 2019? What was the most significant item in the cash flows used for financing activities section in 2019?
- Where is "deferred income taxes" reported in M&S's statement of cash flows? Why does it appear in that section of the statement of cash flows?
- Where is depreciation reported in M&S's statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What method of computing net cash provided by operating activities does adidas use? What method does Puma use? What were the amounts of cash provided by operating activities reported by adidas and Puma in 2018?
- What was the most significant item reported by adidas and Puma in 2018 in their investing activities sections? What is the most significant item reported by adidas and Puma in 2018 in their financing activities sections?
- What were these two companies' trends in net cash provided by operating activities over the period 2017 to 2018?
- Where is "depreciation and amortization" reported by adidas and Puma in their statements of cash flows? What is the amount and why does it appear in that section of the statement of cash flows?
- Based on the information contained in adidas's and Puma's financial statements, compute the following 2018 ratios for each company. These ratios require the use of statement of cash flows data. (These ratios were covered in [Chapter 5](#).)
 - Current cash debt coverage.
 - Cash debt coverage.
- What conclusions concerning the management of cash can be drawn from the ratios computed in (e)?

Financial Statement Analysis Case

The consolidated statement of cash flows for **Telefónica, S.A.** (ESP) is presented as follows.

(millions of euros)	Current Year	Prior Year
Cash flows from operating activities		
Cash received from customers	75,962	77,222
Cash paid to suppliers and employees	(55,858)	(55,769)
Dividends received	85	82
Net interest and other financial expenses paid	(2,952)	(2,093)
Taxes paid	(2,024)	(1,959)
Net cash from operating activities	15,213	17,483
Cash flows from investing activities		
Proceeds on disposals of property, plant and equipment and intangible assets	939	811
Payments on investments in property, plant and equipment and intangible assets	(9,481)	(9,085)
Proceeds on disposals of companies, net of cash and cash equivalents disposed	1,823	4
Payments on investments in companies, net of cash and cash equivalents acquired	(37)	(2,948)
Proceeds on financial investments not included under cash equivalents	30	23
Payments made on financial investments not included under cash equivalents	(834)	(669)
Payments from cash surpluses not included under cash equivalents	(318)	(646)
Government grants received	1	13

Net cash used in investing activities	(7,877)	(12,497)
Cash flows from financing activities		
Dividends paid	(3,273)	(7,567)
Transactions with equity holders	656	(399)
Proceeds on issue of debentures and bonds	8,090	4,582
Proceeds on loans, borrowings and promissory notes	6,002	4,387
Cancellation of debentures and bonds	(4,317)	(3,235)
Repayments of loans, borrowings and promissory notes	(8,401)	(2,680)
Net cash used in financing activities	(1,243)	(4,912)
Effect of foreign exchange rate changes on collections and payments	(382)	(169)
Effect of changes in consolidation methods	1	10
Net increase (decrease) in cash and cash equivalents during the year	5,712	(85)
Cash and cash equivalents at January 1	4,135	4,220
Cash and cash equivalents at December 31	9,847	4,135

Instructions

- What method does Telefónica use to prepare the operating cash flows section of its statement of cash flows? Briefly discuss how you can determine this.
- Telefónica reported net income of €4,403 in the current year (in millions). Briefly discuss some of the adjustments that would explain such a difference in its income and operating cash flows.
- IFRS requires disclosure of interest, taxes, and dividends. Briefly describe how Telefónica has complied with these requirements. What other approach could a company take to comply with the reporting requirement?

Accounting, Analysis, and Principles

The income statement for the year ended December 31, 2022, for Laskowski AG contains the following condensed information.

Laskowski AG Income Statement		
Revenues		€6,583,000
Operating expenses (excluding depreciation)	€4,920,000	
Depreciation expense	880,000	5,800,000
Income before income tax		783,000
Income tax expense		353,000
Net income		€ 430,000

Included in operating expenses is a €24,000 loss resulting from the sale of machinery for €270,000 cash. The company purchased machinery at a cost of €750,000.

Laskowski reports the following balances on its comparative statements of financial position at December 31.

Laskowski AG Comparative Statements of Financial Position (partial)		
	2022	2021
Inventories	€834,000	€867,000

Laskowski AG		
Comparative Statements of Financial Position (partial)		
Accounts receivable	775,000	610,000
Cash	672,000	130,000
Accounts payable	521,000	501,000

Income tax expense of €353,000 represents the amount paid in 2022. Dividends declared and paid in 2022 totaled €200,000.

Accounting

Prepare the statement of cash flows using the indirect method.

Analysis

Laskowski has an aggressive growth plan, which will require significant investments in plant and equipment over the next several years. Preliminary plans call for an investment of over €500,000 in the next year. Compute Laskowski's free cash flow and use it to evaluate the investment plans with the use of only internally generated funds.

Principles

How does the statement of cash flows contribute to achieving the objective of financial reporting?

Research Case

As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to IFRS. One of your team, a finance major, believes the statement should be prepared to report the change in working capital because analysts many times use working capital in ratio

analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- b. What information is provided in a statement of cash flows?
- c. List some of the typical cash inflows and outflows from operations.

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the statement of cash flows under IFRS and U.S. GAAP.

As in IFRS, the statement of cash flows is a required statement for U.S. GAAP. In addition, the content and presentation of a U.S. GAAP statement of cash flows is similar to one used for IFRS. However, the disclosure requirements related to the statement of cash flows are more extensive under U.S. GAAP.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the statement of cash flows.

Similarities

- Both U.S. GAAP and IFRS require that companies prepare a statement of cash flows.
- Both U.S. GAAP and IFRS require that the statement of cash flows should have three major sections—operating, investing, and financing—along with changes in cash and cash equivalents.
- Similar to U.S. GAAP, the cash flow statement can be prepared using either the indirect or direct method under IFRS. For both U.S. GAAP and IFRS, most companies use the indirect method for reporting net cash flow from operating activities.
- The definition of cash equivalents used in U.S. GAAP is similar to that used in IFRS.

Differences

- Under U.S. GAAP, bank overdrafts are classified as financing activities. A major difference in the definition of cash and cash equivalents is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS.
- Under U.S. GAAP, companies may present non-cash investing and financing activities in the cash flow statement. IFRS requires that non-cash investing and financing activities be excluded from the statement of cash flows. As indicated in the chapter, these non-cash activities should be reported elsewhere. This requirement is interpreted to mean that non-cash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements.
- One area where there can be substantive differences between U.S. GAAP and IFRS relates to the classification of interest, dividends, and taxes. U.S. GAAP requires that except for dividends paid

(which are classified as a financing activity), these items are all reported as operating activities. IFRS provides more alternatives for disclosing these items.

About the Numbers

One area where there can be substantive differences between U.S. GAAP and IFRS relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

Item	IFRS	U.S. GAAP
Interest paid	Operating or financing	Operating
Interest received	Operating or investing	Operating
Dividends paid	Operating or financing	Financing
Dividends received	Operating or investing	Operating
Taxes paid	Operating—unless specific identification with financing or investing	Operating ^{1, 2}

¹U.S. GAAP has additional disclosure rules.

²U.S. GAAP has specific rules regarding the classification of the benefit associated with share-based compensation arrangements and the classification of derivatives that contain a financing element.

Source: PricewaterhouseCoopers, Similarities and Difference—A Comparison of IFRS and U.S. GAAP (October 2013).

As indicated, the major difference is that IFRS provides more alternatives for disclosing certain items.

On the Horizon

The IASB and the FASB have collaborated on a joint project on the presentation and organization of information in the financial statements. With respect to the cash flow statement specifically, the notion of *cash equivalents* has been debated. In addition, the IASB is considering some changes in cash flow reporting that will better align with U.S. GAAP.

GAAP Self-Test Questions

- Which of the following is **true** regarding the statement of cash flows under U.S. GAAP?
 - The statement of cash flows has two major sections—operating and non-operating.
 - The statement of cash flows has two major sections—financing and investing.
 - The statement of cash flows has three major sections—operating, investing, and financing.
 - The statement of cash flows has three major sections—operating, non-operating, and financing.
- In the case of a bank overdraft:
 - U.S. GAAP typically includes the amount in cash and cash equivalents.
 - IFRS typically includes the amount in cash equivalents but not in cash.
 - U.S. GAAP typically treats the overdraft as a liability and reports the amount in the financing section of the statement of cash flows.
 - IFRS typically treats the overdraft as a liability, and reports the amount in the investing section of the statement of cash flows.
- Under U.S. GAAP, significant non-cash transactions:

- a. are classified as operating, if they are related to income items.
 - b. may be presented in the statement of cash flows as a separate schedule.
 - c. are classified as an investing or financing activity.
 - d. are classified as an operating activity, unless they can be specifically identified with financing or investing activities.
4. For purposes of the statement of cash flows, under U.S. GAAP interest paid is treated as:
- a. an operating activity in all cases.
 - b. an investing or operating activity, depending on use of the borrowed funds.
 - c. either a financing or investing activity.
 - d. either an operating or financing activity, but treated consistently from period to period.
5. For purposes of the statement of cash flows, under U.S. GAAP income taxes paid are treated as:
- a. cash flows from operating activities unless they can be separately identified as part of investing or financing activities.
 - b. an operating activity in all cases.
 - c. an investing or operating activity, depending on whether a refund is received.
 - d. either operating, financing, or investing activity, but treated consistently to other companies in the same industry.

GAAP Concepts and Application

GAAP23.1 Briefly describe some of the similarities and differences between IFRS and U.S. GAAP with respect to cash flow reporting.

GAAP23.2 Explain how the accounting for interest received and paid in a statement of cash flows differ between IFRS and U.S. GAAP.

GAAP23.3 What are some of the key obstacles for the IASB and FASB in their convergence project for the statement of cash flows?

GAAP23.4 Founded in the early 1980s, the **Vermont Teddy Bear Co.** (USA) designs and manufactures American-made teddy bears and markets them primarily as gifts called Bear-Grams or Teddy Bear-Grams. Bear-Grams are personalized teddy bears delivered directly to the recipient for special occasions such as birthdays and anniversaries. The Shelburne, Vermont, company's primary markets are New York, Boston, and Chicago. Sales have jumped dramatically in recent years. Such dramatic growth has significant implications for cash flows. The following are the cash flow statements for two recent years for the company.

	Current Year	Prior Year
Cash flows from operating activities:		
Net income	\$ 17,523	\$ 838,955
Adjustments to reconcile net income to net cash provided by operating activities		
Deferred income taxes	(69,524)	(146,590)
Depreciation and amortization	316,416	181,348
Changes in assets and liabilities:		
Accounts receivable, trade	(38,267)	(25,947)
Inventories	(1,599,014)	(1,289,293)

Prepaid and other current assets	(444,794)	(113,205)
Deposits and other assets	(24,240)	(83,044)
Accounts payable	2,017,059	(284,567)
Accrued expenses	61,321	170,755
Accrued interest payable, debentures	—	(58,219)
Other	—	(8,960)
Income taxes payable	—	117,810
Net cash provided by (used for) operating activities	236,480	(700,957)
Net cash used for investing activities	(2,102,892)	(4,422,953)
Net cash (used for) provided by financing activities	(315,353)	9,685,435
Net change in cash and cash equivalents	<u>\$ (2,181,765)</u>	<u>\$ 4,561,525</u>
Other information:		
Current liabilities	\$ 4,055,465	\$ 1,995,600
Total liabilities	4,620,085	2,184,386
Net sales	20,560,566	17,025,856

Instructions

- Briefly describe any similarities or differences in Vermont's U.S. GAAP-based statement of cash flows compared to the requirements of IFRS.
- Note that net income in the current year was only \$17,523 compared to prior-year income of \$838,955, but cash flows from operations was \$236,480 in the current year and a negative \$700,957 in the prior year. Explain the causes of this apparent paradox.
- Evaluate Vermont Teddy Bear's liquidity, solvency, and profitability for the current year using cash flow-based ratios (as covered in [Chapter 5](#)).

Answers to GAAP Self-Test Questions

1. c 2. c 3. b 4. a 5. b

Notes

- IFRS Accounting Trends and Techniques* indicates that most companies surveyed report income taxes paid or received, interest received and paid, and dividends received as operating activities. However, most companies show dividends paid as a financing activity. These results are consistent with how this information is reported in [Illustration 23.1](#).
- In certain circumstances, it is possible that the net increase and decrease in cash reported on the statement of cash flows will not reconcile beginning and ending cash from the statement of financial position. The most common reason will be bank overdrafts. In this case, the company should disclose a reconciliation of the amounts from the statement of cash flows to the statement of financial position. [5]
- "Net cash flow from operating activities" is a generic phrase, replaced in the statement of cash flows with either "Net cash provided by operating activities" if operations increase cash, or "Net cash used by operating activities" if operations decrease cash.
- IFRS Accounting Trends and Techniques* reports that out of its 175 surveyed companies, 151 used the indirect method and 23 used the direct method. One company did not provide a statement of cash flows. *In doing homework assignments, you should follow instructions for use of either the direct or indirect method.*

- 5 Other unrealized holding gains or losses, such as revaluations on property, plant, and equipment, or intangible assets, are also reported as part of other comprehensive income. As a result, net income is not adjusted in computing cash flows from operating activities for any type of unrealized holding gains or losses that are reported in other comprehensive income.
- 6 In some countries, companies receive a tax deduction related to share-based compensation plans at the time employees exercise their options. The amount of the deduction is equal to the difference between the market price of the share and the exercise price at the date the employee purchases the shares, which in most cases is much larger than the total compensation expense recorded. When the tax deduction exceeds the total compensation recorded, this provides an additional cash inflow to the company. Under IFRS, this tax-related cash inflow should be reported in the financing section of the statement of cash flows. [7]
- 7 Some non-cash investing and financing activities are part cash and part non-cash. Companies should report only the cash portion on the statement of cash flows. The non-cash component should be reported in a separate note. A study of significant non-cash investing and financing activities found that the effects of these transactions—debt issued for capital assets and capital lease financing of capital assets—can have a significant effect on analysts’ assessments of capital expenditures and free cash flow. Given the importance of non-cash capital expenditures to calculations of free cash flow, the authors encourage the IASB to revise its stance regarding the exclusion of all non-cash activities from the statement of cash flows. See C. Mulford and H. Nicholson, “Measuring the Effects of Non-Cash Investing and Financing Activities,” *Journal of Applied Research in Accounting and Finance* (Vol. 9, No. 1, 2014), pp. 27–43.
- 8 As part of its Primary Financial Statements project, the IASB is considering elimination of options for the reporting of interest and dividends paid or received. See the IFRS website for more information on the Primary Financial Statements project.

CHAPTER 24

Presentation and Disclosure in Financial Reporting

LEARNING OBJECTIVES

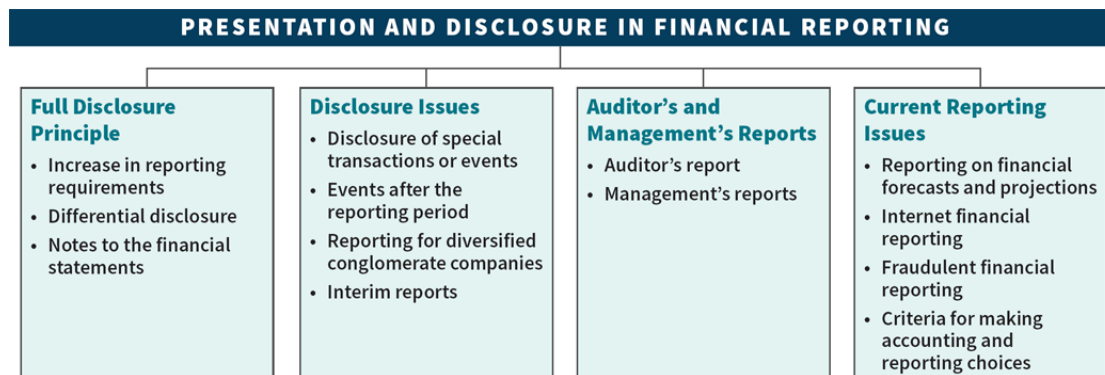

After studying this chapter, you should be able to:

1. Describe the full disclosure principle and how it is implemented.
2. Discuss the disclosure requirements for related-party transactions, subsequent events, major business segments, and interim reporting.
3. Identify the major disclosures in the auditor's report and management's responsibilities for the financial statements.
4. Describe other reporting issues related to implementation of the full disclosure principle.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 24

As the following opening story indicates, investors and other interested parties are concerned about the quality of information for all aspects of financial reporting—the financial statements, the notes, the president's letter, and management commentary. In this chapter, we cover the full disclosure principle in more detail and examine disclosures that must accompany financial statements so that they are not misleading. The content and organization of this chapter are as follows.

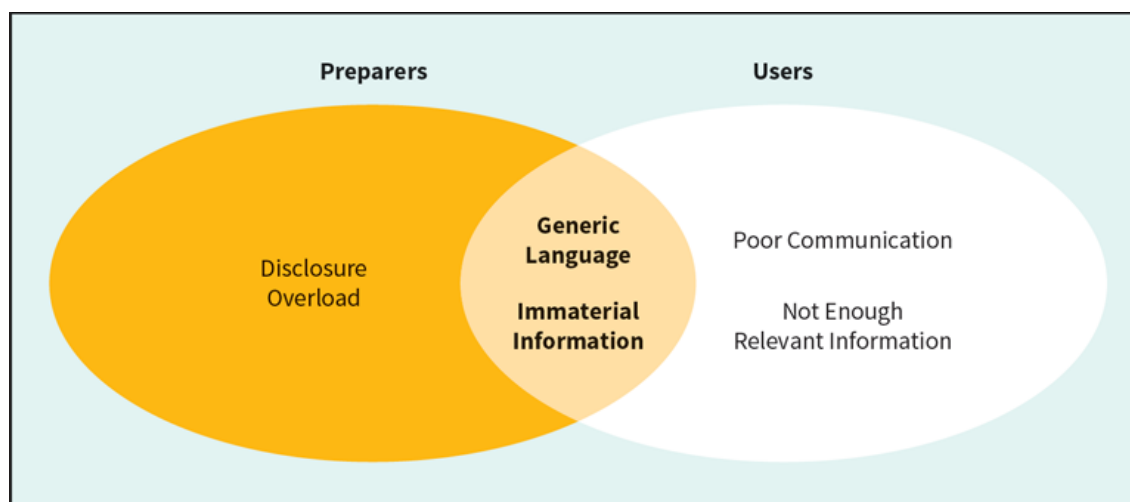

We Need Better, Not More

As you have learned in your study of this text, financial statements contain a wealth of useful information to help investors and creditors assess the amounts, timing, and uncertainty of future cash flows. In addition, the usefulness of accounting reports is enhanced when companies provide note disclosures to help statement readers understand how IFRS was

applied to transactions. These additional disclosures help readers understand both the judgments that management made and how those judgments affected the amount reported in the financial statements. Some users, however, feel we need to go even further.

The IASB has heard these demands for improved financial reporting and disclosure and is responding. It organized a Discussion Forum and conducted a survey of preparers and users to get input on the effectiveness of reporting and disclosure in financial statements. The survey asked whether there is a disclosure problem and, if so, where in the annual report the problem arises. The survey focused on three potential areas: (1) not enough relevant information, (2) too much irrelevant information, and (3) poor communication of disclosures. The accompanying graphic summarizes the feedback.

As indicated, preparers viewed the disclosure problem as primarily one of information overload; that is, they are being required to provide too much data. Users, on the other hand, complained that some of the information they get is poorly communicated and not that relevant. The message that emerged from the Discussion Forum was similar. Specifically, increases in the volume of financial disclosures have resulted in a perceived reduction in their quality and usefulness. More importantly, there was broad consensus that collective action was required in order for improvements to be made.

As a result, the IASB has taken action in several areas:

1. The IASB implemented amendments to *IAS 1 Presentation of Financial Statements* to encourage companies to apply professional judgment in determining what information to disclose in their financial statements. Specifically, the amendments make clear that materiality applies to the whole of financial statements and that the inclusion of immaterial information can inhibit the usefulness of financial disclosures.
2. The IASB amended *IAS 7 Statement of Cash Flows* to require a disclosure of changes in liabilities arising from financing activities, including changes arising from cash flows and non-cash changes.
3. The IASB added a “better communication in financial reporting” theme to its agenda. This theme includes a number of projects, including adjusting the content of the primary financial statements, updating the previously issued practice statement on management commentary, and issuing a practice statement related to making materiality judgments. The practice statement includes a process for making such

judgments.¹ In addition, guidance on specific topics that often involve materiality judgments, including prior period reporting, errors, and interim reporting, is included.

Hans Hoogervorst, chair of the IASB, summarized the IASB's response as follows: "It is undoubtedly true that we and others can improve our [disclosure] requirements. However, material improvements will require behavioural change to ensure that financial statements are regarded as tools of communication rather than compliance. That means addressing the root causes of why preparers may err on the side of caution and 'kitchen-sink' their disclosures." The bottom line: We need better, not necessarily more, disclosure.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Full Disclosure Principle

LEARNING OBJECTIVE 1

Describe the full disclosure principle and how it is implemented.

The IASB Conceptual Framework notes that while some useful information is best provided in the financial statements, some is best provided by other means. For example, net income and cash flows are readily available in financial statements, but investors might do better to look at comparisons to other companies in the same industry, found in news articles or brokerage house reports.

IASB rules directly affect financial statements, notes to the financial statements, and supplementary information. These accounting standards provide guidance on recognition and measurement of amounts reported in the financial statements. However, due to the many judgments involved in applying IFRS, note disclosures provide important information about the application of IFRS. Supplementary information includes items such as disclosures about the risks and uncertainties, resources and obligations not recognized in the statement of financial position (such as mineral reserves), and information about geographical and industry segments. Other types of information found in the annual report, such as management commentary and the letters to shareholders, are not subject to IASB rules. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.)

[Illustration 24.1](#) indicates the various types of financial information.

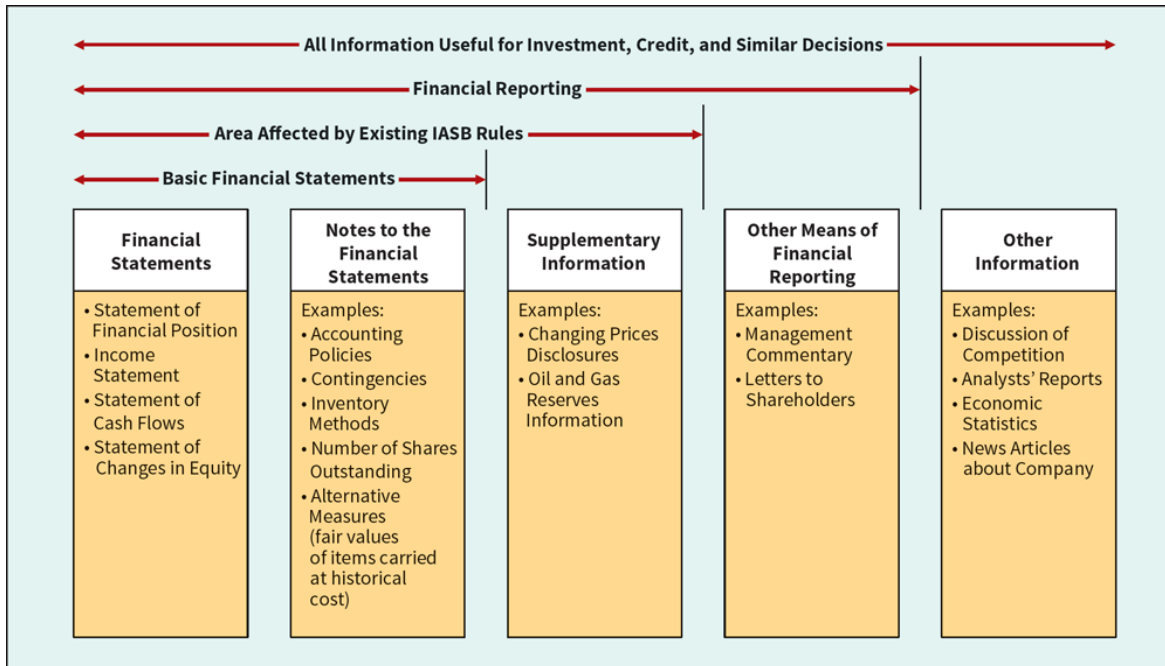

ILLUSTRATION 24.1 Types of Financial Information

As [Chapter 2](#) indicated, the profession has adopted a **full disclosure principle**. The full disclosure principle calls for financial reporting of **any financial facts significant enough to influence the judgment of an informed reader**. In some situations, the benefits of disclosure may be apparent but the costs uncertain. In other instances, the costs may be certain but the benefits of disclosure not as apparent.

For example, the IASB requires companies to provide expanded disclosures about their contractual obligations. In light of the accounting frauds at companies such as **Steinhoff International** (ZAF), the benefits of these expanded disclosures seem fairly obvious to the investing public. While no one has documented the exact costs of disclosure in these situations, they would appear to be relatively small.

On the other hand, the cost of disclosure can be substantial in some cases and the benefits difficult to assess. For example, at one time the financial press reported that if segment reporting were adopted, a company such as **Fruehauf** (USA) would have had to increase its accounting staff 50 percent, from 300 to 450 individuals. In this case, the cost of disclosure can be measured, but the benefits are less well defined (see [Underlying Concepts](#)).

Underlying Concepts

Here is a good example of the trade-off between cost considerations and the benefits of full disclosure.

Some even argue that the reporting requirements are so detailed and substantial that users have a difficult time absorbing the information. These critics charge the profession with engaging in **information overload**.

Financial disasters at **Mahindra Satyam** (IND) and **Société Générale** (FRA) highlight the difficulty of implementing the full disclosure principle. They raise the issue of why investors

were not aware of potential problems: Was the information these companies presented not comprehensible? Was it buried? Was it too technical? Was it properly presented and fully disclosed as of the financial statement date, but the situation later deteriorated? Or was it simply not presented? In the following sections, we describe the elements of high-quality disclosure that will enable companies to avoid these disclosure pitfalls.

Increase in Reporting Requirements

Disclosure requirements have increased substantially. One survey showed that the size of many companies' annual reports is growing in response to demands for increased transparency. For example, annual report page counts ranged from 164 pages for **Wm Morrison Supermarkets plc** (GBR) up to over 200 pages in **Puma's** (DEU) annual report. This result is not surprising; as illustrated throughout this text, the IASB has issued many pronouncements in the last 10 years that have substantial disclosure provisions.

The reasons for this increase in disclosure requirements are varied. Some of them are:

- **Complexity of the business environment.** The increasing complexity of business operations magnifies the difficulty of distilling economic events into summarized reports. Areas such as derivatives, leasing, business combinations, pensions, financing arrangements, revenue recognition, and deferred taxes are complex. As a result, companies extensively use **notes to the financial statements** to explain these transactions and their future effects.
- **Necessity for timely information.** Today, more than ever before, users are demanding information that is current and predictive. For example, users want more complete **interim data**.
- **Accounting as a control and monitoring device.** Regulators have increasingly sought public disclosure of such phenomena as management compensation, off-balance-sheet financing arrangements, and related-party transactions. Many of these newer disclosure requirements enlist accountants and auditors as the agents to assist in controlling and monitoring these concerns (see [Underlying Concepts](#)).²

Underlying Concepts

Surveys indicate that to meet users' changing needs, business reporting must (1) provide more forward-looking information; (2) focus more on the factors that create longer-term value, including non-financial measures; and (3) better align information reported externally with the information reported internally.

Differential Disclosure

A trend toward **differential disclosure** is also occurring. The IASB has developed IFRS for small- and medium-sized entities (SMEs). SMEs are entities that publish general-purpose financial statements for external users but do not issue shares or other securities in a public market. SMEs are estimated to account for over 95 percent of all companies around the world. Many believe a simplified set of standards makes sense for these companies because they do not have the resources to implement full IFRS.

Simplified IFRS for SMEs is designed to meet their needs and capabilities. Compared with full IFRS (and many national accounting standards), simplified IFRS for SMEs is less complex in a number of ways:

- Topics not relevant for SMEs are omitted. Examples are earnings per share, interim financial reporting, and segment reporting.
- Simplified IFRS for SMEs allows fewer accounting policy choices. For example, there is no option to revalue property, equipment, or intangibles.
- Many principles for recognizing and measuring assets, liabilities, revenue, and expenses are simplified. For example, goodwill is amortized (as a result, there is no annual impairment test) and all borrowing and R&D costs are expensed.
- Significantly fewer disclosures are required (roughly 300 versus 3,000).
- To further reduce standard overload, revisions to the IFRS for SMEs will be limited to once every three years.

Thus, the option of using simplified IFRS helps SMEs meet the needs of their financial statement users while balancing the costs and benefits from a preparer perspective. [2]

Notes to the Financial Statements

As you know from your study of this text, notes are an integral part of the financial statements of a business enterprise. However, readers of financial statements often overlook them because they are highly technical and often appear in small print. **Notes are the means of amplifying or explaining the items presented in the main body of the statements.** They can explain in qualitative terms information pertinent to specific financial statement items. In addition, they can provide supplementary data of a quantitative nature to expand the information in the financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand, they provide meaningful information for the user of the financial statements.

Accounting Policies

Accounting policies are the specific principles, bases, conventions, rules, and practices applied by a company in preparing and presenting financial statements. IFRS states that information about the accounting policies adopted by a reporting entity is essential for financial statement users in making economic decisions. It recommends that companies should present **as an integral part of the financial statements a statement identifying the accounting policies adopted and followed by the reporting entity.** Companies whose financial statements comply with IFRS must make an explicit and unreserved statement of such compliance. Companies should present the disclosure as the first note or in a separate Summary of Significant Accounting Policies section preceding the notes to the financial statements.

The Summary of Significant Accounting Policies answers such questions as: What method of depreciation is used on plant assets? What valuation method is employed on inventories? What amortization policy is followed in regard to intangible assets? How are marketing costs handled for financial reporting purposes? You can see a good example of note disclosure for

Marks and Spencer plc (GBR) (which accompanies the financial statements presented in [Appendix A](#)) at the company's website.

Analysts examine carefully the summary of accounting policies to determine whether a company is taking a conservative or an aggressive approach to accounting practices. For example, depreciating plant assets over an unusually long period of time is considered aggressive. Using weighted-average inventory valuation in a period of inflation is generally viewed as conservative.

In addition to disclosure of significant accounting policies, companies must:

1. Identify the judgments that management made in applying the accounting policies which have the most significant effect on the amounts recognized in the financial statements, and
2. Disclose management's assumptions about the future (and other major sources of estimation uncertainty at the end of the reporting period), that have a significant risk of resulting in a material adjustment to the carrying amounts of assets and liabilities within the next financial year. In respect to those assets and liabilities, the notes should include details of (a) their nature and (b) their carrying amount as of the end of the reporting period.

Many times these disclosures are presented with the accounting policy note or provided in a specific policy note. The disclosures should identify the estimates that require management's most difficult, subjective, or complex judgments. [3] An example of this disclosure is presented in [Illustration 24.2](#) for **International Airlines Group** (GBR).

International Airlines Group

2. Significant accounting policies

Critical accounting judgements, estimates (in part) and assumptions

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. These judgements, estimates and associated assumptions are based on historical experience and various other factors believed to be reasonable under the circumstances. Actual results in the future may differ from judgements and estimates upon which financial information has been prepared. These underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised prospectively.

Revenue recognition

Passenger revenue is recognised when the transportation is provided. At the time of transportation, revenue is also recognised in respect of tickets that are not expected to be used ('unused tickets'). Revenue associated with unused tickets is estimated based on the terms and conditions of the tickets and historical trends.

Revenue associated with the issuance of points under customer loyalty programmes is based on the relative stand-alone selling prices of the related performance obligations (brand, marketing and points), determined using estimation techniques. The transaction price of brand and marketing services is determined using specific brand valuation methodologies. The transaction price of the points is based on the value of the awards for which the points can be redeemed and is reduced to take account of the proportion of the award credits that are not expected to be redeemed by customers. The Group estimates the number of points not expected to be redeemed (using statistical modelling and historical trends) and the mix and fair value of the award credits. A one percentage point change in the assumption of points not expected to be redeemed will result in an adjustment to deferred revenue of €100 million, with an offsetting adjustment to revenue and operating profit recognised in the year.

The following estimate involves a higher degree of judgement or complexity, or is where assumptions are significant to the financial statements. However, this accounting estimate is not a major source of estimation uncertainty that has a significant risk of resulting in material adjustment to the carrying amounts of assets and liabilities within the next year.

Impairment of non-financial assets

The Group assesses whether there are any indicators of impairment for all non-financial assets at each reporting date. Goodwill and intangible assets with indefinite economic lives are tested for impairment annually and at other times when such indicators exist. The recoverable amounts of cash-generating units have been determined based on value-in-use calculations. These calculations require the use of estimates and assumptions as disclosed in note 14.

Other non-financial assets are tested for impairment when there are indicators that the carrying amounts may not be recoverable.

ILLUSTRATION 24.2 Accounting Estimate and Judgment Disclosure

Collectively, these disclosures help statement readers evaluate the quality of a company's accounting policies in providing information in the financial statements for assessing future cash flows. Companies that fail to adopt high-quality reporting policies may be heavily penalized by the market. For example, when **Isoft** (GBR) disclosed that it would restate prior-year results due to use of aggressive revenue recognition policies, its share price dropped over 39 percent in one day. Investors viewed Isoft's quality of earnings as low.

Common Notes

We have discussed many of the **notes to the financial statements** throughout this text and will discuss others more fully in this chapter. The more common are as follows.

Major Disclosures

Inventory. Companies should report the basis upon which inventory amounts are stated (lower-of-cost-or-net realizable value) and the method used in determining cost (FIFO, average-cost, etc.). Manufacturers should report, either in the statement of financial position or in a separate schedule in the notes, the inventory composition (finished goods, work in process, raw materials). Unusual or significant financing arrangements relating to inventories that may require disclosure include transactions with related parties, product financing arrangements, firm purchase commitments, and pledging of inventories as collateral. [Chapter 9](#) illustrates these disclosures.

Property, Plant, and Equipment. Companies should state the basis of valuation for property, plant, and equipment (e.g., revaluation or historical cost). It is usually historical cost. Companies also should disclose pledges, liens, and other commitments related to these assets. In the presentation of depreciation, companies should disclose the following in the financial statements or in the notes: (1) depreciation expense for the period; (2) balances of major classes of depreciable assets, by nature and function, at the statement date; (3) accumulated depreciation, either by major classes of depreciable assets or in total, at the statement date; and (4) a general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. Finally, companies should explain any major impairments. [Chapter 11](#) illustrates these disclosures.

Creditor Claims. Investors normally find it extremely useful to understand the nature and cost of creditor claims. However, the liabilities section in the statement of financial position can provide the major types of liabilities only in the aggregate. Note schedules regarding such obligations provide additional information about how a company is financing its operations, the costs that it will bear in future periods, and the timing of future cash outflows. Financial statements must disclose for each of the five years following the date of the statements, the aggregate amount of maturities and sinking fund requirements for all long-term borrowings. [Chapter 14](#) illustrates these disclosures.

Equityholders' Claims. Many companies present in the body of the statement of financial position information about equity securities: the number of shares authorized, issued, and outstanding and the par value for each type of security. They may also present such data in a note. Beyond that, a common equity note disclosure relates to contracts and senior securities outstanding that might affect the various claims of the residual equity holders. An example would be the existence of outstanding share options, outstanding convertible debt, redeemable preference shares, and convertible preference shares. In addition, it is necessary to disclose certain types of restrictions currently in force. Generally, these types of restrictions involve the amount of earnings available for dividend distribution. Examples of these types of disclosures are illustrated in [Chapter 15](#) and [Chapter 16](#).

Contingencies and Commitments. A company may have gain or loss contingencies that are not disclosed in the body of the financial statements. These contingencies include litigation, debt and other guarantees, possible tax assessments, renegotiation of government contracts, and sales of receivables with recourse. In addition, companies should disclose in the notes commitments that relate to dividend restrictions, purchase

agreements (through-put and take-or-pay), hedge contracts, and employment contracts. Disclosures of such items are illustrated in [Chapter 7](#), [Chapter 9](#), and [Chapter 13](#).

Fair Values. Companies that have assets or liabilities measured at fair value generally disclose both the cost and the fair value in the notes to the financial statements. Fair value measurements may be used for many financial assets and liabilities; investments; revaluations for property, plant, and equipment; impairments of long-lived assets; and some contingencies. Companies also provide disclosure of information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. This fair value hierarchy identifies three broad levels related to the measurement of fair values (Levels 1, 2, and 3). The levels indicate the subjectivity of the measurement of fair value information. [Chapter 17](#) discusses in detail fair value disclosures.

Deferred Taxes, Pensions, and Leases. The IASB also requires extensive disclosure in the areas of deferred taxes, pensions, and leases. [Chapter 19](#), [Chapter 20](#), and [Chapter 21](#) discuss in detail each of these disclosures. Users of financial statements should carefully read notes to the financial statements for information about off-balance-sheet commitments, future financing needs, and the quality of a company's earnings.

Changes in Accounting Policies. The profession defines various types of accounting changes and establishes guides for reporting each type. Companies discuss, either in the summary of significant accounting policies or in the other notes, changes in accounting policies (as well as material changes in estimates and corrections of errors). See [Chapter 22](#).

In earlier chapters, we discussed the disclosures listed above. The following sections of this chapter illustrate four additional disclosures of significance—special transactions or events, subsequent events, segment reporting, and interim reporting.

What Do the Numbers Mean?

Footnote Secrets

Often, note disclosures are needed to give a complete picture of a company's financial position. A good example is the required disclosure of collateral arrangements in repurchase agreements. Such arrangements gained front-page coverage when it was revealed that the now-defunct **Lehman Brothers** (USA)—and many other U.S. and European financial institutions—employed specialized repurchase agreements, referred to as Repo 105 (or Repo 108 in Europe), to “window-dress” their statements of financial positions. Here's how it works.

A repurchase agreement amounts to a short-term loan, exchanging collateral for cash upfront and then unwinding the trade as soon as overnight. Lehman's Repo 105 used a variety of holdings as the collateral. Lehman made the exchanges with major global financial institutions, such as **Barclays** (GBR), **UBS** (CHE), **Mitsubishi UFJ Financial Group** (JPN), and **KBC Bank** (BEL). What was special about the Repo 105/108 is that the value of the securities Lehman pledged in the transactions was worth 105 percent of the cash it received. That is, the firm was taking a haircut on the transactions. And when Lehman eventually repaid the cash it received from its counterparties, it did so with interest, making this a rather expensive technique. Under accounting guidance at that time, Lehman could book each transaction as a “sale” rather than a “financing,” as most repos are regarded. That meant that for a few days, Lehman could exclude tens of billions of dollars in assets to appear more financially healthy than it really was.

Another recent example is the accounting for media content expenses compared to the true cost. For a company like **Netflix** (USA), its increased licensing fees are recognized in income on a delayed basis. In 2014 alone, Netflix paid \$500 million more to add to its library than it recognized in expenses. These differences represented about 10 percent of expenses and would have reduced EPS from \$4.32 to −\$1.31. Netflix's accounting follows the rules, but you might not be able to compare it to the growing number of global media competitors that could be using different accounting policies for program costs.

How can you be better informed about note disclosures that may contain important information related to your investments, like Repo 105 and media content costs? The **Calcbench** (USA) website provides a good online resource for understanding the contents of note disclosures. The site highlights insights that can be gained by mining the information in financial statements, including footnotes. For example, some recent reports on the site have highlighted such issues as the substantial changes revealed by the new leasing standard (such as at **Starbucks** (USA)), different discounts rates used by companies, and recent changes in product warranty accruals.

Werdigier, “The Origins of Lehman's ‘Repo 105,’” *The New York Times* (March 12, 2010); New Constructs, “Three Ways Accounting Tricks Hidden in Footnotes Can Blow Up Your Portfolio,” *Diligence Pays* (September 23, 2015); and “A Look at Product Warranty Accruals,” Calcbench Blog (November 12, 2019).

Disclosure Issues

LEARNING OBJECTIVE 2

Discuss the disclosure requirements for related-party transactions, subsequent events, major business segments, and interim reporting.

Disclosure of Special Transactions or Events

Related-party transactions, errors, and fraud pose especially sensitive and difficult problems. The accountant/auditor who has responsibility for reporting on these types of transactions must take care to properly balance the rights of the reporting company and the needs of financial statement users.

Related-party transactions arise when a company engages in transactions in which one of the parties has the ability to significantly influence the policies of the other. They may also occur when a non-transacting party has the ability to influence the policies of the two transacting parties.³ Competitive, free-market dealings may not exist in related-party transactions, and so an “arm’s-length” basis cannot be assumed. Transactions such as borrowing or lending money at abnormally low or high interest rates, real estate sales at amounts that differ significantly from appraised value, exchanges of non-monetary assets, and transactions involving companies that have no economic substance (shell corporations) suggest that related parties may be involved.

In order to make adequate disclosure, companies should report the economic substance, rather than the legal form, of these transactions. IFRS requires the following minimum disclosures of material related-party transactions. [5]

1. The nature of the related-party relationship;
2. The amount of the transactions and the amount of outstanding balances, including commitments, the nature of consideration, and details of any guarantees given or received;
3. Provisions for doubtful debts related to the amount of outstanding balances; and
4. The expense recognized during the period with respect to bad or doubtful debts due from related parties.

Illustration 24.3, from the annual report of **Volkswagen AG (DEU)**, shows disclosure of related-party transactions.

Volkswagen AG

Note 44. Related Parties

The following tables present the amount of supplies and services transacted, as well as receivable and liabilities, between consolidated companies of the Volkswagen Group and related parties.

	Supplies & Services Rendered		Supplies & Services Received	
(€ million)	2018	2017	2018	2017
Porsche SE and its majority interests	3	7	3	1
Supervisory Board members	4	2	2	2
Unconsolidated subsidiaries	1,137	1,029	1,649	1,300
Joint ventures and their majority interests	16,724	14,294	491	1,225
Associates and their majority interests	194	214	1,267	733
Pension plans	1	1	2	0
Other related parties	0	0	1	0
State of Lower Saxony, its majority interests and joint ventures	10	11	8	9
	Receivables From		Liabilities To	
(€ million)	2018	2017	2018	2017
Porsche SE and its majority interests	4	13	1	0
Supervisory Board members	0	0	205	254
Board of Management members	0	0	78	72
Unconsolidated subsidiaries	1,319	1,480	1,869	1,773
Joint ventures and their majority interests	11,989	9,889	2,671	2,168
Associates and their majority interests	112	76	487	572
Pension plans	1	1	—	—
Other related parties	—	—	100	63
State of Lower Saxony, its majority interests and joint ventures	1	2	2	1

ILLUSTRATION 24.3 Disclosure of Related-Party Transactions

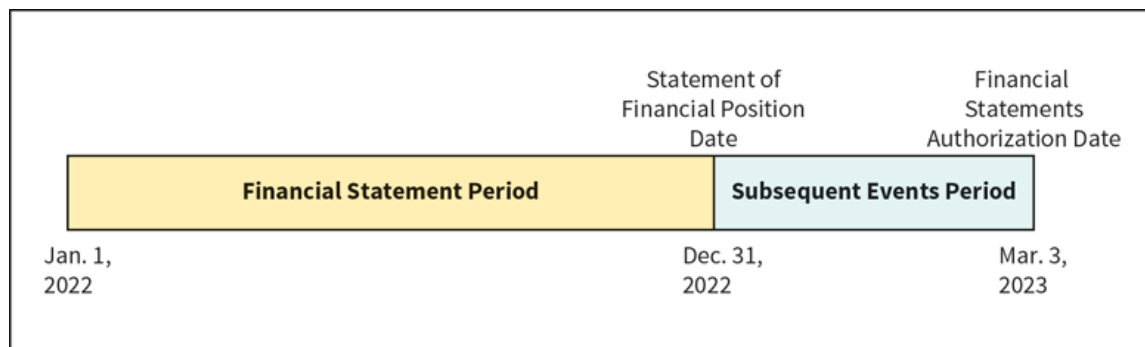

Many companies are involved in related-party transactions. However, another type of special event, errors and fraud (sometimes referred to as irregularities), is the exception rather than the rule. Accounting **errors** are **unintentional** mistakes, whereas **fraud** (misappropriation

of assets and fraudulent financial reporting) involves **intentional** distortions of financial statements.⁴ As indicated earlier, companies should correct financial statements when they discover errors. Fraud should be given the same treatment. Its discovery gives rise to a different set of procedures and responsibilities for the accountant/auditor, however.

Disclosure plays an important role in these types of transactions because the events are many times more qualitative than quantitative and involve more subjective than objective evaluation. Users of the financial statements need some indication of the existence and nature of these transactions, through disclosures, modifications in the auditor's report, or reports of changes in auditors.

Events After the Reporting Period (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal statement of financial position date, but before the statements are authorized for issuance (hereafter referred to as the authorization date). These events are referred to as **events after the reporting date** or **subsequent events**. [Illustration 24.4](#) shows a time diagram of the subsequent events period.

[ILLUSTRATION 24.4](#) Time Periods for Subsequent Events

A period of several weeks or sometimes months may elapse after the end of the fiscal year but before the management or the board of directors authorizes issuance of the financial statements.⁵ Various activities involved in closing the books for the period and issuing the statements take time: taking and costing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the statement of financial position date and its authorization date, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a statement of financial position believe the financial condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered unusual losses, settled significant litigation, or experienced any other important event—in the post-statement of financial position period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions (see [Underlying Concepts](#)).

Underlying Concepts

The periodicity or time period assumption implies that economic activities of an enterprise can be divided into artificial time periods for purpose of analysis.

Two types of events or transactions occurring after the statement of financial position date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions **that existed** at the statement of financial position date, including the estimates inherent in the process of preparing financial statements. These are referred to as **adjusted subsequent events** and require adjustments to the financial statements. All information available prior to the authorization date of the financial statements helps investors and creditors evaluate previous estimates. To ignore these subsequent events is to neglect an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the statement of financial position date.

For example, if a loss on an account receivable results from a customer's bankruptcy subsequent to the statement of financial position date, the company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the statement of financial position date.

The same criterion applies to settlements of litigation. The company must adjust the financial statements if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the statement of financial position date.

2. Events that provide evidence about conditions that **did not exist** at the statement of financial position date but which arise subsequent to that date. These events are referred to as **non-adjusted subsequent events** and do not require adjustment of the financial statements. To illustrate, a loss resulting from a customer's fire or flood *after* the statement of financial position date does not reflect conditions existing at that date. Thus, adjustment of the financial statements is not necessary. A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the statement of financial position but which arose after the statement of financial position date.

The following are examples of non-adjusted subsequent events:

- A major business combination after the reporting period or disposing of a major subsidiary.
- Announcing a plan to discontinue an operation or to commence the implementation of a major restructuring.
- Major purchases of assets, other disposals of assets, or expropriation of major assets by government.
- The destruction of a major production plant or inventories by a fire or natural disaster after the reporting period.

- Major ordinary share transactions and potential ordinary share transactions after the reporting period.
- Abnormally large changes after the reporting period in asset prices, foreign exchange rates, or taxes.
- Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the statement date. [7]⁶

Some non-adjusted subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect (see [Underlying Concepts](#)).

Underlying Concepts

A company also should consider supplementing the historical financial statements with pro forma financial data. Occasionally, a non-adjusted subsequent event may be so significant that disclosure can best be made by means of pro forma financial data.

[Illustration 24.5](#) presents an example of subsequent events disclosure, excerpted from the annual report of **A.P. Møller - Maersk** (DNK).

A.P. Møller - Maersk

Note 26. Subsequent Events

On 21 February 2019, the Board of Directors has decided to initiate the separation of the drilling activities through a demerger. The shares in Maersk Drilling Holding A/S (Maersk Drilling) and its subsidiaries as well as certain other assets and liabilities will be contributed to a new company with the legal name “The Drilling Company of 1972 A/S”. The Board of Directors intends to propose the demerger for approval by the shareholders of A.P. Møller - Mærsk A/S at the Annual General Meeting on 2 April 2019.

Subject to approval at the Annual General Meeting, the shares in Maersk Drilling will be distributed to A.P. Møller - Maersk shareholders with anticipated first day of trading on 4 April 2019. The A.P. Møller - Maersk Board of Directors intends to propose a single share class structure for Maersk Drilling with the new listed shares being distributed on a pro-rata basis based on the nominal value of the shares in A.P. Møller - Mærsk A/S. Shareholders will receive one share in Maersk Drilling per nominal A.P. Møller - Maersk DKK 500 share and two shares in Maersk Drilling per nominal A.P. Møller - Maersk DKK 1,000 share.

[ILLUSTRATION 24.5](#) Disclosure of Subsequent Events

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are non-accounting events or conditions that management normally communicates by other means. These events include legislation,

product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Reporting for Diversified (Conglomerate) Companies

In certain business climates, companies have a tendency to diversify their operations. Take the case of **Siemens AG** (DEU), whose products include energy technologies, consumer products, and financial services. When businesses are so diversified, investors and investment analysts want more information about the details behind conglomerate financial statements. Particularly, they want income statement, statement of financial position, and cash flow information on the **individual segments** that compose the total income figure.

Much information is hidden in the aggregated totals. With only the consolidated figures, the analyst cannot tell the extent to which the differing product lines **contribute to the company's profitability, risk, and growth potential**. For example, in [Illustration 24.6](#), the office equipment segment looks like a risky venture. Segmented reporting would provide useful information about the two business segments and would be helpful in making an informed investment decision regarding the whole company.

Office Equipment and Auto Parts Company Income Statement Data (in millions)			
	Consolidated	Office Equipment	Auto Parts
Net sales	\$78.8	\$18.0	\$60.8
Manufacturing costs			
Inventories, beginning	12.3	4.0	8.3
Materials and services	38.9	10.8	28.1
Wages	12.9	3.8	9.1
Inventories, ending	(13.3)	(3.9)	(9.4)
	50.8	14.7	36.1
Selling and administrative expenses	12.1	1.6	10.5
Total operating expenses	62.9	16.3	46.6
Income before taxes	15.9	1.7	14.2
Income taxes	(9.3)	(1.0)	(8.3)
Net income	\$ 6.6	\$ 0.7	\$ 5.9

ILLUSTRATION 24.6 Segmented Income Statement

A classic situation that demonstrates the need for segmented data involved **Caterpillar, Inc.** (USA). Market regulators cited Caterpillar because it failed to tell investors that nearly a quarter of its income in one year came from a Brazilian unit and was non-recurring in nature. The company knew that different economic policies in the next year would probably greatly affect earnings of the Brazilian unit. But Caterpillar presented its financial results on a consolidated basis, not disclosing the Brazilian operations. Caterpillar's failure to include information about Brazil left investors with an incomplete picture of the company's financial

results and denied investors the opportunity to see the company “through the eyes of management.”

Companies have always been somewhat hesitant to disclose segmented data for various reasons:

1. Without a thorough knowledge of the business and an understanding of such important factors as the competitive environment and capital investment requirements, the investor may find the segmented information meaningless or may even draw improper conclusions about the reported earnings of the segments.
2. Additional disclosure may be helpful to competitors, labor unions, suppliers, and certain government regulatory agencies, and thus harm the reporting company.
3. Additional disclosure may discourage management from taking intelligent business risks because segments reporting losses or unsatisfactory earnings may cause shareholder dissatisfaction with management.
4. The wide variation among companies in the choice of segments, cost allocation, and other accounting problems limits the usefulness of segmented information.
5. The investor is investing in the company as a whole and not in the particular segments, and it should not matter how any single segment is performing if the overall performance is satisfactory.
6. Certain technical problems, such as classification of segments and allocation of segment revenues and costs (especially “common costs”), are formidable.

On the other hand, the advocates of segmented disclosures offer these reasons in support of the practice:

1. Investors need segmented information to make an intelligent investment decision regarding a diversified company.
 - a. Sales and earnings of individual segments enable investors to evaluate the differences between segments in growth rate, risk, and profitability, and to forecast consolidated profits.
 - b. Segmented reports help investors evaluate the company’s investment worth by disclosing the nature of a company’s businesses and the relative size of the components.
2. The absence of segmented reporting by a diversified company may put its unsegmented, single product-line competitors at a competitive disadvantage because the conglomerate may obscure information that its competitors must disclose.

The advocates of segmented disclosures appear to have a much stronger case. Many users indicate that segmented data are the most useful financial information provided, aside from the basic financial statements. As a result, the IASB has issued extensive reporting guidelines in this area.

Objective of Reporting Segmented Information

The objective of reporting segmented financial data is to provide information about the **different types of business activities** in which an enterprise engages and the **different**

economic environments in which it operates. Meeting this objective will help users of financial statements do the following.

- a. Better understand the enterprise's performance.
- b. Better assess its prospects for future net cash flows.
- c. Make more informed judgments about the enterprise as a whole.

Basic Principles

Financial statements can be disaggregated in several ways. For example, they can be disaggregated by products or services, by geography, by legal entity, or by type of customer. However, it is not feasible to provide all of that information in every set of financial statements. IFRS requires that general-purpose financial statements include selected information on a single basis of segmentation. Thus, a company can meet the segmented reporting objective by providing financial statements segmented based on how the company's operations are managed. The method chosen is referred to as the **management approach**. [8] **The management approach reflects how management segments the company for making operating decisions.** The segments are evident from the components of the company's organization structure. These components are called **operating segments**.

Identifying Operating Segments

An **operating segment** is a component of an enterprise:

- a. That engages in business activities from which it earns revenues and incurs expenses.
- b. Whose operating results are regularly reviewed by the company's chief operating decision-maker to assess segment performance and allocate resources to the segment.
- c. For which discrete financial information is available that is generated by or based on the internal financial reporting system.

Companies may aggregate information about two or more operating segments only if the segments have the same basic characteristics in each of the following areas.

- a. The nature of the products and services provided.
- b. The nature of the production process.
- c. The type or class of customer.
- d. The methods of product or service distribution.
- e. If applicable, the nature of the regulatory environment.

After the company decides on the possible segments for disclosure, it makes a quantitative materiality test. This test determines whether the segment is significant enough to warrant actual disclosure. An operating segment is deemed significant and therefore a reportable segment if it satisfies **one or more** of the following quantitative thresholds.

- 1. Its **revenue** (including sales to both internal and external customers and intersegment sales or transfers) is 10 percent or more of the combined revenue of all the company's

operating segments.

2. The absolute amount of its **profit or loss** is 10 percent or more of the greater, in absolute amount, of **(a)** the combined operating profit of all operating segments that did not incur a loss, or **(b)** the combined loss of all operating segments that did report a loss.
3. Its **identifiable assets** are 10 percent or more of the combined assets of all operating segments.

In applying these tests, the company must consider two additional factors. First, segment data must explain a significant portion of the company's business. Specifically, the segmented results must equal or exceed 75 percent of the combined sales to unaffiliated customers for the entire company. This test prevents a company from providing limited information on only a few segments and lumping all the rest into one category.

Second, the profession recognizes that reporting too many segments may overwhelm users with detailed information. The IASB decided that 10 is a reasonable upper limit for the number of segments that a company must disclose (see [Underlying Concepts](#)). [9]

Underlying Concepts

Users of financial statements indicate that multi-segment companies operate diverse businesses that are subject to different opportunities and risks. Segment information provides additional insight about the opportunities and risks of investments and sharpens predictions. Because of its predictive value, providing segment information is of the highest priority.

To illustrate these requirements, assume a company has identified six possible reporting segments, as shown in [Illustration 24.7](#) (euros in thousands).

Segments	Total Revenue (Unaffiliated)	Operating Profit (Loss)	Identifiable Assets
A	€ 100	€10	€ 60
B	50	2	30
C	700	40	390
D	300	20	160
E	900	18	280
F	100	(5)	50
	<u>€2,150</u>	<u>€85</u>	<u>€970</u>

[ILLUSTRATION 24.7](#) Data for Different Possible Reporting Segments

The company would apply the respective tests as follows.

Revenue test: $.10 \times €2,150 = €215$; C, D, and E meet this test.

Operating profit (loss) test: $.10 \times €90 = €9$ (note that the €5 loss is ignored, because the test is based on non-loss segments); A, C, D, and E meet this test.

Identifiable assets tests: $.10 \times €970 = €97$; C, D, and E meet this test.

The reporting segments are therefore A, C, D, and E, assuming that these four segments have enough sales to meet the 75 percent of combined sales test. The 75 percent test is computed as follows.

75% of combined sales test: $.75 \times \text{€}2,150 = \text{€}1,612.50$. The sales of A, C, D, and E total €2,000 (€100 + €700 + €300 + €900); therefore, the 75 percent test is met.

Measurement Principles

The accounting principles that companies use for segment disclosure need not be the same as the principles they use to prepare the consolidated statements. This flexibility may at first appear inconsistent. But, preparing segment information in accordance with IFRS would be difficult because some IFRS are not expected to be applied at a segment level. Examples include accounting for the cost of company-wide employee benefit plans, and accounting for income taxes in a company that files a consolidated tax return with segments in different tax jurisdictions.

The IASB does not require allocations of joint, common, or company-wide costs solely for external reporting purposes. **Common costs** are those incurred for the benefit of more than one segment and whose interrelated nature prevents a completely objective division of costs among segments. For example, the company president's salary is difficult to allocate to various segments. Allocations of common costs are inherently arbitrary and may not be meaningful. There is a presumption that if companies allocate common costs to segments, these allocations are either directly attributable or reasonably allocable to the segments.

Segmented Information Reported

The IASB requires that an enterprise report the following.

1. **General information about its operating segments.** This includes factors that management considers most significant in determining the company's operating segments and the types of products and services from which each operating segment derives its revenues.
2. **Segment profit and loss and related information.** Specifically, companies must report the following information about each operating segment if the amounts are included in determining segment profit or loss.
 - a. Revenues from transactions with external customers.
 - b. Revenues from transactions with other operating segments of the same enterprise.
 - c. Interest revenue.
 - d. Interest expense.
 - e. Depreciation and amortization expense.
 - f. Unusual items.
 - g. Equity in the net income of investees accounted for by the equity method.
 - h. Income tax expense or benefit.
 - i. Significant non-cash items other than depreciation, depletion, and amortization expense.

3. **Segment assets and liabilities.** A company must report each operating segment's total assets and liabilities.
4. **Reconciliations.** A company must provide a reconciliation of the total of the segments' revenues to total revenues, a reconciliation of the total of the operating segments' profits and losses to its income before income taxes, and a reconciliation of the total of the operating segments' assets and liabilities to total assets and liabilities.
5. **Information about products and services and geographic areas.** For each operating segment not based on geography, the company must report (unless it is impracticable): (1) revenues from external customers, (2) long-lived assets, and (3) expenditures during the period for long-lived assets. This information, if material, must be reported (a) in the enterprise's country of domicile and (b) in each other country.
6. **Major customers.** If 10 percent or more of company revenue is derived from a single customer, the company must disclose the total amount of revenue from each such customer by segment.

Illustration of Disaggregated Information

[Illustration 24.8](#) shows the segment disclosure for **Equinor** (NOR).

Equinor

3 Segments (partial)

Segment data for the year ended 31 December, 2018 is presented below. The measurement basis of segment profit is *Net operating income*. In the table below, deferred tax assets, pension assets and non-current financial assets are not allocated to the segments. Also, the line additions to PP&E, intangibles, and equity accounted investments is excluding movements due to changes in asset retirement obligations.

(in USD million)	E&P Norway	E&P International	MMP	Other	Eliminations	Total
Full year 2018						
Revenues third party, other revenues and other income	588	3,182	75,487	44	0	79,301
Revenues inter- segment	21,877	9,186	291	2	(31,355)	0
Net income/(loss) from equity accounted investments	10	31	16	234	0	291
Total revenues and other income	22,475	12,399	75,794	280	(31,355)	79,593
Purchases (net of inventory variation)	2	(26)	(69,296)	(0)	30,805	(38,515)
Operating, selling, general and administrative expenses	(3,270)	(3,006)	(4,377)	(288)	653	(10,288)
Depreciation, amortisation and net impairment losses	(4,370)	(4,592)	(215)	(72)	0	(9,249)
Exploration expenses	(431)	(973)	0	0	0	(1,404)
Net operating income/(loss)	<u>14,406</u>	<u>3,802</u>	<u>1,906</u>	<u>(79)</u>	<u>103</u>	<u>20,137</u>
Additions to PP&E, intangibles and equity accounted investments	6,947	7,403	331	519	0	<u>15,201</u>
Balance sheet information						

Equity accounted investments	1,102	296	92	1,373	0	2,863
Non-current segment assets	30,762	38,672	5,148	353	0	74,934
Non-current assets, not allocated to segments						8,655
Total non-current assets						<u>86,452</u>

ILLUSTRATION 24.8 Segment Disclosure

Interim Reports

Another source of information for the investor is interim reports. As noted earlier, **interim reports** cover periods of less than one year. The securities exchanges, market regulators, and the accounting profession have an active interest in the presentation of interim information (see **Underlying Concepts**).

Underlying Concepts

For information to be relevant, it must be available to decision-makers before it loses its capacity to influence their decisions (timeliness). Interim reporting is an excellent example of this concept.

Because of the short-term nature of the information in these reports, there is considerable controversy which general approach companies should employ. One group, which favors the **discrete approach**, believes that companies should treat each interim period as a separate accounting period. Under that protocol, companies would follow the principles for deferrals and accruals used for annual reports. Companies would report accounting transactions as they occur, and expense recognition would not change with the period of time covered.

Another group, which favors the **integral approach**, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this approach, companies would assign estimated expenses to parts of a year on the basis of sales volume or some other activity base. In general, **IFRS requires companies to follow the discrete approach.** [10]

Interim Reporting Requirements

Generally, companies should use the same accounting policies for both interim and annual reports. They should recognize revenues in interim periods on the same basis as they are recognized for annual periods. For example, if Cedars Corp. uses the percentage-of-completion method as the basis for recognizing revenue on an annual basis, then it should use the percentage-of-completion method for interim reports as well. Also, Cedars should treat costs directly associated with revenues (product costs, such as materials, labor and related fringe benefits and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, average-cost, etc.) for both interim and annual reports. However, companies may use the gross profit method for interim inventory pricing. But they must disclose the method and adjustments to reconcile with annual inventory.

Discrete Approach

Following the discrete approach, companies record in interim reports revenues and expenses according to the revenue and expense recognition principles. This includes costs and expenses other than product costs (often referred to as period costs). No accruals or deferrals in anticipation of future events during the year should be reported. For example, the cost of a planned major periodic maintenance or overhaul for a company such as **Airbus** (FRA), or other seasonal expenditure that is expected to occur late in the year is not anticipated for interim reporting purposes. The mere intention or necessity of incurring future expenditures is not sufficient to give rise to an obligation.

A company such as **Carrefour** (FRA) may budget certain costs, which it expects to be incurred sporadically during the financial year, such as advertising and employee training costs. Those costs generally are discretionary even though they are planned and tend to recur from year to year. However, recognizing an obligation at the end of an interim financial reporting period for costs that have not yet been incurred is not consistent generally with the definition of a liability.

While year-to-date measurements may involve changes in estimates of amounts reported in prior interim periods of the current financial year, the principles for recognizing assets, liabilities, income, and expenses for interim periods are the same as in annual financial statements. For example, **Wm Morrison Supermarkets plc** (GBR) records losses from inventory write-downs, restructurings, or impairments in an interim period similarly to how it treats these items in the annual financial statements (when incurred). However, if an estimate from a prior interim period changes in a subsequent interim period of that year, the original estimate is adjusted in the subsequent interim period.

Interim Disclosures

IFRS does not require a complete set of financial statements at the interim reporting date. Rather, companies can comply with the requirements by providing condensed financial statements and selected explanatory notes. Because users of interim financial reports also have access to the most recent annual financial report, companies only have to provide explanation of significant events and transactions since the end of the last annual reporting period. Companies should report the following interim data at a minimum.

1. Statement that the same accounting policies and methods of computation are followed in the interim financial statements as compared with the most recent annual financial statements or, if those policies or methods have been changed, a description of the nature and effect of the change.
2. Explanatory comments about the seasonality or cyclical nature of interim operations.
3. The nature and amount of items affecting assets, liabilities, equity, net income, or cash flows that are unusual because of their nature, size, or incidence.

4. The nature and amount of changes in accounting policies and estimates of amounts previously reported.
5. Issuances, repurchases, and repayments of debt and equity securities.
6. Dividends paid (aggregate or per share) separately for ordinary shares and other shares.
7. Segment information, as required by *IFRS 8*, “Operating Segments.”
8. Changes in contingent liabilities or contingent assets since the end of the last annual reporting period.
9. Effect of changes in the composition of the company during the interim period, such as business combinations, obtaining or losing control of subsidiaries and long-term investments, restructurings, and discontinued operations.
10. Other material events subsequent to the end of the interim period that have not been reflected in the financial statements for the interim period.

If a complete set of financial statements is provided in the interim report, companies comply with the provisions of *IAS 1*, “Presentation of Financial Statements.”

Unique Problems of Interim Reporting

IFRS reflects a preference for the discrete approach. However, within this broad guideline, a number of unique reporting problems develop related to the following items.

Income Taxes

Not every dollar of company taxable income may be taxed at the same rate if the tax rate is progressive. This aspect of business income taxes poses a problem in preparing interim financial statements. Should the company use the **annualized approach**, which annualizes income to date and accrues the proportionate income tax for the period to date? Or should it follow the **marginal principle approach**, which applies the lower rate of tax to the first amount of income earned? At one time, companies generally followed the latter approach and accrued the tax applicable to each additional dollar of income.

IFRS requires use of the annualized approach. Income tax expense is recognized in each interim period based on the best estimate of the weighted-average annual income tax rate expected for the full financial year. This approach is consistent with applying the same principles in interim reports that are applied to the annual report; that is, income taxes are assessed on an annual basis. However, amounts accrued for income tax expense in one interim period may have to be adjusted in a subsequent interim period of that financial year if the estimate of the annual income tax rate changes. [11]⁷

Seasonality

Seasonality occurs when most of a company’s sales occur in one short period of the year, while certain costs are fairly evenly spread throughout the year. For example, the natural gas industry has its greatest sales in the winter months. In contrast, the beverage industry has its greatest sales in the summer months.

The problem of seasonality is related to the expense recognition principle in accounting. Generally, expenses are associated with the revenues they create. In a seasonal business, wide fluctuations in profits occur because off-season sales do not absorb the company's fixed costs (for example, manufacturing, selling, and administrative costs that tend to remain fairly constant regardless of sales or production).

To illustrate why seasonality is a problem, assume the information as shown in [Illustration 24.9](#).

Selling price per unit	\$1
Annual sales for the period (projected and actual) 100,000 units @ \$1	\$100,000
Manufacturing costs	
Variable	10¢ per unit
Fixed	20¢ per unit or \$20,000 for the year
Non-manufacturing costs	
Variable	10¢ per unit
Fixed	30¢ per unit or \$30,000 for the year

[ILLUSTRATION 24.9](#) Data for Seasonality Example

[Illustration 24.10](#) shows sales for four quarters and the year (projected and actual).

		Percent of Sales
1st Quarter	\$ 20,000	20%
2nd Quarter	5,000	5
3rd Quarter	10,000	10
4th Quarter	65,000	65
Total for the year	<u>\$100,000</u>	<u>100%</u>

[ILLUSTRATION 24.10](#) Sales Data for Seasonality Example

Under the present accounting framework, the income statements for the quarters might be as shown in [Illustration 24.11](#).

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed ^a	(4,000)	(1,000)	(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Non-manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed ^b	(7,500)	(7,500)	(7,500)	(7,500)	(30,000)
Income	<u>\$ 4,500</u>	<u>\$(4,500)</u>	<u>\$ (1,500)</u>	<u>\$31,500</u>	<u>\$ 30,000</u>

^a The fixed manufacturing costs are inventoried, so that equal amounts of fixed costs do not appear during each quarter.

^b The fixed non-manufacturing costs are not inventoried, so equal amounts of fixed costs appear during each quarter.

ILLUSTRATION 24.11 Interim Net Income for Seasonal Business—Discrete Approach

An investor who uses the first quarter's results might be misled. If the first quarter's earnings are \$4,500, should this figure be multiplied by four to predict annual earnings of \$18,000? Or, if first-quarter sales of \$20,000 are 20 percent of the predicted sales for the year, would the net income for the year be \$22,500 ($\$4,500 \times 5$)? Both figures are obviously wrong. And the investor may become even more confused after the second quarter's results are reported.

The problem with the conventional approach is that the fixed non-manufacturing costs are not charged in proportion to sales. Some enterprises have avoided this problem by making all fixed non-manufacturing costs follow the sales pattern, as shown in [Illustration 24.12](#).

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(4,000)	(1,000)	(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Non-manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(6,000)	(1,500)	(3,000)	(19,500)	(30,000)
Income	<u>\$ 6,000</u>	<u>\$ 1,500</u>	<u>\$ 3,000</u>	<u>\$19,500</u>	<u>\$ 30,000</u>

ILLUSTRATION 24.12 Interim Net Income for Seasonal Business—Integral Approach

This approach solves some of the problems of interim reporting: Sales in the first quarter are 20 percent of total sales for the year, and net income in the first quarter is 20 percent of total income. In this case, as in the previous example, the investor cannot rely on multiplying any

given quarter by four but can use comparative data or can rely on some estimate of sales in relation to income for a given period.

The greater the degree of seasonality a company experiences, the greater the possibility of distortion. Because there are no definitive guidelines for handling such items as the fixed non-manufacturing costs, variability in income can be substantial. To alleviate this problem, IFRS requires companies subject to material seasonal variations to both disclose the seasonal nature of their business and consider supplementing their interim reports with information for 12-month periods ended at the interim date, for the current and preceding years.

The two illustrations highlight the difference between the **discrete** and **integral** approaches. [Illustration 24.11](#) represents the discrete approach, in which the fixed non-manufacturing expenses are expensed as incurred. [Illustration 24.12](#) shows the integral approach, in which expenses are charged to expense on the basis of some measure of activity.

Evolving Issue

It's Faster But Is It Better?

The profession has developed some rules for interim reporting, but much still has to be done. As yet, it is unclear whether the discrete or the integral method, or some combination of the two, will prevail. Discussion also persists about the independent auditor's involvement in interim reports. Many auditors are reluctant to express an opinion on interim financial information, arguing that the data are too tentative and subjective. On the other hand, more people are advocating some examination of interim reports. As a compromise, auditors generally perform a review of interim financial information. Such a review, which is much more limited in its procedures than the annual audit, provides some assurance that the interim information appears to be in accord with relevant standards.⁸

Analysts and investors want financial information as soon as possible, before it's old news. We may not be far from a continuous database system in which company financial records can be accessed via the Internet. Investors might be able to access a company's financial records whenever they wish and put the information in the format they need. Thus, they could learn about sales slippage, cost increases, or earnings changes as they happen, rather than waiting until after the quarter has ended. A step in this direction is the mandate by the U.S. Securities and Exchange Commission (SEC) for companies to file their financial statements electronically.

The SEC also believes that timeliness of information is extremely important. It gives large public companies just 45 days to complete and disseminate their annual reports. Quarterly reports must be done within 40 days of the close of the quarter, and company executives and shareholders with more than 10 percent of a company's outstanding shares now have just two days to disclose their sale or purchase of shares. Furthermore, the SEC encourages companies to post current, quarterly, and annual reports on their websites—or explain why they don't. The postings would have to be made by the day the company submits the information to the U.S. SEC. A steady stream of information from the company to the investor could be very positive because it might alleviate management's continual concern with short-run interim numbers.

In a recent speech, Hans Hoogervorst, chair of the IASB, made the following comments about the relationship between short-termism and accounting standards:

“I agree with everybody who thinks that the financial markets are plagued by short-termism.

Management can be subject to the temptations of short-termism. Although executive pay is often linked to a company’s financial performance, all too often this performance is measured using unbalanced non-GAAP numbers, defined by management itself. Moreover, because the median tenure for CEOs is no longer than five years, management can be tempted to boost a company’s short-term performance at the expense of long-term results.

Given these incentives for short-termism, high-quality accounting standards are essential. Accounting standards that aim to reflect economic reality as closely as possible help the company and its investors to navigate challenges in a timely fashion.”

While some are calling for the elimination of all interim reporting requirements in response to the negative consequences of short-termism, others are calling for a common sense approach, encouraging standard-setters to consider both costs and benefits. In their view, regulators and standard-setters should be judicious when establishing disclosures that are mandatory every reporting period, and that the hurdle should be high for such requirements.

Benoit, “Time to End Quarterly Reports, Law Firm Says,” *Wall Street Journal* (August 19, 2015); PricewaterhouseCoopers, “The Interim Reporting Model: Time to Get Back to Basics,” *Point of View* (November 2014); and Hans Hoogervorst, “Accounting Standards and the Long Term,” Speech at the 9th Symposium of Accounting Research at *Autorité des Normes Comptables* (December 19, 2019).

Auditor’s and Management’s Reports

LEARNING OBJECTIVE 3

Identify the major disclosures in the auditor’s report and management’s responsibilities for the financial statements.

Auditor’s Report

Another important source of information often overlooked is the **auditor’s report**. An **auditor** is an accounting professional who conducts an independent examination of a company’s accounting data.

Audit Opinion

If satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with IFRS, the auditor expresses an **unmodified opinion**. An example is shown in [Illustration 24.13](#).⁹

Puma SE

Auditor's Report (in part)

Audit Opinions

We have audited the consolidated financial statements of PUMA SE, Herzogenaurach, and its subsidiaries (the Group), which comprise the consolidated balance sheet as at 31 December 2018, the consolidated income statement, the consolidated statement of comprehensive income, the consolidated statement of changes in equity and the consolidated cash flow statement for the financial year from 1 January to 31 December 2018 as well as the notes to the consolidated financial statements, including a summary of significant accounting policies. In addition, we have audited the combined management report of PUMA SE for the financial year from 1 January to 31 December 2018.

In our opinion, on the basis of the knowledge obtained in the audit...

- the accompanying consolidated financial statements comply, in all material respects, with the International Financial Reporting Standards (IFRS) as adopted by the EU, and the additional requirements of German commercial law pursuant to Section 315e (1) German Commercial Code (HGB) and, in compliance with these requirements, give a true and fair view of the assets, liabilities, and financial position of the Group as at 31 December 2018, and of its financial performance for the financial year from 1 January to 31 December 2018, and
- the accompanying combined management report as a whole provides an appropriate view of the Group's position. In all material respects, this combined management report is consistent with the consolidated financial statements, complies with German legal requirements and appropriately presents the opportunities and risks of future development. Our audit opinion on the combined management report does not cover the content of the statement on corporate governance and the corporate governance report specified in Chapter "Corporate Governance Report including the Statement on Corporate Governance pursuant to § 289f and § 315d HGB" of the combined management report.

Pursuant to Section 322 (3) Sentence 1 German Commercial Code (HGB), we declare that our audit has not led to any reservations relating to the legal compliance of the consolidated financial statements and of the combined management report.

Basis for the Audit Opinions

We conducted our audit of the consolidated financial statements and of the combined management report in accordance with Section 317 German Commercial Code (HGB) and the EU Audit Regulation (No. 537 / 2014; referred to subsequently as "EU Audit Regulation") and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW). Our responsibilities under those requirements and principles are further described in the "Auditor's Responsibilities for the Audit of the Consolidated Financial Statements and of

the Combined Management Report” section of our auditor’s report. We are independent of the group entities in accordance with the requirements of European law and German commercial and professional law, and we have fulfilled our other German professional responsibilities in accordance with these requirements. In addition, in accordance with Article 10 (2) Point (f) of the EU Audit Regulation, we declare that we have not provided non-audit services prohibited under Article 5 (1) of the EU Audit Regulation. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions on the consolidated financial statements and on the combined management report.

Auditor’s Responsibilities for the Audit of the Consolidated Financial Statements and of the Combined Management Report

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and whether the combined management report as a whole provides an appropriate view of the Group’s position and, in all material respects, is consistent with the consolidated financial statements and the knowledge obtained in the audit, complies with the German legal requirements and appropriately presents the opportunities and risks of future development, as well as to issue an auditor’s report that includes our audit opinions on the consolidated financial statements and on the combined management report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Section 317 German Commercial Code (HGB) and the EU Audit Regulation and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW) will always detect a material misstatement. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and this combined management report.

OTHER LEGAL AND REGULATORY REQUIREMENTS

Further information pursuant to Article 10 of the EU Audit Regulation

We were elected as group auditor by the annual general meeting on 12 April 2018. We were engaged by the Supervisory Board on 24 October 2018. We have been the group auditor of PUMA SE, Herzogenaurach, without interruption since the financial year 2012.

We declare that the audit opinions expressed in this auditor’s report are consistent with the additional report to the audit committee pursuant to Article 11 of the EU Audit Regulation (long form audit report).

GERMAN PUBLIC AUDITOR RESPONSIBLE FOR THE ENGAGEMENT

The German Public Auditor responsible for the engagement is Stefan Otto.

Munich, 30 January 2019

Deloitte GmbH
Wirtschaftsprüfungsgesellschaft

Christof Stadter
Wirtschaftsprüfer
[German Public Auditor]

ILLUSTRATION 24.13 Auditor's Report

In preparing the report, the auditor followed these reporting standards.

1. The report states whether the financial statements are in accordance with the financial reporting framework (IFRS) and describes the responsibilities of the directors and auditors with respect to the financial statements.
2. The report identifies those circumstances in which the company has not consistently observed such policies in the current period in relation to the preceding period.
3. Users are to regard the informative disclosures in the financial statements as reasonably adequate unless the report states otherwise.
4. The report contains either an expression of opinion regarding the financial statements taken as a whole or an assertion to the effect that an opinion cannot be expressed. When the auditor cannot express an overall opinion, the report should state the reasons. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's examination, if any, and the degree of responsibility being taken.

In most cases, the auditor issues a standard **unmodified or clean opinion**, as shown in [Illustration 24.13](#). That is, the auditor expresses the opinion that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with accepted accounting principles.

Certain circumstances, although they do not affect the auditor's unmodified opinion, may require the auditor to add an explanatory paragraph to the audit report. Some of the more important circumstances are as follows.

1. **Going concern.** The auditor must evaluate whether there is substantial doubt about the entity's **ability to continue as a going concern** for a reasonable period of time, taking into consideration all available information about the future. (Generally, the future is at least, but not limited to, 12 months from the end of the reporting period.) If substantial doubt exists about the company's future, the auditor adds to the report an explanatory note describing the potential problem.
2. **Lack of consistency.** If a company has changed accounting policies or the method of their application in a way that has a material effect on the comparability of its financial statements, the auditor should refer to the change in an explanatory paragraph of the report. Such an explanatory paragraph should identify the nature of the change and refer readers to the note in the financial statements that discusses the change in detail. The auditor's concurrence with a change is implicit unless the auditor takes exception to the change in expressing an opinion as to fair presentation in conformity with accepted accounting principles (IFRS).
3. **Emphasis of a matter.** The auditor may wish to emphasize a matter regarding the financial statements but nevertheless intends to express an unqualified opinion. For

example, the auditor may wish to emphasize that the entity is a component of a larger business enterprise or that it has had significant transactions with related parties. The auditor presents such explanatory information in a separate paragraph of the report.

In some situations, however, the auditor expresses a **modified opinion**. A modified opinion can be either (1) a **qualified** opinion, (2) an **adverse** opinion, or (3) a **disclaimed** opinion.

A **qualified opinion** contains an exception to the standard opinion. Ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole; if it were, an adverse opinion would be rendered. The circumstances in which the auditor may deviate from the standard unqualified report on financial statements are as follows.

1. The scope of the examination is limited or affected by conditions or restrictions.
2. The statements do not fairly present financial position or results of operations because of:
 - a. Lack of conformity with accepted accounting principles and standards.
 - b. Inadequate disclosure.

If confronted with one of the situations noted above, the auditor must offer a qualified opinion. A qualified opinion states that, except for the effects of the matter to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows in conformity with accepted accounting principles.

Illustration 24.14 shows an example of an auditor's report with a modified opinion—in this case, a qualified opinion of **Helio Company** (USA). The auditor modified the opinion because the company used an accounting policy at variance with accepted accounting principles.

Helio Company

Independent Auditor's Report

(Same first and second paragraphs as the standard report)

Helio Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with accepted accounting principles. If these lease obligations were capitalized, property would be increased by \$1,500,000 and \$1,300,000, long-term debt by \$1,400,000 and \$1,200,000, and retained earnings by \$100,000 and \$50,000 as of December 31, in the current and prior year, respectively. Additionally, net income would be decreased by \$40,000 and \$30,000 and earnings per share would be decreased by \$.06 and \$.04, respectively, for the years then ended.

In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of Helio Company, and the results of its operations and its cash flows for the years then ended in conformity with accepted accounting principles.

ILLUSTRATION 24.14 Auditor's Report with Qualified Opinion

An **adverse opinion** is required in any report in which the exceptions to fair presentation are so material that in the independent auditor's judgment, a qualified opinion is not justified. In such a case, the financial statements taken as a whole are not presented in accordance with IFRS. Adverse opinions are rare because most companies change their accounting to conform with IFRS. Market regulators will not permit a company listed on an exchange to have an adverse opinion.

A **disclaimer of an opinion** is appropriate when the auditor has gathered so little information on the financial statements that no opinion can be expressed.

Key Audit Matters

In many countries, auditors are also required to include in their audit report "key audit matters." **Key audit matters (KAMs)** are defined as "those matters that, in the auditor's professional judgement, were of the most significance in the audit of the financial statement of the current period."¹⁰ Illustration 24.15 presents a KAM discussion from the audit report of **Puma** (DEU).

Puma SE

Key Audit Matter Discussion (in part)

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements for the financial year from 1 January to 31 December 2018. These matters were addressed in the context of our audit of the consolidated financial statements as a whole and in forming our audit opinion thereon; we do not provide a separate audit opinion on these matters.

In the following we present the key audit matters we have determined in the course of our audit:

1. Recoverability of goodwill
2. Recoverability of the Cobra brand

Our presentation of these key audit matters has been structured as follows:

- a. Description (including reference to corresponding information in the consolidated financial statements)
- b. Auditor's response

Recoverability of goodwill

a. The consolidated financial statements of PUMA SE show goodwill in the amount of mEUR 245.7 corresponding to approximately 7.7% of the consolidated balance sheet total or 14.3% of the group equity.

Each financial year or in case of respective signs of impairment, goodwill is subject to impairment tests. The impairment tests are performed by PUMA SE by applying the "discounted cash flow method". The valuation is based on the present values of the future cash flows. The company's valuation model is based on future cash flows, which are in turn based on the effective three-year plan and valid at the date the impairment test. This detailed planning phase is extended with the assumption of long-term growth rates. The discounting is performed using the weighted average cost of capital (WACC). Here, the realizable amount is determined on the basis of the value in use and a possible need for impairment is determined by comparing the value in use with the carrying amount.

The outcome of this valuation highly depends on the legal representatives' assessment of future cash flows, the WACC rate applied and the long-term growth rate and therefore involves uncertainties and discretion. Thus, the assessment of the recoverability of the goodwill was classified as a key audit matter within the scope of our audit.

Information on the goodwill, provided by the legal representatives, is disclosed in [Chapter 2](#) "Significant Consolidation, Accounting and Valuation Principles" and in [Chapter 10](#) "Intangible Assets" of the notes to the consolidated financial statements.

b. Within the scope of our risk-oriented audit, we gained an understanding of the systematic approach applied when performing the impairment test. We satisfied ourselves, that the valuation model used adequately presents the requirements of the relevant standards, whether the necessary input data are completely and accurately determined and whether the calculations within the model are performed correctly. We satisfied ourselves of the appropriateness of the future cash flows used for the computation by reconciling these cash flows particularly with the effective three-year plan as well as by interviewing the legal representatives or persons appointed by them with regard to the material assumptions underlying this plan. In addition, we performed a critical assessment of the plan under consideration of general and industry-specific market expectations.

Since a material portion of the value in use results from the forecasted cash flows for the period after the three-year plan (phase of perpetuity), we in particular critically assessed the sustainable growth rate used within the perpetuity phase by means of general and industry-specific market expectations. Since relatively low changes of the discounting rate may materially affect the amount of the realizable value, we have also checked the parameters used when determining the WACC rate involving internal valuation experts from the financial advisory sector and reproduced the computation scheme.

Due to the material significance and taking into account the fact that the assessment of the goodwill also depends on the economic framework conditions that cannot be influenced by the Group, we performed in addition a critical assessment of the sensitivity analyses performed by PUMA SE for the cash-generating units (so-called CGUs) with low headroom (present values compared to the carrying amount) in order to be able to assess a possible impairment risk in case of change of a material valuation assumption.

Source: The full 2018 auditor's report for Puma can be accessed at the company's website; see pages 197-199.

ILLUSTRATION 24.15 Key Audit Matters

According to audit standards, for each KAM that is included in the audit report, the auditor will describe why the matter was considered to be significant and how it was addressed during the audit. The goal of including KAMs in an audit report is to enhance the communication value of the report. In Puma's audit report, the KAM presented is related to goodwill. Many of the accounting topics appearing in this text, including revenue recognition, asset impairments, income taxes, inventory, and contingent liabilities, commonly appear as KAMs.

The audit report should provide useful information to the investor. One investment banker noted, "Probably the first item to check is the auditor's opinion to see whether or not it is a clean one—'in conformity with accepted accounting principles'—or is qualified in regard to differences between the auditor and company management in the accounting treatment of some major item, or in the outcome of some major litigation."

What Do the Numbers Mean?

Heart of the Matter

Financial disclosure is one of a number of institutional features that contribute to healthy security markets. In fact, a recent study of disclosure and other mechanisms (such as civil lawsuits and criminal sanctions) found that good disclosure is the most important contributor to a vibrant market. The study, which compared disclosure and other legal and regulatory elements across 49 countries, found that countries with the best disclosure laws have the biggest securities markets.

Countries with more successful market environments also tend to have regulations that make it relatively easy for private investors to sue companies that provide bad information. While criminal sanctions can be effective in some circumstances, disclosure and other legal and regulatory elements encouraging good disclosure are the most important determinants of highly liquid and deep securities markets. And it does not matter whether we are talking about securities exchanges or bond markets. In fact, at a recent bond dealers' conference, underwriters were told it is best to walk away from deals that do not measure up with respect to the disclosure standards established by regulators.

These findings hold for nations in all stages of economic development, with particular importance for nations that are in the early stages of securities regulation. In addition, countries with fewer market protections likely will benefit the most from adoption of international standards for market regulation and disclosure. The lesson: Disclosure is good for your market.

Management's Reports

Management Commentary

Management commentary helps in the interpretation of the financial position, financial performance, and cash flows of a company. For example, a company such as **Ahold Delhaize** (NLD/BEL) may present, outside the financial statements, a financial review by management that describes and explains the main features of the company's financial performance and financial position, and the principal uncertainties it faces. Such a report may include a review of:

- The main factors and influences determining financial performance, including changes in the environment in which the entity operates, the entity's response to those changes and their effect, and the company's policy for investment to maintain and enhance financial performance, including its dividend policy;
- The company's sources of funding and its targeted ratio of liabilities to equity; and

- The company's resources not recognized in the statement of financial position in accordance with IFRS.

Such commentary also provides an opportunity to understand management's objectives and its strategies for achieving those objectives. Users of financial reports, in their capacity as capital providers, routinely use the type of information provided in management commentary as a tool for evaluating an entity's prospects and its general risks, as well as the success of management's strategies for achieving its stated objectives (see [Underlying Concepts](#)).

Underlying Concepts

The IASB Conceptual Framework notes that management knows more about the company than users and therefore can increase the usefulness of financial information by identifying significant transactions that affect the company and by explaining their financial impact.

For many companies, management commentary is already an important element of their communication with the capital markets, supplementing as well as complementing the financial statements. Management commentary encompasses reporting that is described in various jurisdictions as management's discussion and analysis (MD&A), operating and financial review (OFR), or management's report.

[Illustration 24.16](#) presents an excerpt from the MD&A section of **Lectra's** (FRA) annual report.

Management Discussion and Analysis (in part)

4. RISK FACTORS - INTERNAL CONTROL AND RISK MANAGEMENT PROCEDURES

This chapter describes the main risks facing the Group with regards to the specific characteristics of its business, of its structure and its organization, of its strategy and its business model. It further describes how the Group manages and prevents these risks, depending on their nature.

4.1 Risk factors

For internal control and risk management to be effective, the Group needs to be able to identify and assess the risks to which it is subject, namely the possible occurrence of an event whose consequences could affect the Company's human capital, assets, environment, goals, together with its activity, financial condition, financial results, ability to achieve its goals, or reputation.

The risk factors are divided into two main categories: risks relating to the environment in which the Group operates, and operational risks relating to its activity.

4.1.1 Risks related to the environment in which the Group operates

4.1.1.1 Macroeconomic and geopolitical environment

The solutions marketed by the Group represent a sometimes sizable investment for its customers. Decisions depend in part on the macroeconomic environment and on the state of the sectors of activity in which the customers operate. Customers could scale back or defer their investment decisions when global economic growth slows or when a particular sector suffers a downturn or is in crisis. The Group is consequently exposed to the global economic cycles. The economic development of the countries where the Group operates is mixed, and for some of them their political, economic and monetary situation either has deteriorated or is at risk of doing so.

The key factor protecting the Group against changes in the environment in which the Group operates is its business model, and in particular:

- a distribution of business activity over market sectors and geographic markets with cycles that are different from each other, and the very large number of customers throughout the world;
- a balanced revenue mix between revenues from new systems sales, the Company's growth driver, and revenues from recurring contracts, consumables and parts that provide a cushion in periods of difficult economic conditions.

4.1.1.2 Market risks

Because of its international presence, foreign exchange risk is the main market risk to which the Group is exposed.

Specific foreign exchange risks

The Group is exposed to financial risks resulting from variations in certain currencies against the euro, a substantial proportion of its revenues being denominated in these different currencies.

The impact of these fluctuations on the Group's activity and financial statements is especially significant since the site where final assembly and testing of the equipment it produces and markets takes place, is located in France, and since most of its subcontractors are located in the Eurozone.

Nearly all foreign-currency positions in the Company's statement of financial position are hedged by forward sales and purchases of currencies.

Stock market risks

The Group holds no interests in listed companies other than its own shares held under a Liquidity Agreement (see note 15.2 to the consolidated financial statements), or more generally under the new share repurchase program submitted for approval by the Shareholders' Meeting of April 30, 2019 (see [chapter 10](#)). At December 31, 2018, the Group held 0.1% of its own shares in treasury, solely in the framework of the Liquidity Agreement. Accordingly, it is not subject to stock market risk.

4.1.1.3 Risks related to the effects of climate change

Given its activity, and because of the concentration of its industrial operations at its Bordeaux-Cestas site, the Company does not consider the risks related to the effects of climate change to be material. However, the Company cannot exclude that, in some parts of the world, extreme climate events could have an impact on its customers, their activity and their investment decisions. This risk is minimized, however, by the location of the Group's activity across the entire world.

ILLUSTRATION 24.16 Management's Discussion and Analysis

Alternative Performance Measures

Company management often develops performance measures that are used to evaluate the financial position and performance of the entity and its various components. Some of the measures are based on financial statement items that are defined and required by IFRS. For example, management may regularly review the ratio of debt to equity to gain insight into how the financial leverage of the entity is changing. However, management may also develop measures that do not rely solely on IFRS-defined financial statement items, such as a revenue growth measure based on constant currency, to remove the impact on the change in revenue caused by currency exchange rate changes. Measures not based solely on IFRS-defined measures are referred to as **alternative (or management) performance measures**.

Many companies include these measures in their management commentary because they believe it provides financial statement users with additional insight on how the company is being managed and how it is performing. Current best practice is to provide discussion of each alternative measure that explains how it is calculated, why it is useful to management, and how it is reconciled to the relevant information in the financial statements. [Illustration 24.17](#) presents a selection of the alternative performance measures reported by **Marks and Spencer plc** (GBR).

Marks and Spencer plc

Alternative Performance Measures (in part)

The Group tracks a number of alternative performance measures in managing its business, which are not defined or specified under the requirements of IFRS because they exclude amounts that are included in, or include amounts that are excluded from, the most directly comparable measure calculated and presented in accordance with IFRS, or are calculated using financial measures that are not calculated in accordance with IFRS.

The Group believes that these alternative performance measures, which are not considered to be a substitute for or superior to IFRS measures, provide stakeholders with additional helpful information on the performance of the business. These alternative performance measures are consistent with how the business performance is planned and reported within the internal management reporting to the Board. Some of these alternative performance measures are also used for the purpose of setting remuneration targets.

These alternative performance measures should be viewed as supplemental to, but not as a substitute for, measures presented in the consolidated financial information relating to the Group, which are prepared in accordance with IFRS. The Group believes that these alternative performance measures are useful indicators of its performance. However, they may not be comparable to similarly-titled measures reported by other companies due to differences in the way they are calculated.

APM	Closest equivalent statutory measure	Reconciling items to statutory measure	Definition and purpose
Management gross margin	Gross profit margin	Certain downstream logistics costs	Where referred to throughout the Annual Report, management gross margin is calculated as gross profit on a management basis divided by revenue. The gross profit used in this calculation is based on an internal measure of margin rather than the statutory margin, which excludes certain downstream logistics costs. This is a key internal management metric for assessing category performance.
Net debt	None	Reconciliation of debt – Note 27	Net debt comprises total borrowings (bank, bonds and finance lease liabilities net of accrued interest), net derivative financial instruments that hedge the debt and the Scottish Limited Partnership liability to the Marks and Spencer UK pension scheme less cash, cash equivalents and unlisted and short-term investments.

			This measure is a good indication of the strength of the Group's balance sheet position and is widely used by credit rating agencies.
Free cash flow	Net cash inflow from operating activities	See Financial Review	<p>The cash generated from the Group's operating activities less capital expenditure and interest paid.</p> <p>This measure shows the cash retained by the Group in the year.</p>

ILLUSTRATION 24.17 Alternative Performance Measures

Some companies use the management commentary section of the annual report to disclose company efforts in the area of sustainability. An excerpt from M&S's annual report is presented in **Illustration 24.18**.

Marks and Spencer plc

Plan A Review

Plan A is a multi-year sustainability transformation plan that has been updated several times (2010, 2014 and 2017) to reflect the evolution of our business and the risks and opportunities that social and environmental issues pose for us.

As we go through our business transformation we are currently updating Plan A to reflect our new structures and commercial priorities. This process is not yet complete but as in previous years we are publishing datasets on our most material issues in our 2019 Plan A Performance update.

These datasets show a mixed performance this year, reflecting a period of considerable change across the business. We also offer an audit trail where we highlight existing commitments that we know already we will not be pursuing in the future. Leadership on social and environmental issues remains central to our promise to our customers and colleagues. Once our current comprehensive review of Plan A is completed we will publish our new approach.

Our actions are aligned in support of the United Nations Sustainable Development Goals. Further details about Plan A, our policies, performance and activities can be found online at: marksandspencer.com/plana

Our Goals:

- Places: To help transform 1,000 communities.
- People: To help 10 million people live happier healthier lives.
- Planet: To become a zero-waste business.

Plan A Measurements

Places:

- Transforming Communities: 10 new communities engaged as part of our Helping to Transform Communities Initiative.
- Volunteering Hours: 47,218 hours of work-time volunteering across the UK and Republic of Ireland
- Work Placements: 2,554 to people from disadvantaged groups in the community.

People:

- Empowerment: 83% of our colleagues feel that they are trusted and have the freedom to perform their role effectively.
- Engagement: 81% of our colleagues feel proud to work at M&S and enjoy what they do.

- Enablement: 76% of our colleagues feel that they have the right processes, support and tools to do their job well.

Planet:

- Packaging Recycled: 70% of all M&S product packaging that ends up with customers is classified as being widely recycled in the UK.
- Waste Sent to Landfill: Zero of the waste generative by our stores, offices, and warehouses was sent to the landfill.
- M&S Greenhouse Gas Emissions: 360,000 tons of CO₂ emissions down 16% from last year and down 75% since 2006/2007.

ILLUSTRATION 24.18 Sustainability Reporting

Additional reporting on sustainability is important because it indicates a company's level of social responsibility and can provide insights about potential obligations that are reported in the financial statements.

While there are no formal IFRS requirements for management commentary, the IASB has issued a practice statement that offers a non-binding framework and limited guidance on its application, which can be adapted to the legal and economic circumstances of individual jurisdictions. While the statement is focused on publicly traded entities, to the extent that the framework is deemed applicable, it may be a useful tool for non-exchange traded entities, for example, privately held and state-owned enterprises.¹¹

Management's Responsibilities for Financial Statements

Management is responsible for preparing the financial statements and establishing and maintaining an effective system of internal controls. The auditor provides an independent assessment of whether the financial statements are prepared in accordance with IFRS (see the audit opinion in [Illustration 24.13](#)). An example of the type of disclosure that public companies are now making is shown in [Illustration 24.19](#).

Wm Morrison Supermarkets plc

Statement of Directors' responsibilities in respect of the Annual Report and Financial Statements (in part)

The Directors are responsible for preparing the Annual Report and the Financial Statements in accordance with applicable law and regulation.

Company law requires the Directors to prepare financial statements for each financial period. Under that law the Directors have prepared the Group financial statements in accordance with International Financial Reporting Standards (IFRSs) as adopted by the European Union and Company financial statements in accordance with United Kingdom Generally Accepted Accounting Practice (United Kingdom Accounting Standards, comprising FRS 101 'Reduced Disclosure Framework', and applicable law). Under company law the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the Group and Company and of the profit or loss of the Group and Company for that period. In preparing the financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- state whether applicable IFRSs as adopted by the European Union have been followed for the Group financial statements, and United Kingdom Accounting Standards, comprising FRS 101, have been followed for the Company financial statements, subject to any material departures disclosed and explained in the financial statements;
- make judgements and accounting estimates that are reasonable and prudent; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Group and Company will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to show and explain the Group and Company's transactions and disclose with reasonable accuracy at any time the financial position of the Group and Company and enable them to ensure that the financial statements and the Directors' remuneration report comply with the Companies Act 2006 and, as regards the Group financial statements, Article 4 of the IAS Regulation.

The Directors are also responsible for safeguarding the assets of the Group and Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

The Directors are responsible for the maintenance and integrity of the Group and Company's website. Legislation in the United Kingdom governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

The Directors consider that the Annual Report and accounts, taken as a whole, is fair, balanced and understandable and provides the information necessary for shareholders to assess the Group and Company's position and performance, business model and strategy. ...

Assessment of whether the Annual Report is fair, balanced and understandable

As required by the Code, the Directors confirm that they consider that the Annual Report, taken as a whole, is fair, balanced and understandable and provides the information necessary for shareholders to assess the Group's position and performance, business model and strategy.

When arriving at this position the Board was assisted by a number of processes including the following:

- the Annual Report is drafted by appropriate senior management with overall co-ordination by the Chief Financial and Commercial Officer to ensure consistency across sections;
- an extensive verification process is undertaken to ensure factual accuracy; and
- comprehensive reviews of drafts of the report are undertaken by members of the Executive Committee and other senior management; and the final draft is reviewed by the Audit Committee prior to consideration by the Board.

Responsibility statement We confirm that to the best of our knowledge:

- the financial statements, prepared in accordance with the applicable set of accounting standards, give a true and fair view of the assets, liabilities, financial position and profit or loss of the Group and its subsidiaries included in the consolidation as a whole; and
- the Strategic report includes a fair review of the development of the business and the position of the Group and its subsidiaries included in the consolidation taken as a whole, together with a description of the principal risks and uncertainties that they face.

By order of the Board

12 March 2019

ILLUSTRATION 24.19 Report on Management's Responsibilities

Current Reporting Issues

LEARNING OBJECTIVE 4

Describe other reporting issues related to implementation of the full disclosure principle.

Reporting on Financial Forecasts and Projections

In recent years, the investing public's demand for more and better information has focused on disclosure of company expectations for the future.¹² These disclosures take one of two forms:¹³

- **Financial forecasts.** A **financial forecast** is a set of prospective financial statements that present, to the best of the responsible party's knowledge and belief, a company's

expected financial position, results of operations, and cash flows. The responsible party bases a financial forecast on conditions it expects to exist and the course of action it expects to take.

- **Financial projections.** **Financial projections** are prospective financial statements that present, to the best of the responsible party's knowledge and belief, given one or more *hypothetical assumptions*, an entity's expected financial position, results of operations, and cash flows. The responsible party bases a financial projection on conditions it expects *would* exist and the course of action it expects *would* be taken, given one or more hypothetical assumptions.

The difference between a financial forecast and a financial projection is clear-cut: A forecast provides information on what is **expected** to happen, whereas a projection provides information on what **might** take place but is not necessarily expected to happen.

Whether companies should be required to provide financial forecasts is the subject of intensive discussion with journalists, company executives, market regulators, financial analysts, accountants, and others. Predictably, there are strong arguments on either side. Listed below are some of the arguments.

Arguments for requiring published forecasts:

1. Investment decisions are based on future expectations. Therefore, information about the future facilitates better decisions.
2. Companies already circulate forecasts informally. This situation should be regulated to ensure that the forecasts are available to all investors.
3. Circumstances now change so rapidly that historical information is no longer adequate for prediction.

Arguments against requiring published forecasts:

1. No one can predict the future. Therefore, forecasts will inevitably be wrong. Worse, they may mislead if they convey an impression of precision about the future.
2. Companies may strive only to meet their published forecasts, thereby failing to produce results that are in the shareholders' best interest.
3. If forecasts prove inaccurate, there will be recriminations and probably legal actions.¹⁴
4. Disclosure of forecasts will be detrimental to organizations because they can be read not only by investors, but also by competitors (foreign and domestic).

Auditing standards establish guidelines for the preparation and presentation of financial forecasts and projections.¹⁵ They require accountants to provide (1) a summary of significant assumptions used in the forecast or projection and (2) guidelines for minimum presentation.

To encourage management to disclose prospective financial information, some market regulators have established a **safe harbor rule**. It provides protection to a company that presents an erroneous forecast, as long as the company prepared the forecast on a reasonable basis and disclosed it in good faith.¹⁶ However, many companies note that the safe harbor rule does not work in practice, since it does not cover oral statements, nor has it prevented investor lawsuits.

What Do the Numbers Mean?

Global Forecasts

Great Britain permits financial forecasts, and the results have been fairly successful. Some significant differences do exist between the English business and legal environments, and those of other countries. The British system, for example, does not permit litigation on forecasted information, and a solicitor (lawyer) is not permitted to work on a contingent-fee basis. A typical British forecast adapted from a construction company's report to support a public offering of shares is as follows.

Profits have grown substantially over the past 10 years and directors are confident of being able to continue this expansion.... While the rate of expansion will be dependent on the level of economic activity in Ireland and England, the group is well structured to avail itself of opportunities as they arise, particularly in the field of property development, which is expected to play an increasingly important role in the group's future expansion.

Profits before taxation for the half year ended 30th June were 402,000 pounds. On the basis of trading experiences since that date and the present level of sales and completions, the directors expect that in the absence of unforeseen circumstances, the group's profits before taxation for the year to 31st December will be not less than 960,000 pounds.

No dividends will be paid in respect of the current year. In a full financial year, on the basis of above forecasts (not including full year profits) it would be the intention of the board, assuming current rates of tax, to recommend dividends totaling 40% (of after-tax profits), which will be payable in the next two years.

A general narrative-type forecast might appear as follows.

On the basis of promotions planned by the company for the second half of the fiscal year, net earnings for that period are expected to be approximately the same as those for the first half of the fiscal year, with net earnings for the third quarter expected to make the predominant contribution to net earnings for the second half of the year.

As indicated, the general version is much less specific in its forecasted information.

But such differences probably could be overcome if influential interests cooperated to produce an atmosphere conducive to quality forecasting. What do you think? As an investor, would you prefer the more specific forecast?

Source: See "A Case for Forecasting—The British Have Tried It and Find That It Works," *World* (New York: Peat, Marwick, Mitchell & Co., Autumn 1978), pp. 10–13. In a more recent survey, U.K. companies remain stubbornly backward-looking. Just 5 percent of FTSE 100 companies address the future of the business in their discussion and analysis. See PricewaterhouseCoopers, "Guide to Forward-looking Information: Don't Fear the Future" (2006).

Questions of Liability

What happens if a company does not meet its forecasts? Can the company and the auditor be sued? If a company, for example, projects an earnings increase of 15 percent and achieves

only 5 percent, should shareholders be permitted to have some judicial recourse against the company?

One court case involving **Monsanto Chemical Corporation** (USA) set a precedent. Monsanto predicted that sales would increase 8 to 9 percent and that earnings would rise 4 to 5 percent. In the last part of the year, the demand for Monsanto's products dropped as a result of a business turndown. Instead of increasing, the company's earnings declined. Investors sued the company because the projected earnings figure was erroneous, but a judge dismissed the suit because the forecasts were the best estimates of qualified people whose intents were honest.

As indicated earlier, safe harbor rules are intended to protect companies that provide good-faith projections. However, much concern exists as to how market regulators and the courts will interpret such terms as "good faith" and "reasonable assumptions" when erroneous forecasts mislead users of this information.

Internet Financial Reporting

Most companies now use the power and reach of the Internet to provide more useful information to financial statement readers. All large companies have Internet sites, and a large proportion of companies' websites contain links to their financial statements and other disclosures. The popularity of such reporting is not surprising, as companies can reduce the costs of printing and disseminating paper reports with the use of Internet reporting.

Does Internet financial reporting improve the usefulness of a company's financial reports? Yes, in several ways. First, dissemination of reports via the Internet allows firms **to communicate more easily and quickly with users** than do traditional paper reports. In addition, **Internet reporting allows users to take advantage of tools** such as search engines and hyperlinks to quickly find information about the firm and, sometimes, to download the information for analysis, perhaps in computer spreadsheets. Finally, **Internet reporting can help make financial reports more relevant** by allowing companies to report expanded and more timely disaggregated data than is possible through paper-based reporting. For example, some companies voluntarily report both weekly sales and segment operating data on their websites.

Given the widespread use of the Internet, it is not surprising that organizations are developing new technologies and standards to further enable Internet financial reporting. An example is the increasing use of Extensible Business Reporting Language (**XBRL**), a computer language adapted from the code of the Internet. It "tags" accounting data to correspond to financial reporting items that are reported in the statement of financial position, income statement, the cash flow statement, and even the notes to the financial statements. Once tagged, any company's XBRL data can be easily processed using spreadsheets and other computer programs.

In fact, XBRL is a global language with common tags across countries. To support the use of XBRL by companies reporting under IFRS, the IASB has developed the IFRS taxonomy, a specific set of tags that support financial reporting using XBRL under IFRS guidance. The taxonomy is updated on an annual basis. As more companies prepare their financial reports using XBRL, users will be able to easily search a company's reports, extract and analyze data, and perform financial comparisons within industries and across countries.¹⁷

Fraudulent Financial Reporting

Economic crime is on the rise around the world. A global survey of over 6,000 executives from 54 countries documented the types of economic crimes, as shown in [Illustration 24.20](#).¹⁸

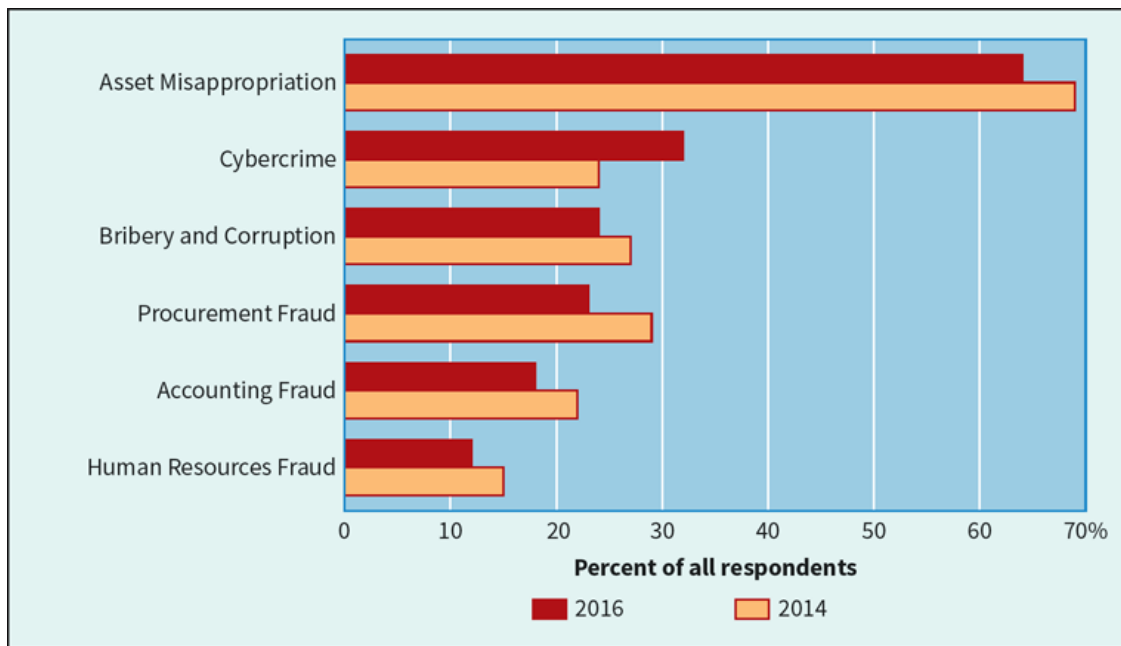

ILLUSTRATION 24.20 Types of Economic Crime

As indicated, asset misappropriation, cybercrime, and bribery and corruption top the list. And while the trend has declined slightly, the incidence of economic crime is stubbornly high, with cybercrime jumping 25 percent. Also important and troubling, accounting fraud remains above 15 percent and is ranked fifth in the economic crime hit parade.

Fraudulent financial reporting is defined as “intentional or reckless conduct, whether act or omission, that results in materially misleading financial statements.”¹⁹ Fraudulent reporting can involve gross and deliberate distortion of company records (such as inventory count tags), or misapplication of accounting policies (failure to disclose material transactions). The frauds reported in the illustration above, and recent events involving such well-known companies as **Parmalat** (ITA), **Mahindra Satyam** (IND), and **Société Générale** (FRA) indicate that more must be done to address this issue.

Causes of Fraudulent Financial Reporting

Fraudulent financial reporting usually occurs because of conditions in a company’s internal or external environment. Influences in the **internal environment** relate to poor internal control systems, management’s poor attitude toward ethics, or perhaps a company’s liquidity or profitability. Those in the **external environment** may relate to industry conditions, overall business environment, or legal and regulatory considerations.

Motivations for fraudulent financial reporting vary. The desire to obtain a higher share price, avoid default on a loan covenant, or achieve personal gain (e.g., additional compensation, promotion) are common incentives. Situational pressures on the company or an individual manager also may lead to fraudulent financial reporting. Examples of these situational pressures include the following.

- **Sudden decreases in revenue or market share** for a single company or an entire industry.
- **Unrealistic budget pressures** may occur when central headquarters arbitrarily determines profit objectives (particularly for short-term results) budgets and without taking actual conditions into account.
- **Financial pressure resulting from bonus plans** that depend on short-term economic performance. This pressure is particularly acute when the bonus is a significant component of the individual's total compensation.

Opportunities for fraudulent financial reporting are present in circumstances when the fraud is easy to commit and when detection is difficult. Frequently, these opportunities arise from:

1. **The absence of a board of directors or audit committee** that vigilantly oversees the financial reporting process.
2. **Weak or non-existent internal accounting controls.** This situation can occur, for example, when a company's revenue system is overloaded as a result of a rapid expansion of sales, an acquisition of a new division, or the entry into a new, unfamiliar line of business.
3. **Unusual or complex transactions** such as the consolidation of two companies, the divestiture or closing of a specific operation, and the purchase and sale of derivative instruments.
4. **Accounting estimates requiring significant subjective judgment** by company management, such as the allowance for loan losses and the estimated liability for warranty expense.
5. **Ineffective internal audit staffs** resulting from inadequate staff size and severely limited audit scope.

A weak ethical climate in a company contributes to these situations. Opportunities for fraudulent financial reporting also increase dramatically when the accounting policies followed in reporting transactions are non-existent, evolving, or subject to varying interpretations.²⁰

As discussed earlier, auditing regulators have issued numerous auditing standards in response to concerns of the accounting profession, the media, and the public.²¹ For example, the standard on fraudulent financial reporting "raises the bar" on the performance of financial statement audits by explicitly requiring auditors to assess the risk of material financial misstatement due to fraud.²²

Criteria for Making Accounting and Reporting Choices

Throughout this text, we have stressed the need to provide information that is useful in predicting the amounts, timing, and uncertainty of future cash flows. To achieve this objective, companies must make judicious choices between alternative accounting concepts, methods, and means of disclosure. You may be surprised by the large number of choices that exist among acceptable alternatives.

You should recognize, however, as indicated in [Chapter 1](#), that accounting is greatly influenced by its environment. It does not exist in a vacuum. Therefore, it is unrealistic to

assume that the profession can entirely eliminate alternative presentations of certain transactions and events. Nevertheless, we are hopeful that by adhering to the Conceptual Framework, the profession will be able to focus on the needs of financial statement users and eliminate diversity in practice where appropriate (see [Underlying Concepts](#)). The IASB's focus on principles-based standards is directed at these very issues. It seeks to develop guidance that will result in accounting and financial reporting that reflects the economic substance of the transactions, not the desired financial result of management. The profession must continue its efforts to develop a sound foundation upon which to build financial standards and practice. As Aristotle said, "The correct beginning is more than half the whole."

Underlying Concepts

The IASB statements on the objective of financial reporting, elements of financial statements, and qualitative characteristics of accounting information are important elements supporting accounting choices that result in high quality financial reporting.

Evolving Issue

Disclosure Overload?

As we discussed in [Chapter 1](#) and throughout the text, IFRS is gaining popularity around the world. The U.S. SEC continues to evaluate whether adoption of IFRS by publicly traded U.S. companies will be mandatory or voluntary. There is some debate on U.S. readiness to make the switch. For example, there are several areas in which the FASB and the IASB must iron out a number of technical accounting issues before they reach a substantially converged set of accounting standards. Here is a list of six important areas yet to be converged.

1. **Error correction.** According to *IAS 8*, it is not always necessary to retrospectively restate financial results when a company corrects errors, especially if the adjustment is impractical or too costly. U.S. GAAP, on the other hand, requires restatements in many error-correction cases.
2. **Death of LIFO.** Last-in, first-out (LIFO) inventory accounting is prohibited under *IAS 2*, so any U.S. company using the method will have to abandon it (and the tax benefits) and move to another methodology. Although LIFO is permitted under U.S. GAAP, the repeal of LIFO for tax purposes is an ongoing debate.
3. **Reversal of impairments.** *IAS 36* permits companies to reverse impairment losses up to the amount of the original impairment when the reason for the charge decreases or no longer exists. However, U.S. GAAP bans reversal.
4. **PP&E valuation.** *IAS 16* allows for the revaluation of property, plant, and equipment, but the entire asset class must be revalued. That means a company can choose to use the revaluation model if the asset class's fair value can be measured reliably. But, it must choose to use one model or the other; both cannot be used at the same time. U.S. GAAP does not allow revaluation.
5. **Component depreciation.** Also under *IAS 16*, companies must recognize and depreciate equipment components separately if the components can be physically separated from the asset and have different useful life spans. In practical terms, that means controllers will have to rely on the operations side of the business to help assess equipment components. U.S. GAAP allows component depreciation, but it is not required.
6. **Development costs.** Based on *IAS 38*, companies are permitted to capitalize development costs as long as they meet six criteria. However, research costs are still expensed. U.S. GAAP requires that all R&D costs be charged to expense when incurred.

Some are already debating what will happen if U.S. companies adopt these new standards. It is almost certain that expanded disclosure will be needed to help users navigate accounting reports upon adoption of IFRS. As one accounting analyst said, "get ready for an avalanche of footnotes." Since using IFRS requires more judgment than using U.S. GAAP, two to three times as many footnotes will be needed to explain the rationales for accounting approaches. So while principles-based standards should

promote more comparability, they also require investors to dig into the disclosures in the footnotes. Otherwise, they risk becoming victims of information overload.

Sources: Marie Leone, “GAAP and IFRS: Six Degrees of Separation,” CFO.com (June 30, 2010); and T. Shumsky, “As Company Disclosures Balloon, It’s Getting Easier to Bury Information,” *Wall Street Journal* (February 26, 2016).

APPENDIX 24A

Basic Financial Statement Analysis

LEARNING OBJECTIVE *5

Explain financial statement analysis.

What would be important in studying a company’s financial statements? The answer depends on your particular interest—whether you are a creditor, shareholder, potential investor, manager, government agency, or labor leader. For example, **short-term creditors** such as banks are primarily interested in the ability of the firm to pay its currently maturing obligations. In that case, you would examine the current assets and their relation to short-term liabilities to evaluate the short-run solvency of the firm.

Bondholders, on the other hand, look more to long-term indicators, such as the enterprise’s capital structure, past and projected earnings, and changes in financial position. **Shareholders**, present or prospective, also are interested in many of the features considered by a long-term creditor. As a shareholder, you would focus on the earnings picture because changes in it greatly affect the market price of your investment. You also would be concerned with the financial position of the company because it affects indirectly the stability of earnings.

The **managers** of a company are concerned about the composition of its capital structure and about the changes and trends in earnings. This financial information has a direct influence on the type, amount, and cost of external financing that the company can obtain. In addition, the company managers find financial information useful on a day-to-day operating basis in such areas as capital budgeting, breakeven analysis, variance analysis and gross margin analysis, and for internal control purposes.

Perspective on Financial Statement Analysis

Readers of financial statements can gather information by examining relationships between items on the statements and identifying trends in these relationships. The relationships are expressed numerically in ratios and percentages, and trends are identified through comparative analysis.

A problem with learning how to analyze statements is that the means may become an end in itself. Analysts could identify and calculate thousands of possible relationships and trends. But knowing only how to calculate ratios and trends without understanding how such information can be used accomplishes little. Therefore, a logical approach to financial statement analysis is necessary, consisting of the following steps.

1. **Know the questions for which you want to find answers.** As indicated earlier, various groups have different types of interest in a company.
2. **Know the questions that particular ratios and comparisons are able to help answer.** These will be discussed in this appendix.
3. **Match 1 and 2 above.** By such a matching, the statement analysis will have a logical direction and purpose.

Several caveats must be mentioned. **Financial statements report on the past.** Thus, analysis of these data is an examination of prior history. When using such information in a decision-making (future-oriented) process, analysts assume that the past is a reasonable basis for predicting the future. This is usually a reasonable approach, but its limitations should be recognized (see [Underlying Concepts](#)).

Underlying Concepts

Because financial statements report on the past, they emphasize the *qualitative characteristic of feedback value*. This feedback value is useful because it can be used to better achieve the *qualitative characteristic of predictive value*.

Also, ratio and trend analyses will help identify a company's present strengths and weaknesses. They may serve as "red flags" indicating problem areas. In many cases, however, such analyses will not reveal **why** things are as they are. Finding answers about "why" usually requires an in-depth analysis and an awareness of many factors about a company that are not reported in the financial statements.

Another caveat is that a **single ratio by itself is not likely to be very useful**. For example, analysts may generally view a current ratio of 2 to 1 (current assets are twice current liabilities) as satisfactory. However, if the industry average is 3 to 1, such a conclusion may be invalid. Even given this industry average, you may conclude that the particular company is doing well if you know the previous year's ratio was 1.5 to 1. Consequently, to derive meaning from ratios, analysts need some standard against which to compare them. Such a standard may come from industry averages, past years' amounts, a particular competitor, or planned levels.

Finally, **awareness of the limitations of accounting numbers used in an analysis** is important. We will discuss some of these limitations and their consequences later in this appendix.

Ratio Analysis

In analyzing financial statement data, analysts use various devices to bring out the comparative and relative significance of the financial information presented. These devices include ratio analysis, comparative analysis, percentage analysis, and examination of related data. No one device is more useful than another. Every situation is different, and analysts often obtain the needed answers only upon close examination of the interrelationships among all the data provided. Ratio analysis is the starting point. Ratios can be classified as follows.

Major Types of Ratios

Liquidity Ratios. Measures of the company's short-run ability to pay its maturing obligations.

Activity Ratios. Measures of how effectively the company is using the assets employed.

Profitability Ratios. Measures of the degree of success or failure of a given company or division for a given period of time.

Coverage Ratios. Measures of the degree of protection for long-term creditors and investors.²³

We have integrated discussions and illustrations about the computation and use of these financial ratios throughout this text. [Illustration 24A.1](#) summarizes all of the ratios presented in the text and identifies the specific chapters that presented that material.

Summary of Ratios Presented in Earlier Chapters		
Ratio	Formula for Computation	Reference
I. Liquidity		
1. Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Chapter 13
2. Quick or acid-test ratio	$\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$	Chapter 13
3. Current cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$	Chapter 5
II. Activity		
4. Accounts receivable turnover	$\frac{\text{Net sales}}{\text{Average net accounts receivable}}$	Chapter 7
5. Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Chapter 9
6. Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	Chapter 11
III. Profitability		
7. Profit margin on sales	$\frac{\text{Net income}}{\text{Net sales}}$	Chapter 11
8. Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	Chapter 11

Summary of Ratios Presented in Earlier Chapters		
9. Return on ordinary share capital—equity	$\frac{\text{Net income} - \text{Preference dividends}}{\text{Average shareholders' equity—ordinary}}$	Chapter 15
10. Earnings per share	$\frac{\text{Net income} - \text{Preference dividends}}{\text{Weighted-average shares outstanding}}$	Chapter 16
11. Payout ratio	$\frac{\text{Cash dividends}}{\text{Net income}}$	Chapter 15
IV. Coverage		
12. Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	Chapter 14
13. Times interest earned	$\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	Chapter 14
14. Cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$	Chapter 5
15. Book value per share	$\frac{\text{Shareholders' equity—ordinary}}{\text{Outstanding shares}}$	Chapter 15

ILLUSTRATION 24A.1 Summary of Financial Ratios

Limitations of Ratio Analysis

The reader of financial statements must understand the basic limitations associated with ratio analysis. As analytical tools, ratios are attractive because they are simple and convenient. But too frequently decision-makers base their decisions on only these simple computations. The ratios are only as good as the data upon which they are based and the information with which they are compared.

One important limitation of ratios is that they generally are **based on historical cost, which can lead to distortions in measuring performance**. Inaccurate assessments of the enterprise's financial condition and performance can result from failing to incorporate fair value information.

Also, investors must remember that **where estimated items (such as depreciation and amortization) are significant, income ratios lose some of their credibility**. For example, income recognized before the termination of a company's life is an approximation. In analyzing the income statement, users should be aware of the uncertainty surrounding the computation of net income. As one analyst aptly noted, "The physicist has long since conceded that the location of an electron is best expressed by a probability curve. Surely an abstraction like earnings per share is even more subject to the rules of probability and risk."²⁴

Probably the greatest limitation of ratio analysis is the **difficult problem of achieving comparability among firms in a given industry**. Achieving comparability requires that the analyst (1) identify basic differences in companies' accounting policies and procedures, and (2) adjust the balances to achieve comparability. Basic differences in accounting usually involve one of the following areas.

1. Inventory valuation (FIFO, average-cost).
2. Depreciation methods, particularly the use of straight-line versus accelerated depreciation.
3. Capitalization versus expensing of certain costs.
4. Investments in ordinary shares carried under the equity method versus fair value.
5. Differing treatments of postretirement benefit costs.
6. Questionable practices of defining discontinued operations, impairments, and unusual items.

The use of these different alternatives can make a significant difference in the ratios computed. For example, at one time **Anheuser-Busch** (now **AB InBev** (BEL)) (USA) noted that if it had used a different inventory method, inventories would have increased approximately \$33,000,000. Such an increase would have a substantive impact on the current ratio. Several studies have analyzed the impact of different accounting methods on financial statement analysis. The differences in income that can develop are staggering in some cases. Investors must be aware of the potential pitfalls if they are to be able to make the proper adjustments (see **Underlying Concepts**).²⁵

Underlying Concepts

Consistency and comparability are important concepts for financial statement analysis. If the principles and assumptions used to prepare the financial statements are continually changing, accurate assessments of a company's progress become difficult.

Finally, analysts should recognize that a **substantial amount of important information** is not included in a company's financial statements. Events such as industry changes, management changes, competitors' actions, technological developments, government actions, and union activities are often critical to a company's successful operation. These events occur continuously, and information about them must come from careful analysis of financial reports in the media and other sources. Indeed, many argue, in what is known as the **efficient-market hypothesis**, that financial statements contain "no surprises" to those engaged in market activities. They contend that the effect of these events is known in the marketplace—and the price of the company's shares adjusts accordingly—well before the issuance of such reports.

Comparative Analysis

Comparative analysis presents the same information for two or more different dates or periods, so that like items may be compared. Ratio analysis provides only a single snapshot, for one given point or period in time. In a comparative analysis, an investment analyst can concentrate on a given item and determine whether it appears to be growing or diminishing year by year, and the proportion of such change to related items. Generally, companies present comparative financial statements. They typically include two years of statement of financial position information and three years of income statement information.

In addition, many companies include in their annual reports five- or 10-year summaries of pertinent data that permit readers to examine and analyze trends. As indicated in IFRS, "the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise." [Illustration 24A.2](#) presents a five-year condensed statement, with additional supporting data, of Anetek Chemical Corporation.

Anetek Chemical Corporation
Condensed Comparative Statements

ILLUSTRATION 24A.2 Condensed Comparative Financial Information

Percentage (Common-Size) Analysis

Analysts also use percentage analysis to help them evaluate and compare companies.

Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. For example, analysts frequently express all items in an income statement as a percentage of sales or sometimes as a percentage of cost of goods sold. They may analyze a statement of financial position on the basis of total assets. Percentage analysis facilitates comparison and is helpful in evaluating the relative size of items or the relative change in items. A conversion of absolute dollar amounts to percentages may also facilitate comparison between companies of different size.

Illustration 24A.3 shows a comparative analysis of the expense section of Anetek Chemical for the last two years.

Anetek Chemical Corporation Horizontal Comparative Analysis (In millions)				
	2022	2021	Difference	% Change Inc. (Dec.)
Cost of sales	\$1,000.0	\$850.0	\$150.0	17.6%
Depreciation and amortization	150.0	150.0	0	0
Selling and administrative expenses	225.0	150.0	75.0	50.0
Interest expense	50.0	25.0	25.0	100.0
Income taxes	100.0	75.0	25.0	33.3

ILLUSTRATION 24A.3 Horizontal Percentage Analysis

This approach, normally called **horizontal analysis**, indicates the proportionate change over a period of time. It is especially useful in evaluating trends because absolute changes are often deceiving.

Another comparative approach, called **vertical analysis**, is the proportional expression of each financial statement item in a given period to a base figure. For example, Anetek Chemical's income statement using this approach appears in **Illustration 24A.4**.

Anetek Chemical Corporation Income Statement (In millions)		
	Amount	Percentage of Total Revenue
Net sales	\$1,600.0	96%
Other revenue	75.0	4
Total revenue	1,675.0	100
Less:		
Cost of sales	1,000.0	60
Depreciation and amortization	150.0	9
Selling and administrative expenses	225.0	13
Interest expense	50.0	3
Income taxes	100.0	6
Total expenses	1,525.0	91
Net income	\$ 150.0	9%

ILLUSTRATION 24A.4 Vertical Percentage Analysis

Vertical analysis is frequently called **common-size analysis** because it reduces all of the statement items to a “common size.” That is, all of the elements within each statement are expressed in percentages of some common number and always add up to 100 percent. Common-size (percentage) analysis reveals the composition of each of the financial statements.

In the analysis of the statement of financial position, common-size analysis answers such questions as: What percentage of the capital structure is represented by equity, current liabilities, or long-term debt? What is the mix of assets (percentage-wise) with which the company has chosen to conduct business? What percentage of current assets is in inventory, receivables, and so forth?

Common-size analysis of the income statement typically relates each item to sales. It is instructive to know what proportion of each sales dollar is absorbed by various costs and expenses incurred by the enterprise.

Analysts may use common-size statements to compare one company’s statements from different years, to detect trends not evident from comparing absolute amounts. Also, common-size statements provide intercompany comparisons regardless of size because they recast financial statements into a comparable common-size format.

APPENDIX 24B

First-Time Adoption of IFRS

LEARNING OBJECTIVE *6

Describe first-time adoption of IFRS.

As discussed in [Chapter 1](#), IFRS is growing in acceptance around the world. For example, recent statistics indicate that over 50 percent of the Global Fortune 500 companies use IFRS. And the chair of the IASB predicts that in the near future IFRS adoption will increase, from more than 115 countries to nearly 150 countries.

When countries accept IFRS for use as accepted accounting policies, companies need guidance to ensure that their first IFRS financial statements contain high-quality information. Specifically, *IFRS 1* requires that information in a company's first IFRS statements (1) be transparent, (2) provide a suitable starting point, and (3) have a cost that does not exceed the benefits. [\[12\]](#)

The overriding principle in converting from national GAAP (e.g., U.S., Chinese, or Russian) to IFRS (the conversion process) is full retrospective application of all IFRS. Retrospective application—recasting prior financial statements on the basis of IFRS—provides financial statement users with comparable information. However, the IASB recognizes that full retrospective application may be difficult in some situations, particularly when information related to past periods is not readily available. In response, the IASB has established guidelines to ensure that financial statement users have high-quality comparable information while balancing the costs and benefits of providing comparable data.

General Guidelines

The objective of the conversion process is to present a set of IFRS financial statements as if the company had always reported on IFRS. To achieve this objective, a company must:

1. Identify the timing for its first IFRS statements.
2. Prepare an opening statement of financial position at the date of transition to IFRS.
3. Select accounting policies that comply with IFRS and apply these policies retrospectively.
4. Consider whether to apply any optional exemptions and apply mandatory exceptions.
5. Make extensive disclosure to explain the transition to IFRS.

Relevant Dates

Once a company decides to convert to IFRS, it must decide on the transition date and the reporting date. The **transition date** is the beginning of the earliest period for which full comparative IFRS information is presented. The **reporting date** is the closing statement of financial position date for the first IFRS financial statements.

To illustrate, assume that FirstChoice Company plans to provide its first IFRS statements for the year ended December 31, 2023. FirstChoice decides to present comparative information for one year only. Therefore, its date of transition to IFRS is January 1, 2022, and its reporting date is December 31, 2023. The timeline for first-time adoption is presented in [Illustration 24B.1](#).

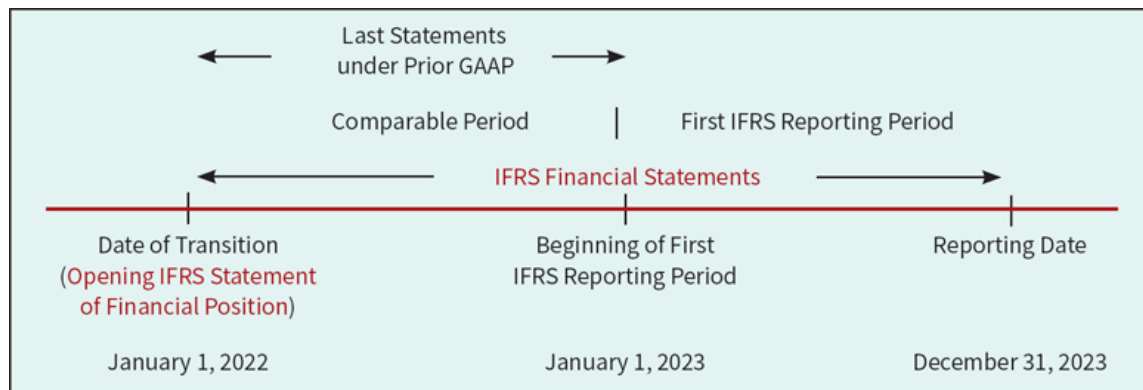

ILLUSTRATION 24B.1 First-Time Adoption Timeline

[Illustration 24B.1](#) shows the following.

1. The **opening IFRS statement of financial position** for FirstChoice on January 1, 2022, serves as the starting point (date of transition) for the company's accounting under IFRS.
2. The first full IFRS statements are shown for FirstChoice for December 31, 2023. In other words, a minimum of two years of IFRS statements must be presented before a conversion to IFRS occurs. As a result, FirstChoice must prepare at least one year of comparative financial statements (for 2022) using IFRS.
3. FirstChoice presents financial statements in accordance with its national GAAP annually to December 31, 2022.

Following this conversion process, FirstChoice provides users of the financial statements with comparable IFRS statements for 2022 and 2023.

Implementation Steps

Opening IFRS Statement of Financial Position

As indicated, to start the conversion process, companies first prepare an opening IFRS statement of financial position. This process involves the following steps.

1. Include all assets and liabilities that IFRS requires.
2. Exclude any assets and liabilities that IFRS does not permit.
3. Classify all assets, liabilities, and equity in accordance with IFRS.
4. Measure all assets and liabilities according to IFRS. [\[13\]](#)

Completing this process requires knowledge of both the prior GAAP used and IFRS (which you have obtained by your study of this text). To illustrate, the following facts for NewWorld SA are presented in [Illustration 24B.2](#).

Opening Statement of Financial Position

Facts: NewWorld SA is preparing to adopt IFRS. It is preparing its opening statement of financial position on January 1, 2022. NewWorld identified the following accounting policy differences between IFRS and the national GAAP it currently uses. Under national GAAP, NewWorld:

1. Expenses development costs of €500,000 on a project that had met economic viability.
2. Does not make a provision for a warranty of €100,000 because the concept of a “constructive obligation” was not recognized.
3. Does not capitalize design fees of €150,000 into the cost of machinery that was put into service at the beginning of 2020 even though those costs were necessary to bring the asset to its working condition. The machinery has a 5-year life, no residual value, and NewWorld uses straight-line depreciation.

Question: How should NewWorld account for these items in its opening IFRS statement of financial position?

Solution:

1. IFRS allows the deferral of development costs in this case (see [Chapter 12](#)), and NewWorld should capitalize these costs.
2. IFRS requires recognition of a warranty provision (see [Chapter 13](#)), so a liability should be recorded.
3. Under IFRS, all costs incurred in bringing an asset to its place and condition for its intended use are capitalized into the cost of the asset.

ILLUSTRATION 24B.2 Policy Changes—Opening Statement of Financial Position

Adjustments as a result of applying IFRS for the first time are generally recorded in retained earnings. NewWorld makes the following entries on January 1, 2022, to adjust the accounts to IFRS treatment.

To capitalize development costs		
Development Costs (or related intangible asset)	500,000	
Retained Earnings		500,000
To recognize warranty liability		
Retained Earnings	100,000	
Warranty Liability		100,000
To recognize cost of machinery		
Equipment	150,000	
Accumulated Depreciation—Equipment		60,000
Retained Earnings		90,000

In each of these situations, NewWorld adjusts retained earnings for the differences between IFRS and national GAAP to ensure that the opening statement of financial position is reported in accordance with IFRS.

After recording these adjustments, NewWorld prepares its opening IFRS statement of financial position. The January 1, 2022, statement of financial position is the starting point (the date of transition). Subsequently, in 2022 and 2023, NewWorld prepares IFRS financial statements internally. At December 31, 2023, it will formally adopt IFRS.²⁶

Exemptions from Retrospective Treatment

In some cases, adjustments relating to prior periods cannot be reasonably determined. In other cases, it is “impracticable” to provide comparable information because the cost of generating the information exceeds the benefits. The IASB therefore targeted exemptions from the general retrospective treatment where it appeared appropriate. Two types of exemptions are provided—required and elective.

Required Exemptions

The Board identified a number of areas in which companies are prohibited from retrospective application in first-time adoption of IFRS:

1. Estimates.
2. Hedge accounting.
3. Non-controlling interests.
4. Derecognition of financial assets and financial liabilities.
5. Classification and measurement of financial assets.

These required exemptions are imposed because implementation of retrospective application in these areas generally requires companies to obtain information that may not be readily available. In these cases, companies may have to re-create information about past transactions with the benefit of hindsight. [15] For example, retrospective application with respect to non-controlling interests requires information about conditions and estimates made at the time of a business combination—often a difficult task. In addition, this exception provides relief for companies that otherwise might have to determine the allocation of

transactions between owners and non-controlling interests in periods prior to the transition period.

Elective Exemptions

In addition to the required exemptions for retrospective treatment, the **IASB identified specific additional areas in which companies may elect exemption from retrospective treatment**. These exemptions provide companies some relief from full retrospective application. This simplifies the preparation of the first-time IFRS statements. Areas addressed in the text are presented in [Illustration 24B.3](#).²⁷

Companies may elect an exemption from retrospective application for one or more of the following areas.

- a. Share-based payment transactions.
- b. Fair value or revaluation as deemed cost.
- c. Leases.
- d. Employee benefits.
- e. Compound financial instruments.
- f. Fair value measurement of financial assets or financial liabilities at initial recognition.
- g. Decommissioning liabilities included in the cost of property, plant, and equipment.
- h. Borrowing costs.

ILLUSTRATION 24B.3 Elective Exemption from Retrospective Treatment

Optional exemption from retrospective treatment is understandable for certain situations. The accounting for the areas identified above generally requires a number of estimates and assumptions at initial recognition and in subsequent accounting. Depending on the accounting under previous GAAP, the information necessary for retrospective application may not be available, or may be obtained only at a high cost. We discuss two examples.²⁸

Exemption Example: Compound Securities

As discussed in [Chapter 16](#), IFRS requires splitting the debt and equity components of convertible debt, using the “with and without” approach. The subsequent accounting for the debt element reflects effective-interest amortization on the estimated debt component. However, if the liability component is no longer outstanding at the date of first-time adoption, retrospective application involves separating two portions of equity. The first portion is in retained earnings and represents the cumulative interest accredited on the liability component. The other portion represents the original equity component. Since the company would not have records on the debt once it is no longer outstanding, it would be costly to re-create that information for retrospective application. As a result, a first-time adopter need not separate these two portions if the liability component is no longer outstanding at the date of transition to IFRS.

Exemption Example: Fair Value or Revaluation as Deemed Cost

Companies can elect to measure property, plant, and equipment at fair value at the transition date and use that fair value as their **deemed cost** in accounting for those assets subsequent to the adoption of IFRS. This exemption may also be applied to intangible assets in certain situations. By using the exemption, companies avoid re-creating depreciation records for property, plant, and equipment, which is a costly exercise for many companies. In fact, in providing this exemption, the IASB noted that reconstructed cost data might be less relevant to users, and less reliable, than current fair value data. The Board therefore concluded that it would allow companies to use fair value as deemed cost. A company that applies the fair value as deemed cost exemption is not required to revalue the assets subsequent to first-time adoption. [\[18\]](#)²⁹

Presentation and Disclosure

Upon first-time adoption of IFRS, a company must present at least one year of comparative information under IFRS. [\[19\]](#) To comply with *IAS 1*, an entity's first IFRS financial statements shall include at least three statements of financial position, two statements of comprehensive income, two separate income statements (if presented), two statements of cash flows, and two statements of changes in equity and related notes, including comparative information. Companies must explain how the transition from previous GAAP to IFRS affected its reported financial position, financial performance, and cash flows.

A company's first IFRS financial statements shall include reconciliations of:

- Its equity reported in accordance with previous GAAP to its equity in accordance with IFRS at the transition date.
- Its total comprehensive income in accordance with IFRS to total comprehensive income in accordance with previous GAAP for the same period. The reconciliation should be prepared for the latest period in the company's most recent annual financial statements under the previous GAAP. [\[20\]](#)

Further, if a statement of cash flows was presented under the company's previous GAAP, any material adjustments should be explained. For example, Jones plc first adopted IFRS in 2023, with a date of transition to IFRS of January 1, 2022. Its last financial statements in accordance with previous GAAP were for the year ended December 31, 2022. An example of Jones plc's reconciling items and their effects on equity for first-time adoption is provided in [Illustration 24B.4](#) for the non-current assets section of the statement of financial position.

Through this disclosure, statement users are able to evaluate the impact of the adoption of IFRS on the statement of financial position. In practice, it may be helpful to include cross-references to accounting policies and supporting analyses that give further explanation of the adjustments shown in the reconciliations.

Jones plc

(amounts in thousands)

First-time adoption effects on equity at January 1, 2022 (date of transition to IFRS)

Note		Previous GAAP	Effect of Transition to IFRS on Equity	IFRS
1	Property, plant, and equipment	£ 8,299	£100	£ 8,399
2	Goodwill	1,220	150	1,370
2	Intangible assets	208	(150)	58
3	Financial assets	3,471	420	3,891
	Total non-current assets	<u>£13,198</u>	<u>£520</u>	<u>£13,718</u>

Notes to the reconciliation at January 1, 2022:

1. Depreciation was influenced by tax requirements in accordance with previous GAAP, but in accordance with IFRS reflects the useful life of the assets. The cumulative adjustment increased the carrying amount of property, plant, and equipment by £100.
2. Intangible assets in accordance with previous GAAP included £150 for items that are transferred to goodwill because they do not qualify for recognition as intangible assets in accordance with IFRS.
3. Financial assets are all classified as non-trading equity investments in accordance with IFRS and are carried at their fair value of £3,891. They were carried at cost of £3,471 in accordance with previous GAAP. The resulting gains of £294 (£420, less related deferred tax of £126) are included in the accumulated other comprehensive income.

ILLUSTRATION 24B.4 Reconciling Items for Equity

Reconciling items for total comprehensive income for Jones with respect to the gross profit section of the income statement are presented in [Illustration 24B.5](#).

Jones plc

(amounts in thousands)

Note		Previous GAAP	Effect of Transition to IFRS	IFRS
1, 2, 3	Revenue	£20,910	£ 0	£20,910
	Cost of sales	(15,283)	(97)	(15,380)
	Gross profit	<u>£ 5,627</u>	<u>£(97)</u>	<u>£ 5,530</u>

Notes to the reconciliation of total comprehensive income for 2022:

1. A pension liability is recognized in accordance with IFRS but was not recognized in accordance with previous GAAP. The pension liability increased by £130 during 2022, which caused increases in cost of sales (£50), distribution costs (£30), and administrative expenses (£50).
2. Cost of sales is higher by £47 in accordance with IFRS because inventories include fixed and variable production overhead in accordance with IFRS but not in accordance with previous GAAP.
3. Depreciation was influenced by tax requirements in accordance with previous GAAP but reflects the useful life of the assets in accordance with IFRS. The effect on the profit for 2022 was not material.

Explanation of material adjustments to the statement of cash flows for 2022:

Income taxes of £133 paid during 2022 are classified as operating cash flows in accordance with IFRS but were included in a separate category of tax cash flows in accordance with previous GAAP. There are no other material differences between the statement of cash flows presented in accordance with IFRS and the statement of cash flows presented in accordance with previous GAAP.

ILLUSTRATION 24B.5 Reconciling Items for Total Comprehensive Income**Summary**

When companies adopt IFRS, they must ensure that financial statement users receive high-quality information in order to compare financial statements prepared under IFRS and previous GAAP. IFRS guidelines are designed to ensure that upon first-time adoption, financial statements are comparable and that the costs and benefits of first-time adoption are effectively managed.

Learning Objectives Review

1 Describe the full disclosure principle and how it is implemented.

The full disclosure principle calls for financial reporting of any financial facts significant enough to influence the judgment of an informed reader. Implementing the full disclosure principle is difficult because the cost can be substantial and the benefits difficult to assess. Disclosure requirements have increased because of (1) the growing complexity of the business environment, (2) the necessity for timely information, and (3) the use of accounting as a control and monitoring device. **Notes in financial statement preparation:** Notes are the accountant's means of amplifying or explaining the items presented in the main body of the statements. Notes can explain in qualitative terms information pertinent to specific financial statement items and can provide supplementary data of a quantitative nature. Common note disclosures include such items as accounting policies; inventories; property, plant, and equipment; creditor claims; contingencies and commitments; and subsequent events.

2 Discuss the disclosure requirements for related-party transactions, subsequent events, major business segments, and interim reporting.

In **related-party transactions**, one party has the ability to significantly influence the actions of the other. As a result, IFRS requires disclosure of the relationship, a description of the transactions including amounts, provisions for doubtful debts, and expenses recognized. For **events after the reporting date**, a company should disclose any transactions that materially affect its financial position or operating situation. Finally, aggregated figures hide important information about the composition of these consolidated figures. There is no way to tell from the consolidated data the extent to which the differing product lines contribute to the company's profitability, risk, and growth potential. As a result, the profession requires **segment information**, with segments identified based on the management approach.

Interim reporting. Interim reports cover periods of less than one year. Two viewpoints exist regarding interim reports. The discrete approach holds that each interim period should be treated as a separate accounting period. The integral approach holds that the interim report is an integral part of the annual report and that deferrals and accruals should take into

consideration what will happen for the entire year. IFRS requires use of the discrete approach.

Companies should use the same accounting policies for interim reports that they use for annual reports. A number of unique reporting problems develop related to the following items: (1) income taxes and (2) seasonality.

3 Identify the major disclosures in the auditor's report and management's responsibilities for the financial statements.

The auditor expresses an unmodified or clean opinion if he or she is satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with IFRS. A qualified opinion contains an exception to the standard opinion; ordinarily, the exception is not of sufficient magnitude to invalidate the statements as a whole.

An adverse opinion is required when the exceptions to fair presentation are so material that a qualified opinion is not justified. A disclaimer of an opinion is appropriate when the auditor has so little information on the financial statements that no opinion can be expressed.

Management commentary complements information reported in the financial statements. This commentary frequently discusses financial aspects of an enterprise's business, such as liquidity, capital resources, results of operations, important risks, and sustainability. Management's responsibility for the financial statements is often indicated in a letter to shareholders in the annual report.

4 Describe other reporting issues related to implementation of the full disclosure principle.

Companies are permitted (not required) to include profit forecasts in their reports. To encourage management to disclose such information, market regulators have issued a safe harbor rule. The rule provides protection to a company that presents an erroneous forecast, as long as it prepared the projection on a reasonable basis and disclosed it in good faith. However, the safe harbor rule has not worked well in practice.

Fraudulent financial reporting is intentional or reckless conduct, whether through act or omission, that results in materially misleading financial statements. Fraudulent financial reporting usually occurs because of poor internal control, management's lax attitude toward ethics, and weak performance.

***5 Explain financial statement analysis.**

Basic **financial statement analysis** involves examining relationships between items on the statements (ratio and percentage analysis) and identifying trends in these relationships (comparative analysis). Analysis is used to predict the future, but ratio analysis is limited because the data are from the past. Also, ratio analysis identifies present strengths and weaknesses of a company, but it may not reveal *why* they are as they are. Although single ratios are helpful, they are not conclusive. For maximum usefulness, analysts must compare them with industry averages, past years, planned amounts, and the like.

Ratios are classified as liquidity ratios, activity ratios, profitability ratios, and coverage ratios. (1) *Liquidity ratio analysis* measures the short-run ability of a company to pay its currently maturing obligations. (2) *Activity ratio analysis* measures how effectively a company is using its assets. (3) *Profitability ratio analysis* measures the degree of success or failure of a company to generate revenues adequate to cover its costs of operation and provide a return to the owners. (4) *Coverage ratio analysis* measures the degree of protection afforded long-term creditors and investors.

Limitations of ratio analysis. Ratios are based on historical cost, which can lead to distortions in measuring performance. Also, where estimated items are significant, ratios lose some of their credibility. In addition, comparability problems exist because companies use different accounting policies and procedures. Finally, analysts and other users must recognize that a substantial amount of important information is not included in a company's financial statements.

Comparative analysis. Companies present comparative data, which generally includes two years of statement of financial position information and three years of income statement information. In addition, many companies include in their annual reports five- to 10-year summaries of pertinent data that permit the reader to analyze trends.

Percentage analysis. Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. Analysts use two approaches. *Horizontal analysis* indicates the proportionate change in financial statement items over a period of time; such analysis is most helpful in evaluating trends. *Vertical analysis* (common-size analysis) is a proportional expression of each item on the financial statements in a given period to a base amount. It analyzes the composition of each of the financial statements from different years (a) to detect trends not evident from the comparison of absolute amounts and (b) to make intercompany comparisons of different-sized enterprises.

***6 Describe first-time adoption of IFRS.**

Upon first-time adoption of IFRS, a company must prepare and present an opening IFRS statement of financial position at the date of transition to IFRS. This is the starting point for its accounting in accordance with IFRS. The general rule for first-time adoption of IFRS is retrospective application. That is, a company shall recast prior financial statements on the basis of IFRS, and use the same accounting policies in its opening IFRS statement of financial position, and throughout all periods presented in its first IFRS financial statements. Those accounting policies shall comply with each IFRS effective at the end of its first IFRS reporting period. Companies provide at least one year of comparative statements prepared in accordance with IFRS.

The opening IFRS statement of financial position. Companies must first prepare the opening IFRS statement of financial position by (1) including all assets and liabilities that IFRS requires; (2) excluding any assets and liabilities that IFRS does not permit; (3) classifying all assets, liabilities, and equity in accordance with IFRS; and (4) measuring all assets and liabilities according to IFRS. Companies must make entries through retrospective application. After recording these adjustments, an opening IFRS statement of financial position is prepared, which will reflect application of the same policies that will be applied in the first IFRS financial statements.

Exemptions to retrospective application in first-time adoption of IFRS. Given the range of changes that might be required for first-time adoption, the IASB considered the cost-benefit of retrospective application and developed targeted exemptions from retrospective treatment, when the amount of the adjustment relating to prior periods cannot be reasonably determined and when it is “impracticable” to provide comparable information. These exemptions are classified as required (in which a company is prohibited from retrospective application) and optional.

Presentation and disclosure requirements. Upon first-time adoption of IFRS, a company presents at least one year of comparative information under IFRS. A company’s first IFRS financial statements shall include at least three statements of financial position, two statements of comprehensive income, two separate income statements (if presented), two statements of cash flows, and two statements of changes in equity and related notes, including comparative information. Companies also must explain how the transition from previous GAAP to IFRS affected its reported financial position, financial performance, and cash flows. A company’s first IFRS financial statements shall include reconciliations of its equity and total comprehensive income in accordance with previous GAAP to its equity and comprehensive income in accordance with IFRS.

Practice Problem

Konetzke AG, a publicly traded company, is preparing the financial data which it will issue to its shareholders for the fiscal year ending December 31, 2022. Your job as a member of the accounting team is to help determine the appropriate disclosures and any other potential year-end adjustments. You have collected the following information.

1. Konetzke is involved in four separate industries. The following information is available for each of the four industries. Konetzke wonders which segments are reportable, under IFRS.

Operating Segment	Total Revenue	Operating Profit (Loss)	Identifiable Assets
Badger	€ 60,000	€15,000	€167,000
Spartan	10,000	1,500	83,000
Cornhusker	23,000	(2,000)	21,000
Hawkeye	9,000	1,000	19,000
	<u>€102,000</u>	<u>€15,500</u>	<u>€290,000</u>

2. On February 3, 2023, one of Konetzke’s customers declared bankruptcy. At December 31, 2022, this company owed Konetzke €15,000, of which €3,000 was paid in January 2023.
3. On January 18, 2023, one of the three major plants of the client burned down.

4. On January 23, 2023, a strike was called at one of Konetzke's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
5. On February 1, 2023, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of €1,200,000 of preference shares.

Instructions

- a. State in each case how the 2022 financial statements would be affected, if at all. Financial statements will be authorized for issuance on February 15, 2023.
- b. Moving ahead to the first quarter of 2023, your team has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales revenue	€30,000
Cost of goods sold	18,000
Variable selling expenses	500
Fixed selling expenses	1,500

Included in the fixed selling expenses was the single lump-sum payment of €800 for Internet advertisements for the entire year. Address the following with respect to the first quarter report. (1) Explain whether Konetzke should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period. (2) State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Konetzke's quarterly report prepared for the first quarter of 2023.

Solution

- a. 1. Konetzke first conducts the following three tests:

Revenue test: $.10 \times €102,000 = €10,200$. The Badger (€60,000) and Cornhusker (€23,000) segments both meet this test.

Operating profit (loss) test: $.10 \times (€15,000 + €1,500 + €1,000) = €1,750$. The Badger (€15,000) and Cornhusker (€2,000 absolute amount) segments both meet this test.

Identifiable assets test: $.10 \times €290,000 = €29,000$. The Badger (€167,000) and Spartan (€83,000) segments both meet this test.

Thus, Konetzke has three reportable segments for which segment information should be disclosed.

Regarding the subsequent events:

2. The financial statements should be adjusted for the expected loss pertaining to the remaining receivable of €12,000. Such adjustment should reduce accounts receivable to their realizable value as of December 31, 2022.
3. Disclose the fire loss in a footnote to the statement of financial position and refer to it in connection with the income statement, since earnings power is presumably

affected.

4. Strikes are considered general knowledge and therefore disclosure is not required. Many auditors, however, would encourage disclosure in all cases.

5. Report the action of the new share issue in a footnote to the statement of financial position.

- b. 1. The company should report its quarterly results as if each interim period is discrete.
2. The company's revenue and expenses would be reported as follows on its quarterly report prepared for the first quarter of 2023:

Sales revenue	€30,000
Cost of goods sold	18,000
Variable selling expenses	500
Fixed selling expenses	1,500

Sales revenue and cost of goods sold receive the same treatment as if this were an annual report. Costs and expenses other than product costs should be charged to expense in interim periods as incurred (and not allocated among interim periods.)

If the selling expenses reflect seasonality, one-fourth of Internet advertising could be disclosed as an expense in the first quarter, assuming the advertising is constant throughout the year. These costs can be deferred within the fiscal period if the benefits of the expenditure clearly extend beyond the interim period in which the expenditure is made. A revised quarterly report would appear as follows.

Sales revenue	€30,000
Cost of goods sold	18,000
Variable selling expenses	500
Fixed selling expenses	
Advertising (€800 ÷ 4)	200
Other (€1,500 – €800)	700

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. What are the major advantages of notes to the financial statements? What types of items are usually reported in notes?
2. What is the full disclosure principle in accounting? Why has disclosure increased substantially in the last 10 years?

- 3.** The IASB requires a reconciliation between the effective tax rate and the government's statutory rate. Of what benefit is such a disclosure requirement?
- 4.** What type of disclosure or accounting do you believe is necessary for the following items?
- Because of a general increase in the number of labor disputes and strikes, both within and outside the industry, there is an increased likelihood that a company will suffer a costly strike in the near future.
 - A company reports a loss on a discontinued operation (net of tax) correctly on the income statement. No other mention is made of this item in the annual report.
 - A company expects to recover a substantial amount in connection with a pending refund claim for a prior year's taxes. Although the claim is being contested, counsel for the company has confirmed the client's expectation of recovery.

5. The following information was described in a note of Canon Packing.

"During August, Holland Products AG purchased 311,003 ordinary shares of the Company, which constitutes approximately 35% of the shares outstanding. Holland has since obtained representation on the Board of Directors."

"An affiliate of Holland Products AG acts as a food broker for Canon Packing in the greater Amsterdam marketing area. The commissions for such services after August amounted to approximately €20,000." Why is this information disclosed?

- 6.** What are the major types of subsequent events? Indicate how each of the following "subsequent events" would be reported.
- Collection of a note written off in a prior period.
 - Issuance of a large preference share offering.
 - Acquisition of a company in a different industry.
 - Destruction of a major plant in a flood.
 - Death of the company's chief executive officer (CEO).
 - Additional wage costs associated with settlement of a 4-week strike.
 - Settlement of an income tax case at considerably more tax than anticipated at year-end.
 - Change in the product mix from consumer goods to industrial goods.

7. What are diversified companies? What accounting problems are related to diversified companies?

8. What quantitative materiality test is applied to determine whether a segment is significant enough to warrant separate disclosure?

9. Identify the segment information that is required to be disclosed by IFRS.

10. What is an operating segment, and when can information about two operating segments be aggregated?

11. The controller for Lafayette AG recently commented, "If I have to disclose our segments individually, the only people who will gain are our competitors and the only people that will lose are our present shareholders." Evaluate this comment.

- 12.** What are interim reports? Why is a complete set of financial statements often not provided with interim data?
- 13.** What are the accounting problems related to the presentation of interim data?
- 14.** Dierdorf SE, a closely held company, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when an inventory write-down is recorded. What problems are encountered with inventories when quarterly data are presented?
- 15.** What approaches have been suggested to overcome the seasonality problem related to interim reporting?
- 16.** An article in the financial press entitled “Important Information in Annual Reports This Year” noted that annual reports include a management commentary section. What would this section contain?
- 17.** “The financial statements of a company are management’s, not the accountant’s.” Discuss the implications of this statement.
- 18.** Olga Conrad, a financial writer, noted recently, “There are substantial arguments for including earnings projections in annual reports and the like. The most compelling is that it would give anyone interested something now available to only a relatively select few—like large shareholders, creditors, and attentive bartenders.” Identify some arguments against providing earnings projections.
- 19.** The following comment appeared in the financial press: “Inadequate financial disclosure, particularly with respect to how management views the future and its role in the marketplace, has always been a stone in the shoe. After all, if you don’t know how a company views the future, how can you judge the worth of its corporate strategy?” What are some arguments for reporting earnings forecasts?
- 20.** What is the difference between an auditor’s unmodified opinion, or “clean” opinion, and a modified one?
- 21.** Jane Ellerby and Sam Callison are discussing the recent fraud that occurred at LowRental Leasing plc. The fraud involved the improper reporting of revenue to ensure that the company would have income in excess of \$1 million. What is fraudulent financial reporting, and how does it differ from an embezzlement of company funds?
- *22.** “The significance of financial statement data is not in the amount alone.” Discuss the meaning of this statement.
- *23.** A close friend of yours, who is a history major and who has not had any college courses or experience in business, is receiving the financial statements from companies in which he has minor investments (acquired for him by his now-deceased father). He asks you what he needs to know to interpret and evaluate the financial statement data that he is receiving. What would you tell him?
- *24.** Distinguish between ratio analysis and percentage analysis relative to the interpretation of financial statements. What is the value of these two types of analyses?
- *25.** In calculating inventory turnover, why is cost of goods sold used as the numerator? As the inventory turnover increases, what increasing risk does the business assume?
- *26.** What is the relationship of the asset turnover to the return on assets?

- *27.** Explain the meaning of the following terms: (a) common-size analysis, (b) vertical analysis, (c) horizontal analysis, and (d) percentage analysis.
- *28.** Briefly explain the need for a standard on first-time adoption of IFRS.
- *29.** How are the date of transition and the date of reporting determined in first-time adoption of IFRS?
- *30.** What are the characteristics of high-quality information in a company's first IFRS financial statements?
- *31.** What are the steps to be completed in preparing the opening IFRS statement of financial position?
- *32.** What is the rationale for exemptions to retrospective application at first-time adoption of IFRS?
- *33.** Briefly describe the required exemptions to retrospective application at first-time adoption of IFRS.
- *34.** What are elective exemptions to retrospective application at first-time adoption of IFRS?
- *35.** Briefly describe the deemed cost exemption to retrospective application at first-time adoption of IFRS.
- *36.** If a company elects the deemed cost exemption, must it continue to use revaluation accounting subsequent to first-time adoption? Explain.
- *37.** Briefly describe the presentation and disclosure requirements for first-time adoption of IFRS.

Brief Exercises

BE24.1 (LO 1) An annual report of Crestwood Industries states, "The company and its subsidiaries have long-term leases expiring on various dates after December 31, 2022. Amounts payable under such commitments, without reduction for related rental income, are expected to average approximately €5,711,000 annually for the next 3 years. Related rental income from certain subleases to others is estimated to average €3,094,000 annually for the next 3 years." What information is provided by this note?

BE24.2 (LO 1) An annual report of Barclays plc states, "Net income per share is computed based upon the average number of shares of all classes outstanding. Additional shares of ordinary shares may be issued or delivered in the future on conversion of outstanding convertible debentures, exercise of outstanding employee share options, and for payment of deferred supplemental compensation. Had such additional shares been outstanding, net income per share would have been reduced by 10¢ in the current year and 3¢ in the previous year.... As a result of share transactions by the company during the current year (primarily the purchase of Class A shares from Barclays Foundation), net income per share was increased by 6¢." What information is provided by this note?

BE24.3 (LO 2) Morlan SA is preparing its December 31, 2022, financial statements. Two events that occurred between December 31, 2022, and March 10, 2023, when the statements were authorized for issue, are described below.

1. A liability, estimated at €160,000 at December 31, 2022, was settled on February 26, 2023, at €170,000.
2. A flood loss of €80,000 occurred on March 1, 2023.

What effect do these subsequent events have on 2022 net income?

BE24.4 (LO 2) Tina Bailey, an intermediate accounting student, was heard to remark after a class discussion on segment reporting, “All this is very confusing to me. First we are told that there is merit in presenting the consolidated results, and now we are told that it is better to show segmental results. I wish they would make up their minds.” Evaluate this comment.

BE24.5 (LO 2) Foley Group has seven operating segments with total revenues as follows (in millions).

Penley	¥600	Cheng	¥225
Konami	650	Takuhi	200
KSC	250	Molina	700
Red Moon	275		

Based only on the revenues test, which operating segments are reportable?

BE24.6 (LO 2) Operating profits (losses) for the seven operating segments of Foley Group are as follows (in millions).

Penley	¥ 90	Cheng	¥ (20)
Konami	(40)	Takuhi	34
KSC	25	Molina	150
Red Moon	50		

Based only on the operating profit (loss) test, which industry segments are reportable?

BE24.7 (LO 2) Identifiable assets for the seven industry segments of Foley Group are as follows (in millions).

Penley	¥500	Cheng	¥200
Konami	550	Takuhi	150
KSC	250	Molina	475
Red Moon	400		

Based only on the identifiable assets test, which industry segments are reportable?

***BE24.8 (LO 5)** Answer each of the questions in the following unrelated situations.

- a. The current ratio of a company is 5:1 and its acid-test ratio is 1:1. If the inventories and prepaid items amount to \$500,000, what is the amount of current liabilities?
- b. A company had an average inventory last year of \$200,000 and its inventory turnover was 5 times. If sales volume and unit cost remain the same this year as last and inventory turnover is 8 times this year, what will average inventory have to be during the current year?

- c. A company has current assets of \$90,000 (of which \$40,000 is inventory and prepaid items) and current liabilities of \$40,000. What is the current ratio? What is the acid-test ratio? If the company borrows \$15,000 cash from a bank on a 120-day loan, what will its current ratio be? What will the acid-test ratio be?
- d. A company has current assets of \$600,000 and current liabilities of \$240,000. The board of directors declares a cash dividend of \$180,000. What is the current ratio after the declaration but before payment? What is the current ratio after the payment of the dividend?

***BE24.9 (LO 5)** Heartland plc's budgeted sales and budgeted cost of goods sold for the coming year are £144,000,000 and £99,000,000, respectively. Short-term interest rates are expected to average 10%. If Heartland can increase inventory turnover from its present level of 9 times a year to a level of 12 times per year, compute its expected cost savings for the coming year.

***BE24.10 (LO 6)** Becker Ltd. is planning to adopt IFRS and prepare its first IFRS financial statements at December 31, 2023. What is the date of Becker's opening statement of financial position, assuming one year of comparative information? What periods will be covered in Becker's first IFRS financial statements?

***BE24.11 (LO 6)** Bohmann Company is preparing its opening IFRS statement of financial position on January 1, 2022. Under its previous GAAP, Bohmann had capitalized all development costs of \$50,000. Under IFRS, only \$10,000 of the costs related to a patent were incurred after the project met economic viability thresholds. Prepare the entry (if any) needed to record this adjustment at the date of transition.

***BE24.12 (LO 6)** Stengel plc is preparing its opening IFRS statement of financial position on January 1, 2022. Under its previous GAAP, Stengel used the LIFO inventory method. Under LIFO, its inventory is reported at £250,000; under FIFO, which Stengel will use upon adoption of IFRS, the inventory is valued at £265,000. Prepare the entry (if any) needed to record this adjustment at the date of issuance.

***BE24.13 (LO 6)** Latta Inc. is preparing its opening IFRS statement of financial position on January 1, 2022. Under its previous GAAP, Latta had deferred certain advertising costs amounting to \$37,000. Prepare the entry (if any) needed to record this adjustment at the date of issuance.

***BE24.14 (LO 6)** Smitz Spa is preparing its opening IFRS statement of financial position on January 1, 2022. Under its previous GAAP, Smitz did not record a provision for litigation in the amount of €85,000 that would be recognized under IFRS. Prepare the entry (if any) needed to record this adjustment at the date of issuance.

***BE24.15 (LO 6)** Porter Company is evaluating the following assets to determine whether it can use fair value as deemed cost in a first-time adoption of IFRS.

1. Biological assets related to agricultural activity for which there is *no* active market.
2. Intangible assets for which there is *no* active market.
3. Any individual item of property, plant, and equipment.
4. Financial assets that are *not* held for trading.

For each asset type, indicate if the deemed cost exemption can be used.

Exercises

E24.1 (LO 2) (Subsequent Events) Keystone Corporation issued its financial statements for the year ended December 31, 2022, on March 10, 2023. The following events took place before the statements were authorized for issue early in 2023.

- a. On January 10, 10,000 ordinary shares of \$5 par value were issued at \$66 per share.
- b. On March 1, Keystone determined after negotiations with the taxing authorities that income taxes payable for 2022 should be \$1,320,000. At December 31, 2022, income taxes payable were recorded at \$1,100,000.

Instructions

Discuss how the preceding subsequent events should be reflected in the 2022 financial statements.

E24.2 (LO 2) (Subsequent Events) Consider the following subsequent events.

_____	1. Settlement of a tax case at a cost considerably in excess of the amount expected at year-end.
_____	2. Introduction of a new product line.
_____	3. Loss of assembly plant due to fire.
_____	4. Sale of a significant portion of the company's assets.
_____	5. Retirement of the company president.
_____	6. Issuance of a significant number of ordinary shares.
_____	7. Loss of a significant customer.
_____	8. Prolonged employee strike.
_____	9. Material loss on a year-end receivable because of a customer's bankruptcy.
_____	10. Hiring of a new president.

	11. Settlement of prior year's litigation against the company.
	12. Merger with another company of comparable size.

Instructions

For each event, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

E24.3 (LO 2) (Segment Reporting) LaGreca SpA is involved in four separate industries. The following information is available for each of the four segments.

Operating Segment	Total Revenue	Operating Profit (Loss)	Identifiable Assets
W	€ 60,000	€15,000	€167,000
X	10,000	1,500	83,000
Y	23,000	(2,000)	21,000
Z	9,000	1,000	19,000
	<u>€102,000</u>	<u>€15,500</u>	<u>€290,000</u>

Instructions

Determine which of the operating segments are reportable based on the:

- Revenue test.
- Operating profit (loss) test.
- Identifiable assets test.

***E24.4 (LO 5) (Ratio Computation and Analysis; Liquidity)** As loan analyst for Murray Bank, you have been given the following information.

	Plunkett plc	Herring Ltd.
<u>Assets</u>		
Other assets	£ 500,000	£ 612,000
Current assets		
Inventories	570,000	518,000
Receivables	220,000	302,000
Cash	120,000	320,000
Total current assets	<u>910,000</u>	<u>1,140,000</u>
Total assets	<u>£1,410,000</u>	<u>£1,752,000</u>
<u>Equity and Liabilities</u>		
Share capital and retained earnings	£ 710,000	£ 902,000
Non-current liabilities	400,000	500,000
Current liabilities	<u>300,000</u>	<u>350,000</u>
Total equity and liabilities	<u>£1,410,000</u>	<u>£1,752,000</u>

Annual sales	£ 930,000	£1,500,000
Rate of gross profit on sales	30%	40%

Each of these companies has requested a loan of £50,000 for 6 months with no collateral offered. Since your bank has reached its quota for loans of this type, only one of these requests is to be granted.

Instructions

Judging from the information above, which of the two companies would you recommend as the better risk and why? Assume that the ending account balances are representative of the entire year.

***E24.5 (LO 5) (Analysis of Given Ratios)** Robbins Company is a wholesale distributor of professional equipment and supplies. The company's sales have averaged about \$900,000 annually for the 3-year period 2020–2022. The firm's total assets at the end of 2022 amounted to \$850,000.

The president of Robbins Company has asked the controller to prepare a report that summarizes the financial aspects of the company's operations for the past 3 years. This report will be presented to the board of directors at its next meeting.

In addition to comparative financial statements, the controller has decided to present a number of relevant financial ratios which can assist in the identification and interpretation of trends. At the request of the controller, the accounting staff has calculated the following ratios for the 3-year period 2020–2022.

	2020	2021	2022
Current ratio	1.80	1.89	1.96
Acid-test (quick) ratio	1.04	0.99	0.87
Accounts receivable turnover	8.75	7.71	6.42
Inventory turnover	4.91	4.32	3.72
Debt to assets ratio	51.0%	46.0%	41.0%
Long-term debt to assets ratio	31.0%	27.0%	24.0%
Sales to fixed assets (fixed asset turnover)	1.58	1.69	1.79
Sales as a percent of 2020 sales	1.00	1.03	1.05
Gross margin percentage	36.0%	35.1%	34.6%
Net income to sales	6.9%	7.0%	7.2%
Return on assets	7.7%	7.7%	7.8%
Return on equity	13.6%	13.1%	12.7%

In preparing the report, the controller has decided first to examine the financial ratios independent of any other data to determine whether the ratios themselves reveal any significant trends over the 3-year period.

Instructions

- The current ratio is increasing while the acid-test (quick) ratio is decreasing. Using the ratios provided, identify and explain the contributing factor(s) for this apparently

divergent trend.

- b. In terms of the ratios provided, what conclusion(s) can be drawn regarding the company's use of financial leverage during the 2020–2022 period?
- c. Using the ratios provided, what conclusion(s) can be drawn regarding the company's net investment in plant and equipment?

***E24.6 (LO 5) (Ratio Analysis)** Howser Ltd. is a manufacturer of electronic components and accessories with total assets of £20,000,000. Selected financial ratios for Howser and the industry averages for firms of similar size are presented below.

	Howser			2022 Industry Average
	2020	2021	2022	
Current ratio	2.09	2.27	2.51	2.24
Quick ratio	1.15	1.12	1.19	1.22
Inventory turnover	2.40	2.18	2.02	3.50
Net sales to equity	2.75	2.80	2.95	2.85
Net income to equity	0.14	0.15	0.17	0.11
Total liabilities to equity	1.41	1.37	1.44	0.95

Howser is being reviewed by several entities whose interests vary, and the company's financial ratios are a part of the data being considered. Each of the parties listed below must recommend an action based on its evaluation of Howser's financial position.

Citizens National Bank. The bank is processing Howser's application for a new 5-year term note. Citizens National has been Howser's banker for several years but must reevaluate the company's financial position for each major transaction.

Charleston Company. Charleston is a new supplier to Howser and must decide on the appropriate credit terms to extend to the company.

Shannon Financial. A brokerage firm specializing in the shares of electronics firms that are sold over-the-counter, Shannon Financial must decide if it will include Howser in a new fund being established for sale to Shannon Financial's clients.

Working Capital Management Committee. This is a committee of Howser's management personnel chaired by the chief operating officer. The committee is charged with the responsibility of periodically reviewing the company's working capital position, comparing actual data against budgets, and recommending changes in strategy as needed.

Instructions

- a. Describe the analytical use of each of the six ratios presented above.
- b. For each of the four entities described above, identify two financial ratios, from those ratios presented in [Illustration 24A.1](#), that would be most valuable as a basis for its decision regarding Howser.
- c. Discuss what the financial ratios presented in the question reveal about Howser. Support your answer by citing specific ratio levels and trends as well as the

interrelationships between these ratios.

***E24.7 (LO 6) (Opening Statement of Financial Position)** Goodman AG is preparing to adopt IFRS. In preparing its opening statement of financial position on January 1, 2022, Goodman identified the following accounting policy differences between IFRS and its previous GAAP.

1. Under its previous GAAP, Goodman classified proposed dividends of €45,000 as a current liability.
2. Goodman had deferred advertising costs of €500,000.

Instructions

- a. Prepare the journal entries needed (if any) before preparation of Goodman's opening statement of financial position.
- b. Determine the net change in equity from these adjustments.

***E24.8 (LO 6) (Opening Statement of Financial Position, Disclosure)** Lombardo Group is preparing to adopt IFRS. It is preparing its opening statement of financial position on January 1, 2022. Lombardo identified the following accounting policy differences between IFRS and its previous GAAP.

1. Lombardo had not made a provision for a warranty of €75,000 under previous GAAP because the concept of a "constructive obligation" was not recognized.
2. Under previous GAAP, €60,000 paid for certain architect fees was not capitalized into the cost of a building that was put into service at the beginning of 2021, even though those costs were necessary to bring the asset to its working condition. The building has a 40-year life and no residual value, and Lombardo uses straight-line depreciation.

Instructions

- a. Prepare the journal entries needed (if any) before preparation of Lombardo's opening statement of financial position.
- b. Determine the net change in equity from these adjustments.
- c. Briefly describe the disclosures that Lombardo will make related to the adjustments in its first IFRS financial statements.

Problems

P24.1 (LO 2) (Subsequent Events) Your firm has been engaged to examine the financial statements of Almaden AG for the year 2022. The bookkeeper who maintains the financial records has prepared all the unaudited financial statements for the company since its organization on January 2, 2017. The client provides you with the following information.

Almaden AG Statement of Financial Position December 31, 2022	
Assets	Liabilities

Almaden AG Statement of Financial Position December 31, 2022			
		Equity	€4,650,600
Other assets	€5,171,400	Non-current liabilities	1,439,500
Current assets	<u>1,881,100</u>	Current liabilities	<u>962,400</u>
	<u>€7,052,500</u>		<u>€7,052,500</u>

Current assets include:		
Cash (restricted in the amount of €300,000 for plant expansion)		€ 571,000
Investments in land		185,000
Accounts receivable less allowance of €30,000		480,000
Inventories (weighted-average)		<u>645,100</u>
		<u>€ 1,881,100</u>
Other assets include:		
Prepaid expenses		€ 62,400
Plant and equipment less accumulated depreciation of €1,430,000		4,130,000
Notes receivable (short-term)		162,300
Goodwill		252,000
Land		<u>564,700</u>
		<u>€ 5,171,400</u>
Current liabilities include:		
Accounts payable		€ 510,000
Notes payable (due 2025)		157,400
Estimated income taxes payable		145,000
Share premium—ordinary		<u>150,000</u>
		<u>€ 962,400</u>
Non-current liabilities include:		
Unearned revenue		€ 489,500
Dividends payable (cash)		200,000
8% bonds payable (due May 1, 2027)		<u>750,000</u>
		<u>€ 1,439,500</u>
Equity includes:		
Retained earnings		€ 2,810,600
Share capital—ordinary, par value €10; authorized 200,000 shares, 184,000 shares issued		<u>1,840,000</u>
		<u>€ 4,650,600</u>

The supplementary information below is also provided.

1. On May 1, 2022, the company issued at par €750,000 of bonds to finance plant expansion. The long-term bond agreement provided for the annual payment of interest every May 1. The existing plant was pledged as security for the loan.
2. The bookkeeper made the following mistakes.
 - a. In 2020, the ending inventory was overstated by €183,000. The ending inventories for 2021 and 2022 were correctly computed.
 - b. In 2022, accrued wages in the amount of €225,000 were omitted from the statement of financial position, and these expenses were not charged on the income statement.
 - c. In 2022, a gain of €175,000 (net of tax) on the sale of certain plant assets was credited directly to retained earnings.
3. A major competitor has introduced a line of products that will compete directly with Almaden's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Almaden's line. The competitor announced its new line on January 14, 2023. Almaden indicates that the company will meet the lower prices, which are high enough to cover variable manufacturing and selling expenses, but permit recovery of only a portion of fixed costs.
4. You learned on January 28, 2023, prior to completion of the audit, of heavy damage because of a recent fire in one of Almaden's two plants; the loss will not be reimbursed by insurance. The newspapers described the event in detail.

Instructions

Analyze the preceding information to prepare a corrected statement of financial position for Almaden in accordance with IFRS. Prepare a description of any notes that might need to be prepared. The books are closed, and adjustments to income are to be made through retained earnings.

P24.2 (LO 2) (Segment Reporting) Cineplex Corporation is a diversified company that operates in five different industries: A, B, C, D, and E. The following information relating to each segment is available for 2022.

	A	B	C	D	E
Sales revenue	\$40,000	\$ 75,000	\$580,000	\$35,000	\$55,000
Cost of goods sold	19,000	50,000	270,000	19,000	30,000
Operating expenses	10,000	40,000	235,000	12,000	18,000
Total expenses	29,000	90,000	505,000	31,000	48,000
Operating profit (loss)	\$11,000	\$(15,000)	\$ 75,000	\$ 4,000	\$ 7,000
Identifiable assets	\$35,000	\$ 80,000	\$500,000	\$65,000	\$50,000

Sales of segments B and C included intersegment sales of \$20,000 and \$100,000, respectively.

Instructions

- a. Determine which of the segments are reportable based on the:

1. Revenue test.
2. Operating profit (loss) test.
3. Identifiable assets test.

b. Prepare the necessary disclosures required by IFRS.

***P24.3 (LO 5) Groupwork (Ratio Computations and Additional Analysis)** Bradburn plc was formed 5 years ago through a public subscription of ordinary shares. Daniel Brown, who owns 15% of the ordinary shares, was one of the organizers of Bradburn and is its current president. The company has been successful but is currently experiencing a shortage of funds. On June 10, Daniel Brown approached the Hibernia Bank, asking for a 24-month extension on two £35,000 notes, which are due on June 30, 2022, and September 30, 2022. Another note of £6,000 is due on March 31, 2023, but he expects no difficulty in paying this note on its due date. Brown explained that Bradburn's cash flow problems are due primarily to the company's desire to finance a £300,000 plant expansion over the next 2 fiscal years through internally generated funds.

The commercial loan officer of Hibernia Bank requested financial reports for the last 2 fiscal years. These reports are reproduced below.

Bradburn plc Statement of Financial Position March 31		
Assets	2022	2021
Plant and equipment (net of depreciation)	£1,449,000	£1,420,500
Inventories (at cost)	105,000	50,000
Accounts receivable (net)	131,800	125,500
Notes receivable	148,000	132,000
Cash	18,200	12,500
Total assets	<u>£1,852,000</u>	<u>£1,740,500</u>
Equity and Liabilities		
Share capital—ordinary (130,000 shares, £10 par)	£1,300,000	£1,300,000
Retained earnings ^a	388,000	282,000
Accrued liabilities	9,000	6,000
Notes payable	76,000	61,500
Accounts payable	79,000	91,000
Total equity and liabilities	<u>£1,852,000</u>	<u>£1,740,500</u>

^aCash dividends were paid at the rate of £1 per share in fiscal year 2021 and £2 per share in fiscal year 2022.

Bradburn plc Income Statement For The Fiscal Years Ended March 31		
	2022	2021

Bradburn plc Income Statement For The Fiscal Years Ended March 31		
Sales revenue	£3,000,000	£2,700,000
Cost of goods sold ^a	1,530,000	1,425,000
Gross margin	1,470,000	1,275,000
Operating expenses	860,000	780,000
Income before income taxes	610,000	495,000
Income taxes (40%)	244,000	198,000
Net income	£ 366,000	£ 297,000
^a Depreciation charges on the plant and equipment of £100,000 and £102,500 for fiscal years ended March 31, 2021 and 2022, respectively, are included in cost of goods sold.		

Instructions

- Compute the following items for Bradburn plc.
 - Current ratio for fiscal years 2021 and 2022.
 - Acid-test (quick) ratio for fiscal years 2021 and 2022.
 - Inventory turnover for fiscal year 2022.
 - Return on assets for fiscal years 2021 and 2022. (Assume total assets were £1,688,500 at 3/31/20.)
 - Percentage change in sales, cost of goods sold, gross margin, and net income after taxes from fiscal year 2021 to 2022.
- Identify and explain what other financial reports and/or financial analyses might be helpful to the commercial loan officer of Hibernia Bank in evaluating Daniel Brown's request for a time extension on Bradburn's notes.
- Assume that the percentage changes experienced in fiscal year 2022 as compared with fiscal year 2021 for sales, cost of goods sold, and expenses will be repeated in each of the next 2 years and that the dividend amount will be held constant at the 2022 rate. Is Bradburn's desire to finance the plant expansion from internally generated funds realistic? Discuss.
- Should Hibernia Bank grant the extension on Bradburn's notes considering Daniel Brown's statement about financing the plant expansion through internally generated funds? Discuss.

***P24.4 (LO 5) (Horizontal and Vertical Analysis)** Presented below are comparative statements of financial position for Ozturk Ltd.

Ozturk Ltd. Comparative Statements of Financial Position As of December 31, 2022 and 2021		
	December 31	
	2022	2021

Ozturk Ltd. Comparative Statements of Financial Position As of December 31, 2022 and 2021		
Assets		
Fixed assets	₺2,585,000	₺1,950,000
Accumulated depreciation	(1,000,000)	(750,000)
Prepaid expenses	25,000	25,000
Inventories	1,060,000	980,000
Accounts receivable (net)	220,000	155,000
Short-term investments	270,000	150,000
Cash	180,000	275,000
	<u>₺3,340,000</u>	<u>₺2,785,000</u>
Equity and Liabilities		
Share capital—ordinary	₺2,100,000	₺1,770,000
Retained earnings	570,000	550,000

	<u>₺3,340,000</u>	<u>₺2,785,000</u>

Instructions

(Round to two decimal places.)

- Prepare a comparative statement of financial position of Ozturk Ltd. showing each item's percentage of the total assets or total equity and liabilities.
- Prepare a comparative statement of financial position of Ozturk Ltd. showing the Turkish lira change and the percent change for each item.
- Of what value is the additional information provided in part (a)?
- Of what value is the additional information provided in part (b)?

***P24.5 (LO 5) Writing (Dividend Policy Analysis)** Matheny AG went public 3 years ago. The board of directors will be meeting shortly after the end of the year to decide on a dividend policy. In the past, growth has been financed primarily through the retention of earnings. No share or cash dividend has ever been declared. Presented below is a brief financial summary of Matheny AG operations (euros in thousands).

	2022	2021	2020	2019	2018
Sales revenue	€20,000	€16,000	€14,000	€6,000	€4,000
Net income	2,400	1,400	800	700	250
Average total assets	22,000	19,000	11,500	4,200	3,000
Current assets	8,000	6,000	3,000	1,200	1,000

Working capital	3,600	3,200	1,200	500	400
Ordinary shares:					
Number of shares outstanding (in thousands)	2,000	2,000	2,000	20	20
Average market price	€9	€6	€4	—	—

Instructions

- Suggest factors to be considered by the board of directors in establishing a dividend policy.
- Compute the return on assets, profit margin on sales, earnings per share, price-earnings ratio, and current ratio for each of the 5 years for Matheny AG.
- Comment on the appropriateness of declaring a cash dividend of €0.20 per share at this time, using the ratios computed in part (b) as a major factor in your analysis.

Concepts for Analysis

CA24.1 (LO 1) (General Disclosures; Inventories; Property, Plant, and Equipment) Koch Corporation is in the process of preparing its annual financial statements for the fiscal year ended April 30, 2022. The company manufactures plastic, glass, and paper containers for food and drink manufacturers and distributors.

Koch Corporation maintains separate control accounts for its raw materials, work in process, and finished goods inventories for each of the three types of containers. The inventories are valued at the lower-of-cost-or-net realizable value.

The company's property, plant, and equipment are classified in the following major categories: land, office buildings, furniture and fixtures, manufacturing facilities, manufacturing equipment, and leasehold improvements. All fixed assets are carried at cost. The depreciation methods employed depend on the type of asset (its classification) and when it was acquired.

Koch Corporation plans to present the inventory and fixed asset amounts in its April 30, 2022, statement of financial position as shown below.

Inventories	\$4,814,200
Property, plant, and equipment (net of depreciation)	6,310,000

Instructions

What information regarding inventories and property, plant, and equipment must be disclosed by Koch Corporation in the audited financial statements issued to shareholders, either in the body or the notes, for the 2021–2022 fiscal year?

CA24.2 (LO 1, 2) (Disclosures Required in Various Situations) Ace SA produces electronic components for sale to manufacturers of radios, television sets, and digital sound systems. In connection with her examination of Ace's financial statements for the year ended December 31, 2022, Gloria Rodd completed field work 2 weeks ago. Ms. Rodd now is evaluating the significance of the following items prior to preparing her auditor's report. Except as noted, none of these items have been disclosed in the financial statements or notes.

Item 1: A 10-year loan agreement, which the company entered into 3 years ago, provides that dividend payments may not exceed net income earned after taxes subsequent to the date of the agreement. The balance of retained earnings at the date of the loan agreement was €420,000. From that date through December 31, 2022, net income after taxes has totaled €570,000 and cash dividends have totaled €320,000. On the basis of these data, the staff auditor assigned to this review concluded that there was no retained earnings restriction at December 31, 2022.

Item 2: Recently, Ace interrupted its policy of paying cash dividends quarterly to its shareholders. Dividends were paid regularly through 2021, discontinued for all of 2022 to finance purchase of equipment for the company's new plant, and resumed in the first quarter of 2023. In the annual report, dividend policy is to be discussed in the president's letter to shareholders.

Item 3: A major electronics firm has introduced a line of products that will compete directly with Ace's primary line, now being produced in the specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Ace's line. The competitor announced its new line during the week following completion of field work (but before the financial statement authorization date). Ms. Rodd read the announcement in the newspaper and discussed the situation by telephone with Ace executives. Ace will meet the lower prices that are high enough to cover variable manufacturing and selling expenses but will permit recovery of only a portion of fixed costs.

Item 4: The company's new manufacturing plant building, which cost €2,400,000 and has an estimated life of 25 years, is leased from Wichita National Bank at an annual rental of €600,000. The company is obligated to pay property taxes, insurance, and maintenance. At the conclusion of its 10-year non-cancelable lease, the company has the option of purchasing the property for €1. In Ace's income statement, the rental payment is reported on a separate line.

Instructions

For each of the items, discuss any additional disclosures in the financial statements and notes that the auditor should recommend to her client. (The cumulative effect of the four items should not be considered.)

CA24.3 (LO1) (Disclosures, Conditional and Contingent Liabilities) Presented below are three independent situations.

Situation 1: A company offers a one-year warranty for the product that it manufactures. A history of warranty claims has been compiled, and the probable amounts of claims related to sales for a given period can be determined.

Situation 2: Subsequent to the date of a set of financial statements but prior to the authorization of issuance of the financial statements, a company enters into a contract that will probably result in a significant loss to the company. The amount of the loss can be reasonably estimated.

Situation 3: A company has adopted a policy of recording self-insurance for any possible losses resulting from injury to others by the company's vehicles. The premium for an insurance policy for the same risk from an independent insurance company would have an annual cost of £4,000. During the period covered by the financial statements, there were no accidents involving the company's vehicles that resulted in injury to others.

Instructions

Discuss the accrual or type of disclosure necessary (if any) and the reason(s) why such disclosure is appropriate for each of the three independent sets of facts above.

CA24.4 (LO 2) Groupwork (Subsequent Events) At December 31, 2021, Coburn plc has assets of £10,000,000, liabilities of £6,000,000, share capital of £2,000,000 (representing 2,000,000 ordinary shares at £1 par), and retained earnings of £2,000,000. Net sales for the year 2021 were £18,000,000, and net income was £800,000. You are making a review of subsequent events on February 13, 2022, and you find the following.

1. On February 3, 2022, one of Coburn's customers declared bankruptcy. At December 31, 2021, this company owed Coburn £300,000, of which £60,000 was paid in January 2022.
2. On January 18, 2022, one of the three major plants of the client burned.
3. On January 23, 2022, a strike was called at one of Coburn's largest plants, which halted 30% of its production. As of today (February 13), the strike has not been settled.
4. A major electronics enterprise has introduced a line of products that would compete directly with Coburn's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor has been able to achieve quality similar to that of Coburn's products but at a price 50% lower. Coburn officials say they will meet the lower prices, which are high enough to cover variable manufacturing and selling costs but which permit recovery of only a portion of fixed costs.
5. Merchandise traded in the open market was recorded in the company's records at £1.40 per unit on December 31, 2021. This price prevailed for 2 weeks, after release of an official market report that predicted vastly increased supplies; however, no purchases were made at £1.40. The price throughout the preceding year had been about £2, which had been the level experienced over several years. On January 18, 2022, the price returned to £2, after public disclosure of an error in the official calculations of the prior December correction of which destroyed the expectations of excessive supplies. Inventory at December 31, 2021, was on a lower-of-cost-or-net realizable value basis.
6. On February 1, 2022, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of £1,200,000 of preference shares.

Instructions

State in each case how the 2021 financial statements would be affected, if at all.

CA24.5 (LO 2) Writing (Segment Reporting) You are compiling the consolidated financial statements for Winsor Corporation International (WCI). The corporation's accountant, Anthony Reese, has provided you with the following segment information.

Note 7: Major Segments of Business

WCI conducts funeral service and cemetery operations in the United States and Canada. Substantially all revenues of WCI's major segments of business are from unaffiliated customers. Segment information for fiscal 2022, 2021, and 2020 follows (amounts in thousands).

	Funeral	Floral	Cemetery	Real Estate	Dried Whey	Limousine	Consolidated
Revenues							
2022	\$302,000	\$10,000	\$ 73,000	\$ 2,000	\$7,000	\$12,000	\$406,000
2021	245,000	6,000	61,000	4,000	4,000	4,000	324,000
2020	208,000	3,000	42,000	3,000	1,000	3,000	260,000
Operating Income							
2022	74,000	1,500	18,000	(36,000)	500	2,000	60,000
2021	64,000	200	12,000	(28,000)	200	400	48,800
2020	54,000	150	6,000	(21,000)	100	350	39,600
Capital Expenditures							
2022	26,000	1,000	9,000	400	300	1,000	37,700
2021	28,000	2,000	60,000	1,500	100	700	92,300
2020	14,000	25	8,000	600	25	50	22,700
Depreciation and Amortization							
2022	13,000	100	2,400	1,400	100	200	17,200
2021	10,000	50	1,400	700	50	100	12,300
2020	8,000	25	1,000	600	25	50	9,700
Identifiable Assets							
2022	334,000	1,500	162,000	114,000	500	8,000	620,000
2021	322,000	1,000	144,000	52,000	1,000	6,000	526,000
2020	223,000	500	78,000	34,000	500	3,500	339,500

Instructions

Determine which of the segments must be reported separately and which can be combined under the category “Other.” Then, write a one-page memo to the company’s accountant, Anthony Reese, explaining the following.

- Which segments must be reported separately and Which segments can be combined.
- Which criteria you used to determine reportable segments.
- Which major items must be disclosed for each.

CA24.6 (LO 2) (Interim Reporting) Sino Group, a publicly traded company, is preparing the interim financial data which it will issue to its shareholders at the end of the first quarter of the 2021–2022 fiscal year. Sino’s financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales revenue	¥60,000,000
Cost of goods sold	36,000,000

Variable selling expenses	1,000,000
Fixed selling expenses	3,000,000

Included in the fixed selling expenses was the single lump-sum payment of ¥2,000,000 for television advertisements for the entire year.

Instructions

- a. Sino Group must issue its quarterly financial statements in accordance with IFRS regarding interim financial reporting.
 1. Explain whether Sino should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.
 2. State how the sales revenue, cost of goods sold, and fixed selling expenses would be reflected in Sino Group's quarterly report prepared for the first quarter of the 2021–2022 fiscal year. Briefly justify your presentation.
- b. What financial information, as a minimum, must Sino Group disclose to its shareholders in its quarterly reports?

CA24.7 (LO 2) Groupwork (Treatment of Various Interim Reporting Situations) The following are six independent cases on how accounting facts might be reported on an individual company's interim financial reports.

Instructions

For each of these cases, state whether the method proposed for interim reporting would be acceptable under IFRS. Support each answer with a brief explanation.

- a. J. D. Long Company takes a physical inventory at year-end for annual financial statement purposes. Inventory and cost of sales reported in the interim quarterly statements are based on estimated gross profit rates because a physical inventory would result in a cessation of operations. Long Company does have reliable perpetual inventory records.
- b. Rockford Company is planning to report one-fourth of its pension expense each quarter.
- c. Republic Company wrote inventory down to reflect lower-of-cost-or-net realizable value in the first quarter. At year-end, the net realizable value exceeds the original acquisition cost of this inventory. Consequently, management plans to write the inventory back up to its original cost as a year-end adjustment.
- d. Gansner Company realized a large gain on the sale of investments at the beginning of the second quarter. The company wants to report one-third of the gain in each of the remaining quarters.
- e. Fredonia Company has estimated its annual audit fee. It plans to pro rate this expense equally over all four quarters.
- f. LaBrava Company was reasonably certain it would have an employee strike in the third quarter. As a result, it shipped heavily during the second quarter but plans to defer the recognition of the sales in excess of the normal sales volume. The deferred sales will be recognized as sales in the third quarter when the strike is in progress. LaBrava Company

management thinks this is more representative of normal second- and third-quarter operations.

CA24.8 (LO 4) Writing (Financial Forecasts) An article in *Barron's* noted the following.

“Okay. Last fall, someone with a long memory and an even longer arm reached into that bureau drawer and came out with a moldy cheese sandwich and the equally moldy notion of corporate forecasts. However, the forecast proposal was dusted off, polished up and found quite serviceable. The U.S. SEC, indeed, lost no time in running it up the old flagpole—but no one was very eager to salute. Even after some of the more objectionable features—compulsory corrections and detailed explanations of why the estimates went awry—were peeled off the original proposal.

Seemingly, despite the Commission’s smiles and sweet talk, those craven corporations were still afraid that an honest mistake would lead them down the primrose path to consent decrees and class action suits. To lay to rest such qualms, the Commission last week approved a “Safe Harbor” rule that, providing the forecasts were made on a reasonable basis and in good faith, protected corporations from litigation should the projections prove wide of the mark (as only about 99% are apt to do).”

Instructions

- What are the arguments for preparing profit forecasts?
- What is the purpose of the “safe harbor” rule?
- Why are companies concerned about presenting profit forecasts?

CA24.9 (LO 1) Ethics (Disclosure of Estimates) Nancy Tercek, the financial vice president, and Margaret Lilly, the controller, of Romine Manufacturing Company are reviewing the financial ratios of the company for the years 2022 and 2023. Tercek notes that the profit margin on sales has increased from 6% to 12%, a hefty gain for the 2-year period. She is in the process of issuing a media release that emphasizes the efficiency of Romine Manufacturing in controlling costs. Margaret Lilly knows that the difference in ratios is due primarily to an earlier company decision to reduce the estimates of warranty and bad debt expense for 2023. Lilly, who is unsure of her supervisor’s motives, hesitates to suggest to Tercek that the company’s improvement is unrelated to efficiency in controlling costs. To complicate matters, the media release is scheduled in a few days.

Instructions

- What is the ethical dilemma in this situation, if any?
- Should Lilly, the controller, remain silent? Give reasons.
- What stakeholders might be affected by Tercek’s media release?
- Give your opinion on the following statement and cite reasons: “Because Tercek, the vice president, is most directly responsible for the media release, Lilly has no real responsibility in this matter.”

CA24.10 (LO 2) Ethics (Reporting of Subsequent Events) In June 2022, the board of directors for McElroy Enterprises authorizes the sale of £10,000,000 of company bonds. Jennifer Grayson, treasurer for McElroy Enterprises, is concerned about the date when the

bonds are issued. The company really needs the cash, but she is worried that if the bonds are issued before the company's year-end (December 31, 2022) the additional liability will have an adverse effect on a number of important ratios. In July, she explains to company president William McElroy that if they delay issuing the bonds until after December 31, the bonds will not affect the ratios until December 31, 2023. They will have to report the issuance as a subsequent event, which requires only footnote disclosure. Grayson expects that with expected improved financial performance in 2023, the ratios should be better.

Instructions

- a. What are the ethical issues involved?
- b. Should McElroy agree to the delay?

***CA24.11 (LO 5) Groupwork (Effect of Transactions on Financial Statements and Ratios)** The transactions listed below relate to Wainwright Inc. You are to assume that on the date on which each of the transactions occurred, the company's accounts showed only ordinary shares (\$100 par) outstanding, a current ratio of 2.7:1, and a substantial net income for the year to date (before giving effect to the transaction concerned). On that date, the book value per share was \$151.53.

Each numbered transaction is to be considered completely independent of the others, and its related answer should be based on the effect(s) of that transaction alone. Assume that all numbered transactions occurred during 2022 and that the amount involved in each case is sufficiently material to distort reported net income if improperly included in the determination of net income. Assume further that each transaction was recorded in accordance with IFRS and, where applicable, in conformity with the all-inclusive concept of the income statement.

For each of the numbered transactions you are to decide whether it:

- a. Increased the company's 2022 net income.
- b. Decreased the company's 2022 net income.
- c. Increased the company's total retained earnings directly (i.e., not via net income).
- d. Decreased the company's total retained earnings directly.
- e. Increased the company's current ratio.
- f. Decreased the company's current ratio.
- g. Increased each shareholder's proportionate share of total equity.
- h. Decreased each shareholder's proportionate share of total equity.
- i. Increased each shareholder's equity per share (book value).
- j. Decreased each shareholder's equity per share (book value).
- k. Had none of the these effects.

Instructions

For each transaction listed below, select from options a-k above the answer which best corresponds to each of the 9 choices. There can be more than one answer for each numbered transaction.

Transactions

_____	1. In January, the board directed the write-off of certain patent rights that had suddenly and unexpectedly become worthless.
_____	2. The company sold at a profit land and a building that had been idle for some time. Under the terms of the sale, the company received a portion of the sales price in cash immediately, the balance maturing at 6-month intervals.
_____	3. Treasury shares originally repurchased and carried at \$127 per share were sold for cash at \$153 per share.
_____	4. The company wrote off all of the unamortized discount (and issue costs) applicable to bonds that it refinanced in 2022.
_____	5. The company called in all its outstanding ordinary shares and exchanged them for new shares on a 2-for-1 basis, reducing the par value at the same time to \$50 per share.
_____	6. The company paid a cash dividend that had been recorded in the accounts at time of declaration.
_____	7. Litigation involving Wainwright Inc. as defendant was settled in the company's favor, with the plaintiff paying all court costs and legal fees. In 2019, the company had appropriately established a special contingency for this court action. (Indicate the effect of reversing the contingency only.)
_____	8. The corporation received from its insurance company a check for the proceeds of a policy against theft of trucks. No entries concerning the theft had been made previously, and the proceeds reduce but do not completely cover the loss.
_____	9. Treasury shares, which had been repurchased at and carried at \$127 per share, were issued as a share dividend. In connection with this distribution, the board of directors of Wainwright Inc. had authorized a transfer from retained earnings to permanent share capital of an amount equal to the aggregate market price (\$153 per share) of the shares issued. No entries relating to this dividend had been made previously.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

As stated in the chapter, notes to the financial statements are the means of explaining the items presented in the main body of the statements. Common note disclosures relate to such items as accounting policies, segmented information, and interim reporting. The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What specific items does M&S discuss in its **Note 1—Summary of Significant Accounting Policies**? (List the headings only.)
- b. For what segments did M&S report segmented information? Which segment is the largest? Who is M&S's largest customer?
- c. What interim information was reported by M&S?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a.
 1. What specific items does Puma discuss in its **Note 2—Significant Consolidation, Accounting, and Valuation Principles**? (Prepare a list of the headings only.)
 2. What specific items does adidas discuss in its **Note 2—Our Summary of Significant Accounting Policies**? (Prepare a list of the headings only.)
- b. For what lines of business or segments do adidas and Puma present segmented information?
- c. Note and comment on the similarities and differences between the auditors' reports submitted by the independent auditors of adidas and Puma for the year 2018.

*Financial Statement Analysis Case

RNA manufactures a variety of consumer products. The company's founders have run the company for 30 years and are now interested in retiring. Consequently, they are seeking a purchaser who will continue its operations. A group of investors, Morgan SA, is looking into the acquisition of RNA. To evaluate RNA's financial stability and operating efficiency, Morgan SA has requested that RNA provide its latest financial statements and selected financial ratios. RNA provides the following summary.

RNA Income Statement For the Year Ended November 30, 2022 (in thousands)	
Sales (net)	€30,500
Interest income	500
Total revenue	31,000
Costs and expenses	
Cost of goods sold	17,600
Selling and administrative expenses	3,550
Depreciation and amortization expense	1,890
Interest expense	900
Total costs and expenses	23,940
Income before taxes	7,060
Income taxes	2,800
Net income	€ 4,260

RNA Statement of Financial Position As of November 30 (in thousands)		
	2022	2021
Property, plant, & equipment (net)	€ 7,100	€ 7,000
Inventory	6,000	5,400
Accounts receivable (net)	3,200	2,900
Investments (at cost)	300	200
Cash	400	500
Total current assets	9,900	9,000
Total assets	€17,000	€ 16,000
Share capital—ordinary (€1 par value)	€ 2,700	€ 2,700
Share premium—ordinary	1,000	1,000
Retained earnings	5,000	4,900
Total equity	8,700	8,600
Long-term debt	2,000	1,800
Accrued expenses	1,700	1,400
Income taxes payable	900	800
Accounts payable	3,700	3,400
Total current liabilities	6,300	5,600
Total equity and liabilities	€17,000	€ 16,000

Selected Financial Ratios			
	RNA		Current Industry Average
	2021	2020	
Current ratio	1.61	1.62	1.63
Acid-test ratio	.64	.63	.68
Times interest earned	8.55	8.50	8.45
Profit margin on sales	13.2%	12.1%	13.0%
Asset turnover	1.84	1.83	1.84
Inventory turnover	3.17	3.21	3.18

Instructions

- Calculate a new set of ratios for fiscal year 2022 for RNA based on the financial statements presented.
- Explain the analytical use of each of the six ratios presented, describing what the investors can learn about RNA's financial stability and operating efficiency.
- Identify two limitations of ratio analysis.

Accounting, Analysis, and Principles

Savannah plc manufactures and sells a single product. Unit sales for each of the four quarters of 2022 are projected as follows.

Quarter	Units
First	80,000
Second	150,000
Third	550,000
Fourth	120,000
Annual Total	900,000

Savannah incurs variable manufacturing costs of £0.40 per unit and variable non-manufacturing costs of £0.35 per unit. Savannah will incur fixed manufacturing costs of £720,000 and fixed non-manufacturing costs of £1,080,000. Savannah will sell its product for £4.00 per unit.

Accounting

Determine the amount of net income Savannah will report in each of the four quarters of 2022, assuming actual sales are as projected and employing (a) the integral approach to interim financial reporting and (b) the discrete approach to interim financial reporting. Ignore income taxes.

Analysis

Compute Savannah's profit margin on sales for each of the four quarters of 2022. What effect does employing the integral approach instead of the discrete approach have on the

degree to which Savannah's profit margin on sales varies from quarter to quarter?

Principles

Should Savannah implement the integral or discrete approach under IFRS? Explain the conceptual rationale behind the integral approach to interim financial reporting.

Research Case

As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of IFRS financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with IFRS, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. In general, what should disclosures of accounting policies encompass?
- b. List some examples of the most commonly required disclosures.

Global Accounting Insights

LEARNING OBJECTIVE 7

Compare the disclosure requirements under IFRS and U.S. GAAP.

U.S. GAAP and IFRS disclosure requirements are similar in many regards. The IFRS requirements addressing various disclosure issues are *IAS 24* (“Related Party Disclosures”), disclosure and recognition of post-statement of financial position events in *IAS 10* (“Events after the Balance Sheet Date”), segment reporting IFRS provisions in *IFRS 8* (“Operating Segments”), and interim reporting requirements in *IAS 34* (“Interim Financial Reporting”).

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to disclosures.

Similarities

- U.S. GAAP and IFRS have similar standards on post-statement of financial position (subsequent) events. That is, under both sets of standards, events that occurred after the statement of financial position date, and which provide additional evidence of conditions

that existed at the statement of financial position date, are recognized in the financial statements.

- Like U.S. GAAP, IFRS requires that for transactions with related parties, companies disclose the amounts involved in a transaction; the amount, terms, and nature of the outstanding balances; and any doubtful amounts related to those outstanding balances for each major category of related parties.
- Following the issuance of *IFRS 8*, “Operating Segments,” the segment reporting requirements under U.S. GAAP and IFRS are very similar. That is, both standards use the management approach to identify reportable segments, and similar segment disclosures are required.
- Neither U.S. GAAP nor IFRS require interim reports. Rather, the U.S. SEC and securities exchanges outside the United States establish the rules. In the United States, interim reports generally are provided on a quarterly basis; outside the United States, six-month interim reports are common.

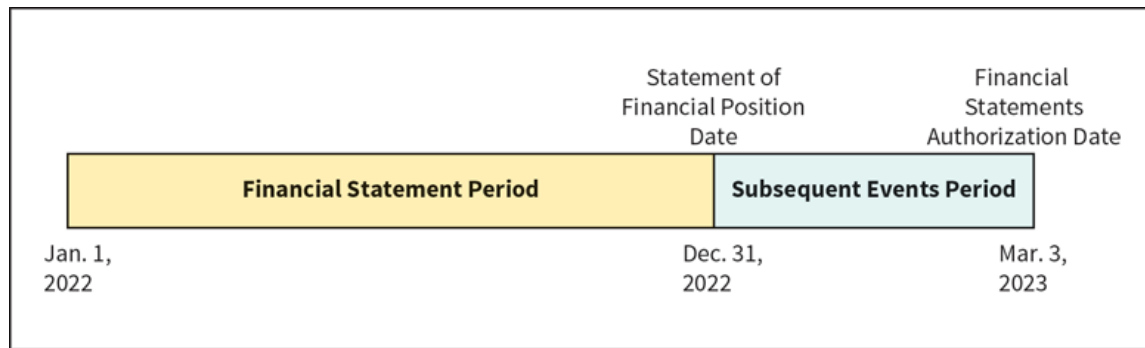

Differences

- Due to the narrower range of judgments allowed in more rules-based U.S. GAAP, note disclosures generally are less expansive under U.S. GAAP than under IFRS.
- In the United States, there is a preference for one set of accepted accounting principles except in unusual situations. The FASB issues alternative guidance (within U.S. GAAP) for privately held companies with input from the Private Company Council. As indicated in the chapter, the IASB has developed a separate set of standards for small- and medium-sized entities (SMEs), which are designed to meet the needs of privately held companies.
- As indicated in the About the Numbers section below, U.S. GAAP uses the date when financial statements are “issued” to determine the reporting of subsequent events. Subsequent (or post-statement of financial position) events under IFRS are evaluated through the date that financial instruments are “authorized for issue.” Also, for share dividends and splits in the subsequent period, U.S. GAAP adjusts, but IFRS does not.
- U.S. GAAP has specific requirements to disclose the name of a related party; under IFRS, there is no specific requirement to disclose the name of the related party.
- Under U.S. GAAP, interim reports are prepared on an integral basis; IFRS generally follows the discrete approach.

About the Numbers

Post-Balance-Sheet Events (Subsequent Events)

Under U.S. GAAP (as under IFRS), notes to the financial statements should explain any significant financial events that took place after the formal balance sheet (statement of financial position) date, but before the statement is issued. These events are referred to as **post-balance-sheet events** or just plain **subsequent events**. The following illustration shows a time diagram of the subsequent events period under U.S. GAAP.

A period of several weeks and sometimes months may elapse after the end of the fiscal year but before the company issues financial statements. Various activities involved in closing the books for the period and issuing the statements take time: counting and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent public accountants, and printing the annual report. During the period between the balance sheet date and its distribution to shareholders and creditors, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a balance sheet believe the balance sheet condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered extraordinary losses, settled significant litigation, or experienced any other important event in the post-balance-sheet period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Relative to IFRS, which stipulates that the subsequent-event period should end on the date the statements are authorized, the subsequent-event period is longer under U.S. GAAP. Therefore, financial statement users generally receive more information about subsequent events. However, U.S. GAAP and IFRS define recognized and non-recognized subsequent events similarly. The following subsequent events disclosure is excerpted from the annual report of Commercial Metals Company.

Commercial Metals Company

NOTE 22. SUBSEQUENT EVENTS (August 31 Fiscal Year End)

On October 7, 2021, The Company announced its decision to exit the business in CMCS by way of sale and/or closure. During 2021, the Company made operational improvements in the business but not to a level which would restore profitability for the long run. Additionally, delayed entry in the European Union, cyclical demand for tubular products, unsustainable losses and increased demand for capital resources resulted in the decision to exit the business. The operation will service any existing customer commitments and the Company expects to wind down operations and liquidate inventory over the next several months. In connection with this decision, the Company expects to incur severance and other closure costs between \$25 million and \$40 million in fiscal 2022.

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are non-accounting events or conditions that management normally reports by other means. These events include legislation, product

changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

Summary Observations

Because U.S. GAAP and IFRS are quite similar in their disclosure provisions, we provide some observations on the application of IFRS by foreign companies listing securities in the United States. Recently, the staff of the U.S. SEC reviewed the financial statements filed with the SEC by 100 foreign issuers, prepared for the first time using IFRS. The staff did not make any statements regarding the overall *quality* of the reports but did identify areas where additional questions might be asked. Here are some of the items that warranted staff comment:

1. Revenue recognition, especially where a company provided generic policy disclosure but did not provide disclosure specific to its circumstances.
2. Intangible assets and goodwill, including the factors that led a company to recognize them in a business combination.
3. Companies' policies for identifying and evaluating impairment, the circumstances resulting in impairment recognition, or the circumstances surrounding impairment reversals of long-lived assets, including goodwill.
4. Leases, including their terms and the future minimum payments under operating and financial leases.
5. Contingent liabilities, including their nature and estimated financial effects.
6. The significant terms of financial instruments, including derivatives, their effects on future cash flow, and the recognition and measurement criteria the company applied in accounting for financial instruments.
7. Additional issues related to income statement and cash flow statement formats and related notes.

On the Horizon

Hans Hoogervorst, chair of the IASB, recently noted: "High quality financial information is the lifeblood of market-based economies. If the blood is of poor quality, then the body shuts down and the patient dies. It is the same with financial reporting. If investors cannot trust the numbers, then financial markets stop working. For market-based economies, that is really bad news. It is an essential public good for market-based economies.... And in the past 10 years, most of the world's economies—developed and emerging—have embraced IFRSs." While the United States has yet to adopt IFRS, there is no question that IFRS and U.S. GAAP are more converged, relative to 10 years ago. We have provided expanded discussion in the *Global Accounting Insights* to help you understand the issues surrounding convergence as they relate to intermediate accounting. After reading these discussions, you will realize that IFRS and U.S. GAAP are very similar, with differences in the areas that involve minor technical points. In other areas, the differences are major; for example, IFRS does not permit LIFO inventory accounting. Our hope is that the FASB and IASB can continue convergence efforts, to narrow differences in accounting standards for use by companies around the world.

GAAP Self-Test Questions

1. Which of the following is false?

- a. In general, IFRS note disclosures are more expansive compared to U.S. GAAP.
- b. U.S. GAAP and IFRS have similar standards on subsequent events.
- c. Both IFRS and U.S. GAAP require interim reports, although the reporting frequency varies.
- d. Segment reporting requirements are very similar under IFRS and U.S. GAAP.

2. Which of the following is true?

- a. Differential reporting for small- and medium-sized entities is required for all companies less than a certain size.
- b. IFRS SME accounting omits accounting topics not relevant for SMEs, such as earnings per share, and interim and segment reporting.
- c. U.S. GAAP provides no accounting alternatives for private companies.
- d. U.S. GAAP requires significantly more disclosures, since more items are subject to judgment.

3. Subsequent events are reviewed through which date under U.S. GAAP?

- a. Balance sheet (statement of financial position) date.
- b. Authorization date of the financial statements.
- c. Date of independent auditor's opinion.
- d. Financial statement issue date.

4. Under IFRS, share dividends declared after the statement of financial position date but before the end of the subsequent events period are:

- a. accounted for similarly to errors as a prior period adjustment.
- b. adjusted subsequent events, because they are paid from prior year earnings.
- c. not adjusted in the current year's financial statements.
- d. recognized on a prospective basis from the date of declaration.

5. Interim reporting under U.S. GAAP:

- a. is prepared using the discrete approach.
- b. is prepared using an integral approach.
- c. requires a complete set of financial statements for each interim period.
- d. permits companies to omit disclosure of material events subsequent to the interim reporting date.

GAAP Concepts and Application

GAAP24.1 Briefly describe some of the similarities and differences between disclosure rules under U.S. GAAP and IFRS.

GAAP24.2 Bill Novak is working on an audit of a U.S. GAAP client. In his review of the client's interim reports, he notes that the reports are prepared on an integral basis. That is, each interim report is viewed as a part of the annual period. Is this acceptable under U.S. GAAP? If so, explain how that treatment could affect comparisons to an IFRS company.

Answers to GAAP Self-Test Questions

1. c 2. b 3. d 4. d 5. b

Notes

- 1 "Making Materiality Judgments," *IFRS Practice Statement 2* (London, U.K.: IASB, December 2017). Practice statements are not IFRS. Accordingly, entities are not required to comply with the framework for the preparation and presentation of management commentary as a condition for asserting compliance with IFRS.
- 2 The IASB is evaluating disclosure issues such as those related to management commentary. However, as noted by one standard-setter, the usefulness of expanded required disclosure also depends on users' ability to distinguish between disclosed versus recognized items in financial statements. Research to date is inconclusive on this matter. See Katherine Schipper, "Required Disclosures in Financial Reports," Presidential Address to the American Accounting Association Annual Meeting (San Francisco, Calif.: August 2005); and B. Bratten, P. Choudhary, and K. Schipper, "Evidence that Market Participants Assess Recognized and Disclosed Items Similarly When Reliability Is Not an Issue," *The Accounting Review* (July 2013).
- 3 Examples of related-party transactions include transactions between (a) a parent company and its subsidiaries, (b) subsidiaries of a common parent, (c) a company and trusts for the benefit of employees (controlled or managed by the enterprise), and (d) a company and its principal owners, management, or members of immediate families, and affiliates. [4]
- 4 International Standard on Auditing 240, "The Auditor's Responsibilities Related to Fraud in an Audit of Financial Statements," *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (New York: International Federation of Accountants (IFAC), April 2010). An expanded discussion of fraud appears later in this chapter. Requirements for company audits vary according to the jurisdiction and market listing. Audits of public international companies outside the United States comply with the international auditing standards issued by the International Auditing and Assurance Standards Board (IAASB).
- 5 In many jurisdictions, management is required to issue its financial statements to a supervisory board (made up solely of non-executives) for approval. In such cases, the financial statements are authorized for issue—the end of the subsequent events period—when the management authorizes them for issue to the supervisory board. In other jurisdictions, companies are required to submit the financial statements to their shareholders for approval after the financial statements have been made public. In such cases, the subsequent events period ends on the date of issue, not the date when shareholders approve the financial statements. [6]

- 6 The effects from natural disasters, such as the eruption of the Icelandic volcano, which occurred after the year-end for companies with March fiscal years, require disclosure in order to keep the statements from being misleading. Some companies may have to consider whether these disasters affect their ability to continue as going concerns.
- 7 The estimated annual effective tax rate should reflect anticipated tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax-planning alternatives.
- 8 These are referred to as review engagements, which are less extensive than an audit. See International Standards on Review Engagements (ISRE) 2410, “Review of Interim Financial Information Performed by the Independent Auditor of the Entity,” *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (April 2010).
- 9 This auditor’s report and the following discussion follow international auditing standards. See International Standard on Auditing 700, “Forming an Opinion and Reporting on Financial Statements” and International Standard on Auditing 705, “Modifications to the Opinion in the Independent Auditor’s Report,” *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (New York: International Federation of Accountants (IFAC), April 2010). They are also similar to the specifications for U.S. auditors contained in “Reports on Audited Financial Statements,” *Statement on Auditing Standards No. 58* (New York: AICPA, 1988). U.S. standards differ due to the required audit opinion on the company’s internal controls, as required by the U.S. SEC.
- 10 International Standards on Auditing 701, *Communicating Key Audit Matters in the Independent Auditor’s Report* (Geneva, Switzerland: The International Auditing and Assurance Standards Board, International Federation of Accountants, January 2015), para 8.
- 11 “Management Commentary: A Framework for Presentation,” *IFRS Practice Statement*, IASB (December 2010). This is not an IFRS. Accordingly, it is not a requirement for an entity to comply with the framework for the preparation and presentation of management commentary as a condition for asserting compliance with IFRS.
- 12 Some areas in which companies are using financial information about the future are equipment lease-versus-buy analysis, analysis of a company’s ability to successfully enter new markets, and examination of merger and acquisition opportunities. In addition, companies prepare forecasts and projections for use by third parties in public offering documents (requiring financial forecasts), tax-oriented investments, and financial feasibility studies. Use of forward-looking data has been enhanced by the increased capability of computers to analyze, compare, and manipulate large quantities of data.
- 13 There is not a specific international standard in this area. In the United States, see “Financial Forecasts and Projections” and “Guide for Prospective Financial Information,” *Codification of Statements on Standards for Attestation Engagements* (New York: AICPA 2006), paras. 3.04 and 3.05.
- 14 The issue is serious. Over a recent three-year period, eight percent of the companies on the New York Stock Exchange (NYSE) were sued because of an alleged lack of financial

disclosure. Companies complain that they are subject to lawsuits whenever the share price drops. And as one executive noted, “You can even be sued if the share price goes up—because you did not disclose the good news fast enough.”

¹⁵ *Op cit.*, par. 1.02.

¹⁶ For example, the U.S. SEC Issued “Safe-Harbor Rule for Projections,” *Release No. 5993* (Washington: SEC, 1979). The U.S. Private Securities Litigation Reform Act of 1995 recognizes that some information that is useful to investors is inherently subject to less certainty or reliability than other information. By providing safe harbor for forward-looking statements, this should facilitate access to this information by investors.

¹⁷ See www.sec.gov/rules/final/2009/33-9002.pdf and C. Twarowski, “Financial Data ‘on Steroids’,” *Washington Post* (August 19, 2008), p. D01. See also the XBRL website for additional information.

¹⁸ PricewaterhouseCoopers, *The Global Economic Crime Survey: Economic Crime in a Downturn* (2016).

¹⁹ “Report of the National Commission on Fraudulent Financial Reporting” (Washington, D.C., 1987), p. 2. Unintentional errors as well as company improprieties (such as tax fraud, employee embezzlements, and so on) that do not cause the financial statements to be misleading are excluded from the definition of fraudulent financial reporting.

²⁰ The discussion in this section is based on “Report of the National Commission on Fraudulent Financial Reporting,” (2004), pp. 23–24. See also “2014 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners” for fraudulent financial reporting causes and consequences.

²¹ Because the profession believes that the role of the auditor is not well understood outside the profession, much attention has been focused on the expectation gap. The expectation gap is the gap between (1) the expectation of financial statement users concerning the level of assurance they believe the independent auditor provides, and (2) the assurance that the independent auditor actually does provide under generally accepted auditing standards.

²² See [International Standard on Auditing 240](#), “The Auditor’s Responsibilities Relating to Fraud in an Audit of Financial Statements,” *Handbook of International Quality Control, Auditing, Review, Other Assurance, and Other Related Services Pronouncements* (April 2010).

²³ Some analysts use other terms to categorize these ratios. For example, coverage ratios are sometimes referred to as *solvency* ratios; activity ratios as *turnover* or *efficiency* ratios; and coverage ratios as *leverage* or *capital structure* ratios.

²⁴ Richard E. Cheney, “How Dependable Is the Bottom Line?” *The Financial Executive* (January 1971), p. 12.

²⁵ See for example, Eugene A. Imhoff, Jr., Robert C. Lipe, and David W. Wright, “Operating Leases: Impact of Constructive Capitalization,” *Accounting Horizons* (March 1991).

²⁶ To maintain comparisons in the transition year, companies may present comparative information in accordance with previous GAAP as well as the comparative information

required by IFRS. Companies must (a) label the previous GAAP information prominently as not being prepared in accordance with IFRS, and (b) disclose the nature of the main adjustments that would make it comply with IFRS. Companies need not quantify those adjustments. [\[14\]](#)

[27](#) Other areas subject to the option are (1) business combinations; (2) insurance contracts; (3) investments in subsidiaries, jointly controlled entities, and associates; (4) designation of previously recognized financial instruments; (5) financial assets or intangible assets accounted for as Service Concession Arrangements; and (6) transfers of assets from customers. [\[16\]](#)

[28](#) Specific implementation guidance for other areas is provided in *IFRS 1*. [\[17\]](#)

[29](#) In addition, IFRS does not restrict the use of fair value as deemed cost to an entire class of assets, as is done for revaluation accounting (see discussion in [Chapter 11](#)). For example, a company can use fair value for deemed cost for some buildings and not for others. However, if a company uses fair value as deemed cost for assets whose fair value is above cost, it cannot ignore indications that the recoverable amount of other assets may have fallen below their carrying amount. Thus, an impairment may need to be recorded.

(1) The “Other reserve” was originally created as part of the capital restructuring that took place in 2002. It represents the difference between the nominal value of the shares issued prior to the capital reduction by the Company (being the carrying value of the investment in Marks and Spencer plc) and the share capital, share premium and capital redemption reserve of Marks and Spencer plc at the date of the transaction.

(2) Amounts “reclassified and reported in profit or loss” in 2017/18 includes the revaluation of the cross currency swaps, offsetting the revaluation of the USD hedged bonds within finance costs.

(3) Included within Retained Earnings is the fair value through other comprehensive income reserve.

Consolidated statement of cash flows

- sales-type leases, [21-26](#)

United Kingdom: R&D incentives, [12-19](#)

United States

- government debt, [14-2](#)
- R&D incentives, [12-19](#)
- Sarbanes-Oxley Act, [2-22](#), [3-70](#), [7-26](#)
- Tax Cuts and Jobs Act (TCJA), [7-1](#)

Units-of-delivery method, [18-35](#)

Units-of-production approach, [11-5](#), [11-18](#)

Unprofitable contracts

construction expenses, [18-43](#)

Construction in Process account, [18-44](#)

losses on, [18-43](#)–44

revenue recognition, [18-43](#)

Unrealized gain

adjustments to net income, [23-23](#)–24

computation, [17-27](#)

Unrealized losses, [23-23](#)–24

Unsecured bonds, [14-3](#)

Upfront fees

definition, [18-28](#)

non-refundable, [18-28](#), [18-29](#)

transaction price considerations, [18-28](#)

U.S. GAAP (generally accepted accounting principles)

deferred taxation, [19-59](#)

employee stock-purchase plans, [16-60](#)

impairment measurement, [11-55](#), [11-56](#)

inventory presentation and disclosure, [9-43](#)

leases, [21-69](#)–73

pensions, [20-45](#)

terminology, [4-44](#)

U.S. Securities and Exchange Commission (SEC), [1-24](#)

Useful life

change in estimated, [22-17](#)

indefinite, [12-4](#), [12-5](#)

limited (finite), [12-4](#)

V

Valuation

of accounts receivable, [7-10](#)–14

of bonds payable, [14-4](#)–7

of current assets, [5-8](#)

of debt investments, [17-4](#)

decrease below historical cost, [11-27](#)–28, [11-30](#)–31

increase, [11-27](#), [11-29](#)–30

of intangible assets, [12-3](#)–4

intrinsic, [17-35](#)

of inventories, [8-1](#)–42, [9-1](#)–44

of long-term bonds, [6-27](#)–28

of notes receivable, [7-19](#)

of property, plant, and equipment, [10-11](#)–20

Valuation bases

actuarial present value, [20-6](#)

book value, [10-16](#)

book value per share, [5-31](#), [15-26](#), [15-27](#)–28, [24-38](#)

carrying value, [14-7](#)

fair value, [10-16](#), [14-21](#), [17-4](#), [17-12](#), [17-31](#)

fair value hedge, [17-38](#)–40, [17-45](#)–47

fair value less costs to sell, [11-12](#)

future value, [6-8](#)

lower-of-cost-or-net realizable value (LCNRV), [9-3](#)–7, [9-16](#)–19

net realizable value (NRV), [9-3](#), [9-5](#)–6, [9-7](#)–10, [9-23](#)

present value, [6-2](#), [6-8](#)

purchase commitments and, [9-11](#)–12

relative fair value, [10-13](#)

relative standalone sales value, [9-10](#), [9-24](#)

residual value, [11-3](#)

salvage value, [11-3](#)

stated value, [15-7](#)

time value, [6-2](#), [6-3](#)–9, [17-35](#)

time value of money, [18-13](#)

Valuation methods

allowance method, [7-11](#)–14

cost-basis approach, [8-1](#)–42

direct write-off, [7-11](#)

fair value, [14-22](#)–23, [16-13](#)

fair value adjustment, [17-8](#), [17-9](#)

income approach, [10-12](#)

market approach, [10-12](#)

master valuation approach, [12-12](#)

with-and-without method, [16-4](#)

Value in use

computation, [11-14](#)

definition, [2-18](#)

impairment loss calculation based on, [11-14](#)

Value-added taxes (VAT) payable, [13-9](#)–11

Value-in-use, [11-12](#)

Variable consideration, [7-8](#)–10, [18-11](#)–12

Variable lease payments, [21-8](#)

Variable-charge approach, [11-5](#)

Variable-rate mortgages, [14-18](#)

VAT (value-added taxes) payable, [13-9](#)–11

Verifiability, [2-11](#)–12

Verification

direct, [2-11](#)

indirect, [2-11](#)

Vertical percentage analysis, [24-41](#)
Vested benefit obligations, [20-6](#), [20-7](#), [20-26](#)
Vested benefits, [20-6](#)
Vested rights, [13-13](#)
Viability, economic, [12-4](#), [12-43](#)
Virtual certainty, [13-29](#)
Virtual companies, [2-14](#)
Volatility, [20-24](#)–25
Volume discounts, [18-14](#)

W

Wage expenses
 accrued salaries and wages, [3-27](#)
 adjustment for, [3-27](#)–28
Warning signals, [5-14](#)

Warranties

assurance-type, [13-18](#), [13-19](#), [13-20](#), [18-26](#), [18-27](#)

definition, [13-18](#)

examples, [13-20](#), [18-27](#)

expected cash outflows, [6-30](#)

measurement of, [13-17](#)

as provisions, [13-16](#), [13-18](#)–20

revenue recognition, [18-26](#)–28, [18-29](#)

service-type, [13-19](#)–20, [18-27](#)

share, [16-10](#)–11

tax deductions, [19-8](#)

temporary liability differences, [19-8](#)

types of, [13-18](#)–19, [18-26](#)–27

Warrants

definition, [16-9](#)

diluted EPS, [16-27](#)–28

issuance situations, [16-9](#)–10

share, [15-4](#), [16-9](#)–12

Watered shares, [15-8](#)

Weighted-average method, [8-13](#)–14

Weighted-average ordinary shares, [16-26](#)

Weighted-average ordinary shares outstanding, [16-21](#)–23

With-and-without method, [16-4](#)

Work in process inventory, [8-3](#)

Working capital

changes in, [23-27](#)

definition, [5-14](#)

minimal, [15-16](#)

Working capital ratio, [13-30](#)

Worksheets

adjustments, [3-46](#)–47

columns, [3-46](#)–47

to correct income and statement of financial position errors, [22-29](#)

financial statement preparation from, [3-44](#)–45, [3-47](#)

format, [23-31](#)

guidelines for using, [23-30](#)–31

income statement columns, [3-47](#)

pension, [20-11](#)–13, [20-16](#)–19

preparation of, [23-31](#)

statement of cash flows, [23-30](#)–38

statement of financial position columns, [3-47](#)

trial balance columns, [3-46](#)

use of, [3-44](#)–45, [23-30](#)–38

Write-offs

goodwill, [12-13](#)

resource costs, [11-18](#)–19

uncollectible accounts, [7-12](#)

X

XBRL (eXtensible Business Reporting Language), [1-14](#), [24-33](#)

Y

Yield, effective, [6-8](#), [14-6](#)

Z

Zero-interest debenture bonds, [14-3](#)

Zero-interest-bearing notes

- definition, [7-15](#)

- issued, [13-5](#)–6

- long-term notes payable, [14-12](#)–13

- recognition, [7-16](#)–17

- time diagrams, [7-16](#), [14-13](#)

Zero-profit method, [18-40](#)–41

Z-score, [5-14](#)
